The bank has given these men the fullest co-operation. Sometimes they have paid as little as ten dollars a month each. But the bank has signified its willingness to loan them up to ninety per cent of the market value of good stocks listed on the New York Stock Exchange, provided the stock certificate is pledged as security, and provided further that interest is paid monthly and the note reduced by at least ten per cent each month. No doubt similar arrangements can be made with banks in every city in the country. The plan encourages regular systematic saving, and makes it possible for many people to purchase securities who might be unable to do so if they had to pay for them in full at the time of purchase.

It is buying on margin, but it is a safe method of buying on margin. The money is borrowed from the bank, not from the broker; the stock certificate is delivered, and there is no chance of the purchaser being sold out, as frequently happens in the case of regular speculative margin accounts. Purchasers under the club plan need pay little attention to the daily fluctuations of the stock market, and so long as they stick to

BANK SERVICE AND BANK SAFETY

Every investor knows that banks make investments, and that every security in which banks invest is first subjected to thorough investigation.

Unless banks were satisfied that these investments would be safe and yield a steady income they would not be made.

By using the Atlantic Trust Investment Plan you can buy bonds of the same issues in which the funds of this State-supervised bank are invested.

You enjoy the advantages of Bank Service in selecting your investments and Bank Safety while you are completing their purchase. Meanwhile your money earns bond interest.

FINANCIAL DEPARTMENT

(Continued)

high-grade listed securities they have little to worry about. It is a method of purchasing stocks on margin by means of a variation of the partial payment plan, and it is an excellent method.

QUESTIONS AND ANSWERS

Q. I have five thousand dollars which I wish to invest in five different bonds. I should be grateful for your suggestions, and would like to net as near six per cent as possible.

A. We should consider that the sub-joined list would answer your purpose: Anaconda Copper 6s, due 1929; Brooklyn Union Gas 6s, due 1947; Missouri, Kansas, and Texas prior lien 6s, due 1932; Philadelphia Electric Company 6s, due 1941; Wilson & Co. 6s, due 1941.

Q. Will you name five preferred stocks which you think are suitable for an investment of approximately \$1,000 each?

A. American Tobacco; Atchison; Topeka, and Santa Fe; Bethlehem Steel 8 per cent; National Lead; and Union Pacific.

Q. Will you please tell me the par value of Central Aguirre Sugar stock, its dividend rate and selling price? What is the amount of the funded debt of this company?

A. Par value of this stock is \$20 a share; the present dividend rate is \$6 a share a year; and the stock is now quoted at about 77 bid, 79 asked. There is no funded debt.

Are You An Investor?

During the past year the Financial Editor of The Outlook has helped hundreds of Outlook readers to solve intelligently their particular investment problems. Perhaps you are contemplating a shifting of your present holdings or have fresh funds to invest. In either case we shall be glad to give you specific information on any securities in which you may be interested. A nominal charge of one dollar per inquiry will be made for this special service.

Outlook.

Typing of manuscripts or other matter by
well qualified woman. 2,911, Outlook.

Dividend checks from the American Telephone and Telegraph Company are received quarterly by more than 200,000 telephone users.

Owned by those it serves

Less than fifty years ago an application was made for a patent which created the possibility of speech between distant points. It was the culmination of years of study, research and experiment. It suggested a new aid in commerce and domestic life; a new tie to bind the people together. But it was only a suggestion—a dream.

To make that dream come true required the creation of an organization unlike any other. It demanded a kind of scientific knowledge that was yet to be formulated, as well as a type of equipment still to be devised. And it necessitated the financial and moral support of many communities.

Out of this situation grew the Bell System,* bringing not only a new public service, but a new democracy of public service ownership—a democracy that now has more than 200,000 stockholders—a partnership of the rank and file who use telephone service and the rank and file employed in that service. The American Telephone and Telegraph Company exists to serve the people and is

owned directly by the people—controlled not by one, but controlled by all.

Evolution is going on. Each year the ownership is more widespread. Each year the various processes of the service are performed more efficiently and economically. Each year new lines and extensions are constructed. The responsibility of the management is to provide the best possible telephone service at the lowest possible cost and to provide new facilities with the growth of demand. To do these things requires equipment, men and money.

The rates must furnish a net return sufficient to induce you to become a stockholder, or to retain your stock if you already are one; after paying wages sufficient to attract and retain capable men and women in the service. They must adequately support and extend the structure of communication.

These are considerations for the interest of all—public, stockholders, employees.

This Week's Outlook

AN outline study of current history is published each week based on that week's issue of The Outlook and is sent without charge to all subscribers who request it, but is especially designed

for groups of students engaged in the study of current events, history, civics, English, etc. Information as to special rates for subscriptions ordered in quantities for class work will be sent on request to

Educational Director

The Outlook Company, 361 Fourth Avenue, New York City

BY THE WAY

THE good friends who, after hearing a story, say to us, "The way I heard it was this," try us terribly, but they generally improve the story, we have to admit. A subscriber thus betters the legend recently printed in this column about Lafayette's greeting to married and unmarried men: "In our story (handed down in our family in Philadelphia) he told the unmarried man he was a lucky dog, while he said to the married individual, 'What a happy man you must be!' When his attention was called to the apparent contradiction between the two compliments, he said: 'There is a great difference between a happy man and a lucky dog!'"

The names of towns on the borders of States are sometimes made up of syllables from the names of the States. Sylmar, for instance, in Maryland, borrows syllables from Pennsylvania and Maryland, and Pen Mar, in Pennsylvania, does the same thing in a slightly different way. Calexico, in California, indicates its proximity to Mexico in its name. Mexicali, just on the other side of the border, in Lower California, has become celebrated as the possessor of "the longest bar in the world," to which Californians can cross over from Calexico and slake their thirst without fear of prohibitory laws.

"To be offered for sale by auction," says an advertisement in an English paper, "part of the ESTATE OF LOCHIEL, extending to a total area of about 117,000 acres." This Scottish estate, consisting of over 180 square miles of territory, includes a deer forest of 13,000 acres, a castle, lakes, mountains, sheep farms, trout streams, etc. In its various preserves a total of about 200 stags are often shot during the season, and quantities of salmon and trout obtained. "In one preserve," it is said, "Lord Burton shot the famous 20-pointer." (Refers to a huge stag whose antlers had 20 points.) This vast domain is advertised as a "sporting estate," and probably could be matched only in America for extent and romantic scenery, which includes the famous Ben Nevis.

In the window of a wholesale silk house on Fourth Avenue, New York, the wayfarer sees this cheering sign: **JOBS ALWAYS ON HAND.** This is probably short for "job lots."

Another sign, at a recent industrial show, read: **GUARANTEED EGGS. THESE EGGS ARE LAID BY HAPPY, HEALTHY HENS.**

A sign on the Bowery reads: **FRENCHY, ARTIST.** It speaks volumes as to the popular impression that the French are up on art.

Another Bowery sign, perhaps suggested by "Frenchy's," is: **SHOEY THE BOOTBLACK.**

A Yiddish-English sign in Brooklyn reads as follows: **OUR MOTTO: QUALITY, TRUTHNESS, QUICK SERVICE.**

What I Think of Pelmanism

By Judge Ben B. Lindsey

JUDGE BEN B. LINDSEY

Judge Ben B. Lindsey is known throughout the whole modern world for his work in the Juvenile Court of Denver. Years ago his vision and courage lifted children out of the cruelties and stupidities of the criminal law, and forced society to recognize its duties and responsibilities in connection with the "citizens of tomorrow."

PELMANISM is a big, vital, significant contribution to the mental life of America. I have the deep conviction that it is going to strike at the very roots of individual failure, for I see in it a new power, a great driving force. I first heard of Pelmanism while in England on war work. Sooner or later almost every conversation touched on it, for the movement seemed to have the sweep of a religious conviction. Men and women of every class and circumstance were acclaiming it as a new departure in mental training that gave promise of ending that preventable inefficiency which acts as a brake on human progress. Even in France I did not escape the word, for thousands of officers and men were *Pelmanizing* in order to fit themselves for return to civil life.

When I learned that Pelmanism had been brought to America by Americans or Americans, I was among the first to enroll. My reasons were two: first, because I have always felt that every mind needed regular, systematic and scientific exercise, and secondly, because I wanted to find out if Pelmanism was the thing that I could recommend to the hundreds who continually ask my advice in relation to their lives, problems and ambitions.

Failure is a sad word in any language, but it is peculiarly tragic here in America where institutions and resources join to cut success within the reach of every individual. In the twenty years that I have sat on the bench of the Juvenile Court of Denver, almost every variety of human failure has passed before me in melancholy procession. By *failure* I do not mean the merely criminal mistakes of the individual, but the faults of training that keep a life from full development and complete expression.

Pelmanism the Answer

If I were asked to set down the principal cause of the average failure, I would have put the blame at the door of our educational system. It is there that trouble begins—trouble that only the gifted and most fortunate are strong enough to overcome in later life.

Either think back on your own experience or else look into a schoolroom in our own town. Routine is the ideal, with pupils drilled to do the same thing at the same time in the same way. There is no room for originality or initiative because these qualities would throw the machinery out of gear. Individuality is discouraged and imagination frowned upon for the same reason. No steadfast attempt to appeal to interest or to arouse and develop latent powers.

What wonder that our boys and girls come forth into the world with something less than firm purpose, full confidence and

leaping courage? What wonder that mind wandering and wool gathering are common, and that so many individuals are shackled by indecisions, doubts and fears?

It is to these needs and these lacks that Pelmanism comes as an answer. The "twelve little gray books" are a remarkable achievement. Not only do they contain the discoveries that science knows about the mind and its workings, but the treatment is so simple that the truths may be grasped by anyone of average education.

In plain words, what Pelmanism has done is to take psychology out of the college and put it into harness for the day's work. It lifts great, helpful truths out of the back water and plants them in the living stream.

As a matter of fact, Pelmanism ought to be the beginning of education instead of a remedy for its faults. First of all, it teaches the science of self-realization; it makes the student *discover* himself; it acquaints him with his sleeping powers and shows him how to develop them. The method is *exercise*, not of the haphazard sort, but a steady, increasing kind that brings each hidden power to full strength without strain or break.

Pelmanism's Large Returns

The human mind is *not* an automatic device. It will *not* "take care of itself." Will power, originality, decision, resourcefulness, imagination, initiative, courage—these things are not gifts but results. Every one of these qualities can be developed by effort just as muscles can be developed by exercise. I do not mean by this that the individual can add to the brains that God gave him, but he can learn to make use of the brains that he has instead of letting them fall into flabbiness through disuse.

Other methods and systems that I have examined, while realizing the value of mental exercise, have made the mistake of limiting their efforts to the development of some single sense. What Pelmanism does is to consider the mind as a whole and treat it as a whole. It goes in for mental team play, training the mind as a unity.

Its big value, however, is the instructional note. Each lesson is accompanied by a work sheet that is really a progress sheet. The student goes forward under a teacher in the sense that he is followed through from first to last, helped, guided and encouraged at every turn by conscientious experts.

Pelmanism is no miracle. It calls for application. But I know of nothing that pays larger returns on an investment of one's spare time from day to day.

(Signed) BEN B. LINDSEY.

Note: As Judge Lindsey has pointed out, Pelmanism is neither an experiment nor a theory. For almost a quarter of a century, it has been showing men and women how to lead happy, successful, well rounded lives. 650,000 Pelmanists in every country on the globe are the guarantee of what Pelman training can do for you.

No matter what your own particular diffi-

culties are—poor memory, mind wandering, indecision, timidity, nervousness or lack of personality—Pelmanism will show you the way to correct and overcome them. And on the positive side, it will uncover and develop qualities which you never dreamed existed in you. It will be of direct, tangible value to you in your business and social life. In the files at the Pelman Institute of America are hundreds of letters from successful Pelmanists telling how they doubled, trebled and even quadrupled their salaries thanks to Pelman training.

How to Become a Pelmanist

Pelmanism is taught entirely by correspondence. There are twelve lessons—"Twelve Little Gray Books." The course can be completed in three to twelve months, depending entirely on the amount of time devoted to study. Half an hour daily will enable the student to finish the course in three months.

"Scientific Mind Training" is the name of the absorbingly interesting booklet which tells about Pelmanism in detail. It is fascinating in itself with its wealth of original thought and clear observation. "Scientific Mind Training" makes an interesting addition to your library.

Your copy is waiting for you. It is absolutely free. Simply fill out the coupon and mail it today. It costs you nothing, it obligates you to nothing, but it is absolutely sure to show you the way to success and happiness. Don't put it off and then forget about it. Don't miss a big opportunity. THE REALITY OF DEBATING

SINCE I always read The Outlook with great interest, and am very much interested in debating, I of course gave especial attention to your number of September 13, containing the editorial on "Debates and Beliefs" and the article on "Where Men Debate Beliefs—Not Statistics." Because of my observations and experiences from four years' debating at college, I should like to take exception to most of your assertions in your editorial and article. But for the present I shall confine my attention to your statement that American college debating "lacks actuality" and to the inference from your quotation from Roosevelt's Autobiography that American college debating does not "turn out of our colleges young men with ardent convictions on the side of the right."

Your editorial writer asserts on his *ipse dixit* that our college debating "lacks actuality." Unfortunately, he does not inform us *what* he means by "actuality" or *why* this debating "lacks actuality." The assertion is "full of sound and fury, signifying nothing." If the editorial writer had only slight debating training, he would have learned to define his terms and give his reasons or "beliefs." Does he mean by "actuality" that the subjects chosen for debate are academic or archaic? Does he mean that the present methods of preparation and speaking are "unreal" because they give the debaters no training helpful in any way? Or has he something else tucked away in his mind? I must confess that my strong "convictions" are that your writer never debated or attended a debate.

Of course I may have been a young man who had visions and dreamed dreams, but debating seemed very real to me during my four years' contact with it. The subjects were always interesting and vital. I felt that I had "sincerity and intensity of conviction." While I may not have "moved the hearers," I thought that I was "moved."

At any rate, I have "ardent convictions" that my American college debating experience was the most valuable training that I have thus far received in my young life. While I shall not relate all of my reasons for this statement, I shall trouble you with a few. I am not so foolish as to believe that I possess all the qualities that debating teaches, but it has pointed them out to me and demonstrated their inestimable value not only in my effort to be a citizen but a lawyer also: ease; poise; self-control; courtesy; ability to stand on one's feet before people and think and speak clearly, concisely, accurately, cogently; a knowledge of human nature; the value of diligent and thorough preparation not only of your own side but of the other

fellow's; an appreciation of the fact that there are generally two sides to a question and that it is a great mistake to be cocksure that you are always "on the side of the right." I must confess that often, after a debate, into which I entered believing myself "on the side of the right" and the exclusive apostle of justice, I found the other team were not such insincere, "glibly" talking assignees and had some "right" in their case. I have strong convictions that American college debating has made me a better citizen and lawyer.

Before closing, I want further to expose myself to the elements by giving you my reasons why "college debates do not evoke the interest of the general student body nor do they call out the talents of the real college leaders." To one group of undergraduates the studious preparation necessary for debating "smacks too much of the curriculum," and the average student pays no more attention to the curriculum than is required to attain a "gentleman's grade." Consequently anything calling for very diligent, thorough study is taboo. To another group, debating interferes too much with many undergraduates' ideas of a college as a social clearing-house and country club. Again, the "rocking-chair fleet" is sufficient to anchor many who might otherwise hazard the debating tempests. Then there are the countless hosts who have never debated or attended a debate and consequently have false notions about it. Finally, there are those who often before they left "prep school" have set their eyes on the traditional college "honors" regardless of what college activities and opportunities possess the most value to them as future citizens.

LINCOLN L. KELLOGG.

Oneonta, New York.

A MAGNIFICENT EXPERIMENT

IN my message last Sunday it was my pleasure to read your entirely reasonable interpretation of the recent poll upon the Eighteenth Amendment, and to emphasize your judgment as expressed in the editorial of September 27, that Nation-wide prohibition is a magnificent and unique experiment, achieving most favorable results. As casting light upon the situation in an ordinary town, and in the center of the country, I present this interesting fact. Formerly this town was, like all small towns, saloon-ridden. This summer we have had three "big events." A Fourth of July celebration brought five thousand people here; a circus day, another five thousand; and our county fair has had an attendance of twenty-five thousand. In all there was but one arrest for intoxication, and that on circus day. Our county fair has closed without even one breach of the peace. The splendid American crowds,

full of happiness, enjoyed the event without the former disturbances due to the presence of the saloon and the sale of liquor, and the testimony seems unanimous that the conditions now enjoyed are here to stay.

S. M. CAMPBELL.

Macon, Missouri.

"DEAF" OR "DEAF-MUTE"?

THE Outlook for September 27 contains an excellent illustration of the Gallaudet statue on the grounds of Gallaudet College for the Deaf at Washington, D. C. The explanatory foot-note accompanying the illustration is in error when it says that Gallaudet College "is the only college which gives degrees to deaf-mutes." Gallaudet College is the only college in which the methods of instruction are adapted to meet the special requirements of the deaf. Any college or university will give degrees to the deaf otherwise qualified and several have done so, among them Yale, Washington University, and the University of California.

The Gallaudet of the statue at Washington is known as the "founder of deaf-mute education in America." His first school at Hartford was known as "The American Asylum for the Deaf and Dumb." It was located on "Asylum" street. So much for the corporate title and the public view-point of the education of the deaf at its beginning. The word "Asylum" soon gained the disfavor of educators of the deaf and of the educated deaf. Schools of the era following the one at Hartford took as their corporate title "Institution for the Education of the Deaf and Dumb." Later on the teaching of speech to the deaf began to be stressed. The fact that every deaf child otherwise normal could learn to talk more or less made the word "dumb" appear inappropriate, so schools began to take the title "Institution for the Deaf." The most up-to-date title is "School for the Deaf." Gallaudet College originally was "The National Deaf-Mute College." About thirty years ago the alumni of the college inaugurated a movement which culminated in a change to the name it now bears.

In so far as the general public is concerned, the terms "mute," "deaf-mute," and "deaf and dumb" are practically synonymous; but among the instructors of the deaf, the educated deaf, and well-informed people the words "mute," "deaf-mute," and "dumb" are looked upon with disfavor and their use is discouraged when referring to the pupils and graduates of schools for the deaf.

Following the line of least resistance, the deaf young man or woman seeking a higher education will go to Gallaudet College, where the method of instruction is designed to circumvent the hearing defect. Some have gone directly to colleges and universities for the hearing

and have graduated. A few have entered universities for the hearing after graduating from Gallaudet. A talented architect residing in St. Louis is a graduate of Gallaudet School for the Deaf, St. Louis; of Gallaudet College for the Deaf, Washington; and of Washington University, St. Louis. I do not believe there is a college or university in existence where one who is a "deaf-mute," "deaf-and-dumb," or "deaf" will be denied a degree provided he is otherwise qualified.

Gallaudet College does not confine its degrees to the deaf. Persons not deaf, among them graduates of various State universities, of Yale, Harvard, Amherst, Trinity and many others, who have made notable contributions to the department of education of the deaf have been the recipients of degrees from Gallaudet—among them the late Dr. Alexander Graham Bell.

JAMES H. CLOUD.

A "FAKE" REVIVED

RECENTLY in an impassioned speech upon the floor of Congress reference was made to "the burning of witches" in Salem, and within a few months something of the same sort has repeatedly appeared in magazines of supposed intelligence and of such high grade as the late "Unpopular Review"—still later the "Unpartisan Review." People with any familiarity with New England history know that the victims of the lamentable witchcraft delusion, nineteen in number, were put to death in the usual official manner of the time—that is, by hanging—though one was under English law pressed to death with heavy weights, not because he was accused of practicing the black art but because he refused to plead, his motive perhaps being that his family would thus save his property from forfeiture. It is reasonable to believe that in England the same fate would have befallen him under the same conditions. The persistence with which this idea prevails that the Salem victims suffered at the stake suggests the ease with which historic myths get started and the difficulty of uprooting them—especially when they are damaging to the good name of the Puritan clergy of New England.

The foregoing considerations are submitted because another New England myth seems in a fair way of general acceptance, in spite of its absurdity. Last year the Houghton Mifflin Company published a book by Mary Rogers Bangs entitled "Old Cape Cod: The Land; the Men; the Sea," on pages 78-9 of which occurs the following statement in apparently the best of faith:

Quakers held parsons in light esteem, yet not one of the Cape clergy could have conceived such a plan as Cotton Mather, in 1682, spread before Higginson of Salem. "There be now at sea a skipper," wrote he, "which has aboard a hundred or more of ye heretics and malignants called Qua-

kers, with William Penn, who is ye scamp at ye head of them." Mather went on to recount that secret orders had gone out to waylay the ship "as near ye coast of Codde as may be and make captives of ye Penn and his ungodly crew, so that ye Lord may be glorified, and not mocked on ye soil of this new country with ye heathen worship of these people." Then the astounding proposition: "Much spoil can be made by selling ye whole lot to Barbadoes, where slaves fetch good prices in rumme and sugar. We shall not only do ye Lord great service by punishing the Wicked, but shall make gayne for his ministers and people." The precious scheme somehow miscarried, the threatened engagement off "Codde" did not take place, and Philadelphia was founded.

Now the very archaisms of this posteros letter, so laboriously wrought, would arouse suspicion, the effort to imitate a seventeenth-century style of English being fairly apparent. Moreover, if such a letter really existed, the almost universal disposition to deride the Puritan clergy would have long since made its phrases almost household words among the present generation, and it would not have been left to be drawn from its obscurity by a rather negligible book in 1920. From the point of view of the modern unregenerate, the "letter" with its delicious suggestions of "rumme and sugar" and "gayne" for the clergy is altogether "too good to be true." Furthermore, it is a fair supposition that if Cotton Mather had heard that a ship-load of Quakers was on its way to such a distant point as what was to be Philadelphia, he would have thanked God that such ill-disposed persons were not headed for Boston—to insist on being hanged. At any rate, he certainly would not have suggested the selling into slavery of so influential a person as William Penn, the personal friend of the Duke of York, brother to King Charles and heir apparent to the throne itself.

As a matter of fact the "letter" went the rounds of the American newspaper press in 1891, and, strange to say, actually imposed upon persons of intelligence. The Rev. Dr. Heber Newton read it from his pulpit as genuine, and the editor of the Albany "Evening Times," T. C. Callicot, could not make up his mind to reject it as a forgery. But the New York "Sun," which justly described it "as the work of a humorist rather than of a deliberate and mercenary impostor," in its issue of June 19, 1891, in a half-column editorial, gave the history of this engaging fraud on the evidence of an unnamed Easton, Pennsylvania, correspondent.

It first appeared in the Easton "Argus" of April 28, 1870, and was the concoction of its editor, James F. Shunk, son of a one-time Governor of Pennsylvania and son-in-law of Judge Jeremiah S. Black. It was introduced as having been discovered by "Mr. Judkins, librarian of the Massachusetts Historical Society," among the papers "of the late

Robert Greenleaf, of Malden," neither of which persons ever existed, as was speedily discovered by Massachusetts investigators—or perhaps it would be more exact to say that the Massachusetts Historical Society never had a librarian named Judkins, and no Robert Greenleaf had ever been heard of in Malden.

But the full humor of the "letter" can be best exhibited by a transcription of Mr. Shunk's effort as originally printed, premising that the text that went the rounds in 1891 was slightly abridged, a few lines of the 1870 version being omitted:

September ye 15th, 1682.
To ye aged and beloved Mr. John Higginson:

There be now at sea a shippe (for our friend Mr. Esaias Holcroft of London did advise me by the last packet that it wolde sail some time in August) called ye Welcome, R. Greenaway, master, which has aboard an hundred or more of ye heretics and malignants called Quakers, with W. Penne, who is ye Chief Scampe at ye hedde of them. Ye General Court has accordingly given secret orders to Master Malachi Huxett of ye brig Porposse to waylaye ye said Welcome styllie as near ye coast of Codde as may be and make captive ye said Penne and his ungodlie crewe so that ye Lord may be glorified and not mocked on ye soil of this new countrie with ye heathen worshippe of these people. Much spoyle can be made by selling ye whole lotte to Barbadoes, where slaves fetch good prices in rumme and sugar, and we shall not only do ye Lord great service by punishing ye wicked, but we shall make great gayne for his ministers and people. Master Huxett feels hopefull and will set down the newes he brings when his shippe comes back.

Yours in ye bowells of Christ,
COTTON MATHER.

And to think that this sort of thing should be treated as history!

FREDERICK J. SHEPARD.
Buffalo, New York.

JUST THIS ONCE WE PUT A WANT AD IN THE MAIL BAG

In Jail, Deland, Florida.

The Outlook Company:

If you learn of lawyers who are honest and competent, and are hunting work, I want 5.
R.

[This is the kind of letter which editors like to receive. It is terse and yet it covers the situation completely. We are sure that this correspondent, if he wanted to criticise an editorial, would not take three times the space required by that editorial to do it in. If all our correspondents had a like faculty of brevity, the Mail Bag could hold a dozen subjects where now it holds one. And we would have more room for editorial replies like this one, which is twice as long as the letter which called it forth. —The Editors.]

Dutton's Books for Children

The Bird-Nest Boarding House

By VERBENA REED

With illustrations by OLIVER HERFORD

Grown-ups' eyes are farther from the grass than children's, so they may be surprised to learn that Daddy Long-Legs was the Widow Grasshopper's table boarder. But they will know better than the youngsters how deliciously witty these drawings are. \$2.50

The Pinafore Pooket Story Book

By MIRIAM CLARK POTTER

Whimsical fancies to read to the five-year-old who is too old for nursery rhymes and too young to read. Illustrations by Sophia Balcom. \$2.00

Karl the Elephant

By DHAN GOPAL MUKERJI

The story of how a boy and an elephant worked and grew up together. \$2.00

Little Lucia

By MABEL L. ROBINSON

Author of "Dr. Tam o' Shanter." A capital story for little girls, sound and true, as well as entertaining. \$2.00

Elizabeth Ann's Delight

By MAUD DOWSON

A genuine fairy tale of delight for any child who plays in a garden. \$2.00

Boys' Book of Physics

By CHARLES RAMSAY CLARKE

Directions for simple experiments with home-made apparatus. Illustrated. \$2.50

Sing a Song of Sleepy Head

By JAMES W. FOLEY

Author of "Boys and Girls," etc. \$2.00

The Shadow Witch

By GERTRUDE CROWFIELD

A companion to "The Princess White Flame" and equally fine in spirit. \$2.00

Henny and Penny

By BERTHA PARKER HALL

The adventures of twin girls and their brother. Illustrated with illustrations by Ruth Clements Farrell. \$1.50

CONTRIBUTORS' GALLERY

EVERETT PEPPER-BELL WHEELER, lawyer and author, was born in New York in 1840. He was educated at the College of the City of New York, and in 1859 received his A.M. degree from there and his LL.B. from Harvard University. He has

been prominent in various local and National Civil Service Commissions, a member of the New York Board of Education, and Vice-President of the American Bar Association. He is the author of "Daniel Webster, Expounder of the Constitution," "Sixty Years of American Life," "A Lawyer's Study of the Bible," etc.

THOMAS MASSON is one of the best known of American critics and essayists. He has been literary and managing editor of "Life" since 1893, and is the author of several volumes, including "A Bachelor's Baby, and Some Grown-ups," "A Corner in Women," and "The Best Stories in the World." He has edited many collections, such as "Humorous Masterpieces of American Literature," "Humor of Love in Verse," and "Best Short Stories." His home is in Glen Ridge, New Jersey.

JOHN BALLARD is a newspaper and magazine writer and a native of Wisconsin. He did newspaper work in that State for several years and was later a correspondent in the Northwest for New York and Chicago papers. While engaged in that capacity he began to make a study of the radicalism that has steadily gained strength in the granger States, and from 1920 to 1922 he was engaged in making investigations and writing on the subject for the American Constitution League of Wisconsin. Mr. Ballard does not view radicalism from the standpoint of either a politician or a professional economist, for he is neither one nor the other. His chosen work is that of a writer on outdoor life, and he is a regular contributor to the "Outers-Recreation Magazine" of Chicago.

KINGSLEY MOSES, who has made an enviable name for himself as an industrial writer, is a graduate of Dartmouth College. He was the only American present in Tripoli during the Italo-Arab hostilities of 1919 and the consequent negotiations for peace of that spring and summer. He traveled considerably over a thousand miles in Libya; and to him, as probably to no one else, were confided the Arab ideals of autonomy.

Community Heating is Logical

SUPPOSE each city family had to manufacture gas and electricity and pump water! Ridiculous?—Yes. But, no more so than our present system of buying coal at retail, having a "heater" for each apartment or house, every man tending his own little fire and wheeling out his own ashes.

The most logical way is to heat groups of buildings from a Central Heating Plant, distributing the steam through underground mains, buying it as needed, by meter.

We have assisted many hundreds of communities, institutions, industrial plants, and other groups of buildings to the enjoyment of the advantages of Adsko Community Heating.

They have ample heat on tap at each radiator 24 hours a day, as easily controlled by an Adsko Graduated Packless Radiator Valve, as water at a faucet.

We have prepared an interesting booklet on Adsko Community Heating; ask for Bulletin No. 20-O. Bulletin No. 158-O describes Adsko Heating—the coal-saving system—for individual buildings with any make of boiler.

LYMAN ABBOTT

1835-1922

The Outlook

NOVEMBER 1, 1922

LYMAN ABBOTT, FOR FORTY-SIX YEARS EDITOR-IN-CHIEF
OF THIS JOURNAL, DIED IN NEW YORK CITY ON
OCTOBER 22, IN THE EIGHTY-SEVENTH YEAR OF HIS AGE

HE looked forward to this day without dread; he even looked for it with curiosity; for he thought of it as the beginning of a great adventure, as a time of falling asleep and waking to find himself at home, as a passage across the threshold to another room. He had fought a good fight—he was willing to trust his comrades to continue the battle. He had finished his course—he was willing to trust his message to those who would carry it on. He had kept the faith—and he was willing to trust that the faith would still be guarded.

Many have faith like his in God; but not many have such faith as his in men. In no respect did he show this faith more clearly than in the conduct of this journal. The trust that he reposed in his associates remains to-day their greatest heritage from him.

Because he trusted his associates, he laid upon their shoulders during the latter years of his life a steadily increasing responsibility for editorial decisions. He did this, not because he sought relief from labor, but because he saw that only in this way could that labor be made enduring. He did this freely and happily because he knew that his associates shared his convictions concerning the fundamental principles of life.

These principles he found supremely expressed in Jesus of Nazareth. Every problem of conduct, whether involving individual action or National policy, he referred to those principles for solution. He became and remained, as he said, the student of one Book and the follower of one Man.

Life he saw as a struggle, and the end of that struggle was life. Conflict he neither sought nor

avoided, but when he found himself in the midst of battle he fought for the peace of victory. This is the peace which he sought in his own life, in the life of his own land, and in the development of humankind.

Believing in the peace of victory, he found natural comrades in those who, like himself, were doers as well as preachers of the Word. So in his earlier years he fought side by side with Beecher; so in his later years he gave his trust and support to Roosevelt.

He was indifferent to partisan and factional labels. If consistency meant stubborn adherence to what he found to be false, he was willing to be inconsistent. He kept his mind always open to new evidence and was unafraid in the search for truth. He could change his opinions without fear because he knew his convictions were unchangeable.

The power which Lyman Abbott exercised through this journal lay not chiefly in what he wrote, though the simplicity of his style was the most fitting medium for the clarity of his thought. Nor did his power lie chiefly in the counsel he gave, though that was invariably wise. His power lay chiefly in his life. He not only preached justice, mercy, and loyalty to the eternal; he was just, merciful, and loyal in all that he did and all that he was.

That power is a living force to-day. Many times before this he has gone, as now again he has gone—into another room. We are not reconciled to the loss of the sound of his voice; we cannot so soon accustom ourselves to the thought that we shall not see him again; but we shall not be deprived of the power that he imparted, for that is the power of his life.

THE WEEK

THIS issue of The Outlook was partly on the press when word came of the death of Lyman Abbott.

Those who knew the Editor-in-Chief of The Outlook will understand why his colleagues felt that he would not wish any departure from the normal course of publication.

For this reason, we shall wait until next week to give to his friends, known and unknown, a record of his life and of the tributes which marked his passing.

THE BRITISH POLITICAL CRISIS

HOW suddenly the political kaleidoscope may turn in Great Britain is illustrated by the fact that a cable despatch from London printed in New York on October 19 bore the heading "Lloyd George Sure of Caucus Victory," while in the same paper of October 20 we find the title "Lloyd George Steps Out."

The end of the Coalition formed in 1914 was certain from the hour when Mr. Bonar Law at the Carlton Club threw in his lot with that wing of the Conservative Party which is tired of political union with the Liberals and the leadership of Lloyd George, and wants to fight on the old party lines again. Mr. Bonar Law has faithfully worked with Lloyd George to carry on sound government, and only a week or so before the action at the Carlton Club approved Lloyd George's action in making a firm stand on the Asian side of the Straits.

This is one of many indications that the death of the Coalition is directly due, not to Near East questions, but to those of British internal politics, and largely that of the balance between the old parties and the Labor Party.

A political campaign moves quickly in England. Mr. Lloyd George, after the Conservatives at the Carlton Club had voted by 186 to 87 adversely as to the maintenance of the Coalition, went at once to the King and, as is the custom, put his resignation in the King's hands—"kissed hands" is the traditional phrase. The King summoned Andrew Bonar Law and asked him to form a new Cabinet. Then Bonar Law was formally chosen party leader of the Conservatives. On October 24 Bonar Law announced his Ministry; its most important members are:

Lord President of the Council, Marquis of Salisbury; Lord High Chancellor, Viscount Cave; Chancellor of the Exchequer, Stanley Baldwin; Secretary for Home Affairs, William C. Bridgeman; Secretary for Foreign Affairs, Marquis Curzon; Secretary for the Colonies, the Duke of Devonshire; Secretary for India, Viscount

Peel; Secretary for War, the Earl of Derby.

The King will dissolve Parliament, warrants for new elections will be issued, the campaign will be fought quickly and hotly, and presumably this great appeal to the country will be heard, decided, and all over in a month,

International
BONAR LAW, GREAT BRITAIN'S NEW PREMIER

whereas our election campaign has been going on all summer and most of the fall.

Lloyd George is an old campaigner. With his usual promptitude, he began his fight before the formal preliminaries had been concluded. The day after he resigned he declared to a great crowd: "I am a free man. The burden is off my shoulders. But the sword is in my hand!" And in what we would call a car tail-end speech he said at Bedford: "I am glad to find no end of great hearts. It is with these hearts that I

am going into battle to win. I come before you as one of the great unemployed."

Arrived at Leeds, he made a long and vigorous speech, the keynote of which was, "I stand for the people," based on his declaration that "the banner of party strife has been raised in the Carlton Club," and that the question is one between the will of the people and the success of party. He defended the work of his Government in war and peace, and put the case colloquially when he said: "They say I was a very good war Premier, but the war is over now. I was like a doctor who was good in life-and-death cases, but couldn't cure a headache. I haven't got the proper bedside manner. When one cuts expenses it brings in no votes, yet as the result of our financial policy the sovereign is beginning to look the dollar in the face."

The political situation is made complex by the fact that some influential Conservative leaders, such as Lord Balfour, Lord Birkenhead, Austen Chamberlain, and Sir Robert Horne, are still supposed to desire the continuance of the Coalition, while, on the other hand, many Liberals of the Asquith stripe are opposed to it. A London correspondent of the New York "Herald" puts it this way:

Mr. Lloyd George, who during the war split the Liberal party into two sections, has now done the same thing by the Unionist party. Thus, instead of the two original parties, there now are four, with the Labor party making the fifth. There no longer will be an Irish party, which for so many years during the great Home Rule agitation was able to dominate the Westminster Parliament by throwing its seventy members to whichever side it chose.

THE TURK IN EUROPE

THE formal re-entry of the Turk into Constantinople will soon take place. Already the symbol of Turkish rule has been raised in Constantinople. Refet Pasha passed through Constantinople on his way to Eastern Thrace, where he is to act as the civil commissioner for the Kemalist Government there to be established. The sight in Constantinople

International
DR. W. W. YEN, PREMIER OF CHINA
LAST JUNE

when Refet made his triumphal entry on October 19 was extraordinary. The Turks of the great city gave him a foretaste of the reception they are planning for Kemal.

Refet rode through wildly cheering masses across the famous bridge from Galata to Stamboul. He was accompanied by the man who is to be Governor of Adrianople, the Turks' sacred city, ravished from them in the Balkan War, and now to be humbly returned. With him were gorgeously clad officials and a detachment of the Nationalist army. There were green arches in honor of Kemal's victories, red flags with the Star and Crescent and the green war flag of the Prophet waved, while Turkish bands played their independence march, sheep were slaughtered as a sacrifice along the line in Oriental style, and Greeks, Armenians, and Jews hid away or wore the Moslem fez. Meanwhile, from Adrianople and Eastern Thrace a vast mass of fleeing Christians and Jews (350,000 is one estimate) has fled westward rather than accept Turkish rule.

All this took place under the supervision of Allied forces still in possession; but when Kemal comes, as he will soon, there will be no Allied forces in Constantinople, and if the Christian and Jewish quarters are spared it will be by Kemal's orders. It should be remembered that the humiliation which the Western or Christian world is undergoing in seeing Turkey now dominant in Constantinople and dominant in Eastern Thrace, and alone of Germany's allies better off in its European possessions than it was before the war broke out in 1914—this humiliation, we say, was not, as many people suppose, a consequence

of Kemal's great victory, for the great Allies had agreed to these very things months before Kemal swept the Greeks through Asia Minor like chaff before the storm. Perhaps the settlement is the best that the general condition of the Near East and its complicated problems makes possible, but it certainly is not an inspiring or enjoyable situation.

CHINA AGAIN IN FERMENT

CHINA's development, it has often been said, depends upon internal peace. It depends rather upon order and justice. And when there is corruption combined with governmental feebleness it is impossible to secure order and justice without a disturbance of the peace. If China is to take her place by the side of other Powers whose authority is recognized and whose rights are acknowledged, she must find some way of establishing a really sovereign government. At present China has no government which other governments can hold responsible, and as long as her provinces are subject to the control of their military governors, known as tuchuns, there can be no China worthy of the name of nation. Some of the most enlightened leaders in China recognize this fact, and the disturbances in China during the past few months have been in part the result of attempts to establish a central authority and secure Chinese unification.

Yet more and more it becomes evident that the reconstruction of China must await the utter bankruptcy of militarism. The story of the fight for republican stability since the Chinese crisis of 1917 dividing the twenty-one provinces into a "North" and a "South" has been that of an ever-narrowing circle of military leaders contending for the control of Peking for financial reasons. The manipulation of the Central Government paid dividends to the winner, while the unsuccessful contenders for place have been steadily eliminated.

By last spring the power north of the Yangtze River had gravitated into the hands of three outstanding figures—Tsao Kun with his then lieutenant, Wu Pei-fu, opposing Chang Tso-lin in his descent upon China's capital from Manchuria. To-day Tsao remains as tuchun in his bailiwick of Chihli Province overshadowed by Wu and stripped of his primary military and thus political importance. Wu Pei-fu's only rival, Chang Tso-lin, retreating after his defeat to his Manchurian kingdom, has completely reorganized his forces. The consensus of opinion in China is that Chang to-day constitutes a greater menace than ever before to his opponents in Central China.

With China in the critical position she

(C) Harris & Ewing
DR. WANG CHUNG-HUI, PREMIER OF CHINA
SINCE JULY

occupies at this time, the position of the Southern leaders ousted from Canton in refusing to accept office in the reorganization of Peking's Government, under the acting presidency of Li Yuan-hung, at first sight seems playing selfish politics. Why does not Sun Yat-sen, the driving force in China's growing democratic nationalism, co-operate without hesitancy?

Far from being eliminated as a political factor in China's politics, Sun remains in Shanghai from the deep conviction that until the outcome of the conflict brewing in North China no man can do anything to help Peking out of the hole it is in with any lasting results for China's sorely tried republicanism. So long as Peking remains in the grip of contending armies, the possibility of taking hold of China's actual bankruptcy is dubious. The position of Sun Yat-sen's party is that the millstone of military politics remains around the neck of any government now taking office. Until events take that millstone off, the chances of responsible government succeeding in the task of republican reconstruction are held to be slim.

As Chang Tso-lin continues to re-establish his power in Manchuria, the position of the other super-tuchun of China, Wu Pei-fu, becomes more and more threatened. Only the lack of funds prevents Wu from attacking his rival to-day. In the meantime Sun, though driven from his capital, retains the loyalty of his main army. His forces have now turned on the neighboring province of Fukhien, and have taken the capital. A reconstitution of the Southern Government in Foochow is in the

offing, with a general realignment of interests. Wu is likely to be crushed by a new attack from Manchuria combined with the defection of some of his allies. The result will probably be to leave supreme in North China a single military leader against whom no liberal civil leadership would avail. But after a period of inevitable reaction, the grind of destiny will bring into power those men, both North and South, who are determined to build in China an enduring government of the people, by the people, and for the people. The next few months are likely to try the souls of those who believe in a republican China. But until the nightmare of militarism has worn itself out there is little real place for democratic government in Peking, a financial house-cleaning, and the necessary material support from the Powers.

CHINESE CHRISTIANS IN POLITICS

It is perhaps something more than a coincidence that the most effective political leadership at Peking and the most effective military leadership in Wu Pei-fu's army have both been in the hands of Chinese Christians.

In the enormous mass of the Chinese population Christians constitute a very small proportion, but their place in Chinese leadership has been of very great importance.

In June, upon the triumph of Wu Pei-fu, there came into office China's first Christian Premier, Dr. W. W. Yen. Like many other Chinese who have represented China in her foreign relations, Dr. Yen had a foreign training. He was graduated at St. John's University (Episcopalian) in Shanghai and studied in the United States at the University of Virginia, where he attained the scholarly distinction of membership in the Phi Beta Kappa. He returned to China to take a professorship in St. John's University. The famous Chinese diplomat Wu Ting-fang was the first to induce him to go into politics. At the outbreak of the war Dr. Yen was Minister to both Germany and Denmark, and he stayed in Berlin until China entered the war, when he withdrew to Copenhagen. He was Minister of Foreign Affairs in China for two or three years, until he became Premier.

Having accepted the Premiership only temporarily, Dr. Yen was succeeded by another Christian Chinese in the Premiership, Dr. C. H. Wang. Like Dr. Yen, Dr. Wang received a foreign training. He is a graduate of Yale and has specialized in law. He has been China's Chief Justice, and while Chief Justice was a delegate of China to the Arma-

GENERAL FENG

ment Conference at Washington. In manner Dr. Wang is mild and gentle, but he made upon those who met him in Washington during that Conference an impression that could only be made by a firm and strong personality. No one meeting Dr. Wang and knowing his record can doubt his patriotism, or his public spirit, or his disinterested purpose to serve his people. In spite of his helplessness in the face of the military situation, to have such a man as that in public office in China, and particularly in office as Prime Minister, is of real promise for China's future.

CHINESE CHRISTIANS IN WAR

WHILE these men of Christian faith and high character have been in political office, the most effective military leadership in China has undoubtedly been that of another Christian, General Feng Yu-hsiang. He has not only been the most effective general in war, but he has also been and is the Governor of Honan Province. He has been likened more than once to Oliver Cromwell, and his men to Cromwell's Ironsides.

General Feng's methods of fighting may revolutionize military operations in China—and revolutionize them for the better. A people of industry and thrift, who have long had reason to be disgusted with political corruption and

with militarism, the Chinese generally seem not to have much stomach for fighting. As we have had occasion to say before now, and as many of our readers need not to be told, until recently in so-called battles in China there has not been much bloodshed nor much determination for victory. The so-called battles have been largely maneuvers. When one force has maneuvered another force into a bad position, the general on the losing side has followed the example of the chess player and has usually yielded the game. "You win," says the defeated general; "we will drop this, and start a new campaign." At this point the victorious soldiers then begin their real operations. Unopposed and unhindered, they run amuck with fire and sword. They loot, destroy, kill, and torture. Their victims are the unarmed and pacifist population. This is the natural and practically inevitable fruit of pacifism. The result is a loss of life and an amount of suffering greatly exceeding even the worst involved in modern warfare. In the Chinese variety of battle the soldiers are safe; it is the defenseless civilian population, especially the women and children, who are the victims.

Feng has changed that. Feng's army does not slaughter the defenseless. It fights those who would slaughter the defenseless. General Feng himself is a Methodist convert, and about eighty per cent of his soldiers are said to be Christians, and of the officers all are Christians. According to information we have received, Feng regularly employs two evangelists to work among his troops at all times, and occasionally some of the leading missionary evangelists go for two or three weeks among the soldiers. When Feng's troops encamp, all evil women in the vicinity are immediately driven out. The officers meet regularly for Bible study in a sort of normal class; then in turn they hold Bible study classes with the soldiers. The spirit of Cromwell's Ironsides has seemed to reappear in Feng's camp. Like Cromwell's men, Feng's soldiers are relentless in battle. Without unduly idealizing the men of Feng's army, it is possible to regard them as a vast improvement over the Chinese soldiers who count cowardice a virtue and adorn it with atrocity.

If the Chinese can get the spirit of Yen and Wang into public office and the spirit of Feng into the army, they may make of their country a really great nation. They may create a force which will be equally unselfish in service and inexorable against exploitation. There is no greater libel that has ever been uttered against Christianity than that it is a religion of feebleness. On the con-

trary, it is a religion that, for the protection of the weak and the service of all, first creates and then harnesses power. It does not seem to us by chance that Christian influence seems to have introduced power into the public life of China.

THAT GOOD OLD GULF STREAM!

RUMORS seem to have been circulated all over the world that some evil-disposed corporations have laid hands upon the Gulf Stream, have been utilizing it to their own advantage, and have thereby put the world in a parlous condition. Happily, the fact seems to be that the good old Gulf Stream is still carrying on and is benefiting commerce and climate in the most benignant manner. The whole thing is an amusing illustration of the way in which a scientific hypothesis may be twisted into a note of alarm and terror. An eminent French scientist, Professor Berget, who is the Director of the Bureau of Oceanography in Paris, seems to have discussed the possible results that might come if the Gulf Stream were turned from its course, say, by completing "the railway that goes to sea" all the way from Florida to Cuba—than which nothing is less likely. Thereupon the newspaper sensationalists and headliners represented Professor Berget as declaring that terrible evils were about to befall the world because of what already had been done in Florida; Scotland, we believe, was to become a country of Polar ice; England was to have its temperature drop to forty degrees below zero, and it was to become impossible to grow crops in western Europe.

Our American scientists, and especially the officials of the United States Weather Bureau, immediately came to the defense of the Gulf Stream, and Europe is now safe. They declared that nothing had been done or was likely to be done which would shift the Gulf Stream, and that even if it were thrown out of its present channel it was more than doubtful whether the effect on Europe's weather would be what had been predicted. All sorts of other scientists and practical men came to the rescue also to show that nothing whatever had been done to call for alarm or sensation.

Finally, an amusing aspect of the discussion cropped up when it was asserted that the whole excitement had arisen from the efforts of various Florida boomers to show that their particular towns had the very best conceivable climate in the world because the Gulf Stream had very kindly moved over in their direction. Thereupon the whole discussion resolved itself into an inter-

esting but highly academic inquiry as to what might happen perhaps a few hundred centuries from now if the Gulf Stream should suddenly and unexpectedly move westward. In that case, say the learned men, it might be that a large part of Europe would become another "Siberian anticyclonic zone." Professor Berget sensibly remarks as to this, "Why be frightened by possibilities that are never likely to be transformed into probabilities?" But this of course was not headlined by the sensationalists.

FOR BETTER RACE RELATIONS

AN extensive report has been made by the Commission on Race Relations appointed by former Governor Lowden, of Illinois, to study the history and meaning of the race riot which took place in Chicago in 1919. As a result a formidable volume of 650 pages has been printed for the Commission by the University of Chicago Press.

If this volume dealt solely with the Chicago riots it might be of limited value, but it contains a large amount of matter bearing on the race question the country over. It should prove of high importance as material for study of the question anywhere in America. The recommendations made, former Governor Lowden declares, will, if acted upon, make a repetition of the tragedy of 1919 impossible. He particularly calls attention to the recommendation that permanent local commissions on race relations be created. As a proof of the value of this, he can well point to the work of the Chicago Commission. Its appointment was the Governor's first act after the riots and while the danger of recurrence was imminent. From the date of the appointment, confidence was restored and conditions rapidly improved. The Commission was composed of carefully selected representatives of both races; they worked without friction and agreed substantially on facts and on recommendations.

One interesting fact was that the minimum of friction between the races existed in Chicago in just that part of the city in which colored people have lived longest and in the largest numbers. It was the floating population of Negroes seeking work and the less intelligent white workers who thought that they might be driven out by a flood of Negro labor that were behind the ill feeling. Thus, when regrettable and causeless incidents occurred, the hatred behind the incidents led to the outbreak of savagery.

The sequence of events in this Chicago riot is typical of the way in which such bloodthirsty affairs spring up suddenly and as suddenly run wild. A white saloon-keeper died of heart trouble, but

some reckless reporter wrote that he had been killed by a Negro; that night white toughs fired on a group of Negroes; similar incidents followed, until not long before the riot two colored men were shot down absolutely without cause or reason except race hatred, and, so the Commission reports, policemen who saw the murders refused to make arrests. So hate and violence increased until one Sunday at a lake-front beach a young Negro, who had swum pushing a log before him over into the section of water supposed by an invisible line to be reserved for whites only, was stoned, let go his log, and was drowned. This was the event that started the reign of terror, and within a few days there were 38 deaths (15 of whites and 23 of Negroes) and 537 people were injured. In time order was restored, but too late to save lives of innocent people or homes from destruction.

It was perfectly evident to everybody that the work was, as the Governor said, the work of the worst element of both races. So the Governor's Commission set to work to study the question thoroughly and impartially. No fewer than fifty-nine recommendations are made, ranging from large questions, such as the causes of all race antagonism and racial intolerance, down to the suggestions that the word Negro should be spelled with a capital "N" and the word "nigger" should be avoided as a needless provocative. The recommendations are notable for their specific form and are addressed specifically in groups to all the municipal boards, to municipal and State officials, to the courts, and to the public at large. We commend this study of a troublesome and serious question to all who wish to see the relations of the white and colored races improved.

THE COMING ELECTION

IT will be somewhat difficult to disentangle from the results of the coming election on November 7 the settlement of any National issue. Most of the elections of Senators, Representatives in Congress, and Governors will be determined to a large extent by local and personal conditions. There are, however, two important National questions upon which the vote will throw at least some light—the question of prohibition, and the question as to whether the country is on the whole satisfied with the general course of the present Administration in Washington.

It may be set down as an almost invariable political law that mid-Administration elections are usually unfavor-

ble. All Presidents are apt to fall short of what is expected of them during their first year and a half of office. Every time the party of opposition returns to power its adherents expect its Presidential nominee to bring about a political millennium. This was so when Mr. Wilson was elected; it will prove to be so in the case of Mr. Harding, and especially because he was elected by such an overwhelming and unprecedented majority. We may therefore fully expect to find partisan Democratic papers on November 8 pointing out that Mr. Harding and all his ways and works have been repudiated; and equally we may find partisan Republican papers proving how astonishing it is that so many Democrats who voted for him in 1920 have stayed by him. We do not think that mid-Administration elections are very significant thermometers regarding the political temperature produced by Presidential policies. The real test in this respect will come two years from now.

More decisive conclusions may be drawn from the vote on the prohibition question. In Ohio there will be a popular referendum on the modification of the State liquor law by raising the legal alcoholic content of beverages. The "Wets" thus propose to relieve State officers from any responsibility in the enforcement of the Volstead Act. If the proposal is carried, it can have no other effect than registering the sentiment of the majority of the people of Ohio upon the Prohibition Amendment and the Volstead Law; for Federal officers will still possess the same authority that they possessed before. As a means, however, of registering public opinion the proposal has been shrewdly drawn by those who wish to modify or weaken the Prohibition Amendment, and the result will be significant. In New Jersey the issue is very clear cut. Senator Frelinghuysen is running for re-election as an avowed supporter of the Prohibition Amendment and the Volstead Enforcement Act; Governor Edwards is running against him for the Senatorship in avowed opposition to prohibition in all its phases. If Senator Frelinghuysen should win, it would be reasonable to make the deduction that the sentiment on the Atlantic seaboard is favorable to prohibition. In California Mr. Richardson is running for the Governorship as a "Dry" candidate, and while his campaign turns to some extent upon questions of taxation and economy, if he should be elected it would be a distinct triumph for prohibition sentiment. In Nebraska Senator Hitchcock, the Democratic nominee to succeed himself in the United States Senate, has come out

openly as favoring prohibition, although he has heretofore been counted among the "Wets." It is said that Mr. Bryan is now supporting him, while in the past he has opposed him because of their differences on the liquor question. We look upon these various tests of prohibition sentiment with some concern. Now that the Amendment is a part of the Constitution it should be given a fair trial, and it cannot be given a fair trial with some of the country half-heartedly wet and some of the country half-heartedly dry.

In New York State the chief and perhaps the only contest of National interest is that between Governor Miller, the Republican nominee, and ex-Governor "Al" Smith, the Democratic nominee. Governor Miller has never made a special feature of his views on prohibition, but ex-Governor Smith is avowedly for "light wines and beer." The contest is, however, really between an extraordinarily magnetic personality, on the one hand, and a candidate who makes his appeal not through personal popularity, but through the highest standards of efficiency in political administration. If Governor Miller wins, it will be because the voters of New York have resisted the temptation to vote for the candidate whom they thoroughly like, in spite of his association with Tammany Hall, in order to place again in the Governor's chair a man who has shown as scrupulous honesty and as high standards of efficiency as perhaps have ever been displayed at Albany.

The Middle West, as Mr. Davenport's articles and some of the political correspondence elsewhere in this issue have pointed out, is seething with dissatisfaction about more economic and social conditions than can be catalogued and tabulated. In Wisconsin Senator La Follette and his organization are appealing to all those who for one reason or another dislike certain American traditions. Unfortunately, pro-Germanism in the worst sense of that word still flourishes in this country. In Iowa the candidacy of Colonel Brookhart for the Senatorship is the result of dissatisfaction of the farmers of the Middle West, who feel that everybody but themselves has had political consideration in the economic readjustment following the war.

In spite of the confusion of issues, we are inclined to think that the candidates and the platforms and the policies of the coming election are on the whole better, both morally and intellectually, than they might easily have been in such a period of complete disorganization as the world finds itself in at the present moment.

LLOYD GEORGE IN ECLIPSE

AS no man can live wholly unto himself, so no nation can change its government, or even its policies foreign or domestic, without affecting other nations. In one sense, whether Great Britain chooses to displace Lloyd George from the head of the British Government is no concern of ours. Certainly Americans have no right to ask the British people to consider their wishes in the matter. And yet decisions affecting the interests of America as well as of France, Russia, Italy, and Germany, the peoples of the Balkans, the Near East, and even possibly nations on the other side of the globe, will be affected by the fact that the man who came into power in Britain when Britain was fighting with but a fraction of her strength, turned the resources of the Empire over to the cause of victory, guided the nation not only through a military triumph but through a diplomatic triumph even more notable, virtually banished the Irish question as a plague of English politics and as an American bugbear, and diverted into normal channels of protest revolutionary sentiment that was making the labor problem an international one, has now been dismissed. In another sense, therefore, the change in the British Government is very much our concern. We are not responsible for it. We can do nothing about it. But we shall be undoubtedly affected by it.

Though the cause of Lloyd George's retirement as Prime Minister was chiefly, if not wholly, one of domestic politics, its effect will nowhere be felt more definitely than in Britain's foreign affairs.

On the wisdom of the change from the British point of view American comment is not likely to be helpful. In the first place, it is not likely to be adequately informed; an ignorant comment is likely to be irritating even to those whom it favors. Even English comment is not altogether clarifying. It is not by any means certain that the English people themselves understand what has been done or why it has been done. Some of the old-time distinctions between Liberals and Conservatives have been obliterated by the effects of the war and by the subsequent, if not wholly consequent, social and economic changes in England. Now that the Coalition has broken up, the old Liberal party seems still feeble, while a Government conducted, as Bonar Law's Government seems to be, by those who used to be recognized as the governing class seems somewhat incongruous at a time when

the old-fashioned Tory method of sitting on the safety valve is particularly dangerous.

If England ever needed liberal leadership she needs it now. Will the Labor Party force the Conservatives to become Liberals in self-defense? Will Lloyd George convince the people that they must choose between the Conservative Party and the Empire? Is there any other leader in England that can command a following that Lloyd George can? Britain, as it has been remarked, is sound financially but rotten economically. To restore economic health to a country cursed with unemployment as England is will require something more than a die-hard conservative or a politician with a captivating personality.

Whatever the cause of the overturn in Britain, the effect on Britain's foreign policies has already begun to be seen. Lloyd George's instability has irritated and disconcerted the statesmen of other countries, but especially those of France. In particular, the unreliability of his course in applying the terms of the Peace Treaty with Germany has been one of the important factors in the European situation. Sir Edward Carson has been quoted by the Oxford students who have recently visited America to debate with American students as describing the peace established by the Treaty of Versailles as "the peace which passeth all understanding." Certainly as applied by Lloyd George no one could be expected to understand it. Perhaps it is because he modified its terms by his own interpretation that he was the longest to last of the "Big Four" who negotiated it. Perhaps he had to seem uncertain to his foreign neighbors in order to keep his power at home. Perhaps the friction that has accompanied his negotiations ever since the Peace Treaty was signed was the inevitable product of England's economic turmoil and political instability. Nevertheless it is impossible to relieve Mr. Lloyd George of the responsibility for much that has happened in the fostering of misunderstanding over the enforcement of the German reparations, as well as the negotiations concerning the Near East. It is impossible for the foreign observer to ignore the fact that in Europe, except with Germany and her allies, Lloyd George's retirement has been greeted mainly with expressions of relief.

Nothing that has occurred in connection with the change in the British Government indicates, as far as we can see, any reason for a change in the attitude of America toward Europe. We have every reason for continuing to give our aid to those who are helpless, though those very helpless ones may have

ALASKA THE MISUNDERSTOOD

Do you know that Alaska is the most misunderstood territory on earth to-day? The popular notion that Alaska is composed entirely of blizzards, icebergs, and Eskimos is a mistake. Nearly one thousand miles north of where Alaska begins there are enormous wheat-fields, vegetable gardens, and scorching summer days when the mercury climbs to 90°. An Eskimo on the streets of Fairbanks would be a seven-day wonder. If you think that Alaska is still the land of the "rough-neck," it will interest you to know that a dinner-jacket is as useful in Alaska as in New York, and that modish fashions in dress reach Alaska almost as soon as they reach Boston and Philadelphia.

Sherman Rogers has just returned from Alaska, and in a series of articles soon to appear in *The Outlook* he punctures hundreds of our illusions about the Land of the Midnight Sun. He describes in full exactly what Alaska is and what Alaska needs. He describes its neglect by Congress, and outlines the remedy.

Mr. Rogers's report on Alaska is likely to excite much controversy. It is the story of billions of dollars' worth of potential wealth and opportunities of social and political development which at present lie fettered beneath crushing masses of administrative red tape.

neighbors whose obligation to them is more direct than ours. We have every reason to look with sympathy upon every effort towards liberty and true self-government, even when we have no means of giving material aid. But for intervention or for interference in the

general political or economic situation there seems to us to be no present necessity. The time may come when a more active policy than we are now pursuing may be effective; but if it is to be effective then, we must be careful not to do what would be ineffective now.

THE THIRD DEGREE

IF published reports are to be credited, legal officials and detectives in the New Brunswick murder case have furnished another example of the futility as well as the un-American cruelty of "third degree" methods. One person thus treated, not under arrest, already questioned repeatedly, was called out of his back door early in the evening by mysterious men, taken to a room where lawyers and detectives were waiting, and subjected to a rapid fire of interrogation that lasted for many hours and well into the early morning. He had no counsel, no friend to guard his interests. Under these circumstances the "grilling" was peculiarly an outrage. The result was apparently negligible. Another man, whom events proved to be untrustworthy, was supposed to know something he had not told. He was bullied and cross-questioned and threatened until he broke down nervously and accused of the murder a friend of his who, events showed, was innocent and who was discharged soon after his arrest. In this instance the result was a good deal worse than nothing.

There is such a thing as moral and mental as well as physical torture. It is repugnant to Anglo-Saxon ideas of personal liberty. There should be wide latitude offered to keen-witted investigation of crime, but the examination of accused or suspected persons should be conducted by a judicial officer under such circumstances that coercion and physical breaking down of the questioned person should be prevented. Scientists and lawyers agree that coerced confession, or testimony are frequently false, when admitted as evidence at all, they are regarded as the poorest kind of evidence.

Pride in the fine traditions of Anglo-Saxon law and judicial procedure should not lead us to ignore the merit in some other traditions. In respect to the examination of suspected persons or of reluctant witnesses, the French follow a method much superior to the "third degree" both in its efficiency and in its justice. Such examination is conducted openly by the judge who exercises great liberty in his questions but is restrained from excess not only by tradition and by the dignity of his office but by the very publicity of the procedure.

ON THE EVE OF ELECTION DAY

I—THE REVOLT AGAINST THE YANKEE

SPECIAL CORRESPONDENCE FROM WISCONSIN BY JOHN BALLARD

EVERY political ostrich in the country has his head in the sand, the while squeaking plaintively that the radical success in Wisconsin does not mean anything serious. It all depends on what one considers serious. The fact has to be faced that in the Wisconsin primary election of September 5 Socialism gained the greatest victory that it has ever won in American politics. That Robert M. La Follette received not merely a majority, but a smashing, an overwhelming majority, was due to the Milwaukee Socialist organization, incomparably the best disciplined and most efficient political machine in the United States.

It is, moreover, entirely possible that Congress will again be confronted with the necessity of deciding what to do with Victor Berger.

Last spring Berger went to the National Convention of his party and persuaded the delegates so to change the rules as to permit the Wisconsin branch to make no nomination for Senator, and thus leave the members free to vote for La Follette. Perhaps it was in his mind to show the country that the bulk of the La Follette followers were now willing to share the name as well as the principles of Socialism. The outcome has justified his opinion. The La Follette faction met the avowed Socialists more than half-way. If the November decision affirms the September verdict, the full strength developed by La Follette may be counted as Socialist strength.

The real, the true reason why Socialism has made such political gains in Wisconsin since 1917 is because the European War consolidated the spirit of revolt against the Yankee tradition. The same thing is true of the whole group of Mid-Western granger States that have been populated by Continental peasants. Probably there are not more people in Wisconsin than in some other States who feel that the United States is not a country, but there are more who openly say so and who will vote for a man whose words and acts mean substantially the same thing. The two groups that dominate an immense area and population—the German and the Scandinavian—have been brought into almost complete accord by the events of the war. Scandinavian Minnesota was as balky in war time as German Wisconsin. Half a dozen States need only the same quality of leadership that Wisconsin has to become articulate in the same way. The depeasantized peasants, as H. G. Wells calls them, have in their common hatred of Yankeeism a stronger bond of unity than ever existed before.

In Wisconsin, and particularly in Milwaukee, an absurd state of affairs has resulted from the attempt to ignore

the facts. There is no wholesome ventilation of the political premises and no exchange of views on the subject that is uppermost in everybody's mind but which nobody talks about. Nobody, that is to say, except Victor Berger, for the Socialist leader is almost alone in speaking plainly. It is perfectly well known that the so-called conservative German-language papers really wanted La Follette to win in the primary and want Berger to win in November; that business men who were publicly enrolled as contributors to anti-radical funds have privately given both their money and their votes to help the Socialists win; but that it is not considered polite to mention these facts.

Berger, always more open than La Follette or the German editors who support La Follette, occasionally speaks his mind. Two weeks before the primary election, in a remarkably shrewd analysis and forecast, he gave his reasons for expecting a Socialist victory, and of three causes contributing to the situation, political and economic and ethnic, he gave most consideration to the ethnic. Here is a part of the statement, published in his "Findings" on August 22:

Ethnic. The United States are not an ethnic unit. Our population is of mixed European descent.

Naturally, the inherited characteristics and instincts play a strong part in our lives, and even for that reason alone the American participation in the World War was a crime and a blunder. Our mission naturally should have been one of peace.

Wisconsin is overwhelmingly German and Scandinavian.

For some reason La Follette always has had a strong hold on the Scandinavian farmers—which surely was not lessened by the position he took against the war, because the Scandinavians, by a large majority, were not in favor of the war.

And undoubtedly La Follette has gained the sympathies of ninety-nine per cent of all the voters of German descent, who by instinct as much as by political and economic insight were opposed to our entrance into the World War.

Add to this that the Irish element during the war and since the war has also come to appreciate Robert M. La Follette as he had never been appreciated before. It will be a sorry Irishman, indeed, who would vote for the Rev. "Big Bill" Ganfield in preference to voting for Robert M. La Follette.

The reactionaries in their stupidity have made the war the issue in this election. They have boldly proclaimed that the nomination and election of Robert M. La Follette is to be considered a referendum on the war question.

They will get their "referendum."

Now, although the German Socialists may manifest a tender interest in the Irish before election, in their secret hearts they fear the Irish politician. To this day they do not know just how it came about that Dan Hoan, of true Hibernian breed, became the Socialist Mayor of this Teutonic town. Berger likes to avail himself of Irish political skill, but it is part of the Socialist programme to make an end of Irish and Anglo-American leadership. With scandalous disregard of this ambition, sundry Irishmen went out on September 5 and cleaned up the best county nominations in sight. Inasmuch as the Irish in Milwaukee are relatively about as numerous as Scotchmen in Hester Street, a sporting population would have been moved to admiration. Not so a community whose motto, under the direct primary, has become, "Everybody welch." The day after the primary, defeated candidates agitated the air with cries of rage and demands for an independent ticket. Berger was moved to sympathy for the defeated Republican candidates and said in his disgust:

Shaughnessy, McManus, Cary, Phelps—here is a real, smashing defeat of the "Huns" in Milwaukee County—in spite of Bob La Follette's Hunnish triumph. Let Bob make progressive laws; they, the genuine patriots, will "stand pat" on the pay check.

There were eight candidates for district attorney; Koenig, Bartelt, Graebner, Groelle, Juergens, *et al.*, and Shaughnessy beat the lot. Pat McManus beat "Heinie" Bulder for county treasurer, in spite of the fact that "Heinie" holds the office now and had, besides, presented the Milwaukee zoo with an elephant. This defeat exasperated the supporters of both the Kaiser and the zoo and caused Berger to remind his readers that the elephant is the source of commercial ivory. However, Berger is too subtle for his constituency.

Some Wisconsin editors have sent out word that the vote for La Follette should not be regarded as an indorsement of his war record—which is of course the Socialist war record also. The statement is absurd. In the primary campaign no issue was more fairly and squarely before the people than that very question.

However unpalatable the fact may be, a record of service in the war of 1917-18 is a liability and not an asset for a candidate in Wisconsin.

Almost every ex-service man who tried for a nomination in the primary was *spurio versunkt*. Paulsen, with the record of a first-class fighting man, tried for Secretary of State, and in a more direct way than anybody else challenged

public opinion on the subject of La Follette's war record. He told in his campaign speeches of having rounded up German prisoners in France who informed him that Bob La Follette's protests against the war were circulated behind the German battle-lines. The German districts of Wisconsin with one accord buried Paulsen under an avalanche of votes, and his opponent, Zimmermann, was nominated by a huge majority.

One soldier, by reason of his personal popularity, did succeed in winning the nomination for sheriff of Milwaukee County. That was Colonel Westfahl, commander of an artillery regiment of the Thirty-second Division. He lives in Victor Berger's Congressional district. Berger is much annoyed by the soldier's success, and is already at work trying to turn the Colonel's military record to account against him. He invites workmen to contemplate "that German drill master of Whitefish Bay" and sneers at Westfahl as "the victor of Veuve Cliquot and Château Lafitte." Colonel Westfahl has before him in November a battle of more doubtful issue than any he fought in France.

Mr. Puelicher, elected in October President of the American Bankers' Association, is one of the best-tempered but also one of the most persistent antagonists of revolutionary radicalism in Milwaukee. Yet analysis of the primary returns shows that the Socialists ob-

tained upwards of 2,000 votes in the neighborhood that constitutes Milwaukee's "gold coast." Business and professional people rolled up Berger's big vote, cast as a defiance to Congress two years ago, and they will vote for him again this year. In that connection Berger reminded his constituents a little while ago that his case in the Federal court is not yet finally disposed of and that he is still under heavy bail.

The Socialists had the labor vote before the European War. The impressive gains made since the war represent mainly the spread of radicalism among people who are not factory workers. It is, to be sure, a radicalism that pictures Socialism as an anti-Yankee rather than anti-capitalist movement, but it swallows a moderate programme of collectivism along with the rest. At no other time during the campaign was La Follette greeted with quite such stormy applause as when he declared, for the first time, for the public ownership of railways.

What is said here is as true of the State as a whole as of Milwaukee. There is nothing to be gained by blinking at the facts, and the facts are that the people of Wisconsin indorsed La Follette's war record, approved his tacit alliance with the Socialist Tammany of Milwaukee, and, in the circumstances, virtually approved Victor Berger's record by the same unprecedented vote. There was in truth only one contest, and that was between Republicans and So-

cialists. The Socialists won and have captured the Republican organization as completely as the Non-Partisan League did in North Dakota. How completely the Democratic party has been extinguished in Wisconsin is revealed by the returns. In two counties, Sauk and Shawano, the Democrats polled less than 100 votes—74 in Sauk and 19 in Shawano. In Washington, a strongly German county, they got 221 votes; in Outagamie, another German stronghold and formerly the home of many Democrats, 163; in Kenosha, a factory district, 672. The Democratic vote was small enough in 1920—the total for Governor then was 22,435—but in 1922 it has approached the vanishing point.

After the November election it will be disclosed in what manner the Socialists propose to utilize the new alignment in making their Milwaukee machine the nucleus of a strengthened National radical movement. Berger now stands accredited as the most successful political manipulator that Socialism has produced in America. If the new third party appears, it remains to be seen how a man of Berger's intense, passionate, and dominating personality will get along with La Follette, who is himself not without similar qualities and who as a political boss is celebrated for not permitting anybody else to decide what issues shall be discussed or how his organization shall be run.

Milwaukee, Wisconsin.

II—POLITICAL TOPSY-TURVYDOM IN OKLAHOMA

SPECIAL CORRESPONDENCE FROM AN OKLAHOMAN OBSERVER¹

O KLAHOMA is always interesting. The State got born that way when, almost twenty years ago, it adopted its 30,000-word Constitution. The Convention which framed that remarkable document, with characteristic modesty, assured itself that it was more capable of enlightened lawmaking than any Legislature which the new State was likely to elect within a decade or two, and proceeded ceremoniously to incorporate in the Constitution practically all of the legislation which it conceived a forward-looking commonwealth would need for that period. It was liberal in the quantity thus produced, as attested by the record-breaking length of the instrument, and not less so in the substance, according to the best school of Bryanism which was then ascendant in the councils of the dominant Democratic party.

It is noteworthy that, whereas the present Constitution is the longest recorded, the next one bids fair to be among the shortest, for, so far as sentiment is now formed and vocal, the experiment of embodying complete legislation in a constitution has either been

acknowledged a failure or, conceded to have been advisable if not necessary under the circumstances a couple of decades ago, the conditions no longer prompt such restrictions upon natural political development. This is the attitude of several of those still living in the State who as members of the first Constitutional Convention helped to frame the document now in force. These pioneers not only incorporated extensive legislation in the Constitution, but they made amendment so nearly impossible that only two changes which affect the substance of the document are said to have succeeded when submitted to the electorate. The issue of a new Constitution must soon be forward, since the twenty-year period, within which the question of calling a Constitutional Convention must be submitted to the people, will soon be up.

But the political situation in the present campaign is one of the most startling on the map. Nowhere is the shattering of old and rigid partisan alignments more complete. The Democratic party has dominated every election in the history of the State. That two years ago is nearest an exception, when a Republican Senator was sent to Washington and a Republican majority was returned to the lower house of the Legislature. But

the Democratic Governor and his administration still held the control of affairs. Now the Democratic party machinery has been captured by the farmer-labor group. Their leaders do not scruple to declare that they are the North Dakota Non-Partisan League under a different name. Just as the League captured the Republican party machinery in North Dakota, so they have taken over the Democratic machinery in Oklahoma.

They have done thorough work. Their candidate, formally nominated at their antecedent Convention, was tacitly accepted by the Democratic Convention, and the primaries triumphantly confirmed the choice. In this candidate's campaign the farmer-labor platform is being so openly woven into the conservative Democratic platform that lifelong and hereditary Democrats are alarmed to the point of the desertion of their party standards in multitudes. One prominent citizen remarks that his old dad warned him in his youth that if he ever voted for a Republican his dog would bite him when he returned home from the polls; he feels himself forced to put the old gentleman's prophecy to the test this year, for he joins the deserting multitude and will vote for the Republican candidate.

But the Democratic candidate chal-

¹The writer of this correspondence holds a position in the State which gives him a point of vantage for political observation which the ordinary citizen does not have and which at the same time precludes the publication of his name.—The Editors.

lenges his supporters to win over two farmers or laboring men formerly affiliated with the Republicans to replace each one of these deserters. His success is amazing in that all over the State it is conceded that he will command the Negro vote. Mark that among your freaks of a freakish year: a Democratic candidate, in a State constantly boasting of its Southern political maternity, appealing openly to Negro voters with resounding promises of service to them as a political group, and manifestly winning their allegiance! Contrariwise, the Republican candidate almost as openly poses as a Lily-White, the candidate of the Lily-Whites, and the champion of "white supremacy."

In an Oklahoma accommodation train

the other day a citizen of unmistakable Southern antecedents was overheard to remark, "Whatever else comes out of this election, it means that the South is henceforth independent in politics." His neighbor across the aisle responded in as unmistakable a Southern accent with a devout "Thank God for that!"

The Democratic candidate, repudiated openly and bitterly by many heretofore incorrigible Democrats, storms the State as a Democrat and in command of the Democratic partisan machinery. The Republican candidate soft-pedals his party doctrines everywhere, mumbles or declines to attempt pronouncing his party shibboleths, and has adopted as his campaign slogan, "Vote for the man." The banners over their respective cam-

paign headquarters in the capital city announce the one as the regular Democratic nominee, and studiously omit any reference to the party affiliation of the other. The Republican says nothing or tacitly repudiates the Federal Republican Administration, while the Democrat holds up to bitter scorn the administration of the State, which has been continuously Democratic since the State came into being.

Oklahoma may not be pointing out a clear course to new party organization but she is running true to type and her history in smashing precedents and traditions. The names are all that have been preserved of the old party organizations and principles in the present political campaign.

III—SOMETHING BREWING IN THE MIDDLE WEST

BY FREDERICK M. DAVENPORT

MEMBER OF THE SENATE OF THE STATE OF NEW YORK
PROFESSOR IN LAW AND POLITICAL SCIENCE AT HAMILTON COLLEGE

This is the last of a series of letters by Senator Davenport upon the political and economic situation in the Central States of America.—The Editors.

THE present Middle Western agitation is observable also in the States of Nebraska, Minnesota, North Dakota, and Wisconsin. Nebraska, like the battered and splattered political pioneer that she is, is normally viewed with arched eyebrows by the East. But she has a great body of husky American citizens in her midst nevertheless. In her rather violent struggles in the last generation for a better commonwealth and a better country she has practically lost all sense of party. Political machines mean nothing in her experienced young life. Republican and Democratic labels are essentially worthless as vote-getters. Issues, discontents, dries, wets, conservatives, liberals—you hear about these, but not about Republican or Democratic platforms or standard bearers.

The contest this year in Nebraska wages about the Governorship and the United States Senatorship. And unless all signs fail, she will pick Bryan for Governor and Howell for United States Senator. Bryan has the Democratic label, Howell the Republican. Bryan is a brother of the better known W. J. B., but he has a record of his own. He was long a City Commissioner of Lincoln, then Mayor, and is now City Commissioner again. He is committed to a municipal ownership and operation programme for cities, where necessary, just as Howell is. He is dry, as Howell is. He is backed by the more radical progressive faction and by the Non-Partisan Leaguers, just as Howell is. Randall, the Republican candidate for Governor, who is running against Bryan, is in natural surroundings and tendencies what they call in Nebraska a conservative. He is President of the State Bankers' Association, a man of high

character, known in kindly fashion as Uncle Charlie because he is always extending a friendly hand to somebody; prominent in the Methodist Church, which is the leading denomination in Nebraska, having sixty-five thousand members in the State and four or five hundred preachers. The Methodists were the boosters for his candidacy, and politically they usually don't go far wrong, at least on the character or the humanness of a public man. But Randall is a member of the State Senate, and has recently voted, in a brief period of conservative reaction which followed the war, for a drastic anti-picketing law; for a bill to take the party organization out of the direct primary regulations, leaving only the candidates for public office to be nominated there; for a banking statute which gives the State Banking Board power to refuse a charter wherever they like. These measures are up on referendum in the present campaign and seem not to be so popular as they looked when they passed the Legislature. So far as there is any odium attached to them, it falls on Randall particularly as a candidate for Governor. Bryan is against them all.

Howell, the Republican candidate for United States Senator, is pitted against the sitting Senator, Hitchcock, who has been much before the country as a staunch supporter of the Wilson programme of the League of Nations, and who is an able and aggressive public man. Probably a majority of the nominal Republicans, and particularly a majority of the women, of Nebraska favored the League of Nations and were well pleased with the Washington Conference on the Limitation of Armaments. But Hitchcock has neutralized with these women of Nebraska his stand on

the League by his vigorous opposition to woman suffrage, and especially his stand against prohibition. For years the men and women of the German stock, who are strong in numbers and influence in Nebraska, followed Hitchcock with devotion. When he voted for an embargo on the shipment of munitions to the Allies, the Germans in Nebraska roared approval. But he lost them by his later stand for the Wilson League and his vote against a separate peace with Germany. What the Germans will do as a body this year, whether they will remember their former devotion to Hitchcock and support him, after all, in considerable numbers, is problematical. There is no doubt that the feelings of the Germans in the State for him have amounted to personal affection. Hitchcock was once a Heidelberg student, and he has spoken sometimes to his audiences in the German tongue.

Nebraska is dry, is no longer interested in the League of Nations, shares the economic unrest of the middle country, and seems to be headed away from Hitchcock towards Howell. Howell has had an able and progressive life record. He has for years been the Republican National Committeeman of his State, a position fairly won by espousing Roosevelt Republicanism consistently and openly from the beginning. He has been in a long twenty years' fight in Nebraska to break the grip of extortionate private monopoly upon municipal utilities. He lives in Omaha, and he is now the general manager of the municipal water plant, the municipal ice plant, and the municipal gas plant—industries which he has managed with astonishing success.

Howell's point of view, as distinguished from the old order of private

profiteering in Omaha, is indicated by a conversation a little while ago between him and a prominent banker of the State. Howell was telling the banker about the success of his ice plant. He spoke of the original investment of \$240,000 and of how in the first year he had made some money. "But, do you know," said he, earnestly, "this year we are selling ice for thirty-three cents a hundred pounds at jitney stations all over the city, where people have come for the ice with baby buggies and little wagons and have taken it to their homes, while the price at Sioux City has been a dollar a hundred delivered; and, in spite of this low price, we have laid up," said Howell, "a surplus of \$80,000." And the banker looked at him and said: "Howell, isn't it too bad you couldn't have done that for yourself?" Howell represents the unselfish idealism of Nebraska. The group who are against him are particularly those who, like the banker above, have not the imagination to understand a man who glories in serving his city or his State.

Howell is against the cancellation of Europe's debt; he favors the bonus because in the war he failed to draft labor and the profiteers to a genuine public service, but sternly compelled the soldiers to take their lives in their hands on the battlefields of France. This seems to be throughout the West a strong emotional argument for the bonus. When the subject of taxes to pay the bonus is broached, however, the emotional discussion wanes. It is at bottom an uncertain issue in the Middle Western breast, unless that section of American capital which profited most by the war bears the burden of the bonus. Howell also is a foe of the Esch-Cummins Law. He, too, like Brookhart of Iowa, would squeeze out seven billions of water, restore real competition between the railways, establish regional tribunals, and abolish the dictatorship of railway capitalists. He defends public ownership only as a last resort to prevent the continued plundering of the people; and if it becomes necessary in the case of the railways to go to public ownership, he would take over one great National system, not all the roads, and force the reign of justice by the competitive use of this single great line. He is opposed to the ship subsidy and promises to support the farm bloc. He seems to fit into the temper of the time in Nebraska, as Beveridge does in Indiana and Brookhart in Iowa.

The Non-Partisan League, with its programme of State Socialism, still troubles the political waters of the Middle Northwest. Townley, the quondam leader, who went to jail for his attitude towards the war, is out and managing again. I am informed, the Non-Partisan farmers' organization of North Dakota. His hand is not so apparent as it was in the political movements of the time in the Northwest, but his cause is still to be reckoned with in Minnesota, North Dakota, and other near-by States.

Frazier, of North Dakota, who was recalled only last year as Governor, appears this year as the victorious Republican candidate for United States Senator, and is likely to join the other Middle Western apostles of a more radical day in the Senatorial circle of fame at Washington.

I speak always of the candidates for the United States Senatorship in these States, because the National battle centers around them. In Minnesota the Republican candidate is the sitting Senator Kellogg, trust-buster in the Roosevelt days, but staid and regular now, able and useful, though lacking elements of warm political popularity. The Democratic candidate is Mrs. Peter Oleson, who has been vigorously active in word and deed in the political organization and inspiration of women all over the State. She is said to be one of the very fastest talkers in captivity, only matched or exceeded, so Minnesotans say, by George E. Vincent, now President of the Rockefeller Foundation, who was formerly at the head of the State University at Minneapolis. She is against the "millionaire bloc" in Congress, against the Esch-Cummins Bill, against a sales tax, against any subsidizing of great corporate interests, in favor of a bonus paid out of excess profits. She has a name which goes far in the Swedish population of Minnesota, and she is proving dangerously attractive to Republican women.

The Farmer-Labor Non-Partisan League Senatorial candidate in Minnesota is Doctor Henrik Shipstead, a country dentist, a philosophizing Norwegian, a student of economic radicalism and of Norwegian literature, a political radical of the type of La Follette and Brookhart, and an indefatigable worker for his party and his cause. The fight for the Senatorship rages about him. It seems to be the opinion of intelligent observers in Minnesota that Mrs. Oleson will come off third, perhaps drawing sufficient Republican women from Kellogg to let Shipstead into the Senate. If this happens, the Senate will gasp. It will be the last straw. The argument against its probability is that the usual may happen and the conservative citizens of the twin cities of Minneapolis and St. Paul, without regard to party, may move in a body over to Kellogg on election day. Thus the Non-Partisan League peril, which above all things they fear, will once more be avoided.

The commercial conservatives of the Twin Cities have long had no other antidote for what they naturally regard as the menacing Socialism of the radical Leaguers, except a startled joining of forces in a crisis, without regard to party, or a hysterical digging into their pocketbooks for great campaign funds against catastrophe. They are only slowly learning that they must meet by rational remedies the undoubted ills under which the farmers of the great wheat States suffer.

The radical leaders of the farmers de-

mand that the remedies be State elevators, State warehouses, and State banks. Only slowly, in Minnesota, is the bulwark of co-operative enterprise being employed to meet the advancing pressure of State Socialism. But the co-operative spirit is growing. The present Governor Preus was elected on that issue. He convinced the farmers that they should control their own remedial institutions, and not put them into the hands of Socialist politicians of the State Government. Both in Minnesota and in Nebraska the propagandism of the Non-Partisan League is being successfully met by the advance of private co-operation. Forty thousand members in Nebraska are in the Farmers' Co-operative Union, owning and operating a long line of elevators. And the number in Minnesota is growing.

La Follette in Wisconsin is coming to the peak of his power. He has finally merged in an overwhelming personal constituency the anti-corporation agrarians, the wets, the Germans, the pro-bonus soldiers, the Socialists and the industrial workers of all shades. Here is another State where anybody is welcome to the rest of the electorate. Wisconsin is Wisconsin and La Follette has on his side the great bulk of the kind of voters who dwell in it. If he keeps his health and vigor, he would seem to be psychologically in preparation as never before for the leadership of the radical elements in the Republican party and in the country. So conservative a progressive as Beveridge recently paid La Follette high public compliment for his astonishing ability and determined integrity. In fact the whole Middle West, whether friendly or hostile to his ideas, rates his integrity high. It was with La Follette as with those other leaders who came through in their separate States; the people were in each instance groping for the men whom they regarded as of unselfish and uncompromising integrity. The voters seemed to be saying to themselves: "We are uncertain about policies, we don't know what we want; but we would choose these men whom we trust, and put the problems up to them."

And that is about as far as the Middle West has yet gone in its new onward surge of progress. It is on the warpath. It doesn't know where it's going, but it's on the way. Its movement is yet purposeless and lacks unity of method or motive. If unusual material prosperity intervenes, the temperature of its political blood-heat may be lowered by 1924. But the Middle West is already the matrix of a new National insurrection, if economic difficulty continues and the right sort of leadership arouses conscious purpose.

In any event, prospective candidates for the Presidency in 1924 would do well, I think, to bear in mind that bourbon and reactionary traits are no more beloved in the West than they were a decade ago, that a nominee for the Presidency without progressive horizon

foredoomed to repudiation in that section of the country. The die-hards of commerce and politics should take notice.

It is a long distance from Broadway out here where the cart-wheel silver dollars begin to weigh down your pocket-book and the big soft hat shades the husky form of the out-of-doors man. I went one Sunday morning to church,

and as I was passing out I was courteously approached by an elderly member who recognized me as a stranger and inquired for the place of my residence. When I replied, "New York," his face lighted up and he said: "I was in New York once, and I went to hear a man preach there. Let me see, what was his name?—Oh, yes, Beecher, Beecher. You know, he cut quite a figger in his day."

It's a long distance from Broadway, and it has its faults of unreason, but a sturdy National heart beats here, and its conscience, though socially and theologically conventional, is sensitive to economic and political injustice. Out here you catch the sound of the reveille and the early intimations of the onward march while yet the East sleeps stolidly in its tents.

THE POWER OF THE PRESIDENT TO PROTECT AMERICAN CITIZENS IN TURKEY AND THEIR WORK

BY EVERETT P. WHEELER

THE President of the United States has naturally been careful to avoid any military action to check the advance of the victorious Turkish armies in Asia Minor. But the destruction of Smyrna and of the property of American citizens there and the breaking up of the work of American citizens in Asia Minor compel careful consideration of our duty at the present time.

Article II of the Constitution of the United States defines the duty of the President and expresses his powers. The executive power is vested in him. At his inauguration he solemnly swears faithfully to execute the office of President of the United States and "preserve, protect, and defend the Constitution." Under this Constitution he has power by and with the consent of the Senate to make treaties.

Section 3 of this article declares: "He shall take care that the laws are faithfully executed."

Article VI provides that all treaties made "under the authority of the United States shall be the supreme law of the land."

In pursuance of the power thus vested in the President and with the advice and consent of the Senate, a treaty was made between the United States and the Ottoman Empire in 1830. That treaty guarantees to American citizens in Turkey that "they shall not in any way be vexed or molested." "They shall not be disturbed in their affairs." It also provides that "even when they have committed some offense they shall not be arrested or put in prison by the local authorities, but they shall be tried by their Minister or Consul and punished according to their offense, following in this respect the usage observed toward other Franks." A treaty between the United States and the Turkish Government ratified in 1862 confirms these provisions. Under their protection and with the full consent of the Turkish Government, American citizens have gone to Turkey, established colleges, schools, and hospitals there, and have done a most benevolent work among the native Christians.

By Turkish law a Mussulman who caves his Mohammedan faith and

adopts another is punishable with death. The work of Americans for the Turks has been, for this reason, very limited; still they have had the benefit of American medical and surgical skill.

During the last year these provisions of the treaties have been shamefully violated by the Angora Government. American citizens have been arrested, taken from their homes for no crime whatever, they have not been tried before their Consul, and the work in which they were engaged among the native Christians has been broken up. More than a million of these native Christians have been killed or deported by the Angora Government. This is just as much, to use the words of the treaty, a "disturbance" in the affairs of the Americans and a "vexing and molesting" of them as it would be to kill all the persons employed in a factory or for whose supply the factory was working. As long ago as 1855 the Attorney-General of the United States rendered an opinion that our citizens who had gone to Turkey under the protection of this treaty and established schools and colleges and hospitals are as much entitled to this benefit as if they were merchants; that the treaty applied to all lawful business, whether benevolent or mercantile. This has been the practical construction of it from the beginning.

There is no question of making war upon Turkey or doing any act which requires further legislation. The treaties already made and ratified by the Senate are the supreme law of the land. It is the duty of the President to execute them and to obtain, not only indemnity for the past, but security for the future. His executive power extends to the Army and Navy, of which he is Commander-in-Chief, and it is his duty to use the full power of the United States Government to protect, for the future, American citizens in that part of Thrace of which possession is shortly to be delivered to the Turkish Government.

All our experience with the Turks (and the same is true of the experience of other nations) shows that their promises are not to be relied upon. Whatever they may say now to obtain admission to Thrace, they will undoubtedly commit

the same crimes there that they did in Asia Minor, unless this Government makes such a show of force that the Turks will see that the whole power of this Government will be exerted for the protection of our colleges and other American institutions in Turkey and for the security of the many Americans who are living in Constantinople and doing business there.

In dealing with the Turks it must be remembered that it is part of their religion to make war upon unbelievers and to kill them unless they become Mohammedans, and that a promise made by a Turk to an unbeliever is not binding. Men are sometimes worse than their religion. They are seldom better. Individual Turks are courteous and plausible, but when it comes to united action, when they have had the power, they have lived up to the precepts of the Koran. We can expect nothing better in the future unless we satisfy them that we are both able and willing to protect our own citizens and the work in which, with the full consent of the Turkish Government, they have engaged. This is not war; it is police protection. Our Government has protected its citizens in this way a hundred times in the past without declaring war. In fact, such bold and manly actions prevent war; just as a well-organized police force is generally effective to prevent a mob or to disperse it if it should assemble.

The President, as has been shown, has full power to send a brigade to Constantinople for the protection of our citizens there and their work. The Allies would welcome this co-operation. The American flag and the power behind it would be as effective as it was when it waved over Corinna Shattuck at Oorfa, and saved a thousand innocent lives.

We may well recall the words of Grover Cleveland in his Venezuela message:

There is no calamity which a great nation can invite which equals that which can follow a supine submission to wrong and injustice and the consequent loss of national self-respect and honor beneath which are shielded a people's safety and greatness.

THE CRESCENT RISES

WILL THE TURK PENETRATE ITALIAN TRIPOLI?

BY KINGSLEY MOSES

THE sirocco of Turkish victory that sweeps over Asia Minor is likely to prove far more devastating than we innocent outsiders suspect.

For a year or more in intimate touch with Mohammedanism, for four months of that time utterly isolated from any English-speaking civilization in the desert of Libya, the writer confesses a fellow-feeling for the Moslem, a personal partiality toward the individual Arab. Such sentiment, however, should not be confused with intellectual approval.

Dr. Lothrop Stoddard in his thoughtful if rather feverish volume "The Rising Tide of Color" presents all the arguments that would warn against a *Jehad* or Holy War. The imminence of such a struggle is to be discounted, if only on the grounds that the Mohammedan is far too wise and shrewd a politician to delude himself with any thoughts of immediate success. Fundamentally a fighting man, he realizes perfectly how slim would be his chance against the highly trained forces of even a single Christian nation.

It is certain, therefore, that he will not now attempt any aggressive movement that would definitely align against him the armies of England, France, or Italy; that he will not attempt to carry the war into distinctly European territory—barring that territory until lately known as Turkey in Europe.

That he will even attempt to win back his European *villayets* is, at the moment, problematical. England's official attitude is a warning. The Turk may well be skeptical, however, as to just how much police strength lies back of England's threat; how strongly the British people would support such an enterprise just at this time. And the Turk's principal virtue in addition to personal courage is the virtue of patience. Secure in his present comfortable position, he can afford to sit tight and await diplomatic developments.

Purely speculative though the opinion be, it is the writer's conviction that the present Turkish triumph will not seriously affect the peace of either the French or the English Mohammedan countries. Algiers and Tunis are too close to Paris, too precious as colonies, to be pried loose from French sovereignty. Egypt and India have been too long under the stern control of the British military forces. Sporadic uprisings may occur; but any concerted effort by Islam would in Algiers, Tunis, Egypt, or India be pretty sure of instant suppression.

There remains the question of Tripoli—or, as the country is more definitely and accurately designated, Libya.

Libya, that stretch of Sahara desert lying between Tunis and Egypt along the Mediterranean Sea, is technically to-

day under the dominion of Italy. But the grip of the Quirinal upon this enormous African waste is none too secure.

Taken by force of arms in 1911, Libya is still restive under Italian supervision. There has been no change whatever in the religion of the inhabitants, no swerving from the strict tenets of orthodox Mohammedanism. Always the most difficult of converts, the Mohammedans of Libya particularly see no attractions in Roman Catholicism; and it is doubtful that a hundred of them have been brought into the Christian Church. Other influences too, among the most powerful the presence in Libya itself of the see of the Senussi, have worked to nullify the best efforts of Roman Catholic missionaries.

Lacking also the colonial experience of France and England, Italy has failed in any material degree to colonize Libya with Italians. Naturally gregarious, the Italian peasant prefers the long ocean journey to the United States, the Argentine, or Brazil, where already are hundreds of thousands of his fellow-countrymen, to a short two days' voyage over the placid blue sea to Tripoli or Bengasi. Opportunity also, in that sterile empty land of the desert, seems unalluring. So Libya remains—and appears likely to remain—Arab.

Along a shore-line of approximately eight hundred miles, Libya, including the provinces of Tripolitania and Cyrenaica, extends from a point about due south of Milan to a point due south of Smyrna. That is a long journey. And when one considers that no railway—save two negligible little narrow-gauge lines of twenty miles length—serves the country, and that communication is had along the coast only by steamer and in the interior only by camel-back, one can readily understand the difficulties of keeping such a territory under control.

Southward for perhaps a thousand miles, over the unmapped desert, Italy nominally holds control. But here again there is sovereignty only in name; and recent press despatches report towns not forty miles from Tripoli City in the hands of the Bedouins.

The reason for this tenuous hold on Libya by the Italians is due more to the very nature of the country than to any laxity or inherent weakness in Italian government. To subdue and hold a desert country is one of the most difficult tasks conceivable even in this advanced day of military efficiency. Infantry advance, ever slow and clumsy, is just about impossible in Libya, where military forces must depend wholly for subsistence upon their own lines of communication. Ask any experienced soldier how long he can maintain adequate lines of communication without railways. Artillery movement through the

heavy Saharan sand is out of the question, and may be summarily dismissed; while he who would fight the Bedouin of the desert with cavalry had better consider long and prudently, for the horsemen of the Arabs have been noted through the centuries for their ferocity and consummate skill.

More modern developments serve little. At Azizia, shortly after its surrender as Turkish headquarters in the spring of 1919, the writer personally witnessed the futility of airplane attack. The great rock, outcropping from the sands, where the Turks and Arabs had fought on for six months after the European armistice, stood practically untouched, though it had been constantly bombarded by Italian planes; and all about in the rolling sand dunes of the desert the lately hostile Bedouins camped comfortably, secure in their experience that an airplane bomb dropped into soft sand was about as deadly or dangerous as a pebble tossed into a millpond. The sand gushed up in great geysers of dust, but the shrapnel was smothered.

And there always remains in Tripoli the resentment of the natives against the method of seizure employed by Italy.

From the European point of view, the action of Italy in 1911 was perfectly natural. Certainly, with our vacillating colonial policy, it is no function of an American to criticize; we have enough peculiar problems of our own in the Philippines, Porto Rico, Cuba, and Haiti. Italy wanted a slice of Africa. A generation ago it had nosed into the African cupboard and brought out the driest and most unpalatable bone—Somaliland. Libya looked like fair game. France, to the west, had gobbled the rest of the Barbary States; Spain had a morsel in Morocco; England had most of the meat in Egypt and, with usual good judgment, had pre-empted the fertile and navigable valley of the Nile.

Southward in the Dark Continent practically all the desirable territory had been seized by either England or Germany. Besides, that country was a long, long way from Genoa or Naples—the leading Italian naval bases.

There remained Libya. So Italy took it.

It was a poor enough prize; but it was something. Italy hung on, tried hard to develop the land, to make it yield some slight return on the investment of money and blood.

But again luck interposed. Not three years had elapsed before the outbreak of the World War stirred up again the Mohammedan frenzy. Italy, even though not then an active participant in Europe, had to begin operation of a regular troop transport service to Tripoli. Reinforce-

ments, and more reinforcements, were demanded. Finally there was open rebellion and bloodshed.

So, while the attention of the world was centered upon the battlefields of France and Belgium, while even Italy turned its eyes toward the Carso and Mount Grappa, an unnoticed but extremely ferocious little war was waged across the wastes of the Libyan Desert, and was being carried right up to the walls and outpost forts of the seaboard cities. Misurata, on the Mediterranean, fell; and Zavia, less than fifty kilometers from Tripoli City, was taken and occupied by the Arabs under the command of Fuad Pasha, nephew of the Turkish Sultan.

In May, 1919, as has been said, an armistice was patched up. That armistice exists on paper to-day. But what the true situation is remains dubious; for news reports from Libya, having their only possible origin in the Italian Censor's office, cannot be depended upon.

The difficulties, then, that menace the maintenance of Italian dominion in Libya are three:

First, the comparatively recent conquest of the country, a matter of only eleven years past. The writer spent some days with a famous sheik of the desert, one Mohammed Shulabi, who is reputed to have been himself the leader of a terrible attack on Italian *bersaglieri* from which scarcely a man escaped. What Mohammed Shulabi thinks now no one may say, for the Arab is not communicative to comparative strangers. But what other chief men of the race feel is very evident in the very manner in which they eye their Italian overlords and in their muttered curses of hatred as the Italian soldiers, always—and prudently—fully armed, pass down the *suk* of the city.

Second, the failure of the Italian Government adequately to colonize the country with loyal Italians. Where here in

New York (an American city, despite all that some of its detractors may maintain) we have huge colonies of Italians living almost precisely as they would in Caserta or Reggio or Bari or Trapani—talking the same tongue, eating the same food, prey to the same superstitions, flaunting the same flag—in the towns of Libya, from Buchamesh on the west to Tobruch on the Egypt line, is heard no syllable of the soft Latin tongue. Here the Koran is in every tent and Dante is unknown; here fez replaces *borsalino*, and the sandal takes the place of the boot. What few civilians, clustered about iron café tables, do speak the Latin tongue turn out to be, upon closer and disappointing investigation, mongrel Maltese from Valetta or Levantine Jews.

And, in the third place, there are the almost insuperable obstacles to a purely military control. In Algiers and Tunis, not to speak of Morocco, the Atlas Mountains supply great tracts of arable and fertile country, welling with water. In Egypt is the incalculably precious Nile, along which—in addition to its fertilizing properties—troops may be moved with speed and security for hundreds of miles. But, in Tripolitania, in the interior of Cyrenaica even, twenty miles from the littoral, are none of these tactical advantages. Forever and forever the sands of the desert stretch southward, hill upon hill. Across the glaring emptiness of this awful desolation, tortured by the unbelievable heat of the summer sun or frozen by the gale of winter blasts from the bitter Adriatic, any defending forces must move painfully in pursuit of the will-o'-the-wisp enemy. In full possession of the vast herds of camels and of thousands of beautiful Arab horses, the Bedouins can strike, and run and strike again with miraculous speed.

And, untrammelled by any Hague conventions, the Arab knows war only in its most primitive aspects. To kill the

enemy is his ideal. How? Well, that doesn't matter very much. The night attack is his favorite pastime; the slitting of hostile throats while his victim sleeps is a peculiarly pleasant sort of play; the maiming or horrible cicatrization of "Christian dogs" is all a part of the game.

It is that sort of thing that Italy has to face in Libya. And if the Turkish uprising in Asia Minor spreads its spirit unchecked, it is that sort of thing that is almost certain to happen.

The loss of Libya would seem a small thing as measured in the great balance of world affairs. To Italy, indeed, the bereavement might not be unbearable; for the arid land is unprofitable enough as it stands, and constitutes a constant and annoying drain upon the royal treasury.

But with the Turk actually triumphant in his own ancient provinces of Asia, daily threatening a return to lost lands of Thrace, a single victorious campaign in the territory of a strong Allied nation would lend him a confidence that might well prove enormously difficult to subdue.

A thousand years ago the Christian nations were at bay in their own lands. And while there is no danger of another such situation in our living generation, the advance of the champions of the Crescent is worth more than superficial attention.

The Turk, winning Syria, wins back a land long Moslem. The Turk, winning Tripoli—all Libya—wins back a land where Christian influence has for a little time at least been omnipotent.

And there is, it may be added, a sinister significance in the circumstance that those strangers from "the parts of Libya about Cyrene" (Acts ii.10)—who on the first Day of Pentecost spoke the Apostles' own language—should be now wholly converted to the tongue of the Prophet.

THE SECRET OF GERMAN FINANCE

BY P. W. WILSON

IN considering the finances of Europe, and the question whether and to what extent the United States should press for payment of the debts due to her, it is easy to understand the situation of France and Great Britain. These countries are hard hit by the war, but both of them are obviously solvent. Britain has balanced her budget, repaid more than one billion dollars of external and internal liabilities, reduced the amount of her paper money, and brought her exchange sterling within ten per cent of par gold; while France is declared by the Bankers' Trust, after an elaborate investigation, to be as wealthy as she was before the war (this being the reward of her thrift), and if her budget does not yet balance, the reason is that she has undertaken the restora-

tion of her ruined provinces on a large scale; debiting the cost, not to taxation, but to German reparations, which are in a large measure withheld. The case of Italy, too, is plain. Her expenditure is greater than her revenue, and what she needs is a much smaller army, many fewer officials, and severe rectitude in her administration.

But when we come to Germany, we find that even experts differ. This is doubtless because some of them, like scientific witnesses, are swearing their testimony to a brief. They want Germany to pay her fines to France and they say, therefore, that she is well able to do so, or they want the United States to cancel her loans and therefore they say that Europe is perishing. I hold no brief for any policy. I have heard a

dozen budgets introduced into the British House of Commons. There is not a budget so introduced by Mr. Lloyd George that I did not hear discussed in advance and during its passage. The judgment that I have brought to bear upon the German problem is the judgment which I would apply to the finances of my own country, a judgment based on cold arithmetic, which, after all, is one of those few sciences that, even in a mad world, cannot err.

The collapse of currency in Russia was of course deliberate. During the war it was actually promoted by Germany, where billions of forged rubles were distributed for the purpose along the Russian front. The Bolsheviks may now wish to regain a monetary standard, but in the first flush of their Communist

enthusiasm they hoped to use other tokens, representing only the various units of labor performed and eliminating wealth, thrift, investment, and the entire machinery of capitalism. In Austria currency has been wrecked, moreover, by causes easy to analyze. Vienna is "the head without a body," where proceeds what business men call a vast "overhead" expenditure with no volume of business to sustain it.

But Germany is not Communist. In no country is capital more powerful and triumphant. Nor is Germany a head without a body. By war she has lost less than one-fifth of her territory, and more than four-fifths remains. Why, then, has the mark fallen from 23 cents to about one-seventeenth of a cent? It is a fall to one-four-hundredth of value or—allowing for a feverish recovery—to one-three-hundredth. What is the explanation?

The immediate reason for the fall in the mark is easy enough to state. Paper money is a symbol for gold. On a dollar bill are printed the words:

The Federal Reserve Bank of New York will pay to the bearer on demand one dollar.

The bill is issued on the security of the United States, dischargeable in gold. In Germany, one year ago, the gold reserve was \$250,000,000. The outstanding paper was \$17,500,000,000. The proportion of paper to gold was thus 70 to 1. And to-day the position is worse. German currency merely represents credit, not assets. In a single week as many as 10,000,000,000 paper marks, equivalent to more than 2,000,000,000 paper dollars, have been issued, not to pay reparations, but with obvious intent to depreciate.

On this phenomenon there can be no higher authority than Dr. Bruhn, the chairman of Krupps' directors. Recently he has said:

Inflation is the lesser evil. The greatest evil would be if we were to stop working.

In other words, the inflation is deliberate. The industrial magnates have ordained it. George Bernhard, editor of the "Vossische Zeitung," has expressed the view that Stinnes is playing for a collapse. The objective is Germany busy but Germany bankrupt. She is to recover her trade, but she is to shed her debts.

Take first her industries, and secondly her finance. In May, 1921, Mr. Schwab, supported by Mr. Hoover, declared that Germany had gone back to work and was "winning the peace." In Mr. Hoover's words, she hoped "to coin desperate labor into good solid money." On August 12 the London "Economist," the highest financial authority in the British Empire, reported of Germany:

The trade boom is growing; and an increasing number of manufacturers refuse to deliver before the end of the year, and in all cases provide for alteration of their contract prices in case wages or other costing factors increase. Employment continues to improve, and the unsatisfied demand

for labor materially exceeds the small number of unemployed. The number of publicly supported unemployed has fallen from 314,475 a year ago to 19,864 on July 1. Crops will not be as bad as was feared some weeks ago, but will not be as good as in 1921.

The unemployed in Germany are 20,000 in numbers, and in Britain, with sterling rising to par, the unemployed number nearly 2,000,000, this on a smaller population.

Inflation of currency is thus a tonic while it lasts. In Germany's home market it has resulted in constantly rising prices. Goods are ordered to-day because they can be sold to-morrow at an assured profit. Companies have raised an immense volume of new capital, employees becoming mark millionaires in a month. As prices have risen, so on the whole have wages, and one estimate is that, as a result of the war, the standard of living in Germany has fallen only six per cent. As an eight-hour day has been substituted for a nine-hour day—with a temporary but considerable diminution of output due to the fragrance of Bolshevism—this is certainly an interesting result. The workers are considered to be well fed and well clothed. A mercantile marine is in process of construction. The tonnage of shipping cleared at Hamburg is rapidly returning to normal, and the number of passenger automobiles, which in 1914 was 60,676, had risen by 1921 to 60,966, while in some cities skyscrapers of American plan are being projected. Into a period of peace Germany has thus continued the feverish activities of war.

But, having developed great industrial cities and a crowded population, the Germans cannot live by taking in one another's washing. They must have foreign trade, and this foreign trade, like the home trade, has been stimulated by inflation. Take Krupps. It is true that seventy-five per cent of the ore used by Krupps is now imported and paid for in gold. But, on the other hand, Krupps receive gold for every manufactured product that they export. The difference between these imports and those exports is a gold difference in favor of Krupps, and put into marks that gold is multiplied hundreds of times in paper value. Now the rise in German wages has always been lower than the rise in the value of gold. If Krupps get 300 marks for their one mark gold, they have only to pay 150 marks or less on increased wages, salaries, and overhead expenses. On the transaction they have thus an enormous margin of profit—sufficient to enable them to sell steel in England at \$20 less per ton than England can make that steel.

It is true that Germany has lost many investments abroad by confiscation. But after peace was signed her financiers met this difficulty by exporting foreign investments held in Germany. The object was twofold. First, it meant that these foreign investments could not be seized in Germany for reparations or taxes imposed for the purpose of repara-

tions. And, secondly, it provided Germany with assets in foreign banks against which she could get credit for the purchase of raw material that she badly needed owing to the depletion of her stocks. Her own banks were, doubtless, weakened by the loss of these exported securities and had to lend to their own people without such security and thus contribute to inflation, but this result, as we have seen, German financiers did not mind. Inflation has been their game throughout.

We thus see that, in peace as well as in war, the German mind is comprehensive, thoroughly logical, and organized to the last detail, like a machine. The depreciation of the mark has of course led to many valuable German assets passing at low prices into foreign hands, but on balance Germany has gained enormously. Her assets of every kind—mines, forests, factories, farms, etc.—are worth about \$70,000,000,000 gold, none of which assets, as valued in gold, are affected by the fall in the mark. When, however, we come to Germany's liabilities, we find a very different story. The whole of her domestic war debt, much swollen since the armistice, is in paper, and last year it had reached about 250,000,000,000 of such marks, or \$60,000,000,000. But see what happens when the mark falls to one-three-hundredth of its face value. The German debt shrinks to only \$200,000,000, or less than one-hundredth of the Federal debt of the United States. One can easily understand why Germany would like to raise an international loan, even of moderate dimensions. For every cent she receives by such loan she can redeem 300 cents of scrip face value, issued—all of it—in the first instance at or about par.

The German argument is thus subtle and ingenious. She sees Britain, with her sterling exchange almost back to normal, heavily taxed and painfully repaying to her creditors, at home and abroad, 20 shillings in the pound. How much easier to postpone taxation, to retain innumerable officials, to run the post office and railways at a loss, and so depreciate not only the currency, but the debts of every kind dependent on it! When Germany had to find a billion dollars in gold last year for reparations, she let the mark slump, and it is estimated that her foreign creditors lost much more by the fall than the Allies gained by the billion dollars. With their assets safely planted abroad, German capitalists would rather like the country to go bankrupt and get rid of its liabilities, and especially of reparations. Then, with the capital thus exported, they would start business again unhampered by actual and political liabilities.

That this has been and is the German strategy, I take to be demonstrable beyond possibility of challenge. Whether she can "put it over" is another question. After all, when the mark fell to 2 cents, many people outside Germany bought the currency in the belief that Germany would play the game and seek

a recovery of her credit. On their part, it was doubtless a speculation, but it will be a long time before German marks are again trusted abroad. Also, inflation is like running a bicycle down hill. What exactly will happen when the brake is applied? May it not then be up-hill work, as in the United States during deflation?

What Dr. Hermes, the German Finance Minister, says is that reparations are "the cause of the entire financial distress of the Empire." He is right. Whether the reparations be reasonable or excessive, Germany does not want to pay one gold mark more than she has to or before she is made to pay. Inflation is her weapon not only for promoting commerce but for postponing installments when they fall due. As long as the amount of reparations continues indeterminate, for so long will Germany drive down her apparent credit at home, building up by a feverish trade new credits abroad, which the Allies cannot touch.

In saying that the Germans are not philanthropists, but are thinking mainly of their own interests, the French also

are right. The Germans are in that respect like every other nation that walks this earth. Whether the inflation is an honest device, one may argue one way and the other way. The Germans consider that it is their economic defense against claims for reparations of an impossible amount. The practical question, however, is not one of ethics. It is plain that Germany will pay nothing except as she is compelled, and what we have to decide is how far she can be compelled. The profits on her state mines and forests, when reduced to gold, are negligible—perhaps intentionally negligible—and there is little hope that those profits would increase if German workers were to be placed under the alien control of French officers. Military measures against Germany, in which France would have to act alone, whether justified by the facts or not, would fail to raise money. Interrupt German industry, and the last hope of reparations seems likely to vanish.

Germany is to-day recovering. By her treaty with the Soviets she has obtained access to the vast resources of Russia which she is now organizing. In one

year her population rose by 750,000, while the population of France fell by 200,000. The balance of population was changed to the disadvantage of France by one million in twelve months—this without any annexation of Austria or other extension of German territory. The very measures which disarm Germany on the military side strengthen her armament as a commercial Power. One billion dollars' worth of gun plant has been scrapped at Krupps under General Bingham, of the British army. And Krupps is making locomotives with other steel products, which are seized by customers before they are sold. The German budget shows an item of 3,600,000,000 marks for defense and 8,100,000,000 marks for pensions, or 11,700,000,000 marks in all for the army and navy. In gold this works out at less than \$8,000,000! The naval and military budget of France is 5,000,000,000 francs. In gold that works out at \$400,000,000. Germany is thus spending in gold one-fiftieth of the sums spent by France upon armaments, pensions included. That, in plain terms, is the situation that we are up against.

THE CRIME WAVE AND THE JURY

BY IMOGEN B. OAKLEY

THE report of the Cleveland Crime Survey has been published, various Bar Associations have spoken, and the consensus of opinion appears to be that the courts are congested, that legal procedure in many cases is antiquated, and that the law's delay which is the consequence of the congestion and the antiquated methods is a direct encouragement to the criminal and an incentive to crime.

The jury seems to have escaped criticism, yet my experience as a juror in the criminal court compels the verdict that the jury, as it is selected to-day, must bear a large share of the responsibility for the contempt of law which is the primary cause of the crime wave. Nominally, every citizen on the assessors' lists is liable to jury service; actually, nearly half of those called find some way of escape. Precedent and political influence are invoked to exempt those best fitted to pass upon the guilt or innocence of their fellow-citizens at the bar, and that solemn responsibility is left to the ignorant and inexperienced. The "twelve men tried and true" have ceased to be tried, and though they may be true according to their lights, those lights are often but a feeble glimmer.

In my own State the written law exempts from jury service any man who has been a member of the National Guard for nine years or who after nine months in the United States Army has been honorably discharged. Precedent rules that physicians and nurses shall automatically excused. Lawyers are ad officers of the court and are ex-

cused. The judge may at his discretion excuse any one who claims that his business will suffer without his actual presence, and teachers and clergymen appeal successfully, as a rule, to that discretion. Those who cater to the necessary needs of the community—the butcher, the baker, the electric-light maker—find small difficulty in persuading the court that they are of more value as public providers than as jurors. A watchmaker summoned to my jury was permitted to return to his work because he said he was the only expert workman in his shop. Political influence can be trusted to relieve from service all those with a pull, and foresighted citizens who contribute handsomely to the expenses of the party in power need not fear the tedium of the court-room.

By these various processes of elimination, the eighty talesmen assigned to my court were reduced to forty-two before the court opened. Only four of the forty-two gave evidence of anything more than a primary education. Chauffeurs, waiters, plumbers' assistants, clerks from small shops, men "temporarily out of a job" predominated. The women did not raise the level of intelligence. In addition to my wholly inexperienced self, my sex was represented by a colored woman, elderly and somnolent, and two flappers whom their masculine fellow-jurors openly admired, and with whom the younger of them openly flirted. We were an ignorant and inefficient group. Several of us had never before been in a court-room. More than one could have sympathized with the

juror who, after the trial was over and the judge had made his charge, was asked whether he would vote for the plaintiff or the defendant, and replied helplessly, "But which is the plaintiff and which the defendant?" We did not know how to weigh evidence nor sift the conflicting and contradictory testimony of the witnesses. Our "native common sense" did not save us from unjust verdicts. We punished the innocent and bade the guilty go free.

Happily, though it was the criminal court, the cases were for the most part trivial. In the first one submitted to us, a colored truck-driver was accused of selling a barrel of apples from the truck and putting the money into his own pocket. The witnesses were his fellow-employees, ignorant colored men like himself, and under the heckling of the lawyers they grew more and more confused in their testimony. They contradicted themselves and one another and left us in a maze of doubt and bewilderment. The judge's charge failed to extricate us. We could not agree and were sent to the jury room for consultation.

The jury room was small, dark, and badly ventilated. It contained a table, twelve chairs, and an enormous spittoon around which we gathered. The men eagerly lighted their pipes, and it at once occurred to me that ignorant jurors, only half-conscious of their responsibilities, might easily agree to disagree in order to escape for a while from the severe decorum of the court and lounge and smoke in the jury room. I

have since been assured that evidence is not lacking to confirm my suspicion.

The jury room, as I have said, was stuffy and the pipes were rank. My soul revolted at the thought of seeing that huge spittoon put into active use, so I said, "Excuse me, gentlemen, but smoking is forbidden in court."

"This is not the court," said a juror, puffing clouds of bad tobacco smoke into the already foul air.

"Let us leave it to the judge," I replied. "I will call the guard and tell him to ask the judge whether this room is or is not the court."

Every pipe was instantly put out—a bit of circumstantial evidence in favor of my suspicion—and we quickly decided that, while the testimony was contradictory and bewildering, it did seem, on the whole, to lean toward the prisoner and we would give him the benefit of the doubt. Our foreman reported a verdict of acquittal, and the old experienced crier, with whom I had established friendly relations, found opportunity to whisper to me, "Well, that *was* a bum verdict." I appealed to the prosecuting attorney, who was my kindly guide through the mazes of legal procedure, to know why it was "bum," and he said, "You went straight against the evidence. We know the man is guilty. He has confessed. And you paid no attention to the judge's charge."

"What else can you expect from such an ignorant and inexperienced lot as we are?" I replied. "We thought we were following the evidence. We thought we were heeding the judge's charge. We did the best we could."

In another typical case we were asked to decide which of two toughs had hit the other first in a street fight. Four of us, the four oldest and most experienced in the ways of the world, believed the testimony pointed to the guilt of the defendant; eight, including the flappers and their admirers, insisted upon his innocence. Again we were sent to the jury room for consultation. It had happened that a witness had referred to a previous fight between the plaintiff and the defendant, and the judge had warned us that that bit of testimony had no connection with the case and must not be considered. One of the flappers quoted it, and, when reminded that the judge had charged us to forget it, she said, "Well, I guess we must go by what the witnesses say. I guess we heard what that witness said. I guess we know as much as the judge does about that."

Her admirers supported her and it looked as if we must remain four to eight, but one of the four whispered to me, "These young people are so young that they know it all. No argument will change them. If we do not agree, the case will have to be retried. Is it worth a retrial? Does it really matter which of these two toughs hit the other first?"

I agreed that it did not, we went over to the majority, and the foreman reported a verdict for the defendant.

When I asked the prosecuting attorney what he thought of the verdict, he said: "All the evidence is against the defendant. Why did you not listen to the judge?"

"This time I know we ignored the judge's charge," I answered, "but the flappers and their young men would have it so." And he sighed, "You never can tell what a jury will do."

One reason why you never can tell is that the jury, being ignorant and inexperienced, falls easily under the spell of emotional oratory. It has become the custom of the lawyers for the defense to say little about the evidence against their clients, but much of their sufferings under the accusations of the prosecution. The stronger the evidence against them, the more vividly the sufferings are portrayed. The jury is implored to think of the ignominy that will attach to the devoted wife of the defendant if the verdict be against him, of the disgrace that will pursue his innocent children. The gray hairs of an aged mother become a criminal's best defense, "sob-stuff" takes the place of argument, and if a lawyer can make the jury weep he need not fear its verdict.

Not long ago a bootlegger was brought to trial before the Federal court in my own city. It happened to be Easter week, and the bootlegger's lawyer, profiting by the memories evoked by the sacred season, compared the sufferings of his client under the charges of the prosecution to the sufferings of Christ on his way to Calvary! Tears of emotion dimmed the eyes of the men jurors, the one protesting woman felt herself obliged to yield to the tearful majority, and the bootlegger left the court a vindicated man.

It is worth while to note that it is the women jurors who are objecting to the substitution of emotion for evidence and "sob-stuff" for argument. The men, even the most intelligent, have failed to register a protest.

Another reason why you never can tell what a jury will do is that, being ignorant and inexperienced, it is easily prejudiced against the testimony of the police. In the majority of the cases submitted to my court police officers testified either for the defense or the prosecution, and the opposing lawyer always urged us to pay no attention to anything they might say.

"All policemen are liars," said one attorney in asking a verdict for his client. "It is their business to build up a case, and they build it up, evidence or no evidence."

I asked that lawyer later if he thought it conducive to law and order to condemn the police in open court. "Look at the people in this court-room," I said. "They are all ignorant. Many of them are aliens. All of them are criminals or the friends of criminals. Tell them that the police are corrupt and are building cases against them, and what becomes of their respect for the law?"

He merely shrugged his shoulders.

His one aim was to influence the jury, and he had the support of precedent. A lieutenant of police has lately lamented to me the effect of this discrediting of police testimony in open court upon the morale of the force. "If we are always spoken of as knaves," he said, "where is the incentive to be honest? If the force is as corrupt as the lawyers would have the jury believe, why not devote to its improvement the energy spent in denouncing it?"

Given the jury as I found it, it is evident that upon it must rest a due proportion of the responsibility for the miscarriages of justice which disgrace our courts and give immunity to the criminal. It is not the severity of the sentence that the lawbreaker fears; it is the certainty of the sentence. The jury stands for uncertainty. The criminal knows that if he can secure a lawyer who is expert in heckling witnesses until they become bewildered and uncertain, the jury will become bewildered and uncertain. He knows that if his lawyer is able to play upon the emotion of the jurors and move them to tears he can await their verdict without trembling. The native common sense of the ignorant juror is supposed to guide him through the mazes of conflicting evidence and the pitfalls spread by emotional oratory, but common sense is not an invariable attribute of the ignorant and inexperienced, nor has it been proved that native common sense is eradicated by education. To be a good juror does not imply a college degree. The expert watchmaker who was excused from my jury was evidently not a college graduate, but his skilled trade had made him observant and taught him concentration, yet those very qualities which made him invaluable as a juror served to relieve him from jury duty.

I asked a lawyer, upon whose client we sat in judgment, if he would tell me why he had challenged so many jurors. "Because they were just plain stupid," he said. "They could not have understood the evidence."

Intelligence tests are superseding examinations and references for entrance into college and the business world; perhaps in time they will be used to eliminate the "plain stupid" from the jury box. Perhaps, too, the tests which are weeding morons out of the United States Army may eventually weed the illiterate and feeble-minded from that vastly more important army whose weapons are votes and whose battleground is the ballot-box.

I may add that I submitted my verdict on the jury to my judge and he agreed it is just. He agreed that the jury, as at present selected, is unrepresentative and therefore too often inexperienced and incompetent.

He agreed that if mixed juries are to continue the age limit must be raised. Twenty-one years may insure enough wisdom to vote but not enough to enable young men and young women to sit side by side in the jury box and hear

and discuss the unsavory testimony of the criminal court.

He agreed that lawyers who "work the soft racket" should be checked, but when I ventured to ask him why he had not checked them in his own court he replied that he had not the authority. It would take the united action of many judges to overturn a precedent so long established.

He agreed that the discrediting of police testimony in open court tends to demoralize the criminal class, the jury, and the force itself, but he felt again that only by united action can the custom be abolished.

He agreed that I had common sense on my side when I suggested that the chief reason why cleanly and intelligent citizens evade jury duty in the criminal court is that a murder trial will consign them to the jury dormitory and compel them to bunk next to men of doubtful cleanliness and of any "race, color, or previous condition of servitude." The jury dormitory might have meant democracy in the time of Alfred, but in the twentieth century it is merely defiance of the elementary laws of health and hygiene. Modern sanitary science demands separate cubicles, and until they

are provided women jurors will be justified in refusing to go into a dormitory and preferring a jail sentence for contempt of court, for in a jail one may at least have a cell to herself.

I left the court-room on my last day profoundly depressed by the jury system as I had seen it in operation, and by my own share in so many unjust verdicts. I was the more pleased when the crier, who had been the severest critic of our verdicts, followed me with outstretched hand. "Good-by," he said, "good-by, and I hope they'll send you back to us soon. You've got the makin's of a good juror."

GIFFORD PINCHOT

BY EDWARD J. HUNTER

THE Bull Moose has fought a decisive battle with the Elephant in the Pennsylvania political arena, and has subdued him. Now the pachyderm plods docilely in the wake of his antlered conqueror, and together they are going to administer the usual drubbing to the Democratic Donkey on election day in November.

In other words, Gifford Pinchot, disciple of Roosevelt and the foremost of the Bull Moose in the Keystone State, who stands for everything the Republican organization leaders have scoffed at since T. R.'s memorable campaign in 1912, is to be the next Governor of Pennsylvania, and he is to be elected as the regular Republican candidate. And, furthermore, the one-time followers of Boise Penrose, men who fought Pinchot bitterly in the primary election, will accept the inevitable and help the Progressive host, which brought about his nomination, in rolling up the customary Republican majority.

So in January next the chief executive's mansion, occupied for so many generations by men subservient to the dictates of the Republican machine, will be occupied by Roosevelt's Chief Forester, one of his most trusted lieutenants, who sums up his pledges to the people by announcing that he will give them "a Roosevelt square deal."

That Pinchot will be elected there is not the slightest doubt. Of course the "unterrified" of the Democracy, who have a morose habit of prolonging their own agony, may insist that their candidate, John A. McSparran, who is also the Master of the Pennsylvania State Grange, has a chance to win. But in their innermost consciousness they know he hasn't the remotest chance.

Pitted against any other candidate than Pinchot, McSparran would poll a vote much larger than has ever been given to any Democratic candidate in Pennsylvania since Robert E. Pattison was chosen Governor. He represents the best his party has to offer, having been selected in opposition to the desires of the machine leaders. But, this year,

against Pinchot, he hasn't any chance whatever.

Pinchot not only represents a programme of good government, which the people know he is honest and vigorous enough to put into effect, but, more than that, he represents a movement which the people of Pennsylvania, in a more or less confused way, have been trying to bring to a successful point in the commonwealth's political life for many years.

Pinchot typifies to the people the destroyer of the boss system. There always has been an undercurrent of sentiment against bossism in the State, even though observers may have believed that it was "corrupt and contented." In 1912, when Colonel Roosevelt came into Pennsylvania and declared war on Boies Penrose, in the contest for delegates to the Republican National Convention in Chicago, the people answered his call because they saw an attack on the bosses. When the Progressive party was formed, and Roosevelt, continuing his fight, called for the State's electoral vote, he got it. The people wanted to end the boss system, and they felt that T. R.'s return to Presidential power meant the downfall of Penrose and his associates.

Subsequently, with the magnetic personality of the Colonel removed, the ardor of the people cooled, and the Progressive force was disorganized. But it came back strongly in the recent primary election, and the selection of Gifford Pinchot as the Republican gubernatorial candidate was the result.

Unquestionably the political blunders of the Republican machine leaders contributed to the success of Pinchot—that and the fact that there was a disaffection in their ranks which precipitated certain disclosures concerning mismanagement of the Pennsylvania State Treasury. But these were merely contributing causes—the main elements that produced victory lay in the realization that Pinchot stood for Rooseveltism, and that his Rooseveltism was not a modified or diluted article, but such as might be expected from a man who had

lived and worked with and shared the confidence of the man whom Pennsylvania reverences as it does only Lincoln and Washington.

As to the blunders of the organization leaders, these consisted of certain acts which helped to emphasize the declarations of Pinchot that a little group of men was nullifying the Uniform Primaries Act and taking out of the hands of the people their right to select the party candidates.

When the time arrived for the selection of a machine man for the gubernatorial nomination, Penrose had died. A group of county leaders, together with Governor William C. Sproul, essayed to take the power of Penrose into their hands. Another group, sympathetic with Joseph R. Grundy, President of the Pennsylvania Manufacturers' Association, declined to work with them.

Consequently it was difficult for the Sproul group of leaders to concentrate on one man. Several men upon whom they looked with favor had thrown themselves into the race, and, in addition, the Grundy faction had entered John S. Fisher, former Banking Commissioner of the State.

Finally the Sproul leaders managed to eliminate all but Fisher and Pinchot, although they never had hoped to drive the Forester out of the race. Then they entered an entirely new candidate, George E. Alter, Attorney-General of Pennsylvania.

This process of elimination not only required considerable time, but it involved endless secret conferences, and with Pinchot pointing his finger continually to the efforts of the bosses to defeat the purposes of the primary election, the people were deeply impressed by the spectacle.

And to more thoroughly stamp the iniquity upon the popular mind, John S. Fisher, who had previously refused to get out of the field at the behest of the Sproul leaders, withdrew with a call to the people to name Pinchot and defeat the attempt to nullify the primary.

The battle in the primary election was

a definite fight upon the issue as to whether a set of bosses or the Republican voters themselves should name the gubernatorial candidate. Exposure of the mismanagement of the State's funds came shortly before the primary election, through the Auditor-General, Samuel E. Lewis, one of those opposing the Sproul coalition. It influenced thousands of votes, no doubt, but the major issue was that of bossism.

The election of Pinchot, therefore, will result, the people firmly believe, in the ending of the system which has not only saddled bad government on their State for generations, but has gained their commonwealth an evil reputation throughout the Union. The election of McSparran, were that possible in a State so strongly Republican as Pennsylvania, would simply destroy the work which has already been accomplished in returning the government of Pennsylvania once more into the hands of its people.

This is generally recognized by the voters throughout the State, and the election of Pinchot therefore is beyond question. The only thing the balloting in November can settle more definitely is the size of his vote. And the indications are that his victory will far surpass that of any previous Republican candidate for the place of chief executive.

Under favorable conditions there might have been a rebellion of the Republican machine leaders; but with George Wharton Pepper, of Philadelphia, and Major David A. Reed, of Pittsburgh, sharing the Senatorial patronage at Washington—both men who are as deeply opposed to the boss type of politician as is Gifford Pinchot himself—the practical political leaders are not in a position to attempt such a defection.

The commonwealth has settled down, therefore, in the comfortable belief that the era of the Camerons, the Quays, and the Penroses has passed forever, and that when in January next Gifford Pinchot moves into the executive mansion at Harrisburg he will, to use his own phrase, "turn on the light and clean up the mess."

Pinchot himself, however, is carrying on a campaign which is every whit as extensive and as vigorous as though he had only a shred of a chance to win. He doesn't question the certainty of his victory. In fact, he already has appointed a committee of leading citizens to examine the State's obsolete financial system so that he may, immediately upon taking office, recommend reforms to the Legislature.

But he is resolved that his triumph shall be so decisive that it will rob the bosses of the power effectively to oppose his reform measures in the General Assembly.

Almost any other political aspirant, facing such a roseate prospect as does Pinchot, would seat himself on his front porch and loll away the hours until election in pleasant meditation. Espe-

MR. AND MRS. PINCHOT IN CONFERENCE CONCERNING THE DETAILS OF THE CAMPAIGN FOR THE GOVERNORSHIP

cially would he do so did he enjoy such a pleasing view as is obtainable as one looks down the valley from the altitudinous terraces of the Pinchot mansion, Grey Towers, just outside Milford, Pike County, Pennsylvania.

But Pinchot insists that he must get out among the people and tell them of the programme for Pennsylvania's uplift that he has in mind. Before election day he is going to go into every county in the State, and there are sixty-seven of them. And in each county he is going to visit as many communities as can be crowded into the itinerary.

To make it easier to jump from place to place, without long layovers, he is making his tour in an automobile. The Republican State Committee could well afford to pay train expenses, which would make the trip much easier for the gubernatorial candidate, but he has declined to consider the question of fatigue. The auto, he feels, is more adaptable to his needs—he can visit more places in one day—and that is the only phase of the matter which strikes him as important. However, auto-campaigning is not new to him. When he ran against Boies Penrose, in a forlorn contest for the United States Senatorship, he rode all over the State in a Ford. This time, however, he will travel in a six-cylinder car, because it gives him more chance to stretch his legs.

As a campaigner, Mr. Pinchot is quite as dynamic as Colonel Roosevelt. The Colonel put more gestures into his speeches—fairly exhausted himself sometimes in driving home his oratorical points. But T. R. would conserve his strength when he was not speaking. Pinchot, however, keeps moving almost incessantly from the moment he opens his tour.

During his primary election campaign he almost exhausted the newspaper correspondents who were with him. He was up and out of his hotel—when he stopped overnight in a hotel—before daybreak. And if he touched bed again before midnight it was because he was to continue his journey in a sleeper—as was usually the case—and the railway schedule compelled him to get aboard before the mystic hour of twelve. And in his waking hours it was a constant whirl from town to town, with barely enough time to bolt a meal now and then.

But with all the hardships of campaigning with Pinchot, there wasn't a man among them who wasn't ready to go out again with him when the time for his fall trip arrived, despite the fact that itinerary and the mode of travel promised even more grueling adventures.

And it was simply because Gifford Pinchot is the sort of man who inspires others. To begin with, he has a fine personality, one that wins and holds friendships. And, more than that, his honesty and sincerity impress themselves on one at the first meeting.

To correspondents, who had campaigned with practical politicians, who were mere mouthpieces for a political machine, it was a real joy to write about a man who was the personification of integrity, and who sought nothing in politics except the honorable opportunity to reshape the political destinies of his native State for the good of its people.

Yet, with all his sincerity of purpose, all of his intense desire for real public service, Pinchot is by no means a self-centered zealot, a bore who is always ready to inflict his views upon those around him. He is a man of charming manners, has an exquisite sense of

GIFFORD PINCHOT INSTRUCTING HIS SON, GIFFORD, JR., IN MARKSMANSHIP AT GREY TOWERS

humor, and under the most trying circumstances is a pleasant companion.

During his primary campaign he lost his voice, and for days his throat was so greatly inflamed that it gave him intense pain. On top of this, his right hand became very sore, through shaking hands with thousands of persons each day. Either one of these afflictions would have developed at least grumpiness on the part of an average person forced to carry on a political campaign. But Pinchot not only concealed all manifestations of pain, but during long train or automobile rides laughed incessantly at the pleasantries of the newspaper men. And it is doubtful whether any one among those he met during those days knew just how badly he felt.

When Pinchot addresses an audience, he wins it almost immediately. Before he opens his mouth, the audience is convinced—if it is convinceable—that he is an honest man, that what he is about to say will be the truth, and what he promises to do will be done if it is possible for a man to do it, and if it isn't done it will not be because he has failed to make the attempt.

It was the discovery of this reaction on the part of his audiences by the newspaper men accompanying him that made it possible for them, after a certain stage in his primary campaign, to predict his nomination, in face of the fact that he was opposing the machine, whose "slated candidates" for State offices had never gone down to defeat.

The comments of the men and women who turned out to hear him showed that he won their confidence the minute they took a look at him, and that when they had heard him speak they were committed to his cause. Of course this is true of any candidate where the audience is picked by well-known political methods, but in Pinchot's case the as-

semblages were almost wholly impromptu gatherings.

Pinchot is not a great orator. He lacks both the word power and the gesticulations of Roosevelt. But he has the intense earnestness which marked T. R.'s utterances, and it means more than all the polished periods and brilliant epigrams that the most eloquent speaker might roll out. Wherever he has gone in his primary election campaign—and in his general election tour up to date—it is apparent that the people stamp their approval upon him because he is the embodiment of honesty, and his words—uttered in a plain, heart-to-heart manner—ring true.

Probably nowhere does one obtain a more comprehensive insight into the many-sidedness of Pinchot than at his home at Milford. His den and office, which is on the first floor of one of the towers from which the house takes its name, has objects in it which run the gamut of human activities—guns, books on forestry, fishing tackle, statistics on conservation of natural resources, quaint bits of art, outlines for reforms in various departments of State government—a perfect conglomeration of objects which play some part in the varied interests of his busy life.

There is hardly a subject which the ordinary human being may wish to discuss, whether it be fishing, hunting, aviation, good government, taxation, the drama, or literature, which he cannot take up authoritatively, and like as not illustrate with something either on his desk, the walls, or in the book-cases.

While a great lover of life in the open, he is also a student and a tremendously hard worker. Even when at home at Grey Towers, he is continuously on the go, except when he has to play the host. One minute he is to be seen poring over a book, reading a report, or dictating a letter, and soon after he appears costumed for a try at the trout in the creek which runs through his estate. And, next to wading the stream after the trout, the greatest pleasure he can derive is in togging out his seven-year-old son, Gifford, Jr., popularly known as "Mr. Fish," and taking him along to try his hand with the fishing-rod.

Mr. Pinchot likes to be home at Grey

Towers, for there, he says, he can work around in old clothes and wear soft shoes and an old hat and enjoy himself.

One of the pleasant features of life at the Pinchot home is the partnership, in every respect, which exists between husband and wife. Mrs. Pinchot is not only interested in the pleasures that are her husband's, but she is equally as well versed in politics and knows the State, its people, and its problems of a governmental character as thoroughly as does Mr. Pinchot.

In fact, the practical politicians profess to fear her more than they do her husband, for they say she wields tremendous influence among the women of the State, which is unquestionably true. She is a member of the Republican State Committee from Pike County, the county's only member, in fact. She makes a speech which puts many a male orator in the shade, and she has an exceedingly comprehensive knowledge of the political cross-currents of the State.

Always before adopting any course of political action Mr. Pinchot consults with the "State committeeman from Pike County," and there is no evidence that he has made any mistakes so far.

If he were to do nothing more for the sake of the State politically, Mr. Pinchot has accomplished one thing which will indelibly stamp his name upon its history. As far back as the memory of man runneth not to the contrary, it has been the custom of the State's dominant political party to assess the employees of the State and the various local governments to help defray the costs of the State-wide campaigns. Each follower of the party holding a job, no matter how humble the place or meager the salary, has been forced to pay a certain percentage of his yearly wage. This system has been a subject of protest for years, but no candidate, no matter what his pretensions to honesty might be, ever attempted to end this practice until Mr. Pinchot found that he had been nominated.

Then he notified the Republican State Committee that if this system of extorting assessments was to prevail, he would sever his campaign from its control and conduct it himself. The State committee argued that it was impossible to conduct a campaign without gouging the State and city employees, but finally, when it was found that Mr. Pinchot meant what he said, the Committee decided that, after all was said and done, it would be better to raise the necessary money from private sources.

That was triumph No. 1 for the Bull Moose, as the machine politicians call Mr. Pinchot. Since then the Committee has accepted his counsel and direction without debate, all of which augurs well for the future. It means that Pinchot will not only be elected, but he will find the Legislature amenable to his advice, and it will be possible to carry out the "Roosevelt square deal" programme which he promised the people.

AN ALMOST IDEAL JUNIOR FOOTBALL ELEVEN, WITH REASONABLY SMALL VARIATIONS IN WEIGHT AND AGE. SECOND TEAM, CARTERET ACADEMY, ORANGE, NEW JERSEY

The second and third teams, kept rigidly to boys of nearly the same size and age, were thus capable of superior team-work, and lost altogether but three games in thirty in two years

WHEN YOUR BOY PLAYS FOOTBALL

BY CHARLES K. TAYLOR

AS one of our great National sports reaches its usual spectacular wind-up in New York, the second one gets into its fall stride. These two games, baseball and football, are assets of no mean value—not when played by professionals for the excitement of some thousands of bench athletes, but when played by schoolboys for their own mental, moral, and physical benefit.

Each game brings its own peculiar benefits. With baseball, for instance, comes the most rapid kind of co-ordination between mind and body. There must be instantaneous judgment and individual alertness of very high order. There must be a stern self-control, for all ball players know the fatal rout that comes when a team "goes up in the air." So much for baseball. The season's knell is sounding for the professionals and that for the schools sounded months ago.

Enters football. And here we have another fine game that can be of enormous aid, not only in physical development, but in developing physical courage, the ability to take a rough-and-tumble in good humor and a bump or two without self-pity. It develops the ability to work as a member of a team. And team-play is a mark of civilization. A football eleven made up of eleven individuals is no team at all, and deserves the certain defeat that comes to it. This is something that boys learn, and those who are worth anything become able to sink their individualities in the team, and out of this arises fine and rapid team-play, rapid and effective interference, the resolute fighting of a good team of sportsmen going down to defeat, but going down gallantly, with flags flying to the last bitter moment. Here's a game that requires real manhood, and often develops manhood where it was

seemingly lacking before. Here's a game that bumps a self-centered youth out of himself, and, by virtue of much rolling in the mud and sundry hard knockings against a tough old earth and sundry hard elbows, feet, and leather armor, makes him into a genial, co-operating fellow-citizen.

And all this is rather hard to say when one reads every fall of the number of fatal accidents and quantities of painful injuries gained by the more youthful players of this noble game. We do have the deaths, and we do have the broken legs, arms, collar bones, and so on. And it is because of this well-advertised annual list of unfortunate happenings that many parents, perhaps wisely, keep their young sons out of the game and many schools try to discourage it.

And yet, after all, if one or two reasonable regulations are strictly and fairly enforced, the chance of accident is reduced to such a minimum that football may well become much safer than many other sports—basket-ball, for instance, which has such an unpleasant record with its younger enthusiasts, who too often gain heart enlargement through its too long continued violence.

But football, even for the small boy, and I am talking now particularly concerning the playing of this game on the part of lads under college age—for the boy and youth, then, football becomes quite safe and of immense physical and character benefit if but one or two rules are understood and rigidly enforced. And this is something that the parents themselves often have to enforce. Too many coaches seem unable to avoid "taking a chance" for the sake of making a winning team a possibility.

Here is the first and most vitally important rule. When schoolboys play football, they should play in teams of

boys of approximately the same weight, and should never play against other teams that weigh more than a very few pounds over their own average weight, nor should the opposing team have any one individual player weighing over two or three pounds more than the heaviest player on the first team.

The writer has seen many of the schoolboy accidents that get into print, and has looked up numbers of others, and in a great majority of cases these have come to small or young boys who have been playing with much heavier or older boys. Now it may well be that the light-weight boy in question is a very superior player, and too many coaches do not resist the temptation to put this boy with the heavier and older players. True enough, an exceedingly skillful lad of fourteen or fifteen by real dexterity may avoid serious accident when playing with a team of much heavier fellows. But in such cases you no longer have a real sport. You have only the younger and lighter boy's dexterity between him and a possible serious if not fatal injury. No boy should play under such a handicap. He should be able to give and take with the rest of his team and not need to use most of his capacities in avoiding getting badly hurt, instead of using them totally for the advancement of the game, which he could do if placed with boys of his own size.

This is certainly true when much lighter boys are sent into teams with heavier ones, and it is even true when a young but heavy and stocky boy is sent in with boys who may be no heavier, but who are considerably older. For the young boy's joints are not tightly knit. A blow that the older boy will hardly notice may injure the younger boy for life. So that there should be, in an ideal team, not only a

homogeneity in size but also in age, when schoolboy playing is concerned.

It is true that some schools rigidly maintain such regulations, and when this is done chance of accident is reduced to a very small minimum, the boys gain much benefit and pleasure, and, which is quite important, they are very likely to win their games, for a homogeneous team is a much better machine for a fighting game like football than any team can ever be that mixes wide variations of sizes and ages. And yet the writer has seen experienced coaches do this very thing, knowing all the time that there is a real risk (to the boys, of course, and not to the coach), but willing to "take a chance" that the youngster will manage to keep out of ugly tackles and manage not to get beneath some big burly fellow who will be likely to break some of his bones. For a good example of a risky combination, the writer has seen a schoolboy team, produced by a large school, that contained players ranging from 110 to 180 pounds, and from fourteen to eighteen years of age. Such a team would average about 135, and would have to play teams of the same or even more weight, which teams could of course have play-

ers as heavy as the heaviest of the home team. One does not have to imagine the result if one opposing player of 180 pounds should happen to fall full weight on the slight 110-pound youngster. It is in the taking of such chances that our worst schoolboy accidents arise and that give this wonderfully fine game so undeserved a bad reputation.

Let us consider again another eleven years the writer has followed for two or three years. Last season this younger boys' team averaged fifteen years, and ran from fourteen to sixteen, with one or two able thirteen-year athletes as substitutes. The total range in weight was about twenty pounds, though the great majority were close around the average—110 pounds. This team in its two years of play was not permitted to play antagonists whose team average was over two pounds more than its own average, nor could any one opposing player weigh over two pounds more than the home team's heaviest player. These conditions were agreed upon and approved by all the opposing teams, and in the twenty games played there were no accidents to either team or bruises worth mentioning, and the boys had no end of a good time. Not only so, but their very

homogeneous made a caliber of team-work possible that one attributes usually to older teams, so that this particular team lost but two of its twenty games in the two years of its organization. This is but one example out of many similar ones.

In any sport, and particularly a schoolboy sport, there should be one adamant rule enforced rigidly by the school authorities, and this is, "Avoid risks," and its adjunct might well be, "Do not take a chance of sacrificing a young though able player merely for the sake of adding chances to winning." The winning isn't nearly so important as is the playing of the game in a rational fashion, with the maximum of safety—which means the maximum of fun and benefit for all.

To conclude, then, you parents who really concern yourselves with matters affecting your sons, see to it that your sons do play football, if they are physically fit, but see to it that they play with boys of their own size and against boys of their own size, if you would avoid getting your boy into splints or having him come home with some life-lasting injury, such as you read about in the papers every fall.

UNDER FOUR PRESIDENTS

THE AUTOBIOGRAPHY OF OSCAR S. STRAUS

CHAPTER IX—IN THE CABINET

AFTER a White House luncheon early in January, 1906, President Roosevelt asked me to wait for him in the Red Room. When the other guests had departed, he came back to me and, with his face beaming with geniality, he said:

"I don't know whether you know it or not, but I want you to become a member of my Cabinet. I have a very high estimate of your character, your judgment, and your ability, and I want you for personal reasons. There is still a further reason: I want to show Russia and some other countries what we think of the Jews in this country."

Of course I was very much gratified. I told him I had heard from several persons that he had spoken of this intention, but that I had meant to take no notice of it until he should speak to me about it; that I should certainly esteem it the very highest honor to become a member of the Cabinet, and especially to have the privilege of working alongside of him.

"I knew you would feel just that way; therefore I was anxious to let you know of my intention as long in advance as possible," replied the President. He said all this in such a cordial and affectionate manner that I was profoundly touched with this manifestation of close friendship for me.

Roosevelt added that he could not see at it would do any good, and might do

harm, to make further protests regarding massacres in Russia; and he did not want to do anything that might sound well here and have just the opposite effect there. He thought it would be much more pointed evidence of our Government's interest if he put a man like me into his Cabinet, and that such a course would doubtless have a greater influence than any words with the countries in which unreasonable discrimination and prejudice prevailed.

He told me that it might be July, or even later, before he could carry out his purpose. But I was to regard my appointment to one of the Cabinet positions as certain.

My wife and the rest of my family were of course elated at hearing the news, particularly my brother Isidor, whose attitude toward me, his youngest brother, was always more like that of an affectionate father than a brother. I felt no trepidation, especially should I be selected for the Department of Commerce and Labor. My past training and interest in many of the subjects that came up under that Department made me conversant with the main questions it had to administer.

PERMANENT RETIREMENT FROM PRIVATE BUSINESS

Upon my return to New York I began to make arrangements for severing all business connections. This I thought

wise, particularly if I became head of the Department of Commerce and Labor. It was not a necessary step, but I wanted it never to be said that I advocated any measure or made any decision that might in the remotest way be of advantage to my private interests. I spoke to Roosevelt about my intention, and he said that, while it was not essential, if I could do so it would on the whole be advisable; that situated similarly he would do the same thing himself. Before assuming office, therefore, I had retired from business for good, and I have not since that time been connected with any business for personal profit.

My nomination was officially made in September, but it was not until early December, 1906, that I received a letter from William Loeb, Jr., the President's secretary, notifying me that the President desired me to assume office on December 17.

The scope of the Department as constituted then was probably the largest of the nine branches of the Government. It was charged with the work of promoting the commerce, mining, manufacturing, shipping, and fishery industries of the country, as well as its transportation facilities and its labor interests; in addition it had jurisdiction over the entire subject of immigration. It had twelve bureaus: Corporations; manufactures; labor; lighthouses; Census; Coast

and Geodetic Survey; statistics, including foreign commerce; steamboat inspection; immigration and naturalization; and standards.

In order to co-ordinate the work of these various bureaus I instituted the simple method employed by large business administrators of having the several bureau chiefs come together with me twice a month to discuss and confer regarding the most important administrative subjects. This enabled me to keep better informed and served to make the various heads of bureaus conversant with the whole scope of the Department, preventing overlapping and duplication of functions. I learned that this simple administrative method had never been made use of before in Federal departments, but thereafter it was adopted by several of the other department heads.

Thanks to Mr. Cortelyou's admirable organization of the Department, I found, almost without exception, a fine and competent set of men in charge of its several branches. Some of them were friends of Roosevelt, members of his "tennis cabinet," and were thoroughly imbued with his spirit and ideals. The Assistant Secretary was Lawrence O. Murray, a capable and conscientious official. James R. Garfield, chief of the Bureau of Corporations, devoted himself to the difficult task of exposing the abuses and legal infractions of some of the great corporations, and did it with judgment and ability, and with conspicuous courage. Charles P. Neill, chief of the Bureau of Labor, a laboring man in his early days, and afterwards an instructor at Notre Dame, and Professor of Economics at the Catholic University in Washington, D. C., was eminently qualified for his duties and had the confidence alike of the labor leaders and employers. Dr. Samuel W. Stratton, a scientist of distinction and a fine administrator, was then and still is chief of the Bureau of Standards, a veritable institution of science.

AT HOME IN THE "VENETIAN PALACE"

My wife had so promptly put our household in order that in a week after our arrival we were comfortably installed in our Washington home, No. 2600 Sixteenth Street, a house known as the "Venetian Palace." It was a new house, built by Mrs. John B. Henderson, and well suited to our needs and for entertaining. The social functions in Washington I found most agreeable. During the season we either gave a dinner or attended a dinner on an average of five evenings a week, but these occasions were not burdensome because they usually ended by ten-thirty o'clock.

According to custom, President Roosevelt at the beginning of the season designated the date on which each Cabinet member was to give a dinner to the President, and the date assigned to me was February 19. It had been usual for each host to invite to this dinner all the other Cabinet members and their wives, which left little opportunity to invite

(C) Underwood

"On Christmas Day, Mrs. Strauss and I received an invitation to come to the White House to see the Christmas tree"

others. Roosevelt changed this custom, so that other friends of the host were invited rather than one's fellow-members in the Cabinet. Foreign diplomats also were not invited, the entire purpose being to give these occasions the character of intimate gatherings, not large, usually from eighteen to twenty-five guests.

Our dinner went pleasantly. The President was in his usual good humor. Wines were served liberally, but it was Roosevelt's habit to drink very little. This I had observed on several previous occasions, both at the White House and elsewhere. Roosevelt usually took some white wine with *apollinaris*, and perhaps a glass of champagne. For this dinner my wife had secured the additional services of a certain colored cook in Washington, a woman famous for preparing terrapin, which was one of Roosevelt's favorite dishes.

The day after taking office I attended my first meeting. The Cabinet table is oblong, the President seated at the head, and to his right and his left the secretaries in the order in which their departments were created.

The meetings were informal and no minutes were taken or other record made. After some brief preliminary talk, in which the President often had some incident to relate or some amusing caricature or savage attack upon himself to exhibit, the business of the day began. The President called on every secretary, but in no fixed order. He presented such matters as he might deem important, or for information, or upon which he might want discussion and advice.

JAPANESE QUESTION SMOLDERS

Important among the immigration subjects were those which presented phases of the Japanese question, the immigration *en masse* of Japanese to the Pacific Coast States, California in particular. The matter was brought up by Secretary Root at one of the Cabinet

meetings. The city of San Francisco had taken action excluding Japanese from the public schools. It was deemed detrimental for the white children of tender ages to be in the same classes with older and even adult Japanese who came to these schools to learn English.

The President insisted that, as it directly affected the relations between the two nations, it was a National concern. Secretary Root asked me whether I could furnish some data as to the use made of Hawaii by Japanese immigrants for circumventing our Contract Labor Law, as many of the Japanese immigrants were coming to the mainland via Hawaii. Upon looking into this matter, I found during the year previous fully two-thirds of the Japanese came via Hawaii. The President took the situation in hand and had the Mayor of San Francisco and other leaders of the Japanese agitation come to Washington.

The obnoxious matter was finally adjusted with Japan in a manner to allay irritation by a "gentlemen's agreement," by which that country itself was to prevent the emigration of its laboring classes. It was of course much better that the Japanese interdict emigration of their own people than that we offend that nation's pride by preventing their entrance, although it was made clear that we should pass an exclusion law if they did not take prompt and effective action. With some exceptions, this plan worked well. The whole Japanese question, however, was still smoldering.

Happily, our relations with Japan are now more peaceful than they have been for some time, and to a large degree this has been accomplished by the Four-Power Treaty negotiated at the Washington Conference on the Limitation of Armaments in December, 1921. The various vexatious instances that had from time to time occurred in our relations with Japan were stimulated by German officers stationed in the Far East and fostered by the sensational

The "Venetian Palace," the Washington residence of Mr. and Mrs. Straus during Mr. Straus's membership in the Roosevelt Cabinet

press in both Japan and our own country. The Anglo-Japanese Alliance of 1911 came into being because of the aggression of Germany and Russia in the Far East. After the World War of course this condition no longer obtained, and as the *raison d'être* of the alliance had therefore vanished, there was a justified feeling in America that the continuance of the treaty was a menace to our country. This fact was not unrecognized in Great Britain itself. As Mr. Balfour stated at the Washington Conference, it was necessary to "annul, merge, destroy, as it were, this ancient and outward and unnecessary agreement, and replace it by something new, something effective, which should embrace all the Powers concerned in the vast area of the Pacific." By the Four-Power Treaty the Anglo-Japanese Alliance was automatically discontinued and Great Britain, the United States, France, and Japan became associated in friendly partnership as guardians of the peace in the Far East.

A TRIP TO HAWAII

That summer I decided to combine business with pleasure by taking a vacation trip along the Canadian border from Montreal to Vancouver to inspect the lighthouse and immigration services, then down the Pacific coast and to Hawaii, where I might acquaint myself with regard to immigration as it affected the Japanese question. The President thought this would be a useful trip and urged me to take it.

In the administration of a department such as that of Commerce and Labor it was important to familiarize one's self as much as possible with its outlying branches, to become personally ac-

quainted with the various officers and the details of their work and surroundings, thereby to enable one better to do the administrative work than by remaining at one's desk.

After leaving Vancouver, we stopped a few days each at Seattle, Portland, and San Francisco, where I conferred with the officials of the Department. From San Francisco we took a steamer to Hawaii, on board which we met George R. Carter, Governor of Hawaii, returning from a vacation in the United States, and Congressman and Mrs. Nicholas Longworth. It made a very pleasant party.

The authorities and the population gave us a rousing welcome, cannons saluted, and the militia was out to escort us. Only once before since the island became United States territory had a Cabinet official paid a visit, and that was two years before when Secretary of War Taft stopped there for a few days *en route* to Japan. We were comfortably installed in the Hotel Moana, in the suburb of Waikiki.

The islanders showered upon us bounteous hospitality in every conceivable form. Governor and Mrs. Carter entertained the Longworths and us in the official residence, the former palace of the Hawaiian rulers, in the throne room of which hung the portraits of those rulers from earliest times to the deposed Queen Liliuokalani. The reception was a brilliant occasion. The leading officials and the *élite* of the population were there; the grounds were beautifully illuminated; and the Royal Hawaiian Band played the soft, plaintive music so typical of the mild temperament of the people and the luxuriant foliage of the island.

The island residents impressed me

with the great need for better shipping facilities between the mainland and the islands. The coastwise shipping laws applying to them since annexation penalized the carrying of passengers or freight in other than American bottoms. Foreign ships accepting either passengers or freight to American ports on the coast were heavily fined. The result was, not only inconvenience to residents who for one reason or another needed to leave the islands, but the loss of much perishable freight, principally fruit, which rotted on the wharves waiting for American ships. I promised them that I would do everything in my power to help them get the shipping facilities they needed.

As we sailed out of the harbor on the Asia, bedecked with Hawaiian flowers, the Royal Hawaiian Band played its farewell music. The last words we heard from the Hawaiian shore were "Aloha Nui," the Hawaiian farewell.

HARMONIZING HUMAN AND BUSINESS INTERESTS

In a Department like mine, which covered so many and such varied subjects, the conflict between human and property interests was often apparent. Roosevelt had told me that whenever within my jurisdiction there occurred this conflict, he was sure I would lean to the human side, and I could always count on his support.

A striking example of this conflict grew out of an order I issued for the inspection of excursion and ferry boats at least three times a year instead of once. The summer before I took office the boiler of the General Slocum, a large excursion boat on the Long Island Sound, blew up and caused the death of nearly a thousand women and children. As spring approached and the excursion season drew near, I made up my mind to make all possible provision to prevent the recurrence of any such disaster.

I accompanied the supervising inspector-general, George Uhler, to witness the inspection of some passenger boats plying between Washington and Norfolk to get personal knowledge of the details of inspection. I carefully studied a report made to me by Mr. Murray, the Assistant Secretary of my Department, who had been a member of the board of inquiry into the Slocum disaster and later the Valencia wreck. I called a meeting of the Board of Supervising Inspectors of Steamboats and impressed upon them the importance of great care in inspection. I urged that no man be retained in the inspection service who was not thoroughly competent and efficient, since they had to deal with the protection of human life.

My order for more frequent inspection brought forth many objections from the steamboat owners, and a committee came to Washington and presented their grievances and objections direct to the President, in the hope of inducing him to overrule my instructions. They were patiently heard, but their main objection

was that it would cost a little more and be a little more inconvenient to have three inspections instead of one, and the President gave them little more comfort than to make it quite clear that he was thoroughly in accord with my action for the provision of greater safety to human life. He told them he felt he was fortunate in having at the head of the Department of Commerce and Labor a man who was a humanitarian besides having large business experience, for, while it was his purpose to harmonize human and business interests, always when they conflicted he would lean toward the human side, as I had done in issuing that order.

SAVING THE SALMON

The President was deeply interested always in the natural resources of the country and their preservation, and asked me to take up the question of the Alaska salmon fisheries. It was certain that unless some drastic action was taken the salmon would be destroyed in the Alaskan waters just as they had been in the Columbia River. Roosevelt felt that Wood River ought to be closed. I devoted parts of two days to a hearing on the subject. The cannery interests were represented by their counsel and the Fishermen's Union by several of its officers. Senator Fulton, of Oregon, as well as the two Alaskan Delegates in Congress, pleaded for the closing of the rivers.

After hearing all sides and studying the question I signed an order directing the closing of both the Wood and Nushagak Rivers to trap and net fishing, and if the law had not applied only to rivers at a distance of five hundred feet from the mouth, I should have directed the closing also of Nushagak Bay, where extensive trap fishing was carried on.

HOW THE CHAMBER OF COMMERCE OF THE UNITED STATES ORIGINATED

When I was President of the New York Board of Trade and Transportation, I was impressed with the importance of establishing a closer relationship between the commercial bodies of the country and the Government. Shortly after I became Secretary of Commerce and Labor, therefore, I sought to accomplish that end. I had a study made by Nahum I. Stone, tariff expert of the Bureau of Manufactures, of the relations between the European governments and their commercial bodies, especially in Great Britain, France, Germany, Italy, and Belgium. I sent invitations to about forty of the leading chambers of commerce, boards of trade, and other commercial organizations throughout the country to send delegates to Washington for a two days' conference, with a view to bringing about an organization of these bodies for the purpose of co-operation between them and the departments of the Government having to do with commerce and manufactures.

Accordingly, on December 5 a representative gathering of over one hundred

(C) Underwood

Diamond Head, from the Waikiki Beach, Hawaiian Islands. As Secretary of Commerce and Labor, Mr. Straus visited Hawaii, where he and his party received a rousing welcome

delegates met in my Department, and I put before them a plan for organization. I invited Secretary Root, who took a deep interest in the scheme, and he made a thoughtful address, in which he impressed upon the gathering the things that ought to be done, and could be done only through organization and the power of concerted effort. Andrew D. White, our Ambassador at Berlin, had sent to the President a letter containing the proposal that a method of instruction in commerce be applied at the instance of our Government, as had been done in agriculture; this interesting proposal I read to the meeting.

I then went with the delegates to the White House, where the President addressed them. In the afternoon Gustav H. Schwab, of the New York Chamber of Commerce, was elected temporary chairman and the organization of the Council proceeded. A committee on organization and one on rules were appointed, and it was decided that an advisory committee of fifteen members was to have headquarters in Washington. On December 5, 1907, therefore, the National Council of Commerce came into being.

Later the Council was reorganized and called the Chamber of Commerce of the United States, which to-day is an impor-

tant institution in the commercial life of our country.

SESSIONS WITH LABOR CHIEFS

To bring about a similar relationship between the Department and the labor bodies, I called another conference in February, 1909, to which I invited the leading labor representatives throughout the country, and about fifty attended. Unfortunately, my term of office was drawing to an end and there was not time to organize this wing, but I urged the men to insist upon the continuance of the conferences and the co-operation with the Department thus established.

The matters discussed at this meeting were mainly how best to lessen unemployment, how the Division of Information under the Bureau of Immigration might be administered for the greater benefit of labor in general, and how the Nobel Peace Prize, which President Roosevelt had set aside for a foundation for the promotion of industrial peace, could be made most effective. There were addresses by Samuel Gompers, President of the American Federation of Labor; Warren S. Stone, Grand Chief of the Brotherhood of Locomotive Engineers; William F. Yates, President of the Marine Engineers' Beneficial Association; and Terence V. Powderly, Chief

of the Division of Information in the Bureau of Immigration. The presiding officer was Daniel J. Keefe, Commissioner-General of Immigration and Naturalization.

During my term of office repeated efforts were made in Congress, backed by organized labor, to divide my Department and make two of it—the Department of Commerce and the Department of Labor. I successfully opposed this plan, my idea being that labor and capital were the two arms of industry, the proper functioning of which could best be secured by co-operation, which in turn could best be promoted by administering their interests together. In this I had the support of Roosevelt. During the Taft Administration, however, the bill was passed creating the Department of Labor.

CONCERNING POLITICAL FENCES

On April 3, 1908, the Savannah Board of Trade celebrated its twenty-fifth anniversary, and I was asked to be one of the speakers. On this trip my wife and younger daughter accompanied me. The Mayor and prominent citizens of my former home, Columbus, upon learning of our presence in the South, sent us a pressing invitation to visit that city, where a dinner was presently given at the Opera House. The dinner was served on the stage, and while the toasts were being responded to the curtain was raised, disclosing an auditorium crowded with people. I was touched by this fine attention by the citizens of my former home, who took great pride in the fact that one of their former townsmen was a member of the Cabinet. In the audience were several of my schoolboy friends and those of my brothers, and I found several friends and companions of my parents still among the living.

In the South at that time it was still rare for a person to change his politics, and one of the questions that was put to me was why had I, a member of a Democratic family, once a Democrat myself, and even having held office under a Democratic President, changed over to the Republican side. In other words, why had I been on both sides of the political fence?—though they were too polite to ask the question in that direct form. I told them that perhaps no one had a better right than they to ask. It was true, I said, that I had been, as it were, on both sides of the fence, but that was not my fault; the fence had been moved. This produced great merriment.

CHRISTMAS AT THE WHITE HOUSE

On Christmas Day Mrs. Straus and I received an invitation by telephone to come to the White House between three and four o'clock to see the Christmas tree. Some thirty or forty guests were there. In one of the side rooms in the basement of the house was assembled a large company of children. The room as darkened, that the lighted tree might stand out. There were presents

for all the children, and Mrs. Roosevelt played Lady Bountiful to see that each child got its gift. Upstairs in the Red Room the gentlemen sat smoking. It was a genuinely joyful and happy day.

The social season in Washington is usually begun with the President's New Year's reception, which lasts from eleven o'clock until half-past two on New Year's Day. At a few minutes before eleven o'clock the officials and their wives assembled upstairs, and promptly at eleven the President and Mrs. Roosevelt led the march to the Blue Room. The procession marched toward the main stairway, where the line divided, the ladies going to the left and the gentlemen to the right, reuniting at the first landing; then through the main hall, where the passageway was roped off through a crowd of specially invited guests.

The order following the President was: the Cabinet officers; the *doyen* of the diplomatic corps, the Italian Ambassador and his staff; the Ambassadors and Ministers of the other nations, according to rank. After them, grouped in more or less regular order, the Justices of the Supreme Court, headed by the Chief Justice; Senators; Representatives; Army and Navy officials; the officers of the Government.

On New Year's Day every one is accorded the right to pay his or her respects to the President. The officials come straight to the White House and the uninvited guests form a line on the grounds. On the particular day of which I speak the line stretched through

the grounds, along Pennsylvania Avenue and down by the State Department Building, probably more than half a mile long, and the President received about sixty-five hundred people in all. At two o'clock the iron gates of the White House grounds are closed, and those who had not reached that point by that time were barred out. The reception had to end promptly, as the Cabinet ladies who assist have to be present at the receptions at their own homes from half-past two until six, in accordance with a custom that has been in vogue probably since the days of Washington. Our buffet in the dining-room was kept well replenished, and there were champagne and punch served. We had in all about four hundred guests.

SOCIAL LIFE IN WASHINGTON

The official functions at the White House during the Roosevelt Administration were agreeable and in stately form. They were usually followed by an informal supper to which were invited personal friends and visitors.

Our series of official dinners began with the one to the Vice-President and Mrs. Fairbanks and ended with the dinner to the President and Mrs. Roosevelt. In addition we followed the pleasant custom of the President and had guests to informal luncheons three or four times a week. These luncheons we gave in the sun-parlor back of our dining-room, which was one of the attractive features of our Venetian Palace.

It was my privilege to give the last Cabinet dinner to the President, on March 2, two days before the close of the Administration. The event had been postponed for a week on account of the death of the President's nephew, Stewart Robinson, whose mother was the President's sister. Governor and Mrs. Hughes, who were among our invited guests, stayed over when it was found that the dinner had to be postponed. Mrs. Roosevelt later informed me that she planned that our dinner should be the last, knowing that I had some sentiment about it which she and the President shared.

I have made several references to the wonderfully human touch characteristic of Roosevelt. On February 5, the day beginning the last month of his Administration, a messenger from the White House brought me a package containing a large folio, a handsomely illustrated memorial volume describing the Castle of Wartburg in Saxony, in which Luther was confined and where he worked on his translation of the Bible. The book had been prepared by official direction, and Roosevelt had received two copies of the royal edition, one from the Kaiser personally and one from the Chancellor, which latter he sent to me with this inscription:

"To Mr. and Mrs. Oscar S. Straus, in memory of our days together in the Administration; days which I have so much enjoyed and appreciated. Theodore Roosevelt. February 5, 1909."

THE DRAMATIC STORY OF THE PROGRESSIVE CAUSE

The birth of the Progressive party and Roosevelt's campaign for the Presidency in 1912 are tersely described in next week's chapter of the Autobiography. Roosevelt's defeat is explained. The attempted assassination of him by a lunatic in Milwaukee is described. His dramatic appearance at the final mass-meetings at Madison Square Garden, contrary to the advice of his physicians, is brilliantly pictured. This chapter contains some of the finest and most memorable excerpts from Roosevelt's speeches. The nomination of Mr. Straus himself as candidate for Governor of New York in the same year, the stampeding of the convention, and his participation in that tumultuous campaign are depicted with great vividness in this historic chapter.

THE MAKING OF AMERICA

PICTURES FROM OUTLOOK READERS

From A. Fagerberg, Santa Fe, New Mexico

Santa Fe, New Mexico, the oldest capital in the United States, has an annual fiesta or celebration commemorating the reconquest from the Pueblo Indians by the Spanish in 1693. For 210 years this festival has been observed, and now it takes the form of a three-day pageant, unique in its historical setting, color, and significance. This picture shows a modern Santa Fean in the rôle of Don Diego de Vargas Zipata Lujan Ponce de Leon, who did the recapturing, accompanied by two of his chief captains. The de Vargas Day was September 5 this year

From the School of American Research, New Mexico

Spanish government was established in Santa Fe in 1606 and overthrown by the Pueblos in 1680, and when de Vargas recaptured the place in 1693 hundreds of submissive Indians witnessed the ceremony. The Indians here seen are the descendants of those red men of old and are impersonating them in the Santa Fe Fiesta, watching the approaching of de Vargas. They are standing before the old Palace of the Governors, exactly where the original ceremony took place. This old Palace has housed more than one hundred Governors of New Mexico — Spanish, Pueblo, Mexican, and American—beginning with Oñate in 1606. Among these was Lew Wallace, author of "Ben Hur"

THE BOOK TABLE

LITERARY NEUROSIS BY THOMAS L. MASSON

NO matter how fond we may be of reading and how we may look back with a sense of delight at some of the most delicious moments of our lives when we were absorbed in some entrancing tale, it still remains true that all of us experience restless periods, when nothing in the way of a book seems to satisfy us.

And the worst of it is, this feeling appears to grow; just the thought that it is growing, that it is little by little getting the best of us, makes us yet more restless. That is, it does if we have a conscience. Singular to state, a large proportion of us still have consciences lingering somewhere about in our systems, although we may not realize this. It is the restless wandering of this conscience as it travels up and down our spinal cord and flops about in our medulla oblongata, only to rise up and patter aimlessly through the bewildering maze of our gray matter—it is this that only aggravates our case of literary neurosis. There is undoubtedly, however, a proportion of people who either have no literary conscience at all or who by long practice have succeeded in utterly eliminating it. To contemplate these poor wretches may be of great benefit, because they serve as a warning—they reveal concretely what we ourselves may come to unless we take ourselves in hand. These are the people who go from mystery story to mystery story, who, like advanced opium-eaters, demand a thrill on every half-page, and who if you should as much as mention to them the novels of Jane Austen would fall into a coma.

But it doesn't matter whether this disease of literary neurosis has only just attacked us or whether we are in the last, say the Oppenheim, stage of it, the quality of the result is the same; only the degree and intensity differ. Let us face it bravely and discover if we can cure ourselves of it.

It is a universal malady. It afflicts the scholar alike with the dilettante. Rousseau writes somewhere of the delights of a vacation where one takes along all the books one has planned to read—and never reads them. There is undoubtedly the greatest benefit in that kind of evasion. Indeed, a most convincing argument could be built up which would show the superiority of the moral progress to be made from not doing all the things we have planned. There may be, indeed, a deliberate intention to evade the things we plan. Thus there is the old jest of the lady who always does shopping without ever buying anything; and most of us have had the experience of laying out a journey beforehand and by some slight accident of having our direction completely diverted to some other destination sud-

denly, and by this happy mischance opening up a whole unexplored world of hitherto unimagined delights.

But literary neurosis is quite another affair. It is a progressive ailment. It may begin with "Vanity Fair" and end with "The Sheik." For sufferers from

THE LOST ART OF TRUTH TELLING

The author of many volumes and a veteran reviewer comments on an Outlook book review in the following words:

I must say a word in praise of Willis Fletcher Johnson's review of Van Loon's "America for Little Historians." It is not only a great piece of work, but it shows the highest kind of editorial judgment to publish it. Our periodicals generally are governed by too much timidity. Telling the truth is almost a lost art. If you can keep on reviving it in The Outlook you will command a great audience. The American people are pathetic in their craving for the truth, and to place it before them requires not so much courage as fine intelligence.

Willis Fletcher Johnson is honorary professor of history of American foreign relations at New York University. His incisive exposure of the inaccuracies in Mr. Van Loon's work, which has been widely recommended by librarians and school-teachers, was almost the first authoritative comment which the volume received. It was a type of review which The Outlook is always eager to secure and ready to publish.

this ailment, Shakespeare did an unpardonable thing when he wrote: "No profit is where is no pleasure ta'en. In brief, sir, study what you most affect." Little by little, if we follow this rule, we fall, as fell the angels. I have seen spoiled young women, victims of this fell disease, wander all about a country house on a fine rainy day, from book-shelf to book-shelf where there were Dickens and Lamb and Conrad and Mark Twain and Stevenson, metaphorically wringing their hands, exclaiming: "Oh, there isn't a thing to read! There isn't a thing to read!"

Certain modern remedies at once suggest themselves. One of the most widely advertised is auto-suggestion. If we adopt this panacea of Professor Coué, we have only to say to ourselves every morning twenty times in a half-drowsy

state: "I love deep reading more and more. Every day in every way I am getting better and better about deep reading." Do not fail, in repeating this formula, to add the magic phrase "In every way," because then you can tackle everything. Works on psychology and theology will fill you with delight, and a bound copy of the "Congressional Record" will excite your passionate interest.

But suppose after a fair trial this remedy should fail, as I am told occasionally happens. What then?

I have discovered a method that, although not without its difficulties, is of great benefit. If we come to analyze our motives for doing anything at all, we shall be amazed to see how the incentive comes from outside stimuli. For example, if you have a note coming due at the bank, say, in three months, your attention is very apt to be riveted to that fact and you have not the slightest difficulty in working like mad to be able to pay it. An automobile accident liability policy is the dullest reading there is, but if your car runs into anybody you read every word of the policy with your eyes glued to it. In much milder cases than these the thing works with astonishing power. You are fond of golf, but business has kept you nailed to your desk. Suddenly an old golfing partner drops in and says, "Come on! There's just time to get to the links." You are up to your ears, but the call of the wild golf ball is too strong, and so you fall, like the angels. You are off!

To circumvent literary neurosis, therefore, it is only necessary to cultivate a few literary specialists—say a Walter Scott rooter, a Jane Austen enthusiast, a Conrad crank, or a Shakespeare trailer. At first it will seem as if nobody ever read anything; but little by little you will be able to scare up these literary fans; and to-day our means of communication are so ample that you can reach any one of these anywhere in a few moments.

I recall quite vividly my first contact with a Conrad crank. I had picked up one of Conrad's novels a few days before meeting him, and, being afflicted with an attack of literary neurosis, I had wandered over its first pages aimlessly hoping there would be a killing. I couldn't get on with it. I mentioned this to the Conrad crank. There was a lambent gleam in his off eye; he grew rosy under the gills; then he began on me. In thirty minutes he had me worked up to a Conrad frenzy. I took an early train home that afternoon and sat up half the night until I had finished "Victory."

If you are a victim of literary neurosis with time and a fit of it both on your hands, call up one of your availables. Bait him a little. Say to him:

"Old man, is there anything good in what's his name—Robert Louis Stevenson? What is the best thing he ever

In the same test-tubes that insure the Nation's safety, Peace finds myriad blessings!

IN 1802 Eleuthere Irénée du Pont de Nemours, at the invitation and with the assistance of Thomas Jefferson, built on the Brandywine River the first du Pont plant the first powder mill to be erected in America. Jefferson had seen the vital necessity to the country's safety of insuring its supply of explosives, and so du Pont became powder-maker to the United States Government.

For the 120 years following, from 1802 to 1922, the du Pont Company has been a manufacturer of explosives *today*, explosives are but *one* of the family of du Pont products.

And the reason is The Chemical Engineer!

* * *

THE Chemical Engineer is a strange mingling of abilities—a coupling of the man of science with the manufacturing expert. He is a chemist who knows manufacturing as well as his science, and who can take the chemist's discoveries on the experimental scale and put them into production on the larger scale of commerce. His province is the *practical* transformation of matter from useless to useful forms. And he has brought into the world's manufacturing plants a new knowledge, a new set of abilities, that has revolutionized industry in the past generation.

The du Pont Company was one of the pioneers in developing the Chemical Engineer. Since its founding by E. I. du Pont de Nemours, who was himself a chemist, it has been building on the foundations of chemistry, for the manufacture of explosives called for increasingly higher forms of chemical knowledge. And in the early years of this century, the du Pont Company had come to have one of the finest research staffs in the country, and in addition a staff of *Chemical Engineers*, men who knew manufacturing as well as chemistry.

This staff was essential, for since 1802 the du Pont Company's larger service has been to be *ready* to supply the Government with whatever explosives it might need for the country's defense. And for the same reason, the company had acquired sources of supply for the large quantities of the raw materials that it might one day need—acids, nitrates, coal-tar products and other materials that were absolutely essential to the production of explosives.

In war, immense quantities of such materials are desperately needed—in peace, very little—yet the supply of materials has to be kept open, for who knows when they may be *instantly* needed?

But how? The Chemical Engineer found the answer. And in the answer lies the key to the du Pont Company's family of products. For the products that du Pont makes are *not* unrelated products. Each of them has its root in one or another of the materials used in making explosives.

It may be another use of the same materials as in the manufacture of dyes. It may be a variation in process, as in the case of Pyralin and Fabrikoid. It may be a product like paints, varnishes, enamels, etc., in which the knowledge of the Chemical Engineer is needed, and the colors produced in dyes, may be used. It may be a product like ether, or a long list of chemicals that other industries use, which the du Pont Company produces in manufacturing its other products.

* * *

THUS, the seemingly unrelated products that carry the du Pont Oval are not strangers, but brothers in the same family. They are not merely the diversions of peace, but the peace uses of materials that the country's emergencies may require the du Pont Company to have at hand in overflowing abundance.

This is one of a series of advertisements published that the public may have a clearer understanding of E. I. du Pont de Nemours & Co. and its products.

FABRIKOID
Scuff-proof, stain-proof and waterproof. For upholstering furniture and automobiles, binding books, making luggage and other uses.

PAINTS AND VARNISHES
For every household and industrial use. Enamels, stains, fillers, automobile finishes, etc.

LITHOPONE
Lithopone and dry colors. Used by paint, rubber, linoleum, paper, ink and other manufacturers.

EXPLOSIVES
For every requirement of civilization; mining, quarrying, land-clearing, tree-planting, irrigation, construction; shotgun and rifle powders.

PYRALIN
For toilet articles, automobile windows, novelties of many kinds. Transparent, or in any color combination.

CHEMICAL PRODUCTS
Ether and other pharmaceuticals, pyroxylin lacquers and enamels. Solutions for coating leather. Bronze powders.

ACIDS AND HEAVY CHEMICALS
For varied uses by practically every industry.

DYESTUFFS
An ever-expanding line of dyestuffs for all purposes.

LET THESE BUSY PEOPLE SHOW YOU HOW TO KEEP UP WITH THE NEW BOOKS

IF you want to know something about the big new novels that have appeared; if you are asking what new poet has arisen; what new controversy is agitating literary circles—we suggest that you read these extracts from unsolicited letters sent in by people as busy as you who have linked themselves to the book world through a weekly periodical which Henry L. Mencken says "is the best literary magazine ever set up in America"—

The Literary Review

OF THE

New York Evening Post

EDITED BY HENRY SEIDEL CANBY

"I regard The Literary Review as by far the ablest in this country and also in advance of any critical periodical over-seas for wide range of information, for brilliant, penetrating comment and for quintessential entertainment."

"I wish I could tell you what you mean to me. I am a busy young housewife and the mother of two very lively young children, and I have pitifully little time to read. I was beginning to be appalled at the thought that I would have to become a back number as far as any knowledge of modern literature was concerned—when you came to the rescue. You have filled a definite and crying need in my life, and I couldn't get along a week without you."

"I mean to suggest to my study club that The Literary Review be made a part of each week's programme; that the club take out the subscription."

In addition to its editorials, essays, poems, and reviews, The Literary Review, through May Lamberton Becker's Department, "The Reader's Guide," renders a special service to subscribers by answering individual requests for reading lists, club programmes, etc. The annual subscription price is \$2.50. A five months' introductory subscription may be obtained for \$1. Send the coupon now.

The Literary Review, 20 Vesey Street, New York City

Please send me The Literary Review for the period of one year for \$2.50.

(Check below method of payment)

I enclose \$2.50

Bill me for \$2.50

Name..... Address.....

(If you desire a five months' subscription send \$1.00)

NOTE: Add \$1 to the annual subscription price of \$2.50 (sending \$3.50 in all) and we will send you The Literary Review's special three-volume set of Booth Tarkington's works, including Monsieur Beaucourt, The Two Van Revels, In the Arena, The Beautiful Lady, and His Own People.

(THE BOOK TABLE—Continued)
wrote?" The Stevenson addict will do the rest.

THE NEW BOOKS

HISTORY AND POLITICAL ECONOMY
CALIFORNIA: THE AMERICAN PERIOD. By Robert G. Cleland, Ph.D. The Macmillan Company, New York. \$4.

California's history offers a fascinating field for study, and the author of this book has made excellent use of the abundant material at hand. His dignified and well-considered chapters are characterized not only by careful re-

search but by a fitting sense of proportion and by a spirited treatment of many of the romantic and stirring incidents that filled California's early annals.

WHEN KANSAS WAS YOUNG. By T. A. McNeal. The Macmillan Company, New York. \$1.50.

These are not "short stories" in the accepted definition of that term as denoting a brief tale of fictional character; but many of the sketches have the vivid interest that a good short story awakens. They deal with the rough life of border times, and breathe the tense atmosphere of life on the frontier during the turbu-

lent period when desperadoes and gunmen made life difficult for the peaceful settlers of Kansas.

POETRY

HEROIC BALLADS OF RUSSIA (THE). By L. A. Magnus, LL.B. E. P. Dutton & Co., New York. \$5.

As Russia, in spite of its tremendous concentration in self-analysis and philosophical speculation, is the infant of civilized nations, so necessarily is it the last home of a living folk-lore. The great ballads of the Slav, perfected and crystallized through the fine sieve of an oral tradition, begin in the thirteenth century (a period which marks the full fruition and practical completion of the folk-lore of other countries) and come down to the Turco-Russian War. The literature, music, and art of modern Russia are in great measure based upon these ballad cycles. Mr. Magnus in his book has attempted a digest and narrative account of the earlier balladry of Russia. He, wisely enough, outlines no theories, but contents himself with setting forth the legends as they are. The result is a bulk of stirring and heroic tales, occasionally interspersed with passages in verse which illustrate the ballad meters and methods of composition of this root literature of Russia. His work is to be applauded, although so simple in imagery are the tales it is to be desired that the ballads themselves eventually receive by complete translations the recognition that is their due.

FICTION

TRAMPING ON LIFE. By Harry Kemp. Bont & Liveright, New York. \$3.

Has the author of this "autobiographical narrative" modeled his book on Rousseau's "Confessions"? Some of the revelations make one think he has; but, so far as we remember, Rousseau did not include profanity among his foibles. People who can stomach the profanity and the sex stuff of this book will find it decidedly interesting in its discursive and conversational revelations of an unconventional personality.

VAN ROON (THE). By J. C. Snaith. D. Appleton & Co., New York. \$2.

There is a fascination about antique shops, and Mr. Snaith makes good use of that setting to interest his reader in the recovery and restoration of the marvelously beautiful Van Roon painting. Its adventures in the hands of Uncle Si, the miserly dealer, his assistant the super-simple William, and his niece the super-clever June are exciting and duly end in love and prosperity. Not exactly Mr. Snaith's strongest work.

ESSAYS AND CRITICISM

WOMEN OF THE FRENCH REVOLUTION. By Winifred Stephens. E. P. Dutton & Co., New York. \$5.

The women of the French Revolution have filled a large space in history and literature. Such names as Marie Antoinette, Mme. Roland, and Charlotte Corday rank with Louis XVI, Mirabeau, and Danton in the list of the great characters of that epoch. The author of this book tells in detail and with literary

skill the story of the lives of many of these women and reveals much that will be new to the average reader.

TRAVEL AND DESCRIPTION

ATOLLS OF THE SUN. By Frederick O'Brien. Illustrated. The Century Company, New York. \$5.

Experiences in visiting some of the less well known islands of the South Seas are here described by the author with characteristic vividness and charm of style. The story of the mutineers of the *Bounty* is retold and brought up to date, and will be read with avidity by all who are interested in that romantic idyll of the Pacific. Some of the natives who figured in Mr. O'Brien's previous books are again met with in these stirring chapters.

IN LOTUS-LAND JAPAN. By Herbert G. Ponting. E. P. Dutton & Co., New York. \$6.

Lovers of Japan will make no mistake in using this new edition of Mr. Ponting's "Lotus Land" as a gift book. The lure of the pictures and of the well-balanced text would win over even a Japanophobe to a liking for the wonderful islands and their remarkable people. The color plates are especially dainty.

NIGHTS AND DAYS ON THE GYPSY TRAIL. By Irving Brown. Illustrated. Harper & Brothers, New York. \$3.

George Borrow is indirectly responsible for this delightful book about the Gypsies. The author, as a college boy, one day picked up Borrow's "Gypsies of Spain" and became absorbed in it. He learned his Romany vocabulary, and later visited Spain and mingled with the Gypsies on terms of familiarity that Borrow himself might have envied. The pages are full of color, incident, and insight into the character and life of these strange people.

RELIGION AND PHILOSOPHY

INITIATION, HUMAN AND SOLAR. By Alice A. Bailey. The Lucifer Publishing Company, New York. \$3.50.

This book is dedicated "with love and reverence to the Master K. H." The Master K. H., it seems, dwells at Shigatse in the Himalayas, where he has lived for many centuries and "is in line for the office of World Teacher when the present holder of that office vacates it for higher work and the sixth root race comes into being." The "initiated" may find something worth while in the farago of high-sounding words that fill these 200-odd pages, but to the average Anglo-Saxon the book will be useful only as offering a mild form of amusement.

LETTERS ON OCCULT MEDITATION. Received and Edited by Alice A. Bailey. The Lucifer Publishing Company, New York. \$4.

These letters purport to come from a "Tibetan teacher" who prefers to remain anonymous. People of a mystical temperament may perhaps find in them some adumbration of the supposed wisdom of the East. Others may be amused at the long-drawn-out metaphysical disquisitions, akin to the dissertations of the Schoolmen of the Middle Ages. But much of the so-called "philosophy" will remind the reader of the jargon of the Keely motor cult of a generation ago and

ABINGDON

Gift Books of Permanent Interest

A BOOK of merit cannot wear out its appeal. Rather it improves with closer acquaintance and frequent delving into the treasures of its pages. Choose those books for Christmas gifts that will invest with appreciation and permanency the remembrance of the donor.

Abingdon Books live longer than the few days of the holiday season. The truths they voice, the artistry of their silent discourse, place them among the favored volumes of every true lover of good books. They are an enduring compliment to the finer sensibilities of the reader and a reflection of the giver of gifts.

Make your selections this season from the volumes bearing the mark of The Abingdon Press.

THE PREACHER AND THE PEOPLE

By Bishop Francis J. McConnell

Bishop McConnell has restricted the range of these lectures so that they deal only with the minister as a preacher. It is, therefore, an intensive rather than an extensive discussion. It is essentially a book for the younger men in the ministry, although it contains much that will prove profitable to those of larger and wider experience.

Net, \$1.00, postpaid.

SHADOWS ON THE WALL

By F. W. Borcham

In his brief introductory note to this volume of his delightful essays the author remarks, by way of explanation of its title and characterization of its contents: "The figures that float across these pages are like shadows dancing on the wall. They show that life is crowded with realities and flooded with radiance, for without substance and sunshine there can be no shadows."

Net, \$1.75, postpaid.

THE CHRISTMAS CANTICLES

By George Elliott

This book is the fruitage of "nearly fifty years' meditations at Christmas time on the Canticles of the Incarnation," and has a distinct message as an interpretation of the divine purpose in the sending forth of the Divine Son into the world.

Frontispiece. Net, \$1.00, postpaid.

THE VALIDITY OF AMERICAN IDEALS

By Shailer Mathews

In this discussion of the history and significance of America, Dean Mathews attempts "to help the generation that bore the brunt of the war to take up the course of development interrupted by that great tragedy."

Net, \$1.25, postpaid.

THE INEVITABLE BOOK

By Lynn Harold Hough

This charming volume comprises a series of stories of the fashion in which men and women from the most varied groups met the time of crisis in their lives. Each comes to the decisive hour in need of a living word to be spoken from somewhere and in each case the word comes from one compelling, powerful Book. These stories show how that Book lives again in lives made different by its presence.

Net, \$1.25, postpaid.

THE PHILOSOPHY OF PRAYER

By C. K. Mahoney

Philosophy undertakes to explain the facts of existence. These facts are the facts of experience, in the widest sense of the term, and the facts of necessary inference deduced from the premises furnished by experience. Prayer is a real fact of human life and it ought to have a philosophy. In these chapters the author seeks to disclose and explain it.

Net, \$1.00, postpaid.

New Methods in Child Training

Now for the first time there is a scientific method in child training, founded on the principle that guidance is the basis of control. This new system shows you how in your own home to correct the causes of disobedience, willfulness, untidiness and other dangerous habits which, if not properly remedied, lead to dire consequences. The trouble in most cases now is that children are punished or scolded for what they do. The new method removes the cause—by punishment or scolding but by confidence and cooperation along lines which are amazingly easy to any parent to instantly apply.

Highest Endorsements This new system, which has been prepared especially for the busy parent, is producing remarkable and immediate results for the thousands of parents in all parts of the world. It is also endorsed by leading educators. It covers all ages from cradle to eighteen years.

Free Book "New Methods in Child Training" is the title of a startling book which describes this new system and outlines the work of the Parents Association. Send letter or postal note today and the book will be sent free—but do it now as this announcement may never appear here again.

The Parents Association
Box 111-A Pleasant Hill, Ohio

The mind can heal. Whether the mind can heal alone is not the point. The mind *can* heal. And without the help of the mind, there can be no permanent healing. But what must the mind do to help? What must you say, think; what acts must you perform? Tons have been written on the mind's power to heal or assist in healing. Very little of what has been written is clear. The ordinary man or woman cannot understand it. A growing confusion has been the result. Now comes this book, **SELF - HEALING SIMPLIFIED, by George L. Perin. It is the fruit of personal experience, of contact with thousands of lives. Dr. Perin was founder and head of the Franklin Square Home-Hotel for Girls and Women, in Boston. All over America are people whom he has helped to get well. There is literally no person living whom he cannot help with this book. Get **SELF - HEALING SIMPLIFIED**. Read it and do the simple things it tells you to do—things *anybody* can do. It will mean better health for you, surer courage, greater happiness.**

MOONLIGHT SCHOOLS. By Cora Willson Stewart. E. P. Dutton & Co., New York. \$2.

The story of the attempt to teach adult illiterates how to read and write, beginning in Kentucky and spreading to other States, is told in this book simply but with an eloquence that stirs the emotions. The photographs and letters of the pupils, some of them old men and women, who attended the "moonlight schools" after their day's work was done and mastered the rudiments of their subject, are altogether unusual and make an American proud of his race.

FORWARD TO YESTERDAY

BY J. C. LONG

THOSE who have been longing for the good old days may find them in Chillicothe, Missouri.

The high-speed living of the past forty years—building up centers of population around railway terminals, making dollars grow in the deserts, changing our ideas of distance—has had its definite advantages. It has brought us better clothes, more material comforts, a wider sophistication; but until recently there has been felt the loss of neighborliness, good fellowship, and independence that obtained in the days when commerce was over the turnpike.

In the early development of this country cities prospered which were located at the head of navigation or were situated on main highways, such as the Boston Post Road; but when steel rails began to span the continent population had to follow them or be left out of the tide of events. The very life of a town depended on its ability to connect with some big railway system. Hundreds of communities were necessarily unable to accomplish this ambition and dwindled away. The turnpike lost its significance. The rattling buggy and creaking farm wagon were unable to keep up with the swift pace of progress set by the roaring locomotive.

Near the beginning of the twentieth century, however, there came a new instrument into human affairs whose effect on the lives and happiness of the average man is just beginning to be realized. This instrument was the motor vehicle. Twenty years ago there were less than thirty thousand of these contraptions snorting around the country, scaring horses and increasing the use of vivid vocabularies. To-day there are over ten million motor cars and trucks on the roads, or an average of one to every ten persons.

Sinclair Lewis in "Main Street" and "Babbitt" has indicated how intensively the automobile has permeated the conversation and the living of the average American citizen. Babbitt finds in his car an outlet for creative desires, a sense of release, a matter of pride. Others have discussed what the car and truck have meant to the farm population, or again how it has developed suburban life, or yet again its effect on the recreation and business possibilities of the individual.

But Chillicothe, Missouri, exemplifies in a striking way the effect of motor transport upon the town.

Chillicothe calls itself the "Highway City." It has in a sense returned to the old-time characteristics of the turnpike town. There are railways there, but the outstanding feature of its life and growth is its location on twenty-eight highways, eleven of which are National thoroughfares.

The growth of Chillicothe in the past twenty years has been not so much in terms of population as in the well-being

How a Trust Company Safeguards Estates and Trusts

THE care of an estate or trust is essentially a service of protection. The safeguards with which the modern trust company surrounds the administration of estates and trusts include:

RESPONSIBILITY: The trust company is financially responsible.

EXPERIENCE: Every step by the trust company is taken in the light of long experience in trust matters.

SYSTEM: Accurate accounting is the backbone of estate administration. A trust company keeps estate records with the same accuracy that it accords to banking operations.

CONTINUED EXISTENCE: The individual named as executor may die. A corporation has unlimited existence, and is always ready and competent to act.

JUDGMENT: The directors and officers of a trust company, through the general transaction of their business, are exceptionally equipped to invest funds and handle business matters.

SUPERVISION: Trust companies are under the supervision of State Banking Departments and subject to rigid laws governing their operation.

By appointing a trust company as your executor and trustee every safeguard provided by that highly developed organization will be utilized in the protection of your estate.

Ask a Trust Company

for a copy of the booklet, "Safeguarding your Family's Future," which fully explains the advantages of trust company administration of estates and trusts, and outlines steps which you can take to protect those who will inherit your estate.

**TRUST COMPANY DIVISION
AMERICAN BANKERS ASSOCIATION
FIVE NASSAU STREET, NEW YORK**

FORWARD TO YESTERDAY (Continued)

of its individual citizens. Bank deposits in the city have increased from \$2,860,000 in 1917 to \$4,000,000 in 1921.

It is a city of complete material well-being, as with a population of 10,000 there are 2,000 homes owned by individual families. In the current year \$2,000,000 is being spent in private building and public works projects, the largest amount that has ever been spent in one year for the development of the city. The growth of motor transportation has demanded the building of a new hotel and has stimulated the remodeling and building up of the main business streets of the city.

Among the developments of the last decade are a new court-house erected in 1914, a Federal building completed in 1916, and a modern theater constructed in 1920.

The town has 14 churches, 2 daily papers, 15 school buildings, 2 modern hospitals, and a municipally owned water and light plant.

Chillicothe is the home of 300 traveling salesmen, who find it a convenient location, as the city is on the highway between Chicago and Kansas City, between Omaha and St. Louis, and between Minneapolis on the north and the highway to New Orleans on the south. Two through routes from coast to coast pass through the streets of Chillicothe which have twenty-five miles of paved surfaces.

Chillicothe, as an example of the small city of the new age, indicates how the advantages of urban life may be secured without its accompanying congestion and high rents. When the only means of swift modern transportation was the railway, it became necessary for the man who wanted city life to move into town and stay there, but to-day motor transport enables a man ten and twenty miles out of town to drive in for his shopping and entertainment without sacrificing the freedom and spaciousness of rural conditions.

We are, then, going forward into yesterday, a yesterday which saw a high degree of civilization in small groups of population, a yesterday of lower rents, with house and land for every family. Coupled with that yesterday are the advantages of to-day—the swifter means of locomotion, improved school buildings, all the comforts of modern life. We are achieving again the spirit of the old New England township, augmented, however, by the conveniences and satisfactions of the new age.

Chillicothe, indeed, is but one example of the effect of highways on the standard of living. Professor C. J. Galpin, now of the United States Department of Agriculture, when at the University of Wisconsin made some illuminating studies of rural life in relation to roads. His investigation showed that around an average trading center there is usually a country population as large as or larger than the number of persons living in the town itself. Where good roads exist, it becomes clear, then, that a city of 10,000 can offer the advantages of a center of

"Such a nice taste!"

BAKER'S COCOA

has a most delicious flavor and aroma, natural to high-grade cocoa beans. That is why children do not have to learn to like it,

why they never tire of it, and one reason among many why it is an ideal beverage for them as well as for older people.

"In beverages, as in food,
Flavor is the decisive factor."
—"Food and Flavor," by Henry T. Finck.

FORWARD TO YESTERDAY (Continued)

20,000, as it can count on that many persons to patronize its schools, churches, Chautauquas, and theaters.

These Wisconsin studies, which were undertaken before the present development of motor transportation, showed that the number of children attending high school was closely related to road conditions in a given community. They indicated that these same conditions affected other contacts with the outside world. A list was made of twenty institutions, such as the Baptist Church, the Methodist Church, the Women's Club, the I. O. O. F., and the Grange. Each family in this county was queried as to whether it belonged to any, and how many, of the twenty institutions. It was found that the nearer one got to the town, the greater was the number of associations to which the average family belonged. Conversely, those living farther out had fewer contacts, and many families were found on the back roads who did not belong to one institution. This is the type of isolation which modern motor transportation is breaking down.

Perhaps the most valuable element in the life of yesterday was its independence. The community and the individual were relatively self-sufficient; both controlled their own transportation. We are coming to that state again today. The county may not be on the main highway, but it can readily build a road to connect with some main highway. Through this connection it is put in touch with the activity of the rest of the world. It has an outlet for its goods. It is assured of a tie-up with some main railway terminal. It has in effect created a spur-line route to its own front door.

So rapidly has the machine age developed that the question has often arisen whether man's own inventiveness might not be destroying him. Could he stand the pace of an industrial center? Would machinery result in the centralized control, stamping out the individual? There have been these dangerous tendencies, but there has also been an element of release from hard labor and saving of time in the progress of modern invention. Perhaps foremost on the social side has been the social influence of motor transportation eloquently attested by the two thousand individually owned homes of Chillicothe.

WANTED—CARTOONS

THE OUTLOOK wants to receive cartoons from its readers, clipped from their favorite newspapers. Each cartoon should have the sender's name and address together with the name and date of the newspaper from which it is taken pinned or pasted to its back. We pay one dollar (\$1) for each cartoon which we find available for reproduction. Some readers in the past have lost the dollar bills to which they were entitled because they have failed to give the information which we require.

SIX-ROOM BUNGALOW No. 625

Designed for the Service Dept., American Face Brick Assn.

This beautiful six-room bungalow is one of the ninety-six distinctive homes shown in our "Face Brick Bungalow and Small House Plans." Note the splendid arrangement of windows, the inviting porch, the pleasing roof lines, and the compact, convenient interior arrangements.

Permanent Homes, Always Beautiful

THE beauty of your Face Brick home will be a source of never-ending satisfaction to you. And when your children pass it on to your grandchildren its original beauty will only have been mellowed with the richness of age. A Face Brick house is a family legacy, becoming richer in traditions in each succeeding generation.

Then, too, your Face Brick house is a sound investment. It depreciates almost imperceptibly, the walls require no repairs and are fire-safe, painting is required only around doors and windows, fuel costs and insurance rates are reduced to a minimum. From every point of view Face Brick gives you the greatest value for your building dollars.

These matters are fully discussed in "The Story of Brick," an attractive booklet with beautiful illustrations of modern homes and packed with information of value to every prospective home-builder. Sent free on request.

"Face Brick Bungalow and Small House Plans" are issued in four booklets, showing 3 to 4-room houses, 5-room houses, 6-room houses and 7 to 8-room houses, in all ninety-six, each reversible with a different exterior design. These designs are unusual and distinctive, combined with convenient interiors and economical construction. The entire set for one dollar. Any one of the booklets, 25 cents, preferably in stamps.

We have the complete working drawings, specifications and masonry quantity estimates at nominal prices. Select from the booklets the designs you like best and order the plans, even if you are not going to build now, for their study will be not only interesting and instructive, but helpful in formulating your future plans for a home.

You may want "The Home of Beauty," fifty designs, mostly two stories, representing a wide variety of architectural styles and floor plans. Sent for 50 cents in stamps. We also distribute complete working drawings, specifications and quantity estimates for these houses at nominal prices. Address, The American Face Brick Association, 1739 Peoples Life Building, Chicago, Illinois.

BY THE WAY

THE caption-writer of the London "Sphere" seems not to have been around the globe much, notwithstanding the title of his paper. In a recent issue he says that the Municipal Building of New York City is "situated on the 'Great White Way' of the American capital!"

The President of the Harvard Club of Singapore writes from that antipodean port to the "Harvard Alumni Bulletin" that his club is small but flourishing, and is doing what it can to advance the interests of Harvard on that side of the world. To this end, he says, a small model of the John Harvard statue has been placed in the office of the Colonial Secretary for the Straits Settlement, "where it is doing a great deal to remove the impression generally current among official Britons that Harvard is merely the name of a beer." Furthermore, he announces, a large photograph of the last Harvard-Yale football game has been hung in the club-house of the Dyak Head Hunters Association of North Borneo, where it is arousing enthusiastic interest among the young and enterprising head hunters, who believe that they could pick up some valuable hints during a course at Harvard.

Athletes, owing perhaps to their severe training and strenuous exertions, are often short-lived. An exception to this rule, if it is a rule, is furnished by the career of Henry E. Buermyer, who recently died at the age of eighty-four. He was one of the founders of the New York Athletic Club and the first amateur champion heavyweight boxer of the United States. In his prime he could put up two ninety-eight pound dumbbells at the same time, could lift 1,250 pounds from the floor, and could run a hundred yards in 10¼ seconds. He held more than fifty medals which he had won in athletic events of various sorts.

In "Studies of the Chinese Drama," by Kate Buss, it is said that in Chinese theaters the pleasant custom obtains of collecting the admission fee during the evening after those persons who may not find themselves interested in the performance have had time to depart. In other cases money may be tossed upon the stage at the end of a performance. All Chinese theaters, it is remarked, have certain unhygienic customs such as a common use of wet towels, passed about to "refresh" the audience; the omnipotent teacup; and the unfreshened air. Stands for teapots and cups are within reach of everybody, and tea is served continuously; even an actor may be offered a cup of tea while playing, if his part is difficult or prolonged.

The so-called evil smells of China, the author of the above-quoted book observes, are traditional, and give pleasure to the Chinaman, whose idea of sweet and foul differs from our own. The

Chinaman's scent perception is more highly developed than the Westerner's, it seems; we cultivate mainly sight and hearing, while the Chinese revel in "sweet" odors that to us are objectionable.

"On two successive pages of your issue of October 4," a subscriber writes, "an incorrect quotation occurs—'He who runs may read.' The passage from which this is taken is in the Bible, Habakkuk ii. 2, 'And the Lord answered me and said, Write the vision, and make it plain upon tables, that he may run that readeth it.' As annotated in the Scofield Reference Bible, 'that he may run that readeth—i. e., as a messenger of the vision.'"

This is doubtless a correct interpretation of the Scripture; but our quotations have the sanction of usage as crystallized by the poets. Cowper, for instance:

But truths on which depends our
main concern,
That 'tis our shame and misery not
to learn,
Shine by the side of every path we
tread
With such a luster he that runs may
read.

And Tennyson:

Read my little fable:
He that runs may read.
Most can raise the flowers now,
For all have got the seed.

An "anti-feminist reaction" is noted in the "Woman Citizen" as gaining force in several countries, among them Great Britain. As illustrating the point, it is said that a woman physician, who until recently held a position as adviser at a maternity clinic in England, was dismissed when she married!

America does not share in the reaction above noted by the "Woman Citizen," for it continues to give women greater advantages. The latest privilege conferred by a new Federal law, according to the "Citizen," gives the alien-born woman the opportunity of becoming an American citizen after only one year's residence. It takes away from her, however, the easy method of becoming a citizen by annexing a native husband. The law, fortunately, is not retroactive, and foreign-born women who have been forehanded in acquiring citizenship through the marital method will not lose their standing as citizens.

San Francisco has more hotels than any other city in the United States except New York, according to a recent report of the Hotel Association. It has only four houses, however, of the "first capacity"—hotels having more than 450 rooms. Of these New York has 18, Chicago 11, Los Angeles 5; Boston, Cleveland, Detroit, Minneapolis, New Orleans, and Pittsburgh each have three; Cincinnati, St. Louis, and Washington have two; Philadelphia has one. Atlantic City and Saratoga, strangely enough, are not included in this list.

Happy, restful days—

CHALFONTE-HADDON HALL
ATLANTIC CITY, N. J.
Combined in ownership and management. Hospitable, quiet homelike. Broad deck porches overlooking the sea. Beautiful pavilions and sun parlors. Pleasant rooms. Golf and yacht club privileges.
On Beach and Boardwalk, American Plan. Write for folder and rates.

Boys Shoes \$4.00 & \$4.50

W. L. Douglas name and portrait is the best known shoe Trade Mark in the world. It stands for the highest standard of quality at the lowest possible cost. The name and price is plainly stamped on the sole.

The CHRISTIAN CENTURY

A Journal of Religion

CHARLES CLAYTON MORRISON and
HERBERT L. WILLETT, Editors

Published Weekly Four Dollars a Year

Says Rev. Charles W. Gilkey: "No other religious journal has contributed, either to my thinking, preaching or living, anything like the wealth of guidance and inspiration that I find in The Christian Century."

Prof. Harry F. Ward: "I consider The Christian Century the most promising venture in the field of religious journalism in the English-speaking world."

Rev. Charles E. Jefferson: "Wherever I go among men, east and west, I find they are reading your journal."

Pres. W. H. F. Faunce: "I read every paragraph in The Christian Century every week with constantly growing satisfaction. Here is a journal that puts first things first and leaves the petty things far out on the circumference."

Rev. Cornelius Woolfkin: "The Christian Century is the only publication which comes to my home which gets a reading straight through upon its arrival."

Dr. Sherwood Eddy: "Among the few journals that have stood for complete social justice and a full social gospel, The Christian Century holds a unique place."

Pres. Ozora S. Davis: "There are some things that a man cannot get along without in these days; The Christian Century is one of them. You are fearless and constructive and are leading the way."

Bishop Francis J. McConnell: "I regard The Christian Century as the greatest journalistic force working for social and international righteousness coming from any press of the Christian Church."

Dr. John Dewey's

criticism of China's Missionary Schools appeared in the New Republic some months ago.

"American missionary education [in China] has failed," thus Dr. Dewey quotes a Chinese student, "to develop independent energetic thought and character among even its most distinguished graduates. It has produced rather a subservient intellectual type, one which is characterized as slavish."

Dr. Guy W. Sarvis,

Professor of Economics and Sociology in the University of Nanking, replies to Dr. Dewey's criticism in one of the most trenchant and informing articles on Christian educational ideals in China that has yet appeared.

"Many of us who are in missionary educational work in China are former students of Dr. Dewey or enthusiastic followers of his educational and philosophical doctrines. We believe he desires to aid China in every possible way. We do not understand why, on the basis of assumption and hearsay, he has used the weight of his influence to damage institutions which, with all their imperfections, are making possible the most important contribution of America to China."

Dr. Sarvis' reply will appear in a forthcoming issue of The Christian Century.

"CHRISTIANIZING PUBLIC OPINION"

By SAMUEL MCCREA CAVERT

The educational function of Christianity is not accomplished until the public opinion of the social order has itself been made Christian, so says Dr. Cavert in two articles about to appear in The Christian Century. These articles illuminate the concept of the social responsibility of the church.

"STUDIES IN SIN"

By H. D. C. MACLACHLAN

Using Tolstol, Ibsen, Browning, Kipling, Bernard Shaw, Strindberg, Dostoevsky, and A. S. M. Hutchinson as his background, Dr. MacLachlan is now beginning a series of articles on such subjects as "The Sin Against the Holy Ghost," "Sin and Atonement," "The Sin of Immaturity," "The Sin of the Secret Wish," "Sinning at Long Range," "Second Hand Sinning," "Sin and Punishment," and "Sin and Social Conventions." This will be a remarkable interpretation of literature and a unique discussion of the modern conception of sin.

"CHRIST AND MODERN LIFE"

Running currently with all other good things, the editors will continue to discuss and interpret the social aspects of the Christian gospel. Editorials and articles on such themes as these will be appearing each week:

"Jesus and Modern Industrialism"
"Christianity and Modern Science"
"Is Modern Business Christian?"
"Christ Shows 'The Way Out' for the World"

"The Socialism That Is Christian"
"Christianity and Evolution"
"When Will the Kingdom Come?"
"The Future of the Community Church,"
Etc., etc., etc.

The Christian Century is distinguished by its candid discussion of living issues in the light of the mind of Christ.

The Secret of Making a Good First Impression

When you are at a dinner, either formal or informal, do you know just exactly how to create conversation, what to talk about, how to be entertaining? Other guests always appreciate this. It relieves constraint, makes everyone feel happy and at ease.

At a dance, can you mingle with the men and women, make gracious introductions that arouse the desire for friendship, be so perfectly at ease that everyone around you feels at ease? When you dance, do you know what to say to your partner and how to make her feel happy in your company?

Hostesses like to invite to their theatre and opera parties those who have learned the secret of being perfect guests—those who know what to say and when to say it, what to do and when to do it. It is remarkable the way a good manner can prepossess people in your favor—make them want to know you, and like you.

At weddings, receptions, teas—on all social occasions, do you know what to wear, how to create conversation, how to be entirely at ease? The knowledge of what to do, say, write and wear on all occasions not only gains many friends but gives one a feeling of poise and power.

THE one sure way to make people like you and want to be with you, is to have an engaging manner. And the only way to have an engaging manner is to be absolutely free from all embarrassment and self-consciousness—to be well-poised and at ease at all times.

Popular men and women always seem to have an irresistible appeal to everyone with whom they come in contact. They always seem able to do the civil and correct thing as easily and naturally as saying "good morning." They are never hesitant, never awkward, never embarrassed. They always seem to know exactly what is expected of them.

Recently a well-known man was guest of honor at a tea given him by a women's organization. Clever women—all of them. Yet it was quite evident that they were flustered, that they were wondering what to do, what to say. They couldn't enjoy themselves, of course, because they were embarrassed. And the guest didn't enjoy himself because their embarrassment made him feel ill at ease.

You will find this to be true no matter where you go, no matter with whom you happen to be. When one is awkward, ill at ease among strangers, always hesitant and in doubt, one never seems to be welcome. But when one knows the secret of an easy, engaging manner, one is able to attract people at first sight.

The Simplest Art to Master

Music, literature, painting—all require intensive study and application. But one of the most useful arts there is—the art of knowing what to do and say on all occasions—can be mastered quickly, easily.

It is the well-bred man or woman who always feels calm, well-poised and at ease. Etiquette is useful because it enables you to adapt yourself to every environment—because it enables you to make yourself pleasing to all people. Etiquette will show you the way to make yourself agreeable and likable to the people you meet socially and in business.

Almost in one evening you can master the art of etiquette. It is one of the most fascinating arts to master. It tells you all you need to know, regarding perfect table manners, excellent control of the impulses, shows you how to become a pleasing conversationalist and an ideal guest. It will solve all the little problems that may be puzzling you, show you how to be master of every situation, no matter how puzzling.

Are you sure of yourself? Will you be ready when your big moments in life come? Do you know how to make an impressive entrance into a drawing room, how to have flawless table manners, how to create conversation, how to make and acknowledge

introductions? Do you know what to wear to a dance, a tea, a wedding, a yacht party?

The Book of Etiquette—Two Volumes of Valuable Information

The Book of Etiquette is indeed the most complete and authoritative work on etiquette available today. It is a veritable treasure-trove of information—encyclopedic in scope, fascinating in form, thoroughly indispensable to the man or woman who values the friendship and admiration of the people with whom he or she comes in contact.

Wedding etiquette, the etiquette of games and sports, of introductions, of correspondence, of dress: dance etiquette, hotel etiquette, travel etiquette—all are covered in the Book of Etiquette.

There are chapters for the engaged girl, chapters for the bachelor, chapters for the business woman. Nothing is omitted, nothing forgotten. Here is the "opportunity" you have been waiting for—the "golden chance" to make yourself a magnet for friends—to gain the polished poise and ease of manner that will make people like you at first sight.

The Book of Etiquette will prove extremely valuable in the home, where you can refer to it readily. Perhaps an unexpected invitation will arrive and you will want to know how to acknowledge it. Perhaps you will receive a dinner invitation and you will want to know whether asparagus is taken in the fingers or with a fork, whether olives are taken with a fork, how corn on the cob is eaten. There are so many little problems, so many embarrassing little situations that can take you off your guard and cause you discomfort and humiliation.

Free for Five Days' Examination

Would you like to have the Book of Etiquette sent to you absolutely free for 5 days' examination—free to read, study and glance through at your leisure?

If you just clip and mail the coupon below at once, the complete two-volume set of the Book of Etiquette will be sent to you entirely without cost or obligation.

Don't send any money—just the coupon. When the Book of Etiquette arrives, read the chapters that interest you. Glance at the illustrations. Keep the books at our expense for 5 days. During that time decide whether or not you want to keep the books—whether or not you can do without them. If you decide to keep them, send only \$3.50 in full payment. Otherwise return the books and the examination will not have cost you a penny. But be sure to act at once. Clip and mail this coupon NOW. Nelson Doubleday, Inc., Dept. 411, Garden City, N. Y.

NOVEMBER 8, 1922

THIS WAS THE LAST EDITORIAL THAT CAME FROM LYMAN ABBOTT'S PEN—IT WAS WRITTEN ABOUT TWO WEEKS BEFORE HIS DEATH

HEGEL, the philosopher, in his "Philosophy of History" says: "God governs the world; the actual working of his government and the carrying out of his plan is the history of the world."

This is my profound religious faith, and I hold that all good men and true should make it their life-work to contribute what they can to carrying out that plan; to making the community in which they dwell more governed by the principle of justice, more pervaded by the spirit of mercy, generosity, and good will, and more guided by reverence and humility. When I became Editor-in-Chief of *The Outlook*, more than forty years ago, I determined to introduce into it a history of current questions; to make it contain an interpretative history week by week of the world's life. In this history I intended to interpret every question by its effect on the betterment of the community—by its contribution to justice, mercy, and loyalty. The effect of any proposed policy on any party (Democratic, Republican, Progressive, or Prohibition) or on any church (Protestant, Roman Catholic, Jewish, or agnostic) I proposed to ignore. Conventional standards were dropped

out of sight. The only standards I proposed to pay any attention to were the eternal standards of Micah's definition of religion: "To do justly, and to love mercy, and to walk humbly with thy God."

Governed in all our editorial policy by this basic purpose—the endeavor to state impartially and interpret truthfully the fundamental principles necessary for the welfare of the community—we have also been governed by some other principles which I might call constitutional, though never formulated or written.

We have tried not to judge the motives of public men, but only their actions.

We have aimed always to be impartial, but never neutral.

When convinced that we have unintentionally done injustice to any man by a misrepresentation, we make the correction as prominent as the mistake.

We have always made our utmost endeavor with the resources at our command to give our readers an accurate account of the tangled controversies which we have frequently had to report, including the strongest statements we could obtain of the policies opposed to our views.

LYMAN ABBOTT.

TRIBUTES TO LYMAN ABBOTT FROM HIS EDITORIAL ASSOCIATES

MY FATHER

S EVEN years ago, when he was eighty years old, my father wrote his autobiography, most of which appeared at the time in *The Outlook* and will be found in a volume entitled "Reminiscences," published by Houghton Mifflin Company, of Boston. It contains the main facts of his life.

He was born on the 18th of December, 1835, in Roxbury, Massachusetts. His father was Jacob Abbott, a teacher, preacher, and author, who was best known in his time as the author of the "Rollo Books." His mother died when he was eight years old. For that reason, perhaps, he was thrown upon his own resources—at least his own intellectual resources—when he was still a boy, although he says in his autobiography that, "while motherless, he was not homeless." He entered New York University as a freshman when he was not quite fourteen, and was graduated with the degree of B.A. in the class of 1853, when he was not quite eighteen. This was not because he was especially precocious, but probably because seventy years ago the intellectual demands of the colleges were not what they are to-day. He studied law; was admitted to the bar when he was twenty-one; joined his two older brothers in the practice of law; and in his reminiscences relates two rather interesting cases which the firm conducted in behalf of the New York "Times," cases in which he had a not unimportant part.

An irresistible impulse, or a sense of duty to his fellow-men, or a longing to help them, or a call of the spirit—he never defined the moving cause himself—led him to give up the law and go into the ministry. He was ordained a Congregational minister at twenty-five, and his first pastorate was in Terre Haute, Indiana, where he lived and preached during the Civil War. Returning to New York in 1865, he became a minister of a modest little church in this city. After four years in this pastorate, he moved to Cornwall-on-Hudson in 1869 and established there what has been the family homestead ever since. His vocation then became that of a writer and editor, although his avocation was preaching every Sunday in a Presbyterian church of his community.

In 1888 he was called to succeed Henry Ward Beecher as minister of Plymouth Church, and filled that position for eleven years. At the same time

he was Editor-in-Chief of the "Christian Union," the name of which was later changed to *The Outlook*. He assumed this editorial position in 1876, and has therefore been the guiding spirit and Editor-in-Chief of this journal for forty-six years. He surrounded himself with editorial associates who were always glad to relieve him of the details of administration, so that he was free to preach or to speak in public. In this, what may, perhaps, be called the oratorical side of his work, I think his greatest satisfaction was in preaching and talking to young men and young women in American schools and colleges. One of these college parishioners of his, who is now a distinguished clergyman in this city, told me recently that he roughly estimated that in this school and college preaching my father must have talked to two or three hundred thousand different individual students.

His "Reminiscences" not only fill in the foregoing outline of his activities, but the volume contains a kind of valedictory; I shall quote it:

In one respect my life has succeeded beyond the dreams of my youth. I have never cared for money; perhaps if I had cared more my wife would have had an easier time, but I doubt whether we should have been happier. Nor for reputation; therefore the attacks made upon me and the misreports and misrepresentations to which I have been subjected have never much troubled me. They have had a value. One can learn his faults better from his critics than from his friends, because his critics are more frank. Nor for power; I like to influence, but not to command. But I have desired friends; and it sometimes seems to me that no man ever had more friends than I have. I am often stopped on the street by a stranger who thanks me for some word of counsel or inspiration received; and scarcely a week goes by that I do not receive a letter of grateful appreciation from some unknown friend whom I never shall see, and who, perhaps, has never seen me.

I have other invisible friends who people my quiet home with their companionship. I believe that death and resurrection are synonymous, that death is the dropping of the body from the spirit, that resurrection is the upspringing of the spirit from the body; and I think of my friends and companions, not as lying in the grave waiting for a future resurrection, nor as living in some distant land singing hymns in loveless forgetfulness of those they loved on earth. I think of them as a great cloud of witnesses

looking on to see how we run the race that is set before us, grieved in our failures, glad in our triumphs. I think of my mother rejoicing in the joys of the boy whom she was not permitted to care for on earth; of my father still counseling me by his unspoken wisdom in my times of perplexity; of my wife giving me rest and reinvigoration by her love. So I am never lonely when I am alone; rarely restless when I am sleepless.

I believe that I have learned one secret of happiness; it is a habit easier to describe than to adopt.

We live in the past and in the future. The present is only a threshold over which we cross in going from the past into the future. We live, therefore, in our memory and in our anticipation. He who forms the habit of forgetting the unpleasant and remembering the pleasant lives in a happy past; he who forms the habit of anticipating the pleasant and striking out from his anticipation the unpleasant lives in a happy future. I have no wish to live in a fool's paradise; but it is no better to live in a fool's purgatory. I therefore allow myself to anticipate evil only that I may avoid it if it is avoidable or, if it is unavoidable, may meet it with wisdom and courage. I recall past errors, follies, and faults in order that I may learn their lesson and avoid their repetition. Then I forget them. The prophet tells me that my Father buries my sins in the depths of the sea. I have no inclination to fish them up again and take an inventory. I gladly dismiss from my memory what he no more remembers against me forever. Thus my religion is to me, not a servitude, but an emancipation; not a self-torment because of past sins, but a divinely given joy because of present forgiveness.

It is almost impossible to write freely of the experiences of one's heart to a throng of unknown readers. It is easier to portray them to an intimate friend. For this reason I transfer to these pages a few sentences which I wrote to my wife from Terre Haute during her absence in the East in the summer of 1863:

"Ought we to go always through life condemned of ourselves and thinking and feeling that God must condemn us? Is this a necessity? Is it not possible so to live that our own conscience approves us, and we have the happiness of feeling that we have the approval of God and of our own hearts? It is possible. Is it not practicable? Was it not Paul's experience? . . . It is true that we ought never to be satisfied with ourselves—that our ideal of holiness ought always to outrun our attainments; that we ought always to desire something more and better. But we may be self-approved and not self-satisfied. We may be dissatisfied and yet not self-condemned."

It is thus at eighty years of age that I look back upon the years that have passed since I imbibed some-

A PORTRAIT OF DR. ABBOTT IN HIS SEVENTIETH YEAR, PAINTED BY
CHARLES W. HAWTHORNE

thing of the spirit of faith and hope and love in my grandfather's home at Farmington. I am far from satisfied with this review; but I am not self-condemned. I say to my Father, as I say to myself, I have often been defeated, but I have fought a good fight; I have often faltered and fallen, but I have kept up the race; I have been besieged all my life with doubts, and they still sometimes hammer at the gates, but I have kept my faith.

And I look forward to the Great Adventure, which now cannot be far off, with awe, but not with apprehension. I enjoy my work, my home, my friends, my life. I shall be sorry to part with them. But always I have stood in the bow looking forward with hopeful anticipation to the life before me. When the time comes for my embarkation, and the ropes are cast off and I put out to sea, I think I shall still be standing in the bow and still looking forward with eager curiosity and glad hopefulness to the new world to which the unknown voyage will bring me.

No man, I suppose, can know another man so intimately, so through and through, so undraped and uncurtained, as a son knows his father—especially when the relationship has been not only filial, but that of partnership. Thirty-one years ago last April I became President of the Outlook Company, and during those thirty-one years my father always treated me as his superior in business affairs, and as his equal editorially—never as an inferior or a subordinate. I don't mean that he consciously treated me so; I think it was just a perfectly simple and natural attitude of which he never more consciously thought than he would have thought when he came downstairs in the morning, "Now I must say 'Good-morning' to my children cheerfully." Of course I was not his superior in business, for he was a very wise man, of sound judgment, grasping and acting upon the essential principles of economic human relationship. (As one of my cousins has said to me since his death, "His goodness subtracted nothing from his wisdom; neither did his wisdom subtract anything from his goodness.") And I was his inferior editorially. But as I look back I am not conscious that I ever felt that I was not his equal; in fact, I never thought anything about it, and he never thought anything about it.

He wanted to be, and he really and essentially was, a preacher of the Brotherhood of Man under the Fatherhood of God, but he was this without ecclesiasticism, or ministerialism, or professionalism, or even emotionalism. He loved deeply, and he was deeply loved; but he was as free from sentimentality or gushes of feeling as anybody I have ever known. In our family circle, and in the circle of intimate friends and connections that surrounded the family, I have

seen him over and over again during a period of fifty years conduct the celebrations of marriage and of christening and administer the last rites of death, but I don't recall that I ever heard his voice falter or ever saw a tear glisten in his eye. I think this was because his feelings were so deep and so established on a rock, and therefore so serene and unshaken, that they did not affect his body.

He was a delightful companion—in the earlier years in the pastimes and excursions, and even some of the sports of outdoor life. For example, he taught his four boys how to swim and was a good swimmer himself. In his later life, up to the very last, I would rather sit *vis-à-vis* with him at the luncheon table than with any man I know—not as son lurching with a father, but as a club companion lurching with a chosen club companion. He was interested in the whole of life, and in every wholesome expression of life, from the "Three Musketeers" of Dumas to William James's "Varieties of Religious Experience." He says somewhere that as a boy and a young man he had an ungovernable temper. Perhaps he had—no, I won't say "perhaps," because I think he never made a statement of fact of which he was not sure. But in fifty years I never saw any display of temper, and I never knew him to say a mean or rankling or biting thing in controversy about anybody. He had vigor and decision and could denounce, but he never indulged in pin-pricks or in sarcasm for the sake of provoking an opponent in a contest. This used to seem to me remarkable, because I think the temptation of most men in controversy—it is mine, I know—is to say something that will get "under the skin" of their antagonists, much as a toreador in a bull-fight throws the barbed darts or *banderillas* into the skin of the bull in order to provoke him to rush upon his own destruction.

Even those who, like my father, believe that death is only an incident of a much greater, more glorious, and more permanent or immortal experience, which we call life, cannot with all their philosophy and all their faith escape the wrench of personal parting. Nevertheless as I write these lines I find that my own feelings are expressed better than I could have expressed them myself in a note which I have just received from a friend, a man who has led an active life in the great world of industry and affairs: "I have just read the announcement of your father's passing, and my impulse is to send you a note of congratulation on your heritage, rather than sympathy for your loss. I cannot feel that what we miscall the ending of such a life should be the subject of mourning." LAWRENCE F. ABBOTT.

MY FATHER'S PURPOSE

IN a letter, now yellow with age, there can still be read in the faded ink the expression of some doubt whether a certain motherless little boy could ever be raised to manhood. His body was frail; but something in his mind and soul made it serve him for nearly eighty-seven years. It was only when he found that body failing at the end that, turning to one of his children and quoting Holmes, he confessed, "The old coat is worn out."

When I was still a small boy, he was a grown man approaching middle age. Even then he seemed frail to my boyish eyes. He not only was not athletic; he seemed to me physically weak. And yet, as I look back upon those days, I see that he was doing an extraordinary amount of work requiring frequent draughts upon his reservoirs of nervous and muscular vitality. By his habit of saving his time, by making sure of sufficient sleep—he had trained himself to be able to drop into a nap at any time and under any circumstances—by carefulness in selecting his physicians and following their directions, and by regular recreation in preparation for work, he kept those reservoirs replenished.

This care of his unathletic body was essentially that of a good athlete. It was not for his body's sake; it was for a purpose which he was determined his body should serve. He was in this respect a man's man. As a youth he envied in Beecher the abounding physique that was the opposite of his own; and as an old man he admired in Roosevelt the robustness which he himself lacked. He had, however, in common with each this athletic and masculine point of view that regards the body as a means to the attainment of an end through struggle.

To that end he directed not only his body but his mind, and not only his mind but his spirit. He has been called a scholar and a mystic. He had in his brain the scholar's equipment and in his faith the mystic's inner light; but I do not think he had either the scholar's or the mystic's purpose. In knowledge, which the scholar seeks for its own sake, and in faith, which the mystic desires as a source of the highest enjoyment, my father found not ends in themselves but means to the attainment of his object.

The adoption of this purpose in life was, I think, a matter of growth. At first it was a vague desire to be like the people he most admired. Then he found that these people all had the same ideal, and he adopted that ideal as his. As pictured to his mind it was the ideal of "a Man who had courage and yet forbearance, authority and yet infinite

meekness, a Man who never flinched when courage was required and never asserted himself simply to defend himself, who gave himself to a life of service and sacrifice and died not for the sake of those who loved him, but for those who hated him." As yet, however, his purpose in life was not formed. That was to come, not as a vague desire, not as a high emotional impulse, but as the result of study and thought. He was not content with his general and apparently unattainable ideal as an object. He sought something concrete, definite, practical; and by the time he was twenty-five he found it. From that time on he made it his single aim. He had discovered for himself that in the sayings, the deeds, and the character of the Man whom he had set before himself as his ideal there were embodied certain principles or laws of life. He believed that the observance of these principles, that action in accordance with these laws, would solve every moral problem. So he set himself to study to know those principles or laws, and then in them for every question of conduct, whether individual or social, to find an answer.

In this way he made for himself an object of life that was practically attainable. The ideal which he still held to for himself and for the world might be far off; but the process of molding his life and helping to mold the life of the world about him in accord with the principles embodied in that ideal was something that he could engage in day by day, week by week, year by year. If success consists in the accomplishment of one's aim, my father's life was successful; for he had chosen an aim that could be reached and yet remain as an object of new endeavor. In substance, it was the same when he was eighty-six years old as when he was twenty-five; but in form it was as varied as the world in which he lived and as changing as history; and, being new with every new problem, it filled his life with interest and kept him youthful.

The world which he saw during his lifetime was indeed a changing world. It began for him as a world in which railways were still new and stage-coaches not yet unknown; it ended for him as a world of the airplane and the radio. In no other epoch of the world's history has any one man's lifetime encompassed such changes in the outward aspects of life. Much that was familiar to him in his age would have seemed to him as a child incredible magic; yet I never heard him talk very much about this wonderful transformation. What impressed him was the change, far more wonderful and interesting to him, in the moral and social experience and ideas of men. He was born into a country which

accepted and maintained slavery; he saw the slaves set free. He was born into a country still divided against itself; he lived to see the Nation made one and indivisible. He saw the rise of industrialism and the formation of powerful corporations and powerful labor unions involving new problems of industrial justice hardly less serious than slavery itself. He saw great changes in education and in religious thinking. He saw new movements for international amity progressing until overturned by the most destructive of wars. After victory he saw new problems emerging. These and the like, rather than the necromancies of science and invention, were the changes in the world which impressed him, because they concerned those principles of life which it was his single object to study and apply. It was these principles that made him an advocate of liberty and union during the period of the Civil War and after. It was these principles that led him to urge for the ills of industrialism what he was the first to call Industrial Democracy. It was these principles that drew him to the schools and colleges of the land as a guide and counselor to students in the midst of a revolution in scientific and religious thought. It was these principles that gave him leadership in the cause of international justice alike in time of peace and time of war. It was these principles which in his latter days, when men have talked of a dissolving civilization, kept his mind clear and his spirit serene.

How he endeavored to apply the principles he found in the teachings, life, and character of Jesus to these social problems he recorded in his writing; but he did more than write about those principles. He had made them so much a part of himself that they governed him in all that he did.

I cannot remember his ever exhorting me or any of my brothers or sisters. It was enough for him to live with his children. Just before I was born he had moved to Cornwall-on-Hudson, where his home was to remain for the rest of his life, and where three of his children and five of his grandchildren were to be born. Here under the shadow of Storm King, on the edge of the Highlands of the Hudson, his children—in particular, the younger children—came to know him as I think few children know their father. Scarcely a week in the summer went by when my younger brother and I did not go two or three times with him for a swim in the river. Unathletic as he was, he taught us to be at home on or in the water. He took us camping with him on the borders of a lake in the near-by mountains. He went horse-back riding with us over the roads of

Orange County. He was as companionable to us as any boy of our own age could be; he was as companionable to us as to men of his own age. One of his books which describes the way he thinks of God he entitled "The Great Companion;" but long before he put that book into words he had written it in characters of life in his children's experiences. There was a sort of equality in his companionship which was never lacking whomever he was with. Of course it could not be equality of age or experience or ability or authority. It was the sense of the recognition on his part that each of us had the right to his own individuality, to the expression of his own will, to the development of his own power. This feeling of equality which, I think, all his children had in his company did not interfere with their implicit recognition of his authority. Neither the brother who was my special comrade nor I can remember ever deliberately disobeying him, and when recently I asked my brother why we never disobeyed, he gave the only answer that I could give, "We never thought of it." Perhaps it was because we could not imagine him violating authority himself. In later life, when that same brother became a physician, my father not only accepted his medical advice implicitly, but, as few fathers could do, regarded his youngest son's instructions as commands to be obeyed.

I have deliberately disobeyed other authority, but not my father. I dare say I disobeyed him often thoughtlessly, but never with the intent of violating his will. I think that is due to the fact that his authority was never a form of self-will. He never insisted on our obeying a command merely because the command was his. It never seemed to be a command to go and do, but always a command to come and follow. This made the exercise of his authority perfectly compatible with my father's habit of reasoning with his children, his encouragement of co-operation, his readiness to trust his children with responsibility, his spirit of liberty. This adjustment between authority and liberty became habitual in all his relations. The sharpest debates in which I have ever engaged have been those about the dinner table in my father's house or those in which I have engaged with my father when he and I were together alone. In 1893, upon my graduation from college, he took me on a trip to England and Scotland. That was the time of the controversy over Gladstone's Home Rule Bill, and no discussion in Parliament was more acute, though on certainly one occasion I think it was less parliamentary, than the arguments we had with each other on that sub-

THE LAST PHOTOGRAPH TAKEN OF DR. ABBOTT, MAY 17, 1922, ON THE OCCASION OF THE CONFERRING ON HIM OF THE DECORATION OF THE LEGION OF HONOR BY THE FRENCH GOVERNMENT, AT THE HANDS OF M. GASTON LIÉBERT, THE FRENCH CONSUL-GENERAL, IN THE OUTLOOK EDITORIAL ROOMS

The photograph was taken with a pocket camera by a member of The Outlook's staff—H. H. Moore—who had served on the paper continuously with Dr. Abbott from the time when he became Editor-in-Chief

ject as we traveled. He was always ready, in fact, eager, to get my point of view; if he failed to get it, I felt that I was not clear about it in my own mind or that I was awkward in trying to express it. He enjoyed setting his mind to wrestle with another's; but I am not sure that he enjoyed the debate itself so much as the experience of finding it a means of reaching new aspects of the truth. It was with this consciousness of equality that I think he invariably faced an audience, and he invariably welcomed the proper opportunity to hear from his audience as well as to speak to them. To stand before hundreds of people, receive the fire of their questions, and to throw back his answers was to make companions of his hearers. He always preferred the method of co-operation over the method of authority whenever there was any fair choice between the two. Naturally, this spirit of exercising authority by means of co-operation, this habit of the practice of liberty and reason, which he believed in as a principle to be applied to all social questions and which he observed with relation to his children, marked his conduct of The Outlook. At the regular weekly edi-

torial conference he used to preside, but not direct. What he called sometimes brotherhood, sometimes democracy, sometimes co-operation, was the governing spirit whenever he occupied the chair at the head of the table. On every important question before the conference he desired and usually asked specifically for the opinion of each editor in attendance; and the resulting editorial, even when he wrote it himself, was, so far as he could make it, the considered judgment of the whole staff. He was wont to say that democracy was no more the control of the minority by the majority than it was the control of the majority by the minority, but was rather the composite judgment of many minds, which was different from the judgment of any one or any group of the many. He never shunned the responsibility which his office as Editor-in-Chief placed upon him, but he conceived it chiefly as the responsibility for the choice of his associates. Having chosen to serve with them and over them, he trusted them with his reputation and, what was even more precious to him, The Outlook's influence. No exercise of authority in particular instances could begin to have the sober-

ing effect of such a course. It was characteristic of this attitude of his that at the time when the country was on the verge of war with Germany he should write to me a letter which concluded with this sentence:

It is a great relief to me to feel no responsibility for the editorial utterance at such a time and throw it all off on my sons.

Having this respect for others, he made it his rule, which he invariably observed, never to judge their motives. He judged their deeds. When those deeds showed lack of consideration for those he loved or injustice to the defenseless, his anger could flame. He never was angry with his children for anything they did to him, but I have seen his anger at heedlessness of mine which brought new burdens to my mother. And his anger was always the anger of good will, never ill will. His mercy was but another aspect of his sense of justice, as his justice was but an aspect of his mercy. When he himself was abused or misrepresented, he never replied. If reply was needed, he depended on others to make the correction, but he never undertook to defend

and preserve his own reputation. I have in my possession a letter which he wrote to me concerning an attack that a reader of *The Outlook* had made upon me for an opinion I had expressed. It was written in March of this year. My father wrote:

All my life I have made my enemies serve me. For I have assumed that prejudice is often more keen than friendship, and that a hostile critic will often discover a fault which a friend or even a judicially-minded reader will fail to observe.

The natural product of such a life was poise, freedom from harassing worry, a peaceful mind. Anxiety not infrequently troubled him; but he never was anxious about the things which he could not help, and about the things that he could help he was anxious only concerning the rightness of his own judgment. And not even his anxiety was disturbing enough to shatter his sense of humor. He was more anxious, for instance, about the health of others than he was about his own. In the fall of 1919 he was anxious about me, as I can now see by re-reading his letters at the time, but he made his humor serve his concern, and he wrote to me the following letter:

Thanksgiving Day
1920

My dear Ernest:

Can't you get from the office away
For a day,
Or more
Say four:
Thursday, Friday, Saturday, Sunday
Then you'd be good for something
Monday.

I've been told
And learned of old
That for a cold
The best
Cure is rest
Stay in bed
When your head
Feels like lead
And you cough
Fit to joggle it off.
Drop your work
Learn how to shirk
'Twill be no loss.
Your boss.

Is it any wonder that a man who can write of his anxiety for others in this way looked forward to his own departure from this world with placidity? All that he dreaded as old age advanced was the pain that might accompany the losing of his physical vitality. Among the papers that he left after his death is the following memorandum, which came into the possession of one of my sisters shortly after my father's eighty-fifth birthday:

Old Age. Some Reflections—Frag-
mentary.

As I grow older current themes interest me less, and I feel less capable of dealing with them. Partly because I cannot complete them; partly be-

cause the younger generation are more competent to *understand* them and to act concerning them.

My eighty years of experience shows me that we are progressing. If, for example, we could solve the slavery problem in 1860, we shall be able to solve the labor problem in 1920.

My greatest difficulty is to leave the current problems in the hands of the rising generation and have faith in them.

I study less, reflect more; retire more within myself. Gradually my hold on this life lessens, my anticipation of the future life grows more vital. Can I not say that my delights are fewer, my contentment greater; my pleasures fewer, my happiness, if not greater, at least more uniform? I used to take care of others; I am gradually learning to let others take care of me.

LYMAN ABBOTT.

Even in his last few hours his fragmentary and sometimes scarcely audible conversations with his children were turned with pleasantries. He was thoughtful for those whom he was about to leave, but he was not looking back. As he had been throughout his life, he was still standing in the bow of the boat.

As I stood beside his bed and told him how much he had meant to his children and grandchildren, he smiled and said, in a voice that hesitated for weakness but not for any search for words:

"I want for them the object and purpose in life that I have had. 'I have fought a good fight, I have finished my course, I have kept the faith.' I have fought a good fight—though I have had defeats. I have finished my course—finished my course—though I have sometimes faltered and turned aside. And I have kept the faith—in spite of doubts and perplexities—such doubts and perplexities as every one must have who rests his faith on things that are invisible."

ERNEST HAMLIN ABBOTT.

DR. ABBOTT AT WORK

PROBABLY the first time the name of Lyman Abbott became known to me was over forty years ago. I had read something about the synoptic Gospels, was ingenuously surprised to learn that there was such a discussion, and sent some question to the query column of the *"Illustrated Christian Weekly."* I was soon again surprised to find my inquiry honored by being taken as a text for a long editorial signed Lyman Abbott. What impressed me then was what later, when I came to work with and under Dr. Abbott, impressed me in all Dr. Abbott's writing, the clarity and simplicity of style and the fairness to those with whose views he did not agree. This was admirably

expressed in an article about Dr. Abbott written many years ago for the *"World's Work"* by his associate Hamilton Mabie, when he said: "He is a born truth-lover and truth-seeker, with remarkable working power, remarkable faculty of assimilation, and a natural gift of clear, persuasive statement." And I particularly like a phrase used in this same article, "So engrossed is he in what lies before him that he carries no luggage of self-consciousness or self-satisfaction."

Few literary workers can accomplish more in a given time and make less fuss about it than could Dr. Abbott. When he was at his desk, he worked smoothly, steadily, and rapidly, without the slightest nervousness or sign of excitement. I have heard many stenographers say that he was the best possible giver of dictation because he did not hurry nor hesitate. When one looks at the long list of books he wrote and recalls the vast number of editorials, reviews, addresses, and sermons he prepared, one might suppose him a slave of work. Not a bit of it; he was a slave to nothing. He was an incomparable manager of his time and effort. He once said that in his work he had two governing principles: "First, not to do anything himself which he could get any one else to do; second, to take his rest as a preparation to his work, and not as a restorative after it." The first clause must be taken semi-playfully, though he certainly did know how to utilize assistance; the second is eminently characteristic.

Serenity, tranquility, courtesy, fair-mindedness—those were the qualities that have impressed me during the thirty-five years and more I have watched Dr. Abbott at work and heard him discussing public questions and policies in editorial conferences. I never—never once—knew him to lose his temper, and I doubt very much whether any one else did. Indignation at things that were wrong, disapproval of measures injurious to the country, he had, but personal antagonism or hatred of individuals was not in his nature. Twice I have heard him say, in effect, "Do not let that man's name ever appear in the paper," but in both cases the man was guilty of personal moral delinquency against home and family, and was at the same time posing as a leader or teacher.

Many people have called Lyman Abbott a prophet. It would be an interesting study to compare his early utterances with the actual advance of the world toward liberalism in religion, industrial relations, and political progressiveness, and to see how closely his quiet, intellectual exposition of truth and justice long ago hit marks since reached and passed. Thus he was one of the first to use the phrase "industrial democ-

racy," the growth of religious tolerance was more than foreshadowed in his editorials fifty years ago, and he recognized the broad import of evolution in all branches of life and human endeavor, when the word was almost "taboo" among the conservatives.

In speech and in writing Dr. Abbott was the more convincing because he never "showed off," as the boys say. It has always been most refreshing in editorial conferences when a subject has aroused proponents and anti-ponents, to hear from Dr. Abbott a clear-voiced summing up of both sides, untouched by partisan feeling, with a final opinion perhaps beginning, "Now, as I see it, the real *principle* involved is," thus and so. That was why an observant Canadian writer in the "Welland Tribune and Telegraph" in an editorial about Dr. Abbott pays The Outlook the very great compliment of saying: "As a fighter it has been brave and fearless, but in its pages we have never seen a line that was harsh or bitter." That assuredly describes Dr. Abbott's spirit, and the writer truly adds: "As a preacher Dr. Abbott dwelt so much on love that he had no room for hell-fire, and his editorial policy was fashioned after his theology." Moreover, his hopefulness was always based on reason. A writer in the Portland "Oregonian" says: "Dr. Abbott was not only always an optimist, but he was convincing and not fatuous in his optimism because he was able to put his finger on the reason for his faith in the capacity of his fellow men to solve their own problems."

No one knew Dr. Abbott, whether at work or at play—and he loved both—without finding out sooner or later how much of himself he gave to others in kindness, helpfulness, and friendly remembrance. While he ordered his time and did not allow bores and faddists to impose indefinitely upon him, he never fobbed off coldly those who really wanted advice and sympathy. If the members of the several staffs of Outlook workers should compare notes, I know that there would be an astonishing number of cases where men and women have received spontaneous and voluntary letters of recognition of service or of sympathy in personal trouble, carefully handwritten in Dr. Abbott's best chirography—he used to say that he had three handwritings—one that everybody could read, one that the printers could read, and one that no one could read but himself.

Among ourselves here at the office, we often speak of The Outlook family—sometimes meaning the large body of readers who sympathize with the paper's ideas and have a home-feeling for it, sometimes meaning the group of work-

ers who help carry on its journalistic life. In either sense the "family" has looked to Lyman Abbott as its father, guide, and teacher. I believe that his influence is an abiding one.

ROBERT D. TOWNSEND.

AS A BOY KNEW HIM

LYMAN ABBOTT was almost as much a part of the world of my childhood as my own father and mother. The devoted friend and loyal associate of my grandfather, Lawson Valentine, he belonged as unquestionably in our family circle as those who owed place there to birth. He was an accepted fact, like the coming of morning and the warmth of the sun.

My memory of Lyman Abbott covers the last thirty years of his life. As I look back, it is not a memory of particular events, but rather a gradually growing comprehension of his towering spirit. I do not mean that I understand or can define that spirit. Even the astronomer who talks of light years cannot reach out and grasp the distant stars.

In that memory there are some things, however, which I should like to share with Lyman Abbott's friends. Placed before those who have listened to his voice for many years, perhaps they will not seem too intimate and personal for the printed page.

A child's life is like a spring welling up in a rolling plain. No power on heaven or earth can make the water of that spring flow otherwise than in accord with its inherent nature. In its course it must follow the laws of its being, but that course may be changed and deflected by the guidance of those who know the ways of wandering streams.

Thirty years ago I went with my father and mother to Lyman Abbott's Brooklyn home. There was, if I remember correctly, a service at Plymouth Church, a family dinner, and then an afternoon of friendly talk. Perhaps there was not much for a child to do; perhaps I manifested that restlessness not unknown to children of half a dozen years. I do not know. I only remember that Lyman Abbott left the circle of grown-ups, reached down to me, and said: "I am going for a walk. Would you like to go with me?" He took my hand in his and we went out on the street together. Down from Brooklyn Heights we walked and across to Brooklyn Bridge, spanning the East River with its tendrils of steel. I remember that when we came to a certain place on the Bridge he took a pin from his coat, stooped over, and thrust it into the roadway. When we returned to the

spot, perhaps half an hour later, the change in temperature had so worked upon the steel structure that the expansion plates had pushed the tiny pin aside. It was a direct demonstration of natural forces—a demonstration which Lyman Abbott explained to me in words which even my child's brain could understand. He did not talk down to me, he merely employed the method of explanation which he used all his life to give to others the fruit of his reason.

Out of the thousand things that must have touched me that year this only remains in my memory. It remains perhaps because it marked a turning-point in the development of my mind, the awakening of a new and eager curiosity concerning the world of which I was a part. It was a simple thing for Lyman Abbott to do, simple and natural. Probably he never thought of it again or dreamed for a minute that it might have any more significance than any momentary kindness.

Eight years later I found myself at boarding-school. I was beginning to discover for myself something of the world of letters and to grope rather blindly, as children do, for a way to express the dreams whirling through my mind. Sketches and poems for the school paper appealed to me as eminently more worth while than books which were not of my choosing. I fed myself unbalanced rations of Fiske and Carlyle, reading "Sartor Resartus," I remember distinctly, under a canopy of bed-clothes by the aid of a prohibited electric light. Books and the inevitable melancholy of extreme youth were my closest companions.

One day I found an envelope in my mail. It contained a five-page handwritten letter from Lyman Abbott. That letter is still in my possession, and I quote from it here:

I have just returned from a week's visit at Houghton Farm, where Mrs. Abbott and I had a capital time. I found in the Lodge some numbers of the Echo and having leisure read some of your contributions to it. . . . It seems to me that your writing gives promise of successful work in some form of literary career, and if you care for it, I would be glad to put the results of my experience at your disposal. I always hesitate to offer unasked advice, but perhaps if you felt inclined for it, an hour's talk with a friend might clarify your own ideas a little and that is the main thing. And I owe so much to your Grandfather that I should be very glad to feel that I had expressed my obligation by even a slight service to his grandson. All this is a long preliminary to asking you if you feel inclined to lunch with me at the Union League Club, at 39th Street and Fifth Avenue, on next Thursday, August

25th. I will be there from 12:30 to 1:30. If you are not there by the latter hour I will conclude that you have too much on hand on your arrival after so long an absence and are not coming. You need not feel yourself called on to answer this. If you are at the club before 1:30 I will know you have accepted; if you are not there I will know you have declined.

Reading it now, I am moved to wonder how many men in Lyman Abbott's position would or could have written so sympathetically to a boy of fourteen. I can think of but one other—Theodore Roosevelt. I understood the kindness of the letter when it came and rushed to take advantage of its invitation. But the letter itself means more things to me to-day than it meant in the year when it was written.

I kept my appointment, and we sat together for an hour or more in the dining-room of the Union League Club. I think some of the passers-by must have wondered at the length of that talk between a schoolboy and Lyman Abbott.

He said little of the sketches which had called forth his letter. He said much of the work which remained then and still remains for me to do. He talked of the various fields of literature and journalism; of those who had succeeded therein, and of the education which I must secure before I could even hope to make a beginning. The harder the task which he pictured, the greater was the incentive which he gave. I have fulfilled few of the plans which he laid before me, but the memory of that

hour of his companionship I shall never forget.

There have been times when it has been hard for me to accept all the implications and corollaries of the faith which moved his being, for no philosopher or leader has been able to explain to me the reason for some of the suffering and grief to which the human race is heir. If there remain to me certain doubts which were not doubts to Lyman Abbott, of one thing I know I am sure. The faith that was his flowered into a life which was the highest spiritual manifestation of our time. That is why those of us who knew him, labored with him, and loved him find that our sorrow at his passing is strangely akin to exaltation. HAROLD TROWBRIDGE PULSIFER.

TRIBUTES FROM PAST ASSOCIATES

THE TORCH-BEARER

IN celebration of his seventieth birthday, Dr. Lyman Abbott's colleagues prepared for private circulation a miniature edition of *The Outlook* bearing the date of December 18, 1905. As editor-in-chief *pro tempore*, the Associate Editor, the late Hamilton W. Mable, wrote as the leading editorial the following allegory based on an ancient Greek ceremonial. Though Dr. Abbott's name is not mentioned, it is he whom Mr. Mable saw as the bearer of light. Now for the first time is published this affectionate tribute from an associate who, though younger, was the first to finish the race.—THE EDITORS.

SLENDER in figure, quick in action, swift in motion, they who saw him draw apart from the throng knew that he was one of those whom the gods send to bear the torch in the race, and to pass on the sacred fire. There was about him the air of one who already understood and accepted his destiny, and whose training had been accomplished before he entered the lists. Predestined by the fear and love of the gods which his fathers had felt and cherished for many generations, he bore the stamp of that ancestral piety which, reverently guarding the fire on many altars for generations, passes into the spirit of those who come after a certain clearness of vision, and into their blood a certain lustral cleanness. Upon such there lingers the purity of temples and mysterious impressions of meetings with the gods face to face in solitary places. He who comes to the race thus predestined comes with the sure vision, the buoyant energy, the swift feet, of those who are already trained and shaped for their part.

When such a runner appears in the

line, there is always a torch ready to his hand, and the goal which another has reached becomes his starting-point. He takes his place so quietly among the runners that few are aware that another has entered the lists, and that the light, which has shone about the feet of men in the long dark years when the fathers were groping for the way, has been seized by one who will carry it swift and far into the surrounding darkness.

He cared little for possessions and less for praise; for there was but one thought in his mind and one passion in his heart—to run without ceasing, not only with the light but toward it; for the race is for the night only, and the torch-bearers know that they face the morning and are its forerunners. He gave up what other men prize that he might help them see where lie the real prizes and lead the way to them. There was no burst of applause, no casting of flowers in the way, no procession from the temple, when he took the light in his hand; the consecration was in his spirit, not in any form of ceremony. He was thinking neither of those who cheer nor of those who deride, but of the goal where faces now hidden by darkness gather in the light, and voices now silent welcome, not with shouts for the victor, but with joy in his running and the passing of the fire into the shadows that cover the years that are to come. So they crown not the runner but the race, and honor not the bearer but the torch; and they who have run well and faithfully are glad, for they too have found that the joy lies not in any greeting from another, but in driving back the night.

What doubts were his in the blackness of the valleys, what delight when the

way ran along the edges of the hills and far off there was a faint prophecy of the dawn; what weariness was his when the road was strewn with stones that cut the feet and the air lay murky and oppressive about it, what sudden delight when it climbed the hill and the pressure of every step made him aware that he was ascending to the heights where the stars shine in unclouded splendor; what loneliness was his in places where no light glimmered through the gloom, what warmth of spirit when points of fire here and there brought the companionship of other runners—who shall know these things until the gods make all hidden things plain? And in that day when the light lies on the face of all things, who will remember the perils and hardships of the way by which he came to peace? The road is but a path to the temple, and when the smell of the garlands is in the air, and the song of praise floats above the worshipers, and the gods are no longer hidden afar, who will think how he came in the joy of the race run, and the light passed on, and the vision of the gods making the place radiant, not with hope, but with peace and rest?

LYMAN ABBOTT

A TRIBUTE BY THEODORE ROOSEVELT

IN the same birthday issue of *The Outlook* in which Mr. Mable's editorial, "The Torch-Bearer," first appeared, there was also printed the following letter from the President of the United States, who was to become, about two years later, Dr. Abbott's associate as Contributing Editor of *The*

Outlook. We think it perhaps not inappropriate to print it here as though it came from one who at the time of writing was a member of The Outlook staff.
—THE EDITORS.

The White House, Washington,
December 6, 1905.

My Dear Mr. Mabie:

Through you may I present the assurance of my profound regard to Dr. Abbott, and the heartiest congratulations to him on his seventieth birthday? Dr. Abbott is one of those men whose work and life give strength to all who believe in this country, and hearten them in the effort to strive after better things. He has known how to combine to a very unusual degree a series of qualities, all of them necessary but by no means all often developed in the same individual. Exactly as in his writings he stands fearlessly for the rights of the laboring man and yet is equally fearless in his denunciation of any kind of mob violence or of attack on property; exactly as he unsparingly assails every corrupt politician and yet avoids the pit of mere slanderous accusation against all men in public life; so in his private character he combines a good-natured evenness of temper with the power of flaming wrath against unrighteousness, insistence upon adherence to a high ideal with ready recognition of the need of practical methods in the achievement of that ideal, and a serene and lofty hopefulness and belief in the future with a keen appreciation of all that is low, base, cruel, evil, and therefore mercilessly to be warred against in the present. That he may live many years to guide and inspire us is the hope of his friend,

THEODORE ROOSEVELT.

DR. ABBOTT AT THE GRAVE OF THEODORE ROOSEVELT

TRIBUTES FROM THE PRESS

FROM THE NEW YORK HERALD

IN the passing of Lyman Abbott this city and this country lose one of their great forces for light and truth. He was one of those rare men to whom a whole people turn for advice and example, and when Americans turned to Lyman Abbott he never failed to help.

New England has been generous in giving to the world men and women, sometimes whole families, whose leadership, spirituality and scholarship have been of tremendous benefit to their fellows. Lyman Abbott came of one of those families, each generation of which sought to outdo its predecessor in good works. He had the New England energy, the New England heritage of justice.

Lyman Abbott might have made a great name for himself at the bar, as

two of his brothers did, if he had not chosen to turn to the pulpit. It was as a preacher that he first attracted the attention of the country to his intellectual powers and the breadth of his great mind. It was no easy task to attempt to take the place of Henry Ward Beecher as the pastor of Plymouth Church, but Dr. Abbott took it and kept it. If he lacked Beecher's magnetism and fire he made up for them in his sermons with the clearness of his logic and the genuine warmth of his friendship for humanity.

It was in literature rather than in the pulpit, however, that Dr. Abbott reached his greatest audiences. As the editor of The Outlook he was able to convey his valuable opinions to the entire intellectual public. Nor were these opinions limited to the field of religion. Lyman

Abbott lived in times of strife. He was no mere scholar, apart from the struggle of his fellows. He knew that it was impossible to separate religion and human events; social and spiritual things were too closely intertwined for that. He knew how weak and how strong humanity could be, and tried to turn its strength into the right channels.

Christianity was ever uppermost in Lyman Abbott's soul. He saw that the largest need of his day was to make that Christianity applicable to the day's problems, political or otherwise. He was sincere, and he tried to make his world sincere. He was sane and he preached sanity. He was moderate, relying upon the clarity of his fine argumentative powers to convince.

There was no necessary reform that could not rely upon Dr. Abbott for ad-

vice and aid. He was willing always to give his pen or his voice to a worthy cause. He worked for his city, his State, his country, and indeed for the well being of the whole world. And his ability, his personality, his remarkable quality of seeing the right way to do the right thing attracted to him many other men of vision who worked with him in his chosen vineyards. One of these was Theodore Roosevelt, who served on The Outlook with Dr. Abbott and with whose name Lyman Abbott's will always be linked.

The story of Dr. Abbott is one of the finest pages in the history of unselfish endeavor. He worked unceasingly all the life that has just ended in its eighty-seventh year. So long as there was some new spiritual problem, some social question at which to direct the clear light of his mind, Lyman Abbott would not rest. But at last the strong hands are folded in sleep and the compelling voice is still. He was like a patriarch who had lingered because the people needed him.

FROM THE NORTH AMERICAN, PHILADELPHIA

To fully depict the manifold activities and interests of his long life would take us into almost every field of social progress, and into politics and economics as well as religion.

His ardor for spiritual attainment was matched by his enthusiasm for every cause that aimed at human betterment; at the emancipation of the mind from shackles of ignorance and superstition, and the practical application of the principles and spirit of Christianity to the solution of social problems. These prompting motives could not be better expressed than in the most quoted of his sayings: "He who denies the brotherhood of man is as much an infidel as he who denies the fatherhood of God."

Such a life is an achievement of high and lasting meaning to humanity; an example which glows with hopeful promise through clouds of doubtful portent.

FROM THE KANSAS CITY STAR, KANSAS CITY, MISSOURI

The death of Dr. Lyman Abbott, editor of The Outlook, will bring a sense of personal loss to a multitude of people. Over a long period of years his life was a wholesome influence that was widely felt through his writings in his books and in The Outlook. It fell to him in marked degree to fulfill the ambition so finely expressed by Andrew D. White, founder of Cornell University, to direct young people into fields of fruitful thought and to guide older people along lines of right reason.

It is first of all as a teacher of practical religion that Dr. Abbott himself might like to be judged. He came at a time of transition in religious views and he became one of the best-known interpreters of the new theology.

Broadly tolerant and deeply spiritual,

he had that sense of direct communion with God which he expressed in the title of one of his books, "The Great Companion." He needed no argument for the existence of God. He felt he had the testimony of his own experience.

With this confidence he had no shadow of fear as to the teachings of modern science. His "Theology of an Evolutionist" shows how he found in scientific inquiry suggestions toward an understanding of the most profound questions of life and destiny. "By their fruits ye shall know them," was his test. He stressed life rather than formal creed. Underlying his work was the text from Micah that so fully expressed the belief of his close friend, Theodore Roosevelt:

O man, what doth the Lord require of thee but to do justly, love mercy, and walk humbly with thy God?

But there was another side to Lyman Abbott. He changed the name of the publication he edited from the "Christian Union" to The Outlook, because he desired to emphasize its interest in the whole field of human endeavor. Under his editorship The Outlook has been always progressive, but never visionary. It has stood for a sane Americanism.

When the war came, The Outlook did not permit its neutrality to prevent it from speaking out on the ruthlessness of Germany. Dr. Abbott was for peace, but only for the peace of righteousness. He felt there were evils worse than war. Pacifism was not in his creed.

In considering industrial or political problems he was always vigorously for justice. No one could meet him or attend one of the luncheons that The Outlook staff often gave to men who might have information of interest without understanding that this slight, gray-bearded man was essentially honest, fair, keen, ready to hear all sides while sincerely seeking the truth.

Such leadership as that of Lyman Abbott's is of immense importance in a democracy. It embraces both the vision and the effectiveness without which the people perish.

FROM THE DAILY JOURNAL, TELLURIDE, COLORADO

It is refreshing to pause for just a moment or two in the midst of the present political campaign and pay an honest tribute to Dr. Lyman Abbott, noted editor and churchman, whose death occurred on Sunday.

Dr. Abbott carved a niche in American history. A student of public problems, he was competent to purvey to the world through The Outlook his impressions of contemporaneous life. Dr. Abbott was Editor-in-Chief of The Outlook since 1893.

Dr. Abbott will also be remembered as a friend of that unique figure in American history, Theodore Roosevelt. Like Theodore Roosevelt, Dr. Abbott will be missed. But his kingly presence and endearing personality will remain perma-

nently engraved in American life through his magazine, and through his contributions to the religious life of the country. The Outlook will be carried on under the competent leadership of Dr. Abbott's two sons, Lawrence F. and Ernest H., a continual memorial to the real heart and greatness of Lyman Abbott.

FROM THE MACON DAILY TELEGRAPH, MACON, GEORGIA

Few men of the last half of the nineteenth century and the first quarter of the twentieth have contributed so much to the sanity and moral and social health of the time as has the venerable and lovable Lyman Abbott, who laid down his earth's labors Sunday and entered upon the great venture and quest.

As an editor, author, social leader, theologian, and liberal preacher he has had few equals. He commenced writing very early in life, and in connection with his brother wrote two novels when he was not much more than a boy. He prepared himself for the practice of law, but his interest in things religious was so profound that he decided to become a minister. His first pastorate was in the West, where he early gave evidence of clear-cut and inspirational religious thought of a very high order. Speaking of this early pastorate, he says that he resolved to give his people the enlightenment of Jesus upon the problems of practical life in weekly discourses, and the people heard him gladly. . . . He was not so brilliant and picturesque and oratorical as Mr. Beecher, but was clearer, more pungent, and more informing.

In connection with his work as a pastor and author and social welfare worker, he took the old "Christian Union," and made of it, under the new name "The Outlook," one of the ablest and most popular journals of enlightened opinion not only in America but in the world. . . .

On public issues The Outlook has been conservative, fearless, intelligent, and conspicuously fair. While Mr. Abbott was a Republican in leaning, he appeared to be just as ready to praise a Democrat when he saw good in him as if he were a Republican, and just as ready to criticize Republicans for failure to measure to the highest standards. He was Republican in the same independent and constructive way that the "Telegraph" aspires to be Democratic.

Mr. Abbott was among the first popular ministers of America to take the position that the life and teachings and mission of Jesus were just as efficacious under one scientific hypothesis as another. He believed that the evolutionary point of view, if spiritually interpreted and applied, gave new meaning and worth and dignity and hope to human life and added glory to God. In notable addresses before college audiences he argued that God is in his world and in all the fine forces of life,

and that he is still making the world a progressively better home of man. . . .

His general view of history and politics was very similar to that of President Roosevelt, and after Mr. Roosevelt's retirement to private life Mr. Abbott induced him to become associate editor of *The Outlook*. These two great men worked together with remarkable harmony and with highest mutual regard.

Mr. Abbott was among the first leaders of America who insisted that America should vigorously protest against the German march and the German methods of warfare. . . . He favored large and generous co-operation of America with the rest of mankind, and was finely sympathetic and co-operative with all efforts to feed the hunger, heal the wounds and repair the breaches made by the World War. He also favored generous co-operation of the nations to prevent future wars and to promote common world good. He contended that the World War, as much as it cost to win it by the Allies and America, was worth and would be worth to the human race even more than it cost. His high courage, intelligence, and purpose, as well as ability to work, increased rather than diminished with age. Though very frail of body, he was one of the busiest workers of the time. In some of his writings he tells the interesting story of how he learned to turn insomnia into a blessing. He says he remembered the beautiful verse in the Psalms to the effect that the meditations of the Lord during the night-watches are sweet, and from that hour on he got more rest and refreshing from these sweet meditations than he did from sleep. It is not surprising that one who turned insomnia into a blessing succeeded in making his own life an unusual benediction to his generation.

FROM THE NEW YORK TIMES

One of the gentlest and most widely beloved of Americans, Dr. Lyman Abbott had the fire, fearlessness and vision of a prophet. He did not put much emphasis upon creeds, but his preaching and writing dwelt on the essentials of a Christian life. Though blown upon by every wind of doctrine, he was not blown about by it. He maintained a serenity which had a physical illustration in the mountain at whose foot he lived for many months at a time during his later years—Storm King, on the Hudson. He sought and accepted the last word of science. He even wrote a book on the theology of evolution, but what science had to bring to him only assisted in the evolution of his Christianity, which was a way of life rather than a philosophical or theological opinion.

His great ardor was for spiritual achievement, but he was prominent in every good work for the bettering of the physical life of those about him. As an editor he had not only a gift for clear, persuasive statement, but a reasonable optimism that refused to be dis-

couraged or defeated. As a preacher he had to meet the severe test of succeeding Henry Ward Beecher. The voice of the orator is hushed, but the influence of this prophet of man's brotherhood will be felt long beyond the years of his long life.

FROM THE ROCKY MOUNTAIN NEWS, DENVER, COLORADO

Dr. Abbott took interest in all that pertained to the betterment of the human race. He was always found on the side of the oppressed. He was an Internationalist before the word was much in use and before the doctrine received anything but ridicule from the bulk of the people who associated it with the Red Flag of Marxism. His biographer calls Dr. Abbott a "rational optimist." The phrase fits him.

FROM THE NEW YORK SUN

The full and useful life of Lyman Abbott, who has just died, constitutes a wonderful record of intellectual, political and spiritual service to the American people. He belonged to a race eminent alike for its energy in action, its brilliancy in intellect and its high principle; the race that produced the old New England ministers. In him joined the best of their qualities, for he had not only the strength of understanding and the firmness of principle that were theirs, but the tireless, enterprising energy that kept him active all his life in the advancement of America.

To Dr. Abbott the country's advancement was a matter above all of the spirit. While other men of his day worked manfully to make the country more prosperous, to settle its waiting Western fields, he served especially the ideal of uprightness and high thinking. He lived in a time when his spiritual elevation was needed to right the balance in a nation necessarily absorbed in its material affairs. That America today thinks not simply of the dollar, but past the dollar to great fundamental things without which prosperity would lose its value, we owe to Dr. Abbott and to men like him; but in remarkably large part to Dr. Abbott himself.

America has produced other men who combined spiritual and mental pre-eminence—a long line of them, from Jonathan Edwards to Emerson; but its scholars have few of them possessed Dr. Abbott's gift of applying the high forces in them with full effect to practical matters of the moment. For him principle was no abstract thing, religion was not a matter to lock up in the meeting house with the hymn books, between Sundays. He believed in applied religion; as indeed others did. But he possessed the rare talent actually to apply it.

Fortune added to his gifts that of literary and speaking ability. His power of expression enabled him to reach the American world through the pulpit, by his numerous books and articles, and

perhaps most potently of all, as an editor, shaping and inspiring the utterances of publications which went through all the country. By all these means he preached the application of conscience to the public problems of the day. It was characteristic of him and perhaps the most outstanding of his applications of principle, as well as of his keen and sound instinct for the best, that he pinned his faith and friendship in Colonel Roosevelt. He saw early what not all could see—that this man was destined to play the great part at Washington in a critical phase of American progress.

Few men have influenced more people in this country than Dr. Abbott did. None perhaps have influenced so many for so long a term of years. Sanity went hand in hand with earnestness in him. He remained to the end what he had been throughout, the clear, brave and convincing spokesman of what was best in the American spirit.

FROM THE EVENING NEWS, NEWARK, NEW JERSEY

With all his long study and erudition, Dr. Lyman Abbott is best remembered as a man who found God in the street and the market-place. He was not of the race of great theological controversialists, but a preacher of the Christian life. From the very beginning of his professional career he viewed religion in relation to social and civil problems. It was for him a way of life, and he devoted all his energies, in the pulpit, as editor and as a citizen, to a Christian solution of the practical problems of living.

FROM THE BROOKLYN DAILY EAGLE

If any man ever deserved the commendation, "Well done, good and faithful servant," it was Lyman Abbott, who has entered into rest after more than eighty years of fruitful living. Nowhere will he be mourned so widely or more deeply than in Brooklyn. His eleven years' pastorate of Plymouth Church, where he succeeded Mr. Beecher, was a period of religious illumination and growth for the whole world, and more especially for Brooklyn, where his lucid, frank and honest preaching was reinforced by his personality, which inspired a warm affection among all who knew him.

Dr. Abbott was a beacon light of honest and frank thinking among the orthodox churches at a time when they were profoundly stirred by the higher criticism. Dr. Abbott said at his eightieth anniversary here that he learned to accept the truth of evolution from Mr. Beecher, but the consequence of that acceptance was far wider than either man could have dreamed. Dr. Abbott became pastor of Plymouth in the very year that Mrs. Humphry Ward published "Robert Elsmere," and a few years later

he preached a series of sermons on evolution from that pulpit which stirred opposition among the more narrowly orthodox, but was a powerful factor in leading the churches to a faith which learned to worship God as revealed through natural law as well as through revelation.

Dr. Abbott did a great service through teaching men to see science as the servant of religion rather than its enemy, at a time when the "higher criticism" had made impossible for intelligent and honest minds the earlier belief in the literal or verbal inspiration of the Bible, and was weakening the faith of many brought up in that simpler faith. But he was much more than a great leader of religious thought. He was an editor as well as a preacher, a work which came to its full fruition as editor of *The Outlook*. There he was a friend and supporter of progress in all good causes except only woman suffrage, which he always regarded as a danger to the home. He was a national figure as an advocate of higher political and finer social living and of better education. An incident which illustrated the sanity of Dr. Abbott's thinking was that he was dropped from the American Peace Society in 1913 because he also belonged to the Army and Navy League and because he supported preparedness in *The Outlook*. When the atrocities in Belgium came he insisted that Christianity justified the strong in protecting the weak, and he strongly supported the war, although he had done much to promote the ideal of world peace.

At the time of the Plymouth celebration of Dr. Abbott's eightieth birthday *The Eagle* urged that it be followed by a national assemblage to pay tribute while he still lived to the exalted character of the man and to the great influence he had exerted in the growth of honest thinking and a higher plane of conduct in both public affairs and private living. Such a memorial tribute was not made, however. Now that the tireless worker has gone to his reward, such tributes will no doubt come from many parts of the country. If they serve to emphasize and continue the influence of this great and good man, they will do something to continue the fine work to which he gave his long life freely and without stint.

FROM THE SMITH COLLEGE WEEKLY, NORTHAMPTON, MASSACHUSETTS

In the shifting succession of vesper speakers who appear out of space on the platform of John M. Greene Hall, leave their message, and vanish into space again, we had grown to look forward each year to our visit in the fall from Dr. Abbott as a sort of "St. Martin's summer."

Besides the many endowments which had given him fame, he brought us two especially dear to a college audience and age. We are not so

irreverent as we seem—if we really have something worthy of reverence. The spare, ascetic figure, the white patriarchal beard, made a setting from which the counsels of ripe experience came worthily and were welcome. But the spirit of youth in him was indomitable—and as cheerful as indomitable. Perhaps the greatest gift he gave us was a fresh sense of the normal relation of religion to life. He had a natural gift for spiritual things. He could perhaps have been a mystic. His manhood was spent in the midst of the keenest intellectual ferment the religious world has ever seen. In that intellectual arena he had been a champion. But religion in him was neither intellect nor emotion. It was the strong, fresh breath of his life. It made him at home in any assemblage of men—they were all the children of God. It will make him just as simply and naturally at home with "the spirits of just men made perfect." But we shall miss his message.

FROM THE EVENING MAIL, NEW YORK CITY

Dr. Abbott worked in no narrow groove. He knew the world. He strove always to make it a better world for all to live in. He realized that it could not be made better by the power of prejudice, mutual antagonisms, or inflexible dogmatism. In all that he said and did the spirit of a wise charity was uppermost. He broadened the minds that came in contact with his, and grew broader and deeper himself through his desire to give a fair hearing to all.

FROM THE BUFFALO EXPRESS, BUFFALO, NEW YORK

With the broadest knowledge of men and affairs, both of the past and present, he combined a deep interest in humanity and an instinct for news, which was perhaps the most important factor in his mental equipment. He knew how to select for discussion subjects in which people were interested and thereby he won readers and influenced thought where a more monastic type of man would have failed.

FROM THE WESTERN CHRISTIAN ADVOCATE, CINCINNATI, OHIO

Dr. Abbott was an optimist, but he saw clearly the difficulties and obstacles in the way to success. He was a man of faith and of vision. Strong men, like Theodore Roosevelt, were attracted to him. Because of his great length of life, his vigor to the end, and his deep interest in every important movement for the betterment of men, he became one of the best-known characters to the general public.

FROM THE EDMONTON (CANADA) JOURNAL

Dr. Lyman Abbott, who died in New York on Sunday, was a wonderful old man who over a long period of years

had exerted strong influence on American life. The last issue of *The Outlook*, of which he has been editor-in-chief since 1893, contained an article over his signature in which there was no sign of any abating of his old-time vigor. It is only an occasional man who, on approaching his eighty-seventh birthday, is so much alive as he has shown himself to be in all that he has said and written in recent weeks.

FROM THE DALLAS, TEXAS, MORNING NEWS

As an editor he made of *The Outlook* a distinctive publication. As a preacher he followed his profession for the good that he hoped to do to others and not for the furthering of his own reputation. As a writer on religious subjects he showed both learning and moderation. In all things he displayed prodigious industry, and everywhere he was accorded the respect which sincerity inspires.

FROM THE LA CROSSE, WISCONSIN, TRIBUNE AND LEADER-PRESS

Many men were attracted to Mr. Abbott's leadership by some of the numerous other qualities with which he was endowed besides his active and militant Christianity. But his was none the less an ennobling influence because it was often his personality rather than his principles that first drew men to him. From him must have been reflected and radiated upon those about him something of his own clear and serene faith. So Lyman Abbott leavened the lump of more or less ignoble and thoughtless men and manners of his times.

FROM THE JEWISH TRIBUNE, PORTLAND, OREGON

Dr. Abbott was fearless, and because of the breadth and depth of his learning he did not hesitate to speak the truth as he saw it and to preach the evolution of human thought as demonstrated in the progress of religion. Personally he was among the most lovable of men, with the great dignity which was the natural sequence of his power; a fine democracy that marked the recognition of human fellowship, and a broad humanity which found room for aiding every worthy endeavor for the uplift of the oppressed.

Is there a finer sentiment in all our literature than that sentence in one of his sermons: "He who denies the Brotherhood of Man is as much an infidel as he who denies the Fatherhood of God"? And he not only preached this doctrine—he practiced it.

FROM THE BROOKLYN TIMES, BROOKLYN, NEW YORK

Singular combination of prophet and preacher and scientist and sage, Lyman Abbott had a clear vision of the world around him, and a sublime vision of the world beyond, that made him eminent

in an age of great American churchmen and publicists. He was as clear an analyst of the material progress of his time as any thinker, but science did not shake his faith. Instead, all that he learned of the material world and its contacts strengthened in him the belief in a hereafter cleansed of the dross and wrong of the universe that is apparent to the mind in the flesh. . . .

Brooklyn remembers the great clergyman and scholar as the successor of Henry Ward Beecher in the pulpit of Plymouth Church. . . .

There are many who recall Dr. Abbott as he stood on the plain and severe platform of the historic church, preaching his great sermons on the higher criticism and his Pauline sermons. Spare in body but with a towering forehead and a flowing beard, he looked the prophet. His lectures attracted the attention of scholars and churchmen, because of their keen intellectual quality, their

convincing power, and the clarity and strength of the mind that formed them.

FROM THE CORNWALL PRESS, CORNWALL, NEW YORK

This week newspapers and periodicals all over the United States will commemorate the passing of Dr. Lyman Abbott, but here in Cornwall it is our sad privilege to commemorate the passing of a neighbor.

Dr. Abbott came to Cornwall as a young minister and became pastor of the Canterbury Presbyterian Church. He became very fond of the town and of the surrounding country; and after he had left the pulpit to devote his time to editorial work and authorship, he made Cornwall his home, building the hospitable white house which has long been a landmark in the lower village. . . .

Every one who knew Dr. Abbott will remember his interest in young peo-

ple. This was because he himself had kept a youthful spirit. . . .

For a great number of years past, practically all boys in Cornwall-on-Hudson have come to know Dr. Abbott intimately through the Garden Club, which had access to his home with the same freedom that his family enjoyed. They learned what his great library was like; they enjoyed the friendship of his kindly voice as he read to them grouped about the open fireplaces; they partook of every form of true hospitality; they learned to love good books, and they have gone out, many of them into trades, through college, into the larger business world—some lawyers, U. S. officers, doctors, and every one indelibly stamped by close contact with an indefinable something, which was the soul of Dr. Abbott.

. . . There is an overworked phrase, "Christian first, denominationalist second." Dr. Abbott was the living embodiment of all that is good in the idea.

TRIBUTES FROM FRIENDS

THE letters and telegrams which have come to his associates and to members of his family, and are still coming, express a personal feeling which would, we think, have surprised Dr. Abbott, but which he would have accepted simply and gratefully. We print

some of these personal tributes here because they are triumphant confirmation of Dr. Abbott's faith and conviction that the spiritual relationships of mankind transcend all the temporal divisions of creed, politics, and social circumstance.

From the Rector of All Angels' Church, New York

I can recall among his contemporaries no life richer or happier than his own. He has gone to his rest and reward with the reverence and the love of all those who are seeking the truth in all sincerity. To me he seemed to be the pre-eminent expositor of the simplicity of religion. When others became confused and lost the path or were perplexed by the multiplicity of paths, he shed the radiance of the simplicity of that truth which was always so clear to him, and the perplexity was dissolved. Never in all his ministry did he seem more needed than in these days—and yet one is thrilled by the thought of what joy is his, and how peculiarly prepared for it he is!

S. DELANCEY TOWNSEND.

From Plymouth Church, Brooklyn

In behalf of the officers and members of Plymouth Church, I am sending you this message of deepest sympathy and affection in the hour of your great loss that has touched Plymouth Church and our entire city. We shall all be glad to have you make any use of Plymouth Church you desire. The official Board wished me to say that each individual member joins in this message of deepest sympathy.

NEWELL DWIGHT HILLIS.

From the Executive Secretary of the Roosevelt National Memorial Association

To have Dr. Abbott go is like having a mountain removed at whose base you

have lived all your life. It isn't only that you miss the mountain, but that the whole landscape is changed. The American people will sorely feel your father's going. He was in the truest and highest sense a guide, philosopher, and friend to thousands who never saw him, and the mourning that is in thousands of American homes to-day will not be the usual passing emotion which we feel when a great man takes his place among "those who bear the stars," as Barrett Wendell called them.

HERMANN HAGEDORN.

From a Jewish philanthropist

In the passing of your illustrious father this Nation has lost one of her very great men; one of her dependable assets; one of her most resourceful minds; and it therefore shares your loss.

JULIUS ROSENWALD.

From the Superintendent of the Bowery Mission, New York

Over thirty years ago I saw the funeral of the good Earl Shaftesbury in London, the principal feature of which was that it was as largely attended by the very poor as it was by the nobility and gentry of the land. I am in a position to assure you of a similar attitude with regard to your father. Whilst those in other circles will pay glad tribute to his superb intellectual gifts, and to his extraordinary value as an educator, patriot, and philosopher, thousands of men down here will just as en-

thusiastically bear witness to his beautiful, helpful, Christlike spirit in ministering to them in their dire need. We all feel we have lost a great and true friend.

JOHN G. HALLIMOND.

From Senator Glass

Please accept a very earnest expression of sympathy on the death of your venerable and distinguished father. His objectives in life revealed the nature of the man—his objectives and courageous strivings. These things counted for large value while he wrought—and will be remembered to his high distinction now that he is dead.

CARTER GLASS.

From Senator McCormick

Deepest sympathy to you in the loss of a devoted father; to The Outlook in the loss of a courageous and far-sighted guide; and to his fellow-citizens in the loss of a great American.

MEDILL MCCORMICK.

From Colonel House

A great loss has come to our country in the death of your distinguished father, and there will be widespread sympathy for you and yours throughout America.

EDWARD HOUSE.

From General Booth, of London, Commander-in-Chief of the Salvation Army

I am mourning with you in the loss of one of the world's greatest citizens.

who was also a leader among the sons of God.
BRAMWELL BOOTH.

From Father Curran, of Wilkes-Barre, who was an intimate associate of Theodore Roosevelt in settling the coal strike of 1902

Sincerest and most heartfelt sympathy on the death of your venerable and beloved father, Dr. Lyman Abbott. His name will go down in American history as one of the foremost literary personages of his native land. May his soul rest with the angels and saints of God unto all eternity.
J. J. CURRAN.

From a former Governor of the State of New York

Accept my sincere sympathy at the loss of your distinguished father.

ALFRED E. SMITH.

From the President of a National Labor Union

Through press despatch I have just learned of the death of your beloved father, brother Lyman Abbott, and in behalf of the International Printing Pressmen and Assistants Union of North America I hasten to transmit our sympathy and condolence.

GEORGE L. BERRY.

From the President of the New York Life Insurance Company

Lyman Abbott had to me so long been a great figure—he had indeed so clearly become a tradition in our National life—that it is not easy to think of him as a father whose death brings deep sorrow to his children. The high pride you feel in him as a great leader and teacher does not make your sorrow as a son any less acute. May I as a citizen and a friend join in the universal tribute of respect and affection which the world is now offering.
DARWIN P. KINGSLEY.

From Mrs. Theodore Roosevelt

Deep sympathy. We all needed him.
EDITH ROOSEVELT.

From the President of New York University

I am deeply distressed to hear of the death of your honored father. He was one of the most distinguished and most revered of the graduates of New York University in the whole course of its history. His outlook on the passing show of this world was that of a man who was at once a lawyer, a journalist, a bookman, a religious leader, a man of affairs, and a genial humorist and fellow-man in the ordinary relations of life. Even at his advanced age, he was so wholesome that we thought him destined for many years of ripening leadership.
ELMER ELLSWORTH BROWN.

From Vassar College

I should like to express on behalf of Vassar College, of which for a time be-

ing I am acting President in the absence of President MacCracken abroad, our general sense of the deep loss shared throughout the country in the death of your father. For years Dr. Abbott was a welcome and beloved visitor to the pulpit of the College, and the memory of his helpful service and profound human interest is still so strong that even I, a newcomer to Vassar, have been made aware of it.
GEORGE H. NETTLETON.

From Princeton University

I am distressed to hear of your father's death. Please accept my sincere regret and sympathy. We remember always with gratitude his services at Princeton.
JOHN GRIER HIBBEN.

From General Pershing

Deeply grieved to learn of your father's death, and extend to you my sincerest sympathy. The country has lost a great outstanding figure whose influence has always been for the best and wholesome things in life. He will be revered by his countrymen as a model Christian.
PERSHING.

From the President of Union Theological Seminary

The great and splendid work your father did for the promotion of the kingdom of God, a work that he was permitted to carry on almost to the close of his long life, makes the Church and the country at large permanently his debtors. His name will not be forgotten.
ARTHUR C. MCGIFFERT.

From the students of the Union Theological Seminary

In behalf of the students of Union Theological Seminary I wish to express our profound sorrow at the loss of one who was our beloved friend and counselor. Those of us who had the privilege of meeting Dr. Abbott personally will cherish the remembrance of those rare opportunities as long as we live; and no student can fail to acknowledge the benign influence on his life of him who was so universally loved and respected.
W. M. AIDERTON,

For the students of
Union Theological Seminary.

From the Principal of Hampton Institute

Hampton Institute will feel that it has lost one of its truest and most discerning friends; and every other good cause will miss him deeply. I shall always remember gratefully his message which I found on my arrival at the Institute to begin my work there in April, 1918.

JAMES E. GREGG.

From Mount Holyoke College

For the Class of '93, Mount Holyoke College, of which Dr. Abbott was an honorary and honored member, may I express our appreciation of the high

nobility of his character. We recall with gratitude his gracious acceptance of our invitation to preach our Baccalaureate sermon, and his sympathetic understanding of the many problems that were then perplexing us. From that time to this he has held a peculiarly tender place in our affections.

OLIVE SPRAGUE COOPER,
Secretary of the Class.

From the Consul-General of Japan

It is with deep grief that I learn in this morning's paper of the death of your distinguished father, Reverend Dr. Lyman Abbott. His passing is an irretrievable loss not only to your country, but also to the rest of the world.

K. KUMASAKI, Consul-General.

From the Federal Council of Churches

May I share with you and yours the loss of your honored father, and the gratitude we all feel for his long service to the Church and to the world. From my Theological Seminary days until his death he has been a guide and counselor to me.

CHARLES S. MACFARLAND,
General Secretary.

From the Massachusetts Agricultural College

I should like to express to you a word of tribute to your father. I began taking the "Christian Union" immediately after my college days, and then The Outlook, and for many years I think I got a more complete appreciation of public questions, viewed from the ethical and religious standpoint, as well as perhaps more inspiration with respect to a sane attitude on questions theological, than from any other one source. Dr. Abbott was a great personality and a great influence.

KENYON L. BUTTERFIELD, President.

From Tuskegee Institute

The teachers and students of Tuskegee Institute sorrow with you and your family. Dr. Abbott gave freely of his time and great wisdom to the betterment of humanity, and his passing is a great loss.

WARREN LOGAN, Acting Principal.

From the Minister of the Brick Presbyterian Church, New York

Your father has been one of the notable witnesses in our day for a whole and strong Christianity. No one can estimate his influence. . . . I think this morning with gladness of the hours I had with him at Silver Bay two years ago. He was so generous in his appreciation of what I said, and so helpful in talking it over with the college girls. They questioned me one morning about immortality, and it was a relief and a joy to turn it over to him. He answered in a way that I know will make a difference forever in their thoughts and

feelings. Perhaps the best thing one can say is that it is actually easier to think of him as still alive, than as dead. So he goes on proving that eternal life to which he was so consistent and joyous a witness.

WILLIAM P. MERRILL.

From one of the founders of the Boy Scout Movement

It is with a keen sense of sorrow that I read in this morning's paper the death of my old friend, your distinguished father. It was your father who always had a cordial greeting for me, and a sympathetic ear for all my whims and fancies. Won't you give to your brothers my sincerest sympathy and affectionate regard, and say to them that the privilege of having such a splendid father must, in a measure, comfort them now that he has crossed the Great Divide to join his friend, Theodore Roosevelt, where I doubt not they both await the coming of the rest of us.

DANIEL C. BEARD.

From the President of the University of Virginia

I am saddened by the thought that your father's great life is ended; I am proud that he was my friend.

EDWIN A. ALDERMAN.

From the Consul-General of France

I myself am not only losing a very sincere friend, but France as well will deeply regret the loss of one of her most faithful and ardent followers, who never failed to lend her a helping hand in her hours of need. When I decorated Dr. Lyman Abbott not long ago with the Legion of Honor, I little thought that he would have such a short time in which to enjoy this mark of recognition from France for the many services which he rendered her.

GASTON LIÉBERT.

From the Mayor of Sioux City, Iowa

When I went to Yale, after I had been there just long enough to see some of the demoralizing surface of student life, and not long enough to have penetrated to the real inner spirit of things, your father delivered an address which promptly brought me to my senses again, and set me on my feet intellectually and morally. After that for ten or fifteen years I suppose I read practically everything he wrote. In recent years I have been helped and exalted by the unfaltering vitality of his intellect and spirit with advancing years.

WALLACE M. SHORT.

From the President of Western Reserve University

Your father united at least three elements which, each great in itself, resulted in a still greater character. He had the gift of interpretation. No man of our time could, in so few sentences, more adequately outline the essence of

a movement or of a social or theological or educational condition. In this power of expression was found an equally great power of analysis. He made the complex simple, the obscure clear, the vague definite and exact. But with these intellectual qualities was closely joined a great-heartedness. He loved people, and consequently people loved him. From it all came a great humanity. Or rather this trinity of qualities came forth into a great humanity. In him was incarnated the best.

CHARLES F. THWING.

From Dr. van Dyke

It is glorious to die thus amid the murmur of many voices saying, "God bless you for the good you did me." He was like an old prophet, your father, no, like a new prophet, for youth was always in his heart while his beard grew longer and whiter, and authority clothed the hopefulness of his message. Yet you are grieved that he is gone; I grieve with you, for he always brought me a blessing.

HENRY VAN DYKE.

From a Roosevelt associate

I cannot express my sense of personal loss in the death of your father. He stood to me both for all that was finest and for all that was most effective in American public life. I think of him always as a man who not only wanted the best thing, but knew how to achieve it. Our country is the richer for his life, and the poorer for his departure. My deepest sympathy.

GIFFORD PINCHOT.

From the President of Columbia University

To have fallen asleep at his great age, full not only of years but of distinguished honors, and to carry with him so heavy a freight of affection and good deeds well done, is surely a cause for rejoicing. His is now the everlasting reward of the conflict o'er and of victory won.

NICHOLAS MURRAY BUTLER.

From ex-Secretary Garfield

You have enjoyed a wonderful companionship with your father, such as few men are privileged to enjoy. The memory of it will grow brighter and more helpful as the years pass. His life is an example of highest effort and attainment. I shall always count my association with him among the bright spots in my life.

JAMES R. GARFIELD.

From the President of the General Education Board

Your father was one of the first citizens of our Republic. A man of great learning, of profound public spirit, who served his day and generation in ways most useful, . . . I first heard your father in 1883, when he made an address of

great interest and inspiration at Waterbury, Connecticut. It came to me at a time when I needed just such a forward-looking message as he gave. I have heard him repeatedly since and entertained for him a respect which amounted to reverence.

WALLACE BUTTRICK.

From the former President of Yale University

Your father had reached the fullness of years in such a glorious fashion and was doing such work till near the very end that the public will not feel the sadness of his going; but for those like Mrs. Hadley and me who knew him, and knew how much greater he was than the things which he did could ever show, cannot help trying to tell you how much we cared for him, and how much better his presence made our world to live in.

ARTHUR T. HADLEY.

From the President of Hobart College

I wish to acknowledge the great debt I owe as a man and as an educator to your father as one of the greatest teachers of the greatest things I have ever known.

MURRAY BARTLETT.

From Professor Edward C. Moore, of Harvard University

No one ever rendered a greater service to the University as a member of the Board of Preachers through a long period, eighteen years, if I remember rightly, and no one ever rendered greater service to me personally. My acquaintance with your father dates from 1881, when I first went to New York as a student, and there has been no time in these forty years when I have not reckoned him among my wisest and most faithful counselors.

EDWARD C. MOORE.

From ex-Secretary Redfield

A fine and finished life was his—a record of many-sided service. I prefer to think of him as a spiritual force, an illuminating thinker, a refining and inspiring power. For him "the fever of life is over" and his work is done. Done, I mean, in the sense of accomplishment, but not in the sense of having ended, for it goes on fruitful to-day and to bear fruit in coming days.

WILLIAM C. REDFIELD.

From the Secretary of State

Permit me to express my deepest sympathy in the loss of your father. There is no one with whom I have been brought in contact who has more completely realized to me the ideal of the Christian sage, and there is no one I have known who has had a more beneficent influence. His life has been one of rare beauty and distinction, and his death is an irreparable loss to the Nation.

CHARLES E. HUGHES.

THE WEEK

THE IRISH SITUATION

ANOTHER advance has been made in molding into existence the Irish Free State. The Dail Eireann, which is now sitting as a Constituent Assembly in a Provisional Parliament, has passed a bill ratifying the Constitution of the Free State as placed before the Assembly. This Constitution puts into binding form the agreement between the Lloyd George Government and the representatives of Southern Ireland in what is now known as the London Treaty. Only slight and few amendments were urged by the Dail Eireann. The emphasis still remains on political and religious freedom in Ireland and in the Irish Free State as a "coequal member of the community of nations forming the British Commonwealth of Nations."

There is no doubt whatever that the British Parliament will give its assent and ratification to the action of the Dail Eireann, and that issue is not likely to be changed at all by any result in the general election now about to take place in Great Britain. Finally, as we understand it, this fundamental law for the Free State will be submitted to a referendum of all legal voters in Southern Ireland, and there is hardly a shadow of a doubt that it will be accepted and put into effect.

Southern Ireland at least will thus gain autonomy and self-government, although not absolute independence. The feeling is growing among Irishmen that such freedom of action and opinion as has long been granted to the people of Canada is and ought to be all that the Irish people should require.

A JUNIOR REPUBLIC FOUNDED IN FRANCE

AN English boy, with the suggestive name of Dash, has just been elected president of the first Junior Republic in France. In that Republic there are not only French and English boys and girls, but also those of some other nationalities.

They are thirty-two to forty in number, and they are now engaged in drawing up a constitution for their Republic (based on the French Constitution) and in other details of their new government.

The Republic has been founded at Chavagnac, in the department of the Haute-Loire. Chavagnac was Lafayette's birthplace, and hence is a peculiarly appropriate region in which to start the American endeavor. More perhaps than any one of his day Lafayette would have sympathized with the

ideal of a Junior Republic—to place the duties, privileges, and responsibilities of citizenship on boys and girls for a period of, say, five years before they grow into manhood and womanhood.

It will be interesting to see how the junior city of Chavagnac will be governed by its embryo citizens.

KANSAS AND THE KU KLUX KLAN

ACCORDING to newspaper despatches from Topeka, Governor Allen, of Kansas, takes the Ku Klux Klan seriously. There is a natural disposition to laugh at the Klan and to deride its pretense of being a high moral censor while at the same time it encourages every kind of racial enmity. Thus it cleverly holds out a lure to the Jew hater, to the Negro hater, and the Catholic hater. Its ultimate absurdity is in utilizing the attractiveness of a secret society by its weird customs, its mummeries, and its midnight rides, while at the same time it neglects no avenue of publicity and its secret negotiations have a background of photographers, searchlights, and automobile curiosity-seekers.

The Klan has played some part in politics lately, but it has not seemed to be a great or serious menace. But Governor Allen finds in this revival a great deal that is serious and a great deal that is dangerous. He declares that it has brought into Kansas "the greatest curse that can come to any civilized people—the curse that arises out of the unrestrained passions of men governed by religious intolerance and racial hatred." Specifically, he charges that the Klan has disobeyed the State law by not taking out a charter, as is required of all fraternal and social organizations; and that it has committed the shocking offense of seizing the Mayor of the town of Liberal in Kansas, of carrying him by force to a secluded place, and there whipping him because he had refused to allow the Klan to hold a meeting in a hall he owned.

Governor Allen denounced the un-American idea "that we can improve the conditions in the State by turning the rights of government to a masked organization which arrogates to itself the right to regulate the individual."

Finally, the Governor summed up his case by denying that the people of Kansas desired religious instruction from masked men whose characters and capacities are concealed by disguise.

It is the custom of the present Governor of the State of Kansas to follow up conviction by action. He concluded

the address he was making by announcing that he had directed the Attorney-General of the State to take action against officials of the Ku Klux Klan with a view to expelling them from the State. This sounds arbitrary, but it is to be supposed that whatever may be done in the matter will be done through the courts and under the law, for certainly neither Governor Allen nor the State of Kansas would wish to fight the Klan by its own methods.

SIXTY YEARS OF SURGERY

THE advances of the last sixty years in medicine and surgery in this country were vividly set forth recently by Dr. W. W. Keen, of Philadelphia, in an address before one of the meetings of the Convention at Boston of the American College of Surgeons. Dr. Keen is eighty-five years old, has been practicing medicine and surgery for sixty years, and is now Professor Emeritus in Surgery at the Jefferson Medical College. The occasion of his address was the presentation to him by the Boston Surgical Society of its Bigelow Medal.

Dr. Keen went a little back of his own experience to describe what he was told by his elders was the state of things before 1846, when anæsthesia was discovered; then an operation was "a horrible ordeal for patients, surgeons, and witnesses." It is no wonder that during the five years just preceding the introduction of anæsthesia there were only an average of thirty-seven operations a year in the Massachusetts General Hospital. Astonishing as it may seem, "in the 80's and even into the 90's there were in most hospitals no trained nurses." The use of the medical thermometer was practically unknown until well into the 60's. Dr. Keen doubts if there were half a dozen thermometers in the Army of the Potomac, and the medical custom of judging a fever then was by placing the hand on the arm or neck and estimating the temperature, not in degrees, but as "slight," "considerable," "high," etc. Vaccination, anæsthesia, and antiseptics have been, Dr. Keen believes, the three greatest blessings in the realm of medicine since the Christian era began. In the treatment of diphtheria it was not till 1895 that the "blessed antitoxin" was discovered and, presto! as if by magic, tracheotomy for diphtheria became infrequent, and for years past, one may say, has been unknown."

We must quote one more instance which illustrates, as it seems to us, in an exceedingly practical way the igno-

Photo by Edwin Levick, New York

THE CONTESTANTS IN THE INTERNATIONAL FISHING SCHOONER MATCH—NO. 1, BLUENOSE (CANADIAN); NO. 7, HENRY FORD, GOING OVER THE STARTING LINE

rance and lack of reasoning in the adverse comment upon surgical and medical progress—the kind of comment that is made by perfectionists who assert that if a medical treatment does not save every case it is a failure. Dr. Keen says:

Surgeons who removed ovarian tumors were persecuted. As a student, I even heard them called murderers in the Jefferson clinic because "two out of three of the patients died." It ought to have been worded, "one out of every three recovered," for every recovery was a rescued life. Now, thanks to McDowell, the Atlees, Pasteur, and Lister, and many others, the mortality is less than one in a hundred.

The entire address, as we find it in the Boston "Transcript" for October 26, is illuminating and intensely human. No one can read it without joining heartily in the speaker's general conclusion as to the advance of the profession: "We are gradually throttling disease at its birth and preventing its onslaught upon the health of the world."

CONTROLLABLE SQUALLS

THE international fishermen's race, which showed promise of becoming one of the great sporting events of each

year, has lost, temporarily we hope, some of its appeal.

This race between Canadian and American fishing schooners was initiated three years ago. The victory in the first race went to America. The second year the question of eligibility poked itself up over the horizon. The race went to the Canadians. The third year the question of eligibility produced an even greater stir. Added to this controversy was the question of racing rules and the apparent muddling of the contest by the committee in charge. A jumble of signals in the first race of the series resulted in Bluenose, the Canadian defender, and Henry Ford, the American challenger, sailing over the line only to find that the victory of the Ford was declared null and void. The second race of the series again found the Ford the first across the finish line. Her captain insisted that the cup was his and only consented to race again after prolonged argument. The next two races were won by Bluenose. Her last victory has been protested by the captain of the Ford on the ground that Bluenose carried no official observer and used a staysail which was not part of her regular equipment. The whole affair bore

more resemblance to those unhappy controversies with Lord Dunraven than to the whole-hearted sportsmanship which one would like to find among skippers whose vessels are made to keep the sea in all weathers.

Let us hope that another year may find the contest re-established on a basis of mutual confidence and good spirit. Possibly one cause of friction could be eliminated by limiting the contest to fishing vessels which had been operated commercially for a period of five years. It seemed to us when the race was first initiated that the requirement that all entrants should have at least one season on the banks was not strict enough.

THE DANGER OF BEING SARCASTIC

THERE are some things which it is difficult to satirize. One can only produce a feeble imitation. Two weeks ago we ventured a supposedly sarcastic reference to the literary manners of sporting writers by offering the following imaginary utterance as typical of their style:

Undoubtedly the Hoozis Wildcats will be weaker than the Whatsat

Bohemoths if the Whatsat Bohemoths are not stronger than the Hoozls Wildcats, but on the other hand . . .

We thought in writing this that we had painted the picture with too high colors. We find, however, that sometimes truth outruns fiction. Observe the following passage taken from the New York "Sun:"

West Point has enough within it to play Yale to a tie. The Elis might get together against the Army and at last become that unified team for which everybody is looking. If the Yale men would blunder enough the Army would defeat them. . . . Some things West Point can do better than Yale; some not so well. The outcome favors either team under certain developments. If both play approximately a perfect game Yale has the fringe on the rug the better of it.

The game in question turned out with a tie score of 7-7. Doubtless the writer of this paragraph pointed to his prophecy with pride on this account. He could have pointed with equal pride to the same Delphic utterance no matter whether the Army or Yale had won. We can see no excuse for such writing except that of filling space. There are sport writers who do succeed in making the game of football intelligible and enjoyable for the lay observer, but they are few and far between.

Perhaps the recent developments in radio telephony will do something to make such space-filling prophecies as we have quoted unpublishable. We hope so, but we doubt it. The developments to which we refer are the broadcasting of the progress of football games directly from the field. In New York City, on Saturday, October 28, for instance, crowds listened to the cheering of the great throngs that witnessed the game between the University of Chicago and Princeton University. Play by play, they were able to follow the gallant fight which ended in a typical Princeton finish—a victory snatched from what seemed like almost certain defeat.

THE LEGION AND ITS NEW COMMANDER

THE American Legion has again met in annual session. This year the National Convention was held at New Orleans. For its Commander it chose Mr. Alvin M. Owsley, of Texas, who served during the war as a major and later as lieutenant-colonel. He took part in two offensives with the Thirty-sixth Division. He is a former Assistant Attorney-General of Texas, which office he resigned to become assistant director of the Legion's Americanization Commission. He is a graduate of the Virginia Military Institute and of the Law School of the University of Texas.

Apparently Commander Owsley's pro-

Underwood
ALVIN MANSFIELD OWSLEY, THE NEW
HEAD OF THE AMERICAN LEGION

gramme for the Legion can be summed up under four heads. We find him quoted in the New York "Tribune" as follows:

There are just four things that the Legion means to push, just four things that are on our standard. They are rehabilitation, hospitalization, adjusted compensation, and Americanization. We're going to fight to a finish for adjusted compensation, and we'll win it, too. I will give everything I have to this service.

The Legion has also placed itself on record as opposing the recognition of Soviet Russia, urging preparedness against future wars, fighting the proposals to give amnesty to war-time offenders, standing for the prosecution of war profiteers, and demanding the removal of Brigadier-General Sawyer from any connection with the care of disabled veterans.

There is a very real lack of appreciation of what the Legion has done in improving the condition of the disabled and incapacitated veteran. The Legion has been a powerful force for the elimination of red tape and official sloth. Part of this lack of appreciation is due to the fact that the public has heard little from the Legion leaders except the demand for the passage of the Adjusted Compensation Act.

It might be a good plan if the minutes of the first National Convention of the Legion could be made part of the regular order of the meeting at every subsequent Convention. There were speeches and resolutions at that first Convention which are deserving of remembrance by those who now have the guidance of the Legion in their hands.

THE CASE OF MR. BUCKNER

THERE has just come to our desk a pamphlet¹ which tells a story that in its outward circumstance would seem to be of concern only to the family and neighbors of the man about whom the story centers; but in its inner significance the story has no bounds of parish, State, or Nation.

For eleven years the Rev. J. D. M. Buckner served the Methodist church in the small town of Aurora, Nebraska, as its minister. During that time he not only so conducted the material affairs of the church that it became stronger financially, but evidently developed in the church moral and spiritual vitality. It is not easy to measure the invisible, but some indication of the kind of service that this minister rendered is to be found in the fact that in a little more than a decade the gifts of the church for benevolent purposes had increased from three hundred to three thousand dollars and that he drew to the church men who by their works proved their loyalty to the church's cause. He was not a young man when he came to Aurora. He had been a preacher for over thirty years, and had served the Methodist Episcopal Church for nearly all that time. He is now a man sixty-seven years of age, mature in thought, experienced, with much of the spirit of youth, but without its recklessness. What he believes and what he teaches is the result, not of sudden impulses, but of long consideration. During all the time when he was at Aurora, and for ten years at least preceding that, he openly taught the views, amounting with him to conviction, which may be summed up in this expression of his: "I believe that the hope of the Methodist Church and of all churches lies in the triumph of the new and modern conception of the Bible and of the function of Christianity as applied to the modern problems of a torn and disordered world."

In May of this year he sent to certain newspapers of the State an article in the form of a letter to the several editors. A substantially correct idea of the nature of this article can be obtained from the following quotations:

A good many years ago I decided God was good. This conclusion was reached from two sources: The teachings of Christ and my own personal experience. As I studied the teachings of Christ and my own personal fellowship with God I decided my God is good. That faith has grown with years and I believe it more strongly to-day than ever in my life.

When I read in the Bible anything

¹How I Lost My Job as a Preacher. By J. D. M. Buckner. Obtainable from C. V. Howard, New York City, or J. D. M. Buckner, Aurora, Nebraska. 50 cents.

which reflects on the goodness of God, I do not believe it. All Scripture must be measured by the life and teachings of Christ. . . .

When I was pastor at David City and we were studying the conquest of Canaan, a girl asked me if it were right for the Hebrew soldiers to kill the women and children. I said, "No." Then another girl said, "Why did God tell them to do it, then?" I said, "God never told them to do it. The writer was mistaken." I have been asked many, many times why God hardened Pharaoh's heart ten times and then brought ten plagues upon innocent people which caused untold suffering. For twenty-five years I tried to fix it up, but always failed to satisfy the people or myself, until finally I had the courage to say, "God never did it. My God is good." . . .

I cannot believe that God killed 185,000 of the Assyrian army one night, that he told Joshua to hock the horses, that he told the Jews they could sell spoiled meat to the Gentiles but not to the Jews, that he commanded that if a boy did not obey his parents he was to be killed, that if a man gathered sticks on the Sabbath to make a fire he was to be stoned to death, and that if any one worshiped any other God he was to be killed. None of these things is like my Heavenly Father. . . .

How did we get our Bible? First a religious folk produced a religious literature; second a religious folk selected the Bible from that literature. Now we have a religious folk that interprets the Bible. I must stand with Christ and his teachings and with my own personal experiences with God, and all Scripture must be measured by this standard. All the problems and questions in life which are constantly meeting us must be settled on the basis that God is good, and all other questions adjusted to that standard. I can only believe in a good God. I can love, admire, devote myself, worship, follow, obey only a good God. . . .

J. D. M. BUCKNER,

Pastor M. E. Church, Aurora, Neb.

As a consequence of this article or letter he was called to account in a personal communication by the Rev. Homer C. Stuntz, his ecclesiastical superior as Resident Bishop in the Omaha Area. This communication also warned Mr. Buckner that his published letter was certain to increase the difficulty of his appointment to a parish in the coming Methodist Conference. Just before the Conference met Mr. Buckner reiterated his views in a farewell sermon to his church. At the conclusion of that sermon he spoke as follows:

Forty-two years ago when I stood face to face with God in settling the question of preaching, I promised God if he would let in the light I would walk in it; if he would reveal the truth, I would obey it. The thing I have always wanted to know was the will of God and I have been ready to do it at any cost. I have lived up to that pledge to this day. None of you

has ever asked me a question about my faith that I did not answer.

In an informal meeting with the Bishop and his cabinet Mr. Buckner was told that if his letter and sermon had not been published, it would have been possible for him to receive an appointment, and that it would be easy for Mr. Buckner simply to retire voluntarily, as he could at his age. In reply Mr. Buckner made it clear that he believed the proper way was to permit the old school men and the new school men alike to have their say; and that he had no thought of withdrawing. Nevertheless, without a trial, and in spite of the protests of his own church, with no reason given, upon the recommendation of the Bishop and his cabinet the Conference voted to retire Mr. Buckner from the ministry.

In spite of the humiliation of experiencing removal from the active ministry, in spite of the greater burden of the hardship which the action of the conference had brought to his wife, Mr. Buckner expresses no personal resentment. In his pamphlet he sets the issue forth, not as a personal one, but as a question concerning the future not only of the Methodist Church but of the Church in all denominations. He presents his pamphlet as a defense of younger ministers against the intimidation of the action of the Bishop and the Conference, and defends the Methodist Church at large "against unwarranted assumptions from this particular incident."

In some cases in the past this issue between arbitrary authority and liberty in the Church has been characterized by the pugnacious and controversial spirit of the advocates of liberty; in this case the advocate of liberty has shown a spirit of charity and good will and an understanding of the point of view of his opponents which we hope all those who believe in the cause for which he has been sacrificed will imitate.

The issue which has been raised in Mr. Buckner's case is threefold.

It is an issue of justice.

Even a criminal is allowed his day in court; Mr. Buckner was not allowed any public hearing, any chance to plead his case openly before the body that was to judge him.

It is an issue of liberty.

When a man enters such an order as that of the Jesuits, he surrenders his liberty of thought because the organization is avowedly autocratic. When, therefore, any church takes such action as that taken in Mr. Buckner's case the old issue is again raised as between those who conceive of the Church as a body ruled by divine right of the ecclesiastical authorities and those who con-

ceive of the Church as a body composed of the free sons of God.

It is an issue of the spirit of religion.

And of all the phases of this issue this is the most fundamental. On the one hand stand those who conceive of religion as an arbitrary system devised by the Almighty, imposed upon men for their observance at the peril of their eternal welfare. On the other side are the men who conceive of religion as the response of men to the approach of God to them and their growth in the understanding of him and his dealings with them.

This threefold issue is one that has arisen again and again in the Church. It is the issue between those in all ages and in all churches who fear freedom and those who welcome it, between those who believe that faith needs some protective covering, and those who believe that faith, if it is really living, grows stronger by being left open to the nourishment of truth.

MUDDLING THROUGH

THE British have a habit, in which they take a kind of unconfessed pride, of somehow muddling through. Certainly the change of Government which has just taken place in Great Britain, and which is likely to be a historical event of the first importance, was and still is more or less muddling.

On another page a correspondent in London gives a vivid and entertaining picture of the somewhat haphazard way in which the thing was done—haphazard of course only in externals. The regular technique of change of government was followed. The Prime Minister, Lloyd George, resigned; and the new Prime Minister, Andrew Bonar Law, was formally invited by the King to organize a Ministerial Cabinet. As we said in last week's Outlook, the new Cabinet distinctly represents the old-fashioned ruling class of Great Britain. As one runs down the list, the titles of marquis, viscount, duke, earl, knight, strike the attention. There is no avowed representative of labor in the Cabinet, and few commoners, although the Prime Minister himself is a commoner and is one of four of the thirty-seven Prime Ministers who have governed England for two hundred years to rise to his commanding position without the background of a college or university education. Seventeen of the thirty-seven were graduates of Oxford, thirteen of Cambridge, one of the University of Edinburgh, and two completed their education at Eton College, while Disraeli and Lloyd George had sufficient training in the classics and in French to pass their bar exami-

nation. In a striking sense, modern England has turned to men of letters to guide her destinies. She is now going to try the practical man of business. The change is worth watching.

In a great speech at Glasgow, Lloyd George in his happiest vein, while professing a personal friendship for Bonar Law, poked more or less fun at the list of the new Ministers. "Look at them!" he said; "there is not one of them in achievement, in experience, in talent, that their best friends would compare with those whom they have supplanted. Why was it done?"

Of course such a Cabinet, although dignified and highly respectable, is only a makeshift. After the general election, which takes place in November, and through which both Lloyd George and Bonar Law will appeal to the country, there will be a new realignment.

It is interesting to observe that the ranking member of the new Cabinet next to the Prime Minister, although holding by no means the most important office in the Ministry, is the Marquis of Salisbury, the eldest son of Lord Salisbury, the great Conservative Victorian Prime Minister. His title is an ancient one, and his seat is that famous Hatfield House, in Hertfordshire, which was the scene of so many dinners and conferences when his distinguished father was Prime Minister, who represented in his person and policies the highest type of Government by the peerage in Great Britain—a type which has probably passed away forever. This passing is a gain, perhaps, for the plain people, but a decided loss to the literature of political anecdote and reminiscence.

Of Lord Salisbury, the father, a delightful story is told in the recollections of one of his private secretaries. A dinner was being given by Lord Salisbury at Hatfield House, one of the great establishments of England, and one of the guests was a neighbor of Lord Salisbury's, a country squire whose pedigree was more impeccable than his education in the fine points of literary allusion. Next to this ruddy-faced squire sat a young whippersnapper of a diplomatic secretary, who in an argument in which he had teased and irritated the squire, finally called the old gentleman a "Philistine." "A Philistine!" exclaimed the old squire somewhat heatedly, "what's that?" Lord Salisbury, who had overheard the discussion with some concern, and felt that his old friend was being impolitely chaffed, and yet could not quite bring himself, as host, to rebuke the young secretary openly, saw his chance. He leaned forward and quietly remarked: "Don't you know what a Philistine is? A Philistine is a gentleman who is annoyed by the

jaw-bone of an ass." The young secretary naturally subsided. We hope that the new Lord President of the Council, the present Lord Salisbury, possesses his father's sense of humor. He may need it before he gets through with the complications of his new office.

The name of the Marquis of Salisbury's younger brother, Lord Robert Cecil, is familiar to Americans as the leading English advocate of the League of Nations. Lord Robert was in Lloyd George's Cabinet, but is not in the Bonar Law Ministry. The Marquis is the bearer of a title three hundred years old and is the owner of an estate of twenty thousand acres.

In his Glasgow speech Lloyd George referred to the resentment of British labor against a Government of Conservative peers as a possible "hurricane." This phraseology is perhaps an exaggeration due to the stress of a popular campaign, for Lloyd George is a past-master in appealing to the emotions of a popular audience. Nevertheless we think it somewhat surprising that so astute a politician as Bonar Law should have formed such a Cabinet with any idea that it could be permanent.

IN WETTEST NEW YORK

WETTEST of all wet towns is New York City, the wet press tells us—wetter by far than in pre-Volstead days—and its wet, wet drink is whisky. The whisky trade, a mere infant industry before the Amendment, has attained colossal proportions, we learn, and it behooves the American business man to look into this, as it furnishes many a helpful suggestion. He will discover—

1. The folly of advertising. Until prohibition came, not only the newspapers, magazines, and billboards of America, but its night-time sky, loudly advertised strong drink; yet how little was sold! Now that the advertising has ceased, do we not wade in strong drink—even swim?

2. The folly of window-dressing. Those pyramids of innumerable well-filled bottles were supposed to attract purchasers. To-day our dealers in strong drink provide the true enticement: Out of sight, out of mind.

3. The folly of indiscriminate sales. When any one could buy, trade languished, quite naturally. Now that only a chosen few can buy, trade thrives.

4. The folly of price-cutting. How difficult it was in those dull pre-Volstead days to dispose of two cocktails for a quarter! Charge a dollar and a half

each, and behold! the problem is solved.

5. The folly of pampering one's customers. By making their places of business conveniently accessible (a hundred to the mile), and embellishing them with works of art, and providing extravagant free lunches, the purveyors of strong drink drove customers away. Under the present system, which makes the tippler travel long distances and furnishes disgusting places of business, as a rule, with melancholy and dire loneliness giving them an air of depression thrice depressed, it is a struggle to serve drinks fast enough.

Albeit slowly, the American business man will doubtless come to recognize that the trick of building up trade is in reality very simple—i.e., kill it! Just now, however, we hear him echo that cry of the wet, wet press: "Oh, save us from this awful whisky! On high moral grounds we demand beer and light wines, as of old, for in them lies our only hope of sobriety."

But reflect. To-day, when beer and light wines have vanished, and when every one is forced to consume unlimited quantities of whisky, there are fewer evidences of intoxication than formerly. That familiar sight of a poor wretch staggering along the street, or babbling on a doorstep, or being "pulled in;" that familiar sound of raucous singing in the small hours; that familiar odor of alcohol on the breath—where are they? With rare exceptions, gone forever—abolished by the universal and benign consumption of unlimited whisky!

Were it not for our devout confidence in the asseverations of the wet, wet press, we might almost mistake this whisky-ridden metropolis for the astonishingly dry town it actually is. Inasmuch as polls are at present so popular, we visited a neighboring establishment the other day and polled the representative New Yorkers who make up its staff. Of each representative New Yorker we inquired, "At how many places can you—you yourself, not you generically—obtain drinks?" The answers ranged from "None" to "Eight"—a single "Eight." "Eight" at most in the wettest of wet towns, where until the Amendment any representative New Yorker had his choice of thousands!

But let us not allow mere figures to deceive us or trust too blindly the testimony of our own senses, when a press guided by the well-known journalistic passion for truth declares: "Day by day, in every way, we are getting wetter and wetter." By accepting this assertion at face value we prepare ourselves for a task that awaits us all—the task, namely, of perusing in the right spirit Sir Conan Doyle's new volume, "The Coming of the Fairies."

"GENTLEMEN, THE PREMIER HAS RESIGNED!"

SPECIAL CORRESPONDENCE FROM LONDON BY HAROLD E. SCARBOROUGH

AT two o'clock this afternoon, October 19, the news ticker in my office broke off in the middle of a sober stock market report and began printing pure gibberish. Now, our well-known old friend, the Perversity of Inanimate Things, usually leads tickers astray when there is something of more than especial importance to be communicated.

The London Bureau of the New York "Tribune" does not pride itself on its mechanical skill, but it does know that by poking various levers and twiddling thumbscrews recalcitrant tickers can sometimes be brought to reason. In this case the operation was completed just in time for the following fragment to appear:

"... said that whether by his own fault or by the force of circumstances Mr. Lloyd George had lost the confidence of the country."

That, following a previous announcement that Mr. Bonar Law was speaking before the hurriedly summoned Conservative meeting at the Carlton Club, could mean only one thing: Lloyd George would have to go. He may come back again; at this moment of writing the British political situation is in a worse muddle than it has been for years.

I am concerned now more with the method of his passing from the Premiership than with his political future.

First of all, let me say that the political developments of to-day, the most important date in English history since the armistice, have passed virtually unnoticed by the public at large. The newspapers to-night are jammed with the happenings of a brief six hours, but there are not two hundred people in London who have witnessed any appreciable part of these events. A strange and analysis-defying race, this, which will turn out ten thousand people to watch its Prime Minister entering an international conference, and not a handful to witness his downfall!

Perhaps it is because crisis has succeeded crisis in such kaleidoscopic succession this afternoon and evening that the street crowds have not been able to keep up. However that may be, attention to the drama would have well repaid them, for drama there was in plenty, both on the stage and off.

The action started this morning at the Carlton Club, a grimy granite structure in Pall Mall. Shortly after ten o'clock motor cars began to roll up with Conservatives to attend the meeting called by Mr. Austen Chamberlain to decide the future of the party. There were such well-known figures as Chamberlain, Birkenhead, and Balfour (the latter arriving on foot, and displaying delighted

surprise when the small crowd recognized and cheered him); and then came what seemed an infinity of old gentlemen in silk hats and morning coats; ancients with venerable beards and halting steps; semi-invalids who had virtually to be carried up the steps of the club. One had hardly imagined that there were so many survivors of the traditional Tory type; one wished that the late Henry Adams might have been there to see and to comment.

A violently agitated man hurried down the club steps. He was J. M. Erskine, a "Diehard" or extreme Conservative, who had not been invited to the meeting because he did not support the Coalition, who had announced his intention of attending notwithstanding, and who had been ejected. Rather white of face, he proceeded to give free expression of his feelings to the newspaper men who hurried forward. Finally he disappeared.

Two hours passed, and most of the waiting crowd melted away. Another hour, and all but a few conscientious journalists had gone to lunch. Then suddenly the glass doors of the club opened and Sir Philip Sassoon dashed out and into his car. The others who had attended the meeting followed. To newspaper agency reporters who entered the aristocratic precincts of the club an under-official who still seemed surprised announced that the meeting had voted 186 to 87 that the Conservative Party should go to the coming election as a unit. In other words, the Coalition was dead.

The scene shifted to Downing Street, cheerless under the lash of a wind that betokened March rather than October, and under a sodden gray sky. Rolls-Royce and Daimler limousines were parked at the cul-de-sac at the end of the short street; one knew that behind the drab walls of No. 10 Downing Street Cabinet Ministers must be resigning and history being made; yet the only spectators were the inevitable knot of journalists.

By four o'clock perhaps fifty curious sightseers had gathered near the Whitehall end of the street. I have seen Downing Street packed from curb to curb when some minor foreign notable has chanced to be visiting the Prime Minister.

At 4:10 a gleaming limousine detached itself from the knot of parked motor cars and drew up in front of No. 10. Into it from the house there stepped Sir Edward Grigg, one of the Premier's secretaries. He was followed by Mr. Lloyd George himself, who stopped halfway across the narrow pavement to pose for photographers. He was smiling pleasantly, and it was not at all a forced

expression, if one's eyes can be trusted at ten feet.

The car swung into Whitehall to the accompaniment of a faint cheer from the faithful fifty. Obviously, he was going to Buckingham Palace to resign.

A swiftly commandeered taxi bore one through the Mall in time to see the Prime Minister's car pass through the palace gates without even a salute from the sentries on guard. It entered the courtyard, was lost to sight, and shortly reappeared, to be parked in an inconspicuous corner. So far as could be seen, there was not a single person near the Palace who would not have been there in the ordinary course of his travelling.

Long before the Rolls-Royce returned to Downing Street, the afternoon papers were announcing that the visit to the King must mean a resignation. Still no crowds, no cheering.

Darkness came to Downing Street, and journalists from half a world hung about the portals of the Premier's house. We shivered in the keen wind and wished, in the words of one impatient chap, that they would hurry their blinking funeral and get it over.

And then one passed with the crowd into the reception hall, adorned with its mounted heads of deer and antelope, and with a couple of golf bags carelessly propped in a corner. The bald-headed doorkeeper, who has never in living memory been cheerful, seemed more morose than ever.

A head, surmounted by a thatch of red hair, popped through the swinging doors leading to the interior of the building. It belonged to Mr. G. H. Shakespeare, another of the Premier's secretaries. "If you enter all the way in, I'll be with you in a minute," he announced cheerily, and withdrew.

The room was some twenty feet square, and there were at least fifty men in it. The atmosphere became stifling as the telephone rang incessantly, making every one nervous because there was no one to answer it, and still nothing happened.

At length there was a stir among those journalists nearest the door. Mr. Shakespeare entered, calmly puffing a long brier pipe, and smiling. He carefully balanced himself on his heels on the ledge surmounting the hearth of an open fireplace.

"Well, gentlemen," he said, easily, "the Prime Minister has resigned, and has advised the King to send for Mr. Bonar Law."

Nobody spoke. Nobody moved. Nobody said a word. The Premier's resignation was a fact, and it was not at all a forced expression, if one's eyes can be trusted at ten feet.

ily, after two thoughtful puffs at his pipe, "am out of a job."

Then every one laughed, and the hail of questions began. Every few moments some one, satisfied for the time being, would hurry out to telephone to his office. Then the farewells, and a scurry down the short length of Downing

Street for taxis from the rank in Whitehall. (Incidentally, there were none.)

One who lingered stopped behind the wooden barricades at the end of the street (erected when Sinn Fein outrages were feared) to charge and light his pipe. The single policeman on duty there strolled over.

"Is it true he's resigned, sir?" he asked, recognizing the journalist.

"Yes; that's right."

"So the P. M.'s gone," he observed, meditatively. "Well, he did 'is bit. Rather blustery to-night, sir."

When the journalist looked back, Downing Street was deserted.

THE FASCISTI

SPECIAL CORRESPONDENCE FROM BRUNO ROSELLI

I WAS having lunch at Valiani's—that Roman institution which proves the superiority of the Eternal City over every other metropolis by being the only station restaurant in the world where food does not taste like station restaurant food—when I saw a Fascista who was standing by the door make a sign to another Fascista on the other side of the avenue. I lifted my head from a dish of *carciofini*, or young artichokes (the most dastardly and delectable vegetable infanticide in history) to watch the powwow which ensued. It was excited but short. Then the first Fascista extracted a whistle from his capacious belt, put it to his lips, and blew.

Here a young man who was sipping a glass of lemonade at an itinerant fountain gulped down what there was left and came running; there a lower middle-class family which was tugging its baggage toward the station hurriedly concentrated all the parcels into the hands of the women and children while the two men hastened to the call; farther back another black-shirted devil kissed his girl good-by and darted toward us. Another Fascista (I know not to this day whether waiter, cook, or customer) brushed past my table, ran out of the door, and was soon lost in the scuffling group of fifteen or twenty who ran yelling toward two young Romans with red neckties and carnations who had been ostentatiously displaying the "Avanti!"—the Socialist paper against which the Fascismo has declared war to the finish. With one wild dash, shouting "A noi!" the Fascisti made for them; ten, fifteen canes landed on the Socialists' heads, their clothes were torn, their noses badly smashed, the copies of the "Avanti!" burned like torches by waving hands; one minute later the victors were ready to sing the first stanza of their superb hymn, "Oh, youth, oh, youth, springtime of beauty," and then disbanded. It was time for the police and the ambulance to arrive.

"Giovinezza, giovinezza—Primavera di bellezza. . . ." When had the world last witnessed such scenes in which cruelty and romance were so closely entwined? When, in other words, had Italy been so young? Those lines had a familiar flavor. Oh, yes! "Quant' è bella giovinezza—Che si fugge tuttavia!" (How

beautiful is youth which is forever in flight!) sang Lorenzo de' Medici in an age which certainly lacked neither romance nor cruelty. And just as the world, this practical and "law-abiding" world, casts longing eyes toward the Florence of the Medici, so it cannot help being thrilled by the daring and lenient toward the crimes of this organization of young or youthful men who are rejuvenating Italy by all methods, including the drawing of blood.

A black shirt of a negligée type, wide open at the neck, adorned with all the war decorations, embroidered with defiant mottoes and, often, skull and crossbones; a broad belt, so capacious as to hold and conceal any such objects, harmless or otherwise, as are carried in the vest or coat pockets of the ordinary man; knee trousers, military in style, in fact, usually left over from army days, as were the gray-green puttees below them; no headgear, even in the hottest sun or the stormiest night (the head being protected only by a wild mass of hair eight or ten inches long, thrown back occasionally by comb and brush, and incessantly by the hand and a defiant shaking of the head); a heavy stick, his principal and often his only weapon—a stick which two years ago was straight and carried by a cord hanging from the man's wrist, and is to-day curved at the top, knotty, club-like, and decidedly businesslike. Such is the Fascista whom one meets to-day everywhere in Italy. Strange to say, the least conspicuous of the many symbols worn by him are the victors' fasces with the ax, the earliest and basic insignia from which he took his name, and on which he relied for the prestige that Italians are ever ready to associate with hallowed memories.

Started as an organization of World War veterans, the swift course of events in Italy and the restlessness of the country itself, where political changes are notoriously chameleon-like, has transformed it into the chief mold of Italy's destinies, a whip for ultra-conservative and ultra-liberal alike, an organization for the defense of legality which uses illegal methods and prevents the law from applying to itself. Turning their eyes away from the primeval administration of Fascisti justice, yet hailing

its effects in their country's return to normalcy, the Italians are pursuing a course apparently incongruous, but in reality clear to observers of conditions in that mystifying and often chaotic country. "I had always believed that there are no necessary evils," said one such person to me, "but as an Italian I must now admit that the Fascismo is one."

The Fascisti have come to stay. Many people, and among them a quantity of well-informed Italians, had at first considered the movement a freak, or a passing political fad, arising from a sense of rebellion against the "Reds" who had been given a chance to run the country a couple of years ago, and who, while plainly showing that they could not do it, seemed bent on letting no one else do it. But at the end of two troubled years we see their leader, Benito Mussolini, at the head of an organization numbering not less than half a million volunteers, "minute men" all of them, spreading like wildfire from the northern cities away into the southern countryside, hitherto inaccessible to outside influences; making and unmaking Cabinets, forcing this and that international policy, righting wrongs by Robin Hood methods, dictating conditions of their co-operation with the King, and quietly discussing the most feasible way of marching upon Rome in case they are disturbed in their process of "supplying Italy with a Government."

For that is exactly what they are doing. Professor Reinach, the famous art critic, in discussing the form of the Gothic church, says that it needs the flying buttress because its main body is so weak owing to great height and numerous windows, that "it is like an animal, part of whose skeleton should be outside his body." So in the weird and much-hated animal called the Italian Government the *teeth* were missing; the Fascisti provided them—and neatly do they bite.

I discussed at the time, here and elsewhere, the reasons which made the Italian "proletariat" so active and bitter a couple of years ago; and everybody remembers how the Italian Government, still sore from the blows received in

¹ See "The Italian 'Lock-In,'" in the issue of November 10, 1920.

Paris by war-time partners, had to turn around and deal with one of the most delicate politico-economic problems, workmen's *controllo* and Socialistic occupation of the factories. The ultimate victory of what we shall call, for the sake of brevity, the "element of order" (the stereotyped phrase is "law and order," but the law had to be sacrificed to bring about order) was only achieved by the most amazing avoidance of force, the most portentous ignoring of facts and waiving of provocations known in the history of modern government. Contrary to the view of alarmists, the house of Savoy remained in the saddle; but it seemed sometimes as if the real power of King Victor Emmanuel III over Italy were to be as important as his power over Jerusalem, of which city he is also nominally the King. Had the "Reds" ruled in his stead, with a hand as wise and more firm, people differing in political views, but equally concerned with the good of the Italian nation, would have been willing to see them hold the reins of government. I think I would, for instance; and I know that that very democratic soldier Victor Emmanuel of Savoy certainly would. But they achieved nothing: partly because of the lack of governing experience in the masses, which makes yelling demagogues of most would-be reformers; partly because Italy is not so situated, geographically and industrially, that she can try economic revolutions all alone. The truth is that Italy remained without a *de facto* government from the end of 1920 to the end of 1921.

Then Benito Mussolini, the type of a politician so seldom found in America, a quiet, scholarly man transformed by circumstances into an organizer and a dauntless fighter, appeared on the scene. Was Italy tired of people who talked and did not act? He would act—and lose precious little time in explaining to people just how or why. Had the "Reds" lost themselves in lengthy arguments as to how and how much to organize? He would merely have one organization—the military organization of the army in war time. Had the Italy of 1920 fought over the question of how much each man should be rewarded for working as little as possible or loafing on the job? Mussolini borrowed from Garibaldi the famous sentence, "I promise you hunger, struggles, and death," and assured his followers that they must go to meet the greatest dangers without any hope of pecuniary reward—in fact, leaving their jobs for a raid on a moment's notice as often as necessary, and having only the moral support of the Fascismo to persuade their employers of the inadvisability of discharging them for obeying Mussolini rather than themselves.

How many are the Fascisti? A conservative estimate places them at 500,000; but they are increasing all the time, having lately obtained a large contingent of recruits from Naples and its hinterland, a fact which makes the

Fascismo, born and developed in the north, a more nation-wide organization. Indeed, one of the problems of the Fascisti nowadays has become that of purging their ranks of undesirable elements of two kinds: the riffraff which wished to cover its longing for crime and blood with a political veil, and the members of formerly "Red" labor organizations which, having been converted overnight from their Socialistic creed, would like to be accepted *in toto* by Fascismo, while that youthful and impetuous *partito di avanguardia* can only use the pick of such ranks: the young, healthy, high-minded, resolute leaders. The Fascista must be a spiritual aristocrat.

Such are the people who paralyzed in a few hours the Italian general strike of last August—a strike which was intended to prevent 20,000,000 workers from keeping Italy going, and was to have affected stores, trains, factories, mails, telegraphs, hotels, street cars, telephones, schools, banks, newspapers, steamers, light and water supply, restaurants, street cleaning, electricity, abattoirs, lunatic asylums, carriages, milk deliveries, cemeteries, ambulances, hospitals; the most appalling cessation of civilized life.

I was at Gardone, on Lake Garda, ready for an interview with Gabriele d'Annunzio, when the strike was declared; declared, incidentally, in a way unworthy of real men—by having the General Federation of Labor appoint a secret Strike Committee, which gave the *anonymous* order to strike! I rushed toward Florence by the few means still available to be near my old parents when all services would stop and helpless people would be dependent on their healthy relatives. But a few hours later the Fascisti were in control. Black shirts were either running trains or riding by twos with every engineer to "protect him from being intimidated." They ran the trolleys; in short, they took complete charge of every public service. Stores would be forced open; either the owner wanted to be there to do business, or the store would stay open, anyway! At the Bologna station I saw little signs with these words: "Strikers! The Government forgives; *we don't*. Within a week not one of you will be left in Bologna. We mean it, and you know it." Of course this is arrogance of the purest type; and yet the people who have been chafing for years and years under an incompetent, smooth, bureaucratic, soulless legality made up of revenue stamps and lawyers' cavils, feel that these youths who challenge the universe are playing the rôle of Prometheus unbound; and they are as carried away as the audience at a melodrama when the young hero murders the technically guiltless villain. "They take human lives," I can hear you say. Well, yes. The great Italia has now forty million of these human lives, and through poverty of soil, inane of statesmen, late

start in the race for colonization, and greed of neighbors she was dangerously near losing her own life when the Fascisti came. They do take the lives of a few Italians (mostly renegade) in order to give real life to Italy herself. Perhaps this sounds shocking to Anglo-Saxons; but it is funny how more leniently you look at things ultimately right, yet themselves cruel, when you were born and brought up on the Continent of Europe. One has only to look at Americans traveling through Italy to notice the difference; they are invariably scared by the savage appearance of Fascisti; and, although rather vague concerning the aims of the movement, they seem to agree that it must be Socialistic or Anarchistic. One hates to draw the conclusion that Americans are so incorrigibly conservative that anything unconventional appears "Red." And so little has been known even in "best-informed" circles about the movement that a leading New York daily wrote some time ago that one of the constantly recurring Trieste riots had been led by "a young Italian nationalist, Mr. Fascisti." Even to this day, after Fascismo has loomed large in two out of three news items from Italy, it is not infrequent to have people remark on the similarity of it with the Ku Klux Klan, from which it differs in every particular, especially in its attitude toward publicity, the Fascismo being an incorrigible advertiser of its members and its doings, while the wily Klan covers its traces in true cisatlantic style.

As I finish writing this article, I am told that the Facta Ministry (long on the fence, but planning to become anti-Fascista) has finally been brought down, and that Mussolini is to go to Rome to form a Ministry. Mussolini ought to avoid being lured into forming one, or at least into staying in one long after he has formed it. If that leading figure of modern Italian politics is wise, he ought to put a pro-Fascista politician in the saddle and watch him closely, but do nothing more. Fascismo would then go down into history as the only whip which has made the Italian maverick behave. It must avoid becoming a mere political party, no matter how strong, no matter how well represented in Parliament. Its enemies are drawing it nearer and nearer Montecitorio, knowing full well that, while it could easily achieve a triumph at first by becoming the leading political party, it would be its swan song—for the simple reason that its strength lies in its anti-demagogic methods and frankly undemocratic, unrepresentative organization. An army does not profit by having soldiers' councils and officers elected from their ranks! Italy (and is Italy alone in this?) has been fed for one hundred and fifty years on beautiful words; and it is my humble opinion that she is increasingly willing to exchange all of her empty victories for a handful of real leaders.

UNDER FOUR PRESIDENTS

THE AUTOBIOGRAPHY OF OSCAR S. STRAUS

CHAPTER X—THE PROGRESSIVES

Photograph by Schervée Studios, Worcester, Mass.

THEODORE ROOSEVELT

"Roosevelt had flung himself into the campaign with all the force of his tremendous vigor and energy, and gave to it a dynamic impulse that grew in intensity as he progressed through the country"

IN the torrential flood of American politics two main currents are continuously perceptible. One may be generally described as professional, mechanical, and ruled by the accomplished and consummate selfishness of invisible forces. The other, while more genuine in spirit, is often amateurish in effort; it is more spontaneous; it is kindled by emotions of revolt; it sees mankind, not as masses to be exploited and profited by, but as individuals to be set freer to express themselves socially and economically. It strives to restate the better aspirations of men generally,

and to mitigate some of the pressure that civilization imposes upon them.

It is not the province of the historian to moralize. It is his business to trace the changing currents of human thought and to produce accurate pictures of men in action. And so, in touching on the Progressives, I shall endeavor to give some indication of the mental processes that shaped their cause and to depict some of the dramatic scenes that carried their cause into action. Many of these scenes I was able to observe closely. In a sense, I may have figured more definitely than I realized at the time in

kindling their cause into smoke and flame.

On November 17, 1910, the New York Chamber of Commerce held its 142d annual banquet at the Waldorf Astoria Hotel. The speakers were Senator Henry Cabot Lodge, of Massachusetts; Governor Horace White, of New York; Mayor William J. Gaynor, of New York City; and myself. The president of the Chamber, the late A. Barton Hepburn, presided. My subject was "American Prestige," and I could not refrain from referring to the great extent to which American influence and prestige had been advanced by Roosevelt. There was instant and prolonged applause at the mention of Roosevelt's name, clearly showing that his political influence was not dead, contrary to the ideas of many who thought so because the election of a few days before had shown sweeping Democratic gains and the defeat of Roosevelt's candidate for Governor, Henry L. Stimson. When the banquet was over, Senator Lodge said to me that if the political opponents of Roosevelt could have seen the enthusiasm with which his name was applauded they would realize that even in New York he was as much alive as ever.

AT WAR AGAINST "INVISIBLE POWERS"

When I met Roosevelt in Cairo on his way back from Africa it was clear to me from his conversation that he did not propose accepting any nomination, although there was a demand that he re-enter public life as either Governor of New York or United States Senator.

Roosevelt was so loyal a Republican that his opponents constantly chided him for going along with the bosses and at the same time advocating reforms. He used to reply that he did and would continue to co-operate with the bosses so long as they went his way. His aim from the time he entered public life was to make the party always more responsive to its highest ideals; and from the beginning he worked against the "invisible powers" or boss rule. By word and deed all through his life he showed an independence and moral courage that careless observers might often have mistaken for headlong impetuosity. No one could know him without recognizing that he was broad-minded, liberal, and inherently progressive.

When he arrived home from abroad in June, 1910, he found the Republican party disrupted. The dissatisfaction and impatience of the liberals was distinctly evident. By 1912 Taft had allowed himself to become so thoroughly identified with the reactionaries that the large independent element had not only become unenthusiastic, but decidedly

The famous picture of the Roosevelt Cabinet, in which Mr. Straus was Secretary of Commerce and Labor, prior to the events recorded in this chapter. Left to right, the men in the picture are: President Roosevelt, and Messrs. Root, Straus, Garfield, Metcalf, Cortelyou, Taft, Meyer, Wilson, and Bonaparte

hostile to the Administration. In his Winona speech President Taft had ranked himself on the side of those leaders in the party who opposed real tariff reform. In his famous Norton letter he had even gone so far as to imply, if not expressly to admit, that Federal patronage had been used against the progressives in Congress.

The progressive element was therefore casting about for a candidate who represented the liberal wing of the party for nomination at the National Republican Convention at Chicago in June. Roosevelt's office at *The Outlook* was daily crowded with liberal leaders who had come to urge him to "throw his hat in the ring," to use one of his own picturesque expressions. This demand grew and spread until finally came an appeal from the Governors of Kansas, Michigan, Missouri, Nebraska, New Hampshire, West Virginia, and Wyoming.

WHY ROOSEVELT WAS DEFEATED IN 1912

Roosevelt one day at the offices of *The Outlook* handed me the galley proof of a speech he was to make before the Constitutional Convention at Columbus, Ohio. He called it "The Charter of Democracy." I went into Dr. Abbott's office and carefully read the speech. In it Roosevelt advocated, among other reforms such as the short ballot and the initiative and referendum, the recall of judicial decisions. When I came to that subject, I confess I was shocked, and so expressed myself to one of the editors of *The Outlook*; as I remember it, it was Dr. Abbott himself. Compelled to keep another appointment, I left the office, saying that I should return later.

Upon my return I met Roosevelt just as he was going out.

"I hear you don't like my speech," he said to me.

"I like your speech; I think it is fine; all but that portion of it which refers to the recall of judicial decisions," I answered. I started to give my reasons, but, seeing that he was pressed for time, I said: "I should like to discuss that

matter with you, provided your mind is open on the subject." To my great surprise, he said that he had thought the subject over very carefully, and frankly told me that he had come to a definite decision on it.

That was so unlike the Roosevelt I knew in the many discussions I had had with him, when invariably I found his mind responsive, that I was quite disappointed and somewhat taken aback. But I did not want him to feel that I had joined the ranks of the many who had parted political company with him because he had made it known that he would accept another nomination for President, and so, on reaching my office, I wrote him a letter, briefly explaining why I objected to his statements regarding the recall of judicial decisions. I assured him that on that account I did not part from him politically, for, after all, I agreed with him more than with any other candidate who might possibly be named.

The birth and development of the Progressive party is of course an element of National history that has often been detailed. Roosevelt's candidacy and defeat have been variously analyzed, but I believe now, as I believed in 1912, that but for this unfortunate statement regarding judicial decisions Roosevelt would have been re-elected President in 1912.

"UNTIL BROKEN AND CAST ASIDE"

Shortly after the Columbus speech Roosevelt delivered, on March 20, 1912, at Carnegie Hall, New York, what was in many respects the most forceful and eloquent address I ever heard him make. He graphically described his dedication to his ideals of democracy:

Our task as Americans is to strive for social and industrial justice, achieved through the genuine rule of the people. This is our end, our purpose. The methods for achieving the end are merely expedients, to be finally accepted or rejected according as actual experience shows that they work well or ill. But in our hearts we must have this lofty purpose, and

we must strive for it in all earnestness and sincerity, or our work will come to nothing. In order to succeed, we need leaders of inspired idealism, leaders to whom are granted great visions, who dream greatly and strive to make their dreams come true; who can kindle the people with the fire from their own burning souls.

The leader for the time being, whoever he may be, is but an instrument, to be used until broken and then to be cast aside; and if he is worth his salt, he will care no more when he is broken than a soldier cares when he is sent where his life is forfeit in order that the victory may be won.

If on this new continent we merely build another country of great but unjustly divided material prosperity, we shall have done nothing; and we shall do as little if we merely set the greed of envy against the greed of arrogance, and thereby destroy the material well-being of all of us. To turn this Government into government by plutocracy or government by a mob would be to repeat on a larger scale the lamentable failures of the world that is dead. We stand against all tyranny, by the few or by the many. We stand for the rule of the many in the interest of all of us, for the rule of the many in the spirit of courage, of common sense, of high purpose, above all, in a spirit of kindly justice towards every man and every woman.

A month after the meeting of the National Convention of the Progressive party, popularly called the "Bull Moose Convention," which nominated Theodore Roosevelt for President and Hiram W. Johnson for Vice-President, the New York State Convention of the Progressive party met at Syracuse, in the Arena.

All during the first day and night, amid lively discussion as to the selection of candidates for Governor, committees urged me for permission to present my name as a candidate; but I steadfastly declined, since the Governorship, being so largely a political office, did not appeal to me. I was neither by training nor by temperament a politician, although I had taken active part in campaigns for many years, both local and

One of the campaign posters used during Mr. Straus's candidacy for the Governorship of New York in 1912. The present serial takes its title from a phrase coined during that campaign

National. The next day I was asked to take the permanent chairmanship of the Convention. This I was willing and glad to do; also it was a foregone conclusion that acceptance of the chairmanship excluded me as a candidate for the nomination for Governor.

LIKE AN ENORMOUS TOWN MEETING

The Arena was filled with about seven thousand delegates and members of the new Progressive party. The air was surcharged with the spirit of the new movement—the genuine enthusiasm of men and women of character and standing from every county in the State, and among them a great many ministers, professors, reformers, and leaders of benevolent and charitable movements. There was a conspicuous absence of the professional politician. Indeed, that Convention had more the character of a town meeting than of a cut-and-dried political convention.

September 6 I took my gavel in

hand and called the meeting to order. The first business before the Convention was the nomination of a candidate for Governor. The outstanding candidates for nomination were William H. Hotchkiss, one of the organizers of the Progressive party and chairman of the National Committee, and William A. Prendergast, Comptroller of the City of New York, who had made the speech nominating Roosevelt for President at the Chicago Convention. A deadlock between these two candidates ensued.

After Yates County had been heard from, a tall, gaunt young man towered to his feet and asked to be heard; he was from the Fifteenth Manhattan District, and he had a nomination to make. It was not quite in order, though the spirit of the Convention was to give each man a chance. While I was hesitating about recognizing him, there seemed to be a general desire that he be given an opportunity to speak, so I gave him five minutes.

He looked fantastic as he strode to the platform and faced the audience. His manner was somewhat bizarre. He burst forth in dramatic fashion as follows:

Fellow-citizens, ladies and gentlemen: I have just come down from Vermont. I ask you people at this Convention to make no mistake. We want to put a man up for Governor that no man will be afraid to cast his vote for, against whom there can be no charge leveled of misconduct of any kind, one who can sweep the State from Montauk Point to Lake Erie, and carry every man of every race, religion, and creed; a man whose name is known throughout the civilized world; a man the mention of whose name brings a tear of sympathy to the eye of almost every man and woman in the civilized land; a man whose name, wherever men are found with red blood in their veins, irrespective of race, religion, and creed, will be carried thundering throughout the State to victory.

There is no chance for defeat with this man at the head of the ticket—

"Who is your candidate?" cried impatient listeners.

"What's his name?"

"Name your candidate!"

In sudden answer to these cries from the Convention, the speaker exclaimed:

I nominate the illustrious and honorable Oscar S. Straus.

During the long, terrific applause that followed, the delegate stood awkwardly waiting for a chance to finish. Finally he went on:

We should take no chances in this fight. I could not say one undeserved word if I used the entire dictionary in praise of the other nominees, Mr. Hotchkiss and Mr. Prendergast; but, gentlemen, Mr. Prendergast or Mr. Hotchkiss would cause friction in the State. We want no friction in this election. We want success and victory.

There is not a newspaper editor in the State of New York that would any more assassinate the character of Oscar S. Straus than he would assassinate the character of his own mother.

Gentlemen, remember! Remember that Rome was saved by the cackle of geese. I have no political prestige, but I warn and charge you, put up a man for candidate for Governor who cannot and will not be defeated. Make no mistake about Oscar S. Straus. You will make no mistake in putting him up as your candidate, and you will capture victory and success. No man has had better distinction at home and abroad than Mr. Straus. I ask you to vote for him.

The moment he finished, a stampede started. The entire hall assumed the aspect of a good-natured bedlam. There was cheering and applause, and many of the delegates began marching round that big auditorium, brandishing the banners of their counties, singing "The Battle Hymn of the Republic" and "Onward, Christian Soldiers," and breaking

out in the end with "Straus! Straus! We want Straus!"

NOMINATED FOR GOVERNOR OF NEW YORK

I pounded the desk with the gavel, I shook my head in the negative, but to no avail. The noise lasted fully twenty minutes.

The picturesque young man who had precipitated this scene was John G. McGee, known among his colleagues as "Suspender Jack." He had been a member of the mounted police of New York City.

Meanwhile Mr. Hotchkiss and several other leaders came to the platform and insisted upon my accepting. They even brought Mrs. Straus up, with the hope of getting her to exert her persuasive powers. There was no alternative; I had to accept.

Mr. Hotchkiss announced my acceptance, and immediately former Lieutenant-Governor Timothy L. Woodruff announced the withdrawal of Mr. Prendergast and moved to make the nomination unanimous by acclamation. That produced more shouting, cheering, and waving of banners. It was a touching manifestation and an unexpected honor. I made a brief speech of acceptance, during which I found it difficult to hide the effect of all this demonstration.

The next morning the Convention named for Lieutenant-Governor Frederick M. Davenport, who was Professor of Law and Politics at Hamilton College and had made an admirable record in the State Legislature. The ticket was then quickly completed and the Convention closed.

Roosevelt was in the Far West conducting his own campaign, and wrote me from Spokane:

September 8, 1912.

Dear Straus:

When I left New York I had expected Prendergast to be nominated and there were certain reasons, which I think you know, why I felt that, as a matter of principle, his nomination should be made.

But there was a still further principle involved, and that was that in this Convention the people should have their own way; and, upon my word, I am inclined to think that it was a new illustration of the fact that the wisdom of *all* of us is better than the wisdom of any of us. Having in view the effect, not only in New York but the country at large, I think that your nomination stands second only to that of Hiram Johnson as Vice-President, from the standpoint of strengthening the ticket. If the only result of the next election were to place you in as Governor of New York, I should be inclined to think that the Progressive party had justified itself.

My dear fellow, I am overjoyed; I congratulate you with all my heart. Give my love to dear Mrs. Straus and to Roger and your two daughters and all the grandchildren.

Ever yours,

THEODORE ROOSEVELT.

(C) Underwood

Mr. and Mrs. Oscar S. Straus at their summer home at Tarrytown, New York, during Mr. Straus's campaign for Governor

A few days thereafter he gave out the following interview:

Next in importance to the nomination of the Vice-President is the nomination for Governor of New York. And it seems to me that Hiram Johnson and Oscar Straus symbolize what this movement stands for. One is an ex-Republican, the other an ex-Democrat; they both stand for what is highest in American citizenship.

Mr. Straus is not merely a high-minded and able man, a man of incorruptible integrity and great ability, but also a man who has kept abreast of the great movement from which sprang the Progressive party. He is eminently fitted to be one of the leaders in this movement. On every point of our platform he represents an intense earnestness of conviction for all the things for which we stand. His attitude toward business, his attitude toward the complicated and the vitally important social and economic problems which are dealt with in our plank concerning social and industrial justice; in short, his whole position on governmental matters has been such as to warrant our saying that he is already in practice applying the very principles which we preach.

New York State has a right to be proud of the fact that in this first State Convention of the people themselves Mr. Straus's nomination was, in the most emphatic sense, a nomination by the people themselves, a nomination representing the desire of the people to have the very best man take the office, although that man was himself sincerely desirous to escape having to take it.

I have known Mr. Straus intimately ever since I was Governor of New York. When he was in my Cabinet, I leaned much upon him, and a more loyal and disinterested friend no man could have, and, what is more important, no man could have a more loyal,

disinterested, and sanely zealous supporter. As head of the Department of Commerce and Labor Mr. Straus himself, by study and administration of the law, was one of those who reached conclusions as to the needs of our handling of the Anti-Trust and Inter-State Commerce and similar laws, which I set forth in Message after Message to Congress, and which were substantially embodied in the Progressive platform; and in his attitude toward labor, toward immigration, toward the duty both of public and private employees, he foreshadowed that part of the Progressive platform which has dealt with these same matters.

Moreover, by his disinterestedness, his unselfish devotion to the cause of good government and of sound progressive doctrine for economic and social reform, and by his willingness personally to sacrifice his own interests to those of the cause he espouses, he is, I am happy to say, typical of all men who are in the new movement.

The Republicans telegraphed me to inquire whether I would accept the Republican nomination. They feared that with three candidates in the field the State would go Democratic. One of my managers favored my acceptance, which would without doubt have meant election. But my chief adviser, Chairman Hotchkiss, agreed with me that my accepting the Republican nomination, without the indorsement by the Republicans of the Progressive platform, would destroy the Progressive party in the State, if not throughout the country. I therefore replied that I could not accept a nomination that did not mean an indorsement and acceptance of the platform on which I stood.

On hearing of this, Roosevelt telegraphed me from Memphis: "Three

cheers for you. You are a perfect trump and you always do the right thing."

STUMPING THE STATE

The Republican candidate was Job E. Hedges, a brilliant member of the New York bar. The Democrats nominated William Sulzer, and Tammany Hall sanctioned the selection because he was considered a good opponent who would attract the Jewish vote. But our politicians make no greater mistake than to believe that there is such a thing as a Jewish group vote. However, as chairman of the Committee on Foreign Affairs of the House, Sulzer had taken a prominent part in the abrogation of our treaty with Russia, and during the campaign the slogan, "Non-Jewish but pro-Jewish," was designed to bring him the support of the mass of Jewish voters in addition to the regular Democratic vote.

On the whole, the campaign was conducted with dignity on all sides. There was a noticeable absence of vilification of candidates and general mud-slinging between the camps, as is too often the case in keenly contested elections. My managers arranged for me to make addresses in every county and almost every city throughout the State. I had a special car in which traveled, besides myself and wife, Mr. Davenport, and several other speakers, a dozen or more reporters from the leading papers.

I traveled for seven weeks, making ten to fifteen speeches every day except Sundays, including short talks at stations and from the rear platform of my car. So many clergymen took part in the campaign that frequently the meetings were opened with a prayer. Many of the meetings were spontaneous, emphasizing the crusading spirit so characteristic of the campaign.

One of my slogans was that I was the "unbossed candidate of the unbossed people." One day up in the northern part of the State I was speaking on a raised platform in the open, and, as usual, my time was limited by the train schedule. A member of the Committee told my wife, who was sitting behind me, that the train would leave in a few minutes, and that it was time for me to stop, and just as I got to the middle of the phrase, "unbossed candidate—" she pulled my coat tail as a signal for me to stop. At that moment I was quite evidently not the "unbossed candidate" that I professed to be, and the audience laughed and cheered with amusement. I think that bit of bossing, however, did not cost me any votes.

Mr. Davenport proved himself a most effective campaign speaker. Another effective orator in our party for a short time was Bainbridge Colby, who discharged with great distinction the important duties of Secretary of State during the last year of the Wilson Administration. At Oneonta and at one or other places while I was taking a well-needed rest, the crowds had gathered and were calling for me. Mr.

Colby, without being introduced, responded for me, and the audiences were left with the impression that they had listened to me. My cause certainly did not suffer by my being so admirably represented, or perhaps I should say advantageously misrepresented.

ATTEMPTED ASSASSINATION OF ROOSEVELT

Roosevelt in the meantime had flung himself into the campaign with all the force of his tremendous vigor and energy, and gave to it a dynamic impulse that grew in intensity as he progressed through the country. In October he started on his final tour through the Middle West, and it was while on this trip that he was shot by a lunatic just as he was leaving his hotel to make a speech in the Auditorium in Milwaukee. The incident, tragic in itself, was made dramatic by his heroism. With the bullet in his breast and his clothes soaked with blood, disregarding the entreaties of his companions, he went on to the Auditorium and spoke for more than an hour. To him nothing counted except the triumph of the principles for which he was fighting.

In consequence of this accident the National managers had me leave the State of New York and take up the National campaign. No one, of course, could fill Roosevelt's engagements, but the plan was to rescue the cause so far as possible, and I spoke in Chicago, Cincinnati, and Cleveland. My intense anxiety regarding the condition of my chief during this time was greatly relieved by assuring telegrams from both Mrs. Roosevelt and his nephew, George

Emlen Roosevelt, who were both at his side.

Two final rallies were arranged in Madison Square Garden, New York—one on Wednesday, October 30, for the National ticket, and the second on Friday, November 1, for the State ticket. Roosevelt, though not well, considered himself sufficiently recovered to appear. His physicians, Drs. Lambert and Brewer, had prescribed no more campaign speeches—in fact, did not want him to go to these meetings; but he brushed aside their injunctions and left Oyster Bay for Madison Square.

His presence at the National rally was his first public appearance since the shooting, and keyed up the meeting to a high dramatic pitch. Fully eighteen thousand persons were in the auditorium and a few thousand more were outside clamoring for admission. When Roosevelt appeared on the platform, a roar of applause broke loose and continued for forty-five minutes.

Roosevelt's speech, characteristically, was confined to a plea for the Progressive cause and for the State ticket; no word for himself. He appeared in good form and to possess his usual vigor, although it was observed that he did not use his right arm. His speech was earnest, calm, and exalted, closing with what he called his political creed:

I am glad beyond measure that I am one of the many who in this fight have stood ready to spend and be spent, pledged to fight while life lasts the great fight for righteousness and for brotherhood and for the welfare of mankind.

At the rally for the State ticket two nights later the crowd inside the Garden was as large as at the National rally. The enthusiasm was at the same high pitch. When I arose to speak, the cheering began and lasted twenty-seven minutes before it could be checked. Roosevelt was expected during the evening. His physicians had reminded him when he started from home that he had promised not to speak any more in the campaign, to which he replied that he had promised not to speak for himself, but that this time he would talk for Oscar Straus and Fred Davenport and the candidates on the judiciary ticket!

At the close of my thirty-minute address, Roosevelt appeared. The crowd went wild, and stopped cheering only when Mr. Hotchkiss, who was presiding, besought them to stop out of consideration for the Colonel. Roosevelt spoke for an hour and held that vast audience in rapt attention. He devoted the first half of his speech to outlining the Progressive cause, its meaning and purpose, and the second half to advocating the State ticket. He referred to my public career in terms of unmeasured praise, beginning with my first mission to Turkey. He told the crowd that everywhere he spoke, from the Great Lakes to the Gulf and from the Atlantic to the Pacific, he had "found that the name of Oscar Straus was a name with which to

FAMOUS EUROPEANS AT CLOSE RANGE

Lloyd George, Rudyard Kipling, William Watson, Earl Grey, Georg Brandes, Henri Bergson, Rodin, the Kings of Italy and of Spain, and other celebrated personages move rapidly through the next chapter of Mr. Straus's Autobiography, entitled "Personal Vignettes," which appears next week in *The Outlook*. A memorable visit to Skibo Castle, as the guest of Andrew Carnegie, is described. The reader is taken to the Peace Palace at The Hague. Recollections of Disraeli, from the lips of intimate friends, are carefully reported. This fascinating chapter of personalities concludes with some amazing evidences of a Spanish and Jewish origin of Christopher Columbus.

conjure," and that it "helped the Progressive cause in California and in New Mexico, in Illinois and in Kansas, that we here in New York had named such a man as our candidate for Governor." He then gave accounts of the personal services and qualifications of the other members of the ticket, and with this meeting the Progressive campaign of 1912 closed with a blaze of unforgettable enthusiasm.

PROGRESSIVE CAUSE A CRUSADE

On election day I received the following letter from Roosevelt:

Oyster Bay,
November 5, 1912.

Dear Oscar:

I count myself fortunate in having run upon the same ticket with you and in having had the privilege of supporting you. You are the kind of American who makes one proud of being an American; and I wish also to say that I feel just the same way about all your family, your dear wife, your two daughters and son. It is

just such a family, and just such a family life, as I like to think of as typical of our citizenship at its best.

With affectionate regard and esteem

Faithfully yours

THEODORE ROOSEVELT.

The Progressives, as might have been expected, had been poorly organized. The time had been too short for intensive development of our forces. We had no machine, and in a number of the counties there was scarcely a skeleton of an organization. It was, in fact, not a party in the ordinary sense of the word at all, but rather a crusade, and what we lacked in organization we made up by an abundance of spontaneous ardor. We did not really expect victory, although Roosevelt several times said that while he knew he would be defeated, he thought I would be elected. As a matter of fact, I believe I was the only candidate of the Progressive cause for Governor in any State who ran ahead of Roosevelt. In New York State he got 389,000 votes, in round numbers, while I had 393,000.

I knew from observations during my campaign from one end of the State to the other, how poorly, from a political standpoint, the Progressives were organized, and I confess I did not see the slightest chance of being elected. I was not disappointed, and I think that the men generally who ran for offices on the Progressive ticket were not disappointed. They realized that their contest was waged for a cause and not for office, and from an educational point of view the campaign was eminently successful.

Considering the vastness of the undertaking and the shortness of the time, we did as well as any of us could have anticipated, if not better. We were confident that the cause would triumph, in a degree at least, no matter what party was in power, and I think the facts amply justify our belief that the Progressive ideals made a definite impression upon the country, and have given strength, if not dominant influence, to Progressive principles in both of the old parties.

HOW CAN BRITAIN PAY AMERICA?

BY MAJOR-GENERAL SIR GEORGE ASTON, K.C.B.

IN the old pre-war days it was my business to lecture at the British Army Staff College at Camberley upon great wars in which the British Empire might be involved (not only as to how to move armies and fleets about and how to win battles, but also about what went on behind armies and fleets, about finance and economics, and their influence upon the issue of wars). It was a big subject, about which, in common with my audience of staff officers in embryo of the British army, I knew next to nothing. We searched the city of London for an expert to come to Camberley and tell us about the effect of finance upon war under present-day conditions of international credit. After searching for three years, we came sadly to the conclusion that no such expert existed. There were some who claimed to have studied the effect of war upon finance, a very different affair. Even they had but little knowledge of their subject. The most reliable of them told us that if Britain intervened in a great European war it would cost us about four million dollars per day. It cost us nearer forty million dollars per day before we were through with it, and it left us heavily in debt to the United States.

International finance is a matter for experts. European nations are now tottering into chaos, famine, and civil tumult on account of recent developments in this international finance, and, as usual, experts disagree about the best remedy. Who shall decide? Great Britain used to be a creditor country; now she is a debtor country to the United States, and certainly not in a po-

sition to help other people until she has paid her own debts. She cannot pay them at present out of what the bankrupt states owe her, but she obviously has to pay them. Her credit depends upon it, and credit is everything in international finance, as it is in all finance on a large scale. At least that is the view of the inexpert man in the street, whatever the experts or the men in public life who are guiding our destinies may say. In these circumstances, after all the learned disquisitions by the experts and the Balfour note which gives actual figures (with far too many ciphers for them to be grasped by the ordinary mind), the time seems to have come for the ordinary man to have a say in the matter. Disagreement between experts has an unfortunate tendency to spread to the nations which they represent, or to which they belong. I quote from memory, but the outstanding point is that Great Britain owes the United States nearly four billion dollars. What Great Britain did with the money is beside the point. As a matter of fact, it was spent in America upon munitions of war, but its equivalent was lent to Allies who, without it, would have been unable to carry on the war; the point is that the sum was borrowed and the man in the street means to see that it is paid back somehow; but how?

We used to be told at Camberley that business transactions between nations are very different from transactions between individuals, and that is now a commonplace remark. Individual men pay their debts in "money"—in gold, or in paper with gold or something else of

the nature of a token with a standard value behind it. There is no use in talking about paying a debt of four billion dollars in gold. The first reason (out of thirty-two) given by the commander of Tilbury fort to Queen Elizabeth for not firing a salute in her honor was that he had no powder. She was graciously pleased to dispense with the other reasons. The first reason why such a debt as I have mentioned cannot be paid in gold is similar to the Tilbury commander's reason for not saluting. There is no gold, when sums like that are involved. How, then, can the debt be paid? We are told by the experts that it could be paid by goods, by sending a lot of manufactured or partly manufactured articles over to America for nothing. We were taught at Camberley not to bother about statistics of imports and exports as indications of prosperity, but to remember that the best prosperity barometer to consult was employment. If a nation had few unemployed, that nation was prosperous, and *vice versa*. That means that sending manufactured or partly manufactured British goods to America in payment of the debt would be very bad for America, because unemployment would increase there. It would be very good for Britain, because employment would go up. It is true that the British workers would have to be paid by the British taxpayer, but that would not matter. At present he is paying millions of them a dole for doing nothing, and anything is better than that.

How, then, can Britain pay her huge debt to America, when (the gold does not

exist, and payment in goods would only do harm to Americans? If my late friend Sir Robert Giffen, the economist, were alive, he would say, by "invisible exports"—in other words, by services rendered. For instance, the British Government (in other words, the British taxpayer) could subsidize the British merchant service to carry goods about the world for nothing for American shippers. How would that work? The latest shipping returns show that the actual amount of British steam tonnage stands now at about the same figure that it did before the war, in spite of war losses, but the total world tonnage has gone up, so that the British percentage of the total is now only about 33½ per cent,

compared with 44½ per cent before the war. The principal reason for this is that American steam tonnage has increased enormously, by nearly 11,000,000, since 1914. Presumably it is desired to keep these vessels running. The question of doing so by subsidies is a controversial matter of great domestic concern to Americans, and one about which discussion emanating from elsewhere would very naturally be resented, but it is fairly obvious that "services rendered," in the way of cheap freights offered by British shipping, is not likely to be an acceptable method for Great Britain to discharge her debt to America.

We seem to be drifting into an eco-

nomie morass. For the experts there may be some solution in view of the difficulty. Let us hope that they will find one. The man in the street cannot grasp the complications of international economics; he finds it easier to argue from the individual to the mass. If he wants to draw his money from a bank where it is lodged, he is accustomed to being asked, "How will you have it?" John Bull is at present in the position of a banker, with a debt to Jonathan, and it seems to the ordinary man in Great Britain to be high time to ask a similar question of his creditor, whom he has every intention of paying, if only he could be informed of any acceptable method of payment.

GOING WALKING

BY ELON JESSUP

IN this progressive day and age, when we seldom have to walk unless we wish to, we are beginning to realize what a splendid recreation walking is. A care-free rhythmic saunter along pleasant highways and byways brings health, cheer, and vision.

Now comes autumn, the golden time of the year for walking. It is the serene, soft-smelling season when sweltering days and annoying insects are of the past, the season of marvelous color torrents of russet browns, golden yellows, bronze reds, and flaming scarlets. The time of all times to go the foot-path way to the painted woods.

The pleasure of any walk is largely dependent upon the elimination of all sense of pain and discomfort. In fact, when you are getting the best out of walking you are unconscious of the presence of legs and feet. This condition is impossible unless the feet are wholly devoid of pain or blemish. A blister on the hand may be of slight consequence, but a blister on the foot is likely to mean distressing agony.

It is with various practical details of walking that the present article is concerned: feet, footgear, and the actual physical motion of walking. Most foot misery which interrupts the pleasure of a long hike is wholly preventable, and even when trouble does start it can oftentimes be stopped before well under way. An ounce of prevention is of course worth more than a pound of cure, but I will try to indicate both of these.

A fairly rough-and-ready piece of footgear having broad toe-caps and wide, low heels is quite the most suitable shoe for hiking—provided it fits. But if it doesn't fit, it is almost as hard on the feet as pointed toes and French heels. The term "fit" as applied to hiking shoes is commonly misunderstood. When the average person buys a pair of shoes for city use, he or she is fitted in somewhat the same manner that a man is for a hat; that is, comfortably snug.

And one can walk ten blocks in such shoes without any great discomfort, but if one were to go ten miles there would be a different story. Some people buy hiking shoes in this same manner. Which is a tragic beginning for any long walk.

A hiking shoe "fit" means a shoe which is at least a half size, and possibly a full size, larger than footgear which is ordinarily worn in average city use. Only around the heel and over the instep should there be permitted any suggestion of snugness. Blisters sometimes develop as a result of too much lateral play of the heel because of roominess of the shoe at this point, but, even so, these can oftentimes be prevented by lacing the shoe more tightly.

Of prime importance in a shoe are length, width, and height of toe-cap. During the course of a long, hard walk your feet change size, blood-vessels become distended, and the feet grow noticeably larger. Tight-fitting shoes under such conditions are a forerunner of sore feet. Your feet must always have

free play; not enough to invite chafing, but a sufficient amount to allow them to function without constriction. In using the term "fit" I do not mean a shoe which is far too large for one.

We hear a great deal, and rightly so, concerning the evils of shoes which are too narrow, but not so much about shoes which are too short. Yet in some respects the short shoe is the worse offender of the two. During walking the toes have a way of working forward, and if with each step they meet a firm leather wall there is bound to be trouble in the form of toe blisters or similar abrasions. If the shoes are of sufficient length and still toe blisters threaten, these can usually be prevented by lacing the shoe more tightly. There is no cure, however, for a shoe which is too short. And the same may be said of the low stiff toe-cap. When blisters form on top of the toes, you may hold the toe-cap accountable for the damage.

In addition to the natural distention of the feet while walking there is the question of bulkiness of stockings to be considered. The wool-stocking habit so far as hiking is concerned is an excellent habit to acquire. To most hiking feet wool is far more satisfactory than cotton. Wet feet which are incased in wool are no special disadvantage, whereas with cotton the result may be a bad cold. Furthermore, the comfortable elasticity of wool on the feet serves a valuable purpose.

What has been said in regard to roominess of shoes applies to some extent to wool stockings. There is of course much greater elasticity to wool than leather, but the fact remains that stockings which have shrunk badly may play havoc with pedal comfort. Stockings should be neither so large that they wrinkle nor so small that they squeeze the feet. A tight, pinching stocking will start an ingrowing toe-nail about as quickly as will a tight shoe. Stockings which are badly shrunk

NATALIE DE BOGORY

is a name which we always like to see at the head of an article in our morning mail. We think that our readers share with us our enthusiasm for her interesting interpretations of the foreigners within our gates. A forthcoming Outlook article by Miss De Bogory is called "The Turning of the Tide."

It tells the story of sojourners in our country who are returning to their native lands. Some of their reasons for going back to Europe ought to make Americans do a little hard thinking.

CAMP GIRLS HIKING ALONG A MOUNTAIN TRAIL NEAR ASHEVILLE, NORTH CAROLINA—"THE LAND OF THE SKY"

▲ HIKER MAKING CAMP BY THE WAYSIDE IN THE ADIRONDACKS

should be thrown away. Remember also that there are few surer means of starting blisters than wearing stockings which either have holes or which have been darned.

Sensible shoes, fortunately enough, are much more common to-day than they were. Even in the city streets French heels and pointed toes are being supplemented by normal heels and broad toes. It is now possible for any woman to buy a pair of shoes which will not squeeze her feet beyond recognition. The Young Women's Christian Association is performing a valuable service in recommending certain shoes which pass the common-sense test.

So far as men's shoes are concerned, there is none more satisfactory than the army shoe. The so-called "sporting" shoe, which some people consider a necessary adjunct to a trip to the woods, answers very well provided that it fits,

but one must remember that fit rather than appearance and a lot of waterproofing is of first importance. Furthermore, leather which has been thoroughly waterproofed does not permit much ventilation. And the feet need ventilation. In any case, let me urge that you never make the mistake of starting out on a long hike with a brand-new pair of shoes. Break them in first.

A pair of feet which are tender through disuse can develop painful ailments during a long walk even though the footgear be above reproach. Feet become hardened with walking, but if one has not done any walking to speak of for months on end it is folly suddenly to attempt a fifteen or twenty mile jaunt without preliminary conditioning of some sort. A rather effective artificial method of hardening the feet is that of taking a series of foot-baths for several days. Either cold salt water or a mix-

ture of alum and salt in water is likely to toughen the feet appreciably. A solution of alcohol and salt is also effective. A strongly alkaline soap is bad for the feet, in that it has a tendency to crack the skin. The most effective foot-toughening process is the wholly natural method of getting out and using one's feet.

Any hiker, however seasoned or unseasoned he may be, can with profit soak his feet in salt water before going to bed if he plans to take a long walk next day. And before starting out in the morning let him rub talcum powder on his feet and sprinkle some in his shoes. The time-honored custom of rubbing soap on the feet or on the inner sides of the stockings cannot always be recommended, for reasons which I have just mentioned.

During the noon-time rest of a long jaunt you will find it advisable to take off shoes and stockings, wipe out the insides of the shoes, bathe the feet, dry these thoroughly, add more talcum powder, shake and rub the stockings in order to eliminate as much dirt as possible, and then put these on either inside out or each upon the foot other than it has been worn on during the morning. If at any time during the day's hike one senses foot trouble coming on, an immediate halt should be called and investigation started before the trouble gets well under way.

If a blister has appeared and there seems likelihood of its breaking with further walking, it should be immediately opened and then covered with adhesive tape, so that the skin will not be rubbed off. Great care should be taken to prevent infection, for a much-worn sock is by no means devoid of germs. To open a blister, sterilize the end of a needle or your knife in the flame of a match, prick the skin through the *side* of the blister, and gently squeeze out the water. Never prick the blister on top. If a cramp develops in the leg muscles, sit down and knead these. A cramp in the side can be relieved by drawing a deep breath and bending over.

At the end of a day's tramp the shoes should be cleaned (especially so the insides) with a damp cloth. When wet, they should be dried in a gentle heat. A great amount of heat shrinks the leather and starts foot trouble the next time you wear them. They should be oiled sufficiently to keep them pliable, but no more; too much oil clogs the ventilation pores. When feet do not receive their required amount of ventilation, they are likely to become tender.

The right footgear and proper care of the feet are, as I have indicated, of vital importance to the pleasure of a hike. The choice of route which one follows also has a direct bearing upon this subject, sometimes to a greater extent than one thinks. Avoid all macadam roads. Macadam is jarring to the feet and passing automobiles are jarring to a hiker's nerves. Stick to back roads and pleasant winding trails. A Government topo-

graphical map of any given locality will point out a network of these.

Suppose that it pleases your fancy to make an extended walking tour covering several days of lugging your bed and home in a pack on your back. This is a thoroughly practicable undertaking, but here again due consideration must be given to comfort. To carry a pack which does not presently become a weighty burden is an art which requires a considerable amount of studious attention before starting. If you do not wish to become a pack-horse, you must cut down the weight to the last possible ounce. And you must come to realize before the start of the trip that you can get along comfortably with about half as many articles of equipment as you would like to take.

We now come to the actual physical motion of walking. There is more to be said upon this subject than most people suppose. Strange as it may seem, the average city-bred person doesn't know how to walk. The average country person does. City folk have been called "leg-walkers" and country people "body-walkers." Which sums up the matter in a nutshell.

These two respective gaits are largely the result of environment. The city person has grown careless of energy and balance. The energy in his legs is sufficient to carry him the requisite few blocks to which he is accustomed, and the sidewalks are so neatly level that he doesn't have to pay much attention to balance.

So far as exercise is concerned, that of the city gait is confined almost entirely to the legs. The average city stride is short and choppy, the toes are pointed outward, the heels strike the pavement with a dull, sickening thud, the hips remain fairly rigid—in fact, the whole body above the legs is close to rigid. Such a gait is comparable to the actions of an automatic toy. It is ill-balanced and exhausting.

In contrast to this leg-walking of the city we have in the body-walking of the country a gait which is rolling, easy, rhythmic, and because of the fact that the whole body comes into play is a fine all-around exercise and good for long distances. The stride in level places is as long as it can comfortably be made, while on hills it is both short and leisurely. The toes, instead of pointing outward, as in the city gait, are pointing straight ahead in the line of march (toeing-out causes no small amount of foot trouble).

An English physician some time ago made a collection of well-worn city and country shoes for the purpose of investigating the bottoms of these. He found it almost universally true that the shoes of the city people were worn out at the heel, while those of the country people showed the greatest amount of wear on the soles.

This investigation is fairly significant of the two methods of planting the foot on the ground. It means that the city

HIKING IN THE ADIRONDACKS, WITH PACK

person walks on his heels, that his foot functions somewhat after the order of the end of a "peg leg." As against this, the countryman's step is far more elastic; it is nearly flat-footed at the moment when the foot is planted on the ground, so that all muscles and arches come into play. These parts happily combine and work in harmony for the forward plunge. With heel walking there can be no such manner of elasticity and team-work.

While climbing a slope a city-bred person is likely to go to the opposite extreme from heel walking, plant the front part of the foot firmly in the ground and leave the heel suspended in the air. This is a muscle-tiring proceeding. In any sort of walking the heel has a distinct service to perform. The point which I wish to bring out is that the heel should not be shouldered with more than its allotted amount of work.

Body-walking has the twofold advantage of being fine exercise and a means of conserving one's energy, while leg-walking at the best is merely a means of locomotion. A method which has been suggested for testing one's self in this respect is to take a leather strap and adjust it around the chest. The strap should be just tight enough to prevent much expansion of the chest. If the wearer walks about fifty yards and finds that the strap gives him no discomfort, he may conclude that he is a leg-walker; but if it gives him considerable inconvenience this means that he is accustomed to opening his lungs when walking, and hence is a body-walker.

Body-walking, the rhythmic combined movement of legs, hips, chest, arms, your whole body, is the only natural way of walking, the only method that will make you forget that you have legs and allow you thoroughly to enjoy the countryside.

"TURKISH DELIGHT"¹

AS IT APPEARS TO AN AMERICAN GIRL IN CONSTANTINOPLE

Constantinople, December 12, 1921.

DEAR SAM: It must have been the day of the Standard Oil dinner when I wrote you last. That evening left me with a bad taste in my mouth. It was a jolly dinner—in the apartment of Jack Byrne, a young Standard Oil man. Eight of us, all Americans. Afterward we went on to Maxim's, to dance. There was a special celebration of something or other (nearly every night is). The White Lyres (an American orchestra that used to be in Paris) were at their best, and the Cossack dancers shouted and stamped and did particularly wonderful things with their swords. Then there was a silly sort of beauty contest, and the winner of the prize was asked to step forward. I felt shocked and sick when I saw who it was. Little ——. Did I tell you about this 'girl'? I had heard things, but only seeing is believing. — is young, not over twenty, I should think. When I first saw her, two or three months ago, she was a pretty, soft-eyed little Turkish doll, modest in her black dress and *charchaf*, laughing at herself as she said her few stumbling words of English and French to me. Now she looked years older, in a low-cut European evening dress, with paradise plumes drooping over her shoulder, half silly with champagne. She is the first Turkish woman ever to act in the movies, and that alone will cost her her life if ever the Turks come back into power in Constantinople.

Turkish women *may* be treated as dolls, and of course that is wrong. They don't know how to use freedom yet. But they are kept in better order by their men than any of the other nationalities here. — is the only Turkish woman I have ever heard of who has taken advantage of her husband's absence with Mustapha Kemal to tread primrose paths. Poor little thing! She is a bad advertisement for Western chivalry. Turks—neither men nor women—go to the restaurants at night. And no good Turkish woman is seen on the street, even in the daytime, with any other man than her husband. Even the husband could not walk with her until recently.

But can you imagine a Turkish princess with blond bobbed hair and a permanent wave? I know one, Princess Sabaheddin. Her father was a political exile under Abdul Hamid, and she was brought up in Paris. Sometimes she leaves off the *charchaf*—but she looks much prettier in it. She often comes to tea-dances at our Embassy. By the way, the United States Embassy is the first place where Turkish women have ever danced with men. It has only happened since Admiral Bristol has been there.

They love it, are as eager as children, and a little shy. The husbands and brothers stand around and glare, mostly. Fearfully jealous. Mustapha Kemal said in a despatch from Angora: "Constantinople is becoming degenerate under the Christians. Our women are dancing in public places." But the younger ones realize that the old order must go—that iron lattices are no longer strong enough to shut women away from the world.

The Sultan is a weak-looking old man. I have been to the palace at Yildiz, on Friday at noon, to watch him go to prayer, escorted by horsemen in gorgeous uniforms, with pennants flying. While he is in the mosque no Christian may enter; so we were taken into the palace and served with Turkish coffee in gold cups and long gold-tipped cigarettes, while he prayed.

The Crown Prince is a quiet, middle-aged man. His aide, Ekrim Bey, never misses one of our dances. He is absurdly German looking—cropped head, round face—is always making polite, stiff speeches and clicking his heels together in stiff bows.

There is a Turk of English descent who, they say, expects to be Turkey's next Ambassador to America. You see him everywhere. Black Bey is his name. He has an American wife. He looks like the villain in a melodrama—a great tall man, very dark, heavy-browed, wears a monocle as if born with it; always stands in the doorways at a ball, just glowering at the dancers.

The only Turkish parties that I have been at are teas. Women, I think, never appear at evening parties. But men are asked to the teas. Clee often goes with me. Those at Madame Hassib Bey's are the most interesting. She is a very brilliant and modern woman of fifty or so, and has several talented daughters and friends of every nationality. She wishes that the daughters might go back to America with me. I do, too—what fun it would be to show them Fifth Avenue and Broadway! They ask all sorts of questions. Most of the Turkish women whom I have met speak better English—book English—than I do, and of course perfect French. They are musicians, artistic, read a great deal; but of real life are as ignorant as babies.

Well—so am I! "Defo' de wah," back in New York, I used to think myself rather sophisticated. Clee would come home from school for holidays and he would be *feebly* impressed because certain headwaiters, a playwright and an artist or two, and leading lights of Greenwich Village bowed to me. "Why, sis, you're a regular 'girl about town,'" he would say, and I'd try to look *blasé*. But heavens! I'm a mere babe, and always will be, in comparison with the European women out here. And the men! They just can't believe that my

American simplicity is real. That I actually mean what I say! Isn't it funny? They think I'm deep! Well, you know better, don't you?

Until I have another free day,

Your FRANCES.

Constantinople, December 20, 1921.

My dear:

Yesterday I disobeyed orders, and went to Stamboul—to the Grand Bazaar—alone. (Of course you understand that we live in Pera, the European part of the city? All of the Embassies are here, except the Persian. Many Turks also live in Pera, but the most in Stamboul, across the Golden Horn.) Clee said that I was *never* to go out alone after dark; and never alone in Stamboul at any time. But I love prowling around among the little dark booths of the Bazaar, and other people are always in a hurry. The Grand Bazaar is very old; covers acres of ground. It is honey-combed with tiny shops, along dark little alleys, where you can buy anything, from priceless Oriental rugs and jewels to the commonest Manchester cloth. I love the "Bezesten" best. That is the oldest part, in the very center, where old bearded Turks sit crosslegged and don't care whether you buy or not. Here lovely old carved ivories, strings of amber, beautifully wrought brasses, are heaped up with useless junk. And in the "Bit Bazaar" (translated, Louse Market)—an open road back of the Grand Bazaar—I picked up some of the quaintest old Venetian china for almost nothing. In the main part some of the shopkeepers (mostly Armenian or Jewish) fairly drag you into their places, shouting the merits of their wares. The Turks would not be so undignified. But one never pays the price asked, even in the great rug houses. It is part of the game to *bazelik* (bargain). First, coffee is brought you on a little tray. You have a chat; then, very delicately, the subject is led up to. A price mentioned. It is too much. "Alas! I shall be ruined—my children starve—but I love the Americans!" and a reduction is made. No—you are firm. Leave the shop. A few steps down the street—"Ah, mademoiselle!" and he plucks at your sleeve. You go back, and get your rug for two-thirds of his first price. He is delighted, and blesses you. The favorite felicitation is, "May you live a thousand years, and have only male children!"

I have done all the usual sightseeing. St. Sophia and the other mosques; the howling and whirling dervishes (I felt sick and had to leave when the howlers stuck stilettoes through their cheeks and tongues); the beautiful carved sarcophagus of Alexander the Great, in the Seraglio Museum. Seraglio Point, at the entrance of the Golden Horn, is where,

¹ A letter from this American girl, the sister of a naval officer, appeared in *The Outlook* for October 25.

they say, old or troublesome royal wives used to be tied in a bag with a cat and a snake and dropped in.

By day Stamboul streets are full of a howling mob, but at night as still as the grave.

Pera's streets are never still. Some of the poor Russians have no other place to go. When I first came, their faces haunted me. I could not bear to be so comfortable in the midst of such suffering. Just then (the first of October) the American Red Cross had stopped helping them. But Major Davis, head of the Red Cross here, is keeping on just the same, backed by all the Americans in Constantinople. Major Davis is a wonder; a big, stout man from Boston, with a gay taste in socks, a sleepy smile, a heart as big as he is, and the keenest sort of a mind. He has taken me to see the refugee camps. In one—a dark old palace barn—some twelve thousand sleep on the ground. They are just building little raised platforms for beds, so it will not be so bad now. There aren't many children. They must have died. The lucky ones have work, but so many were just sitting around, looking dully into space. Do you know, the first thing they did in that place was to make one corner of it into a church. They hung up cheap little pictures, and their icons, that they never part with; and decorated it all with pitiful paper flowers.

The Muscovite is the famous Russian restaurant where a general checks your coat and helps you on with your rubbers; and a princess, very likely, brings your soup—wonderful *bortsch*, with sour cream floating on bits of sausage and cabbage, and little hot biscuits with meat stuffing served with it. I dined there my very first night in Constantinople. I was delighted to see a haughty beauty, dressed in black, with a tiny white apron, draw a jeweled lorgnette out of her dress and coolly eye a singer up and down. Imagine how you would feel if your waitress lorgnetted you! And when they are not too busy they will sit down and dine or talk with the patrons who are their friends.

The captain of one of our destroyers is engaged to the prettiest and sweetest girl at the Muscovite. He gave a tea on his ship one Sunday afternoon. There were eight Russian girls and I; the captains of several other destroyers; a much-traveled Englishman; Mr. Thomas, of the Standard Oil, then staying with Admiral and Mrs. Bristol; and my brother. It was a birthday party, and great fun. After the birthday cake and tea we danced. You would never guess, from their manner, that these girls had ever known any more trouble than I. They are *really* well bred, "gentle, brave, and gay."

I can't say so much for the men. They don't stand up so well. They only know how to wear uniforms. There was one who fired my imagination at first. An ex-colonel in Wrangel's army. Big, handsome, shabby, but very neat in his

old uniform. He kissed one's hand so reverently, and told of his life in Petrograd and his despair here in a way to stir a stone. Well, Cleo brought him home to dinner, to tea. He was charming, and so grateful. Cleo gave him a job. He worked like a fiend for a few days. We wished that he might go to America, where he would have a chance; and I told Cleveland that if it could be arranged I would gladly give up the trip to Egypt that I'm longing for to pay this man's passage. But we found that he had been given money and passports for America some time before. He had given a farewell party to all his friends at the Muscovite the night before the sailing date and paid for the very good champagne with the passage money. Cleo gave him money for passage on a freighter, and it went the same way. But, knowing all this, he was a lovable rascal. They are great impulsive children—all emotion and no sense. The Relief workers never give them money; just work, food, or clothes.

No, not all are children! General Wrangel is a real, grown man! He has been one of my heroes for ever so long—and imagine how thrilled I was to meet him! The first time I saw him was at an Embassy dance in October. It was soon after the sinking of his yacht by Bolsheviks. The American women had sent clothes to Baroness Wrangel; and he—at a ball—was dressed in an ordinary Red Cross khaki shirt, worn outside as a tunic! It might have been the most gorgeous uniform in the world, the way he carried it. He looks more royal than almost any pictures of royalty that I've ever seen. And worn, spiritual with suffering for his people. The Baroness is a bright, cheerful soul, awfully sweet and friendly. Of course they do not dance—in Russia's trouble—but they are nearly always at our balls. I did not want to meet General Wrangel until my French had improved; he does not speak English. So I asked my French teacher (a Russian widow) what to say to him when I met him. We used to laugh over it, and I had quite a beautiful conversation all learned. Then when the actual moment came, in the middle of a crowded ballroom floor, I forgot it all, and only shook his hand, stammered, "H-how do you do?" and gazed at him!

He is going soon to Serbia, with several thousand of his troops, who are being taken into the Serbian army.

Some one downstairs is playing the Volga song. That thing will haunt me to the end of my days. There are half a dozen Russian folk-songs that you hear every night, somewhere. We do get wonderful music here. So much fire—oh, other music will seem pale and tame, after these Russians! There is Vertinsky, the singer at the Ermitage, who used to appear before the Czar. He sang at a dinner at our Embassy the other night, and I could see the Cossacks marching—going away—away—faint in the distance, never, never to march again. Everybody cried. Vertinsky is a

drug fiend, and will die soon; but *how* he can sing!

Last night we had dinner with a family of rich Armenians. Heavens, the food they expected us to eat! I don't wonder these people look oily. Perfectly wonderful dishes, beginning with a creamed shrimp soup, and winding up with real Oriental sweet dates stuffed with *kaimak* (clotted buffalo cream) with syrup over them. Afterward the men played bridge, while the three other women and I lounged on a great low divan. With the men's whisky-sodas the maid brought *tea* for us!

Oh, it's a good thing I'm not here for always. Awfully demoralizing. Everybody is either starving or gorging. Everything is extreme. How anybody ever works in such a place is beyond me!

But the return to sanity is going to be hard. Your FRANCES.

Constantinople,
January 4, 1922.

Sam, dear:

You have heard me speak of Elizabeth Baker? The pretty Navy wife who is so very popular with the British? She gave such a jolly dinner last night, a farewell for our naval attaché, who is leaving for Japan. Sir Horace Rumbold, British High Commissioner, was there; Lady Rumbold; Baron Uchida, the jolly little Japanese High Commissioner; General Marden; and some other British army and navy people. Elizabeth put me beside Sir Horace. I was petrified at first. He is the typical book-Englishman, to look at. Absolutely impassive, bored face, monocle and all. But after five minutes we were talking away as if he were a sophomore. He is as simple and easily amused as any boy of twenty, and says that he finds Americans refreshing. Lady Rumbold is a trifle more formal at first, but I thought her very sweet.

Lady Harington (wife of Sir Charles Harington, Commander-in-Chief of British Forces in Turkey) is such a different type from Lady Rumbold. She is Irish, I believe; is big, bobbed-haired, carelessly dressed, unconventional. She is always dancing at Tokatlian's at tea time with a crowd of young officers.

The British large parties are too formal to be much fun. Even the great fancy-dress ball at Harbié, on New Year's Eve, hadn't the right go to it.

On Armistice Day I went to a British tea-dance. It was a "shriek," as one of my little friends here would say. Old English dowagers with hats of the Spanish War period resting on two hairs, younger women with all sorts of beads and lace and what-not hung on them, and carrying off these atrocities with such an air that you almost think maybe that is the way to dress, after all! They wear just what suits their fancy. Straw hats in winter, and a girl at the dancing club last night had a little gold-lace nightcap affair on her head (weren't there such things back in

1914?). After all, why be slaves to fashion?

Ah, but their dinners are delightful! And the British officers' red mess-jackets are beautiful! And their wearers appear to find American women amusing. It is mutual. When I first came, I *could* not get the British army accent. One young subaltern had been telling me the greatest lot at a dance—I couldn't understand a word. Finally I stopped him, and said he'd have to excuse me, but I had only been over a little while, and couldn't understand English yet!

There is an old dear of a British major who is forever giving Anglo-American parties at the Muscovite.

Our dinners are not so good, but our big parties are perfect. We are better at romping than at conversation.

One of the aides at our Embassy advised a pretty Georgian princess: "If you want a good time, go with the American Navy; but if you want to get married, cultivate the British." Our Navy isn't marrying out here to any extent. They are just having a glorious time—in between hard, cold trips into Russia or down to forsaken holes like Mersina or Samsoun.

There was a great deal of entertaining done for the Utah. She was here for three weeks in November, with Admiral Niblack, Commander of our European Squadron, on board. The town was turned upside down to entertain them. Our Embassy gave dinners, dances, and teas. The Italians gave them a ball at their beautiful place that was once the Austrian Embassy. The Utah reciprocated with two big tea-dances on board and any number of luncheons and dinners. Admiral Niblack was greatly intrigued by the spectacle of Turkish ladies dancing at our Embassy. He wired to Mrs. Niblack: "Turkish women very beautiful. Come at once!" And she *did* come, on the next train from the Riviera. Then the Embassy gave another set of parties for her.

Coming home from these parties late at night, I have seen and heard dreadful things on the street. I just get as far back in the *avaba* as I can and shut my eyes sometimes. Of course the Allied police keep some sort of order in the main streets, but Colonel Ballard, their chief, says, "If you want to be murdered, you can be murdered—just wander around in dark alleys!" The Turkish night watchman is a joke. He carries a big stick and goes "tap, tap, tap," on the pavement, so that thieves will hear him coming and run away. It is creepy to hear him calling out where there is a fire in the middle of the night. And every night there are fires.

I wanted to visit one of the Turkish public schools, but it seems that the present Minister of Education is very much afraid of Christian interference, and nobody dared take me. But I did spend a morning in the best private school in Stamboul. It is kept by Nakya Hanum, a quite emancipated woman. She takes children from five to seven-

teen years old; boys and girls together, which is very unusual. It was a pleasant place, shut away from the world in the midst of a rather untidy garden. But the teaching methods were antiquated and the lack of equipment pathetic. In the kindergarten half a dozen of the cleverest children were shown off—they did complicated dances for half an hour—while the rest stood against the wall, looking wistful. One little boy was dressed as a girl; he had long curly hair tied with a red ribbon. His mother had many sons and wanted a daughter, so she just plays he is one. They say it is quite common.

Every mosque has classes of white-turbaned boys studying the Koran. The Y. W. and Y. M. C. A. conduct classes of all kinds. Although the Turks are afraid of American education, for fear that religion will be thrown in with the rest, an American professional man is looked up to as an oracle. Dr. Hoover, of the American hospital, and Dr. Barton, the American dentist, are just kings out in this part of the world.

Last Sunday I dragged Clee to church by the ear. The first time in two years. The foreign population here has rather free and easy notions of religion. The Turks pray five times a day; they fall on their knees and turn their faces toward Mecca, wherever they happen to be, at the muezzin's cry. But there is no American minister outside of the colleges. We went to the Dutch chapel, and heard a British army chaplain.

And this morning we went again—this time to the chapel in what used to be the Russian Embassy. There are no seats in the Russian church, you know; we stood, for two hours, while more and more crowded in. They were all washed and dressed with extra care. The music was glorious; just singing, so sad and deep. Every one put something into a collection basket, and I saw a woman with tragic eyes drop in an unset diamond among the dirty five-plaster pieces.

It made me ache—I'm going for a walk out toward the "Sweet Waters," in the sunshine.

Later.

We've had a glorious walk, and came back in a caique, down the Sweet Waters into the Golden Horn, past Eyoub. That is the Turkish cemetery where Pierre Loti's sweetheart is said to be buried—the one in "Les Desenchantées." Here and there on the hills there were Turks blissfully enjoying *keyeff*. That's their favorite sport; it means less than doing nothing—just *being* nothing. And we passed Baron Uchida, fishing peacefully from the bank. There are some happy people here, after all; I feel better. Good-night.

FRANCES.

Constantinople, April 1, 1922.

Good morning, Sam:

Since my last letter I've traveled fast and far. First there was Christmas, six weeks of it—ours, after that the Greek and Armenian, then the Russian. There were three different sets of holidays.

The restaurants kept open all night. Little boys went from door to door with colored paper lanterns and drums, singing queer Eastern Christmas chants. We were living in rooms just off the Rue du Petit Poisson Mort that week. That's a very queer street. I didn't like the look of it, but it was an experience, too. The walls of my room could have told strange stories, I'm sure. It had a latticed bay-window and smelled musty and old. When we came in late at night, Frau Fiedler, the funny old German woman who tended my fire and so on, had to let us in. We knocked on the iron outer door, and after a while it would open mysteriously. Inside, we looked up and saw her leaning out of a little window, holding the string that pulled the latch, looking like a funny old fairy in her ruffled nightcap and wishing us a "*gute nacht*"!

On Christmas Eve we had dinner at the Muscovite. It was very gay, but not a bit like Christmas. Then one of our men went to the piano and played "Holy Night, Silent Night." I found myself crying into the champagne. It was my first Christmas away from home. We went on to such a nice dance at the Embassy—a family party, nearly all Americans. At twelve o'clock the music stopped suddenly; the Admiral kissed Mrs. Bristol and wished her a Merry Christmas. Then he turned to me and said, "Come and kiss the old man!" And I had to weep again, and laugh; he sounded just like father, and I wasn't homesick any more. After the dance I stayed up till daylight, trimming a little tree to surprise Clee in the morning. He was so pleased with the little foolish things on it.

Toward the last of January it began to get rainy and horrid. Everybody looked fagged out with the prolonged celebration. So a party of us went to Egypt and the Holy Land for six weeks. We came back in March, to find the sky all blue for the summer (the sun shines here for six months of the year), the street flower markets gay with sweet violets, yellow mimosa, scarlet anemones, almond blossom—oh, so lovely! Every Sunday there's a picnic somewhere. We go to Prinkipo or Halki, in the sea of Marmora; or up the Bosphorus toward the Black Sea. One evening we had supper in a ruined palace garden, over on the Asiatic side. A harem, it used to be—one of Abdul Hamid's. All open now to the four winds; gilt chairs with brocade hanging in tatters, great mirror-lined halls. All along the shore are places falling in ruins like that—Turkey is so poor. Have you read "Stamboul Nights," by a man named Dwight, who lived out here for years? He will make you feel what I feel in these places but can't express.

Soon the gay summer season will begin. The Embassies will move to Therapia, and there will be more picnics, more moonlight on the Golden Horn. Pray for me, or I may never come home!

FRANCES.

HIGHWAYS THROUGH THE WOODS

PICTURES FROM OUTLOOK READERS

From Albert B. Herrman, Santa Cruz, California

HAULING TIMBER FROM THE SANTA CRUZ MOUNTAINS

Ox-teams are less common in the Central West now than in pioneer days; Chicago recently had difficulty in procuring such a team for the transportation parade, it is said. But in the region near Santa Cruz, California, our correspondent says, oxen are in constant use for bringing timber and firewood out of the canyons and gulches where horses or mules would be useless

From Dr. R. M. Lewis, Baltimore, Md.

CANOEING DURING A VACATION IN THE ONTARIO WOODS

"The picture preserves for me," our contributor writes, "one of the most thrilling moments of a memorable vacation. The canoeists are shown running a rapid well named 'The Needle's Eye,' on the Maguetauan River. The entire river here narrows from a stream a hundred yards wide to twenty or thirty feet, plunging through a miniature gorge. The innocent-looking wave on the side of the birch canoe almost stopped her voyage by dropping a couple of barrels of water aboard"

THE BOOK TABLE

A GREAT AMBASSADOR¹

A PERSONAL IMPRESSION

BY EDWIN A. ALDERMAN

PRESIDENT OF THE UNIVERSITY OF VIRGINIA

THE Life and Letters of Walter H. Page" is a book of great distinction. As a document of democracy, as the unfolding of a career constituting a complete and inspiring definition of Americanism, this book must appeal to thoughtful people all over the world, and as a colorful, graphic picture of men, atmosphere, events, and social conditions in the two great English-speaking democracies under the strain of war it is an invaluable contribution to history. Mr. Hendrick has wisely let Walter Page tell the story in his glowing, pungent letters and memoranda; but he has done the work of compilation and comment with skill and restraint, combined with a certain ardor in the portrayal of his subject that stirs the sympathy and interest of the reader. This is not a book that one skips about in or dips into here and there. If you begin it, you finish it with a rush of pride in the story, with the sensation of having met an unforgettable man, with a gasp of sympathy for the sheer courage and tragedy of his career.

My qualifications for reviewing this notable work rest upon an acquaintance and an association with Walter Page of forty-three years. We were born in the same old Southern State of North Carolina and in essentially the same era, though he was my senior by six years. Our section was struggling on under the paralysis of war and seeking grimly and bravely to find its place in modern industrial democracy. There was everywhere then in the homes of good people in the South an atmosphere of seriousness and unselfishness. Most of us felt, even in the full tide of buoyant youth, that we must make ourselves fit to be helpful in the rebuilding so plainly before us and that we must stay where we were and use our fitness in bettering conditions right at our doors. This feeling was an obsession with Page, and, though he actually spent only a few years in his home State, and those turbulent and unsatisfactory, his heart and his dreams were always there. He became a cosmopolitan in the highest sense—a true citizen of the world; but his day dreams forever played about the sand-hills of North Carolina and the prosperity of the South. Indeed, perhaps the most poignant scene set forth in these volumes is the scene of the wasted, broken man on the Scottish moors planning to return "home," fancying that health would come back to him

in that old air, smiling wistfully at his son a few days before his death as he was lifted from the train at Pinehurst, and exclaiming: "Well, Frank, I did get here after all, didn't I?"

I saw Walter Page for the first time forty-two years ago. He was then a young man twenty-four years of age, and I a lad at college. He was standing on a platform at the summer session of the University of North Carolina, talking to a group of teachers with fierce eagerness and a kind of defiant intellectual confidence about the value to them to be got out of studying the Greek language and literature. It did not strike me as a very live thesis at the time, but he was putting life into it, and to spare. I recall that I rejoiced in the fact that he seemed to be flouting the oratorical pomposities current at the time in all American, and especially Southern, speaking. He wore no black frock coat, and did not even thrust his right hand into the lapels of the coat which he did wear, which was of rough tweed. His hands were in his pockets, in fact, and, though he "bawled out" his company every now and then, his gestures were few and his manner conversational. I saw him for the last time in October, 1914, standing in the doorway of the old American Embassy, on Victoria Street in London, bidding me good-by on my homeward voyage. He was then preparing to move the Embassy to worthier quarters in Grosvenor Place, but the staff was still there. In many ways he was the same man who was urging Greek discipline upon the Carolina teachers a generation before, with the same unconventionality (he was shouting gentle insults at me for remaining in London so long after the beginning of the war instead of going "on home"), the same vigor and charm. Marks of care and toil were plainly upon him, but also evidences of high pride and purpose, as he undertook the duties of a mission destined to mark a new era in the story of Anglo-American understanding.

The record of Walter Page's life and achievements during the thirty-five years between these two memories is fully and faithfully set forth in Mr. Hendrick's book, and constitutes a splendid proof of what talents and purposes and labor can bring forth in American life, even if the Ambassadorship to Great Britain during a World War had not fallen to his lot.

Walter Hines Page was born in the little village of Cary, near Raleigh, North Carolina, August 15, 1855. His racial stock was pure English, with a

Huguenot strain. His parents were vigorous, forceful people of pioneer breed. He was well educated in the best schools of his region, and came to manhood just in time to be captivated by the fame of the great scholars Daniel C. Gilman had called around him at Johns Hopkins University. I have never understood why he fell upon Greek as his mistress there unless it was the dominating personality and style of Gildersleeve that caught his fancy. He was happy enough in the task of interpreting Æschylus and the comedies of Aristophanes, but he balked at philological grinding in the deep marshes of Greek syntax and Byzantine writers, "fulminated against the grammarians" and fought toward his life's job of studying social conditions, describing the scene of life as he saw it, discovering excellence, shouting at shams, and fighting like a trooper for the things that seemed to him good and durable. The cloister tugged hard at Page. He even considered the ministry as a calling in his youth, his mind doubtless dwelling upon its obvious opportunities for expression, but the world rather than the cloister, won for the world's good. "I am sure that I have mistaken my life-work, if I consider Greek my life-work. In truth, at times I am tempted to throw the whole thing away. . . . But without a home feeling in Greek literature no man can lay claim to high culture." So he would keep at it for three or four years and "then leave it as a man's work." Despite these despairing words, Page acquired a living knowledge of Greek that was one of his choicest possessions through life. That he made a greater success than his self-depreciation would imply is evident from the fact that his fellowship was renewed for the next year.

At the age of twenty-three Page grappled with life in earnest, and for the next twenty years he may be seen roving from St. Joseph, Missouri, to Boston, Massachusetts, in ever-increasing posts of difficulty, but with perfect unity of purpose, striving to comprehend the currents of American life, to interpret them to various sections, and to express them vividly and fairly. He was in turn teacher, lecturer, reporter, editor, student of sociological problems, from Raleigh, North Carolina, to Utah, and finally found himself in the managership of the "Forum," a moribund magazine which he quickly restored to vigor and prosperity. At forty Page achieved the top of his profession by becoming editor of the "Atlantic Monthly." His final progress to the partnership of Doubleday, Page & Co. and the founding of the "World's Work," with which his name will always be associated, followed naturally out of the talents displayed in this field and out of his desire for independence economically and spiritually.

I first came into intimate contact with

¹The Life and Letters of Walter H. Page. Edited by Burton Hendrick. 2 vols. Doubleday, Page & Co., New York. \$10.

him in 1897, when I sat on the platform of the State Normal College at Greensboro and heard his famous address "The Forgotten Man," wherein he formulated a great programme of educational development for the Southern States. Five years before Charles D. McIver and I, with the daring of youth and the enthusiasm of ignorance, had set ourselves the task of proving to the people of North Carolina that it was the privilege and duty of a democratic State, through the instrument of taxation, to educate all of its children, high and low, rich and poor, black and white, from the primary school to the university. This was then a new doctrine in the South, and those who fought for it had need of faith and will. It is an old and accepted doctrine now, and nowhere more completely than in North Carolina, but then its friends were not in authority. It was, however, one of those things that just had to be done. Page, ever on the alert for a stiff fight in a good cause, smelled the battle from afar and came into it with a bound. That speech, with its appealing title, was a piece of heavy artillery in the contest, and its reverberations are still to be heard. I do not think that anything held Page's interest more closely until the outbreak of the World War than the educational struggle in the South and in the Nation to put the life of the common man and his child upon a sound, hopeful educational and economic basis. This programme meant to him, not only more schools, but sensible schools, farming as an intelligent business, care of the public health, and the promotion of all agencies looking to the elevation of standards of living. He found—all of us in this battle found—in the Southern Education Board, and later in the General Education Board, great, far-seeing, wisely controlled agencies for advancing those ends. His magazine and his business delighted him and gave him pleasure in these fruitful days of his life, but his chiefest satisfaction lay in co-operation with the men at work in these constructive fields. He somehow envisaged it all as a great victorious battle. There lies before me as I write an old copy of his book "The Rebuilding of Old Commonwealths," sent to me at New Orleans, where I then lived and directed the work of promoting public education in that region. It is inscribed in his script-like hand-writing—

To
Brigadier-General Alderman
Commanding the Division
of the Southwest,

W. H. P.

April, 1902.

Page thoroughly believed that the only true measure of any civilization was the extent to which it improved the condition of the common citizen and offered him "equality of opportunity." To this end his hearty co-operation with these Boards was directed and his maga-

zine was made to play its part in the interpretation of American life and to set forth in a vital, picturesque, but accurate way the progress the country was making in democracy, education, agriculture, industry, social life, and politics. For nearly a decade a group of men associated with educational activities were accustomed to assemble at the home of Mr. George Foster Peabody on Lake George each summer to discuss

WALTER H. PAGE

and plan for the promotion of such interests. Page was always there, vital, soaring, argumentative, optimistic, ready to discuss anything—especially the futility and emptiness of most of the writing that came to his desk—abounding in humor, bluff heartiness, and generally happy over the discovery of some new man somewhere who was doing some concrete thing better than anybody else. I recall his delight in Seaman Knapp and Wyckliffe Rose. I remember his greeting me at Nashville with the remark, "Come on, I want to show you a man who has more sense than you and I put together," and he carried me off to meet David Lubin, the founder of the International Institute of Agriculture at Rome. There also stands out in my memory the passion that rang in his voice in a speech at Montgomery, when he recited his creed of democracy to the great throng assembled to discuss the educational needs of the South:

I believe in the free public training of both the hands and the mind of every child born of woman.

I believe that by the right training of men we add to the wealth of the world. All wealth is the creation of man, and he creates it only in proportion to the trained uses of the community; and the more men we train, the more wealth every one may create.

I believe in the perpetual regeneration of society, and in the immortality of democracy and in growth everlasting.

Woodrow Wilson, therefore, when he selected Page for the English post was not choosing, as many people imagined, a brilliant literary man with a genius for editorship alone. He was naming for a task of unimagined complexity a sincere philosophical democrat who had thought out and talked out that high hope until the conception thrilled and exalted and stimulated him as religion used to guide its devotees in the age of faith. He was setting apart for enduring international service a man of courage with a talent for co-operation but little stomach for compromise. He was sending to England a man of imagination, of intellectual resource, and an artist in the use of language. Page was not a politician, but forever, as I have said, on the lookout for excellence. He beheld in Woodrow Wilson a man of strong intellect, dignity of character and purpose, and he quickly rallied to his leadership. I have always believed that in his secret heart he would have preferred the Secretaryship of Agriculture in the President's Cabinet to any other office, though he would have scorned to seek it or to obtrude himself into any problem. He was not a "dirt farmer" in any just sense, but I believe he would have rendered notable service in that office, for no man in America had at heart more genuinely the welfare of the farmer or believed more intensely that agriculture must be made a business and given every opportunity to apply science to the production and distribution of the products of the soil. He worked loyally for the election of Mr. Wilson, and immediately upon his election was at him with carefully prepared briefs suggesting lines of policy in the interests of agriculture and education and urging that he gather around him strong, capable men. His letters to me during the interval between the election and inauguration show an interest almost amounting to excitement in the character and purposes of the unusual, lonely man upon whom had fallen this "monstrous job." The two had known each other since their student days at Johns Hopkins. They were intellectually and morally akin, because of their common possession of style in writing, taste in literature, hatred of the second-rate thing or man, and faith in democracy.

Page's place in American history, in the minds of most of his countrymen, will rest upon his services in England during the World War. He sailed for England on the Baltic in May, 1913. He was not a rich man, and had debated the wisdom of undertaking the Ambassadorship from many angles, but he loved adventure of the mind and the great task called to him. He departed absorbed wholly, as was his chief, in domestic affairs, but with his eyes open and his brain racing like a trip-hammer. His plastic, inquisitive mind got to work at once upon his new and strange existence. He began a study of England and the English that soon expressed itself

It had never occurred to him

HE seemed to have all the qualifications for business success. Yet, somehow or other, he didn't advance as he should have. Something seemed to stand in his way.

The thing that held him back was in itself a little thing. But one of those little things that rest so heavily in the balance when personalities are being weighed and measured for the bigger responsibilities of business.

Halitosis (the medical term for unpleasant breath) never won a man promotion in the business world—and never will. Some men succeed in spite of it. But usually it is a handicap. And the pathetic part of it is that the person suffering from halitosis is usually unaware of it himself. Even his closest friends don't mention it.

Sometimes, of course, halitosis arises from some deep-rooted organic disorder; then professional help is required. Smoking often causes it, the finest cigar becoming the offender even hours after it has given the smoker pleasure. Usually—and fortunately, however—halitosis yields to the regular use of Listerine as a mouth-wash and gargle.

Recognized for half a century as the safe antiseptic, Listerine possesses properties that quickly meet and defeat unpleasant breath. It halts food fermentation in the mouth and leaves the breath sweet, fresh and clean.

Its systematic use this way puts you on the safe and polite side. Then you need not be disturbed with the thought of whether or not your breath is right. You know it is.

Your druggist will supply you. He sells a great deal of Listerine. For it has dozens of different uses as an antiseptic. Note the booklet with each bottle. — Lambert Pharmaceutical Company, Saint Louis, U. S. A.

(THE BOOK TABLE—Continued)

in the form of letters, hitting off English life, its strength and weakness, in a fashion marked by humor and truth. He was attracted by the English, but he saw their weaknesses and frailties, and pictured them frankly and so naturally that the record constitutes a sympathetic portrayal of British society before and during the war and, in addition, furnishes a comparison of high value between the ways of an aristocratic society addicted to democracy in government and the ways of this Republic. Nothing escaped him and every impression found utterance in quaint, humorous, discerning phrase.

Page wrote many articles and made many speeches, and they were all good, but his claim to distinction in the field of literature rests upon his letters. These letters reveal him as a master of that most human form of literary expression. At the memorial exercises held in his honor in New York in April, 1919, I ventured to make this prophecy: "If he shall not be adjudged the best letter writer of his generation, I shall be much mistaken." These volumes sustain my prophecy. I dare to claim, and Walter Page has found, without conscious seeking, a permanent place in American literature.

Page spent five continuous years in England, save for a short furlough in America in 1917. The Mexican crisis and the Panama tolls tested his power of statesmanship immediately, and it quickly became clear that this American gentleman, untrained in diplomacy, had a statesman's mind and a breadth of view that placed him securely among the unusual men whom America has sent to Great Britain. And then the Great Smash came. It was my fortune to be his guest in London and at his quiet little home in Surrey during the days which saw the first battle of the Marne. I was a witness of the first flood of work that came rushing upon him and of the unhurrying confidence with which he accepted the burden and grappled with his labors. I shall not here undertake to recite these labors. The reader of these volumes will see the man at work and catch glimpses of his mind and soul that will not fade from the memory. He saw from the start the real issues at stake. His beloved democracy was menaced by a mighty foe. That was the main thing. Driving in from his country place one morning in early September, 1914, as we reached London, we saw the young recruits in golf caps and tweeds who were forming Kitchener's army marching about the streets. Pointing at them in his eager way, he said: "Those men must cross the Rhine, or democracy as we understand it will cease to exist." He believed that America must share in this battle for the doctrine which had made her great and unique among nations. He believed that the leadership of the world must presently fall into American hands and be applied to the highest uses of democracy. He had the courage to like the English, to discern the essential kinship

SPENCERIAN PEN COMPANY

349 Broadway, New York

Digitized by Google

The 3-way corner, efficient bracing, and improved skids make this crate a better protector of contents than the one opposite. The new crate saves material and labor. It requires 18% less lumber. It is made with only 26 pieces of material; the old crate required the cutting and fitting of 37 pieces.

This crate was formerly used by an American manufacturer for packing a piece of heavy machinery. This shipper, alert to the possibilities of reducing damage to goods in transit and of rendering better service to his customers, sought the co-operation of a Weyerhaeuser crating engineer. The better crate opposite was evolved.

Do Claims Compensate for Damaged Freight?

A DEALER has waited several weeks for a shipment ordered by wire. His customer is patient but insists that the delay is proving costly.

The goods finally arrive—in badly damaged condition. More delays and disappointments.

A claim can be filed against the railroad, but arguments and damage claims are poor substitutes for goods sorely needed.

THE mere monetary loss involved in a freight claim is but one chapter in the story of damaged freight. That priceless adjunct of a growing business, the good will of the dealer and his customer, is impaired.

That is why broad-visioned executives in all lines of business are investigating the subject of better packing. They are looking to their shipping departments as one means of reducing the percentage of customer turnover. Using safe packing as a new selling tool, as another aid in outstripping competition, and as a creator of good will.

THROUGH the redesigning of crates and changes in packing methods, damage to goods in transit can be materially reduced. At the same time substantial savings can often be effected through reduction in packing costs and transportation charges.

One shipper, who uses 300

cars of crating lumber annually, reports that, through the co-operation of a Weyerhaeuser crating engineer, he is now saving 25% of the lumber formerly required for one of his crates, and 18% on another; another shipper states that, through the

use of a lighter species of lumber and a new design, he has reduced the shipping weight of one item sufficiently to effect an annual saving of \$10,000 in freight charges alone.

Every day Weyerhaeuser crating engineers are on the job showing shippers how to prevent shipping losses, and in many cases pointing out large savings that can be made in their packing practices.

Frequently, crates that appear sound to the casual observer, fail in action because certain hazards of transportation have been overlooked or disregarded in the crate design.

The drawing above shows the bottom of a standard crate used by a manufacturer in shipping an article weighing several hundred pounds. Heavy packages of this character are seldom lifted. They are usually dragged or skidded in the direction of the long dimension. The bottom of this crate is such that the crate cannot be dragged across the floor without danger of tearing loose some of the frame members with possible consequent damage to the contents.

Chance for damage from this particular hazard has been eliminated in the redesigned crate shown below. Note that two bottom members extend the full length of the crate and provide a surface on which the crate may be skidded without danger of loosened nails or frame members.

WITHOUT obligation or cost to you, a Weyerhaeuser practical crating engineer will come to your plant, and with the co-operation of your shipping department, redesign your shipping containers to fit the product to be packed.

Lumber is the standard material for shipping containers. For this purpose, this organization offers to factory and industrial buyers, from its fifteen distributing points, ten different kinds of lumber of uniform quality and in quantities adequate to any shipper's needs.

A booklet, "Better Crating," which outlines the principles of crate construction and explains the personal service of the Weyerhaeuser engineers, will be sent on request to any manufacturer who uses crating lumber.

Weyerhaeuser Forest Products are distributed through the established trade channels by the Weyerhaeuser Sales Company, Spokane, Washington, with branch offices at 208 South La Salle Street, Chicago; 220 Broadway, New York; Lexington Building, Baltimore; and 4th and Robert Streets, St. Paul; and with representatives throughout the country.

WEYERHAEUSER FOREST PRODUCTS
SAINT PAUL • MINNESOTA

Producers for industry of pattern and slash lumber, factory grades for remanufacturing, lumber for boxing and crating, structural timbers for industrial building. And each of these items in the species and type of wood best suited for the purpose.

Who Will "Stand By, Consenting"?

"Stand by consenting" like Saul at Stephen's stoning; consenting to the dishonor of the name of Uncle Sam; consenting to the wrong and hurt of millions of the most industrious and thrifty of their fellows—even to their own personal hurt and wrong? Some do even more than "hold the clothes of them that stoned"—hold the *contents* of the clothes of *them that are stoned*! The mass of the readers of this are undoubtedly on the side of right and justice, when they understand, as they will understand when they read this page—far better when they read the book it advertises (no profit to advertiser, author or publisher; every dollar—and more—goes to publicity for the good cause advocated.

THE GIST OF IT ALL

The nation has had a Postal Savings Bank since January, 1911.

Every other savings bank in the world makes at least a pretense of serving the interest of depositors, getting for them the largest possible returns consistent with safety and availability.

The Postal Savings Bank has been shackled by the opposite rule, attempting to get from depositors as much money as possible for the least possible interest, paying them only 2 per cent per annum, on money left in the bank at least one year. In practice this return is less than $1\frac{1}{2}$ per cent. Furthermore, the law permits the funds in the Postal Savings Bank to be loaned to commercial banks at $2\frac{1}{4}$ per cent, the banks loaning it to the Government, and to the people, at anywhere from two to four and five times that rate, and yet at no time has the market price for money on the solidest security been less than $3\frac{1}{2}$ to 4 per cent, and today is $6\frac{1}{2}$ to 8 and 9 per cent. It is now proposed:

First—The Postal Savings Bank shall be open and accessible to all without limit as to amounts that may be deposited, and interest thereon paid for any period of time, as is customary with commercial banks.

Second—These deposits shall be loaned at the market price for money on security that is good beyond question. This should make, in these times, the net income for deposits at least 6 per cent, gradually diminishing to 5 or less as world prosperity returns.

Third—Four per cent semi-annual compound interest will go directly to depositors.

To Men of Business

To men of business, "big" and "little." To all who toil.
To stimulate "thrift and saving" among the millions who labor—such as the world has never before seen.

To stabilize business, build confidence, pour the oil of peace and prosperity in the troubled waters of unrest.

To get for YOU who are now "thrift" 4 per cent, compounded semi-annually, on your "daily balance" of every surplus dollar you possess—even the dollars in your pocket, cash drawer and safe.

To get for YOU whenever you want to "borrow" money, all you want and an adequately secure, for "long time" or "short time," at the "market price for money."

Without an iota of "fiat" fallacy, without an atom of "inflation."

Without a shadow of "injustice" or of "favoritism" to any "class" or "interest." To do all this:

Unfetter the existing Postal Savings Bank, now "shackled"—hamstrung—by cunning, short-sighted, selfish greed.

Three Billion Dollars

"REAL MONEY"—INTEREST FREE. No "bluff" about it, no "magic," no "fiat" fallacy, no "inflation."

One hundred and twenty million dollars or more in taxes, yearly, saved right in your pocket and mine!

All available by a little "practical sense" and JUSTICE—see the book for details.

For details, facts uncontroverted, arguments unanswered—unanswerable—see the book "THRIFT AND PROSPERITY," by Senator Morris Sheppard, of Texas, and John B. Alden, Neshanic, N. J., farmer, ex-editor and book publisher, \$1.00—see below.

PUBLIC OPINION is irresistible. YOU help make it. READ the book for facts, simple, overwhelming logic. WRITE to Congressmen, Senators, Editors, Public Men: ask them "Why not?" Tell your thought. Discuss with neighbors.

Honesty is the best POLICY. Godliness is PROFITABLE—economic truth, not buncombe, not cant. Pleased customers more PROFITABLE than "skinned" customers. Dropping water wears stone—Keep at it. Ink beats dynamite. Pen mightier than sword.

Fourth—The balance of the profits shall be paid twice a year into the United States Treasury, thus making possible the reduction of taxes and thereby benefiting the whole citizenship, including, of course, the depositors. This, it is estimated, should bring into the U. S. Treasury, without taxing anybody one cent, an annual income of at least \$120,000,000, to possibly \$300,000,000 or more.

Fifth—Every banking institution in the United States in good standing may become an agent for the Postal Savings Bank, both to receive deposits and to make loans, receiving a small commission on both deposits and loans.

The Postal Savings Bank will thus become the greatest and strongest bank in the world, one vast national reservoir of the people's savings, available for loans to all who furnish proper security. There will be no favoritism to any class or interests—practically no limitation to loans except the limitation of good security and use in harmony with public good.

Sixth—The present gold standard is not affected and will be permanently maintained, yet gold is made no longer either a fetish or a scarecrow.

Seventh—The Postal Savings Bank will be placed beyond the power of domination by any interest or class. It will have no power of either inflation or contraction, these powers being left in the exclusive possession of the existing Federal Reserve Banks.

Eighth—It will quickly mobilize and put into ordinary bank channels over three billion dollars (\$3,000,000,000) of money not now in any bank—the identical kind of money that is now the foundation resource of all banks.

Ninth—With this bill in operation there will be scores of millions of depositors, instead of half a million as at present, with deposits exceeding thirty billions, possibly soon nearer one hundred billions, instead of one hundred and fifty-five million deposits as when this is written.

Bankers with Brains, Vision,

Conscience and Patriotism (plenty of all four cordially recognized) will see, not antagonism, but co-operation in an unshackled Postal Savings Bank.

Bank prosperity goes naturally with industrial prosperity which the freed Postal Bank will enormously stimulate.

PATRIOTISM—the freed Postal will absorb the entire National debt and provide resource practically unlimited for National emergencies, at low interest, without perceptibly trenching on commercial funds.

CONSCIENCE—it is not believable that honorable bankers approve of the way Uncle Sam has been "used" to get the money of Postal Bank depositors at one-third to one-fifth of the "market price for money"—95 per cent of it going to bankers' use.

PROFIT—legitimate, honorable, in return for economic service, will go to bankers in commissions on both deposits and loans of the Postal Bank—profits 100 times greater than had in the past from "skinned" depositors in Postal.

Balking Bandits and Burglars

No more U. S. mail robberies; no more pay-roll "hold-ups;" INCIDENTAL results of an unfettered Postal Savings Bank.

Every certificate of deposit, whether \$1 or \$1,000, is "to order," or "to bearer," at the option of its owner; if "to order" bandit or burglar can't "cash" or "pass" without identification and consequent arrest—no inducement to steal or rob.

Another INCIDENTAL result is, certificates of deposit are good anywhere in the United States—or world—the same as "gold certificates," thus doing away with present enormous cost of "bank exchange," and risk of money transportation.

An unfettered Postal Savings Bank would bring billions of dollars to bankers—bring tens of billions to men who toil—justly, expeditiously, bring prosperity and "peace"—in exchange for the "economic war" of the past—and of the present.

THE BOOK TABLE *Continued*

between his country and England in their common ideals of law and justice and their similar codes of manners and morals. And, finally, he came to believe that the greatest of all political tasks was to effect an understanding between these two great self-governing peoples, constituting, in his thought, the backbone of modern civilization. In a letter to me, written June, 1916, he said: "The thing, the *only* thing is—a perfect understanding between the English-speaking peoples. That's necessary and that's all that's necessary. We must boldly take the lead in that. I frankly tell my friends here that the English have got to throw away their damned arrogance and their insularity and that we Americans have got to throw away our provincial ignorance ('What is abroad to us?'), hang our Irish agitators and shoot our hyphenates, and bring up our children with reverence for English history and in the awe of English literature. This is the only job now in the world worth the whole zeal and energy of all first-class, thoroughbred English-speaking men. We must lead. We are natural leaders. The English must be driven to lead."

Under the impulsion of these great convictions and carrying them forward fearlessly, it came about that he and the President did not see eye to eye as to policies and procedures. Page did not falter, but pounded away at the President himself and at his wise, unselfish old friend, Colonel House. It is a strange, frank correspondence. These volumes relate in a moving way how, after we finally entered the war in April, 1917, the pent-up conclusions of Page's fiery spirit poured forth to the Government in suggestions of genuine foresight and good sense. The plain American journalist became an international statesman who not only had held together the two countries for their mighty association, but by discernment and intuition indicated the lines of common endeavor most suitable for winning the war.

I did not see my old friend after he came home to die. The victory had been won and he heard from his bed the ringing of the bells and the shouting. I know that he faced death like a proud man, knowing that he had fought stoutly for the great faith and had found a place in the hearts of his countrymen and perhaps of all English-speaking peoples.

WANTED—CARTOONS

THE OUTLOOK wants to receive cartoons from its readers, clipped from their favorite newspapers. Each cartoon should have the sender's name and address together with the name and date of the newspaper from which it is taken pinned or pasted to its back. We pay one dollar (\$1) for each cartoon which we find available for reproduction. Some readers in the past have lost the dollar bills to which they were entitled because they have failed to give the information which we require.

Preventing Lost Motion Saves Money

The Mail-bag on the Building denotes Despatch of Business. The Postal Life Insurance Company lives up to the meaning of its Trade-mark without impairing

Safety Saving Service

or any other essential of sound life insurance.

"SLOW" and particularly "Slow Pay" are not good qualities of a reputation. Nothing is appreciated in these modern days like SPEEDING UP the conduct of business. Applicants receiving their policies promptly, beneficiaries the payment of their claims without delay, and correspondents prompt replies, say good things of a company that so deals with the public.

Such an institution is the Company reaching the public *direct*, without the employment of agents, but officially and personally at the Home Office or by correspondence:

POSTAL LIFE INSURANCE COMPANY

Resources \$10,000,000

Annual Income \$2,000,000

Insurance in Force \$43,000,000

The Postal exemplifies *Safety* because of its ample funds and securities—more than sufficient to meet every obligation now and in the future. Its well-known non-agency *Saving* (9½% guaranteed dividends) wins and holds policyholders. Its POLICYHOLDERS' HEALTH BUREAU, with its periodical HEALTH BULLETINS, renders a distinctive *Service* in the prolonging of policyholders' lives and lowering the cost of their insurance to the Company.

The facility, indeed the *Speed*, with which its business is transacted through the mails is winning it golden opinions.

Not using the cumbersome and expensive agency system eliminates many misunderstandings, uncertainties and delays, while reducing the insurance-seeker's net outlay for his protection.

FINANCIAL DEPARTMENT

The Financial Department is prepared to furnish information regarding standard investment securities, but cannot undertake to *advise* the purchase of any specific security. It will give to inquirers facts of record or information resulting from expert investigation, and a nominal charge of one dollar per inquiry will be made for this special service. All letters of inquiry should be addressed to THE OUTLOOK FINANCIAL DEPARTMENT, 381 Fourth Avenue, New York.

INTEREST RATES ON MORTGAGE BONDS

THERE is a growing interest on the part of investors in first-mortgage real estate bonds. This class of securities is becoming increasingly popular. Investors, however, frequently are puzzled over the fact that the prevailing interest rates on these bonds show a considerable variance in different parts of the country, and during the past year we have received numerous requests for an article explaining how this comes about. It seemed to us that the best explanation would be afforded by the people who deal in this class of bonds, and we therefore wrote to leading concerns in the different sections,

asking them to give us the prevailing rates of interest in their section, and to explain just how these rates are fixed.

The letters we received in reply, we believe, will afford the best answer to these questions, and we take the liberty of quoting from them. From the Middle West comes this interesting information:

"On straight mortgages the rates vary from $5\frac{1}{2}$ per cent to $6\frac{1}{2}$ per cent at the present time, with 6 per cent generally the prevailing rate on the average mortgage.

"It is our observation that the rates on mortgages are deter-

Do you invest? Let this service assist you

OUR monthly booklet of Investment Recommendations aids many bond buyers in shaping their investment policies.

The booklet contains a carefully selected list and descriptions of bonds, so diversified as to afford the investor a range of choice among various types, maturities, and yields. Accompanying the booklet is a leaflet

on some phase of investments of interest and value to bond buyers.

At any of our offices you can obtain this booklet and the personal assistance of our representatives in selecting bonds best suited to your needs. In addition, if you will furnish us a list of your holdings, we are prepared to review them and to suggest suitable exchanges.

mined largely by the prevailing rate of interest on other securities, although the rate does not change as quickly as it does on listed securities. When the money market tightened and rates on other classes of securities went up, it was quite some little time before the interest rate on mortgages followed the same course, and likewise they have been slower in coming down.

"We feel that the influence of the interest rate on other securities is largely reflected on the interest rate of first mortgages through the medium of the insurance companies.

"The life insurance companies are among the largest investors in first mortgages on city properties and a large percentage of their investments is comprised of first mortgages. As the interest rates on listed securities began to rise higher than on first mortgages, the insurance companies began to divert their funds from first-mortgage investments to investments in listed securities. This of course reduced the supply of money available for first mortgages very considerably, and in order to make them attractive and bring the insurance companies back into the market it was necessary for the interest rate on first mortgages to be increased, so that they could compete with listed securities.

"Similarly, when the interest rate on listed securities began to go down the life insurance companies began to divert a large portion of their funds to first-mortgage investments, with the result that the demand for first mortgages was greater than the supply and a lower interest rate is resulting.

"On the smaller mortgages the interest rate to-day is about the same as it was before the war. On the larger mortgages I would say that the interest rate is probably one-half of one per cent higher than it was before the war.

"The interest rate on first-mortgage bond issues in this section is now from $\frac{1}{2}$ per cent to seven per cent, which is about $\frac{1}{2}$ per cent to 1 per cent higher than before the war.

"In this field the influence of the insurance companies is not felt, which accounts for the fact that the interest rate is about $\frac{1}{2}$ per cent to 1 per cent higher than on the straight first mortgages.

"In general, however, the same conditions of supply and demand of funds available for investment in this field determine the interest rate the same as in any other line. When interest rates are higher in other classes of securities, funds are steadily withdrawn from first-mortgage bond investments for investment in other fields, with the result that it is necessary to increase the interest rate in order to attract the investor, and during the stringency of the money market rates went as high as 8 per cent last year at this time. As rates on other securities have dropped, the funds have returned to the first-mortgage bond field, with the result that they have driven down rates to their present point.

"In a great many cities we find the financial interests are not organized to

The Greatest Safeguard

WHEN you are considering the investment of money, the greatest safeguard you can have is your own common sense.

Common sense tells you that there is a definite limit to the earning power of money, and that beyond that limit you are groping in perilous uncertainty.

Our Safeguarded First Mortgage Investments in the Nation's Capital are common sense investments. The interest return is the highest consistent with the standards of safety back of our record:

handle first mortgages and first-mortgage bonds and have not made the effort to educate the people to investment in this class of security.

"We feel that this condition largely accounts for the fact that interest rates in such towns are considerably higher than in cities like Chicago and New York, even though the security may be just as good."

From the Northwest we received this:

"The present prevailing rate on small loans in the Pacific Northwest at this time is 7 per cent. While it is true that some agencies are advertising 6 per cent money for choice home loans, close examination reveals the fact that there are always conditions attached to them, such as life insurance requirements and other conditions that really equalize the rate to about 7 per cent. This rate is subject to an increase up to 8 per cent, according to location.

"That is to say, the better neighborhood and surroundings in close proximity to the best section of the city command lower rates than property otherwise as desirable but in the outlying sections of the city or its environs. The maximum is 8 per cent, the scale running from 7 per cent to 8 per cent, depending upon location, etc.

"Your question as to how these rates are fixed is probably answered in the above, with the exception that your question may go to the reason for the base rate, which is as above stated, 7 per cent. The foregoing gives you my reason for the sliding scale from that up. I do not know that I can successfully answer the question as to what fixes the base rate of 7 per cent. It has been recognized as the normal base rate for loans in this class for a good many years, and rates here have always been normally higher than Eastern mortgage rates.

"The fact that the base rate is higher than Eastern rates is, I think, very easily explained by the well-recognized fact that it is a newer country, far removed from the large financial centers, and naturally and normally requires a higher rate to attract money. This is becoming more equalized, however, as the old rates for safe loans in years gone by were as high as 12 per cent. I have not attempted to discuss rates during the war and for the last two years up until about six months ago, as they were abnormally high and fluctuating."

A New York City concern wrote us as follows:

"At the present time we are loaning money at 6 and 6½ per cent. In New York it is increasingly difficult and almost impossible, in fact, to get really good loans at 6½ per cent. We closed one loan on an apartment-house last week at 6 per cent, and I am inclosing a circular.

"Outside of New York we still negotiate on a 6½ per cent basis. It is probable, however, that before long we will be back to 6 per cent everywhere, as

there is steadily increasing difficulty in getting 6½ per cent for our customers on really sound and meritorious building projects.

"You ask how these rates are fixed. They are fixed simply by the law of supply and demand. When we could get 7 per cent for our customers with safety we got it. As more money became available interest rates naturally declined and we had to lower our rate to 6½ per cent, because it was only for a comparatively short time when rates in general were high that borrowers having really good loans were willing to pay the 7 per cent rate. Now, as I have stated above, we are contemplating a further reduction of the rate in order to be able to continue to supply our customers with good loans."

The following statement came from our correspondent in the South:

"The question is sometimes asked by persons living in other sections than the South, 'Why do Southern investments offer a higher rate of interest than do exactly similar investments in other parts of the country?' The reason is simple, and so obvious to those who live and do business in the South that they never question it. Briefly stated it is as follows:

"First, the South is in the midst of a period of great industrial and commercial expansion, which makes necessary an extensive programme of building.

"Second, the liquid capital of the South is not sufficient to finance these improvements; outside money must be brought in.

"Third, the resultant demand for funds to carry on legitimate development is so great as to swamp most of the ordinary agencies for supplying this money.

"Fourth, the great investing public has not yet had time to become thoroughly awakened to the situation in the South and the splendid opportunity it offers them.

"Actual construction contracts awarded in the sixteen Southern States in 1921 amounted to \$400,000,000. Preliminary announcements of building projects during the year involved nearly \$1,000,000,000. In many of the cities half of the total valuation of permits issued was for dwellings, apartment structures, and hotels. In the last quarter of 1921 construction contracts amounted to \$110,171,489, and projects initially announced to \$241,773,777. This indicates that 1922 will witness more building activity even than 1921, which surpassed all previous records in volume.

"Authorities agree that the period of

Six Types of Investors Which Group Are You In?

The Experienced Investor

The man, who as trustee or executor of an estate, or as investment official for a corporation, or who is seeking sound investments for his own funds, desires a non-fluctuating, non-speculative investment with as high an interest rate as absolute safety will permit. If you are in this group let us tell you about an investment field in which your funds will yield a steady and attractive income, ranging as high as 7%.

The Woman Alone

The woman deprived of her husband's protection often has her interest intrigued by questionable investments. The best protection for a woman, upon the safety of whose investments rests the welfare of herself and those dependent upon her, is a connection with a reputable investment banker.

The Father With Foresight

The man, ambitious for his son or daughter, thoughtful of his family's future and protection. George M. Forman & Company's plan safeguards the interests of family and children against any emergency.

The Speculative Buyer

The man easily enthused and often misled by the mirage of big, quick profits. Were he to figure his losses on poor investments against an occasional profit he would find that his net income amounted to less than the same investment would have brought in safe securities, such as he can now learn about through the plan of George M. Forman & Company.

NO matter in which group you find yourself there is now an investment plan that helps you to save, protects your savings, and pays as liberal a yield as is consistent with this safety—up to 7%.

There is but one fundamental upon which the safety of your investment depends—the integrity of your investment house. This requirement is well met by George M. Forman & Co., who from a 37 year association with sound investments, with attractive yields, have prepared a plan for you. Mail the appended coupon for the booklet, "How to Select Safe Bonds."

The Man Who Spends All

To the man who finds it extremely difficult to save it is especially important that a way be found that not only encourages him to make saving a habit but also assures him of absolute safety. A plan awaits every man or woman in this group.

The Savings Depositor

As funds accumulate many savings investors take advantage of the Forman Plan which pays an attractive yield without affecting the safety of their investment.

THE PLAN FOR YOU

A special service awaits you, regardless of which type of investor you may be. Tell us your investment problem and let us send you our interesting booklet. *George M. Forman & Co. Dept. 611, 105 W. Monroe St., Chicago, Ill. Gentlemen: Please send me your booklet, "How to Select Safe Bonds," and tell me about your plan for turning my funds into an investment at attractive yield.*

Send for large, free pamphlet (D-19) containing valuable information that you may need.

C. S. DEMAREE, legal blank publisher,
708 Walnut, Kansas City, Missouri

greater expansion thus begun will continue for many years—probably for the next half-century. This means that money in large sums must be brought into the South from all sections of the United States for a long time to come.

"From this condition results the attractive legal rate of interest paid in the South—a rate which is on the average 1 per cent more than is paid in fully developed sections."

These letters give the prevailing rates. Boiled down, the answer to the question

as to how the rates are fixed would seem to be contained in three words—supply and demand. The rate depends upon the supply of money and the demand for it. The general rule that the higher the yield, the lower the degree of safety, apparently does not apply as forcibly to this class of investments as to bonds and stocks generally. But there is one extremely important rule to be observed in buying real estate mortgage bonds, and that is, be sure about the standing and reliability of the house with which you deal.

THE OUTLOOK CLASSIFIED ADVERTISING SECTION

Advertising Rates: Hotels and Resorts, Apartments, Tours and Travel, Real Estate, Live Stock and Poultry, sixty cents per agate line, four columns to the page. Not less than four lines accepted.

"Want" advertisements, under the various headings, "Board and Rooms," "Help Wanted," etc., ten cents for each word or initial, including the address, for each insertion. The first word of each "Want" advertisement is set in capital letters without additional charge. If answers are to be addressed in care of The Outlook, twenty-five cents is charged for the box number named in the advertisement. Replies will be forwarded by us to the advertiser and bill for postage rendered.

Friendly Tucson bids you come

Glorious outdoor life all the sunny winter awaits you in Tucson, garden city of Arizona.

Golf, motoring, horseback-riding, hunting, polo, interesting old missions, colorful Indian life, or just luxurious, lazy enjoyment of the invigorating sunshine—for rest, play, and physical upbuilding there is no finer city.

Little Rain—Dry Air

Half a mile above sea-level, Tucson lies on a level mesa encompassed by gorgeously colored, lofty peaks. Rainfall is slight. No fogs. The air is dry and crisp. From October to May the mean monthly temperature never exceeds 72° or falls below 49°.

Reduced Fares

Friendly Tucson, with its 25,000 hospitable people, bids you COME. Main-line Pullmans via Rock Island or Southern Pacific will now bring you at reduced fares.

A modest income will command every pleasure and care. New experiences, new energy, and vibrant health can be found here. The illustrated booklet, "Man-Building," will tell more of life in Tucson. Just mail the coupon.

BY THE WAY

"We all have our little tricks in speech or in writing," says Philip Hale in the Boston "Herald." "Jones will never forsake 'however;' Brown has sworn fidelity to 'nevertheless;' Robinson begins every other sentence in a speech, stump or after-dinner, with 'Now.' The word 'angle' is often overworked. 'From this angle it seems.' There was a time when 'it bulked' was used *ad nauseam*. 'It is a far cry' is another overworked phrase." "What's the big idea?" "The right slant," "Good eats," "intrigued," "You said it," are other bromidian expressions that are likely soon to go to the melting pot.

"Tom Sawyer" was not completed all at once. Mark Twain had to stop when he was half through and wait two years before he knew how to finish the story. "At page 400 of my manuscript," he says in a chapter of his hitherto unpublished "Autobiography" in "Harper's Magazine," "the story made a sudden and determined halt and refused to proceed another step. . . . The reason was very simple—my tank had run dry." After a couple of years he took it up again. "It was then that I made the great discovery that when the tank runs dry you've only to leave it alone and it will fill up again, in time, while you are asleep. . . . There was plenty of material now, and the book went on and finished itself without any trouble."

"During a recent visit to the Tower of London," a subscriber writes, "while in the armory, we saw a mace that bore the inscription, 'Borne before Charles II.' 'Born before Charles the Second!' another visitor said; 'how could that be?'"

"The story told by Bishop Candler, of Atlanta, and quoted lately in your column, was told to me in the summer of 1857 by the Rev. James R. Bourne." So begins a letter from a subscriber, and makes us feel blue at having inadvertently worked off another old chestnut on our much-enduring readers. But this reassuring sentence follows: "I have never heard it since except perhaps two or three times when I told it myself, nor have I ever seen it in print before." Apropos of another subject, our friendly critic continues: "Rather curiously, the next year at school I studied Gillespie's Surveying, and he describes a method of mapping which Mr. Kennan describes as being used by Alexander Graham Bell."

Only two men have succeeded in swimming across the English Channel—Captain Webb and William T. Burgess. An American recently tried and failed. Luck seems a factor that decides success or failure in this feat, for if the shifting winds and tides prove unfavorable the attempt is foredoomed to failure. Webb swam the Channel in 1875, in 21 hours 45 minutes. Burgess accomplished the feat thirty-six years later, in 22 hours 25 minutes.

FACTS

About A-B-A Cheques

- universally used by travelers in every land.
- your counter-signature in presence of acceptor identifies you.
- safe to have on the person because they can not be used until they have been countersigned by the original holder.
- safer than money, and frequently more convenient than Letters of Credit because the bearer is less dependent on banking hours.
- issued by banks everywhere in denominations of \$10, \$20, \$50, and \$100.
- compact, easy to carry, handy to use.

The secret the shoemaker revealed to this boy is revealed to you by Dr. Eliot of Harvard in a free booklet. Send for it now.

What Lloyd George learned from the old shoemaker

YOU read a speech of David Lloyd George, and you say:

"How did he learn to think so clearly and express himself with such power? What college did he attend?"

His college was the cobbler shop in a little village in Wales; his teachers were his uncle the cobbler—and a few really worth-while books.

It was those books, wisely selected for him, and systematically read, that gave Lloyd George his start.

Why not decide to-day to stop wasting your reading hours? Why not say: "From now on I will read only the books that will build me into a more successful man or

woman; the books that have proved their building power in other lives."

You can do it, if you will. Your reading problem has been solved; the solution is contained in a free booklet which every ambitious man and woman should own. It is called "Fifteen Minutes a Day" and it tells the whole story of

DR. ELIOT'S FIVE-FOOT SHELF OF BOOKS

*The Fascinating Path to a
Liberal Education*

Every well-informed man and woman should at least know something about this famous library.

The free book tells about it—how Dr. Eliot has put into his Five-Foot

Shelf "the essentials of a liberal education," how he has so arranged it that even "fifteen minutes a day" are enough, how in pleasant moments of spare time, by using the reading courses Dr. Eliot has provided for you, you can get the knowledge of literature and life, the culture, the broad viewpoint that every university strives to give.

"For me," wrote one man who had sent in the coupon, "your little free book meant a big step forward, and it showed me besides the way to a vast new world of pleasure."

Every reader of *The Outlook* is invited to have a copy of this handsome and entertaining little book. It is free, will be sent by mail, and involves no obligation of any sort. Merely clip the coupon and mail it to-day.

Send for this **FREE BOOK**

Before you spend another penny for books, get a copy of "Fifteen Minutes a Day"—the free guide book to reading pictured on this page.

It's a book that tells how to turn wasted moments into growth and increased power. It's ready and waiting for you; and it's entirely free. Send for it at once.

Old Information Is Misinformation

The World changes. Old governments are passing; new governments, territories and parties are in the forming. The discoveries and inventions of to-day are superseded by the achievements of to-morrow. The old-fashioned, bound, stitched and glued Encyclopaedia served its purpose in a past generation. A new age demands a new Encyclopaedia—a reference work that can keep pace, step by step, with the New World.

Nelson's Loose-Leaf Encyclopaedia, with its patented loose-leaf binding device, is the only Encyclopaedia that can discard the old and out-of-date and substitute the new and living in its place. IT IS THE ONLY PRACTICAL PLAN FOR RELIABLE INFORMATION.

NELSON'S

Perpetual Loose-Leaf

ENCYCLOPAEDIA

& Research Bureau for Special Information

A few of the many reasons why you should own Nelson's

It covers the whole field of knowledge—over a million topics—from the dawn of civilization to September, 1922.

It is accurate, concise, authoritative—with over 1,000 contributors, each a specialist in the subject assigned to him.

It is fully and beautifully illustrated—over 7,000 illustrations, colored plates and maps, photographs, reproductions of famous paintings and line drawings.

Its Editorial and Advisory Boards include the finest minds of the world—men at the very head of the various fields which they represent.

It is *always* new—kept constantly down-to-date by the issue, every six months, of 250 or more new pages, old out-of-date facts and figures being eliminated and new ones supplied to take their place.

It is supplemented by a Research Service Bureau which will supply, free of cost, any additional material which you may desire.

It is an authority, used by government departments, libraries, schools, and educational institutions throughout the country.

It is, like history itself, by means of the patented loose-leaf binding device, continually in the making—always complete, but never completed.

It saves you the expense of buying a new Encyclopaedia every five or six years. It is a complete Reference Library and equal to a College Education.

It is *American*, made in America for Americans. Librarians everywhere, when asked where to find the latest and most accurate information, answer

It's always new—Look it up in Nelson's—cannot grow old.

Free Educational Reading Courses

Nelson's Reading and Study Courses in UNITED STATES HISTORY, BUSINESS ECONOMICS, NATURE STUDY, AGRICULTURE and HOME ECONOMICS are declared by educational authorities to be equal to a college course and training in each of these departments.

Nelson's Free Research Bureau

FOR SCIENTIFIC REPORTS AND SPECIAL INFORMATION AND CORRESPONDENCE. Every purchaser of Nelson's is entitled to free membership in this Bureau. If at any time you are in doubt on any subject, old or new, write to this Bureau with the positive assurance that you will promptly receive the latest obtainable and most dependable information.

A CITY THAT OWNS A RAILWAY

BY WILL BARNES

FIFTY or more years ago, when the early settlers ventured out into the inhospitable depths of the great desert that covers so much of southeastern

"THE CITY OF PRINEVILLE RAILWAY"

Oregon, they found a charming little valley at the junction of two rollicking mountain streams. These had cut their channel eight or nine hundred feet down through the hard lava flow that ages and ages ago spread itself in a sheet of molten rock over this region. One stream was called the Ochoco and the other, from its characteristic course, was unhesitatingly called Crooked River. These early pioneers may have wondered just where these clear, cold streams came from in the midst of such a desert. Enough for them, however, that their waters flowed so close on the surface as to make it a comparatively simple job to turn it out onto the level land of the valley for irrigating purposes.

Thus began the little settlement of Prineville. All about them, up on top of the lava plains, lay one of the finest live-stock ranges to be found in all the West, especially in winter. Naturally they became range live-stock men, and as such prospered. For forty or more years Prineville was the central point of southeastern Oregon. They had dreams of some day rivaling Portland, far to the northwest. But alas for their future! no railway came near them. To the west, along the coast, and again to the north, along the great Columbia River, men built railways, but none ventured into that desert of lava rock and pumice. Then came the well-remembered fight between two great railway builders, each eager to outstrip the other in being the first to open up the huge belt of timber that covered the eastern slopes of the Cascade Ranges along the head-waters of the Deschutes River. For some time it looked as if this line would touch Prineville on its way to the south from the Columbia, but fate decreed that the road could be most economically built by going considerably to the west of the town, so their one chance for a railway was everlastingly blasted.

For about ten years they hoped against hope that the builders of the road up the Deschutes River would take pity on them and at least build a branch line into their town. But their hopes

The "Daily Dozen" builds shoulders and back muscles in which you can take pride.

Overweight? 10 minutes a day of the "Daily Dozen" to music will rid you of dangerous excess flesh.

Why be run-down, emaciated, half-alive? The "Daily Dozen" quickly builds you up.

Try the "Daily Dozen" To Music!

FREE PROOF that Ten Minutes' Fun a Day Gives You Health, Strength and Vitality

A GREAT and new idea—and more fun than a game! You cannot appreciate the fascination, the glow of health, the amount of "pep" you acquire from exercising to music until you have tried it!

Ten minutes a day of genuine fun will keep you fit. Walter Camp has made it possible. The famous "Daily Dozen" Exercises of this great Yale coach—exercises that reach and strengthen every muscle in your body—have been set to music on phonograph records, with Mr. Camp's special permission.

You put a record on the machine and the lively, spirited music carries you through ten minutes of the most exhilarating fun. A clear voice on the record gives the commands, telling you exactly what to do. You are swept along with a buoyancy that will amaze you. And the result of this ten minutes' fun a day is a glowing health, a glorious vitality, a springy step, a bright eye—and in short, a whole, healthy, breathing and zestful man or woman tingling with the very glow of life.

But the famous "Daily Dozen" do not stop their wonderful work there. Far from it. If you are overweight they will reduce your waist line. If you are underweight they will put firm, sound flesh on you. They revitalize your body. They revive weak, flabby muscles and rebuild them into live, vital tissue. Thousands of men and women, boys and girls are regaining health, strength and vitality through use of the "Daily Dozen" Exercises.

The "Daily Dozen" Build Muscle

Increase your wind, develop your chest, strengthen your powers of endurance and your energy to work. Put on muscular shoulders, acquire strong stomach

and superb physique—and enjoy yourself every minute you are doing it.

You can say good-bye to constipation, headaches, backaches, insomnia, run-down condition, nervousness, emaciation, want of appetite and that tired, exhausted feeling

Five Days Free Trial

You cannot fully appreciate the real joy of doing the "Daily Dozen" to music until you try it. So we want to send you, absolutely free for five days, the five full-size, ten-inch, double-disc records, playable on any disc machine, containing the complete Daily Dozen Exercises, and the 60 actual photographs showing clearly every movement. A beautiful record album comes free with the set.

No need to send any money. Simply mail the coupon below. Enjoy the records for five days, and if for any reason you are not satisfied, return them and you owe nothing. But if you decide to keep the records, you can pay for them at the easy rate of only \$2.50 down, and \$2 a month for four months until the sum of \$10.50 is paid. Thousands of people have paid \$15 for the same system.

Simply mail the coupon and see for yourself, at our expense, the new, easy, pleasant way to keep fit. It will add years to your life and make you happier by keeping you in glowing health. Mail the coupon to-day. Address HEALTH BUILDERS, INC., Dept. 611, Garden City, N. Y.

Five Day Trial Coupon

HEALTH BUILDERS, Inc., Dept. 611, Garden City, N. Y.

Please send me for five days' Free Trial at your expense the Complete Health Builder Series containing Walter Camp's entire Daily Dozen on five double-disc ten-inch records; the 60 actual photographs; and the beautiful record album. If for any reason I am not satisfied with the system, I may return it to you and will owe you nothing. But if I decide to keep it, I will send you \$2.50 in five days (as the first payment) and agree to pay \$2 a month for four months until the total of \$10.50 is paid.

Dutton's Books for Children

The enchanting drawings by OLIVER HERFORD make this the most amusing child's book of the season.

The Bird-Nest Boarding House

By VERBENA REED

The bewitching story of a boarding-house kept by little Mrs. Worm in last year's bird nest. Oliver Herford fell in love with it and filled it with deliciously funny drawings—Daddy Long-legs, Winnie Wasp, Lally Ladybug, Col. George B. Grub-Worm, the Widow Grasshopper and all the rest of them. \$2.50

The Pinafire Pocket Story Book

By MIRIAM CLARK POTTER

Whimsical fancies to read to the five-year-old. Many of which appeared in the N. Y. Evening Post. Illustrations by Sophia Balcom. \$2.50

Karl the Elephant

By DHAN GOPAL MUKERJI

The story of how a boy and an elephant worked and grew up together. \$2.00

Little Lucia

By MABEL L. ROBINSON

Author of "Dr. Tam o' Shanter." A capital story for little girls, sound and true. \$1.50

Elizabeth Ann's Delight

By MAUD DOWSON

A genuine fairy tale of delight for any child who plays in a garden. \$2.00

Boys' Book of Physios

By CHARLES RAMSAY CLARKE

Directions for simple experiments with home-made apparatus. Illustrated. \$2.50

Sing a Song of Sleepy Head

By JAMES W. FOLEY

Author of "Boys and Girls," etc. \$2.00

The Shadow Witch

By GERTRUDE CROWNFIELD

A companion to "The Princess White Flame" and equally fine in spirit. \$2.00

Henny and Penny

By BERTHA PARKER HALL

The adventures of twin girls and their brother. Illustrated with silhouettes by Ruth Clements Farrell. \$1.50

Verotshka's Tales

By MAMIN SIBIRIAK

Russian tales through which runs a thread of subtle irony. Illustrations by Boris Artzybasheff. \$2.50

The Story of a Cuckoo's Egg

By HILDA TERRAS

A book for any bird lover. With 8 plates in colors and other illustrations from photographs. \$2.50

The Book of Giants

By HENRY C. LANIER

A gathering of giants, real and legendary, from all lands and books. \$2.00

The Japanese Fairy Book

By YEI THEODORA OZAKI

Japanese fairy tales quaintly related. Illustrated by an artist of Tokio. \$3.00

The New World Fairy Book

By HOWARD ANGUS KENNEDY

Folk tales from the Canadian border, chiefly Indian. Profusely illustrated. \$2.50

Training for Authorship

How to write, what to write and where to sell.

Dr. E. Esenwein

Cultivate your mind. Develop your literary gifts. Master the art of self-expression. Make your spare time profitable. Turn your ideas into dollars.

Courses in Short-Story Writing, Verse, Journalism, Play Writing, Photography, Writing, etc., taught personally by Dr. J. Berg Esenwein

for many years editor of Lippincott's Magazine and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. Real teaching.

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"spare work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photography writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in the Literary Department. The editors recognize it, and they are constantly recommending our courses.

We publish The Writer's Library, 13 volumes, descriptive booklet free. We also publish The Writer's Monthly, the only magazine for literary workers; sample copy is sent on subscription \$3.00. Besides our teaching service, we also a manuscript criticism service.

150-Page illustrated catalogue free. Please Address

A CITY THAT OWNS A RAILWAY (Continued)

ever came to pass. The freighters' outfit and the four-horse stage, and later the auto, were their only means of transportation. Then, with the grim determination of the Western people, the Prineville business men got together and said, "Let's build our own railway." "Can't be done," said some. "No town of three thousand people ever did such a thing," said others. "Railways cost money to build. Where will it come from?" asked many more. But the boosters of Prineville persevered. "Here's our new neighbor 'Bend,' over to the west," they exclaimed. "It's only three or four years old, and it has a railway all to itself. Why can't we have one? Let's show 'em what Prineville can do when she tries." That they had only about three thousand population back of them made no difference.

So they showed 'em all right. Five years ago the town issued \$300,000 worth of handsomely engraved bonds, pledging itself for their payment, and with the proceeds built a road that climbed up the side of the deep canyon onto the level desert above and connected with the other line about twenty miles to the west. Then Prineville celebrated in true Western style. At last they were joined with civilization by bands of steel. Instead of a steam locomotive they secured a gasoline motor that is somewhat like unto a modern motor bus. It is provided with a regulation cowcatcher and at times has been known to make the twenty miles to the junction in one hour flat. Also it carries about twenty passengers. Behind it lumbers the oddest little box car ever seen on wheels, which carries the trunks and express matter. Moreover, that little old gas buggy has been known to haul ten car-loads of cattle at one fell swoop—regular sure-enough cattle cars, be it understood, which they borrow from the railway. On these two vehicles the designation "City of Prineville Railroad" is painted in large letters, and every resident is proud of the distinction borne by his home town of being the only town or city in the United States that owns a regular, honest-to-goodness road-gauge railway.

The management of this rather unique enterprise is intrusted to three business men, appointed by the city Council, who, as was told, serve without pay. These men "hire and fire," adjust rates and fares, boost for business, and in general are the President, Chairman of the board, general superintendent, road master, and section foreman of the entire works. For them the edicts of the Federal Inter-State Commerce Commission have no fears. The decisions of the Railroad Labor Board of Arbitration or the orders of the heads of the great organizations of railway workers affect them not. Coal miners may quit working, but it's the price of gasoline that worries the managers of this road.

Does it pay? Well, just about. They wear, however, that nobody ever expected it to.

FROM THREE TO TEN

These are the years that count. No matter how beautiful the superstructure, it is doomed to ruin if the foundation is not right.

JOHN MARTIN'S BOOK

The CHILD'S MAGAZINE for Children from Three to Ten

is one of the most potent influences for right building in America to-day. No commercial consideration takes precedence over what is right for your child

IT IS THE VERY VOICE OF CHILDHOOD

REFLECTING with unerring precision the child's own point of view. Once introduced into a family, it stays there until the little readers grow up to older magazines. It is the resource of thousands of mothers whose faith and enthusiasm it holds as a sacred trust. John Martin's Book requires no censorship and may be relied upon to interest, companion, inspire, and instruct. The aim of its makers is that no unconstructive thought may ever creep into its pages. Little John Martiners are normal, clean-minded, interesting, loyal little citizens.

IT STANDS FOR AND IMPARTS

Happiness
Confidence
Fun
Companionship
Imagination

Good Manners
Good Taste
Honor
Consideration
Obedience

Truth
Loyalty
Reverence
Self-Respect
Sincerity

JOHN MARTIN'S BOOK

is printed in two colors on tough stock and is so strongly bound that it is practically indestructible. It has a gay cover and there is a picture on every page. It covers the gamut of dreams and interest, from nonsense to Bible stories, from fairy tale to biography, and contains a round dozen of pages with things to do, to make, to guess, to fold, and to color.

IT IS NOT A LUXURY

for it dresses the child mind with humor, good taste, appreciation of the finest in art and reading, wholesome wisdom, and a love of clean FUN. It feeds the child spirit with reverence, loyalty, honor, purity, high ideals and the fundamentals of character that make up the sum of a finer and happier man and womanhood.

Every little subscriber receives a jolly *Introduction Letter* from John Martin, a charming Christmas card, and a host more surprises in endless variety.

ITS PRICE PER YEAR IS \$4.00

SPECIAL OFFER—FOURTEEN MONTHS for \$4.00

JOHN MARTIN'S BOOK ROOM for YOUR CHILDREN

is a charming spot where the BEST BOOKS, not all books, are beautifully displayed, courteously presented, and intelligently selected. It is—

A NATIONAL CENTER for advice to earnest parents about truly formative literature for children of all ages. Place your book orders, both juvenile and adult, with our Book Room. Your goods will be sent post-paid.

RECORD YOUR NAME to receive without cost "John Martin's Best Book List," and "Catalogue of Novelties."

An Architect, a Painter and a Sculptress United in Designing This Exquisite Lamp

The lines, proportions and coloring of most of the lamps you see in these days of commercialism are the work of designing departments of large factories. They are the fruit of a deep knowledge of what makes a "popular seller." But some people, the **Decorative Arts League** committee felt sure, would like a lamp designed purely with an eye to good taste, a lamp of artistic proportions and harmonious tones, a lamp embodying grace, symmetry and beauty rather than the long experience of the "salesman-designer" of what seems most in demand in retail stores. Hence this exquisite little lamp you see pictured, "Aurora" as it has been named by an artist, because of the purity of its Greek lines and tones.

A Labor of Love

For the delicate work of designing a lamp that should be a real work of art instead of a mere unit in a factory's production, and yet should be a practical and useful article of home-furnishing, the League enlisted the enthusiastic cooperation of a group of talented artists—one a famous architect skilled in the practical requirements of interior decorating, one a painter and genius in color effects, and one a brilliant sculptress, a student of the great Rodin in Paris.

They caught the spirit of the League's idea and the designing of a lamp that would raise the artistic standards of home-lighting became to them a true labor of love. Model after model was made, studied and abandoned, until at last a design emerged with which not one of the three could find a fault.

In the exclusive Fifth Avenue type of shops, where lamps that are also works of art are shown, the equal of this fascinating little "Aurora," if found, would cost you from \$15 to \$20—perhaps more. Yet the price of this lamp is but

\$3.50

Think of it!

Only the Decorative Arts League could bring out such a lamp at such a price. And only as a means of widening its circle of usefulness could even the League make such an offer. But with each purchase of this beautiful little lamp goes a "Corresponding Membership" in the League. This costs you nothing and entails no obligation of any kind. It simply means that your name is registered on the League's books as one interested in things of real beauty and art for home decoration, so that as Artists who work with the League create new ideas they can be offered to you direct without dependence on dealers.

Send No Money

No matter how many other lamps you have in your house, you will always find a place just suited for this dainty, charming little "Aurora," 16 inches high, shade 10 3/4 inches in diameter; base and cup cast in solid Medallium, shaft of seamless brass. Finished in rich statuary bronze; brass-bound parchment shade of a neutral brown tone, or finished in ivory white with shade of golden yellow. Inner reflecting surface is old rose. Shade holder permitting adjustment to any angle; push-button socket; six feet of lamp cord; 2-piece attachment plug.

16 inches high; 10 3/4 inch shade; Brass and Medallium

Choice of two finishes, Bronze or Ivory

Every Detail Perfect

One style of ornamentation after another was tried out, by the three talented artists collaborating in designing this lamp—only to yield in the end to the perfect simplicity of the classic Greek lines.

Even such a small detail as the exact contour of the base was worked over and over again until it should blend in one continuous "stream" with the lines of the slender shaft.

The graceful curves of the shaft itself, simple as they seem in the finished model, were the results of dozens of trials. The shape, the exact size, and the soft coloring of the shade were the product of many experiments. The result is a masterpiece of Greek simplicity and balance.

Harmonizes Everywhere

Not a thing could be added or taken away without marring the general effect—not the sixty-fourth of an inch difference in any moulding or curve but would be harmful. And yet with all the attention to artistic effect the practical knowledge of an experienced interior decorator has kept "Aurora" in perfect harmony with the actual requirements of the home.

It blends with any style of furnishing, it adapts itself to boudoir or foyer-hall, to library or living room. And wherever you place it "Aurora" will add taste and refinement besides furnishing, with its tiltable shade, a thoroughly practicable and mellow light wherever required.

Seize this opportunity now. Do not expect to find it again. Do not trust that it will be extended. Mail the coupon today. No money need be sent with it.

COUPON DECORATIVE ARTS LEAGUE
175 Fifth Avenue, New York, N. Y.

\$3.50

You may send me, at the members' special price, an "Aurora" Lamp, and I will pay the postman \$3.50, the entire price, plus the postage, when delivered. If not satisfactory I can return the lamp within five days of receipt and you are to refund my money in full. O.L.

Check finish desired:

Bronze ☐ Ivory ☐

Signed.....

Address.....

City.....State.....

Our Offer

You will rarely, if ever, get such a value again. Send no money—simply sign and mail the coupon, then pay the postman \$3.50 plus the amount of parcel post stamps on the package. Weight of lamp shipped is only five pounds, so postage even to furthest points is insignificant. If you should not find the lamp all we say of it, or all you expected of it, send it back in five days and your money will be refunded in full. Clip the coupon now, and mail to DECORATIVE ARTS LEAGUE, 175 Fifth Avenue, New York, N. Y.

We will also enter your name as a "Corresponding Member" of the Decorative Arts League, it being distinctly understood that such membership is to cost you nothing, either now or later, and is to entail no obligation of any kind. It simply registers you as one interested in hearing of really artistic new things for home decorations.

The Outlook

NOVEMBER 15, 1922

THE ELECTION

IN general the voters throughout the country on election day recorded their dissatisfaction with some of the policies and administrative methods of the Republican party.

Two years ago the Republican party went into power with a great sweep; but it has failed to do all that was expected of it by numerous groups of people. The very excess of the vote in 1920 made a sweep in the other direction almost inevitable. Such a swing of the pendulum almost always happens in the middle of a National Administration's term of office. In this case it has not taken the control of Congress from the Republicans, but it has reduced their majority in the House of Representatives from 169 (over two to one) to about 20.

Among the factors in this election not the least was that of personality. This is something that ought never to be lost sight of in a democracy. Probably the most interesting episode in the elections was due in large measure to this factor. The victory of "Al" Smith in the contest for the Governorship of New York State was the victory of a winning personality. A good many people make the mistake of thinking that personality in politics means a hand-shake; as a matter of fact, the plain people in America quickly distinguish between the man who seeks their votes by kissing their babies and the man who has real human interest in them. Alfred E. Smith thinks of political issues in the terms of human beings. This was illustrated when he was in the Legislature, as Mr. Davenport pointed out in an article in *The Outlook* over four years ago. When he considered such a measure as the bill for widows' pensions, he pictured to himself and to others the effect of such a bill on the woman who faces the danger of having her children taken away from her. He is a man who values the affection of the common people, but equally values the respect and approval of uncommon people, just as he is willing to incur and even invite the disapproval of men whose designs are sinister or whose methods he believes bad. Not a few, we believe, voted for "Al" Smith

because they wanted to see overwhelming support given to the man who had routed Hearst and now has the opportunity of regenerating Tammany. Governor Miller's high-minded, efficient public service deserved approval. That it did not receive it in the form of the re-election of Governor Miller is mainly due to the personality of his opponent.

The factors in the general election cannot be analyzed fully at present, but some of them can be enumerated. Among them are discontent with the hodgepodge Fordney tariff; the grievances against the Government which many people, particularly farmers, have on account of their economic burden; the sense of injustice which was developed in many groups of people as a result of the Administration's handling of the coal and railway strikes; the sense of outrage on the part of veterans of the war because of the Administration's methods of dealing with the veterans' interests, and, in particular, their humiliation at the President's action in making his personal family physician a brigadier-general in virtual control of the veterans' interest without justification in Dr. Sawyer's record in the war or in public service or in his course since his appointment; and the fact that most of the dissatisfaction with prohibition worked against the Republicans.

So far as we can see, there is no evidence that views on the Administration's foreign policy—concerning, for example, the League of Nations, the Naval Treaty, the Near East, foreign debts, etc.—had any weight one way or the other. In Massachusetts Senator Lodge received a rebuke largely because of the feeling that he resorted to political prejudices in the electorate at the expense of loyalty to certain principles in which he was supposed to believe. In Indiana ex-Senator Beveridge received an adverse vote very largely because of the feeling on the part of many service men that Mr. Beveridge was lukewarm, if not actually pro-German, during all the early stages of the war.

In New Jersey the victory of Mr. Edwards for the Senatorship over Mr. Frelinghuysen is a definite victory for the anti-prohibitionists; but it is not

purely such, for New Jersey was affected by the general dissatisfaction of the country with the Republican party.

Where Republicanism stood for progressive policies, even though it involved some radicalism, the sweep against the Republicans was checked. In Iowa Mr. Brookhart won a victory over his Democratic opponent because he had already led a revolt in his own party against standpatism; and in Pennsylvania Mr. Pinchot was elected Governor, not only as a Republican, but as an exponent of Rooseveltian progressivism.

At the same time where the Republican nominations had been captured by those who stood openly for policies regarded as Bolshevik the Republicans were defeated as soundly as when they stood for standpatism. Senator France, of Maryland, an apologist for the Bolsheviks of Russia, and ex-Governor Frazier, the Non-Partisan League and Republican candidate for Senator in North Dakota, alike met defeat.

On the whole, the people of the country have said to the Republican party: We made you steward two years ago. You have, however, presumed too much upon the confidence we then reposed in you. Take warning.

SECRETARY HUGHES ON AMERICAN FOREIGN POLICY

IN an important political address at Boston shortly before the election campaign closed Secretary Hughes took occasion to tell clearly his conception of America's duty and limitation in foreign affairs. "Friendship for all nations, alliances with none" was the keynote. He strongly urged co-operation by America in the new International Court of Justice, in proper methods of furthering the public health of the world, and in the fight against commerce in narcotics and traffic in women and children. He would maintain American rights abroad, but by calm insistence rather than by threats.

But beyond such matters as these he deprecated interference in questions distinctively European, for, he declared, "the fundamental and pressing problems of Europe are political problems involv-

ing national hopes and fears; deep-seated convictions as to national safety and opportunity; national ambitions, in some cases long cherished, in others recently awakened; established policies which have become postulates in the thought of peoples. Each nation is its own judge in such matters of policy and, whether acting in or out of groups, will follow its own interests save as some special exigency may control."

As to the new situation in the Near East, Secretary Hughes had already expressed his view of American duty by making public a paragraph from a private letter written by him in which he said: "I conceive it to be the duty of the country to continue to safeguard American lives and interests, to give succor to the destitute and oppressed, and exert our influence in the interest of peace, against cruelty and brutality, and for the proper protection of minorities. We shall not withhold any practical measures of mercy or threaten where we do not intend to execute." In the Boston address he took pains to point out that the terrible incidents of the Greek retreat through Anatolia should be borne in mind, even though they did not palliate the barbaric cruelty of the Turks in Smyrna, and he referred with pride to the fine relief work by American officers and American philanthropy. He repeated his assurances that everything possible and proper should be done to safeguard American citizens in Turkey, our institutions and commercial interests there, the freedom of the Straits, and the rights of minorities. But, as we declined to go to war with Turkey when we entered the Great War, despite the Turkish massacres in 1915, it is futile for Americans to talk of war when other countries are arranging peace. "At no time," he added, "has the Executive had any authority to plunge this country into war, even a holy war. I know there are those who think we should have threatened, even if we did not intend to make war. 'The Administration does not make threats which it does not purpose to carry out. The American people cannot afford a policy where the words spoken on their behalf do not mean all that is said. When we threaten we shall execute.'"

The Secretary of State will find the positions thus taken sustained by the large majority of sensible citizens.

A MAKE-BELIEVE IMPERIAL WEDDING

THE world at large is not deeply concerned over the questions of taste and feeling involved in the wedding of William Hohenzollern, nor is it much stirred by the discussion as to how far

Central News

THE SULTAN AWAITS THE END

the former Kaiser has by it alienated his family and the monarchical party in Germany. As a ruler of Germany William is, as Germans say, "*Kaput*," or, in our slang, "all in." If it is true, however, as cable despatches say, that at the wedding of William to the Princess Hermine of Reuss (a widow with five children) the bridegroom signed himself "Wilhelm II" and the bride was addressed as the Queen of Prussia, it would be a proper thing for the German Government to point out that no one has a right to those titles even by a stretch of courtesy. Prussia is now a component part of the Republic of Germany, and has no royalties. The empty grandiloquence of non-existent titles was merely one phase of the attempt to throw a false glamour of imperial grandeur over what is really a rather melancholy social event, particularly to those Germans who have deeply honored the devoted Kaiserin, who died only a year and a half ago.

Some amusement has been caused by the remark attributed to the Princess Hermine not long ago that the former Kaiser needed to be looked after. The general comment was, "Yes; he always

did." If he had been wisely guided, for instance, he would not have put out his "Memoirs," for apart from their being a queer jumble of fact and fable, the general verdict is that they showed astonishing ignorance and lack of political and personal judgment. They differ widely from the book to which the former Crown Prince's name is attached, for that was in the writing at least moderate, quiet, and in good taste, however unsound in exposition of history it may be.

It has always been a question whether, in rough parlance, Wilhelm II was more a knave or a fool. Probably history will answer that he was a good deal of both. That he was a megalomaniac is sure; but, just as such a thing is recognized in criminal law as criminal insanity as seen in the perverted viciousness of a distorted mentality the possessor of which knows murder to be murder and yet commits the crime, so the former Kaiser cannot be excused because of his self-conceit from his large share of guilt in the colossal crime of the World War.

THE SULTAN'S GOVERNMENT DISPLACED

NOR content with declaring Mohammed VI deprived of the office of Sultan, to be regarded henceforth only as Caliph of the faithful, or of driving out his Ministers, including the Grand Vizier, Tewfik Pasha, the Angora Nationalists under Kemal declared through their representative in Constantinople, Rafet Pasha, that from noon on November 4 the administration of the Great National Assembly of Turkey was established in Constantinople.

This is premature, to say the least. The Allies still have armed forces in Constantinople, and, while they have agreed to all intents and purposes that Nationalist control over the city should be established, it would be only decent for the victorious Turkish army to await the sessions of the proposed peace conference at Lausanne before setting up their Turkish Republic. But when, as despatches of November 5 state, Hamid Bey, the military representative of the Angora Government, practically ordered Allied troops out, and in a note to the Entente demanded evacuation by the Allied forces, the Council of Allies promptly refused his demands as impertinent. They naturally resent the peremptory demand and are unwilling to leave Christians and Jews at the mercy of a Turkish army.

The Kemalist Turkish army may now be harmless and well conducted, and no doubt Greeks and other Balkan nations have been guilty of excesses, but in view

of history, old and recent, the wretched non-Mohammedan people in Thrace do not await the coming of the Turks with calmness. An Associated Press despatch from Constantinople states that a new exodus of Christians has recently begun in Asia Minor, "apparently by order of the Angora Government," and that at least 200,000 people are deserting their homes. Probably Constantinople may be saved from atrocities, but the outer world will feel more comfortable in mind if French and British ships and troops are on guard.

LABOR'S SETBACK IN ENGLAND

THE size of the Labor Party's representation in the next Parliament is an exceedingly important matter. If it is large enough to hold the balance of power when helped out by other members of radical or Socialistic views, then both Liberal and Conservative anti-George members may regret the break-up of their coalition. For this reason the falling off in the Labor vote at many municipal elections two weeks before the general election has excited lively discussion. The setback has been attributed to indifference, but more probably it is due to a feeling that the Labor leaders have gone too far in urging the nationalization of industries and a levy on capital to reduce municipal taxes. Other party leaders are urging their candidates not to make the mistake of underestimating the Labor vote on November 15. In the municipal elections Labor candidates lost in over half the contests; in London its membership in the councils or districts fell from 574 to 215. On the face of it the result seems to favor the Conservatives, and therefore there has been talk of possible union between the Asquithian and Lloyd Georgian Liberals.

The most notable event of the campaign up to a week before the election has been the address by the new Prime Minister before a woman's association in London. Mr. Bonar Law was urbane, quiet, and reasonable. He could not agree with those who looked upon the break-up of the Coalition as the death of a beautiful thing, and illustrated his view by a story so applied to the Coalition as to indicate that, however beautiful it may have been, it was now decidedly dead. He retorted on Lloyd George's question as to why the Conservatives thought he was all right to save England in war-time but not good enough to serve it in peace by the story of the wounded drummer in a hospital who thought it would do him good to beat his drum once more; they let him, and he got well, but the other patients died.

Bonar Law's speech elaborately

THIS WILL BE THE AMERICAN-OWNED UNITED STATES EMBASSY AFTER THE BRAZIL EXPOSITION ENDS

Frank L. Packard, Architect; Dwight P. Robinson & Co., Inc., Constructors

worked out the theme that England requires rest, recuperation, and political harmony rather than sensationalism and dissension. Under Lloyd George's administration, he said, all felt, "We don't know where we are to-day and cannot tell where we shall be to-morrow." Stability and what Americans now call "normalcy" are his ambition.

Mr. Law's speech was notable for his expressions of friendship for England's allies in the war, and America as well as France was warmly greeted. Reversing the recent utterance attributed to Mr. Kipling, the Prime Minister said he considered that by entering the conflict the United States had gained her soul and lost her money.

AMERICAN HOMES FOR AMERICAN AMBASSADORS

FORTUNATELY, the time is passing when the oft-repeated bit of fun about Joseph H. Choate when he was American Ambassador to England is applicable everywhere. The story relates that Mr. Choate was accosted by a London policeman on a wet, windy night. "I say," demanded the Bobby, "what are you doing out this beastly night? Better go home." "I have no home," said Choate. "I am the American Ambassador."

American embassies, "as itinerant as a house-boat," to use the characterization of General Horace Porter, former Ambassador to France, are gradually being displaced by "little White Houses" in the capitals of the world. The change from the old haphazard policy of turning new envoys loose in strange cities, subject to the rapacity of landlords and real estate agents, is added evidence of the discovery of a "new diplomacy." Incidentally, it indicates relief from the peculiar condition of a democracy necessarily choosing its representatives from the wealthy.

The latest and most impressive addi-

tion to the American diplomatic ménage is the Embassy building recently completed in Rio de Janeiro. It is now serving as the United States Government Building at the Brazilian Centennial Exposition, and is used for the reception of visitors and the showing of educational exhibits. With the close of the Exposition it will become the official headquarters of the United States in Brazil and the home of the American Ambassador.

This is the third building operation of the kind the Government has attempted. The Legation in Peking was completed in 1906, at a total cost of \$180,000 for grounds, building, and equipment. The cost of the building and improvement of grounds at San Salvador, to be completed this year, will be \$60,000. The Brazilian building cost \$300,000.

The United States first invested in real estate in a foreign capital in 1884, when a legation building was purchased in Siam. In 1920 these premises were exchanged with the Government of Siam for other quarters in a more desirable section of Bangkok. In 1891 an official residence was purchased in Morocco; in Japan, 1896; in Turkey, 1907; and in Cuba and Panama, 1916. An Embassy building was recently purchased in Chile, and on May 22, 1922, the deeds transferring the home in London donated by J. P. Morgan to the Department of State for Embassy uses were formally executed.

The Government, therefore, at this time owns quarters in ten capitals out of forty-seven in which diplomatic representatives are normally maintained. An embassy is owned in only one European capital, London. Economy can hardly be pleaded as justification, for the embassy grounds of other governments in London, Paris, Berlin, Washington, and other centers of government have increased enormously in value.

putting them in the class of profitable investments.

The new Embassy building at Rio de Janeiro is located on Guanabara Bay directly opposite the harbor entrance with its towering promontories, one of which rises out of the water to a height of 1,200 feet, and this has the most commanding, as well as convenient, location imaginable. Stately, harmonious, adapted to the climate and conditions prevailing in the warmer American countries, it will fittingly house the headquarters of the great North American Republic in the largest Republic in South America.

The building is designed in the Portuguese colonial style, adapted to the Brazilian mode. It is constructed of granite and reinforced concrete, with finishings of tile and Portuguese marble, and roofed with mottled colored tile. The walls inclose a *patio* with a fountain and tropical garden, surrounded on three sides by large arched openings and on the fourth by the main staircase. All the rooms open on the cloisters surrounding the *patio*.

IN MEMORY OF LYMAN ABBOTT

JUST a week after his death Lyman Abbott's neighbors in Cornwall-on-Hudson, where he had made his home for over fifty years, gathered in the church nearest his home in the village to express their affection for him. The memorial service was conducted by ministers of various denominations. The Rev. H. R. Fraser, of Monticello, New York, formerly pastor of the church and Dr. Abbott's nearest neighbor, drew in simple words a picture of the friendliness of Lyman Abbott which his hearers will not soon forget. After the service Dr. Abbott's fellow-townpeople lingered in and about the church, greeting one another as they would at any other neighborly occasion. It was just such a community gathering as he himself had often taken part in. The service might well have been the celebration of his birthday in his absence. No greater tribute could be paid to Dr. Abbott's serene faith than the understanding spirit shown by the people among whom he had lived.

Memorial services were held in many other places. Only a few of these can be mentioned. That in Terre Haute, Indiana, should be recorded because it was there that Lyman Abbott went to take up for the first time his duties as a minister, and it was there that he lived during the Civil War in a community which was divided in its sympathies between North and South. In the church which he then served the Rev. J. W. Herring, the present minis-

ter, recalled the service that Lyman Abbott had rendered in those critical days when "he sacrificed himself and taught others to sacrifice popularity where the choice had to be made between popularity and conscience." Mr. Herring said in conclusion: "May we, as a church, never shrink from the level of his courage; may our eyes never waver from the clarity of his vision; may our spirits never lose the sincere generosity of his spirit, a spirit that could fight without hating and love without compromising."

Plymouth Church, in Brooklyn, where Dr. Abbott preached for eleven and one-half years, was of course the scene of notable memorials. Not only his former parishioners but also a great number of ministers gathered in that historic building to testify by their presence to their affection and respect for Dr. Abbott's memory.

Such memorial meetings as those at Cornell, Terre Haute, and Brooklyn were in true accord with Dr. Abbott's wishes and spirit. It was not only in consequence of the spontaneous wish of those closest to him, but in accord with his own expressed desire, that there was no public funeral. The immediate public commemoration of his passing took the form of a service held at the Madison Avenue Presbyterian Church, of which Dr. Henry Sloane Coffin is pastor. This church was near Dr. Abbott's New York home, and in the last years of his life he had frequently spoken from its pulpit. This service at Dr. Coffin's church on Tuesday evening, October 31, was attended by the friends and co-workers of Dr. Abbott. David Mannes, an intimate friend, played three violin solos. Dr. Newell Dwight Hillis, of Plymouth Church, Dr. Karl Reiland, rector of St. George's Episcopal Church, and Dr. Coffin were the speakers.

"Lyman Abbott," said Dr. Hillis, "was the man that changed the thinking of the younger preachers of the country by reconciling the old view with the new and teaching us the immanence of God, his daily presence."

Dr. Reiland said: "We have and have had and will continue to have particular churchmen, but, except Dr. Abbott, I cannot think of any one who might justly be called a general churchman, for I believe that most of all he belonged to the church of God in Jesus Christ."

Dr. Coffin spoke of Dr. Abbott as follows: "Estimated by the number of persons whom he reached by voice and pen annually for more than half a century, and by the effect of his words in holding their thought and life, Dr. Abbott was unquestionably the greatest teacher of religion in this country, in this generation. . . . I have looked through a num-

ber of Dr. Abbott's volumes, and this comes to me as a constant impression: that he looked upon the living God as a companion. It is a phrase which recurs again and again and again. To that Companion he prayed; of that Companion he spoke as one whom he knew from intimate experience; to that Companion's comradeship he gave himself; and to that Companion's enduring companionship he looked expectantly forth. . . . 'And when even was come, Jesus said, Let us now go over unto the other side.'

THE BIBLE IN CALIFORNIA

IF a newspaper despatch printed as special to the New York "Times" and also to the "World" is to be believed, a California Court has rendered a decision excluding the King James Version of the Bible from the public schools of the State on the ground that it is a book of sectarian character.

We do not know whether this decision is final. If it is, it practically deprives the great mass of the children of California from learning to appreciate, not only one of the great world literatures, but also one of the classics of the English tongue.

If a court should raise a barrier against all study or reading of the literature of the Romans or the Greeks in our public schools, it would be regarded by educators as a calamity. It is no less a calamity for a court virtually to bar from the public schools all study or reading of the equally great literature of the Hebrews. And that is what the Court does, for to the pupils in our public schools the literature of the Hebrews is available only in English, and the opinion of the Court is clearly such as to bar any translation of the Bible. "Controversies," says the Court, according to the newspaper report, "have been waged for centuries over the authenticity of the various translations of the Bible, each sect insisting that its version is the only inspired book." It is this opposition on the part of literalists to translations not receiving their own sanction which, in the opinion of the Court, renders the King James Version objectionable, and must render equally objectionable of course every other version.

If the arguments of those who assert that the literature of the Hebrews was infallibly dictated to infallible amanuenses and was infallibly preserved and finally was infallibly translated are accepted in law at their face value, and yet those who argue thus cannot agree among themselves which portions of that literature were infallibly preserved

and which translations were infallibly made, it is manifestly impossible for any court to sanction the use of a translation without becoming the partisan of the sect whose translation is sanctioned. If the assumptions of the literalists are true, either there must be a union of Church and State in its subtlest form—through the courts of justice—or the Bible must be excluded from the public school, or the public school must be abandoned in favor of schools supported by the several denominations. Of these alternatives the Court has chosen the exclusion of the Bible. Thus some of the most ardent advocates of the reading of the Bible have defeated their own ends.

It was, however, not necessary for the Court to accept these arguments at their face value. In rendering the decision the judges were not concerned with a question of law, but with an interpretation of fact. In the opinion it is categorically asserted:

The sole question for determination was whether the King James Version of the Bible was a sectarian or denominational book.

From the responsibility for deciding that question the judges cannot escape by pleading that they were bound by the law. As they have stated it themselves the question is not one of law. It is a question as to their own knowledge of literature and life.

What are the facts?

The Bible is, in the first place, an ancient literature incomparable in the majesty of its survey of life from primitive days to the beginning of the present era, in its insight into the heart of man, in the elevation of its imaginative flights into spiritual realms, in the conciseness of its words of wisdom, in the simplicity of its greatest narratives. In the variety of its literary forms it is not surpassed by any literature, ancient or modern. In nice perfection of form nothing in the literature of the Greeks exceeds the Song of Songs or the idyll of Ruth. In literary structure not one of the tragedies of the Greek dramatists or the works of Shakespeare overtops the Book of Job. To describe a literature like that in any approximately adequate translation as a "sectarian book" is to reveal a view of life as well as of literature totally inadequate for the decision of great questions such as confront the American people.

In the second place, the King James Version of the Bible is not merely a translation of this great ancient literature; it is itself one of the masterpieces of literature in the English language. Its very phrases have become imbedded in the writings of English-using authors of generations. If the King James

Version were destroyed as a separate body of writing, it would nevertheless continue to live as a part of the living organism of English literature. To it men of all faiths and of no faith have resorted as a model of style, as a vast and inexhaustible treasury of language, as a refreshing and pure fountain of thought. Acquaintance with this classic of their speech is not only a privilege from which Americans should not be excluded; it is a right on which they should insist for themselves and their children.

We deplore this decision of the California Court, not only because it denies this right to thousands of California children, but because it shows what other decisions of other courts have shown—that in too many instances American judges do not know life.

THE IGNOBLE PRIZE

IN the current issue of "Scribner's Magazine" William Lyon Phelps, of Yale, makes a delightfully whimsical suggestion:

In addition to founding the Fano Club, I have established what I call the Ignoble Prize; for which any one is at liberty to suggest the names of candidates. In order to be eligible for the Ignoble Prize, the thing—whether book or musical composition or building or painting—must have a high reputation, be commonly regarded as a masterpiece, and yet to the individual who submits it be lacking both in interest and appeal. Not for a moment would the works of a popular author with no true fame be accepted: the prime condition is that the object suggested must be both famous and respectable, so that the person suggesting it is in danger of damnation, which gives the game a particular little thrill of its own. Having more audacity than fear, I suggest the Plain Tower of Chartres Cathedral, Raphael's "Transfiguration," Meyerbeer's "Huguenots," Thackeray's "Newcomes," and Dickens's "Little Dorrit" and "Tale of Two Cities." I admit that such a list is enough to take one's breath away; but for some reason, not one of these masterpieces has ever impressed me as the critics say it should. Does any one else dare speak his mind? The interior of Chartres is to me the most sublime interior in the world. But I have looked at that plain tower from every angle, trying conscientiously to see why the critics fall down and worship it. To me it is just a church steeple, matched a hundred times in Ohio or Indiana.

The undersigned dares make application for membership. He has never been able to read Dante. There are lines and metaphors and similes and detached ideas to which Dante has given expression that are, of course, beautiful and appealing. But as for taking a vol-

ume of Dante's poems down from the shelf for unconscious and spontaneous refreshment and beauty, as one takes down Calverley's "Theocritus," or Keats or Browning, or Montaigne, or James Howell's Letters, or three or four of the sonnets of Shakespeare, or three or four of the Psalms ascribed to David, or even the intricate but somewhat mysteriously appealing verses of Emily Dickinson—he simply cannot do it.

This is a terribly ignoble confession, no doubt—its ignobility being emphasized perhaps by the profane venturesomeness of coupling the name of the Yankee spinster and recluse, Emily Dickinson, with that of the great and immortal Italian philosopher and poet. But it certainly is not any more ignoble than for a university professor like Mr. Phelps to expose himself publicly as enjoying any one of a hundred Indiana church steeples as much as the Plain Tower of Chartres.

After all, I suspect that under the form of whimsy Mr. Phelps is trying to startle us all into thinking of the truth that there is no universal, mathematical standard of beauty. This truth has been expressed for generations and generations by homely proverbs such as, "What is one man's meat is another man's poison," "*Chacun a son gout*," "*De gustibus non disputandum*." If one can take beauty in one form, he is not to be condemned because some other form of beauty does not appeal to him.

There is, really, only one general universal concept of beauty, and to that concept the poet Keats has given expression in his unforgettable "Beauty is truth; truth, beauty—that is all ye know on earth, and all ye need to know."

The great beauty of Mr. Phelps's Ignoble Prize is that it is designed to develop truthfulness. Let us hope that aspirants for this prize will not mistake cleverness for truth. This mistake has brought a good many current writers to grief—Margot Asquith, for example.

L. F. A.

THOMAS NELSON PAGE

WHEN President Wilson made Thomas Nelson Page American Ambassador to Italy, the general feeling was that the selection was made partly because Mr. Page was a typical Southern gentleman, a Virginian and a Democrat, and partly because of his contributions to American literature. The choice of distinguished American writers to represent their country abroad has yielded several notable successes; conspicuous among these author-diplomats are James Russell Lowell and Walter H. Page; the services of Thomas Nelson Page, if not quite as important

as those of these two brilliant examples, were valuable and substantial.

But in fact Mr. Page was more interested in public affairs and in history than many of the readers of his delightful stories knew. In proof of this may be cited his biography of Robert E. Lee, his books called "The Negro—the Southerner's Problem" and the "Old Dominion," his excellent article on "Jamestown and Civil Liberty" (published in this journal at the time of the Jamestown Centenary), and many special articles and essays. One valuable outcome of his Ambassadorship was the publication last year of his book on "Italy and the World War," of which Mr. Gino Speranza in an elaborate review in *The Outlook* said: "It is a book wherein restraint, a high sense of loyalty, and a passion for fairness are evident in every chapter."

Only Mr. Page's intimates know how strenuously and faithfully he carried on the heavy and responsible war work at his post, to the detriment of his own health and to a physical reaction that led to his official retirement and perhaps to his recent death, at the age of sixty-nine, at his ancestral Virginian home.

The natural bent of the genius of Thomas Nelson Page was toward the short story. We recall two full-fledged novels, "Gordon Keith" and "Red Rock," but, while these are true yet romantic pictures of Virginia social life perhaps twenty years after the Civil War, they do not have the appeal of his short stories of the old régime, and of these the titles that recur to mind at once are "Marse Chan," "Unc' Edinburg," and "Meh Lady." One minor but yet essential trait of Page's stories of Southern life was that he knew how to write Negro dialect. Together with Joel Chandler Harris and H. S. Edwards, Page revolutionized the stiff, absurd, unmusical dialect attributed to the colored people by earlier story-tellers and playwrights and reproduced the real talk of the Negroes with its softness, richness, and simple humor.

Mr. Page's enduring reputation as a writer will rest on the short stories named above. They belong to American literature. Of them, and of him, we may repeat what we said fifteen years ago: A Virginian of the Virginians, he has been the secretary and recorder of a form of social life which had the charm of lavish hospitality, of gracious manners, of a generous habit of life, and of a keen sense of personal dignity. Of that old order there are no more charming reports than "Meh Lady" and "Mars Chan," nor are these unaffected and deeply human interpretations of a vanished social order likely to be surpassed in the future. They give one that sense

International

THOMAS NELSON PAGE

of finality which comes only from those things which are so adequately done that the imagination rests content in them.

FASCISTI TRIUMPHANT

SUPPOSE the young Americans who served overseas returned home to find America in chaos. Suppose they saw the men who stayed at home engaged in overturning the safeguards of American liberty. Suppose they saw the factories and the other means of production paralyzed by a combination of theorists and robbers. Suppose they saw that men who had escaped service in the trenches and on sea-washed decks were engaged in an attempt to line their own pockets at the cost of the country. Suppose they found rich profiteers escaping taxation while the mass of the people were paying in taxes at least one-quarter of their income. Suppose they found their country facing the appalling calamity of a general strike. Suppose they saw the Government at the worst cowardly and at the best powerless in the face of the situation. Suppose they found politicians taking advantage of the disorder to build up a mighty force of office-holders to whom they could give jobs in return for political support to their own ambitions. Suppose they found the railways and the other public utilities under the burden of this bureaucratic body of office-holders breaking down. Suppose they found that thus the Government, instead of being a safe-

guard and a protection, had become a means for exploiting the Nation. Suppose they found that the strong men in power were bargaining for their own advantage and the men of good intention were either weak by nature or weakened by circumstance. Suppose they saw their country engaged in foreign adventures which at their best the country, thus weakened, was ill prepared for and which in no case was the Government willing to follow to their conclusion. And then suppose that these veterans, organized as the American Legion is organized, but devoted, not to their own advancement, not for any bonus for themselves, not for the glorification of their own past deeds, but for the salvation of the country from disaster, had proceeded to take matters in their own hands; had organized vigilance committees; had rejected with contempt the idea of acting in secrecy, or under cover of darkness, or in disguise, but had, on the contrary, adopted for themselves a public symbol of orderly government derived from the traditions of the race, such as the speaker's mace in the House of Commons, and had adopted some distinctive mark of dress by which they could be recognized as legionaries everywhere. Suppose they had devised for themselves signals by which any number of them in a neighborhood could be summoned in an instant like the Minute-Men of Massachusetts. Suppose they had gone systematically to work to fight openly the disruptive elements in society. Suppose that when the general strike came they rushed to the public service, manned the abandoned trains, peopled the deserted factories with workers, and kept circulating the Nation's life-blood. Suppose these legionaries, having scattered the organized groups of chaos-makers, and having renewed the courage of the people to turn to productive industry without fear of intimidation, turned themselves to the renewal of the Government. Suppose in State after State they got political control and finally secured a majority in Congress and placed their leader in the White House.

That is something that could never happen precisely in that way in the United States, because the vastness of the country, the temper of the people, and the nature of American institutions are sufficient to prevent, not only the application of such remedies for social and political ills, but even such a situation from arising. Nevertheless it is by imagining such an event happening in America that Americans perhaps may understand what has happened in Italy.

Most of the Fascisti are young; and those that are not young in years have the spirit of youth. Sometimes it is thought that youth is radical; but here

is an example of youth acting with vigor and initiative in a spirit which is in the broadest sense conservative. It is because these men and women had suffered in the war to preserve the fruits of Italian liberation that when peace came they were willing to continue to suffer and serve to preserve them.

In order to understand what has happened in Italy we in America must remember that the Italian background is different from ours. As a free nation Italy is very young, much younger than the United States. The people of Italy have welded for themselves fragmentary states into a comparatively new nation. This people, or rather this group of peoples, have no long experience in governing themselves. In this respect they are like most of their neighbors on the Continent of Europe. Their history has been made, not by repeated appeals to the ballot, as ours has been, but by appeals to the bayonet. To us it would be a strange and fearful thing to have to resort to direct action; but to the peoples of Europe, and in particular to the people of Italy, in whose memory are still fresh such figures as those of Metternich and Napoleon III as enemies of their liberty, the natural thing is to turn to direct action as a means of release against wrong. What has happened in

(C) Keystone

BENITO MUSSOLINI, LEADER OF THE FASCISTI

Italy is in essence a normal revolution. That is why it is not strange that the Fascisti come into power with the approval, not only of the people as a whole, but of leaders in their army and their

navy, and, most significant of all, of their King.

The week that has passed since Mr. Roselli wrote his article which appeared in the last issue of *The Outlook* has seen the fulfillment of what was there predicted. The Fascisti have marched upon Rome; Mussolini, their leader, has, at the request of the King—a request which he could not refuse—taken up the reins of government. He has formed a Cabinet of youth. It is also a Cabinet of inexperience in political management, but it represents, not only the Fascista movement as such, but other elements in the nation that are sympathetic with the object that the Fascisti have set before them. Mussolini has announced his policy in foreign relations as “not a policy of adventure, but one of friendship to those nations displaying friendship for us,” and his policy in internal affairs as “one of strict economy, discipline, and the restoration of our finances.”

We repeat the hope that Mr. Roselli expressed last week—that the Fascisti will not allow themselves to become permanently a political party, but that, as soon as they have reorganized the Government, they will withdraw and remain a moral force holding all political parties to account.

THE FRANCO-BRITISH RELATIONS AND THE NEAR EAST

BY RAYMOND RECOULY

A FEW days after the Treaty of Sèvres was signed I called on Marshal Foch and asked his opinion on the subject.

“It is quite good,” he answered, “but on the condition that 300,000 French and English bayonets be sent at once over there to enforce its execution.”

Since France and England had neither the means nor the will to send those forces to the East, the Treaty of Sèvres could not be, and never was, enforced.

That sums up the whole story of this unpleasant Eastern affair.

It was not a matter of sympathy or artificiality. It was only a question of power and facts. That is what both English and French had forgotten from the beginning.

The French were the first to realize their mistake, for the only reason that during many months they had had to fight the Turks in Galicia, without the hope of any benefit whatsoever. When they had fought long enough, when they had come to the conclusion that the absurd struggle had lasted sufficiently, they hastened to make peace with the Turks, who immediately made ready to turn on the Greeks.

The English were highly displeased with this Franco-Turkish Agreement and strongly blamed the French for it. The latter answered that they neither could nor wanted to fight the Turks; the only way left to them was to make peace. This answer, though logical and full of good sense, did not satisfy the English.

For he does not know the English who thinks that a logical argument, however strong, can influence them! It is difficult to conceive their contempt for logic and reason when applied to politics. France's readiness to mix up logic with politics or diplomacy seems very extravagant to them. Facts alone appear to them to be of any importance.

Well, facts have just shown the English that the French were right about the Eastern question. Then only have they yielded to necessity. They have at last accepted the solution which France had proposed; that is, give back to the Turks Asia Minor, Constantinople, and Thrace.

The great British plan was to use the Greeks against the Turks in order to push them back into Asia. Unfortunately, the Greeks were not in a position

to fill the part, especially if it were to last a long time. The burden placed upon their shoulders was too much for them to bear; they were completely crushed by it.

A glance at a map will suffice to show that the Greek army could not possibly maintain itself so far from its base, on the far advanced positions that its chiefs—the civil more than the military ones—had been foolish enough to choose.

Twelve years ago I traveled all over that country during a journey in Asia Minor from Smyrna to Koniah, the old capital of the Turks, through Afiaoun-Karaisar and back to Constantinople.

One has scarcely left the coast, crowded with Greek villages and redolent of Greek memories, when the railway climbs three thousand feet through endless windings to the highlands, which appear to the traveler as a land of desolation and death. No civilization, no fields, scarcely any villages. From place to place a few meager fields which just enable the few inhabitants to stave off starvation. A Turkish shepherd clad in his big coat made of rigid felt reaching to the ground, with a hole for the

head, may be seen watching his flock grazing amid the rocks.

It was a pure folly to maintain a big army so far from its base. All faults and follies have to be accounted for. As this one was most serious, its consequences were therefore terrible.

If only the Greek divisions had been content to protect Smyrna and the near "hinterland"! Backed by strong and well-fortified works, they might perhaps have held their own for a while; they might have stopped the Turks, thus giving the diplomats and statesmen time to arrange for the evacuation of Smyrna in exchange for serious advantages; for instance, a kind of autonomy for the city, under the control of the Great Powers, the protection of the Greek minorities, etc.

But sooner or later the Greek army would have had to give up Smyrna. Sooner or later we should have been forced to negotiate with the Turks. The pity of it all is that we should have waited so long.

The opposition between French and English politics has greatly contributed to increase the difficulties of the Eastern problem; it has greatly delayed its solution.

Who is responsible for this inopportune opposition? Both, without any doubt. In Paris as in London both Governments could plead guilty.

Immediately after the armistice M. Clemenceau, who never took much interest in Eastern affairs, gave the English the impression that France would not be very pressing in her demands on the East, more particularly as to Syria. The English were not long in drawing their own conclusions. Circumstances having given them a high hand over the situation, they immediately let loose all their ambitions, and gave the direction of their Eastern policy into the hands of sub-agents whose only aim was to undermine French influence at any cost.

It was the Golden Age of the Pan-Arabic dreams, with all its delusions and all its extravagance. An Oxford professor, metamorphosed into a colonel, the famous Lawrence, gave free vent to his adventurous conceptions, without any regard for the reality of things. He built up chimeric empires for his country over whose destinies the Emir Faisal and his brother Abdallah, the Bedouin Ringlets, sprung from the depths of the Arabian desert, were to preside for the greater good of England. Add to this Lloyd George's distinctly anti-Turkish and pro-Greek disposition of mind.

When one analyzes this policy and tries to discover its chief reasons, one finds a number of elements derived from various origins; foremost, undoubtedly, financial influence, which Lloyd George has always willingly obeyed; then remnants of liberal politics, the anti-Turkish tendency of the old Gladstonian doc-

trine; the imperialistic idea of utilizing circumstances definitely to grab Constantinople and the Straits.

All these elements combined have conduced to warp British policy and hide from the British the great Mohammedan interests that are in the charge of England.

Lloyd George stubbornly maintained his views, just as he did in regard to Russia. It was all in vain that part of the British public, the Foreign Office, and those of the Colonial Office still more, opposed him, showing him the breakers ahead. He was deaf to all, until the day of awakening when he had to yield to hard facts.

Happily, the English are great opportunists, the greatest in the world; they always surrender to facts. Lord Curzon accepted an agreement in Paris which a few weeks previously would have made his hair stand on end.

The concessions made by England—and one must insist on the point—are most important. In order to come back to the road of moderation and good sense the British Government had to go very far!

Thanks to the force of facts, much more than to human will power, France and England have at last come to an agreement over the essential points of the Eastern problem. Many still remain to be solved. Serious differences of opinion may still arise as regards the capitulation, the care of the minorities, the Straits, etc. But what is still to be done is of far less importance than that which has already been accomplished.

It now remains to develop the results already obtained. It was with the Eastern as much as with the reparations question that France and England had conflicting interests. On the former of those questions their interests are now, on the whole, reconciled. Both Governments owe it to themselves and their peoples, whose only wish is to be united, faithfully to try to settle their divergences on the latter also.

The statesmen have been far more to blame over this matter than the public. For on either side of the Channel the almost totality of the country has a distinct feeling that any Franco-British quarrel would not fail to bring about quickly disastrous consequences. Unfortunately, both Governments, instead of forestalling differences, or at least settling them as soon as they arose, have let them multiply. It is not surprising that under such conditions the evil grew.

One point still remains obscure; it is the one dealing with the relations between the Angora Government and the Soviets. What are those relations? What is the exact influence the Bolsheviks have over the Turks?

The Soviet Government has made a noisy and unexpected irruption in the Eastern negotiations. It has expressed the desire not to be left out, and wants to take part in all discussions. Thus, to use a popular expression, we see Lenin stepping into the Czar's shoes! It is not

the first time, however, that we have witnessed such a thing.

This Sovietic "Bat"—certainly far less pleasant to look at than the one that was shown us by Russian artists—alternately shows its paws and its wings. According to circumstances, it calls itself a bird or a mouse! Sometimes it says that there should be no boundaries, and that the old diplomatic methods should be abandoned. At other times, on the contrary, it appears more imperialistic and more jingoist than the Ministers, generals, and diplomats of the Czar ever proved to be.

That Russia holds a high interest in the settlement of the Constantinople and Straits question cannot be denied.

Any decision taken without consulting her runs the risk of being merely a provisional one.

But one may well ask to what extent is Lenin's Government, considering its origin and tendencies, qualified to speak in the name of the whole of Russia and to pledge her signature. This signature, even supposing it were given, might very easily be disavowed by its successor, when eventually there will be one.

With regard to the near East, the French thesis has prevailed. And now that the French and English Cabinets have come to an understanding, the opportunity should be seized for tackling the big question of reparations and trying to reach an agreement over it.

The two points of view are certainly divergent. But so it was with the Eastern problem. Public opinion in France as well as in England welcomed with a sigh of relief the news that both Governments, after many vicissitudes, many efforts, had at last come to an understanding. Its joy would be tenfold if an understanding could be reached over the reparations question. There will be need for concessions on both sides; but in both countries all reasonable men realize that, and are ready to do their bit.

I have just returned from a two months' stay in the United States. I have talked to a great many people—business men, political men, journalists, diplomats—about the reparations question. I am under the impression, from what I could gather from these conversations, that the United States will not do anything in the matter until it is shown a programme of Franco-British co-operation. As long as France and England go on pulling asunder, the United States has decided to stand aloof. It has no wish at all to mix up in a family quarrel, which, viewed from so far off, seems unreasonable and ridiculous. But when France and England present the United States with a complete programme, drawn up by both parties, asking for their support, the majority of Americans will not sanction their Government's standing aloof. They will bring pressure to bear upon it, and the latter will promptly have to yield. For in no country in the world are the political men more easily swayed by public opinion.

"GEORGE WASHINGTON TAKING THE OATH OF OFFICE," A SCENE FROM THE WASHINGTON'S BIRTHDAY PAGEANT GIVEN BY THE HISTORY CLUB OF NEW YORK AND NEW YORK COMMUNITY SERVICE, AT THE MUSEUM OF NATURAL HISTORY

AT twenty minutes past two on every American holiday some one looks up and says, "Doesn't this seem like Sunday?"

After all our preparations—the marketing ahead, the stocking up with cigars, the study of weather forecasts and revised time-tables, the sending of picture post-cards, the wondering if our firm will keep open and if the mail man will come—here is the result. Yes, even on Christmas Day, though what can surpass the agonies of preparation for Christmas? Says the heroine of a charming tale by William Dean Howells, "When this Christmas spirit gets into me, I could do murder!" And behold her reward. At twenty minutes past two, infallibly, some one looks up and says, "Doesn't this seem like Sunday?"

How old Noah Webster must have chuckled when he wrote in his Dictionary, "Holiday—a day of amusement, joy, and gayety!" Father celebrates by reading the morning paper, tinkering around the house, and then going down to the office "to see that everything is all right." Mother toils in the kitchen, cooking twice the usual dinner. The young folks lie abed until noon. Among the populace in general what an air of indecision, of helplessness! On certain holidays the church bells ring. Shall we go? Or there are mass-meetings advertised, and a parade. But, frankly, seriously, do we feel drawn to the masters of oratory, or does it strike us that the parade will differ materially from the hundred and one we have seen before?

As for the parks, meanwhile, pretty crowded, won't they be? At various restaurants, special seven-course midday gorges attract, with music thrown in, yet the price, how extortionate! At the theaters, special holiday matinées prom-

A bearded Santa Claus with a merry smile and jovial voice is really the most important part—next to the Christmas tree, of course—of a Christmas celebration, whether it is held in town or country, indoors or out

ise amusement, joy, and gayety—that is, if we can get in, though even then we pay dear for our seats, and it is the same show we might visit any night in the week.

Finally, thanks to a brilliant flash of inspiration, the populace in general hits on our typical American method of celebrating and—walks around.

Up one street and down another it goes, aimlessly, mirthlessly, yet cherishing a brave hope that something, somewhere, will turn up to convince it, somehow, that this is not Sunday. Beyond the bawling of peddlers selling badges, medals, flags, canes, balloons, and other holiday gimcracks, nothing does. To be sure, there are several times the customary number of automobiles at large; but these, instead of banishing the Sunday illusion, seem rather to argue, "This is Sunday, only more so."

After the holiday we say we had a roaring good time, and here and there a sunburned nose or an upset digestion or accounts of a thrilling afternoon at the play so indicate. But we face arrears of work. The postman brings a double mail, telephones shriek belated orders, complaints pour in from the shipping department about damages to perishable goods, other complaints arrive from customers who would have received our wares on time except for the holiday. And the boss is irritable—his ten cigars were a mistake. Moreover, the one man who knows where an important paper is tucked away has missed his train and failed to show up. We ourselves are—well, not irritable exactly, but no one will detect in us any very glaring symptoms of reinvigoration. In fact, it is a relief to be back at work, provided that we can sit down while working, for the net result of a typical American holiday, as experienced by the populace in general, may be summed up in two words—sore feet.

Nor does it appear that Columbus or Washington or whatever celebrity the holiday was about got much out of it either. We hardly gave him a thought.

There are real holiday-makers—a few. There are also whole classes who profit by a holiday. For example, innkeepers, garage-keepers, showmen, and vendors of peanuts, tobacco, and soft drinks, not to mention the dealers in boots and shoes. But meanwhile whole classes toil harder than ever—trolley conductors, waiters, soda clerks, and plenty more besides—while the populace in general toils at its futile pursuit of "amusement, joy, and gayety" until it seems to deserve the encomium Mr. Dooley bestowed upon Grover Cleveland—to wit: "Industhrees, but naught very bright."

Meanwhile, consider what the populace in general has missed. Not genuine recreation alone. Not the deepening of

fine sentiment alone. Not inspiration alone. Along with failure in these respects goes the neglect of an opportunity to begin learning, not only the art of playing together, but the still more splendid art of pulling together.

On a holiday work has mainly ceased. Sectarian differences are forgotten. Democracy is in the air. Instead of thinking of itself as split up into cliques, to the ruin of broad and generous citizenship, the town can think of itself as a unit, with a community mind and a community soul—that is, if the townsmen will but find something delightful and refreshing they can all do together.

This sounds rather like a challenge, no doubt reminding you of the playwright who was told, "Right along here in the second act you want a few witty lines," and replied, "As for instance?" Yet we are not without suggestions. More and more cities every year go in for community Christmas trees, with Christmas pageants or Christmas tableaux. More and more cities every year arrange on other holidays a programme at once tasteful and exhilarating, and making for huge sociability. Community sports, community singing, community drama—indeed, all imaginable devices for throwing people together and giving them the lark of their lives—we are learning to appreciate. From its headquarters at 315 Fourth Avenue, New York, Community Service has been issuing to its workers the country over a set of mimeographed bulletins showing how city after city has caught the new spirit and, by providing a real holiday, put an end to the custom of looking up and saying at twenty minutes past two, "Doesn't this seem like Sunday?"

Among other things, these bulletins give invaluable lists of pageants, pantomimes, and one-act dramas appropriate to this or that holiday or near-holiday. Very illustrious, oftentimes, are the signatures these pageants, pantomimes, and one-act dramas bear. With an eye to business, our cleverest writers have applied their genius to scheming out di-

A PLAY OR PAGEANT IN WHICH EPISODES IN THE HISTORY OF THE PILGRIMS ARE DEPICTED MAKES A GOOD THANKSGIVING AFTERNOON PROGRAMME

versions for holidays. No more trash. No more sham sentiment. No more tawdriness. Instead, high art, at once popular and inspiring—the sort that makes the most of the holiday's meaning and yields a maximum of enjoyment for those crowds who now go aimlessly up one street and down another, hoping against hope for a holiday thrill.

Now observe. In its endeavor to introduce "amusement, joy, and gayety" into our holidays Community Service cherishes no ambition to discourage mass-meetings or parades or any traditional form of celebration whatsoever. The same orators, in the same frock coats, can go on mouthing the same grandiloquent phrases unmolested. The same veterans, in the same uniforms, can tread the same cobblestones, while, from the same wagons along behind, the same delightful fellows in white coats throw out the same cookies to the same populace. Community Service is not a reform society. It is an organization

seeking to add new pleasures without meddling with those we already have. It provides ideas. If approached in the right way, it even provides leadership.

Considering our general helplessness as regards holidays and our general inability to guess what to do with them, it is astonishing to note their tendency to multiply. Americans still in middle life recall the first Labor Day, the first Arbor Day, the first Columbus Day. Now we are adding Armistice Day. And every little while we extend our list of what might be termed "pink-letter days," not holidays, quite, but almost—Flag Day, Mothers' Day, and the rest. And once we get a holiday started, it lives forever. Even the Massachusetts Fast Day survives—under another name. By and by some joker will be saying that our leading industry is the manufacture of holidays, our chief ambition a resolve to preserve them as long as the world standeth, and our noblest claim to distinction a belief that somehow we shall pull through rather comfortably in spite of them.

Comfortably! Why, bless you, all we need, to fill a holiday with abounding "amusement, joy, and gayety," is leadership. Trained leadership, that is. Leadership that has turned the trick successfully many a time, and itches to do it again. And we know where to find such leadership. Why not make overtures? More than a hundred American cities have already courted Community Service. Indeed, it is getting to be rather the customary thing.

See the record the organization has. It was originally got up to promote playgrounds. Then, when war came, it expanded enormously and promoted war camps recreation. Since the war it has been promoting recreation everywhere. It believes in jollity, in sociability, and in all manner of good times, though not primarily for their own sake.

Primarily it believes in them because

"HOLDING THE FORT AGAINST THE INDIANS," ONE OF THE MOST TENSE MOMENTS IN A THANKSGIVING PILGRIM PAGEANT

by teaching us to get together they teach us to pull together, so that there develops in the town a new spirit, at once genial and progressive. Towns have been made over from top to bottom that way. They are happier. They are bet-

ter. Things they never dreamed of accomplishing in the old days they now accomplish easily. Edward Everett used to say that the greatest word in the English language was the word "together." Community Service takes his

assertion at face value. Especially on a holiday. Yes, even at twenty minutes past two on a holiday. For the holiday works wonders, if you let it. Then, more than at any other time, the community can find itself.

LLOYD GEORGE AND BONAR LAW: THE CONTRAST

SPECIAL CORRESPONDENCE FROM FRANK DILNOT

THOUGH Lloyd George goes out of office, he will remain the storm center of British politics. Leader of the Opposition, he will remain for good or for evil the dominant personality in Britain. It may well be that Ministries will rise and fall through his influence, although he does not again hold office. Warwick, the kingmaker, can hardly fail to be his rôle.

For seventeen years Lloyd George has been a member of the British Cabinet, and from the time that Campbell-Bannerman essayed the audacious experiment of introducing the young Welsh guerrilla to the Ministry in the junior position of President of the Board of Trade he has been the driving force—it might be more correct to say, the commanding force—in the British Government. The Presidency of the Board of Trade may be regarded as the least important of the sixteen to twenty offices which make up the Cabinet. Within about a year of his appointment Lloyd George had made the office of President of the Board of Trade second only in importance to that of the Prime Minister's position itself. I remember well the first time I met him. There had been a railway accident, with twenty people killed, at Shrewsbury, and I went down in charge of a corps of reporters for the "Daily Mail." It had been the custom of the Board of Trade to send down an inspector to any serious accident. On this occasion the inspector was accompanied by the Cabinet Minister himself, Mr. Lloyd George. I can see him now, stepping over the rails, inspecting the wreckage, and asking questions in his quick, alert way. The Board of Trade inspector always held an inquiry on the spot, a private inquiry to which the press up to then had never been admitted. I met Mr. Lloyd George in the street at Shrewsbury, and on behalf of all the press there I asked him if a statement would be issued afterwards with regard to the result of the inquiry. "Would not the newspaper men be there?" asked Mr. George.

"It is private," I said. "We are not admitted."

"Nonsense," was the reply. "Here are twenty people killed, and the public want to know the reason why. The press will certainly be admitted to the inquiry."

This was the first precedent which I knew Mr. Lloyd George to break. He was present at the inquiry and practi-

International
BONAR LAW, GREAT BRITAIN'S NEW PREMIER

cally conducted it himself, and did so with a vigor, comprehensiveness, and force which could not have been entirely pleasant to the dignified official who had hitherto had command of such proceedings.

I remember hearing friends talk of a small incident not long after this. There was threat of a general railway strike. Lloyd George tackled the situation, and there were tense days in which he struggled to bring masters and men together. It was in the winter time, and as he passed into the Board of Trade offices one afternoon he noticed a group of newspaper men waiting outside.

"Why are you here?" he asked.

"Waiting to hear of any decision."

"Come inside and make yourselves comfortable," he said.

He took them in, had a room placed at their disposal, sent tea and toast down for them and also a supply of cigarettes. An unheard-of proceeding for a Cabinet Minister of Britain.

For five years after that I watched him from the Press Gallery in Parlia-

ment, saw him carry through the Budget—the Budget which was to set up changes robbing the House of Lords of much of their historic power. In those stormy times, sitting on the Opposition front bench but not in any prominence, was a tall, gaunt man with a melancholy, thoughtful expression who was destined in the years to come to see Mr. Lloyd George become Prime Minister, to say the decisive word which was to accomplish his downfall, and then to be sent for by the King to form a Government on his own account. Mr. Bonar Law was not a pushful man; he has never been anything but essentially modest as well as able. A certain external mournfulness has always marked his demeanor. It was dissipated in conversation with the kindest and most charming of smiles. He gave one a sense of disillusionment and at the same time of absolute trustworthiness, and probably that expresses his temperament as well as any short phrase is able to do. He was subordinate to the big Tory chiefs in those days and did not trouble much about it, but occasionally he stepped to the front with a speech in opposition to the Government—a speech which was always marked by the closest of argument, an adherence to fact, an intense earnestness, and absence of rhetoric. I can see him now at the box at the table in the House of Commons, rapping on it sharply with his knuckles to emphasize a point, his voice rising to a high note with a snappy precision absent in his more deliberate moments. He never had a note to speak from. It was amazing how without any assistance to his memory he would speak for an hour at a time in a well-ordered, fact-laden speech, coherent, without repetition, and with not a word to spare. He was a steady workman, he had no flamboyancy. He never allowed a hint of passion to escape him, real or simulated. There came a time when, with the departure of Mr. Balfour from the leadership, the Conservatives had to choose a new chief, and opinion being strongly divided between Mr. Walter Long and Mr. Austen Chamberlain, a compromise was arrived at by the selection of Mr. Bonar Law, who, if the truth must be told, was regarded as somewhat of a second-rater. He was a surprise. He took charge with confidence and dignity. Mr. Asquith was then the Liberal Prime Minister, and I remember how, sharing perhaps the

common impression about Mr. Bonar Law, he treated him with some amount of contempt in debate. It was one of Mr. Asquith's big mistakes. Mr. Bonar Law showed no resentment, went steadily on his way, and within a few months had built up for himself a reputation which persists to this moment. United with a steely determination he had a calmness under attack and a courtesy towards his opponents which quickly made him a real power in Parliament, and presently in the country. His big opportunity, however, was yet to come. In the Coalition Government of the war Mr. Lloyd George deputed to Mr. Bonar Law the leadership of the House of Commons, and in this position Mr. Law showed himself to be one of the great

parliamentarians of the past half-century. It is a curious fact that even a political genius does not necessarily make a good leader of the House of Commons, because that leader, while commanding his own party, has also in many respects to take into account the feeling of the whole House, to speak for it, to appeal to it, and in some general indefinable ways to be its mouthpiece. Mr. Bonar Law surpassed Mr. Lloyd George in this respect, surpassed even that great parliamentarian, Mr. Asquith. He had a quiet, smooth manner, he never attacked an opponent unnecessarily, he could be firm as a rock, and yet those who were opposed to him always realized in him an instinctive fairness. It is not too much to say that

he was liked and honored by every member of the House.

I had a private talk with him a few months ago when there was no thought of the present state of affairs. I was impressed with his shrewdness, his grasp of national affairs, and with a certain kindness. Though he had nothing to do with the Government, he referred to Mr. Lloyd George in almost affectionate terms. He displayed not a hint of ambition in the sense of which smaller men give manifestation.

At the moment of writing this Mr. Bonar Law faces a great task. Whether he succeeds or fails, he will leave the impression on all who know him of an honorable man trying to do his duty.

London, England.

WITHERED WREATHS

BY HARRY LEE

DIM in the driven rain
Above the city square,
A soldier,
Done in bronze,
High-hearted,
Debonair,
Faces the west
As though he dreams
Of lads who have gone there.
He gazes out and on,
Heeding not things beneath;
He gazes out and on,
Remembering . . .
And at his feet,
Forgotten by the ones
Who laid it there,
A wreath . . . a withered wreath.

It seemed as though
A wistful, far-blown voice
The stillness broke,
As though the soldier
In the storm-swept square,
For love of those
Who dwell beyond the sunset,
Gravely spoke:

"Last May, when fives were shrill,
When rattling drum,
Wild flag,
And martial feet
Bade all the city come,
The pompous orator
With unction
Said:
'Our soldiers live.
They live
Whom we call dead!'
Ah, then . . . beyond the veil . . .
Unheard . . . we plead . . .
Plead for our comrades
Maimed, uncomfortable.
Not we alone . . . they too . . .
Remembered only
As a fevered dream,
Are Living Dead!

"Three times ten thousand,
Even now,
In white wards wait.
Three times ten thousand . . .
And the Westward Gate,
That opened at our call,
Is closed to them.

"Three times ten thousand,
Living, suffering,
Now!
Ho, every one that breathes
The air of freedom,
From your heart's garden
Gather flowers,
That they
Who bought your freedom
May have wreaths;
Wreaths of remembrance
For the lonely hours;
Wreaths dew-drenched,
Rainbow-hued;
Wreaths wrought in love,
And prayer,
And gratitude,
Of morning flowers.

"Where we are . . .
Love is God.
We have no need
Of human tenderness,
But, oh, the least small flower
Of your love,
Some lad . . .
Would bless. . . ."

The voice grew fainter,
Fainter . . .
Clouds broke,
The west was bright,
And the bronze soldier
High above the city square
Stood dreaming,
Clothed in light.

UNDER FOUR PRESIDENTS

THE AUTOBIOGRAPHY OF OSCAR S. STRAUS

CHAPTER XI—PERSONAL VIGNETTES

MOTORING leisurely through Algiers and Tunis with Mrs. Straus, I was now enjoying a delightful holiday, free from cares and responsibility. The drowsy tropical air invited complete relaxation, and the lazy African days ushered us into a world unbelievably remote from that of American politics. Graceful, luminous Algiers, with its brilliant European hotels, charming cafés, veiled women, and swarthy men, etched lasting impressions upon our minds.

My defeat in the tense Progressive contest for the Governorship of New York had afforded me this opportunity for another taste of freedom. It was in the spring of the year 1913, and the mountains through which we toured were full of unexpected and beguiling scenes. Not only is this region rich in historic associations, but the engineering skill of the French has in turn modernized it with excellent motor roads. From Tunis we crossed to Sicily, where we visited the Carthaginian, Greek, and Roman remains of columns and temples that still bear tragic witness to the conflict between the armies of Hannibal and Scipio and between the transplanted Asiatic and European civilizations.

We made our way to Rome, where Ambassador Thomas J. O'Brien arranged for an audience with Victor Emmanuel III. The King was most affable and agreeable, and spoke perfect English. He referred to my several missions to Turkey, and said he, too, was there frequently when he was in the navy. He spoke with an intimate knowledge of the men and affairs in the Near East that surprised me. We discussed Arabia and the unrest there due to the incompetency of the Sultan's Government, and soon the conversation turned to the Balkan situation. I said I feared that as soon as the treaty then being negotiated, which was to end the first Balkan War against Turkey, was signed a fresh war would break out among the five Balkan Powers. That would not surprise him, he said, but considered that it might be best to let them fight it out. I answered that the trouble with that course was that the fight would involve the Great Powers, as the several Balkan States were attached to strings that led directly into the chancelleries of the Great Powers—with which the King did not disagree.

Altogether we had a fine talk of over an hour. The King's quick and vigorous mind, his clearness of vision and breadth of intellectual grasp, I found very refreshing. Unlike some of the monarchs, he did not seem detached and

weighted down by a sense of his own importance.

With Ernesto Nathan, Mayor of Rome, a tall, prepossessing gentleman, who impressed me somewhat as a typical Englishman, we visited the ancient Roman commercial city of Ostia, whose ruins were being excavated. Georg Brandes, the Danish savant and critic, accompanied us. Brandes was nearly seventy years old, but intellectually vigorous and brilliant, although cynical, even if at times humorously and delightfully so.

A CARDINAL'S AMERICAN FLAGS

In Rome we also met Cardinals Rampolla and Falconio. The latter knew our country well. For nine years he had been Papal Legate at Washington, during which time he became a naturalized citizen. As we entered his reception-room, I observed two little American flags attached to an ornament on the center table. He informed me as he greeted me that his Holiness was quite ill, otherwise he would have advised me to allow Cardinal Rampolla and himself to arrange for an audience.

The Cardinal was told that I had been a member of the Roosevelt Cabinet, which recalled Roosevelt's visit to Rome in 1910. Of course I was anxious to learn how both these prelates regarded that incident. Cardinal Falconio said that the Holy Father had made no conditions as to the visit, but had merely expressed the hope that there might be no repetition of the Fairbanks incident; the Holy Father knew how broad-minded and well-disposed Roosevelt was toward all creeds and had really wanted very much to meet him. The Cardinal said that of course Roosevelt could not be blamed; the matter should not have been handled through the Embassy. His remarks implied that the mismanagement had been there.

We now went within the Vatican district, under the arch on the side, to the palatial residence of Cardinal Rampolla. On entering, we were led to the Cardinal's private room next to the formal reception chamber, where the Cardinal greeted us warmly. He had great charm of manner and was most gracious; withal he impressed one as a keen, learned, and shrewd prelate. He was regarded as the ablest and most distinguished of the cardinals eligible to the Holy See, and it may be remembered that he was considered the logical successor of Leo XIII, and it was said he would probably have been elected Pope but for the opposition of the Emperor of Austria.

In referring to the Roosevelt incident, he too held Roosevelt entirely blameless,

and added that both he and Brother Falconio knew how kindly Roosevelt felt toward Catholics and the Holy See, and that there should have been nothing official about the message to him; if he had been in Merry Del Val's place, the regrettable misunderstanding would not have happened. Evidently he blamed the Papal secretary.

LUBIN, THE ROUGH DIAMOND

David Lubin gave a dinner at the Hôtel de Russie to Mrs. Straus and me on May 1. Lubin was a rough diamond, so to speak: a man of vision, unlimited energy, and enthusiasm. It was he who induced the Italian Government to recognize the International Institute of Agriculture, and he was regarded by that Government as its founder. Indeed, he was better understood in Rome than in Washington. He knew nothing and cared less about diplomatic amenities. When I was in the Cabinet, our Ambassador at Rome had made an unfavorable report about him because of some supposed tactless move which was objected to by our Ambassador. This report displeased Secretary Root, and the result would have been Lubin's recall as our delegate to the Institute had I not interceded for him with the President, explaining what manner of man Lubin was, that he had no manners but had genius, and that I felt sure the King of Italy himself would intercede for him.

As a matter of fact, about a year after that there was some question of appointing another person as American delegate, and the King did intercede for Lubin. For the help and encouragement that I gave this worthy man he was always thereafter most grateful to me. It was David Lubin, too, who first aroused interest in America in the establishment of an agricultural credit system, as well as in the co-operative banks.

LLOYD GEORGE INDORSES A "SHINPLASTER"

From Rome we went direct to London, where I shortly got in touch with William Watson, the poet. I had met him the year before in the United States. I was chairman of the Executive Committee of the Authors Club at the time, and as such its president; the Club gave him a reception; also he was at my house several times. It was said of him that he was better known than Robert Bridges and would have been selected as Poet Laureate in preference to Bridges had he not written a poem called "The Woman with the Serpent's Tongue," referring to Margot Asquith, wife of the

Premier, which spoiled his chances for official recognition. He appeared somewhat disappointed and to be considering permanent residence in America. He asked me about the cost of living in cities other than New York, which he considered too extravagant.

Sir Charles and Lady Henry invited us to luncheon at their beautiful town house in Carlton Gardens, to meet, among others, Lloyd George, then Chancellor of the Exchequer.

Lloyd George explained the important Liberal measures to me, particularly the National Insurance Act of 1911, amendments to which were then being considered in the House. He declared that it was necessary to curb or reform the House of Lords before social justice measures, such as this Insurance Act, legislation for old age pensions, etc., could be put through. He asked about Roosevelt and the status of the Progressive party, and whether the newspapers were favorable to the cause; it seems that the newspapers did not give him adequate information regarding the Progressives. I had to tell him that many of our leading dailies were not with us. I explained to him that I thought the Progressive movement could hardly be regarded as a party, but that I believed its influence in liberalizing both of the old parties would be considerable.

When I was in London shortly after the outbreak of the World War, I remember an amusing incident at another meeting with Lloyd George, at a small dinner. For emergency use there had been issued one-pound treasury notes that looked more like a "shinplaster" of our Civil War days than like a dignified British pound. One of the guests brought in a number of these, for which some of us exchanged gold. As I took one up I remarked about the appearance of it and added that before I accepted it I would require the indorsement of the Chancellor of the Exchequer. Lloyd George quickly answered, "That can be done," and promptly took the note and wrote his name on the back of it. It remains in my possession as a souvenir.

IMPRESSIONS OF EARL GREY

We spent a charming evening with Mr. and Mrs. Harry Brittain, now Sir Harry and Lady Brittain, in their cozy home on Cowley Street. The only other guest was Earl Grey, former Governor-General of Canada. Earlier in the year I had met both Sir Harry Brittain and Earl Grey in New York, when they came over, respectively, as chairman and secretary of the British Committee for the Celebration of One Hundred Years of Peace.

A few days thereafter Earl Grey invited Mrs. Brittain, Mrs. Straus, and me to breakfast with him and then to accompany him to the now famous Hampstead Garden Suburb. I was glad of this opportunity to see that experiment, because the subject of housing workers in wholesome homes and surroundings at

CHRISTOPHER COLUMBUS

Mr. Straus refers in this chapter to a lecture by an eminent Spaniard before the Madrid Historical Society which summed up in nineteen points the reasons for the conclusion that Columbus was a Spaniard and of Jewish ancestry

a moderate cost was one that interested me very much.

Hampstead is only about five or six miles from the heart of London. In this beautiful suburb every house has a garden, and the architecture of the houses is varied and attractive. Earl Grey knew several of the tenants, and took us into a number of the houses. At that time the rental of an entire house per week was six and a half shillings and upward; and there were large single rooms with cooking facilities for three and a half shillings a week. The population was almost seven thousand, and the suburb was being extended. There was an air of contentment about the place, and the children looked robust and happy. The wonder of it all was that the plan was on an economically sound basis and was paying four and a half per cent annually on the capital invested. The Earl had much to do with the development of this suburb, and, if I mistake not, was chairman of the board at the time.

Mrs. Straus and I were also invited

to spend a week-end with Earl and Lady Grey at Howick, their Northumberland estate. Mrs. Straus, however, had planned to take a cure at a German health resort, so my son Roger was invited in her stead. The only other visitor was Henry Vivian, M.P., who was associated with Earl Grey in both the Hampstead Garden Suburb and the organization of the co-operative societies, of which latter Earl Grey was chairman. I participated in a meeting of the Co-operative Society of Northern England, and saw how practical and inexpensively conducted they were, cheapening merchandise of all kinds by eliminating the profits of middlemen and the cost of distribution, and to that extent lowering the cost of living. Along these lines we have much to learn in our own country.

Roger and I spent a delightful few days with Earl and Lady Grey. The Earl represented the finest type of English nobleman. He was a man of the highest ideals, even regarded by some as rather visionary in his various plans for the betterment of economic conditions;

THE PEACE PALACE AT THE HAGUE

"I had promised Mr. Carnegie that I would attend the ceremonies opening the Peace Palace at The Hague, to which all members of the Hague Tribunal had been specially invited"

a man who recognized, as do so many of the British titled people, the patriotic responsibilities attached to their position.

AT SKIBO CASTLE WITH CARNEGIE

I now proceeded to the northern part of Scotland to spend a few days with Andrew Carnegie at Skibo Castle in Sutherland. It was what Andrew Carnegie called "university week" at Skibo, for in accordance with an annual custom he had as his guests the provosts of the several Scotch universities.

Every morning we were awakened by the music of several Scotch Highlanders dressed in their kilts and playing old native tunes on their bagpipes. Those were unique and memorable awakenings in the steel-master's castle; the bagpipes attuned the mind instantly to the Scotch atmosphere and Scotch tradition. We started our day invariably with a game of golf, at which we helped each other out as caddies, for all of us, Mr. Carnegie included, were indifferent players (beyond which stage I have not even since progressed), so that we all felt quite at home with one another on the links.

We had hoped to test Carnegie's much-lauded and far-famed salmon pond, but that season the fish were late in coming up the run, so we were deprived of that pleasure and had to console ourselves with a little trout fishing. Two or three were put into each of our baskets for breakfast, and the remainder were regally restored to the pond.

At that time Skibo Castle had but recently been built, but already it was for its generous hospitality, which

both the British and American friends of Mr. Carnegie so much enjoyed.

I had promised Mr. Carnegie that I would attend the ceremonies opening the Peace Palace at The Hague, to which all the members of the Hague Tribunal had been specially invited. From Skibo, therefore, I returned to London, to meet my old friend Hakki Pasha, who was one of the Turkish members of the Tribunal, and together we went on to The Hague.

THE PEACE PALACE AT THE HAGUE

A word about the origin of the Peace Palace may not prove tedious. Shortly after the close of the first Hague Conference in 1899 the late Professor Martens, distinguished Russian international jurist, had a talk with our Ambassador at Berlin, Andrew D. White, who had been chairman of the American delegation at that Conference. Together they discussed the desirability of a building at The Hague which should serve as a "palace of justice" for the Permanent Court and as a place of meetings for international conferences. Subsequently Ambassador White presented the idea to Andrew Carnegie, and Carnegie invited him to come to Skibo to discuss it. Ambassador White records in his autobiography:

The original idea had developed into something far greater. The Peace Palace at The Hague began to reappear in a new glory—as a pledge and sign of a better future for the world. Then there came from Carnegie the words which assured his great gift to the nations—the creation of a center as a symbol of a world's de-

sire for peace and of good will to man.

The programme for the dedication was in keeping with the occasion. The city itself was decorated with festive drapery and floral arches. It was a beautiful day and great crowds of people had gathered. The great conference hall and the galleries of the Palace were filled with representatives of the nations: the diplomatic corps; about forty members of the Permanent Court; members of the States General of Holland; the Queen; Prince Henry; the Queen Mother, and many ladies—altogether an imposing assembly.

The ceremony opened with the singing of anthems by the choir from Amsterdam. A historical address was made by the former Minister of Foreign Affairs, Jonkheer van Karnebeek, president of the Carnegie Building Foundation. His son, by the way, is Minister of Foreign Affairs at this writing and was Holland's chief representative at the Washington Conference of 1921. Mr. Van Swinderen, the retiring Minister of Foreign Affairs, made the address accepting the custody of the building.

In the evening a banquet to Mr. Carnegie was given in the Hall of Knights at Binnenhof by the Minister of Foreign Affairs in the name of the Government, to which were invited the nobility and all the high officials who had attended the ceremony, and who thereafter were received in audience by the Queen at the royal palace.

The greatest possible distinction was shown to both Mr. and Mrs. Carnegie, who were brimming over with gratification. Well known as Carnegie was as one of the greatest captains of industry, he is even better known, and will be longer remembered throughout the world, by the extent of his benefactions, in the distribution of which he found his supreme happiness in the last two decades of his life.

When the World War began, the cartoonists made much sport of the Peace Palace as the outstanding embodiment of the irony of fate and with the peace advocates for the failure of their vision. But evidence is not entirely lacking that the peace advocates may yet be able to turn the laugh on the cartoonists. Some of the most constructive features of the League of Nations were formulated by commissions working under the roof of the Peace Palace. The International Court of Justice, organized under the provisions of the Covenant of the League of Nations, has its seat within the Palace and will soon be ready to commence its constructive work. The Palace is a contribution whose worth to civilization can hardly be measured in a single generation.

RUDYARD KIPLING AT A DANCE

On May 19, 1914, we again sailed for Europe on the Lusitania on our way to Madrid to attend the marriage of Kermit Roosevelt to Miss Willard, charming

daughter of our Ambassador to Spain. On board we were agreeably surprised to find our long-time friend Mrs. T. J. Preston, Jr., formerly Mrs. Grover Cleveland, seated at our table in the dining-saloon. Naturally we spoke of Cleveland and of his qualities as they had revealed themselves to her and to his more intimate friends. When a man is President and always in the limelight, people get a perverted impression of him, a fact true more or less since Washington's day, but perhaps to a greater degree in the case of Cleveland. Mrs. Preston referred to many incidents that illustrated his gentleness and consideration, and she gave credit to his advice and guidance for much of the tact she displayed as mistress of the White House, for she was scarcely out of her teens when she occupied that important post.

In London I received a letter from Roosevelt saying he would meet us in Paris on June 7, and suggesting that I keep in touch with our Embassy there. Miss Catherine Page also was going to the wedding to be one of the bridesmaids, and Ambassador Page asked us to take her with us, which of course we were glad to do.

We stayed in London for several days, and soon after our arrival there was a young people's dance at the Embassy to which the Ambassador asked us to come, if only for a short stay. There we met Mr. and Mrs. Rudyard Kipling. In the course of a pleasant chat I asked Kipling in what work he was then engaged.

Kipling pointed to the next room at the dancing, and said: "Sitting up late nights, as I have a daughter in society, which is my principal occupation at present."

When we arrived in Paris, a note awaited us from Ambassador Herrick asking us to come to the Embassy, and informing us that Roosevelt was there. When I arrived, I found Roosevelt in the smoking-room engaged in an animated conversation with ex-Premier Honitiaux regarding the physical characteristics of the races of Europe, in which Henri Bergson also participated, and to which the sculptor Rodin appeared to be a bored listener. Roosevelt was talking French, and when he could not find the word he wanted he used an English term, for which Bergson would then give him the French equivalent.

The next day our party left for Madrid—Roosevelt, his daughter Alice, their cousin Philip, son of William Emlen Roosevelt, Miss Page, Mrs. Straus, and myself. We were a jolly party.

Roosevelt and I of course talked politics, especially the future of the Progressive party. The State campaign for Governor and United States Senator was being discussed when Roosevelt had left home, and he had given out an interview before sailing regarding the sort of men that should be chosen, in which he had kindly referred to me as the standard of a nominee for Senator. The press had commented extensively and favorably upon such a choice, and there had ap-

ANDREW CARNEGIE'S SKIBO CASTLE

"Every morning we were awakened by the music of several Scotch Highlanders dressed in their kilts and playing old native tunes on their bagpipes. Those were unique and memorable awakenings in the steel-master's castle; the bagpipes attuned the mind instantly to the Scotch atmosphere and the Scotch tradition"

peared many articles and editorials giving consideration to my name. Roosevelt had of course referred to me only as the type of man to be chosen, and believed that if the nominee for Governor were chosen from New York City, it might be well to choose the candidate for Senator from up-State. I told him I had no personal vanity in the matter, that what we wanted was the candidates that would best embody the cause. He answered that he knew me well enough for that, but that every one agreed that, next to him, I was the most prominent Progressive, and in New York State even stronger than he, as shown by the election of 1912. Of course I did not agree with this generous statement, which was another proof that figures do sometimes lie.

He expressed the hope that the Progressives and the liberal wing of the Republicans might unite. He lamented the difficulties for the party in the coming election, and said he was reluctant to enter the campaign, but, he added: "I must stand by the men who stood by me." If Johnson was again to be the candidate of the party for Governor of California and needed his help, he would have to go there, though he could not overtax his throat, which had been weakened by his fever in the jungles of Brazil. He said if that fever had overtaken him two weeks earlier, he would not have pulled through; as it was, he had had a narrow escape.

At Irun, the Spanish border, King Alfonso's private car was hitched on to our train. From there on to the King's summer palace, where he left the train, a small guard of honor was drawn up at every stopping-place and the chief officials of the district came to pay their respects to their sovereign. The King was only twenty-eight years old, but was generally conceded to be a man of

ability, with enlightened views, and highly regarded by his subjects. However, among the random notes that I made at the end of this visit to Spain, I wrote:

I very much doubt if monarchy will last another score of years in Spain unless the King takes a lesson from Great Britain and is content to have Parliament govern the country. The democratic spirit is rapidly growing, but I very much doubt if the people, with their long traditions of monarchical government, will be prepared for many years for a democratic form of government.

SOME TRAITS OF DISRAELI

This was our second visit to Spain. On our previous visit to Madrid, in 1897, we had had an interesting evening with a former colleague of my first Turkish mission, Herr von Radowitz, German Ambassador. He invited us to dine one evening at the Embassy, and after dinner showed us the throne room, in which hung a picture of the Kaiser. Radowitz explained that it was painted by a friend of the Emperor, "somewhat theatrical, you see, but he is fond of appearing grandiose." He started to tell me how he came into possession of the painting, that he had told the Emperor that the Embassy had no likeness of him, but he corrected himself by saying: "No, I did not ask for the picture, my wife did." He displayed rather a slighting estimate of his sovereign. The fact was that he was a protégé of Bismarck, and after the latter's retirement Radowitz was transferred from Constantinople to Madrid, which was regarded in the nature of a demotion, and that perhaps largely accounted for his attitude.

As we conversed after dinner Radowitz remarked that in 1878 he was one of the secretaries to the Berlin Congress,

and that there he met Disraeli. Disraeli always made specially prepared speeches in English, which Radowitz took down in French. Then Disraeli would compliment him and say, "Did I really speak in this nice way or did you only write me down so elegantly?" When Radowitz replied, "Yes, this is what you said," Disraeli would say, "So let it stand."

This led me to draw out Sir Henry Drummond Wolff, who was also present, regarding Disraeli. He had known Disraeli very well. He told me that at the age of twelve he had met Disraeli and had always had access to him. I asked Sir Henry whether he had not kept a diary. He said he had not, but wished that he had. "Dizzy," he said, was not a compromiser; if he had opponents, he recognized them as such and never sought to placate them. When he first entered Parliament, he was a brilliant, flowery speaker, so much so that his party, the Conservative, was afraid of him. Afterward, when he became a member of the Ministry, he had trained himself down to a rather prosy level, yet now and again his speech would glow with brilliant passages excoriating his opponent. He was quick at repartee and often held up the other side to ridicule in telling metaphor.

I wanted to know whether he recollected when Disraeli's novels first came out. He said he remembered all but "Vivian Grey," which "Dizzy" wrote when he was quite young. He added that Disraeli's writings made him quite a lion among the literary set, but did not help him politically. He wanted to count among the best socially, and ever pointed his political guns toward that target.

When I asked Sir Henry about Disraeli's personal appearance, he said: "Lord Dufferin (Frederick Blackwood) looked very much like him; so much so that he might have been taken for Disraeli's son. Dizzy and Mrs. Blackwood were said to be very good friends. He met her on many of his frequent visits to the home of Lady Blessington, during the period when he was beginning to gain popularity."

Sir Henry had been rather critical of Disraeli, but he ended by saying: "Taking Dizzy all in all, he was the greatest English statesman I have ever known." And to me Disraeli had always been a fascinating subject, so much so, indeed, that at one time I had the intention to write a biography of him.

EVIDENCE OF SPANISH AND JEWISH ORIGIN OF CHRISTOPHER COLUMBUS

The expulsion of the Spanish Jews from Spain was of great interest to me, and on this second visit to Madrid I took advantage of the opportunity to see some of the historical relics from that period. I got in touch with Dr. Angel Pulido, life Senator of Spain, and to-
with Professor A. S. Yahuda, we
the historic city of Toledo, about

David Lloyd George, who, as Chancellor of the Exchequer, pleasantly wrote his name on the back of a one-pound treasury note of an early war-time emergency issue held by Mr. Straus. Facsimile of Lloyd George's indorsement is shown above

THE WORLD WAR

While touring through Normandy in July, 1914, word came to Mr. Straus that war was about to be declared. He and his party hurried to Paris, and then to London. In next week's installment of the Autobiography the distinguished observer gives notable impressions of the derangement of things during the first panic-stricken period of the war. He describes important sessions with Earl Grey and Sir Edward Grey. He recounts his return to America and tell of a dinner at the home of James Speyer, at which Mr. Straus broached the subject of mediation to Count von Bernstorff. He tells of a flying trip to Washington to report Bernstorff's receptive attitude toward mediation. Hurried conferences with Bryan, Jusserand, and Sir Cecil Spring-Rice are detailed, and Germany's insincerity regarding mediation is clearly exposed. Mr. Straus describes his efforts to persuade President Wilson to advise with ex-Presidents regarding America's impending entry into the war, and closes the noteworthy chapter with an account of his last visit with Roosevelt shortly before the latter's death in 1919.

two and a half hours by rail out of Madrid. Dr. Pulido had for years advocated measures to induce Jews to return to Spain, especially those who still retained the Spanish language, as do many in Turkey and nearly all those in Morocco who are the descendants of those driven out of Spain.

Toledo is one of the most ancient cities of Spain. It was once the residence of the kings of Castile, and under the Moors had a population of some two hundred thousand, of whom seventy-five thousand were estimated to have been Jews. The population now is about twenty thousand, and the city is but the bedraggled remains of its former grandeur. In its ancient glory it was noted for its silk and woolen industries and for the manufacture of the famous Toledo steel from which were made swords and other weapons that rivaled those of Damascus.

By the courtesy of Senador Pulido, I met and had several conferences with the Marqués de Dosfuentes, who several years before, as Fernando de Antón del Olmet, had written an article entitled "La verdadera patria de Cristóbal Colón," which was published in "La España Moderna," a leading monthly of Spain.

I was very much interested in the data that several of the historians of Spain had unearthed regarding the ancestry and place of origin of Columbus. The article by the Marquis just mentioned was based on the research made by Celso Garcia de la Riega, and both Olmet and Riega came to the conclusion, based upon their examination of records, that Columbus was not an Italian, but a Spaniard, and that he was born in Pontevedra, Galicia, in the northern part of Spain; that his father's name was Colón (the Spanish for Columbus), and his mother's name Fonterosa; and that he was of Jewish ancestry.

In his article Olmet says, after going into detail regarding the nationality of Columbus according to the documents which he was able to examine:

Nothing seems more logical than the preceding reasoning, and, moreover, this is the simplest method of explaining that the Admiral's parents were a Colón and a Fonterosa, which gives us a clue to the mystery of his life. From the document under notice it is to be inferred that the Domingo de Colón named was a modest trader. If the admiral was his son, it would not be absurd to suppose that, given the social prejudices of the times, this should have been a sufficient motive for hiding his origin and country. But there is still another reason that fully justifies his secrecy and clears up all mystery. The patronymic "Fonterosa" appears in the Province of Pontevedra connected with the names of Jacob the elder, another Jacob, and Benjamin; Colón's mother was called Susana. "If the admiral belonged to this family, doubtless Jewish," says Sg. La Riega, "since we may draw this inference from the Biblical names, or if he belonged to a

family of new Christians, should we not forgive his action in the matter and declare him fully justified in his resolution not to reveal such antecedents? We must bear in mind the then existing hatred toward the Hebrew race and the merciless fury let loose against it in the latter half of the fifteenth century."

In another part of the article Olmet says:

Colón never mentioned any relative, paternal or maternal. Even when

Colón was at the zenith of his fame no one in Italy came forward to claim relationship with him, although he was the most famous personage of that time. Thus everything goes to corroborate Don Fernando Colón's affirmation in his "Life of the Admiral" that his father wished his origin and birthplace to remain unknown.

The research of La Riega was continued to 1914 and published in that year. The author died early in the year,

shortly before I arrived in Madrid. Other Spanish historians also have published conclusions similar to those of La Riega. There was, for instance, a brochure by Enrique de Arribas Y. Turull, entitled "Cristóbal Colón, Natural de Pontevedra," which was originally delivered as a lecture before the Madrid Historical Society. This brochure also sums up, in nineteen points, the reasons for the conclusion that Columbus was a Spaniard, and of Jewish ancestry.

ANALYZING JOHNNY

BY CHARLES K. TAYLOR

LAST summer The Outlook published a brief description, prepared by the writer, of a simple system that might aid in understanding some very obvious character types of children. It may be remembered that the analysis was based entirely on behavior.

Since that time quite a number of letters have come, mostly from parents, discussing children of the types mentioned, and possibly it might be interesting to describe a few cases that have come in contact with the Psychological Clinic of the Carteret Academy, of Orange, New Jersey. Unlike most psychological clinics, this one does not accept abnormal children. It was planned to aid normal children who might be having some kind of difficulty, scholastically or in character, or even to aid parents in understanding the characteristics of children that had no real "difficulty" of any kind. Up to this date an immense amount of time has deservedly been given to the clinical study of abnormal children, and perhaps it is now time to use some practical expedients for the benefit of normal children.

And that brings us to Johnny—though, of course, his name wasn't John at all. John was thirteen, but his spelling looked like the painful struggling of a not over-bright child of seven or eight. The word that was correctly spelled was the exception. His compositions were frightful to look at, though if you could catch the sense of the scrawl you found that it indicated anything but immaturity. But one cannot go through school without being able to spell the simplest kind of words. So a special study was made of John.

Very often a child doing very poorly in all school work is not really dull at all. The child may be lacking in visual memory or auditory memory, and this lack in itself may be due to a remedial physical defect. So the first thing to do was to give Johnny tests for auditory and visual memory. These he passed with a first-rate grade. Also he passed all the other tests for special capacities well, failing only in a test for "simple

association" merely because he could not spell the words that he wanted to write.

So we could eliminate visual and auditory memories as possible causes.

A study was made of his spelling, and it was found that with words of more than one syllable he got the first syllable, and went to pieces on the rest. A reading test showed that he could get the words of one syllable perfectly, but with the larger words he was likely to get the first syllable and mispronounce the rest—though if held to it and made to pronounce a word syllable by syllable, he got it. And he invariably knew the meaning.

For a boy who read with such difficulty his language and general choice of words and expression were excellent. But he could not read under any circumstances, and was not known to have read any book except such as were driven into him by his teacher. Yet, on talking about books to the examiner, he mentioned quite a number of books of first-class caliber, and showed he knew them in detail. No, he had not read them. *They had been read to him.* And we had the secret. From the beginning he had been read to. And now at thirteen he was still read to, mostly by a mother and a sister. His lessons were read to him when he had them to prepare, and what he heard he remembered. He never had been impelled to read for himself, he did not have a natural aptitude for it, and so was still at the seven-year stage of development in this study. He was thirteen, and so could be appealed to. His handicap was made clear. His relations stopped reading to him. For several months he was drilled in noticing the syllables of words, frequently having to guess the first syllable by seeing the second. So he came to notice all the syllables. Having a natural fondness for books, developed by the long course of first-class reading that had been given him, he began struggling on his own account. And at the end of a full year his troubles were over. His spelling was up to average, and his les-

sons in general made marked improvement. That was Johnny's case. Not a difficult one.

The case of Martin. This was a boy of thirteen. He was temperamental, emotional, making a very high score with his intelligence test—three years over his age, in fact. He has a poor physical development and flat chest, despite which he had a very superior soprano voice, could read almost any music at sight, and was a successful singer in church and concert.

The boy's own idea was that he would go to a commercial high school and then get into some "business." He was so fond of music, however, that he was tested in this respect, and, among other qualities, it was found that he had an unusual capacity for improvisation. In a test a theme was started on the piano, and when the piano would stop the boy would go right on with it, improvising, and so it would be passed back and forth between piano and boy. This with other qualities showed potential musical capacity of high order. On the other hand, American boys do not become first-rate musicians in any great numbers. They utterly refuse to make the real sacrifice required for the amount of practice necessary for a real musical career. I do not believe our native American boys have less musical capacity than those of central and southern European parentage. Not at all. I believe that they have the capacity—only they will not take the pains to develop it—nor will their parents require them to take the pains. The word "must," sturdily lived up to, seems to have died out in our American families!

The boy was promptly started at the piano, though thirteen is late for a beginner, and when he found he was getting a mastery his ambition awoke and gradually more and more time went to practice. He was very temperamental and emotional, as are most musicians—often to their detriment. So this boy was given thorough physical training. He developed a high athletic capacity, both for football and baseball. He

learned to box like a machine—and to take and give blows with ready humor. The temperamentalism and emotionalism went down before the steady athletics, and as they went the steadier became his purpose as far as music was concerned, until in three years he was doing four to six hours of it each day—which is five or six times more than ninety-nine out of a hundred American boys will give to music. At sixteen the boy is an admirable performer. A concert career is not far away, and his ability to compose has increased with his time and training. All of which is much better than the commercial high school career and a possible second-rate clerking in some office.

Those who remember last summer's article in *The Outlook* may be interested to know that John was of the "active-controlled" type, and that Martin began as an "active-uncontrolled," but achieved a transformation into the "controlled" classification in about a year and a half.

Now for David. David was a quiet, rather melancholy type of boy, taking little interest in sports or other activities, satisfied to sit quietly at his school desk and struggle with his lessons, or just to sit without struggling. Yes, he was of the "apathetic" type. When aroused he could display a rather charming manner and expression. But he seemed somewhat weak—physically and in will power. He was rather easily led, and those who led him were not as desirable as might be. In fact, he was on the road to failure of several kinds.

A physical examination showed no defects, but that his muscles were flabby and under-developed. Dr. Arthur Holmes, a very able child psychologist on the staff of the University of Pennsylvania, once told the writer that where you find a "flabby" will you usually find flabby muscles. Said he, "Can you imagine a man with a soft forearm clenching his fist, smiting the table with it and declaring, 'I will!'" Not exactly.

The first thing here was systematic physical training. He had little more than an inch chest expansion. At fourteen he could have had about three and a half inches. So he was given breathing exercises and, gradually increasing in distance, hikes. This was in the spring. That summer he was sent to a boys' camp that makes a specialty of individual study and training—for normal boys, of course. There he gradually did more and more swimming, wood-cutting, hard hiking, and special exercises. That fall he returned holding his head up instead of letting it hang. He went out for the football team of his age, and though he was not strong as yet, still he did quite well, all considered. The special exercises continued until he had a deep chest and well-developed and hard muscles. He became a fine distance hiker and runner as well

As intelligent appreciation of music is steadily growing in this country, but there are still many more people who recognize a good short story when they read it than a good song when they hear it. There is, however, a very general desire on the part of concert-goers to cultivate their own intelligent appreciation. With this in view, we have asked one of the most distinguished and well-equipped music critics in this country to write four articles which will tell the music amateur in plain language how to form a correct opinion of good piano playing, good violin playing, good orchestra playing, and good singing. These four papers will be printed in early numbers of *The Outlook*. We can assure our readers that they will find them not only informative, but entertaining, for the author, Mr. W. J. Henderson, has a habit of expressing his views sometimes in a lively fashion.

Mr. Henderson is a graduate of Princeton in the class of 1876, and is now musical critic of the New York "Herald." He has written voluminously on musical subjects, and there are several books of permanent value to his credit in the literature of musical criticism. We do not quite know what is the relation between music and the seven seas, but Mr. Henderson is an expert in navigation and the history of yachting, and his "Elements of Navigation" is a standard work on this scientific subject. The thesis which he maintains in these articles is this: "If music is an art at all, it is the art of beauty in sound. We need not torment ourselves before trying to arrive at a definition of beauty. Let us confess at once that beauty has never been successfully defined, and that it is entirely a matter of opinion; but the fact remains that among the cultivated peoples of the world there is a pretty general consensus of opinion." This he endeavors to arrive at in his papers, illustrated by personal allusions and anecdotes. We believe that every concert-goer under whose eyes they fall will enjoy them.

as swimmer. And, let us add, with this hardening of physique came an immeasurable strengthening of character, a dropping of his undesirable associations, and a developing of a lot of first-class friendships. He was never a brilliant student, and he never will be, but he goes at his work sturdily, and gets it done.

And, finally, here is the case of Donald. And here we failed, because we are not allowed to poison parents or otherwise put their children out of their misery!

Donald was of the "active-uncontrolled" variety. He raised general "hob." He "cussed" like a pirate, and then some. He smoked now and then—not a great deal, because he wanted to be an athlete, but just enough to show that he was a real sport at that. He did miserably in school, seemingly unable to concentrate, even though all his intelligence tests came out well. He had a pale, unhealthy complexion. He was short-winded, having an under-developed chest and a flat one, protruding abdomen, slightly open mouth, pointed upper jaw, with crowded teeth, and every possible sign of adenoid, with frequent colds and bronchitis to suggest something about tonsils. A medical examination showed large adenoids and a throat choked with tonsils. Despite which the boy was a phenomenal athlete for thirteen, almost uncannily good especially in sports that gave him time to get breath. And yet he had the constant discomfort of the mouth-breather, and the handicap of a choked-up throat, and the marvel is that the boy was no worse than he was! It looked like a simple case—removal of adenoids and tonsils, and, with removal of irritation, the gradual disappearance of the boy's less desirable qualities. So the medical report went to the boy's father. The father wrote back promptly and with some asperity. "I don't believe in tonsils and adenoids," said he, with emphasis. Do you remember the story of the old gentleman who said he "disbelieved in India," and of course India was no more. The father's disbelief in tonsils and adenoids did not seem to make them disappear. His believing the matter to be evidence of a "fad" did not straighten the boy's upper jaw, bring out his chest, or make it possible to breathe through his nose. My last sight of him, a short time ago, showed the lad possessing all those unfavorable characteristics. Evidently the father still continues to disbelieve. I wonder what he would think if he was persuaded to look down the boy's throat.

After all, these are all rather simple and not extraordinary cases. But their description is given to illustrate the possibilities of a clinic for the study of normal children and to encourage child psychologists to institute such clinics for the aid of children, parents, and schools wherever these three interesting institutions exist.

THE BOOK TABLE

DOES THE AUTHOR COUNT WITH BOYS?

BY HUBERT V. CORYELL

IN a previous article¹ I told of my experience in giving boys their heads with regard to books, showing how, if they can be brought to discuss books among themselves, pass on their judgments from one to another, and combine their group judgments for the benefit of all, the resulting list of books is pretty sure to be of a surprisingly high quality. Moreover, if boys are given this chance to weigh values, their own power to judge values increases, and—what is more important—becomes an actively functioning power. They actually begin to choose better books for their voluntary reading.

During the past year the group of boys that I was working with finished its job of making up a composite list earlier in the year than usual, and there began to be signs of restlessness at the prospect of going on with more book reports and book discussions. Too much of one thing was about to prove good for nothing. Getting wind of this, I forestalled discontent by asking the boys if they wouldn't like a change. There was a vigorous nodding of their heads and an eager gleam of expectancy in their eyes. They wondered what I was going to offer them instead of book reports. But I had no intention of offering them anything. My best results had come from leaving the initiative to them. So I said, "Well, what else would you like to do?"

They looked from one to another in surprise. Then one boy held up his hand.

"Make a list of authors," he said.

"Publishers," amended another.

"Illustrators," said a third.

A fourth boy suggested that we study up on authors and make reports on them just as we had been making reports on books. As he made his suggestion I remembered that he was the very boy who, two years before, when his class first began to study books with me, had declared that he "didn't see any sense in bothering to say anything about the author of a book when you're talking about the book." To see what would happen, I took his own stand and presented his former attitude to him and the class.

"Are we really concerned with authors enough to make it pay to make reports on them?" I asked. "Does it really matter who wrote a book, if we like it?"

Before the boy himself could answer another caught me up and made reply:

"Oh, sure it does. You might want to read another book by the same author."

"Yes," said another boy, "and, besides, if you find out something about an author's life maybe you'll know whether

he's telling the truth about the places he talks about."

Again the nodding of heads. So I put it to a vote what we should do for the next two months. The verdict was that each boy should begin making up a list of his favorite authors on cards, and that later we should combine the lists as we had with the books; also that shortly we should begin to have reports on authors. Then we began to saw

THE BOY AND THE BOOK

It seems a natural thing for boys to be interested in good stories and hence in those who write them.

Can boys be led to take an equal interest in poetry? Mr. C. Harlow Raymond, of the famous Lawrenceville School, answers this question with an enthusiastic yes! He tells of the solution which he has found for this problem in a forthcoming Outlook article. It is simple and can be applied by any one who loves poetry.

wood. It soon became apparent that the cards alone were not going to make class discussions of any stimulating nature; so we turned to the reports on authors. Each boy was told to prepare himself for oral or written report on a favorite. A week later the reports were in full swing, and popular.

I made no more attempt to guide boys in their choice of authors to report on than I had in their choice of books. For to me the vital thing is to keep off the deadening hands of pedagogy and let the boys follow their own impulses, let them become interested in finding out things about their own favorite author friends. It matters little whether a boy reports, as one did, that "it is certain that Shakespeare was none too wise a youth, for he was not quite nineteen when he married Anne Hathaway . . . eight years older than himself," or whether he reports, as another did, that "Louisa May Alcott's family was very poor and Mr. Alcott was a failure as far as money was concerned." The vital thing is that the boy should delight in delving into the personal life of an author that he cares for.

Information came in so thick and fast and in so unorganized a manner that at times I wondered what my reputation would be worth if it should become known how helter-skelter was our study plan. But gradually, by a process of natural selection, a few authors began to come to the front, and about them all members of the class began to get a few clean-cut ideas. We learned of Samuel Clemens that he had been a printer's apprentice and a Mississippi River pilot before he made a success of writing. We discovered that Cooper grew up in the woods about Otsego Lake, where he often saw real Indians, that he was expelled from Yale for not doing his work, that he went to sea, came back, and did not start writing for several years. We learned that Dickens had pasted labels on blacking boxes, while the family lived in a debtors' prison, and that his rise to fame had been through his own efforts always; also that he had made a great fortune for himself and had lived as few authors have in the time of his own great fame. We learned of Poe's extreme brilliance and of the curse of alcoholism that broke his life. We learned of Scott's lameness from childhood, of his finding the forgotten manuscript of "Waverley" stowed away in an old drawer and starting his career as a novelist with this first effort, and, lastly, of his heroic labors to pay off the debt of the publishing house to which he had belonged after its failure. We learned of Kipling's early life in India, of Jules Verne's passion for things geographic which was at the base of most of his stories, of Thackeray's natural indolence to match his great genius and of the terrible cloud cast over his later years by the giving way of his wife's mind. We learned of Stevenson's struggle for health, his romantic journey across the United States as an emigrant on hearing that the woman he cared for was ill, of the great love which grew in the hearts of the natives of the South Seas for him whom they called Tustitala (Teller of Tales), and, lastly, of his royal burial at the top of the great mountain which he had loved to look at.

Scattered, broken, totally unsystematic, these bits of information came to the class from its members. But, if the information lacked unity, the effect of the experience was just the opposite. For each boy had come to see how the knowledge of an author's life enriched the pleasure of reading the author's books. At the end of the year, when called upon to give honest opinions as to what they had found worth while in the course and what they wished to see eliminated, the boys voted the highest value to have been found in the biographical sketches of authors.

That is their answer to the question: "Does the author count?" And I believe that we can help them to find out just how much the author counts if we

¹Published in The Outlook for August 16, 1922.—The Editors.

THE BOOK TABLE (Continued)

them do the choosing, if we let them be haphazard and whimsical in their searches, if we realize that the great thing is not so much to make the ac-

quaintance of certain great authors, but rather to delight in making the acquaintance of any author whom they may be reading.

BOOKS FOR CHILDREN

BY SIDONIE MATZNER GRUENBERG

Author of "Sons and Daughters," "Your Child To-day and To-morrow," etc.

THERE is an unusually large number of children's books offered this year; and an unusually large proportion of them are worth while. This may make it harder to select just what we want; but it makes more difficult the random selection of a disappointment.

The reaction against fairy tales which appeared some time ago seems to have spent itself, for we have this year more new editions and more new collections of fairy tales than ever before. Especially noteworthy are additions to the legends of various peoples. Instead of rejecting fairy tales entirely, we are learning to select them with more discrimination, and perhaps to tell them without some of the features that the psychologists found objectionable in the tales upon which they were brought up.

We welcomed Mrs. Mitchell's "Here and Now Story Book" last year as a sin-

cere and effective attempt to give the young child stories of reality. We are getting more of that, as well as more of the imaginative and fantastic. After all, the child is entitled to both kinds of literature, and those who select books for children need not decide that one type must be used to the exclusion of the other; the child needs a balanced diet. There is a better selection of biographical and historical books and natural history as well as of fairies. Astronomy is unusually strong, though the other sciences are not well represented; and the interest in wireless is appealed to by a number of good books.

Dr. Dolittle is with us again in a new book, and will be welcomed by his old friends and make many new ones. The most distinctive contributions of the season are probably "The Adventures of Maya the Bee" and Carl Sandburg's "Rootabaga Stories." Books of verse are well represented.

NEW EDITIONS

Fairy Tales Every Child Should Know. By Hamilton W. Mable.

Myths Every Child Should Know. By Hamilton W. Mable.

Wonderful Adventures of Nils. By Selma Lagerlöf. Doubleday, Page & Co., Garden City. \$1.75 each.

Attractive editions. 8-10.

The New World Fairy Book. By Howard Angus Kennedy. E. P. Dutton & Co., New York. \$2.50.

A new edition of a good collection of Indian tales. Well told. 8-10.

A Visit from St. Nicholas. By Clement C. Moore. The Atlantic Monthly Press, Boston. \$1.

Charming little edition of the old favorite. 8-10.

Adventures of a Brownie and Other Stories. By Miss Mulock. J. B. Lippincott Co., Philadelphia. \$3.

Gift edition of this old favorite, illustrated by Maria Kirk. 8-10.

The Mouse Story Told by an Old Schoolmaster. By K. H. With. F. A. Stokes Co., New York. \$1.50.

A delightful mouse story, written in 1905, and now brought out in new dress. 8-10.

East of the Sun and West of the Moon. Illustrated by Kay Nielson. G. H. Doran Co., New York. \$3.50.

New edition of Norse legends well made and beautifully illustrated. Out of the general run of fairy stories. 8-12.

Stories by Mrs. Molesworth. Pictures by Edna Cooke. Duffield & Co., New York. \$3.50.

New edition of "The Cuckoo Clock" and other old favorites. 8-12.

The Three Musketeers. By Alexandre Dumas. D. Appleton & Co., New York. \$3.

Beautiful edition with 250 illustrations by Leleux. 12-14 and over.

Twenty Thousand Leagues Under the Sea. By Jules Verne. Rand, McNally & Co., New York. \$2.

This unrivaled adventure story added to the "Windermere Series" of attractively made reprints of classics. 12-14 and over.

The Cloister and the Hearth. By Charles Reade. Illustrated in Color by Evelyn Paul. Dodd, Mead & Co., New York. \$3.50.

The custom of printing fine editions of classical stories with color illustrations grows. If this beautiful edition helps to make Reade's masterpiece known to young people, a literary service will be rendered. 14-15.

Ivanhoe. By Sir Walter Scott. Illustrated in Color by Rowland Wheelwright. Dodd, Mead & Co., New York. \$3.

A handsome edition of one of the great romances of the world, illustrated in color. It may be that Douglas Fairbanks's popular film of "Robin Hood" will attract new readers to "Ivanhoe," in which Robin Hood plays a brilliant part. 14-15.

Moby Dick, or the White Whale. By Herman Melville. Illustrated by Mead Schaeffer. Dodd, Mead & Co., New York. \$3.50.

Melville's fame rests largely on this book. Boys for two or three generations have read the tale with appreciation, although it was not originally written for boys. 14-16.

FOR THE YOUNGEST READER

The Children Who Followed the Piper. By Padraic Colum. Illustrated by Dugald Stewart Walker. The Macmillan Co., New York. \$1.75.

Charming story of the adventures of the children who entered the mountain, where they meet all the fairy-tale folk.

Mother Goose. Rearranged and Edited by Eula Osgood Grover. P. F. Volland Co., Chicago. \$1.35.

A very handsome edition.

Mother Goose. (Collected.) Henry Altamus & Co., Philadelphia. \$2.50.

The regulation Mother Goose rhymes, with many attractive small cuts and some colored plates. Very complete.

All Through the Day the Mother Goose Way. By Jean Broadhurst. J. B. Lippincott Co., Philadelphia. 75c.

Attractive and unique edition of the favorite rhymes for primer purpose.

The Animal Mother Goose. By Harry Whittier Frees. Lothrop, Lee & Shepard, Boston. \$2.

A nice selection of nursery rhymes, with unusual photographic illustrations of actual animals.

The Boy Who Lived in Pudding Lane. By Sarah Adlington. Atlantic Monthly Press, Boston. \$2.50.

An original story in which the boyhood of Santa Claus is depicted against a background of Mother Goose figures.

Still More Russian Picture Tales. By Valery Carrick. F. A. Stokes Co., New York. \$1.25.

A reissue of these exceptional stories.

Puppy Dogs' Tales. Edited by Frances Kent. Macmillan Co., New York. \$2.

A good collection of simple stories. Remarkable photographic illustrations.

Doggie Woof and Pussy Meow and Other Friends of the Children. By M. C. Davies. Funk & Wagnalls, New York. \$1.50.

Old-fashioned full-page pictures. Appropriate verse.

Brin: The Adventure of a Little Bear. By M. C. Davies. Funk & Wagnalls, New York. \$2.

Large picture book with excellent illustrations and simple stories. Very attractive.

Bobby of Cloverfield Farm. By Helen Fuller Orton. F. A. Stokes Co., New York. \$1.

A charming story.

The Little Wise Chicken that Knew It All. By Kenneth Graham Duffield. Henry Altamus & Co., Philadelphia. 50c.

Well told and illustrated attractively from the child's point of view.

Grunty Grunts and Smiley Smile Outdoors. By E. E. Feist. Henry Altamus & Co., Philadelphia. 50c.

Amusing.

Peter Rabbit and Jack the Jumper. By L. S. Almond. Henry Altamus & Co., Philadelphia. 50c.

A Peter Rabbit adventure with much incident, well told.

A Little Child's Book of Stories. Compiled by Ada M. Skinner and Eleanor L. Skinner. With Pictures by Jessie Wilcox Smith. Duffield & Co., New York. \$3.50.

To have pictures by Jessie Wilcox Smith is a distinction for any children's book. The verses and other brief stories will please children also. 5-10.

FAIRY TALES AND LEGENDS

The Adventures of Maya the Bee. By Waldemar Bonsels. Translated by Adele Ssoeld Seltzer. Thomas Seltzer, New York. \$3.

An allegorical story of unusual merit, based on the organization of bee life; told with whimsical charm. Excellent translation. Verses done into English by Arthur Gutterman. 10-14.

The Boy Who Found the King. By Raymond MacDonald Alden. Bobbs-Merrill Co., Indianapolis. \$1.75.

An excellent book for young boys and girls. Fairy tales, told with good judgment both as to language and content. Well worth while. 8-13.

The Shadow Witch. By Gertrude Crownfield. E. P. Dutton & Co., New York. \$2.

An extremely imaginative story, suitable only for "unmorbid" children. 10-12.

The Magic Flashbone. By Charles Dickens. F. Warne & Co., New York. \$1.50.

A charmingly made book and a delightfully told tale. 7-10.

David the Dreamer. By Ralph Bergengren. Illustrated by Tom Freud. Atlantic Monthly Press, Boston. \$2.50.

Beautifully illustrated and printed. Text interesting. 7-9.

Tales Told by the Gander. By Maud Radford Warren and Eve Davenport. Geo. H. Doran Co., New York. \$2.50.

Familiar material reworked in a rather refreshing way. Well illustrated and well printed. 7-9.

The Grateful Fairy. By T. L. Sappington. Barse & Hopkins, New York. \$1.25.

A droll fairy tale. 8-10.

Zodiac Town. By Nancy Byrd Turner. Atlantic Monthly Press, Boston. \$1.50.

The rhymes and illustrations are both very attractive. 8-10.

Happyland's Fairy Grotto Plays. By Emilie Blackmore Stapp and Eleanor Cameron. Houghton Mifflin Co., Boston. \$1.25.

A sprightly collection of fairy plays for young children. 10-12.

Helga and the White Peacock. By Cornelia Meigs. Macmillan Co., New York. \$1.

A fairy play for children. Well suited for production in groups. 8-10.

Robin Hood and His Merry Men. Retold by S. H. Sterling. G. W. Jacobs & Co., Philadelphia. \$1.50.

Fine addition to the Washington Square classics. 12-14.

Fairy Tales and Stories. By Hans Christian Andersen. Preface by Francis Hackett. Edited by Signe Toksvig. Macmillan Co., New York. \$2.

A lovely edition, characteristic illustrations. Unusually good translation. 8-12.

Fairy Tales from Far and Near. By Katharine Fyle. Little, Brown & Co., Boston. \$2.

Collection of twelve characteristic tales, representing various nationalities—Hindu, Lithuanian, etc. 8-12.

Korean Fairy Tales. By William Elliot Griffis. T. Y. Crowell Co., New York. \$1.60.

Very acceptable addition to the Dutch, Belgian, and other fairy tales. 8-12.

The Islands of Magic. By Elsie S. Ellis. Harcourt, Brace & Co., New York. \$1.75.

Legends, folk and fairy tales from the Azores. 8-12.

(Continued on page 489)

FACTS AND FICTION ABOUT WOOL AND CLOTHES

In the Western States, sheep are brought once a year to the shearing sheds where the fleeces are removed, packed in 300-pound sacks, and started on their long journey by wagon and railroad to the Eastern mill

THE question of our wool supply is one of the least understood, and at the same time one of most vital concern to American industry and welfare.

For clothing and household uses where warmth is a consideration there is no substitute for wool. Other fibers, including reworked wools (shoddy), have been utilized to the limit of economy and serviceability, and yet the United States needs annually to import about 300,000,000 pounds of grease wool—slightly more than the domestic production reported for recent years. These imports come chiefly from the Southern Hemisphere—Australasia, South America, and South Africa. Coarser wools from more primitive types of sheep come from China, India, and South America for use in the making of carpets.

A MILITARY NECESSITY

From a military standpoint, there is no other indispensable material for which the United States is so largely dependent upon foreign countries. In 1917 and 1918 it was our good fortune to have access to the British-controlled supply in the countries having a surplus of wools suitable for clothing. Only the South American supply of wool was available to those nations that could transport it. Writing in 1916, Professor Paul T. Cherington, of Harvard University, said:

The present situation makes more conspicuous than ever before the military strategic value of an American wool-growing industry. It emphasizes the desirability from a military standpoint of independence for the United States in its manufacture of woollens and worsteds.

The following statement was made recently by Senator Lodge, of Massachu-

setts, in a speech delivered in the United States Senate:

An increase in the raising of sheep in the United States is well worth all the money the people will ever spend upon those interests to make us, in peace or war, in sunshine or in storm, always independent, so that under any pressure which may come we shall always be able to clothe our own people.

NATIONAL POLICY ON WOOL SUPPLY

Desirability of independence of foreign-made fabrics and the increase of home manufacturing of woollen goods has been recognized continuously since 1789 by the placing of import duties upon materials manufactured from wool. At no time since that year have woollen goods been admitted to the United States without payment of duty.

Consideration of both civilian and military needs emphasized by Civil War experiences caused President Lincoln's Administration to put into effect a policy of levying an import duty upon wools for the purpose of according to the home producers the benefit of preference in home markets, and thereby developing a larger wool-growing industry. American wool production as compared with National requirements at that time was an infant industry. It has not expanded as was hoped for, although the production in 1919 was about twice that of 1867. The main hindrance to a continued expansion of domestic wool-growing has been the great uncertainty attached to the business as a result of changes in tariff laws and frequent extreme depression of prices.

The act of 1867 prescribed a new basis of wool duties. In the succeeding fifty-four years there have been nine changes of rates, and two of these changes en-

tirely removed the duty for a total of eleven years. At each of fourteen National elections in that period the question of the wool tariff was under debate and extreme uncertainty created as to the National policy, and therefore to safety of production.

The longest continued period of protection was from 1897 to 1913, though during that period complete removal of the duty was seriously threatened at three different times. During that period also the industrial development in the United States caused a strong agricultural trend toward the production of foodstuffs for an increasing population. The cheaply grown wools of frontier areas in the Southern Hemisphere could be secured, duty paid, at values not then attractive to most American farmers.

Prior to 1914 it was becoming apparent that wool-growing had reached the limit of expansion in frontier parts. If supplies were to continue or to increase, it must be through expansion of sheep-raising under the more intensified agricultural methods of older farming sections. The war demand and the difficulties of foreign transportation acted to replace the effect of the wool duty that had been removed in 1913. Production was rapidly increasing in 1918 and 1919. The collapse of 1920 brought foreign wools into our markets under a virtual bounty arising from the superior value of dollar exchange. American producers were not only discouraged, but in many instances bankrupt. Our future supply is more largely than ever dependent upon the establishment of new flocks, which can be brought about only under fairly stable conditions.

THE TARIFF OF 1922

Fair rates of duty upon imported wools have been established by the

The bands of range sheep in the West, unlike the farm flocks, remain in the open all of the year. The shepherd's home is in the wagon that follows the band from place to place over the vast area of land from which the only returns obtainable are the wool and lambs from the traveling bands

Sixty-seventh Congress. The President, through the Tariff Commission, may raise or lower such rates by fifty per cent, according to the occurrence of changes in the relation of home-production costs to those found to obtain in exporting countries.

The Fordney-McCumber Act provides that duties shall be collected only on the "scoured content," or actual weight of wool in condition for manufacture. Former duties were levied upon grease weights, which included from twenty to seventy-five per cent of dirt and oil in the fleeces as they were removed from the sheep and received at ports of entry. The duty in effect prior to 1913 provided that 33 cents per pound should be paid upon wool imported in the clean or scoured condition. The rates set for wools not scoured allowed imports to enter at less than the equivalent of 33 cents. The new law requires that all duties shall be collected upon the basis of scoured wool and at the rate of 31 cents per pound.

These fair and impartial provisions of the wool duty form a part of the enlightened new policy expressed by the Congress just adjourned toward the agricultural industry, giving the rural citizenship the same consideration in commercial policies as was previously accorded only to the manufacturing industries.

FICTION ABOUT CLOTHING COSTS

Prior to the passage of the recent legislation members of some branches of the clothing industry widely advertised the statement that the wool duties as proposed in the Senate bill would increase the cost of men's clothes by as much as \$4 per suit.

The absurdity of such a statement and the unfairness and insincerity associated with its circulation are readily revealed by the facts. Unfortunately, these facts could not be adequately presented or

circulated by the poorly organized growers of wool.

These opponents of a National policy of insuring home producers an equal opportunity in home markets have represented that 33 cents paid at the customs on a pound of scoured wool amounts to 101.4 cents to be paid by the ultimate consumer. It was claimed that the rates of profits secured by wool dealers, spinners, weavers, manufacturing clothiers, and retailers, as calculated upon costs, are, respectively, 10 per cent, 15 per cent, 17½ per cent, 22½ per cent, and 33½ per cent.

The true effect of such a tariff was set forth by a competent and impartial publication, "The Manufacturer," in the issue of July 25. "The Manufacturer" stated that the only increase above 33 cents (the final rate was set at 31 cents) that legitimately could be added to the consumer's price was the extra amount required for interest on an additional 33 cents from the time a pound of wool entered the cloth mill until it was sold by the retailer, plus an allowance for increased cost of insurance arising from the addition of 33 cents to the original cost of a pound of material. "The Manufacturer" allows 3½ yards of cloth for an average suit and 14 ounces as the weight of a yard of goods for winter wear. On this basis, it is shown that the maximum additional cost of a suit resulting from a 33-cent wool duty is not \$4, but \$1.62. (With the lower rate of duty now in effect, the figure would be \$1.52.)

The advertising opponents of the wool tariff, according to their own data, would have used a possible increased cost of \$1.62 as a means of exacting an extra profit of \$2.38. Commenting upon this revelation of a plan to utilize the wool duty as a pretext for increasing profits, "The Manufacturer" said:

If clothing manufacturers and retailers can make these increased costs of respectively \$1.14, \$1.62, and \$2.78

the basis for increasing prices, not by those sums, but by \$4 for suits and \$7.50 for overcoats, the difference being clear profit over and above present profits, the public should be so informed. But in justice to the wool growers and the wool manufacturers, the public should not be permitted to be misled into the belief that such arbitrary price increases are attributable to the raw wool duty.

In considering clothing costs as affected by wool values, the following important facts should be kept in mind: (1) The average amount of cloth used in making a man's suit is 3½ yards. (2) One and one-half pounds of wool is used in making a pound of cloth of the best quality. (3) Using cloth weighing 14 ounces to the yard, the total requirement of scoured wool for a man's suit is 4.4 pounds. (4) For a lighter suit of 10 ounces per yard, 3.3 pounds of scoured wool are needed. The average price of all clothing wools quoted for the Boston market of October 21, 1922, was \$1.076 cents per scoured pound (duty paid). The present average value of wool in a man's suit is therefore \$4.14. Wools used in making carpets are exempt from duty.

The real effect of the duties upon raw wool as prescribed by the Fordney-McCumber Law should be to reduce, and not to raise, the prices charged the consumer for woollen goods. The Emergency Tariff Act that was in effect from May 27, 1921, until September 22, 1922, set much higher duties upon wool than are now in effect under the provisions of the new act. Wool can now be imported under duties considerably lower than were collected for sixteen months prior to September 22. So far as raw wool duties are to be considered as a factor in costs of clothing, the only result that can come through enforcement of the act that became effective on September 22, 1922, is a lowering of clothing prices.

NATIONAL WOOL GROWERS ASSOCIATION, Salt Lake City, Utah

THE BOOK TABLE

(Continued from page 486)

FAIRY TALES AND LEGENDS

- A Treasury of Eskimo Tales.** By Clara K. Bayliss. T. Y. Crowell Co., New York. 75c.
Very nice selection. 8-10.
- Mighty Mikko: Finnish Folk and Fairy Tales.** By Parker Fillmore. Harcourt, Brace & Co., New York. \$2.25.
An unusual collection of folk literature from Finland. Characteristic illustrations. 8-12.
- Fairy Tales.** Collected and Retold by Elizabeth W. De Huff. Harcourt, Brace & Co., New York. \$2.
Folk tales of the Pueblo Indians. 10-12.
- Wonder Tales from Tibet.** By Eleanor Myers Jewett. Little, Brown & Co., Boston. \$2.
Folk-lore of Tibet, well arranged and interestingly told. 8-10.

STORIES, TRAVEL AND ADVENTURE

- The Voyage of Doctor Dollittle.** By Hugh Lofting. F. A. Stokes Co., New York. \$2.50.
The delightful Doctor Dollittle appeals again and will be welcomed by his many friends, young and old. 8-12.
- Son of Fire.** By Irving Crump. Dodd, Mead & Co., New York. \$2.
A well-told tale of primitive man. 12-14 and over.
- Sootabaga Stories.** By Carl Sandburg. Harcourt, Brace & Co., New York. \$2.
Fine imaginative stories in characteristic American settings. 8-12.
- Verotchka's Tales.** By Mamin Siberiak. E. P. Dutton & Co., New York. \$2.50.
Charming, friendly tales of old Russia with humorous, characteristic illustrations. 8-10.
- He Who Steals.** By Alfreda Balocco. E. P. Dutton & Co., New York. \$2.
Interesting story, told with simplicity and vigor. Gives insight into Italian conditions. 10-12.
- Twin Travelers in India.** By Mary H. Wade. F. A. Stokes Co., New York. \$1.75.
Travels of an American boy and girl in India. 10-12.
- The Hill of Adventure.** By Adair Aldon. Century Co., New York. \$1.75.
A wholesome out-of-doors story with much action. Decidedly superior to the usual "girl" story. 12-14.
- Phantom Gold.** By Kenneth Payson Kempton. Century Co., New York. \$1.75.
Good story of adventure, well told. 12-14.
- The Woods Rider.** By Frank Lillie Pollock. Century Co., New York. \$1.75.
An outdoor adventure story. Above the average. 12-14.
- The Trail of the Spanish Horse.** By James Willard Schultz. Houghton Mifflin Co., Boston. \$1.75.
An interesting frontier story, full of adventure and thrilling episodes. 10-14.
- Tenpaw of the Royal Mounted.** By Laurie Y. Erskine. D. Appleton & Co., New York. \$1.75.
Adventurous, exciting story that boys would like. 12-14.
- Weird Islands.** By Jean de Bosschère. R. M. McBride & Co., New York. \$3.
A fanciful and amusing tale of adventure, with interesting pictures. 10-12.
- Hackbeard Buccaneer.** By Ralph D. Paine. Penn Publishing Co., Philadelphia. \$2.50.
A pirate story vividly told. Fine illustrations by Frank E. Schoonover. Boys 12-14.
- The House of Five Swords.** By Tristram Tupper. G. H. Doran Co., New York. \$2.
A romantic, fascinating story. Well written. Over 14.
- Busy Star.** By Olaf Baker. Dodd, Mead & Co., New York. \$2.
The author of "Shaasta of the Wolves" has made another real contribution in this stirring, well-written story of an Indian boy and his wolf cub and their many adventures. 10-14.
- Little Maid of Virginia.** By Alice Turner Curtis. The Penn Publishing Co., Philadelphia. \$1.50.
A nice addition to this author's historical tales. 8-10.
- The Hop Pickers.** By Flavia Camp Canfield. Harcourt, Brace & Co., New York. \$1.50.
A story of girl life in the Sixties. Girls 12-14.
- Princeton Boy in the Revolution.** By Paul G. Tomlinson. Dodd, Mead & Co., New York. \$1.75.
Would hold the interest of the 12-14 year old, and might develop further research into the history of the period.
- The Rich Little Poor Boy.** By Eleanor Gates. D. Appleton & Co., New York. \$2.
Story of an eleven-year-old boy who, in spite of his sordid surroundings in a New York slum, finds content and success. 12-16.
- David Ives: A Story of St. Timothy's.** By Arthur Stanwood Pier. Houghton, Mifflin Co., Boston. \$1.75.
An excellent boarding-school story. Boys 12-14 and over.

*It seemed like certain disaster
yet neither Rick nor Ruddy faltered—*

Other Books in the Rick and Ruddy Series

RICK AND RUDDY

By Howard R. Garis

Illustrated by John A. Goss
Price \$1.75

A tale of a boy and a dog. Rick, the boy, befriends Ruddy, the shipwrecked dog, and is well repaid by the animal's devotion. A book your boy is sure to like.

RICK AND RUDDY IN CAMP

By Howard R. Garis

Illustrated by Milo K. Winter
Price \$1.75

Rick Dalton and Ruddy, the dog, go camping with a troop of Boy Scouts. Their adventures, afloat on a nearby lake and blazing trails through dense woods, are further enlivened by the discovery of a mysterious cave and by encounters with unfriendly neighbors in an adjacent camp.

Ask your bookseller for these books. If he cannot supply you we will ship direct on receipt of price. Complete catalog free.

Milton Bradley Company, Springfield, Mass.

Bradley Quality Books

DOWN whirling, dangerous rapids—through placid streams, go these two—boy and dog—best of friends—on a mission of grave importance. How they reach their destination, foiling those who would thwart them, how they lose their bearings and thru Ruddy's unusual intelligence find their way again, makes a story that will thrill all children—especially those to whom Rick and Ruddy are old, old friends.

RICK AND RUDDY AFLOAT

By HOWARD R. GARIS

Price \$1.75. Illustrated by W. B. King. (Red Book)

Children love dogs—they know what true friends they make. And was there ever a dog like Ruddy, the companion of the boy hero of Howard Garis' series of Rick and Ruddy stories?

THE SKIPPER OF THE CYNTHIA B.

By Charles Pendexter Durell

Illustrated by Harold Brett. Cloth. Price \$1.50

A city boy, Samuel Hotchkiss, becomes acquainted with Uncle Seth, a retired sea captain, owner of a cat-boat called the "Cynthia B." From that day forth Sam's vacation is filled with more adventures than he had ever hoped to experience. Interwoven with the main story are many stirring tales of old Nantucket whaling days, all founded on facts.

SHAW STOCKING CO. Lowell, Mass.

Why Children Don't Obey

OBEEDIENCE is the foundation of character. Yet how many parents discover constantly that their instructions to their children carry no farther than around the corner. And willfulness, selfishness, jealousy, disrespect, untruthfulness, ill-temper and many other unpleasant qualities are directly related to that first great fault of disobedience.

New Methods for Old

Until now, scolding and whipping seem to have been about the parents' only methods. But new methods have been discovered which make it easy to train children to obey promptly, pleasantly and surely without breaking the child's will, without creating fear, resentment or revenge in the child's heart, as whipping does. This new method is based on confidence. When perfect understanding and sympathy exist, obedience comes naturally and all the bad traits that children pick up so easily are not given a chance to develop.

Highest Endorsements

This new system, which has been put into the form of an illustrated course, prepared especially for the busy parent, is producing remarkable and immediate results for thousands of parents in all parts of the world, and is endorsed by leading educators. It covers all ages from cradle to eighteen years.

Free Book

"New Methods in Child Training" is the title of a startling book which describes this new system and outlines the work of the Parents Association. Send letter or postal note and the book will be sent free—but do it now as this announcement may never come to your notice again.

Do You Know How to instruct children in the delicate matter of sex? to always obtain cheerful obedience? to correct mistakes of early training? to keep child from crying? to develop initiative in child? to teach children instantly to comply with command — "Don't touch"? to suppress temper in children without punishment? to teach punctuality? Perseverance? Carefulness? overcome obstinacy? These are only a few of the hundreds of questions fully answered in this new book.

- STORIES, TRAVEL, AND ADVENTURE**
- Solaris the Tallor.** By William Bowen. Macmillan Co., New York. \$2.
Full of whimsical originality. A worthy successor to the "Old Tobacco Shop." 8-10.
- Two Little Misogynists.** By Carl Spitteler. Henry Holt & Co., New York. \$3.50
An unusual story by the winner of the Nobel prize. Very beautiful volume. 10-12.
- Martin Pippin in the Apple Orchard.** By Ewan Farnie. F. A. Stokes Co., New York. \$2.
A highly imaginative, beautiful story. 10-12.
- The Joyous Guests.** By Maud Lindsay and Emilie Poulsen. Lothrop, Lee & Shepard Co., Boston. \$2.50.
A collection of Christmas stories. Beautiful volume. 8-12.
- The Fairy Doll.** By Netta Syrett. Dodd, Mead & Co., New York. \$1.25.
Five attractive little playlets. 8-10.
- Memoirs of a London Doll.** Edited by Mrs. Fairstar. Macmillan Co., New York. \$1.
Reprint of an interesting little book which first appeared in 1852. Quaint and charming. Girls 6-8.
- Lige Mounts: Free Trapper.** By Frank Hintonman. Charles Scribner's Sons, New York. \$2.
An exciting cowboy story. Boys 11 and over.
- The Story of Don Quixote.** Illustrated by Florence Choate and Elizabeth Curtis. F. A. Stokes Co., New York. \$3.
This is still another large-page classic with color pictures. It is arranged and retold to the reading of boys and girls. 13-15.
- Including Mother.** By Margaret Ashmun. Macmillan Co., New York. \$1.50.
A story of a family in a Middle Western town with a few human experiences valuable to growing girls. 13-15.
- The Black Wolf Pack.** By Dan Beard. Charles Scribner's Sons, New York. \$1.65.
Boys always like Dan Beard's stories. Tells of a boy's search for his father and his own adventures on the frontier. 12-14.

NATURE AND SCIENCE

- Bannertail: The Story of a Gray Squirrel.** By Ernest Thompson Seton. Charles Scribner's Sons, New York. \$2.
A welcome addition to Mr. Seton's exceptional books. 10-12.
- Beyond Rope and Fence.** By David Greer. E. P. Dutton & Co., New York. \$2.
A sympathetic story of a horse; would appeal to children's love for animals. 12-14.
- Bird Stories.** By Edith M. Patch. Atlantic Monthly Press, Boston. \$1.25.
Attractive stories for the children interested in birds. 10-12.
- Garden Adventures of Tommy Tittlemouse.** By Clara Ingram Judson. Rand, McNally & Co., New York. 75c.
Charming animal story. 6-8.
- Hunters of the Great North.** By Vilhjalmur Stefansson. Harcourt, Brace & Co., New York. \$2.50.
Details of this explorer's first trip into the Arctic. 10-14.
- Kari, the Elephant.** By Dhan Gopal Mahapatra. E. P. Dutton & Co., New York. \$2.
Story of the growth and adventures of a elephant from the time he was six months old. Singularly successful in conveying the awe of the wide shadow-haunted places. 6-12.
- Many Trails.** By H. Mortimer Batten. Holt & Co., New York. \$2.
Sympathetic stories about wild animals and domestic pets. 10-12.
- The Pussycat Princess.** By Edward Anthon. Century Co., New York. \$2.50.
Photographs of cats delightful. Rather mediocre text. 8-10.
- Letters of a Radio Engineer to His Son.** By John Mills. Harcourt, Brace & Co., New York. \$2.
A very interesting presentation. Profusely illustrated. 12-16.
- Radio: The Book of Wireless Telegraph and Telephone.** By A. Frederick Collins. D. Appleton & Co., New York. \$1.50.
Simple, practical, interesting, helpful. Profusely illustrated. 10-14.
- Radio for Everybody.** By Austin C. Leavelle. Munn & Co., New York. \$1.50.
A convenient and authoritative manual for boys and girls at every stage of interest in the subject. 10-14 and over.
- The Star People.** By Gaylord Johnson. Macmillan Co., New York. \$1.50.
An interesting and ingenious introduction to the stars and planets, with stories, anecdotes, verses, and helpful illustrations. Particularly good for young children. 8-14.
- The Sky Movies.** By Gaylord Johnson. Macmillan Co., New York. \$1.50.
Further lessons in astronomy for young people interestingly told in stories and pictures. 8-14.
- Secrets of the Stars.** By Inez K. McFadden. Thomas Y. Crowell Co., New York. \$1.00.
A good introduction for young boys and girls. Told in simple, straightforward English. Most interesting. 10-14.

THE BOOK TABLE (Continued)

NATURE AND SCIENCE

The Boy's Book of Physics. By Charles Ramsay Clarke and Sidney A. Small. E. P. Dutton & Co., New York. \$2.50.

The Girl's Book of Verse: A Treasury of Old and New Poems. By Mary Gould Davis. F. A. Stokes Co., New York. \$2.

A very comprehensive collection with excellent illustrations.

Five New Ways

To whiter, cleaner, safer teeth—all late discoveries

Dental science has been seeking ways to better tooth protection.

All old methods proved inadequate. Tooth troubles were constantly increasing. Very few escaped them. Beautiful teeth were seen less often than now.

Dental research found the causes, then evolved five new ways to correct them.

The chief enemy

The chief tooth enemy was found to be film—that viscous film you feel. It clings to teeth, enters crevices and stays.

Food stains, etc., discolor it. Then it forms dingy coats. Tartar is based on film. Most teeth are thus clouded more or less.

Film also holds food substance which ferments and forms acids. It holds the acids in contact with the teeth to cause decay. Germs breed by millions in it. They, with tartar, are the chief cause of pyorrhea.

Much left intact

Old ways of brushing left much of that film intact, to cloud the teeth and night and day threaten serious damage.

Two ways were found to fight that film. One acts to curdle film, one to remove it, and without any harmful scouring. Able authorities proved those methods effective.

They were embodied in a tooth paste called Pepsodent, and dentists the world over began to urge its use.

Other essentials

Other effects were found necessary, and ways were discovered to bring them. All are now embodied in Pepsodent.

Pepsodent stimulates the salivary flow—Nature's great tooth-protector.

It multiplies the alkalinity of the saliva. That is there to neutralize mouth acids, the cause of tooth decay.

It multiplies the starch digestant in the saliva. That is there to digest starch deposits on teeth which may otherwise ferment and form acids.

It polishes teeth so film less easily adheres.

Prettier teeth came to millions

One result is prettier teeth. You see them everywhere—teeth you envy, maybe. But that is only a sign of cleaner, safer teeth. Film-coats, acids and deposits are effectively combated.

Send the coupon for a 10-Day Tube. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how teeth whiten as the film-coats disappear.

Cut out the coupon now.

Saves Razor

Saves Shaver

Draw your razor blade
between thumb and finger
moistened with 3-in-One
before stropping and after
shaving.

This simple treatment makes
razor blades stay keen four times
as long. Shaving becomes sim-
pler, easier; a pleasant perform-
ance. The painful pull is gone.

The reason is simple. 3-in-One
prevents rust forming between
the microscopic teeth of the razor
edge. A few drops rubbed into
the strop occasionally makes it
take hold of the razor better.

Try and see for yourself.

"Sold at all good stores in
1-oz., 3-oz. and 8-oz. bottles and
3-oz. Handy Oil Cans."

FREE Special Razor Saver Circular and
generous sample of 3-in-One. To
save postage, request these on a postal card.

BY THE WAY

"A THOUSAND people killed by vehicles in the streets of New York in a year!" a subscriber exclaims. "The remedy is simple. Let every driver of a vehicle—street car, truck, or automobile—be compelled to slow down to three miles an hour at every near crossing and keep that speed till he passes the far crossing of every street, no matter what the traffic conditions—and the thing is half done. Let pedestrians strictly avoid jay-walking—and it is complete. As it is now, automobiles whizz across every side street at any speed they please, whether people are crossing or not. Let a few offenders, of either class, auto-drivers or walkers, get jail sentences for violating these provisions—and you will have a great diminution of accidents." Cops who have the job of keeping the traffic moving might not wholly approve of this three-mile idea.

"When it comes to the corruptions of a baseball umpire," says Uncle Henry in "Colliers," "there's where the splendid rage of an oppressed people breaks forth. I've seen the air so full of pop bottles that they looked like a glass roof. Lots of people think baseball an easy game, but I don't know of anything that's got a more subtle technique. Unless you catch the bottle by the neck, an' put a quick wrist snap into the throw, it won't go any distance at all. . . . I don't know any other sport where 50,000 can take part, an' a leadin' part at that:

"Why didn'tcha make 'im bunt? You're a swell manager, yes, you are!"

"Pass 'im, stoopid! Pass 'im!"

"Take 'im out! Take 'im out!"

"Why didn't ya throw it to first, ya big busher!"

"Oh, you big false alarm! Who ever said you could play ball?"

Overheard in the subway—First Salvation Army lass to second ditto—"I'm at the Army school now; I'm reading Deuteronomy—it's lovely!"

Bernard Shaw pays a high compliment to the pronunciation of a famous English actor, but in the next breath slams the average actor unmercifully in characteristic Shavian fashion. Taking Sir Johnstone Forbes-Robertson's pronunciation as an ideal, Mr. Shaw said at a recent lecture: "His pronunciation goes all over the world unchallenged—even in America. I would suggest that a phonograph record be made with these words attached: 'This is the way Forbes-Robertson speaks. Speak the same way and your social position will never be challenged.'"

Mr. Shaw followed up this compliment by complaining of the great difficulty of getting actors to speak as he wanted them to speak, and said it should be possible for an author to write a scrip in English that conveys to the actor as much as a scrip by Wagner conveys to a musician. "I do not want actors and actresses to understand my plays," Mr.

BY THE WAY (Continued)

aw continued. "That is not necessary. If they will only pronounce the correct sounds I can guarantee the result."

We call to the attention of Government engineers a suggestion which came us in a recent letter:

"If it is true that all typhoons originate at the Island of Yap in the manner described by Commander McIntosh in our issue of September 27, it ought to be a simple matter to banish this particular form of destruction from the Orient. A system of powerful fans, sufficient to keep the air over the island in constant motion during such periods would ordinarily breed typhoons, could do the trick; or a system of pumps and nozzles arranged to keep the air cool by spraying sea water over the whole island. It would seem to be up to the Government of Japan to attempt such an experiment, and to the other maritime nations to help bear the cost. If successful, the installation should cost more than pay for itself in a single season."

Why do our English friends keep to the left while driving, and keep to the right while walking? The anomaly has apparently attracted their attention, and our authorities seem to be trying to make the "rule of the road" uniform. A correspondent of the London "Sphere" thus upholds the old custom:

"The new order, 'Walk to the Left,' which for some time has decorated the London sidewalks, is contrary to custom. As far as I can see, the tendency to walk on the right is general, and it is probably based firmly upon the necessary customs of a troubled past. In rough times, when strangers encountered on the road, they were wary. Each kept to the right, keeping his left arm with its shield toward the actual or possible enemy, while his right arm was free to swing sword or hurl spear. That, believe it or not, is the simple explanation of why foot passengers bear to the right, and why the new rule is generally disregarded."

It is related that the director of a certain famous museum was once showing a distinguished woman some of the priceless treasures of which he is the custodian. For a long time, however, it seemed that nothing interested her very much. Then suddenly the director noticed a change in her; her face lighted up and she leaned forward.

"What is it, madam?" asked the director, gratified at this tardy sign of awakening appreciation. "Do not hesitate to ask if there is anything you would like to know."

"That is awfully good of you!" exclaimed the woman. "I wish you would tell me what brand of polish you use on those iron ventilators that are let into the floor. We have the same sort of thing in my house, but my servants never get them to shine half so brilliantly."

COLGATE'S Cleans Teeth the Right Way

"Washes" and Polishes—
Doesn't Scratch or Scour
IT IS A DOUBLE ACTION
DENTIFRICE:

- (1) Loosens clinging particles.
- (2) Washes them away.

Sensible in Theory
Colgate's Ribbon Dental Cream cleanses without disturbing Nature's balance. Avoid dentifrices that are strongly alkaline or appreciably acid.

Correct in Practice
Authorities agree that a dentifrice should do only one thing—clean teeth thoroughly. Colgate's does this better than any other dentifrice.

This Christmas put a cheery red tube of Ribbon Dental Cream in every Christmas stocking.

Colgate's cleans teeth thoroughly—no dentifrice does more. A LARGE tube costs 25c—why pay more?

Save the Life of Your Tooth Enamel

"Wash"—Don't Scratch or Scour Teeth

GRITTY, soapless tooth pastes may show quick results. If you scour away your skin, Nature can replace it, but Nature will not replace tooth enamel once it has been worn away by gritty, soapless tooth pastes.

CONTRIBUTORS' GALLERY

RAYMOND RECOULY is one of the most distinguished publicists of France. As foreign editor of "Figaro" and "Le Temps," the latter being recognized as an authoritative channel for the report and interpretation of Governmental policies, he writes of French foreign affairs with special knowledge and understanding.

FRANK DILNOT is a British editor and student of social and economic conditions in England, the author of "The Old Order Changeth," "Lloyd George, the Man and his Story," and "The New America." He began as a newspaper reporter in London, and during his journalistic career has been associated with the "Central News," the "Daily Citizen," and the "Daily Mail." For the latter paper he visited the United States, Canada, France, and Russia, and for the "Daily Chronicle" he went to Scandinavia to investigate social and economic conditions. He has been correspondent for the "Chronicle" in New York and President of the Association of Foreign Correspondents. He was editor of the London "Globe" in 1919.

THE week of November 13 being Children's Book Week, we are devoting our "Book Table" section almost entirely to the younger generation. Sidoni Matzner Gruenberg, writer, lecturer, and authority on children's literary and educational problems, briefly reviews a long list of this year's offerings to children. Mr. Hubert V. Coryell, the head of the Junior Department at the Browne and Nichols School, of Cambridge, Massachusetts, contributes a sequel to his article "What Books Do Boys Recommend to Each Other?" which attracted such widespread attention. His first article told the story of how he led his boys to read good books; the present article goes to show that boys are interested not only in the story, but in the man that writes the story.

ROLLIN LYNDE HARTT, the author of "The Festal Day—So Called," is at present on the staff of the "Literary Digest." He has been ordained in the Congregational ministry and held pastorates in Helena, Montana, and in Leverett, Massachusetts. He has traveled extensively all over America in search of magazine material, and has been on the staffs of the Boston "Transcript" and the Chicago "Tribune." He has studied art in Paris.

WANTED—CARTOONS

THE OUTLOOK wants to receive cartoons from its readers, clipped from their favorite newspapers. Each cartoon should have the sender's name and address together with the name and date of the newspaper from which it is taken pinned or pasted to its back. We pay one dollar (\$1) for each cartoon which we find available for reproduction. Some readers in the past have lost the dollar bills to which they were entitled, because they have failed to give the information which we require.

For THE JOY OF CHILDHOOD—JOHN MARTIN'S PUBLICATIONS for CHILDREN

ABOUT ANNABEL

By Rebecca McCann

THE public that follows, day by day, the syndicated feature, *The Cheerful Cherub*, will recognize the same quaintness and charm in Miss McCann's *Annabel*. The Goojum Bird, the Moon Man, Peter Pelican, Toby Elephant, and finally Davy Jones, companion her amazing journeys.

Three-color board covers; 128 pages; 240 two-colored pictures. Age 4 to 10.

Post-paid, \$2.00

JOHN MARTIN'S CHUBBY BOOK

THE book is a merry primer of morals and manners. As happy examples of desirable virtues, the Chubbies teach children to accept these qualities as a matter of course. Thoughtful parents will appreciate the fact that Chubby wisdom is always positive and constructive. Printed in two colors with over eighty full-page pictures illustrating the merry Chubby virtues, all in verse, printed in large type and easily read. Age 4 to 9. Post-paid, \$1.50

JOHN MARTIN'S BIG BOOK No. 6

HOUSANDS of little readers each year eagerly await the publication of *John Martin's Big Book*, the American children's real. The Big Book is a compilation of best pages culled from ten years' issues of *John Martin's Book*. Its 250 pages are shly pictured in two colors. Age 4 to 11.

Post-paid, \$2.50

IN-AND-OUT AND UP-AND-DOWN BOOK

By Jo L. G. McMAHON

WEE people will love this unusual book which is also a *game of fun and fancy*. Cozy little creatures run over the pages and through doors which the *child* cuts. 64 two-color pages; board cover with amusing three-color design. Age 3 to 8.

Post-paid, \$1.25

JOHN MARTIN'S BOOK-PLATE BOOK

BOOK-PLATES foster a love of books. They have been offered in many ways but never so ingeniously as in this book, which will prove a powerful ally in building a permanent library. Ten pages of two-color book-plates, sixty in all, a list of sixty standard books, and other features. State age and whether for boy or girl. Age 5 to 14.

Post-paid, \$1.00

JOHN MARTIN'S SOMETHING TO DO BOOK

AS just gone into its third large printing, 45,000 copies in one year. s a rare combination of book and . Sixty-four pages of thrills for y fingers and active minds. Just thing for the convalescent or t-in child, the child in a hotel, on oat or a train journey, for scissors, yons, and paste, all that is neces- y for the fun, are contained in the tfolio cover. Age 7 to 12.

Post-paid, \$1.25

JOHN MARTIN'S Publications for Children maintain the same high standard that has been held for ten years by John Martin's Book, the *Child's Magazine*. They are books built absolutely from the child's point of view, full of the twinkles and twists that children love.

Buy them of your dealer, or they will be sent, post-paid, from John Martin's Book House, 33 West 49th St., New York

John Martin's Book Room is a national center for the best books for children, a shop whose shelves are censored as carefully as you would censor your own child's library. Experts in juvenile reading are in charge, who will advise and talk with you about your individual problem. Our service is available, also, for those at a distance. Write us the age, temperament, and taste of your children, and we will gladly supply lists of desirable books.

Send for the 1922 edition of "John Martin's Blue Book of Best Reading for Children," a thoughtfully selected group of two hundred standards with brief reviews, names of publishers, and prices. Use the coupon below and we will add, free of charge, a little brochure, "The Giant of Worthless Reading."

JOHN MARTIN'S BOOK HOUSE, 33 West 49th St., New York

Teach Yourself to Write Photoplays

by the Direct, Practical Method Endorsed by Producers, who are co-operating with us to help you. They furnish us the studio synopsis of their forthcoming feature pictures. In connection with each synopsis we publish a complete analysis written by Vernon Hoagland, famous editor and dramatic critic. An easy and fascinating way to master the art of the screen. Make your own stories readable by studying successful pictures with the synopsis and analyses which we provide. For example, we have the studio synopsis of "BROKEN CHAINS," Winnifred Kimball's photoplay which won the \$10,000 Chicago News prize over 30,000 contestants. Send \$1 for this synopsis and list of others we have on hand.

SCREEN WRITERS' EDUCATIONAL BUREAU

24A, 145 W. 45th St., New York

Eat and Be Well!

A condensed set of health rules—many of which may be easily followed right in your own home, or while traveling. You will find in this little book a wealth of information about food elements and their relation to physical welfare.

CONTROL YOUR WEIGHT WITHOUT DRUGS OR TIRE SOME EXERCISES

Effective weight control diets, acid and bland diets, laxative and blood-building diets, and diets used in the correction of various chronic maladies.

The book is for FREE circulation. Not a mail-order advertisement. Name and address on card will bring it without cost or obligation.

HEALTH EXTENSION BUREAU
294 Good Health Building, Battle Creek, Mich.

\$3 Worth Reading 24c

The following books, 160 to 200 pages, clothbound, sell for \$1.50 each. To have a universal sale we offer a special good paper edition, generous size pages, bold faced Cheltenham type, postpaid, for only 12 cts. a copy comprising:

A 60,000 word edition "Masterpieces of American Eloquence" including Lincoln, Wendell Phillips, Beecher, Douglas, Ingersoll and other noted orators, 12 cts. postpaid.

"The World in 1931" by Stewart E. Bruce is the book of the hour. More fascinating than Belamy's "Looking Backward." It portrays a new social and economic order based on co-operation, profit-sharing and international brotherhood. It reads like a romance, yet has all the power of a cyclone. Clothbound, 200 pages, \$1.50. Paper edition, word for word, same text as the clothbound, 12 cts. postpaid.

Don't fail to read "The Ashes of Victory," the most enlightening and stirring book of 1922. Tells the plain truths as to the guilt of all the nations that were at war. The war will have been in vain unless the peoples of the world know the startling truths that "The Ashes of Victory" contains. Cloth, \$1.50, and paper edition postpaid, 12 cts. Do not fail to have one or all three of these soul-stirring and ennobling masterpieces. Offer good until Dec. 15th.

How to Start
Easily Below Zero

Summer heat
in winter manifolds

Don't waste valuable minutes and
struggle your battery fusing with a stiff engine because the
POMEROY PATENTED ELECTRIC GASAFIER
is guaranteed to start any make of car as easily on the coldest morning as
in mid-summer, and is also guaranteed to last as long as the car.
Easily installed in 30 minutes between the car-
surator and intake manifold. No parts re-
moved. It will start your car in winter, and
in summer will banish costly battery abuse.
Intensify gasoline, properly break the gas and
increase mileage. Price complete only \$5.
[not at your dealer's, order direct. Literature Free.

INTO LIVES OF JOY, SERVICE, POISE, SELF-CONTROL, HIGH PURPOSE, EFFECTIVENESS, AND PATRIOTISM

BY THEIR TENTH YEAR

THEY will be well on the road they are to follow through life. Parents are realiz-
ing more and more the potency of early impressions in adult character. You
guard your children from improper companions; are you sure they are safe from
unwholesome suggestion, fear, and mischief in their reading?

JOHN MARTIN'S BOOK The CHILD'S MAGAZINE For Children from Three to Ten

NEEDS no censorship by the most exacting. It is built with a constructive idea
on every page. It is considered by thousands of mothers the most definite force
for right thinking and right living that comes into their homes.

LESS THAN ONE CENT A DAY FOR

the happiness, guidance, inspiration, fun, and companionship of this real friend, with

AN INFLUENCE FOR GOOD THAT LASTS A LIFETIME

WHAT IS JOHN MARTIN'S BOOK

FOR the sake of conforming to postal
regulations, it is called a magazine
and is issued on a specific date. In
all other respects, it is a book, printed
in two colors on tough stock, and so
strongly bound that it is practically

indestructible. It has a gay cover,
a title page, and it is full of pictures.
Go to the shops and find the cost
of the cheapest book on sale. Then
consider what the coupon below brings
you.

Fairy Tales
Nature and History

Classic Tales
Bible Stories

Clean Fun and
Nonsense

Fables and Myths
Poetry and Jingles

AND a special department of children's activities, things to do and to make, games to play,
pages to cut and to color. For train and boat journeys, for convalescent days and for com-
panionship of all days, John Martin's Book is an endless resource.

JOHN MARTIN'S BOOK IS A GIFT

THAT LASTS FOURTEEN MONTHS
AND LIVES A LIFETIME

TO THOSE WHO LOVE CHILDREN

USE JOHN MARTIN'S BOOK ROOM
FOR YOUR CHILDREN

It is a charming spot where the BEST BOOKS, not all books,
are beautifully displayed, courteously presented, and intelli-
gently selected. It is a national center for advice to earnest
parents about truly formative literature for children of all ages.

Whenever soap comes into contact with the skin—use Ivory

Look out! here comes the frost chap!

SOME MOTHERS "wish-there-was-a-law" to keep children from getting dirty when raw winter winds begin to blow!

Chapped hands and faces — how cruelly they hurt! They often result from the extraction of the natural oil from the skin by harsh soap.

Here is one effective way to guard against this possibility.

Let your children wash in Ivory Soap and warm water — not hot — a dozen times a day if need be. Only be sure they dry the skin thoroughly.

Ivory lather, you see, is mild and gentle, and it rinses off easily and completely, leaving the skin clean and smooth and weather-proof.

Your *own* face and hands, too. After Summer's pleasant warmth they must get used to Winter's keen blasts. Though your skin be as fine as a baby's, Ivory will help to protect it against Winter's harshness and keep it healthy and soft.

Husbands like Ivory, especially. Men don't enjoy deep-sea diving for soap in a bathtub—Ivory Soap floats!

Wouldn't you like to have, in *one* soap, all seven of the desirable qualities and properties a *fine* soap may have—purity, mildness, whiteness, fragrance, abundant lather, easy rinsing, and "it floats"?

Of course you would! And Ivory gives you every one.

PROCTER & GAMBLE

Ivory Soap comes in a convenient size and form for every purpose

Medium Cake

For toilet, bath, nursery, shampoo, fine laundry. Can be divided in two for individual toilet use.

Large Cake

Especially for laundry use. Also preferred by many for the bath.

Ivory Soap Flakes

Especially for the wash-bowl washing of delicate garments. Sample packages free on request to Division 24-K, Dept. of Home Economics, The Procter & Gamble Co., Cincinnati, O.

NEW SENATORS-ELECT

THE ELECTIONS: WHERE THE EXPECTED HAPPENED

SO widely distributed were the reverses which the Republicans encountered on Election Day this year, November 7, in the States under their control that States like Pennsylvania, Wisconsin, and California stand up like islands in a sea of Democratic votes.

Of course Pennsylvania remained Republican. What swept Republicans out of power in other States was the protest against standpatism. It takes a veritable tidal wave to overthrow the Republican structure in Pennsylvania; but there was no tidal wave there because the Republican party itself had built a firm breakwater by nominating for the Governorship the progressive leader, Gifford Pinchot.

In Wisconsin the success of the Republican ticket was mainly nominal. It was really a success, and an overwhelming success at that, of the La Follette machine. There what Mr. John Ballard in his recent special correspondence in *The Outlook* described as "the revolt against the Yankee" was complete. Not only was La Follette himself sent back to the Senate, but La Follette's candidate for Governor was overwhelmingly elected and La Follette's ally, Victor Berger, was once more elected to Congress.

We comment elsewhere on the Republican success in Iowa, as a part of the revolt of the farmers. Substantially the election in that State was a defeat for the Republican machine, which was not heartily for the Brookhart candidacy.

In California the Republican candi-

dates were generally successful; but elections in California have ceased to be signs of party strength. There non-partisanship has been erected into a system. Hiram Johnson's triumphant re-election to the Senate is less of a victory for the party than a victory for himself personally and for the policies for which he stands. California sees in Hiram Johnson a man of outstanding personality, of great earnestness, and of devotion to a course which he believes essential to the liberties and rights of the people. This does not mean that all who voted for him always trust his judgment or approve his willingness on occasion to become virtual political partner of Hearst; but it does mean that they trust his general purpose and believe in his sincerity and ability. Like La Follette, Hiram Johnson has the record of remarkable achievement in his State; and in that fact alone may be found one great reason for the indorsement which the voters of the State have repeatedly given him.

The election of Friend W. Richardson, the Republican candidate for Governor, was not by any means merely a party triumph. In fact, the nomination of Mr. Richardson was a most unexpected reversal for the Republican organization. Mr. Richardson made his campaign for the nomination on the issue of economy. He is an old newspaper owner and editor, the only President the California Editorial Association has ever had; and he knew how to get his idea of economy before the voters of the State through the medium of the country press. He

made his campaign in his own automobile and was his own chauffeur, and the talking he did was chiefly to business men informally in store and office and to farmers and orchardists in the open. Behind him was a record for economy and efficiency as State Treasurer. With this record and by this means of campaigning he defeated Governor Stephens for renomination. Then he proceeded to carry on a campaign for the Governorship. He placed himself on the "Dry" side of the prohibition issue, and he has again won. California thus, like practically every other State where the Republicans were successful, records not a victory for the Republican organization, but for a progressive group which had secured control of the party organization or gained the party nominations.

THE ELECTIONS: GAIN AND LOSS

THE defeat of ex-Senator Beveridge in Indiana has been on the whole a disappointment to the country at large. Few men have rendered better service in the Senate than he. Mr. Ralston was chosen partly because the people of Indiana have respect for him and regard his record as Governor of the State with approval; but chiefly because he received the votes of those opposed to Mr. Beveridge. As we said last week, Mr. Beveridge's defeat was due in part to his war record, which did not please ex-service men; but it was also due to the fact that, in spite of his progressive record, radicals suspected him while conservatives feared him. He

tered the opposition of those who appealed to race and group prejudice, and at the same time he had at least the passive opposition of the supporters of the Old Guard faction whom he defeated in the primary.

A distinct gain of National significance was the defeat of Mr. Pelletier as candidate for District Attorney in Suffolk County, Massachusetts. He had been not only displaced from office but disbarred. It was feared that his appeals to religious prejudice would bring about his re-election. After his disbarment a law was passed making only lawyers eligible for the District Attorneyship, but supporters of Mr. Pelletier had this law submitted to the people for a referendum. To the credit of the Commonwealth of Massachusetts, and particularly to the people of Boston, the law was sustained and Mr. Pelletier defeated.

In Maryland the defeat of Senator France was a gain to the Senate, not because of Senator France's opinions, but because of the fact that his candidacy depended largely upon appeals to prejudice and selfish interests. His successor will be William Cabell Bruce, a Democrat of the Underwood school and one of the best lawyers of Maryland.

From Missouri Mr. Reed goes back to the Senate as an anti-Wilson Democrat who has been conspicuous chiefly as a violent irreconcilable both in war and in peace.

In the defeat of Senator Sutherland, of West Virginia, the Senate loses a conscientious and useful member. His place will be taken by Matthew Mansfield Neely, a lawyer and a business man of the State.

THE ELECTIONS: NEWBERRYISM

In Michigan the defeat of Senator Townsend by Woodbridge N. Ferris was due undoubtedly in part to his defense of his colleague, Senator Newberry. It is a sound instinct which rouses the people against men whom they suspect of buying their way into the United States Senate. In the past the use of money for purchasing seats in the chief legislative body of a nation was the curse of the old English rotten-borough system. It has shown itself in the past in this country. The case of Senator Lorimer, of Illinois, bad as it was, was not the most flagrant in our history. If the people ever became indifferent to such abuses, self-government in America would face disaster. It is because in various sections of the country the people have seized upon the case of Senator Newberry as an example of such misuse of money that, not only in Michigan, but in other States, the defenders of Senator Newberry have encountered bitter opposition. At the same time a man like

Gifford Pinchot has been able to spend an amount of money far exceeding the limit set in Michigan and has not suffered in the least for it. The reason for this is that in some way the people have not trusted the purposes of those who were behind Mr. Newberry, while they have trusted the purposes of those who were behind Mr. Pinchot.

That there was danger in demagogic appeals to this perfectly sound instinct ought to be plain to thinking men and women. In the State of Washington Senator Poindexter, one of the most useful and progressive of all the Senators, went down to defeat largely because he conscientiously voted to seat Mr. Newberry. In that case the campaign was affected by the purchase of a newspaper. The Seattle "Post Intelligencer," one of the most trustworthy newspapers on the coast, has become now one of the chain of the Hearst newspapers, and as such supported Mr. Poindexter's opponent, Mr. Dill, emphasizing the Newberry issue.

If the people want to keep the Senate free from the control of money power, they must be on their guard, not only against the open use of money for legitimate publicity, but against the use of money in getting political publicity indirectly. A man who controls great organs of public opinion by means of his wealth can advertise his policies and his candidature without having to account for it as political expenditures. The wealthy man who gains publicity by means of commercial advertising, which does not have to be accounted for as political expenditures, has a great political advantage. This issue really is not mainly concerning the amount of money expended; it usually resolves itself into an issue between a man or a group that the people trust and a man or a group that they do not trust.

THE ELECTIONS: FARMERS IN REVOLT

AGRICULTURAL discontent showed clearly in the results of the elections in the Western States. The farmer felt the post-war deflation before any other element in the country. The prices for his products are to-day below the economic level of the products of our manufacturing centers.

We quote two paragraphs from Mr. Mark Sullivan's account in the New York "Evening Post" of conditions in this region:

West of the Missouri River, in the wheat and potato country, and to only a slightly less extent in the cattle-raising territory, there is a condition of business distress and political radicalism so extreme that the rest of the country refuses to take it as seriously as the facts are. In the writer's recent campaign trip

through parts of this territory the stories about local banks and individual business in actual or incipient bankruptcy were so extreme that one hesitated to print them without investigation and verification.

Among other things, I was told that in some counties of Montana the schools would not open this fall because the farmers could not meet the taxes to support them. In this wheat and potato territory, and because of this condition, the issue that all the local candidates talked about and that all the people wanted to hear about, was not the tariff, nor prohibition, nor foreign relations, nor any of the other issues that the East talked about and heard about. The issue in this wheat and potato territory was deflation and the Federal Reserve Board—in short, the National system of currency, banking, and credit. The farmers in this territory blame their troubles on the policy of deflation, and that was what they wanted to talk about and hear about.

The farmer has come to realize that income is a matter of purchasing power, and not a matter of dollars and cents received. In this respect farmers are better economists than leaders of organized labor—perhaps because farmers have paid more dearly for their education. This understanding of the disadvantages under which they have been laboring, combined with an increased sense of political power and group interest, has brought forward radical farm representatives whose remedies are not always carefully conceived.

Perhaps the outstanding Senator of this type who will appear in Washington as a result of farmer dissatisfaction is Smith W. Brookhart, of Iowa. Brookhart has been a teacher in a country school, a farmer who has won prizes for his pigs, apples, and corn, and a man with a splendid record in the war. He was a former National Guard colonel who attained the same rank in the National service. Senator Brookhart is pledged to work for the repeal of the Esch-Cummins Act, the reopening of the Newberry case, and a "real soldier's bonus." Senator Brookhart is in his early fifties and is the father of five children.

Less radical than Brookhart is the representative of the farm bloc who will speak for Nebraska in the Senate. Senator Howell was supported by the Non-Partisan League, the German element in the Nebraska electorate, and the prohibitionists. Mr. Howell is bone-dry. Senator-elect Howell is reported to be against the ship subsidy, for a soldier bonus, and for a rational tariff. The meaning of the last phrase is distinctly a matter of definition.

The fact that Mr. Howell was a manager of General Leonard Wood's Presidential campaign in Nebraska does not lead one to fear much from the fact that he was supported by the German ele-

NEW SENATORS-ELECT

ment. Senator Howell is well known for his management of the municipally owned utilities of the city of Omaha. He is a graduate of Annapolis and is in his fifty-ninth year.

Nebraska elected for its Governor Mr. Charles W. Bryan, the brother of William Jennings Bryan. Mr. Bryan has been for many years the publisher of the "Commoner."

At first it appeared that the Non-Partisan League had failed in its attempt to elect Lynn J. Frazier to the Senate. Later returns, however, indicate that Mr. Frazier has been elected. He represents an extreme phase of the agricultural unrest which has been behind the Socialistic policies of the Non-Partisan League.

Another new Senator who will belong to the farm bloc is Dr. Henrik Shipstead, a St. Paul dentist, who will represent Minnesota. Dr. Shipstead is in his

early forties, and owes his election to the votes of labor interests and the Non-Partisan League. He defeated the veteran Senator Kellogg, whose loss will be keenly felt in the Senate. Dr. Shipstead stands for the repeal of the Esch-Cummings Act, a "real bonus law," a reorganization of the Federal Reserve system, and the unseating of Senator Newberry.

THE ELECTIONS: A STANDPATTER PULLS THROUGH

IN contrast to the former radicals of the Middle West stands out Simeon D. Fess. Senator-elect Fess has long been a member of the lower house and has a record of never voting against the President except once. Then he voted to override Mr. Harding's veto of the Bonus Bill. Senator Fess before entering politics was President of Antioch College and is the author of an "Outline of American History" and of a text-book

on physiology. In 1920 he was Chairman of the Republican National Congressional Committee.

While Ohio went Republican so far as its Senatorial representative is concerned, it showed its independence by electing a Democratic Governor, Mr. A. V. Donahey.

THE ELECTIONS: THREE SOUTHERN STATES

IN the South the State of Georgia has chosen Walter F. George, formerly Associate Justice of the Supreme Court of Georgia, to succeed the late Senator Watson. His supporters claim that, despite his acceptance of many of the Watson doctrines, he will be more conservative than Georgia's late representative in the upper house.

Texas sends to the Senate a Democrat who won his nomination by defeating the able Senator Culberson and seven other

aspirants for public office. Senator-elect Mayfield was supported by the Ku Klux Klan, and estimates vary as to the effect of this support upon his success.

Mississippi has happily shaken itself free from the Bilbo-Vardaman tradition by sending Hubert Durrett Stephens as successor to John Sharp Williams. Mr. Stephens will not find it easy to fill the place left vacant by the departure of Senator Williams from the Senate, but Mississippi has done herself credit by his election.

THE VOICES OF THE PEOPLE

"THESE United States" is something more than a linguistic survival. The division of our Nation into units with power over their own internal development has a present-day validity which it is sometimes hard for foreign observers to understand. It is easier for such an observer to understand the

historical difference between France and Switzerland than it is to comprehend the subtler distinctions which differentiate the character of our individual States.

There is a tendency for Americans to think of State rights as artificial when they prevent them from doing what they wish. Perhaps for this reason we do not give them credit enough for the advantages which they afford us. We object to State barriers when they prevent us from protecting the children of the Nation as we believe they should be protected. We do not remember at the same time that our compartment system of Government permits us to try out political experiments by a laboratory method which would be impossible under any other form of government.

To the foreigner our multitudinous divorce laws often seem nothing less than ridiculous. To the American, who understands the spirit of his Govern-

ment, these divorce laws are an indication of diverse public opinions which could not be harmonized without a moral sacrifice on the part of large portions of our population. This diversity of State opinion is well illustrated by the popular referendums at the last election. We have not seen the text of many of these amendments, but their purport seems clear enough from newspaper accounts of the votes.

In the social field we find that South Dakota voted two to one for a strict ban on all Sunday festivities. Montana, on the other hand, authorized the adoption of a pari-mutuel system of betting on horse-races. Nevada, by popular vote, has refused to change its divorce laws. Massachusetts declines to censor her motion pictures.

Massachusetts rejected the measure providing for more stringent State prohibition enforcement, but California took

NEW GOVERNORS-ELECT

the Eighteenth Amendment and the Volstead Act to its bosom by incorporating them in her statutes. San Francisco and Sacramento voted against such incorporation; all the other large cities of California, all of southern California, and most of the San Joaquin and Sacramento Valley combined to carry the measure through. By a large majority Ohio defeated a measure designed to throw the burden of enforcing the Eighteenth Amendment upon the Federal Government.

The popularity of the proposition to grant a bonus to veterans is indicated by the votes of the six States confronted with the proposal to use State funds for this purpose. Illinois, Iowa, Kansas, California, and Montana voted heavily to this end. From Oklahoma the final figures are not available, though the indications are that a bonus proposal has been passed.

Oregon manifested her faith in her public school system by adopting a law which requires children between the ages of eight and sixteen years to attend public school. Only those who are physically incapable, those who have completed the eighth grade, and those who live at inconvenient distances from schools or are taught by parents or private teachers are exempt. These, however, must have their education supervised by the State. Though opposition to this law came largely from Catholics and Protestants interested in church schools, it ought to have been opposed by all who believe in freedom of education. In this the voters of Oregon have adopted what is fundamentally an undemocratic measure.

Sentimentalists failed when anti-vivisection laws were defeated in California and Colorado. Washington struck

a blow for her children by defeating the attempt to prohibit the physical examination of children except with the consent of their parents.

Florida voted, among other things, to increase the school taxes of the State.

THE DANGER IN THE NEAR EAST

WHEN the date for the assembly at Lausanne of the delegates of the Powers specially interested in the Near East was changed from November 13 to November 20, it was a slight concession to the wishes of Great Britain that the later date was fixed. Up to November 15 the only authorized delegates to appear at Lausanne were those of the Nationalist Turkish Government. The feeling among British diplomats that led to the short postponement and their evident desire for a longer postponement arose because the acts of the Nationalist Assembly at Angora since the pact made at Mudania have altered the situation. Most spectacular among these acts was the Turkish demand that the British and French forces in Constantinople should abandon the city and that non-Turkish vessels entering the Straits of Dardanelles should be ordered to take out permits from the Nationalist Government. This was not only an unparalleled piece of international impudence, but was entirely outside the Mudania agreement. Apart from this, the Kemalists have extended their already sweeping demands, have been expressing their insistence on the abolishment of the capitulations (extraterritorial rights long conceded to foreign nations in Turkey), and have repeatedly declared that nothing but full sovereign rights to Turkey under the Nationalist Government would be considered. This last would, taken literally,

include the right to fortify the Straits as against foreign warships if Turkey should so desire.

In view of all this, it cannot be said that the situation in the Near East is free from serious danger. It is natural enough that the Kemalists, swollen by their easy success over the weak-kneed Greek army, should consider this their appropriate time to bluff and bluster. They are trying in every way to sound the sincerity of the purpose of Great Britain, France, and Italy to act together. It is no wonder, then, that an effort to strengthen and clarify the mutual intentions of Great Britain and France is desirable as a condition precedent to the Lausanne Conference. Ismet Pasha, who heads the Turkish delegation at Lausanne, darkly hints that the military success of Kemal in Asia Minor has put the Nationalists in such a position that they need not fear compulsion from any direction.

The exodus of Greeks and Armenians is now from Constantinople as well as from Eastern Thrace into Western Thrace. Many thousands of Christian and Jewish people, including large numbers of employees of American firms, are trying to get away from Constantinople, and rumors continue to be spread of danger of massacre and conflagration. The proposal of a state of siege or military control over Constantinople has been discussed between France, Italy, and Great Britain.

Mr. Lloyd George in one of his campaign speeches expressed his view of the situation when he said: "The Treaty of Mudania, which was won by firmness, has been torn to shreds by the Turks." Lord Curzon declares: "The policy of the Turk is one of nationalism gone wild and is almost suicidal in its character."

The pretensions of the Turks cannot be tolerated."

THE EARTHQUAKE CATASTROPHE IN CHILE

It is impossible at this writing to estimate with any degree of accuracy the number of fatalities from the earthquake of November 11 in Chile. Probably a thousand perished, and the fatalities may be largely in excess of that number. The disaster affected a great stretch near the coast; much, if not most, of the damage was inflicted by a tremendous wave which followed a subsidence or break beneath the bottom of the sea; so that, first, enormous quantities of water sank through the crevices, and, secondly, its withdrawal caused an inrush of the ocean. The towns of Coquimbo, Copiapo, and Valenar were seriously damaged and the last was practically destroyed. Numerous small places and country districts were devastated; the length of the territory damaged is put at about 1,200 miles.

Earthquakes are no novelty in Chile. As long ago as 1853 the town of Concepcion was destroyed by an earthquake quite similar to that now recorded, and the whole country along the coast has often suffered from smaller disasters of this kind.

CAUSE AND HISTORY OF EARTHQUAKES

Of all convulsions of nature an earthquake is undoubtedly the most terrifying, both because of the vastness and mystery of the overwhelming power which produces it and because man can neither escape from it nor protect himself against it. The ancients, as modern barbarians do, ascribed earthquakes to the malevolence of demons or to the anger of outraged gods. All unusual and gigantic phenomena of nature, they thought, were produced by supernatural causes. Thus Herodotus, whose history is one of the great classics of all literature, in two passages mentions eclipses as prodigies or portents of the gods, in both cases unfavorable to the Greeks and foreshadowing their destruction. Science, however, made earlier and more rapid progress in astronomy than in seismology, a term of very old Greek derivation employed by geologists to define the very modern study of earthquakes. For, while the Greeks and Egyptians knew something about the cause of eclipses before the Christian Era, it is only within a few decades that an attempt has been made to formulate the causes of earthquakes. Even now a good deal of explanation of earthquake phenomena is hypothetical. In general, however, it may be said that scientific investigators be-

lieve that earthquakes are caused in two ways—either by the explosive pressure of volcanic gases in the molten interior of the earth or by the slipping or displacement of gigantic strata of rock under the earth's surface. In the one case the earthquake is a monstrous explosion, in the other a monstrous landslide.

In most recorded cases the landslide or explosion has taken place near the sea or under its bed, so that it has been accompanied by a violent and death-dealing tidal wave. The earthquake that destroyed Lisbon in 1755 was followed by a tidal wave which swept the shores of Portugal and drowned or dashed to death thousands of human beings. Altogether 40,000 lives were lost in that disaster. Messina was shaken by an earthquake in 1783 and again in 1908, and on the latter occasion a great tidal wave wrought much of the destruction which resulted in the death of 60,000 persons. The recent Chilean earthquake and tidal wave, while terrible and sad enough, are not comparable in magnitude to the Portuguese and Italian disasters, nor probably, in loss of life, to two great earthquakes which have stricken India during the last twenty-five years. It is not surprising that there were times when the Hebrew poet thought man to be a puny thing in the midst of the incalculable forces of nature: "What is man, that thou art mindful of him? and the son of man, that thou visitest him? . . . Thou hast made the earth to tremble; thou hast broken it. Heal the breaches thereof; for it shaketh. . . . He looketh on the earth, and it trembleth; he toucheth the hills, and they smoke!"

ANSWER TO THE ROLL CALL

THE sixth annual Roll Call of the Red Cross is now under way and will continue until Thanksgiving Day. Once a year the Red Cross appeals to the American public to join in its work. The Roll Call is just what the name indicates; a call to members to renew their membership and to those not members to find out what the Red Cross is and does and then become members. This is not a "drive" in the usual meaning of an attempt to raise contributions and donations; no doubt the National Red Cross welcomes at any time of the year new memberships and special contributions, but its sole direct appeal to the public is to join in membership.

We do not know what the exact figures of membership are at present. A year ago there were about six million members—a much larger membership than had existed before the war.

As probably most of our readers know, the membership fees, amounting to sev-

eral million dollars, go directly for relief purposes; the beautiful National Red Cross building in Washington was paid for from special contributions made for that purpose; the National officers, or most of them, either serve without pay or are paid from special contributions made outside the membership fees; thus membership fees paid by individuals go intact to carry out the work of the association.

WHAT THE RED CROSS DOES

WHAT is that work, now that the war has long since been ended? This is a question sometimes asked, and easily answered. The watchword of the Red Cross is "Always Ready." One big part of its work is to be ready for emergencies. When such disasters happen as those at San Francisco and Galveston and Tulsa, and now Smyrna, relief and help cannot be improvised in a minute. This is just what the Red Cross is for; to have funds, railway trains, nurses, doctors, medical supplies, food, tents, ready to send with speed to any place where the need is great.

The greatest emergency this century has seen was the emergency of the Great War. What the Red Cross did need not now be recapitulated. It can be told only in terms of many millions of money and of arduous and unpaid service of many thousands of men and women.

Since the war the Red Cross has rendered services of vast magnitude in devastated countries and regions; nor is its work in this direction to be confined to the ravages of the past. President Harding, who is the President of the American Red Cross, in announcing the present Roll Call, points out that a fearful emergency exists abroad at this moment. In the Near East, he says, "the lives of millions of unfortunate people even now depend and must continue for a long time to depend on the untiring liberality of more favored communities."

The relief that is to come from this country must be rendered, as President Harding points out, almost entirely through co-operation between the Red Cross, the Near East Relief, and some smaller agencies. It is understood that the Red Cross expects to spend for the Near East at least five million dollars. It could not spend it now if it did not have it now; it would not have it now if it had not been for the membership fees of last year. On the day we go to press the American Red Cross has cabled to Red Cross chapters in Chile offering aid to sufferers from the earthquake.

One other among many activities of the Red Cross may be mentioned, namely, the aid it renders to the returned American soldier. Colonel Forbes, the Director of the Vete-

Bureau, speaking for the ex-service man, says: "Whether it be a matter of calling the Bureau's attention to an unrewarded claim, or an ill man needing hospitalization, or of tiding the sick veteran over the time which must elapse before Government aid can be offered, the Red Cross is always on the job with expert service and the necessary goods."

These are only the larger divisions of the humane work of the American Red Cross. Its public health activities, its encouragement of sound sanitary systems, its education in first aid, its training of nurses, its work in the schools, are less outstanding, but combined are extremely valuable.

We join with President Harding in urging Americans to renew their allegiance to the Red Cross "in the interests of our common humanity and of the service which we owe to our fellow-men."

THE ELECTION AS A SCHOOL

Midnight, October 22, 1780.

Franklin. Eh! oh! eh! What have I done to merit these cruel sufferings?

Gout. Many things: you have ate and drunk too freely and too much indulged those legs of yours in their indolence.

Franklin. Who is it that accuses me?

Gout. It is I, even I, the Gout.

Franklin. What? My enemy in person?

Gout. No, not your enemy.

BENJAMIN FRANKLIN, whose paper in the form of a dialogue between himself and the gout thus begins, was wise enough to learn the uses of adversity. What the gout was to Franklin failure can be made to be to any one. It can be made to serve as a physician, a teacher, a good friend.

Fools encounter defeat or censure, and become angry.

The timid encounter defeat or censure, and become discouraged.

The wise encounter defeat or censure, and learn from it.

Whether the elections on November 7 were a victory for the Democratic party is disputed; but it is universally recognized that those elections were a defeat for the Republican party. There is reason for doubt whether the people by their votes were eager to register their approval of the Democratic party; but there is no doubt that they registered censure for the Republican party.

By our laws the Republican party, in spite of the adverse vote, will remain in power in the National Administration for over two years to come; and will even continue in control of Congress by the present overwhelming majority until next March, and by a narrower margin

for two years thereafter. It is therefore of great concern to the Nation whether the rebuke administered at the polls will cause the Republican leaders to be angry, or discouraged, or willing to learn.

If experience of the past is any guide for the future, it is certain that some Republican leaders will have learned nothing. When in 1910 the people began to show dissatisfaction with the conduct of the Government, Republican leaders in power paid little attention; and when the revolt came they proved their incapacity for authority by a course which was guided by anger and resentment. Again in 1916 Republican leaders had a great opportunity of profiting by their lesson, but this time, to their undoing, they were guided by timidity. We hope for the sake of the country that such leaders will not prove to be in control of the dominant party now. We hope that those who are in position of authority in the party will repress whatever anger they are inclined to and overcome whatever timidity they are tempted by, and will regard this election as a school.

If they do, they will find defeat a good teacher.

Defeat can teach them a lesson in leadership. A self-governing people like the Americans do not like bosses, but they demand leaders. They do not wish to be ordered about and told what to do; but they are ready to follow a man who understands their needs, has the insight to read their thoughts and interpret them aright, has the knowledge of the past to enable him to avoid pitfalls, has faith in the country's future, and has the authority of character and mind to direct the forces of government in carrying out the people's will. It is a mistake to believe that the people of America do not want leaders. It is a mistake to believe that the people are afraid to have those in positions of executive responsibility exercise authority. No two men in American history form a more striking contrast than Roosevelt and Wilson, but they both were willing to lead, and each found that the people were willing to follow him as long as they believed he represented their will and purpose. To-day there is a widespread feeling that the Administration has been reluctant to lead. In particular, it is felt that the President, out of a sincere and unselfish desire to promote the spirit of co-operation, has been too willing to forego opportunities for shaping legislation, for forming and guiding public opinion, and for controlling through executive authority such disturbances as the coal and railway strikes. There is a feeling also that within Congress itself there is lack of intelligent, public-spirited, courageous

leadership. The people have common sense enough to know that the legislative and the executive machinery cannot run without direction. They want in charge of that machinery engineers who are willing to accept responsibility and exercise the corresponding authority.

Defeat can also teach Republican leaders a lesson in political appointments. Americans as a rule recognize the need of political organization. Indeed, they are among the most conservative people in the world in their loyalty to organized parties. During the past generation, however, they have been becoming more and more distrustful of party politics and party politicians. They are more sensitive than they were to appointments made for purely party reasons. They demand in every appointment at least the apparent justification of public service instead of party reward. They may not always be right in their judgment as to the men most fitted for public positions. They are willing to roll up a large vote for a man like Charles Steinmetz for the position of State Engineer in New York because, perhaps without sufficient reason, they believe that a man who has gained a great reputation as an inventor and as a scientist would be a good administrator of a public office that has to do with engineering; and they do this although Mr. Steinmetz had no place on either of the great party tickets. They believe that the appointment of Mr. Daugherty to the position of Attorney-General was not because he was the greatest lawyer available but because he was a powerful agent of the party in the State. They believe that the appointment of Mr. Rely to Porto Rico was not because he was the fittest man that could be found for the difficult task of colonial administrator, but because it was convenient to find some berth for a man who had rendered political service. They ought perhaps to remember that the former Administration made a worse appointment to Santo Domingo, and that the present Administration has chosen for Governor of the Philippines the greatest colonial administrator in history; but it ought not to be altogether distasteful to Republicans that the people should expect better things of this Administration than the worst of the preceding one, or that they should consider it natural that the high standard adopted in the Philippines should be applied to Porto Rico and elsewhere. That there is widespread dissatisfaction with the appointment of Dr. Sawyer as the Administration's chief spokesman concerning public health and public welfare is obvious, and it is no less pronounced because that appointment is attributed to personal rather than political causes. More and

more people are demanding that appointments to public office should be made for public reasons.

Defeat ought to be able to teach Republican leaders a lesson in political management. Again and again Americans have shown their discontent with the old method, followed in both parties, known as log-rolling. The fact that the people themselves are apt to follow this method in local politics renders them no more tolerant of it when it is followed in National politics; indeed, it may be one of the very reasons why they are intolerant of it. They do not like petty ways of dealing with matters of National concern. In particular, they are outraged by the log-rolling method as applied to the tariff. Very few Americans know anything about the specific schedules of the Tariff Bill which Congress recently passed; but they saw those schedules determined by a log-rolling method. They saw their representatives swapping votes for the sake of satisfying special interests, giving a concession here for the sake of one interest in exchange for concessions on behalf of another interest. They have seen that method used again and again; and if they are disgusted with it more this time than ever before, it is because their disgust has become cumulative. It is this kind of political management that they identify with reaction. They are ready to trust almost any man who speaks to them in the terms of general interests as distinct from those who seek favor by giving favors for special interests.

Defeat possibly may teach Republican leaders, finally, a lesson in humanity. No matter how efficient, or high-minded, or industrious a public servant may be, Americans are not likely to trust him long with responsibility if they feel that he does not understand them and does not see the problems of the Nation in terms of the problems of the individuals who comprise the Nation. Men of widely different political opinions, widely different economic views, may all be successful in a single election if they all appear to the people to be thinking in terms of the experience of the individual men and women whom they seek to represent. Gifford Pinchot and Smith Brookhart, "Al" Smith and Henry Ford, to cite but four instances out of many, are men whom the people generally regard as human. It was this element of human understanding, the ability to think as the people themselves were thinking, that gave Theodore Roosevelt a unique place of leadership as long as he lived and will endear his memory to the American people through all coming generations. Such personalities cannot be made to order, but if party leaders

wish to maintain their party in control they must find men who not only have integrity and public spirit and the genius for command, but also personal understanding of the ordinary man and woman.

These, we think, are some of the lessons which defeat may teach the Republican leaders if they are teachable. Perhaps at the end of their course of discipline they may be tempted to say to Defeat as Franklin said to the Gout: "I submit and thank you for the past, but intreat the discontinuance of your visits for the future; for in my mind one had better die than be cured so dolefully." And possibly they might profit, as indeed all political leaders would profit, if Gout's final warning might be put into the mouth of Defeat: "I know you too well. You promise fair, but after a few months of good health you will return to your old habits; your fine promises will be forgotten like the forms of the last year's clouds. Let us, then, finish the account, and I will go. But I leave you with an assurance of visiting you again at a proper time and place; for my object is your good, and you are sensible now that I am your real friend."

PROHIBITION

IF, as the "Wets" claim, prohibition was put over on an unsuspecting and unwilling public by the covert and cunning action of a small group of zealots and fanatics, the prohibitory law is certainly not going to stay on the statute-books without wide discussion and a good many rigorous tests of public sentiment.

The late election furnished some of those tests. The triumph of Senator Edwards in New Jersey certainly shows that an unmistakable majority of the voters of that State want beer and light wines, if not the good old American corner saloon. In New York the issue was somewhat obscured, although the "Drys" must admit that Governor Smith's overwhelming vote is an indication that the ardor of the women of the State for prohibition is not what it was thought to be. In Massachusetts the "Wets" claim to be encouraged by the election, although there the issue was, as in New York, obscured by other questions.

The "Drys," however, are justified in being jubilant about California and Ohio. California, in which wine-making was until recently a leading industry, has adopted by a clear majority a measure which insures effective State co-operation with the Federal authorities in enforcement of the Eighteenth Amendment. This is really significant. And Ohio, which has never been a pro-

hibition State, rolled up the extraordinary majority of 187,000 against light wines and beer.

The number of Americans who want a return of the gin-mill, the corner liquor saloon, the village barroom, is negligible. There are thousands of good citizens, however, who would like to be able to have a glass of claret with their dinner or a glass of beer on a summer evening while listening to a good band concert.

Now this picture of a glass of ruby Pontet Canet or of amber Liebfraumilch at the family dinner table and of a cooling stein of Pilsner or Würzburger at the family concert party is really very tempting. The trouble is that these nice things cannot be had without the liquor saloon. It has been tried, and the attempt has failed over and over again. The dispensary system has failed in the South; the Gothenburg system has failed in the Scandinavian countries. It seems to be pretty conclusive that if we take beer and light wines we must take the grog-shop along with them. The man who says, "Oh, no! I don't want the saloon back again; all I want is light wine and beer," either does not know what he is talking about or does not really mean what he says. What he really means is that, saloon or no saloon, he ought not to be deprived of his personal pleasure. Don Marquis, the genial and perspicacious satirist of the New York "Tribune," hits the nail on the head with this well-aimed stroke:

"If they do make light wines an' beers legal," grumbled Clem Hawley, The Old Soak, yesterday, "that ain't gonna mean much to us drinkin' men. The trouble with light wines is that they're light. An' the trouble with beer is that it takes up room that orter to be used for hard liquor."

Stripped of all sophism, the question is simply a problem in social expediency. Is it better for the Nation to insist upon the personal liberty of every man to decide for himself about the use of alcoholic beverages or to insist upon the sacrifice of that form of personal liberty in order to abolish the liquor saloon with the alcoholism, the vice, the crime, and the political corruption which it inevitably produces?

Prohibition is not a matter of abstract morals; it is a matter of social welfare, like the abolition of the personal liberty of spitting where one chooses or the institution of compulsory vaccination. Viewed in this light, it is the greatest and most interesting experiment that has ever been tried in the history of civilization. It is certainly worth trying fairly and honestly. Notwithstanding New Jersey, we believe that a substantial majority of Americans want to see that trial made.

(C) Harvard University

John S. Sargent's new mural paintings for the Widener Memorial Library of Harvard University have recently been unveiled. They constitute a memorial to the Harvard men who gave their lives to the cause of the Allies in the World War. The subjects represented are the symbols of Death and Victory, and the Coming of the Americans to Europe. In the latter panel Mr. Sargent has filled the space with a mighty column of American youths in uniform, slashing the composition boldly from right to left. In the lower right-hand side are three figures symbolic of France, Belgium, and England. France, in the foreground, wearing the Phrygian cap, carries an infant on her left arm and stretches out her right to receive the support of the American soldiers. Behind her, Belgium, a broken sword in her hand, has swooned, and is upheld by other soldiers, while she

WAR MEMORIAL

(C) Harvard University

protects herself partially with the robe of Britannia, a helmeted figure behind her. In the upper left-hand corner is a magnificent representation of the American eagle, silhouetted against the flag. Behind the soldiers can be made out a conventionalized representation of the sea. In the other panel the motif is that of a mortally wounded soldier clasping in his left arm the shrouded figure of Death, and in his right the Winged Victory. Beneath his feet lies a fallen private, and above him are angels blowing trumpets. The face of Death is hidden and the figure wears a crown, but the effect is somber and terrifying. The Victory, on the other hand, is of a light golden color, affording a radiant contrast to the genius of Death. We have taken this description from an article by Professor G. H. Edgell in the "Harvard Alumni Bulletin"

UNDER FOUR PRESIDENTS

THE AUTOBIOGRAPHY OF OSCAR S. STRAUS

CHAPTER XII—THE WORLD WAR

TOURING through Normandy late in July, 1914, we met some friends who had just come from Paris, who told us that war was imminent and from best reports would break out within a very few days. We hurried to Paris, and in the course of twenty-four hours the whole aspect of the city had changed. The air throbbed with the "Marseillaise." Everywhere there were crowds, but they were neither boisterous nor hilarious. Everywhere there was an air of tension and determination, vastly unlike the usual mood of jovial, happy Paris.

Starting at once for London, we found it impossible to get train accommodations, so we motored to Dieppe. The ordinary capacity of the boat for Newhaven was five hundred passengers, but it was packed with some two thousand persons on this voyage, mainly Americans. The Calais-Dover crossing of the Channel had already been suspended.

On the train from Newhaven to London a curious incident occurred that indicated the derangement of things. I had four fares to pay, amounting to about three pounds. I handed the conductor a five-pound Bank of England note. He took it, but shortly returned, saying he could accept nothing but gold. I expostulated with him, told him I had no gold, and since a bank note was valid tender I insisted upon its acceptance. But the upshot was that he preferred to take my card with my London address! My credit at that moment seemed better than that of the Bank of England.

In London soon afterwards, at the Waldorf Hotel, before a meeting of several thousand stranded Americans, I made a short address to the panic-stricken assembly, assured them they had nothing to fear and were as safe in London as if they were in New York, and that our committee would remain with them and help them get suitable transportation as early as practicable. There was loud cheering and my words seemed to have a comforting effect.

A group of us at once organized a special committee for the aid of Americans in Europe. At the Hotel Savoy several large salons were placed at our disposal, so that we had room for the various departments that needed to be formed to attend to the wants of the many terrified Americans who were pouring into London from all over the Continent. I was made chairman of the Embassy Committee, of which Ambassador Page was honorary chairman, and the American Ambassadors to France, Germany, Austria, and the Ministers to Holland and Belgium were made advisory members. Many British friends

who visited our rooms marveled at the promptness and efficiency with which we despatched business under the circumstances, and were solicitous for the health of "the unofficial ambassador," as I was being called, and his staff.

EARL GREY AND WALDORF ASTOR

One day Earl Grey paid me a visit at our headquarters, and with him was Mrs. Waldorf Astor, now Viscountess Astor, who insisted that Mrs. Straus and I spend the week-end at Cliveden, their residence, a short distance out of London. Other guests were Earl Grey, Geoffrey Robinson, editor of the London "Times," and several editors of the "Round Table," a political quarterly.

Mr. Waldorf Astor was an earnest, modest young man, then about thirty-four years old, unspoiled by his enormous wealth. He was devoting much of his wealth as well as his parliamentary activities to philanthropic work, including the treatment and prevention of tuberculosis, and in this connection had been in touch with my brother Nathan in regard to milk pasteurization.

When England entered the war, the diplomatic correspondence was published in what was called the British "White Paper." Sir Edward Grey, now Viscount Grey, had made a speech in Parliament, of which I read the published version in this "White Paper." It happened that on that very day Earl Grey, cousin to Sir Edward, was lunching with me at my hotel, and I pointed out to him the

necessity of making clear, especially for the American public, that the reason England had joined the Allies was not so much on Belgium's account, but to uphold the sanctity of international obligations. This concerned not alone the belligerent nations, but all the nations. Without the sanctity of international obligations the war, no matter how it ended, would cause a reversion to a state of international barbarity. Earl Grey suggested that I discuss the subject with his cousin, and a few days later we three sat down to a simple luncheon at Earl Grey's home on South Street, in Park Lane.

Sir Edward Grey spoke earnestly and frankly. He felt the great responsibility of the decision that brought England into the war, and said he had often asked himself whether he could have done otherwise. There was nothing chauvinistic in either his attitude or his arguments. It was plain that he had weighed the entire issue carefully. His open-mindedness, simplicity, and straightforwardness of manner, his great ability and humanitarian zeal, impressed me.

I mentioned the importance of having Russia grant civil and religious rights to her subject nationalities, that the failure of such action would weaken the moral cause of the Allies, and that from an American point of view it was important that Russia give some evidence of a liberal spirit, otherwise it might be feared that victory for the Allies would

(C) Harris & Ewing

Count von Bernstorff, to whom Mr. Straus broached the subject of mediation in the early days of the war at a dinner at the home of Mr. James Speyer

redound mainly to the advantage of autocracy in Russia. I contended that it was not a question of humanity, but plain state policy, and that it was important that the Governments of Great Britain and France bring Russia, as their ally, into line. I had received several cables from prominent men in New York and Boston who had thus expressed the American point of view.

A MESSAGE TO AMERICA ON BRITISH WAR VIEWS

Earl Grey suggested, in accordance with my remarks of a few days before about the necessity of making clear England's position in entering the war, that I give out an interview to the American press covering the substance of our conversation. I demurred. Naturally I hesitated to state publicly the delicate and critical questions that the British Minister of Foreign Affairs had so frankly discussed with me. However, Sir Edward himself said he would appreciate my doing so, for he had perfect confidence in my doing it without embarrassment to his country. I therefore agreed to it, with the proviso that he approve the interview before it was released for publication.

I got in touch with the representatives of the American papers in London and that evening gave out the interview. The next morning I sent a copy to Sir Edward, who returned it to me without a single change, saying he approved both its form and content. The matter was then cabled to America, published in our leading papers on August 15, and cabled back for republication in the British papers.

Thereafter the London papers came to me for further interviews, and in a sub-

sequent statement I dwelt more specifically on the importance of Russia's fair treatment of her subject nationalities, particularly the Jews, who had suffered most. The press representatives asked whether they might show my interview to Lord Weardale and, if possible, get his comment, to which I gladly consented.

He had been head of the Parliamentary deputation that visited Russia the year before. He told me later that he had already written the Russian Minister of Foreign Affairs, Sazonoff, along the identical lines of my interviews. He supplemented what I had stated with an interview, saying, among other things:

It would be an immense step in the path of progress of Russia herself and would create a profound sentiment of satisfaction in the civilized world if the Czar at such a juncture were to give emphatic indorsement to his already declared intention to give full religious liberty to all his peoples. It is not enough to be powerful in the battlefield; it is even more important to conquer the approval of the human conscience.

The Government and people of Great Britain were very solicitous at that time regarding public opinion in America and the probable attitude of our Government. In many quarters there was a feeling of uncertainty and even of misgiving toward the statement by President Wilson respecting an offer of mediation at the opportune moment, in accordance with the provisions of the Hague Treaty. Because of this and other considerations, Sir Edward Grey and others recognized the importance of having Russia give evidence of a more enlightened spirit.

We left London at the end of August, and soon after our arrival home Mr. James Speyer invited Mrs. Straus and myself to dine with him at his summer home at Briarcliff. Mr. and Mrs. Frank A. Vanderlip were expected, and Count von Bernstorff would be there. As Mrs. Straus was rather worn out by her London experience, I went alone.

AT DINNER WITH BERNSTORFF

Bernstorff I had known for a number of years. I had first met him in 1888 when I was on my first mission to Turkey and he was attaché of the German Embassy. Later he came to Washington as Ambassador when I was in the Cabinet, and we met frequently there.

The conversation was general, although it was inevitable that we should discuss the war. Bernstorff voiced the usual claim of the Germans, that they did not want war, and that the Kaiser and the German Government stood for peace. When he had dilated upon that theme, I asked him:

"Is that the present sentiment and attitude of your country?"

He replied that it certainly was when he left Berlin only two weeks before, on returning to America from his leave of absence.

Knowing how anxious President Wil-

(C) Paul Thompson

William J. Bryan, who, as Secretary of State, eagerly co-operated with Mr. Straus in his effort to stem the tide of the Great War

son was to use any proper opportunity for ending the war, I asked Bernstorff whether his Government would entertain a proposition for mediation.

"Speaking for myself, I certainly would entertain such a proposition," he replied, but added that he could not speak officially, since cable communication with his Government had been cut off for a week or more.

I asked him whether, in his opinion, his Government would give favorable consideration to such a proposal. He said that before leaving Berlin he had discussed with the Chancellor the possibility of mediation, following the report of President Wilson's statement that he was ready to offer his services as mediator to both parties, and the Chancellor had said that the war had but begun and it was too early to instruct regarding mediation until the offer was presented. The Ambassador added that his personal opinion was that his Government would accept an offer of mediation. I regarded his statement as significant, and asked him if I might use it in such a manner as I saw fit. He replied that he had no objection.

As we rose from the table, I made sure of my understanding of his statements, and then the thought occurred to me that the best thing to do was to report the conversation to Secretary of State Bryan, so that he might, if he saw fit, bring it before the President. I so informed Bernstorff, and again he told me he had no objection.

A FLYING TRIP TO WASHINGTON

I looked at my watch. It was ten-fifteen. I announced that I would go to Washington on the midnight train. My host suggested that I "sleep on it and don't hurry;" but I concluded that if there was anything I could do to shorten

Sir Cecil Spring-Rice, British Ambassador, who doubted Germany's good faith concerning the subject of mediation

the war by even a few hours I would have to charge myself with neglect of duty if on account of personal convenience I had refrained from doing so. The next day was Sunday; the day after was Labor Day; and all the while thousands were falling on the battlefield. Several of the guests agreed with my decision, so I bade them good-night, called my motor, and caught the midnight train for Washington.

On Sunday morning I repeated to Mr. Bryan at his home my conversation with Bernstorff, and Bryan believed, as I did, that it might pave the way to mediation. I suggested that he have the German Ambassador come to Washington and speak with him. He communicated with the German Embassy, and Bernstorff arrived the following morning.

Bryan presented the subject to the President, who expressed himself as pleased with the possibility of a favorable outcome. The Secretary advised me to see the British Ambassador, Sir Cecil Spring-Rice, and the French Ambassador, M. Jusserand. He had already

informed them as to what had taken place and of my presence in Washington. Sir Cecil asked whether I would kindly come to the Embassy, and I suggested that he arrange to have the French Ambassador also present. This he did.

When I reached the Embassy we were soon joined by M. Jusserand. Both agreed that the mediation proposal was deserving of serious attention, but Sir Cecil had little confidence in Bernstorff, who had been his colleague at Cairo, where they had represented their respective Governments. He asked whether I thought an ambassador would make such a statement as Bernstorff's without authority from his Government. I replied that both he and M. Jusserand were better qualified to answer that question, upon which M. Jusserand said that he knew that no ambassador under the German system would dare make such remarks without previous authority from his Government.

"That is so much the better," I commented.

Sir Cecil declared that German diplomacy was peculiar and that the Foreign Office had no conscience in disavowing statements by its ambassadors if it suited Germany's purpose.

After we had gone over the whole subject, both Ambassadors stated that if it held one chance in a hundred of shortening the war, it was their duty to entertain it. I replied that I hoped they would entertain it cordially.

Jusserand in his usual happy manner said, "'Cordially,' that is a little too strong."

"Well, sympathetically, then," I said.

"Yes, sympathetically, yes." And with that we parted, both Ambassadors expressing their thanks and appreciation of my services.

I had been scrupulously careful to be absolutely accurate in all my statements, and it was therefore gratifying, after the Bryan-Bernstorff conference, to have the Secretary tell me that the Ambassador's report of the Briarcliff incident was in every detail in accord with mine, and to have the Ambassador also confirm the correctness of Mr. Bryan's understanding from my report. Naturally, I was anxious to avoid misunderstandings or misconceptions of any kind. The issue was too important.

Both Secretary Bryan and Ambassador Bernstorff cabled to Berlin, and for the time the subject rested there, and I returned to New York. But before leaving I called by appointment at both the French and British Embassies, which also had communicated events in detail to their Governments. Both Ambassadors expressed their high appreciation of my services and hoped I would keep in close touch with them regarding the matter. I told them I would regard myself as "messenger boy" for mediation. Sir Cecil replied, "Ambassador extraordinary." He promised to keep me informed, and two days later wrote me:

I have not yet received any intimation from my Government, nor do I

expect one unless something definite is before them. But I need not tell you how heartily my sympathy is with your humanitarian efforts, and you know Grey well enough to be sure that, while scrupulously faithful to all his engagements, he will do everything possible in the cause of peace.

LIFTING THE LATCH OF THE DOOR TO MEDIATION

Throughout these negotiations we took great care to keep the matter secret. Despite that fact, it leaked out in some way, and the correspondent of the London "Times" reported it in such a way as to give the impression that I had been duped by the wily German Ambassador; and there were one or two other papers that took that view. Sir Cecil Spring-Rice was incensed at this interpretation and wrote me on October 3:

I am sure no one who knows you and knows the facts would ever think that you were either duped, or the secret agent of Germany. I am quite positive that Sir Edward Grey would

Paul Thompson

Earl Grey, with whom Mr. Straus had an important conference in England on the sanctity of international obligations in the early days of the war

never have such an idea. What you did—and what I hope you will continue to do—is a work of pure philanthropy.

On October 15 he wrote me again, saying that when the London "Times" representative returned to Washington from New York he would set him right as to the facts, with a view to having the report corrected, and adding:

We used to say at school, "Blessed are the peacemakers, for they get more kicks than halfpence!" It represents a melancholy truth, but, however, I am sure every well-thinking person must appreciate your beneficent efforts.

But in general the press of Great Britain expressed its appreciation of the services I had rendered in lifting the latch of the door to mediation.

A letter from Sir Edward Grey concerning the negotiations sheds important light upon the British attitude:

Foreign Office, London, S.W.
Saturday, 26 September, 1914.

Dear Mr. Straus:

Thank you for your letter of the 9th. I am so busy that I have not time to write at any length; but do not let that make you suppose that I am out of sympathy with what you say.

First of all, however, we must save ourselves and the West of Europe, before we can exercise any influence elsewhere. The Prussian military caste has dominated Germany, and the whole of the West of Europe is in danger of being dominated by it. The German Government, in the hands of this military caste, prepared this war, planned it, and chose the time for it. We know now that the war has revealed how thoroughly the German preparations had been made beforehand; with an organization and forethought which is wonderful, and would have been admirable had it been devoted to a praiseworthy purpose. Not one of the other nations now fighting against Germany is prepared in the same way.

Now, we wish to have three things: Firstly, to secure our own liberty as independent States, who will live and let live on equal terms; secondly, the establishment somehow of a Germany not dominated by a military caste; a nation who will look at liberty and politics from the same point of view as we do, and who will deal with us on equal terms and in good faith; thirdly, reparation for the cruel wrongs done to Belgium—to get that is a matter of honor and justice and right.

The statements made by Wolff's Bureau in Europe deny that Germany is yet ready for peace. If she is ready for peace, then I think that her ambassador in Washington ought not to beat about the bush. He ought to make it clear to President Wilson that he is authorized to speak on behalf of his Government; and state to the President that Germany does wish to make peace. In that case, President Wilson could approach all the others who are engaged in this war and bring them into consultation with

Keystone

Jules Jusserand, the French Ambassador, who welcomed Mr. Straus's lifting the latch of the door to mediation

one another and with him. But at present we have no indication that Germany wishes to have peace, and no indication that she would agree to any terms that would give reparation to Belgium and security to the rest of Europe that the peace would be durable.

Yours very truly,

EL. GREY.

GERMAN INSINCERITY EXPOSED

The history of those negotiations is presented somewhat at length because my friend of many years, the late Ambassador Page, in his recently published letters also expressed the feeling that I had been used as a dupe to throw the blame for continuing the war upon Great Britain, though he expressed great confidence in me and friendship for me. I was not unmindful of this contingency; but I felt that if the negotiations did not result as we hoped, they would serve to expose the insincerity of the German Government with regard to its peace professions. And this is precisely what happened, as the answer of the German Chancellor, received by the State Department on September 22, confirms:

The Imperial Chancellor is much obliged for America's offer. Germany did not want war, it was forced upon her. Even after we shall have defeated France we shall still have to face England and Russia. England, France, and Russia have signed a convention to make peace solely in mutual agreement with each other. England, that is, Mr. Asquith, the London Times, and English diplomatic officers, have on various occasions . . . (sic) that England is determined to conduct the war to the utmost and that she expects success from it lasting a long time. It is therefore up to the United States to get our enemies to make peace proposals. Germany can only accept the

peace which promises to be a real and lasting peace and will protect her against any new attacks from her enemies. If we accepted America's offer of mediation now our enemies would interpret it as a sign of weakness and the German people would not understand it. For the nation which has been willing to make such sacrifices has a right to demand that there shall be guarantees of rest and security.

On September 29 all the British papers served by the Central News War Service carried a cable from New York detailing the negotiations, which ended:

It is believed by those concerned that an important step has been taken to pave the way for mediation, when the opportune moment arrives. In other words, the bolt on the door of mediation has been thrown back so that it will be possible for the door to be opened without either side being forced to take the initiative. Time will doubtless show that the initiative so fortuitously taken by Mr. Straus will prove of real service in the interests of ultimate peace negotiations, and any endeavors to deprecate those services as having been made in Germany's interests are not only contrary to all the facts, but are most unfortunate.

Note: The censor does not object to the publication of the foregoing details, but insists that publication should be accompanied by a foot-note pointing out that since these occurrences took place the German Government have disavowed their ambassador.

Had Germany's oft-reiterated peace professions been sincere, she would have accepted this offer for mediation. By her refusal the falsity of her professions was exposed, not only in Great Britain and in our own country, but in all the neutrals; and the *exposé* served as added proof to all peace-loving and neutrally minded persons that the responsibility for the war and its continuance rested upon the German Government.

WILSON URGED TO CONFER WITH EX-PRESIDENTS

For a year or more events marched on, tragically, like a malignant disease. On February 2, 1917, I lunched with Roosevelt at the Hotel Langdon, where he was in the habit of stopping when in New York. The German Government two days before had announced her submarine blockade of the British, French, and Dutch coasts, and our own entrance into the war seemed likely.

Roosevelt said he did not think we should be involved; the President would probably find some way out and arrange to have Germany's pledge not to destroy merchant ships of neutrals or belligerents, without warning, whittled down so as to apply only to ships flying the American flag. He told us that he had engaged passage on one of the United Fruit Company steamers to Jamaica for Mrs. Roosevelt and himself. Mrs. Roo-

vult needed a change, and they would start in a few days. Regarding the war, he could do nothing more. He had done all he could. He had made an offer to the Secretary of War to raise a division, and had a whole card catalogue of names of men who had volunteered to serve in it.

His relations with the President were far from friendly. He had violently criticised him in articles contributed to the "Metropolitan Magazine" and in public addresses had urged preparedness and compulsory military training. I asked him, in view of the German blockade, what he would do if he were President. He said he would promptly assemble our fleet, put marines on the interned German ships, and show Germany that we were in dead earnest; that unless she recalled her decision to sink merchant ships without observing the rules of modern warfare we should take immediate steps to protect our rights.

"If we continue to back down, we will become Chinafied, without any rights that other nations will respect," said Roosevelt, emphatically.

In such critical times personal differences might be laid aside, I suggested, and I wanted him to write the President and let him have the benefit of his views. I went further: I suggested that I write the President about it. But, in Roosevelt's opinion, Wilson would conclude that Roosevelt had himself urged me to do this because of my close association with him.

My own relations with the President were always agreeable, I might even say most friendly. He had written me that he would consider it a favor if I would keep him informed of important developments that came under my observation. It occurred to me that on the eve of war it would be a fine thing if he consulted with his two surviving predecessors, as Monroe had done with Jefferson and Madison before issuing the doctrine which bears his name. In the crisis we were facing such a step would allay partisan differences and serve to solidify the Nation. With these ideas in mind I wired the President:

Every patriotic American should support you in this great crisis in the history of our country. May I suggest the course followed by Monroe under a crisis involving many of the same principles, to confer with the two surviving ex-Presidents, whose advice, I feel sure, will be most helpful and serve to patriotically solidify the country behind you?

Roosevelt felt sure the President wanted neither advice nor co-operation, though he himself was ready to give the fullest co-operation should Wilson desire it. He thought the same was true on the part of Mr. Taft. The telegram, to my surprise, was given out at Washington to the press a day or two later, but nothing ever came of it.

On February 7 the country was more less agreeably surprised to learn that

Count von Bernstorff had been given his passports and Ambassador Gerard at Berlin had been instructed to demand his. I say the country was surprised because the President had so long avoided such a step—even after the sinking of the *Lusitania* and the *Sussex* following his "strict accountability" and other strong statements—that it was generally believed he did not mean to take it.

Roosevelt, of course, thought that we should have taken such action long before. His contention was always that had we taken prompt and decisive steps after the *Lusitania* tragedy we should have been spared the submarine invasions. He thought we should have acted when Germany announced her subma-

"THE GOLDEN CHAPTER IN THE HISTORY OF CIVILIZATION"

After Ambassador Straus attended the Plenary Session of the Paris Peace Conference he wrote in his "Random Notes:" "I regard this day and its happenings as the golden chapter in the history of civilization." In next week's chapter of his Autobiography he describes the imposing sessions at the *Quai d'Orsay*, the brusque Clemenceau, the statesmen of fourteen nations, and President Wilson speaking for 1,200,000,000 people. When Mr. Straus arrived in Paris as Overseas Chairman of the League to Enforce Peace, he was at once informed by Colonel House that because of Léon Bourgeois's insistence upon certain additional provisos in the Covenant the League of Nations was "on the rocks." Mr. Straus immediately hunted up Bourgeois, and after a long conference secured the Frenchman's promise that France would support the League as preliminarily drafted, but that he would have to refer to the special clauses for political effect. Mr. Straus was therefore able to report back to Colonel House that the League was "off the rocks." Memorable impressions of the historic Conference and its subtle political background are revealed in next week's chapter.

rine blockade and possibly saved ourselves from the *Lusitania* horror. Now that diplomatic relations were broken off, he canceled his trip to Jamaica, not wishing to be out of the country when war was likely to be declared at any moment.

FINAL IMPRESSIONS OF ROOSEVELT

A few days before Christmas, 1918, I called on Roosevelt at the Roosevelt Hospital, where he was convalescing from his seven weeks' illness, believed to have been inflammatory rheumatism. He was dressed in his *robe de chambre* and was seated in an armchair with a pile of books before him. He looked neither enfeebled nor emaciated, though he showed signs of illness. When I asked him how he had been since my last visit, for I had called on him frequently during his illness, he told me that he had had an attack of embolism—I think that was the ailment—which showed in his wrists, and that his fever had gone up to 104. But that was all gone, and he was again feeling fine. The old vivacious glow was on his face. He was planning to return to Sagamore Hill to spend Christmas.

The next day Roosevelt left the hospital to return to his home in Oyster Bay. He apparently gave every indication that soon he would be entirely well again and be with us for many years. Certainly that is what we all expected. He was only sixty.

Exactly two weeks later, on January 6, 1919, I received a telephone call at seven o'clock in the morning from his secretary, announcing that Roosevelt had died early that morning. For thirteen years or more he had had a large and affectionate share in our lives and thoughts, and Mrs. Straus and I felt as though we had been stricken with the loss of a member of our immediate family. I can truly say that I never had a more loyal or a dearer friend. He always treated me and mine as if we were among his nearest relatives.

On January 8 my wife, my son's wife, and I motored to Oyster Bay to attend the funeral in the little Episcopal church which had been Roosevelt's place of worship. The building held only about three hundred and fifty persons, so that none but his family and close friends could be present. There was a committee from the United States Senate headed by Vice-President Marshall; and another from the House. Among the guests were: Elihu Root, Truman H. Newberry, H. L. Stimson, J. R. Garfield; Mrs. Garfield, ex-President Taft, and Governor Hughes. William Loeb, Jr., and Captain Archie Roosevelt were ushers. The other sons, Theodore and Kermit, were still in France. The church was filled with a company of sincere friends and bereaved mourners. The regular Episcopal service was begun at twelve-forty-five, and lasted about twenty-five minutes, when we all accompanied the body to the little

cemetery on the side of the hill half a mile away.

A day hardly passes without its scores of pilgrims to that grave. They come from near and far. They lay a few flowers on the grave. On holidays and Sundays they come by the hundreds. Two years ago the intimate friends of Roosevelt, who had been officially or personally associated with him, formed the Roosevelt Pilgrimage, an association whose purpose is to keep alive the ideals and personality of Theodore Roosevelt by an annual visit to his grave and a simple ceremony. On January 6, 1922, some sixty persons made the pilgrimage, headed by Dr. Lyman Abbott, permanent

chairman of the association. James R. Garfield read Roosevelt's Nobel Peace Prize address, delivered in Christiania in 1910, at the conclusion of which some wreaths were laid on the grave. Mrs. Roosevelt invited us all to luncheon, and the old-time hospitality and friendliness of the Roosevelt home brought many memories of our departed leader.

After luncheon the annual meeting of the Pilgrimage took place in the great North Room, where Roosevelt had so often received his friends and guests. Dr. Abbott made a brief and feeling address, and Mrs. Richard Derby (Ethel Roosevelt) read from the original manuscript Roosevelt's proclamation of 1912

which called into being the Progressive Party. Hermann Hagedorn read a poem entitled "The Deacon's Prayer," by Samuel Valentine Cole, which had especially appealed to Roosevelt. The last stanza may well be regarded as the prayer of our people more than once since the Great Soul departed:

"We want a man whom we can trust
To lead us where thy purpose leads;
Who dares not lie, but dares be just—
Give us the dangerous man of
deeds!"
So prayed the deacon, letting fall
Each sentence from his heart; and
when
He took his seat the brethren all,
As by one impulse, cried, "Amen!"

THE HOLY GHOST

BY WITTER BYNNER

I HAD been bound that I should see his beak
Bearing the key of heaven,
And I had girded up my heart to seek
By all the seas, all seven . . .
But yesterday I listened and I heard,
Just seven miles from town,
A little gray invisible swift bird,
A wild dove, flutter down.

MORE HEAT FROM LESS COAL¹

BY LEWIS EDWIN THEISS

EVER since Gulliver had his talk with the king of Brobdingnag, the world has been awarding the palm of excellence to the man who can make two ears of corn grow where only one grew before. Just now, at least in the United States, we are looking for another magician of the same sort. There is a wreath all ready for the man who will show us how to make one lump of coal do the work of two. While we are waiting for that magician, the best thing we can do is to follow Uncle Sam's directions for making our one lump of coal deliver as nearly as possible one hundred per cent of the heat contained in it.

To do that we must, first of all, pay more attention to the regulation of our stoves and furnaces, because most householders waste a considerable proportion of the fuel they use through ignorance of proper methods of heater regulation. According to the Bureau of Mines, draught regulation is perhaps the most important factor in burning coal efficiently in house-heating furnaces. Draught is regulated mainly by dampers—one in the ash-pit door, one in the

firing door, and one in the smoke-pipe. Some smoke-pipes have two dampers.

To operate these dampers properly one must understand their functions. The damper in the ash-pit door regulates the amount of air flowing up through the fire, and so determines the rate of combustion. The damper in the firing door supplies the air necessary to burn the gases arising from the fuel bed. Opening the damper in the smoke-pipe checks the flow of air through the fire. Though these facts are almost self-evident, considerable care is required to operate these dampers efficiently.

For example, when soft coal is thrown onto a hot fire, gas is promptly liberated. Unless this gas is burned, it will flow up the chimney unconsumed and its heat be lost. The damper in the fuel door, therefore, must be opened just enough to admit sufficient air to allow the perfect combustion of these excess gases. After these gases have been burned, the quantity of air supplied above the fuel bed should be reduced by closing the fire-door damper. But no rule for such closing can be stated, because different fuels give off differing amounts of gas. Soft coal, for instance, gives off a very large volume of these combustible gases. An-

thracite gives off so little that ordinary leakage about the door gives ample air. The damper must be regulated in accordance with the amount of gas to be burned. A little experiment and observation will quickly show the householder how to regulate this damper. With coal at \$14 or more a ton, it will pay any householder to try to get one dollar's worth of heat from each one hundred cents' worth of coal he must buy. One can see the unburned coal among the waste ashes, and so one has a visual reminder of how much coal one has wasted through improper furnace regulation. But one cannot see the lost gases, and so one hardly realizes that there has been waste also in that direction. We should be particular, therefore, to try to avoid it.

This waste of actual coal that we send away in the ash-can occurs from a double cause: improper regulation of the damper in the ash-pit door and too much shaking of the fire. If too little draught is provided, a part of the fuel will be unconsumed; and if too much draught is allowed, combustion will be unnecessarily rapid. Either course means waste. Again the householder must observe and experiment in order to strike

¹This article was submitted to the United States Bureau of Mines and has been approved by its chief mechanical engineer.—The Editors.

the happy medium. And he must do so with every new fuel he burns, because of the great differences in the burning qualities of fuels, even of the same sort.

As for managing the grate, we are told by Mr. A. M. Daniels, expert for the Department of Agriculture, that a fire should not be shaken down more than three times a day, and generally not more than twice. As soon as the first bright spot is seen through the grate, stop shaking. Rock the grate back and forth rather than turn it over completely. Disturbing the fire by poking is also advised against unless this is absolutely necessary. However, some coals make clinkers that fuse into large masses. These will not go through the grate and must be worked up with a poker and taken out through the fire door. But this occurs seldom. To try to work such a mass through the grate would mean that much unconsumed coal would also go through the grate.

Never shake live coals through the grate. To be sure, the ashes could be sifted and these coals recovered; but few of us are willing these days to sift ashes. The better way is to avoid shaking down the unburned coal. In mild weather a considerable accumulation of ashes can profitably be left on the grate.

But ashes should never be allowed to remain in the ash pit. The volume of the ash pit is carefully calculated and is designed to permit enough air to pass into and through it to burn the fuel properly and at the same time keep the grate bars cool enough to prevent injury by overheating. If ashes are allowed to remain in the pit, they prevent uniform air circulation, hinder combustion, and cause damage to grates.

This winter, as never before, many householders will use substitutes for anthracite coal. According to Mr. Henry Kreisinger, of the United States Bureau of Mines, the following fuels, in the order named, are best for house-heating purposes:

1. Anthracite, in sizes from one-half inch to egg size.
2. Coke, in pieces one-half inch to three inches across.
3. Coal briquets, two to three inches in diameter.
4. Screened Pocahontas (semi-bituminous) coal between one-fourth inch and three or four inches.
5. Sized bituminous in pieces one-half inch to three inches.

Soft coal and semi-bituminous coal are both practicable fuels for the home furnace, but they should be used with care and handled in a way quite different from anthracite. When firing anthracite, the best results are obtained by spreading the coal evenly over the entire fuel bed. The fire should not be allowed to become too low before a new supply is added, and the bed should be disturbed as little as possible. This bed should be thick. Semi-bituminous coals of the Pocahontas type can be used in the same way, by spreading them entirely over the bed, and to about the thickness of

eight to ten inches. They are nearly smokeless and make but little soot.

Bituminous coal should be fired only by placing fresh fuel over one-half of the fire bed at a time. These soft coals give off great quantities of gas, etc. When half of the fire bed is left uncovered, the volatile matter rising from the fresh charge is quickly ignited by the glowing coals in the uncovered half. If the entire surface of the bed is covered with a heavy charge of coal, the volatile matter arising does not ignite for a considerable time and passes away unburned as tarry, greenish-yellow smoke. Furnace and flues become filled with this smoke, and when finally the fire burns through the new layer of coal the smoke and gas may explode with sufficient violence to blow down the furnace pipes and fill the house with smoke. Such explosions are particularly likely to occur if the coal contains much slack. So be careful when using soft coal to cover only part of the fire at a time.

Soft coal makes a much more intense heat than hard coal does, and is consequently much harder on grates. More ashes will have to be left under the fire, therefore, to prevent the warping of the grate bars.

On account of haulage charges, wood usually costs too much for use in cities; but for towns near woodlands wood is an excellent fuel. Wood needs more combustion space than coal. A coal stove can be changed at very slight expense by having the fire-bricks removed and lighter ones substituted. However, very good results can be obtained in almost any stove with wood. Furnaces can be heated with wood, and many manufacturers make special wood grates for their furnaces. Short blocks eight to twelve inches are best for furnace use. Hardwood is preferable, though any sort of wood will produce heat. The best method of firing is to keep the furnace packed full of wood, with a moderate draught. The simplest and most effective way to use wood in a furnace is to combine it with coal. Pack the fire box with wood to the level of the fire door, and put a layer of coal on top. Some of this coal will settle down in the crevices between the sticks of wood, making a level bed with coal on top.

One of the most economical stoves for burning wood can be made by turning an ordinary furnace into a "Wilson heater." Remove the grate bars and lay fire-brick on the floor of the ash pit. Build a wood fire on the fire-brick, close the ash-pit door tight and keep the ventilator in the fuel door open. A wood fire made in this way will burn very slowly.

Doubtless the most efficient way of all to burn wood is in one of the so-called wood heaters, which are tight little sheet-iron stoves. A very good sized one can be had for \$6 or \$7, and smaller ones for \$4 or \$5. One can burn anything in them, and even rubbish or punk wood will heat a room well. We live in the country, and, having our own wood-

lot, burn mostly wood. We have several of these little stoves. Time and again I have noticed, on cold winter mornings that when I start the fire in the stove in our living-room the temperature of the room will rise about a degree a minute. When the temperature reaches the desired point, it is possible to damper down the fire so that the wood merely smolders. Burning thus, a chunk of good wood will last half a day or all night. In the autumn we take the chill off the room by burning one or two newspapers in the stove. The fact that these stoves are as nearly one hundred per cent efficient as any stove can be makes them particularly desirable at a time like this. For half the price of a ton of coal one can buy a good wood heater. Chips, dead limbs from the dooryard trees, rubbish, old papers, etc., will make an unbelievable amount of heat. I knew a man who heated one bedroom with such a stove, and during the course of many years he never bought a cent's worth of wood. The fallen twigs in his yard gave enough fuel to warm the room at rising and retiring time.

No system of heating and no sort of fuel, however, will heat a house properly unless the householder pays attention to the matter of humidity. Air in the open contains a large percentage of moisture. When we shut up our houses, we dry the air. Moist air is like a blanket. It holds the heat within our bodies. Dry air allows it to escape. A properly humid air will feel warmer at 65° than a dry air at 80° and be more wholesome. To moisten the air is a much cheaper way of heating than to buy coal at \$14 a ton. So keep the kitchen tea-kettle spouting steam, and on occasion open the cocks of the steam radiators. Set out some pans of water to evaporate. We keep an ornamental brass bowl full of water on the big wood heater in our living-room. Warm water evaporates faster than cold water. Keep your air moist, and it will help you keep your fuel bills low.

Make sure that you have fresh air in the house, as it is wholesome. But you do not need too much fresh air. The construction of the average house permits plenty of air to come in through cracks, and when it is very cold and the wind blows hard far too much fresh air comes in. The average heating system will not warm so much cold air. Then it is necessary to bar this cold air out. Tighten up the joints and cracks by weather strips, pieces of felt, building paper, etc. That will help tremendously to conserve the heat.

In some sections of the country, at least, there will probably be a serious shortage of hard coal this winter. That need not necessarily mean a shortage of heat. Hard coal is only one form of fuel practicable for home consumption. By substituting some other form, at least in part, perhaps we ourselves can make that one lump of coal do the work of two. At any rate, it's worth a try.

(C) 1915 by Darius Kinsey

"BUCKER" READY TO CROSSCUT A TEN-FOOT FIR. THE SIX-FOOT LOG IN FOREGROUND IS A HALF-BURIED WINDFALL WHICH HAS BEEN DOWN MORE THAN A HUNDRED YEARS BUT IS PERFECTLY SOUND. SHINGLES ARE MAINLY MADE FROM DOWN CEDARS

CEDAR SHINGLES

A TRAGEDY OF THE NEW TARIFF ACT

BY SHERMAN ROGERS

INDUSTRIAL CORRESPONDENT OF THE OUTLOOK

MY first job in the Western woods was cutting bolts for a local shingle mill. I can still well remember when I dug my first log from under the moss, and sat for a long time on a near-by stump, viewing disgustedly the decayed tree that I was ordered to saw into 54-inch-length shingle bolts. When the foreman approached, I beligerently inquired where he got the idea that I would work up a lot of worthless cull material.

He looked me over carefully, and then cryptically remarked: "I guess you're a newcomer. Pretty green about timber. When you're here a while you'll find that woods used for shingle manufacture are purely by-products, as a rule. A shingle is only a few inches long, and we use timber for it that's no good for other purposes. Timber that has smashed across stumps in falling, making only short lengths available, is conserved by cutting it into shingle bolts.

"You'll also find that big timber, especially the overripe, large cedar, generally has a heavy center rot. When that log goes to the mill, all the clear grades are used for cedar siding and other satisfactory marketable grades that are now and always will be in great de-

mand. But you'll find that a lot of timber still remains around the heart rot. This is used for shingles, and makes the finest in the world, but it couldn't be used for anything else, because solid pieces could not be obtained in any lengths suitable for lumber.

"Remember, young fellow, if you're going to remain a shingle-bolt cutter, you'll have to get the idea out of your head that you're going to work fine big, green, merchantable trees," concluded the foreman.

For many years after that, in odd months, I engaged in shingle-bolt cutting, and it always gave me a great deal of satisfaction to know that the great Coast shingle industry was built on the manufacture of material that would otherwise be practically a total waste.

A CONGRESSIONAL BLUNDER

I was in the State of Washington this summer when the cedar-shingle free list was announced. I couldn't credit the news, and felt certain that the Western Union had made a mistake. I didn't believe for several days that Congress could have made such a willful, wanton blunder. And then my mind reverted to the shingle weavers. There are many

thousands of them on the Coast. They form a substantial part of the population of such cities as Everett, Bellingham, Seattle, Hoquiam, Raymond, and many other cities and towns. These men are much like coal miners—for shingle weaving is about the only business that they know. What a shame that scores of mills, formerly beehives of industry, will now have to give way to the whimsical idiosyncrasies of Mid-Western Senators and Representatives!

The Farm Bloc group of Congressmen have a just right to feel proud of the protection they secured in the Fordney-McCumber Tariff Bill for the American farmer. There is certainly no one in America that will regret this much-needed legislation to elevate the standards of the greatest group of American industries. Everything pertaining to the farm has finally received the protection that it should have received when the Underwood Tariff of 1913 was placed in effect.

HEAVY TARIFF PROTECTION FOR FARM PRODUCTS

The leaders of the Farm Bloc were able to take practically every kind of agricultural product from the free list

This incline, more than 3,000 feet long, is typical of the extensive railway work necessary for logging in the Northwest. Sometimes such roads are run every half-mile through the forests. The cedar windfalls in such a tract as this should be made into shingles for reasons of economy of operation and conservation of natural resources

with a tariff that really will result in great benefit to the long-suffering American farmer. The following important products have been taken from the free list and have been protected by the tariff indicated: cattle, 1½ cents to 2 cents a pound; fresh beef, 3 cents a pound; fresh mutton, 2½ cents a pound; fresh lamb, 4 cents a pound; bacon, 2 cents a pound; and cream, 20 cents a gallon. Horses valued over \$150 a head were raised from \$10 to \$30. But in grain protection the Farm Bloc adherents have a just right to feel proud. They took buckwheat off the free list and placed on it a tariff of 10 cents a hundredweight; corn, 15 cents a bushel; corn grits and meal, 30 cents a hundredweight; rye, 15 cents a bushel; rye flour, 45 cents a hundredweight; wheat flour, 78 cents a hundredweight; brewers' grain, \$5 a ton; Irish potatoes, 50 cents a hundredweight.

Most men and groups of men vested with unlimited power generally become so intoxicated with it that they shamefully abuse it. Whereas the leaders of the bloc coterie demanded and obtained adequate protection for the farmer, the iron and steel producer, the wool grower, and almost every other conceivable American enterprise, they were cruelly unscrupulous, glaringly arrogant and domineering, toward one of the most picturesque and worthy industries of the Pacific Northwest—the shingle industry.

Despite the pleas of thousands of shingle weavers in the entire business and industry element of the Pacific Northwest, the Mid-Western Senators and Congressmen closed their eyes, and doggedly refused the protection necessary to save the shingle industry from practical annihilation.

Thereby hangs a tale.

The Western shingle industry was originally placed on the free list under the Underwood Tariff Act of 1913. Since that time over 190 shingle mills in western Washington and Oregon have been dismantled. British Columbia, however, enjoying the protecting wing of Congress, has increased its production 250 per cent during this nine-year period of free trading with America; and 85 per cent of British Columbia's entire shingle production is sold in the lumber yards of the United States.

As a direct result, our own great industry has almost ceased to be.

A great many shingle mills had of course hung on. Many that had closed were only awaiting the time when a Republican Congress would recognize the great injustice dealt the shingle industry and place a protection that would again permit this extremely necessary industry to flourish.

I say they were hopeful. They were. But now that they know the truth and realize that Oriental labor receives more consideration from Congress than white labor does, these shingle-mill owners and the thousands of shingle-mill workers, known as shingle weavers, will probably give up the ghost, while a few

will continue to hope against hope that the coming Congress will redeem itself by passing an amendment playing fair with the Pacific Northwest.

It may be that enthusiastic conservationists in Washington have gained, in some mysterious way, the erroneous idea that giving British Columbia the American shingle industry would conserve the cedar in our own country for future generations. I have heard from many sources this conception of what I term the biggest blunder Congress has made in many years.

But I cannot believe that any man living in any part of America could be so densely misinformed regarding the fundamental basis of the shingle industry as to be deceived by the conservation theory. Whatever excuse the Farm Bloc adherents may offer for the iniquitous cedar-shingle clause, one thing is certain. Every man that voted for it knew that it meant the death knell to one of the West's leading industries, and they furthermore knew full well that it meant a deliberate waste of millions of feet of cedar timber that will now be consigned to the refuse burner, to make sparks and smoke, whereas formerly great stacks of cedar shingles rose from the manufacture of grades of cedar timber that could be utilized for nothing else.

The action of the Mid-Western Senators and Representatives has therefore added to the waste and created a fire danger in the Western woods for no other apparent reason than to protect Oriental labor used in British Columbia in shingle production.

PLAYING INTO THE HANDS OF ORIENTAL LABOR IN BRITISH COLUMBIA

The very best white labor is employed in the American shingle industry. These men work eight hours a day, and enjoy good working conditions. Now that the industry they have been engaged in has practically been killed, the question naturally rises, Who will be the beneficiaries?

That is easily answered. British Columbia shingle mills are manned almost wholly by cheap Oriental labor. It certainly was thoughtful of Congress to have taken such great pains to protect the Oriental in British Columbia while legislating out of employment a high-grade, substantial white population in Washington and Oregon.

I would like to believe that the action of Congress was one of misunderstanding, rather than a deliberate intention to favor British Columbia and its Oriental labor while destroying our own industry under the mistaken belief that probably the American consumer would greatly benefit, and that American timber would be conserved. I would like to believe that—but I don't. I don't think any one else does who is familiar with the facts.

It has been repeatedly asserted by men who should know that behind the shingle tariff laws there was a tremendous lobby, representing interests in

control of nearly one million acres of British Columbia timberlands.

A major part of this vast British Columbia timbered area is controlled by Minnesota capitalists, and I note from the Congressional records that Minnesota politicians in Congress were by far the most active in seeing to it that the Oriental labor in British Columbia gained preference over the white labor of the State of Washington.

If adequate protection to the shingle industry would have created a prohibitive cost to American home builders, there would be slight objection, even in the West, toward shingles being placed on the free list, but it is a well-known fact, from coast to coast, that, since the cedar used in shingles is only a by-product, and since there are so many hundreds of small operators in the business, the shingle industry was conducted on such a narrow margin of profit as to be almost negligible.

I well remember, several years ago, when a shingle manufacturer of Everett, Washington, purchased an automobile. I met one of this gentleman's friends, and his first remark was: "I guess John has married a rich widow this time. *He certainly could never have bought an automobile from the profits of his shingle mill.*"

There is another story that has gone the rounds of the Washington woods for many years. If this story is not true, it certainly correctly illustrates the profit and loss side of the shingle industry. An old grizzled Washington lumberman had engaged for many years in a bitter personal quarrel with a lumber-owning competitor. The quarrel had waxed hotter and hotter, when suddenly the senior member of the two-party feud was stricken with typhoid fever. A doctor was called, and he informed the logger that he had only a short time to live. The fast-sinking timber owner sent for one of his best friends, and confided to him that he hated to die, mainly because he had never got revenge on his enemy.

"That's easy," replied the friend. "Why don't you will him one of your shingle mills?"

"Done!" triumphantly whispered the sinking timberman, as he turned his face to the wall. "My revenge is complete. I die happy."

Congress may feel proud of its action. I have personally read many different remarks, talked with scores of shingle weavers and shingle-mill owners while I was on Puget Sound this fall. These men, without exception, were so highly incensed that their opinion of the Farm Bloc action could not be published in *The Outlook*.

One caustic comment appeared in one of the Seattle newspapers, which, in my opinion, covered the subject very well. It declared: "The placing of cedar shingles on the free list, and placing cedar logs on a prohibitively dutiable list, is the limitless, illimitable, and unlimited limit of economic and political blundering."

"GLORY O' THE DAWN"

BY HAROLD TROWBRIDGE PULSIFER

IT must have been twenty-nine, no, thirty years ago that my father bought the Old Lighthouse Point at Middlehaven. He was among the earliest of the summer people to make a home in that part of Maine, and his purchase of the abandoned light and a hundred acres or more of rocks, blueberry bushes, and pasture land was something of an event in the annals of the town.

Middlehaven lies, as you know, on the shore of a heavily wooded island off the mouth of the Kennebec River. Its harbor is a crescent which bites deeply into the northern shore of the island. The old light and my father's land marked the western end of the harbor, and from that rocky promontory, reaching up into the deep waters of Kennebec Sound, you could look across the harbor and read the history of the town with a single sweep of the eye.

Silhouetted against the woods on the hill behind the town stood a row of great square houses built in the days when New Englanders were at home in all the seven seas. Some of these old mansions, when my father first went to Middlehaven, were beginning to fall into disrepair. They were no longer white with the spick-and-spanness of New England, but weatherbeaten and gray from neglect. To the east and the west of these relics of past greatness were scattered the smaller houses of the fishermen, whose industry, in the want of far adventurers, kept the town alive. There was a none too picturesque street of small shops that ambled along behind the ramshackle piers, and in the waters of the harbor usually twenty or more fishing sloops and dingy trading schooners were waiting for the wind.

I have left the clearest page of Middlehaven's record until the last. Beyond the town, at the other end of the crescent from my father's land, lay what remained of a great shipyard. The masts of a few fishing vessels and a coasting schooner under construction; the great gaunt ribs of an unfinished ship, blackened with years of sun and rain; and the marks where a dozen ways had once run from the yard into the harbor waters, were all that was left of an industry which once had made Middlehaven a name to conjure with among those who followed the sea. In the yard itself the gray-haired workmen told as clearly as the deserted ship of a trade which, after their passing, would be known no more.

This was the Middlehaven to which my father came three decades ago. There is a different Middlehaven now—a Middlehaven of country clubs and summer cottages, of motor boats and motor cars, of strange new faces and harpily drawn social lines. I am glad

that my boyhood was spent in the Middlehaven that was before the coming of King Gasoline.

WE lived the first of our summers in the old light itself. Its stubby tower served on alternate days as a studio for my father and a playhouse for me. Some of our neighbors may have called my father "that cracked artist" when his back was turned, but most of them, I am sure, felt for him sympathy and understanding and made their feelings manifest by a hundred deeds of friendly kindness. It was to one of his neighbors that my father turned for advice in his second summer at Middlehaven. He was planning to build a new stone studio on the seaward shore of his land. The design my father had drawn up himself, and he wished to find a mason who had, as he described it, "a feeling for rocks." "I want a man," he said, "who can build me a house without destroying the face of nature within a radius of twenty miles. I want a man who knows that it is bad for the health of a blueberry bush to cover it with plaster and lime. I want a man who would prefer not to drag a heavy beam through my pet nursery of young pines." Our neighbor observed my father quizzically and tolerantly. "I think I know what you want, Mr. Tilton. You want a man to build you a house that will look as though it grew there. Better try and get Caleb Gurney." Then he added, after a pause, "That is, if he is working."

Father and I hoisted the sail of our dory and set out to find Caleb. We discovered him at last, sitting in the lee of the abandoned ship in the old yard. Great curls of clean shavings lay about his feet; the air was redolent with the smell of wood and the smoke from a stubby corn-cob pipe which hung at a perilous angle from Caleb's none too determined jaw. As nearly as I can remember, Caleb seemed to me then a man well past middle age. But I was only thirteen myself, and one's views of middle age alter rapidly as the years go by. His face was round and full, his hair sandy gray. His skin was flushed and tightly drawn, and his eyes were blue and moist. His neck filled the collar of his flannel shirt to bursting. The picture he made, as I recall it, was not a prepossessing one, but there was a friendliness about his glance which made me instinctively trust him.

My father seated himself on the shavings. He lighted his own pipe before he spoke.

"They tell me, Mr. Gurney, that you're a fine mason."

"Folks hev said I was," Caleb guardedly replied.

"And I have generally found," my father went on, "that you people here in

Middlehaven, when you praise a man, don't err on the side of generosity. If Middlehaven says you are a good mason, you must be."

"Well, then, I be," said Caleb. "What was ye wantin' uv me?"

"I am going to build a new house over on the point," said my father, motioning across the harbor with his pipe, "and I want to get a man to do the work who will leave the point so that I can recognize it when he gets through. Do you want a try at the job?"

"I don't know but I might," said Caleb. "I ben workin' here at the shipyard quite a piece, but I'm 'bout through. I like stun work, but somehow every once in a while I get a hankerin' to work in wood. My father was foreman in this yard, and his father afore him. I guess it's in the blood. Somehow, it don't seem right that this kind o' work should die out the way it's done." He shook himself as though to bring back his mind to the present and added: "I'll go with ye, Mr. Tilton—I've heard ye're a good man to work for—an' we'll hev a look at your plan."

A fair wind carried us back across the harbor. Caleb had taken the tiller as we stepped into the dory. His hand rested upon the helm as delicately as the fingers of a violinist rest upon his bow. Our wake across the harbor was straight and steady, though Caleb's eyes seemed to ignore both our craft and the mark for which our course was laid.

"You're a good sailor, anyhow," my father said as our keel grated on the beach.

"If I wasn't, I'd be a lummox," said Caleb. "I was sailin' when this young'un here could 'a' put me in his pocket."

Father carried his plan out to the place which he had selected as the site of his studio and explained his wants briefly. When he had finished, Caleb wasted no words in questioning.

"We can bring our stun right here to the shore," he said, "in a scow. Put a pair o' shears on them rocks an' drop 'em right where we want 'em without bustin' a blade o' grass. There's a big stun wall in Deacon Turner's pasture thet runs right down to the shore. We can hev it for takin' it away. Jeff Taylor has an ole sloop we can use as a scow. There's plenty o' water to bring her in here loaded at low tide, an', with thet long ledge out there to break the sea, we can work here 'most any day snug as ye please. And when we get the buildin' done folks 'll trip over it without seein' it, it'll set here so natcherel."

Nothing was said of wages. The project changed swiftly from one which involved "my studio" to Caleb's more inclusive "our house." On what terms the work was prosecuted I do not know.

I only know that Caleb undertook it as a man undertakes a mission for a life-long friend. My father dropped his painting while the studio was building and labored side by side with his master mason. I, too, busied myself as best I could, fetching trowels, mixing mortar, and tailing on ineffectually when the heavy boulders which Caleb had selected were hoisted into place. Caleb worked as few men work nowadays. He chose the rocks, he pried them onto the stone-boat, he rigged the shears to hoist them to the sloop, and he adjusted the slings about them when they were hoisted from the sloop to the land. Some of the other workmen grumbled over his fussiness: his insistence upon the color and shape of the stones, his foolishness in trying to save them from injury by crowbar or chain. The idea of guarding stones from scratches with burlap bags moved some of them to laughter. But they followed Caleb's directions to the letter.

Late in the summer, when the studio was finished, father sent out word to all his neighbors that he wanted them in for a housewarming. Caleb was to have the place of honor in this gathering, for my father had come to see that in his master mason he had found a fellow-artist. On the evening of the great event a dozen families or more rowed over to our point. Some of them brought deep blueberry pies, a pailful of doughnuts, a basket of apples, a chocolate cake, gingerbread, and such delicacies as are native to Maine. One man, almost apologetically, brought over enough lobsters to feed half the crowd.

"The smack had all she could carry the last trip she made," he said, "and she wasn't payin' much for 'em, anyhow. So I thought I might as well boil 'em up and bring 'em over as let 'em lay around in the pound till next trip."

But there was no Caleb to partake of all this abundance. No one could or would explain his absence until my father found the neighbor who had recommended him. "I guess," he said, "Caleb must hev quit workin' for a spell. He has been workin' almighty hard this summer, an' longer than he generally does. I wouldn't look for him too hard ef I was you."

My father did not heed our neighbor's advice. The next day he set out alone in his dory for Caleb's little shanty across the bay. It stood on a pine-covered knoll overlooking the shipyard. Once Caleb had lived in a comfortable old house near the site of his present home, but it burned down and he had fixed up an old shed for his bachelor needs.

When my father returned, his face was grave. He told me nothing save that Caleb was sick—it was not until a year or so after that I learned the story of his visit. He had gone to Caleb's house and found the door barred. He pounded on it, and at last a shamefaced Caleb appeared in a half-open window.

"Ain't no use comin' fer me, Mr. Til-

ton," Caleb had said. "I ain't been well." The character of Caleb's illness was not one which could be concealed. "Just been celebratin' finishin' house." Caleb rambled on. "Need I' vacation."

"But, Caleb," my father started to protest—

"Goo'-by," said Caleb, and shut the window with a bang.

A week later Caleb rowed across to our point, not to apologize in words for failing to come to our party, but, as he explained, to look around to see if everything was satisfactory. When he left, he pulled from under the thwart of his boat a box, which he handed to me. "Just a little somethin' for the boy, Mr. Tilton; thought he might like to hev it as a meemento of Middlehaven."

Then he shoved off, and was a hundred yards from the shore before I could even thank him. When the box was opened, it proved to contain the model of a fishing sloop. It was barely a foot long, but beautifully finished in every detail. The hull was not carved from a single block, but framed and planked up with the nicest skill. It must have meant the labor of weeks to build and equip the tiny vessel.

So it was that we learned that Caleb was not only a mason and shipwright, but also a builder of models. When my father spoke of his workmanship to some of our neighbors, the only comments which he elicited were to the effect that "Caleb had a slight better build himself a decent house than waste all his spare time makin' jimcracks."

THAT summer passed, and another and another. On evenings of days when Caleb had "been working," he used to row over to our point and sit with my father and me, discussing the world and his wife. His native shrewdness cut its way to a clear understanding of people and issues in a fashion which any college graduate might well envy. As the summer population of Middlehaven grew, Caleb's comments upon the new faces provided us with a most illuminating record of the course of events. But Caleb's chief interest lay, not with the new, but with the old.

In the twilight the skeleton of the old ship across the harbor seemed to awaken his mind to a thousand forgotten things. He peopled the shadowy yard with living figures of a past that he had never known, recounted the story of ships that had taken form there under skillful hands, the lives and loves of their captains, and the tragedies of vessels that never returned.

We never saw Caleb at all during the spells when he was, to use the euphemism of our neighbor, "not working." His absences from our companionship were never alluded to, a thing for which I think he was profoundly grateful. The only comment which any of our neighbors ever made to my father on his friendship with Caleb was made by the village grocer. One day while my father was in the store and waiting for his

change the grocer paused in the wrapping up of a loaf of bread, gazed off towards a bunch of bananas as though it constituted his chief interest in life, and said, with an absent air:

"They do tell me, Mr. Tilton, that Caleb Gurney works a heap sight more sence ye came to Middlehaven. It's a durn shame ye don't live here in winter too."

It must have been my first year at college that Caleb's dream of old Middlehaven began to express itself in reality. It was then, I think, that I remember seeing for the first time a great long bench which filled to overflowing the center of his single-room shack. On this bench stood part of the frame of a ship. The timbers of this eight-foot vessel were not the only evidence that Caleb's home had been turned into a miniature shipyard. On the wall behind his tumbled bed hung yellowed tracings which showed at a glance the source of Caleb's inspiration. Under the thumb marks which edged the drawings I made out the name of the ship which Caleb was laboring to reproduce. Of its beauty lovers of old ships will need to know nothing more than that the plans bore the legend "Glory o' the Dawn."

"When they tore the old sail loft down," said Caleb, "to build the new yacht club, I come across them plans hid away in the bottom of a barrel. Nobody seemed to want 'em, so I brought 'em home with me. Then last winter I got a-hankerin' to see if I couldn't build a ship that old 'Glory' herself would be proud to claim as sister. First off I began workin' with what wood I could find handy, an' I got my model pretty well framed up afore I said to myself, 'This ain't goin' t' do. No, sir, soft stuff ain't good enough for my 'Glory.' She's gotta be fit to sail from here to Chiny. She's gotta be finished even better than they finished ships in them days, when they meant more to their captains than home and mother. Her timbers is goin' to be uv oak; she's goin' to be planked with elum; her decks will be the clearest white pine I can find; her tr'n'n'ls 'll be locust—maybe even ivory; and teak ain't none too good fer her houses and her rail. Her sticks will be spruce or Oregon fir and her fitten's will be brass throughout.' So I up an' smashed my first model with an ax an' I laid the keel o' this one last January—the 8th it was."

"You've got a life job ahead of you, Caleb," I said, "if you finish her up the way you have begun. Are you planning to do the whole thing to scale?"

"Everythin'," said Caleb, "from stem to taffrail, from main truck to keel. I've got calipers accurate enough so's I can measure her riggin' to the thousandth of an inch. They come high, but I had to hev 'em."

THAT first year saw the frame of "Glory o' the Dawn" almost completed. There were weeks when Caleb did

no work at all save to potter around, looking for timbers and natural knees that exactly suited his requirements. When one of his old cronies was injudicious enough to suggest, "Why in tarnation don't ye saw 'em or steam 'em? Nobody ain't goin' t' see 'em after she's planked up," it resulted in a free fight which left Caleb's friend as bewildered as to the cause of Caleb's anger as he was battered as to his own countenance. But Caleb kept his plans to himself. I think that my father and I were the only ones to glimpse the determined dream behind his pale-blue eyes.

It was not until three years later, indeed, that even I began to see the whole of Caleb's plan, and I made my discovery by pure chance. In the dusk of a late September evening I had gone to Caleb's to say good-by before I started back to the city to take up work as a cub reporter. I walked into Caleb's shack without knocking, for the door stood open. He sat with his back to the entrance, his hands clasped about his knees and his eyes fixed on the concave forefoot of the new "Glory o' the Dawn." In the yellow lamplight he looked strangely old. I had not noticed before how thin his hair had grown, and how gray.

Caleb was talking to himself as I started to enter, and, without meaning to eavesdrop, I stood for a minute or so listening to his half-mumbled words. It was the speech of a man who has lived much alone and who has learned the dangerous habit of conjuring up spectral visitors.

"Well, 'Glory,' ol' girl," I heard him say, "they went an' busted up the shipyard; they went an' filled the harbor with bo'ts made o' gingerbread an' paint, thet come a-scurryin' back to their moorin's afore it blows hard enough to muss a woman's hair. Not much like ye, them yachts. I'd like to see one o' them bo'ts beatin' 'round the Horn an' up to Californy in ninety-two days! Thet's what ye done, ol' girl! Praise be there's some as ain't forgot it! Maybe some day—"

He turned and caught sight of me. "Why, hello, Bob," he said, sheepishly. "I thought I was alone, an' I was just talkin' to this ol' girl here, to sort o' pass the time o' day. Ye must uv thought me plumb cracked."

"Cracked nothing, Caleb," I said. "You were just thinking out loud. We all of us do that sometimes. How goes the work?"

"Not so bad," said Caleb, "an' not so good. I hev got her hull most finished, as ye can see, but I can't seem to lay my hands on just the kind o' deck fittin's I need. Guess I'll hev to get me a lathe an' turn 'em out myself. Now them davies there ain't right at all. Accordin' to my measurin', they're a sixteenth of an inch too high, an' the wrong shape to boot. I hain't even been able to make a start on the riggin'. They don't make no line laid up just

right for shrouds or stays. I guess I'll hev to get some thread an' start a rope-walk of my own."

"Isn't that drawing things pretty fine; Caleb?"

"Ain't nothin' jest right ef it ain't jest so," said Caleb, and I knew that "Glory o' the Dawn" would never be launched if her buidler's heart could not be satisfied.

It was this meticulous attention to detail that made the building of "Glory" so long a process—this and the fact that the town's one hotel had come to an agreement with the local political boss whereby one of the laws of Maine was honored in the breach rather than in the observance. In the basement of the hotel a bar had been set up, and it flourished like a green bay tree. Once a year, or oftener if the town fathers were hard up for cash, the bar was raided with all due ceremony, fines assessed, and the proprietor promptly released to return to his lucrative trade. Some of the money that Caleb might have spent for fittings found its way across the brass rail. His neighbors told me that he never returned to his shack on nights when he had been patronizing the bar. I guessed, though I did not say, that when the fit was on him he feared for the safety of "Glory o' the Dawn."

The evening of Caleb's unintended revelation he and I talked for a while, though most of our conversation was made up of those silences which old friends interpret as discourse. At last, with a shake of his hand and a "See you next summer," I went into the night.

It was not next summer, nor the summer after, that I saw Caleb again. With the death of my father and my own efforts to make a place for myself in the world of journalism, it was six years before I went back to Middlehaven. During these years my house on the Old Lighthouse Point had been rented to a summer family that knew not Caleb. Once, indeed, when he had rowed across to dig himself some clams on the beach near the studio that he had built, they had ordered him off in language which it is unwise to use to a son of Maine—particularly when he happens to be within his legal rights. But I heard nothing of this from Caleb. The news only came to me as a bit of local gossip upon my return.

It was to Caleb's shack that I hastened as soon as I had put foot upon the new steamboat pier at Middlehaven. The town had changed much in six years. The stores had a prosperous air; the main street was paved; and a dozen new houses had sprung up in Caleb's neighborhood. But his home was as I had left it.

I found him seated in a rocking-chair set in the midst of his unkempt yard, its tangled grass and weed-grown garden contrasting strangely with the carefully landscaped grounds of summer cottages on either side.

He greeted me as though I had only been away for a week's cruise, and I accepted the casualness of his welcome as the tribute to an understanding friendship. Six years had altered him more than his house. His cheeks were sunken and his shabby clothes hung on his heavy frame in loose folds. We talked for a while of my father and of our old neighbors, and then I asked: "And 'Glory,' has she been launched yet?"

He seemed to grow a dozen years younger as he answered: "Come in an' look at her, boy. She will do your heart good."

Inside the shack I found the masts of "Glory o' the Dawn" towering above me in the dim light. The network of rigging, the yards, many of the sails even, were in place. I caught my breath at the beauty of the workmanship.

I walked around "Glory o' the Dawn" without saying a word. She was too perfect for praise. From the gilded figure of Aurora at her stem to her taffrail, from her main truck to her keel, she was a clipper of clippers—the symbol and spirit of an age which would never come again. All I could find to say was: "Well, Caleb, you've done it."

"Thet's what 'most everybody seems to think—now," said Caleb. "Some of 'em says it in looks, some of 'em in words, an' some of 'em," he chuckled, "tries to say it in money."

"I suppose there must have been quite a few people that wanted to buy her," I said, feeling somehow as though I were speaking to a man about the sale of his wife.

"There has. Only last week Judge Talbot druv up in his machine an' asked if he could see my ship. 'Nothin' to hinder ye,' said I; 'walk in.' He looked her over without so much as sayin' thank ye, grunted an' puffed a bit, an' then said, 'Give ye \$10,000 for your place with this bo't thrown in, or give ye \$10,000 for the bo't with the place thrown in.' 'Judge Talbot,' says I, 'nothin' hindered ye comin' in, an' now there ain't nothin' hinderin' ye goin' out.' I give him a push an' shut the door behind his back. They said downtown thet he was hoppin' mad. Served him right, though. He'd ought t' know that there's some things thet can't be bought."

Caleb was silent for a few minutes, and then went on:

"But there was another feller here last year thet wanted her, an' he sort o' set me thinkin'. He knew ships, thet feller. 'Curator,' he said he was, of a museum to the west'ard. Said he hed to look after a big buidlin' which had nothin' in it but relics of old shippin' days. There was models of whalers there, he said, cases of scrimshaw work, an' walls jest covered with ol' plecters of the best ships thet ever was on the sea. He come o' seafaring folks, an' there wasn't nothin' thet missed his eye. He kept walkin' round her an' round her, lookin' for somethin' to pick me up on. Finally

he says, slow-like, "Thet sailer-binnacle there—I don't think "Glory o' the Dawn" carried one like thet. I think ye got thet design from"— "The "N. B. Palmer,"" says I. "Right," says he. "I'd know thet sailer there with his shiny tarpaulin hat an' standin' with one foot on a keg o' beer if I met him in the Sahary Desert. How in blazes did ye draw thet compass card so fine?" "I didn't draw it," says I, "I had a photy-graph made from an ol' compass an' reduced to fit." "My word," says he, an' starts walkin' round her again.

"Finally, jest as he was goin'," he says to me: "We hev got a new room in our museum. We're goin' to put in it the best things we got. Thet ship o' yours would look fine right in the center." "She would," says I, "but she won't." "Think it over," he said, shakin' my hand. "If you let me hev her, she will be where thousands can see her an' enjoy her every year." "They could, but I couldn't," says I. "I understand," says he, "but let me know if ye change your mind."

"I liked thet feller. He didn't so much as mention money. I could see thet, so far as him an' 'Glory' was concerned, it was a case uv love at first sight. An', as I said afore, it sort o' set me thinkin'."

I knew what Caleb's thoughts were, but I did not voice them. It is not a tactful thing to ask a man what will become of his property after he is gone. But Caleb did not wait to be questioned.

"It sort o' set me thinkin'," he repeated. "Here I hev spent a good part o' my life buidlin' this 'Glory o' the Dawn.' I hev'n't any children to leave her to, an' maybe they wouldn't understand her if I had. She'd ought t' set here in Middlehaven, but she ain't goin' t' decorate no millionaire's summer cottage, if I hev to smash her with an ax. She sort o' belongs to the town in a way, even if the town don't know it. Sometimes I think I'd like to hev her settled afore I go; sometimes I feel thet it would kill me if she went out o' this house. Bob, what do you think?"

I tried hard to put my thoughts into words which would not hurt Caleb's feelings. I am afraid that I made rather a clumsy mess of it. "Caleb," I said, "this ship is more than a splendid model. It is as you have meant it to be, a remembrance of great days. Some time, perhaps, this town will wake up to the fact that it was once something more than a playground for summer folk and that its people once did things more worth while than catering to the needs of even the most estimable of idlers. There's the same blood here that once found the whole world almost too small for its inheritance. Nobody asks of Middlehaven that it should be off to the Indies again; but somehow, some day, Middlehaven must apply its old courage and its old spirit of adventure to the needs of our time. It may be a foolish dream, but somehow it seems to me that this ship

of yours should be left where it can carry the message of old Middlehaven to the Middlehaven that may yet be."

Caleb had not moved while I was talking; I even doubted whether he heard all that I said. But when I had finished, he looked up, and I knew that he had understood.

"Bob," he said, "somehow I'll find a way."

THAT fall a group of the summer people decided that Middlehaven needed a public library. They brought up a celebrated architect from New York, who went over the town and selected the site for the building. It was to be of brick, with a great white Colonial porch that looked out over the harbor. It is a matter of record that the committee had some trouble in buying the site, for the chairman went to the owner of the lot that had been selected with a brusque "We want to build a library on that corner lot of yours. Of course you will sell it." Negotiations thus begun did not progress rapidly. "If they'd only as't me to sell it to 'em as part o' my contribution to the library, I'd hev done it right off," the owner of the lot afterwards said. "But they sort o' gave it out thet I had to sell it because they wanted to buy it, an' I don't hev to do nothin' thet I don't want to."

A more gracious diplomacy triumphed in the end, and the corner-stone of the library was laid before the summer people departed. It was roofed in before snow flew, and the opening day was set for the following July. My vacation took me back to Middlehaven again a few weeks before that opening. As I went up the path to Caleb's house I met him coming out. There was a determined look in his pale-blue eyes, and his hand, as it touched mine, trembled strangely. "I want you should come with me, Bob," he said.

"Why, where are you going, Caleb?"

"I'm going over to see Judge Talbot. There's a meeting of the Libry Committee at his house to-night, an' I've got to be there," he answered.

I tried to get to the bottom of the affair with a feeble joke. "Since when have you been on the committee?"

"Never was on the committee, an' ain't never goin' to be on the committee. There ain't no real Middlehaveners on thet committee. Sometimes it seems as though this libry was goin' to be given to the town the same as ye would give a bone to a dog. But there's one dog as is goin' to bark at least once afore he's done."

He did not vouchsafe any further information even when the crushed limestone on Judge Talbot's driveway crunched under our feet. He rang the bell, and he and I were shown by a somewhat astonished butler into Judge Talbot's den and the presence of the committee.

There sat the Judge, his face, it seemed, more choleric than ever as it rose like a red autumnal sun from

the snowy whiteness of his Palm Beach suit. Judge Talbot nodded to me, but his gaze was fixed on Caleb. Most of the members of the committee I knew, and some of them even knew me. I doubt whether this could be said of old lady Minturn, who sat on the Judge's right—"Cat's-Meat Minturn," the Middlehaveners had called her since she first settled in their midst. She won the name by approaching the butcher with a "Give me some cheap meat such as the natives eat. It's for my cat."

I turned from my survey of the room to find the Judge and Caleb casting doubtful glances at each other. Caleb was nervously twisting his hat in his hands; the Judge was obviously wondering why the butler had let us in.

"I suppose," he said at last, "you have come to see me about your boat. Decided to sell it, eh?"

"It is about the ship," said Caleb, slowly, "but I ain't figurin' on sellin' it. I know ye folks is givin' the town a libry, an' it's got a big hall in the middle uv it. I was sort o' thinkin' thet mebbe ye would like 'Glory o' the Dawn' to put in thet hall."

The Judge was plainly startled. The dollar value of Caleb's ship he knew even if he did not know its cost in dreams. "Why, that's mighty fine of you, Caleb—Mr. Gurney. I am sure our committee will be delighted to have it."

"I wasn't figurin' on givin' it to the committee," said Caleb. "I wanted to give it to the libry when it belonged to the town."

"Of course, of course," said Judge Talbot, "we understand that perfectly." His eye invited the acquiescence of his fellow-committee members. Most of them knew Caleb's ship by reputation if not by sight, and they all nodded approval. Old lady Minturn even went so far as to say that she thought it would look "just too pretty for anything."

Caleb was invited to sit and discuss his gift. He sank into a great leather arm-chair, still clinging tightly to his twisted hat. The beads of perspiration stood out on his forehead and the knuckles of his hands were white.

Before we took our departure even the details of the transfer had been almost irretrievably arranged. Judge Talbot believed in striking while the iron was hot. I think that before the evening was over he sensed a little of the sacrifice that Caleb was making. At least when we turned to go he shook hands with Caleb with a cordiality which surprised me. I doubt whether Caleb noticed the change. Beyond the thought that he had agreed to part forever with "Glory o' the Dawn" I do not think that his mind was aware of what had passed, of what he had said or what had been said to him. When we at last went out into the night, he leaned heavily on my arm as he stumbled down the driveway. I felt tears strike my hand more than once, but neither he nor I spoke until we reached his house. Then it was just "Good-night, Bob," and "Good-night,

Caleb," and I turned away without trusting myself to say more.

BETWEEN the evening at Judge Talbot's and the day set for the dedication of the library I saw little of Caleb. I kept away from his house, partly because I felt there was nothing I could do which would help to make the coming separation from "Glory o' the Dawn" easier for him, and partly because of an occurrence which did not bode well for Caleb.

It was the very next day after the meeting of the Library Committee that a schooner bearing a deck-load of unsavory fish dropped anchor in Middlehaven harbor. There was more interest in the doings of that schooner than its apparent cargo might lead one to suppose. At dusk a dozen or more rowboats could be seen clustered about her, bargaining for fish—fish that the next morning were to be found floating in the harbor waters or left high and dry on the beach by the receding tide. The schooner, having finished her business and emptied her hold of sundry boxes containing nothing which ever came out of the sea, departed on her way—some three hours before a patrol-boat flying the flag of the Treasury Department appeared on the scene. Concerning her after history I know nothing and concerning her cargo almost as little. I only know that Judge Talbot's launchman was among those present when she discharged her load; I know that the hotel-keeper was also represented, and that there was an unaccustomed hilarity along the water-front of Middlehaven for several days after the schooner's departure. I know, too, that part at least of one case found its way to Caleb's house. Broken as he was by his impending loss, it is not to be wondered at that he gave in to the thing which meant at least a brief forgetfulness. Of course I should have stayed with him at this time, but something of that old reluctance, which I had shared with my father, to recognize a side of Caleb so discordant with the character which he had shown to us made me fear to intrude.

When the day for the dedication of the library came, I went to his house with a group of old friends from the town. I did not find that the Middlehaveners were as enthusiastic as they might have been over this prospect of a ceremonial gathering in Caleb's front yard. For obvious reasons he did not stand very high in the estimate of the townspeople. Added to this, the prospect of playing second fiddle to the Library Committee, which had arranged for the gathering, did not increase the attractiveness of the affair. The only Middlehaveners who had any official part in the arrangements were the three selectmen, and the rôle which had been assigned to them was very largely that of passive recipients.

When we arrived, it was to find that Caleb's house had been festooned with red-white-and-blue bunting. Three or

four girls of the summer colony were tacking up the last strips as we approached. Caleb himself sat in the old rocker on his doorstep. He was dressed in an ancient suit which once had been black, but which showed almost green in the hot sun which beat down mercilessly upon the little gathering. He did not seem to see the people around him; he did not even stop rocking to and fro when one of the girls who had been decorating his house stooped and pinned a rose in his buttonhole. I was close behind him as she did it, and I heard her say: "Mr. Gurney, we all think you are just wonderful, really we do. You are giving lots more to the library than all the other people put together." But Caleb only rocked and twisted his handkerchief in his hands. I stepped beside him and put my hand on his shoulder. "It's all right, Caleb," I said; "you are doing a mighty big thing." He reached up, touched my hand for an instant, and then went on rocking back and forth. But his eyes never left the model of "Glory o' the Dawn," which stood, sails set as for a far voyage, in the center of his weed-grown yard.

"Glory o' the Dawn" was supported at either end by a flag-draped saw horse, and behind her a stand some six feet high had been erected, large enough to contain half a dozen chairs and a table bearing a white pitcher of ice-water. The stand as well as the house had been hung with bunting. As I stood at Caleb's side and looked through the lofty spars of his vessel to this platform, decked out in Fourth of July magnificence, I had the feeling that the whole setting of the scene was strangely inappropriate. It seemed to me almost as though this flimsy stand upon which the pitiable old man beside me was to mount should have been hung in the black of a scaffold rather than the gay colors of our National holiday.

While I stood there the schoolgirls, dressed in white muslin, had grouped themselves in a restless half-circle between us and the ship. On one side of the yard there were perhaps twenty or thirty men and women of the summer colony, chatting and laughing among themselves. In this group there were some with golf bags in their hands. Obviously they had stopped to see the sight on their way to the country club. I noticed one fresh-faced college boy in white flannels gazing intently at the ship and then at Caleb. At last he laid his clubs on the ground and walked over to Caleb's chair. "That's a beautiful ship of yours, Mr. Gurney," he said. "I want to thank you for my share in the gift you are making." He flushed a little and went on, "You know, Middlehaven means a lot to some of us—maybe more than we mean to Middlehaven." Caleb took his outstretched hand, mumbled a few words, and the boy slipped back among his friends.

In a separate group on the other side of the yard stood and sat perhaps an equal number of people from the town.

Somehow they seemed to have an even greater air of detachment from the proceedings than the summer people themselves. Few of them had anything in common with Caleb; fewer still felt that the summer people had anything in common with them.

There was a lull in the chatter on both sides of the yard. Judge Talbot beckoned to the selectmen and with two members of his committee mounted the platform. When the others were seated, he advanced to the edge and, looking through the rigging of "Glory o' the Dawn," waved a friendly but rather ponderous hand to the circle of children. "I think," he said, "that we would like to start this brief ceremony by singing the 'Star-Spangled Banner.' We want you children to start the song and the grown-ups will join in—if they can."

The children struggled to their feet and, under the leadership of a teacher with a pitch-key, launched themselves boldly into song. When the shrill notes had died away—few deeper voices had joined in—Judge Talbot wiped his forehead with a silk handkerchief, drank a glass of water, and began his heavy-footed remarks. I doubt if any one remembers much of what he said. Certainly all that I can recall are his concluding words: "And now, citizens of Middlehaven, let us stand in honor of the man who has given the chief adornment of our new library. Mr. Gurney, we want you here on the platform beside us."

Caleb shook himself, stood, swayed, and caught my arm. The half-circle of school-children opened, and we moved together towards the platform. I felt Caleb's hand trembling as though he were stricken with the palsy.

He let go my arm, caught the edge of the platform, stumbled up the steps, clutched Judge Talbot, and then leaned heavily on the table. I do not think that he saw anything of the circle of curious faces grouped in a half-moon behind the vessel of his dreams. Judge Talbot stepped forward again, touched Caleb's shoulder and called, "Now three cheers for Mr. Gurney." Again the shrill cries of the children drowned out their elders' voices. The patter of polite applause which followed soon died away.

Judge Talbot glanced a bit anxiously at Caleb, fumbled at his watch, and announced that "after Mr. Gurney has said a few words we will all adjourn to the library for the dedication. Members of the Library Committee and the selectmen will head the procession, and this beautiful boat will be carried in state on the float we have prepared. I trust you will all fall in behind." He turned and in quieter tones said, "Now, Mr. Gurney, just a few words and we will be on our way. You are going to ride with me in my automobile."

Caleb had hardly moved during the welcome which he had received save that his body swayed to and fro as if he were balancing himself on the deck of a plunging ship. At Judge Talbot's

words he moved forward to the edge of the platform, his eyes fixed on "Glory o' the Dawn." He wet his lips with his tongue, but we heard no sound. Incessantly his hands worked and twisted at the knotted handkerchief which he held. Twice he opened his mouth as though to speak, but no word came forth. The people on the platform behind him pushed back their chairs and started down the steps to the ground. Single figures broke away from the fringes of the gathering. From down the street towards the library came the blare of the village band. The school-children scrambled to their feet, whispering and craning their necks.

Still Caleb stood, as though his mind were in a haze, as though his pale-blue eyes saw nothing but the beauty of his ship below him. Judge Talbot looked at his watch again and touched Caleb on the arm. "Just a few words, Mr. Gurney; we must go." At that moment from the group of summer people broke out the tittering giggle of a young girl. I do not think that she was laughing at Caleb; she had merely given way to that youthful hysteria which is born of em-

barrassment. But the sound of her voice seemed to break the spell which had bound Caleb speechless. He turned towards her and his face flushed.

"She's laughin' at me! She's laughin' at my ship!" His hands clinched. "By God, ye ain't none o' ye fittin' to hev my 'Glory!'" The sweep of his arms took in the whole of the astonished gathering with his menace. "By God, if I can't keep her I'll smash her all to hell."

The amazed Judge saw him snatch the water-pitcher from the table, raise it over his head, and hurl it downward into the mass of delicate spars and more delicate rigging. It grazed the hull and shattered on the ground. Just as Caleb reached for a chair Judge Talbot seized his wrist.

"Don't you tech me!" cried Caleb, wildly. "Don't you tech me! I'll smash my own ship if I want to!"

Caleb's sudden fury gave to his arms a strength which the Judge could not withstand. The end of the struggle came before any of us could reach the platform.

The two men, fighting for the posses-

sion of the chair, stumbled over the edge of the stand and crashed down upon the unsupported midship section of "Glory o' the Dawn." There was a splintering of wood and then the two bodies slipped to the earth. Judge Talbot, bruised, scratched, and groaning, rose to his feet. But Caleb did not move.

What happened then I hardly know, save that I found myself with Caleb's head in my lap. A doctor pushed forward from the crowd which had closed about us, tore open Caleb's shirt, and laid his ear to Caleb's heart. Then he looked up at the excited faces about us and said, "Better stand back there a bit, please. Gurney is gone."

I HAVE been told that the tragedy of Caleb's death has sunk deep into the consciousness of Middlchaven. It was a woman who wrote me of the change in the spirit of the town, and I am not certain of the clearness of her judgment. Single events, I am afraid, seldom alter deep-rooted conditions. I know nothing at first hand, for I have never gone back to Middlehaven since the day that Caleb was buried.

I GO A-BROADCASTING

BY ROLLIN LYNDE HARTT

IF you have ever wondered how people are coaxed into broadcasting, the answer is, They are not coaxed, they are shanghaied. Out of a clear sky—figuratively, as it comes by ordinary telephone—a voice bade me go and speak freely to half a continent and several isles beyond the sea. "Radio . . . WJZ . . . The famous Westinghouse plant at Newark, New Jersey. . . . Nine-thirty next Friday evening. . . . Broadcast your interview with Augustus Thomas for The Outlook."

Before I could so much as protest, "Oh, my dear Mr. Editor!" I heard my lips consent. The newness of the thing, the dazzling immensity, the bewilderment it brings—these are what take one clean off one's feet.

It is a mercy that I am a reporter. "Congratulations!" the reporter instinct said. "Now you are going to learn by personal experience how it feels to make the ether carry your voice to no one can compute how many listening ears. You never talked to more than three thousand people at once. You never wrote for more than two million. This broadcasting—are you not aware that a message from WJZ leaps the Canadian border in one direction, and is distinctly heard by Cubans and Porto Ricans in the other?"

Quite shameless in these confessions, I may add that I was also aware of my own elevation, and during a three days' interim I spread the news among my friends. Never do that; it invites warn-

ings. "Hope you'll pull through, old man; De Wolfe Hopper calls broadcasting the ordeal of a lifetime." "Write it. Remember what Christopher Morley says of broadcasting: 'To err used to be human; now it is international.'" "I'm told there's only one way to avoid perishing of stage-fright. Fix your mind on some radio enthusiast you know, and imagine that you are merely telephoning to him, privately, confidentially, in the usual style."

But meanwhile came glowing accounts of the joys that follow the ordeal. Long-lost relatives would rediscover me and write. Travelers I had met in Rio or Paris, ages ago, would seek me out again. In some remote farmhouse or mountain cabin, when my voice reverberated, a cry would go up: "Come! come quick! Guess who's talking on the radio!" and within a week or less a pencilled scrawl would warm the cockles of my heart.

I am not sure that all novices at broadcasting burst into song. Speaking for myself alone, I sang with great vivacity. It was partly to sustain my courage, partly to give vent to elation, and partly to groom my vocal powers for the maiden effort. Between these carolings I wrote. Not that I intended to read. Ah, no! Despite warnings, I planned to chatter offhand, now and then enlivening my discourse with a playful flight of fancy—"Peking! Oh, Peking! Won't you please get off the ether?" or, possibly, "Mars, dear, this is the earth;

how can I talk to these people when you keep cutting in?" And yet—better safe than sorry!

Again, I doubt if all novices at broadcasting have a distinct mental picture of the plant at Newark. In that picture two magnificent steel towers pierced the sky, with "WJZ" gayly pricked out in electric lights.

The fateful evening arrived. I ducked beneath the Hudson by tube and sped across the Jersey flats, secretly wondering all the way why my fellow-passengers took my presence so calmly. By what miracle of self-restraint did they overcome a burning impulse to nudge one another, furtively, and whisper, "Look! That's him?"

On reaching Newark and seeing no towers, I hailed a citizen, who, little guessing the pang he inflicted, directed me to a commonplace, old-fogy, orphan-asylum-like brick structure, dark all but the entrance and an office beside it. There a watchman ushered me into a peculiarly unromantic corridor suggestive of hand-trucks and porters in overalls—me—think of it! Then a door opened.

I wish I might say that it opened by enchantment, for such was the impression, and enchanting indeed was the interior it revealed—creamy walls hung with paintings; antique furniture admirably chosen; grand piano; Levantine rugs; mellow lights; flowers; altogether, an effect of supreme elegance, heightened by the graceful floatings to and fro

of charming apparitions in ballroom attire.

Toward the farther end of the room stood a rose-pink apparition reading aloud into a metal cylinder thrust out from the top of a tall metal upright. Several powerful reflectors, with lights ready to be turned on when wanted, were grouped about her. A photographer waited his cue, bulb in hand. So that is why apparitions wear ballroom attire while broadcasting. An album receives their photographs; opening it later, I found portraits of half the celebrities in North America.

I own up to a slight flutter on being so suddenly plunged into this *milieu* of ultra-elegance. But there was a stronger feeling—the desire to learn by observation the trick, if I may so call it, of broadcasting. To my surprise, it appeared that nothing could be easier. The apparition might have been addressing a mere class in domestic science, and her subject was—domestic science.

Well, why not? In the biographer's early days any picture that moved seemed wonderful—fire-engines running, trolley cars crossing a square, even a man eating. So with radio at present. Enthusiasts delight primarily in the thrill that comes of snatching from the sky any message whatsoever with an instrument they themselves have made, or they enjoy adding nightly to the list of stations they can "pick up;" only a few have grown critical.

During the apparition's performance the rest of us felt as vaudeville artists in the wings feel toward a vaudeville artist before the footlights. She was a rose-pink nuisance delaying our own onslaught on fame.

When at last she stopped reading, the piano struck up an interlude, lackeys moved the reflectors about at the photographer's command, a picture was taken, and then WJZ's official announcer proclaimed, "This being Literary Evening, Mr. Rollin Lynde Hartt, a contributor to The Outlook, will tell of his interview with Augustus Thomas."

All the decencies combined bid me pretend that my blood ran cold, or at least to declare that the condemned man went to the transmitter with a firm tread, but the truth is, I glowed and walked on air.

Confidently I began, "Hello! This is Hartt speaking. I just wanted to ask—"

As the manuscript opened with an interrogatory sentence, it afforded an easy transition if I chose to read instead of talking. Did I so choose? I did not. There was no choice whatever. In an instant half the spunk had gone out of me. In the next, half the other half went. I quailed, and thanked my lucky stars for that manuscript. It was not only because my fellow-broadcasters kept up a running fire of conversation, nor yet because there came no response whatever from America, Canada, Cuba, or Porto Rico—not a hand, not a laugh.

Bad enough, this; but what overwhelmed me with horror was the spectacle I clearly beheld. Night! Illimitable black mountains, alive with people! All hating me! From a sickening altitude I gazed down upon them. The very air breathed malice and unutterable scorn. Forty years this lasted.

Looking back over that period of my life, I am at a loss to understand how I endured it. Despised, alone, and an outcast, I read grimly on to the bitter end, but there were no playful interruptions from Peking, no opportunities to rebuke the planet Mars. When I had finished, I dragged myself home, a misery of aching disgust.

I have since faced the instigator of this revolting drama—my editor and still my friend, my friend and still my editor. But where are the rewards of so much woe? Have long-lost relatives come swarming? Have old cronies turned up? Am I buried in letters that warm the cockles of my heart or showered with adulation by a grateful half-continent and isles beyond the sea? Weeks have passed. The total result is—nothing! Nothing at all! Less!

Anybody wishing to borrow large supplies of humility will know where to come. I am a blighted and a ruined man, consoled by only one thought: That transmitter—was it working?

Moral: When invited to broadcast, do not hesitate; take deadly aim, and fire!

"BOY"—THE CALL OF THE EAST¹

BY ELEONORE VON ELTZ

"**B**OY! Bring me a whisky 'n' soda!"

"That's the Call of the East for you." So says the newly arrived American in China or the Philippines as he lounges back in his pin-pin chair and privately pats himself on the back (the only form of exercise indulged in until one is acclimated) for having put the thing so neatly.

But a brief sojourn in the Orient convinces him that this Occidentally obsolete phrase is not, after all, the key to the situation. He has overstated the matter. Boiled down to a monosyllable, the call of the East is "Boy!"—just "Boy!" What follows is immaterial.

Occasionally the cry is emphasized by a smart clapping of the hands, but this is superfluous, and in the case of one over-Americanized Filipino was keenly resented. When the head of the family first indulged in this indoor sport, Naba Potenciana respectfully but pointedly faced a bell before her—a bell of the

tinny, ten-cent store variety. It brought her to her senses with a jolt, and she hastily returned to the unadorned use of the magic word—that tiny syllable which, whatever the tone or accent, is the force that makes the wheels go round, from the harbor of Manila to the portals of Peking.

The sunburnt Britisher, wearily washing down a sandwich at the cricket club, drawls languidly, "Boy, pahss the mahstuid!" (not an Eastern dish—merely the British rendering of the relish that goes with cold ham). As his exhausted accents meet the ear, one can picture him a few minutes earlier out on the cricket ground: "Boy, fetch the bally ball!"

The American Army officer *en route* to drill his company raps out briskly, "Boy! Gimme that Sam Browne, kwai-kwai!" (Chinese for "Make it snappy!") Later, at the close of an arduous day in the field, he may be found in an attitude of pained reproach due to the discovery that his wrist-watch has run down. And now the plaintive cry is, "Boy, didn't I tell you wind watch every day? One day, two day, *ting puhao* (very no good). *Must* wind every day."

The doughboy, merely to put the raw

recruit in his place, will probably drop into the vernacular: "Hey! Shohyaa! Jobee!" (Hey! Boy! Rickshaw!) Taking his pick of the dozen which rush to his command, this young lord of creation in khaki lolls back at ease, manifestly the monarch of all he surveys. Suddenly he spies a buddy, likewise lolling and bound for the same goal. Does he alight to run an honest race on his own "pins," as he would term them? Not at all—let Boy do it!

The only exertion he permits himself at this point is to lean forward, the light of conquest in his eye as he growls, "Boy! Kwai-kwai!" Boy, ever faithful, senses the situation instantly and the race is on, both coolies flinging taunts at each other, and, although they may be panting their poor lungs out, apparently enjoying the fracas as much as the two soldiers. Arrived at the barracks, the winner—and perhaps the loser too—will probably pay his Boy three times over—assuming, of course, that these events occur within three days after pay day.

And now we come to the American Army wife and the meaning to her of this call of the East. She and her husband are but recently arrived in Tien-

¹The United States, along with other foreign powers, maintains troops in China under the terms of the Boxer Protocol of 1901. Specifically, our troops are there to reinforce the Legation Guard (U. S. Marines) at Peking and to keep the railway open from Peking to the sea—²Tientsin. The 15th U. S. Infantry is the regiment which has represented this country in Tientsin since 1912.

tsin to take their place in the 15th Infantry. They go to a hotel so that she may get her bearings before attempting to settle their new home. Within twenty-four hours she is discovered by another Army wife—an old-timer (meaning that she has been in China any part of two years). The following conversation, or rather monologue, ensues:

"Why, my dear! What are you doing in this hotel? You must have been here two days! Why don't you move into quarters? Have you a boy? No? Well, I'll see that you get one, and he'll move you right out of this expensive place and have you settled in your own home in a week's time. Trouble? Nonsense! I'll just speak to my Number One Boy."

Morning brings a tall Chinaman clad in a long coat of rich, dark silk and a small round cap. Confronted with this garb and a countenance of calm benignity—not to mention dignity—the Army wife finds herself wondering if she is receiving a call from the Bishop or some other dignitary of the Chinese Church. But no—her illusions are dispelled by the smiling statement that Number One Boy of American Major send him see Missy. What Missy like?

She outlines her requirements, which seem so modest to the Bishop that he respectfully informs her that plenty officers have four-piece boy—three house boy and one-piece boy for rickshaw. But this Missy, being fresh from a Mexican border camp where she has frequently scoured her own frying-pans in the desert sands, feels that an establishment of four is an embarrassment of riches and holds out firmly for only two-piece boy.

Wong graciously humors the Foreign Missy of the Strange Ideas, serene in his private conviction that before many moons he will have his full quota of underlings with which to run the house "ploppa fashion, all same other officers' family." He takes unto himself, therefore, the combined offices of Number One Boy and cook, with the assurance that on the morrow he can catchee Number Two Boy.

His monthly stipend is fixed at twenty Mexican dollars (\$10 U. S. currency), the Army wife having received advance coaching from the old-timer anent this matter of the laborer being worthy of his hire. Theoretically, \$5 Mex is for Number Two Boy, but it is better not to inquire too closely into its final disposition. This does not mean that the Bishop is dishonest—perish the thought! Missy has paid for the services of two boys and will receive these services. What is it to her if Boy Number Two works for no other compensation than his bed, "chow," and the sense of virtue and well-being said to emanate from honest toil? The apprenticeship system is a ruling principle in China, and he is borne up through its duration by the knowledge that his day as Number One is sure to come.

Missy is roused from her musings by a series of bows and smiles from the

WONG—NO. 1 BOY AND COOK, WITH U SAN AND U RUN, WHO REPRESENT ONLY ONE-SEVENTH OF THE FAMILY WONG SUPPORTS ON HIS MEAGER WAGES

Boy—her Boy now—who, with the destiny of her ménage resting lightly on his shoulders, is off in quest of kitchen utensils.

To make a long story short, all happens as predicted. The next day she is moved into quarters, the Boy himself transferring those articles he deems too fragile for conveyance in Army wagons. That night she dines in her own home, and within the week there are guests around her festive board.

In the days that follow she forgets that back in her home town there is a servant problem. She finds that this

Boy, whose name is on every tongue—uttered all too often in sharp, discourteous tones—is a being who is always polite, never cross, never tired, never demands an evening out. He oils the wheels of the domestic machinery so expertly that menus are planned and executed, marketing accomplished far more economically than she could do it, Number Two Boys fired as well as hired, and the family shoes shined, with scarcely a thought on the part of Missy. Practically the only time she gives to housekeeping cares is a quarter-hour each week for checking over the books in which Wong accounts for every copper spent (for your Chinaman is quick to learn writing and figuring in English and requires no school other than a brief term of service in a British or American family).

Missy begins to wonder if this state of bliss can long endure. And with this doubt the storm clouds gather. Number Two Boy's acquired air of polite reserve is cracking under the strain. He is developing a "satiableness" akin to that of the Elephant's Child in Mr. Kipling's story. Missy does not mind a friendly interest in the family affairs, but there are limits to sociability even in China. While setting the table he suddenly drops the silver with a crash and runs to examine with the children the workings of some new toy. He takes to peering over her shoulder when she sits down to write. She decides that "the time has come," and braces herself for the ordeal.

But by now she herself has attained to a degree of Oriental poise which permits her to broach the subject with seeming serenity. Along with the announcement that there will be four dinner guests that night, she issues her ultimatum:

"Wong, Missy thinks more better we have new Number Two Boy. Lee do many things we do not like. Can catch other boy?"

"Yes, Missy. Can do." And this without a trace of resentment, though the object of criticism happens to be his brother. The nuisance disappears that afternoon, and Wong engineers the dinner-party in his usual adequate style, with the aid of a borrowed Boy—his "flend."

Next morning, enter Wong to announce triumphantly that brother has been replaced by "new Boy name" Mah, who have very good face." Mah is brought in for inspection. Missy agrees with Wong as to his physiognomy, and the household wheels roll on without a jar.

The American Army wife has learned the call of the East, and knows now that while she bides "somewhere east of Suez" she will never call in vain.

What wonder, though, that she and her husband and a regiment of Uncle Sam's soldiers view with dismay the current press reports that all American troops may shortly be withdrawn from China.

YOU won't find poems used as "fillers" in The Outlook.

You will find poems which appeal to the editors of The Outlook as representative of the best of contemporary verse.

Some of the writers whose poetry awaits publication in these pages are:

DuBOSE HEYWARD
LESLIE NELSON JENNINGS
BERNICE LESBIA KENYON
DAVID MORTON
HAROLD VINALL

THE BOOK TABLE

OCTOBER FICTION

THE old writers of ballads and tales, if I remember rightly, used to speak with peculiar unction of October's brew of ale. It is usually true that the fiction brew of October is also vigorous and enjoyable, but this year, so far as novels of the first importance are concerned, October hardly equals its traditional fame. I have not as yet had the pleasure of reading Mr. Hugh Walpole's "The Cathedral," but even the fact that it deals with Job in modern times and in an archdeacon's costume, even as Mr. Wells once dealt with a Job of our own day, does not deter one from believing that "The Cathedral" must from its authorship be out of the ordinary and in the class of quality fiction, if I may use that phrase, rather than among the novels of mere excitement and amusement.

Although the majority of the stories of the month hardly belong in the first class, there are some so good that one is inclined to except this general assertion. Such a book undoubtedly is Miss Alice Brown's "Old Crow."¹ Miss Brown's short stories were remarkable in their living pictures of New England character and life. Her novels have gone deeper, although they are not always as closely knit or as single in presentation of the main theme as one would like. As a study of New England traits and ways "Old Crow" goes beneath dialect and into the fiber of character. It is profound and intense in its presentment of the clash between what is spiritual and what is base in life, and of native purity faced with hostile heredity and environment. It has emotion but not emotionalism. It is

¹ Old Crow. By Alice Brown. The Macmillan Company, New York. \$2.

(C) Bachrach
ALICE BROWN

human tragedy flecked with the rays of cheerfulness, sympathy, and devotion.

Another story which for quite different reasons distinctly rises above the average of the month is Mr. Christopher Morley's delightful volume called "Where the Blue Begins."² It is easier to read this than to describe it. We are pleasantly introduced into a dog world, where the dog people live and talk and act very much like human beings, so much so, indeed, that an intention of gentle and humorous satire runs through the whole. One hates to use the word whimsical in speaking of Mr. Morley's work, for he must be heartily tired of seeing it. It is his own fault, however, for no word begins to describe his peculiar appeal as that does.

Readers of New York newspaper "colymys" will certainly take a special pleasure in comparing Mr. Morley's new book with that of Mr. Heywood Broun. "The Boy Grew Older"³ is cleverly written. It has considerable realism in its reproduction of newspaper men's talk, but joined with a spirit of human kindness and friendly feeling that saves the talk from the kind of realism that makes "Babbitt" in its essence pessimistic. Certainly there is much enjoyment to be got from Mr. Broun's picture of the young sports editor, who marries in such haste that one at first dubs him an ignorant fool, but later finds that in his inexpressive way he is really the victim of a deep-lying passion. When his wife skips away from him to gain fame as a singer and dancer, the poor sports editor stolidly but bravely undertakes the task of bringing up his baby boy. He makes queer work of it, but again as the reader goes on he is impressed with an undercurrent of feeling and steady purpose that balances the apparent restlessness and recklessness of the young father. That the book is humorous is a matter of course. It is also odd, and its oddity holds the attention closely.

Mr. Marshall's "Pippin"⁴ is quite different from his previous stories. Years ago he made a most agreeable impression with his novels of English country life. They were always compared with Trollope's novels solely because both "featured" the parson, the squire, and the gentry generally, with villagers and farmers respectfully in the background. Mr. Marshall did this sort of thing capably, and thereby gave gentle and humorous enjoyment to tens of thousands. Then came the war; the old order of things had a severe jolt; perhaps it was for this reason that the author abandoned his former field;

² Where the Blue Begins. By Christopher Morley. Doubleday, Page & Co., Garden City. \$1.50.

³ The Boy Grew Older. By Heywood Broun. G. P. Putnam's Sons, New York. \$1.75.

⁴ Pippin. By Archibald Marshall. Dodd, Mead & Co., New York. \$2.

but for a time he seemed to stray rather listlessly in unfamiliar fields, and his more recent books have not satisfied. But in "Pippin" he strikes an entirely new vein; and a delightful one it is for those who care for delicacy of writing and the quiet depiction of human nature. Pippin, a little restless in his too comfortable home life, obtains his parents' consent for a wander-year in which he shall see the world. Mainly he rambles on foot through the English countryside, talks and works with a "gentleman tramp" who also is a selfish rogue, with a wise peddler who loves children, with people simple, amusing, or singular. His longest stay is with a circus troupe. Finally he comes home, contented, and meets at his approach the girl who had been the last to say good-by. All this would be nothing if it were not for the really exquisite way in which it is written. In its own genre "Pippin" is a little masterpiece.

Those who wait impatiently for each new Joseph Lincoln book to come out will not be disappointed in "Fair Harbor."⁵ It has one of the fine old captains that the author loves to draw—shrewd, clever, humorous in the Cape Cod manner; and the curious situation in which the captain finds himself as skipper of a women's home gives ample chance for incident and fun.

The "Three Fires,"⁶ by Amelia J. Burr, is a thrilling and stirring romance of Ceylon. It is founded, so far as atmosphere and racial depiction go, on the author's own study and observation. The "three fires" are avarice, ambition, and love. How these affect the life of a sweet-natured and devoted young Hindu girl

HARVEY O'HIGGINS

and bring upon herself and her Moslem husband plotting and crime is a theme treated with passionate energy and with consistence as to the local color and personal temperament.

Mr. O'Higgins gives us in an oddly named volume' fictitious biographies that are not pictures of individual Americans but are what might be called fictitious composite types. Yet each person depicted has the same individuality that a well-presented character in fiction possesses. Perhaps the sketch that

¹ Some Distinguished Americans. By Harvey O'Higgins. Harper & Brothers, New York. \$2.

comes closest to a common type is that of the Tammany boss; others vary so far from the type idea that they are practically short stories. A curious use is made in some of these sketches of one of the fundamental ideas of psychoanalysis, that of early continued repression followed by strange reaction in mentality or character in later years.

The author of "Richard"² has never quite repeated the success of her first story, "Christopher Hibbault." The present novel is excellently written and

² Richard. By Marguerite Bryant. Duffield & Co., New York. \$2.

holds the interest perfectly. But the reader cannot quite accept some incidents and situations; and, what is worse, the lovable character of the young criminal is radically inconsistent with his acts and his companionship with low criminals. The situation is extremely tense, for the convict lad escapes from prison only to come under the eyes of his father, a British judge. The father compromises with his conscience by concealing his knowledge while insisting that the son live practically as a prisoner in seclusion and under rigid superintendence.

R. D. TOWNSEND.

THE NEW BOOKS

MUSIC, PAINTINGS, AND OTHER ARTS HERALDRY AND FLORAL FORMS AS USED IN DECORATION. By Herbert Cole. Illustrated. E. P. Dutton & Co., New York. \$4.

A rich storehouse of illustration, with intelligent interpretative comment, on heraldry. The subject at first seems of greater interest to the English than to the American reader, but one soon perceives that the artist and decorator of whatever nationality may find abundant suggestion and entertainment in the book.

BIOGRAPHY

STEEL. By Charles Rumford Walker. The Atlantic Monthly Press, Boston. \$1.75.

A crisp, well-written account of the experience of a young man, a college graduate and an ex-army officer, who went into the steel mills as a laborer. The hardships, the long hours, the drain on man-power involved in the present methods of production in what may be regarded as America's basic industry are presented in realistic style. The book is an exceedingly good example of a class that has become somewhat familiar.

REAL TSARITSA (THE). By Lili Dehn. Little, Brown & Co., Boston. \$3.50.

The poor, dead Tsaritsa cannot defend herself from the flood of narratives

about her life and conduct. Whether any particular one of these is accurate in its facts and analysis of the personality of the Empress is difficult to judge, but certainly all cannot be true, for they are inconsistent. Madame Dehn, we are told, was a member of the Russian Court, a personal friend of the Empress; her book purports to throw light on the inner history of the royal circle and the life of the Czar and his family after the Revolution broke out.

HISTORY AND POLITICAL ECONOMY BOZEMAN TRAIL (THE). By Grace Raymond Hebard and E. A. Brininstool. 2 vols. Illustrated. The Arthur H. Clark Company, Cleveland.

The Bozeman Trail, from Fort Kearney, Nebraska, to Virginia City, Montana, a distance of nearly a thousand miles, led through hostile Indian country, and was in the sixties and seventies of the last century the scene of many battles between whites and Indians. This work is really a history of those encounters and of the opening of the overland routes to the Northwest, and the story is presented with elaborate detail and with a comprehensiveness that is probably without parallel. The work will be of absorbing interest to any one

whose memory goes back to pioneer days.

SECOND EMPIRE (THE). By Philip Guedalla. Illustrated. G. P. Putnam's Sons, New York. \$5.

What so jejune as the story of Napoleon III and his reign? The reader familiar with it in all its details might think so; but it is more than probable that every such reader who takes up this book will lay it down only when the last page is finished. The author is a stylist as well as a historian, and his pages scintillate with striking but unforced phrases that make his subject glow with interest. His knowledge is exhaustive but is not obtruded; his narrative flows easily along and yet is restrained within reasonable limits; and his judgments are often novel but always worth pondering. This is an exceptional book and it will give a host of readers a new interest in history.

ESSAYS AND CRITICISM

HOMESTEADER'S PORTFOLIO (A). By Alice Day Pratt. Illustrated. The Macmillan Company, New York. \$2.

Interesting sketches of the author's life in the Northwest on her own homestead. The ups and downs of the woman homesteader are described with humor.

The Lucky 13 Christmas Gift—all for \$5

12 Monthly Issues of ST NICHOLAS and One Book of Your Own Choice

SEARCH no more for that gift for your boy or girl. Here it is! Lovable St. Nicholas—the magazine of pleasure, instruction and guidance in things that are good and permanently helpful. For fifty years, it has been youthful America's favorite magazine. It will be better than ever in 1923. Splendid new serials and short stories by leading authors, inspiring articles; digests of the latest in news and science—these will fill St. Nicholas twelve times a year.

As a **SPECIAL CHRISTMAS OFFER** we will send St. Nicholas for one year and any one of the books listed below; also a beautiful Christmas Gift Card.

KIM—By Rudyard Kipling

A book every boy should read, and will re-read. Tells of India, the land of tigers, intrigue and mystic lore—and how the son of an Irish soldier grew up in the native secret service, and foiled well-laid plans of the foreign enemy.

St. Nicholas Christmas Book

A careful selection of the most striking Christmas stories and poems that have appeared in St. Nicholas Magazine. The kind that even the "grown-ups" like to read on Christmas Day. Intensely interesting.

—or any one of these fine books

Driftwood; a Story of the Mississippi
Stories of Useful Inventions
The Complete Radio Book
Pretty Polly Perkins

Many of America's most prominent men give thanks to St. Nicholas for its wonderful guidance in their youth. Even for boys and girls who do not ordinarily like to read, St. Nicholas appeals irresistibly with articles on sports, games, nature studies, and with prizes for writings, photographs, drawings, etc.

FILL OUT THE COUPON and make that boy or girl happy with a copy of St. Nicholas in the Christmas stocking.

COUPON

and philosophy, and the book is worth reading, especially by Easterners who long for the open range and a new start in the West.

SKYLINE CAMPS. By Walter Prichard East. Illustrated. W. A. Wilde Company, Boston. \$2.50.

Many agreeable sketches of travel that will be interesting especially to mountain-lovers are found within the cover of this book. The "camps" are mainly in the Northwest, and numerous photographs accompany the descriptions.

TRAVEL AND DESCRIPTION

FROM ADAM'S PEAK TO ELEPHANTA. By Edward Carpenter. E. P. Dutton & Co., New York. \$3.50.

A new edition of one of the very best books of travel, observation, and study of racial aspirations and characteristics in Ceylon and India.

SIX YEARS IN BOLIVIA. By A. V. L. Gish. E. P. Dutton & Co., New York. \$1.

A well-written book of adventure in Bolivia by a mining engineer. The author has a keen eye for the picturesque and a clever knack of describing it. An abundance of personal incident makes the book exciting reading.

MISCELLANEOUS

REIGN OF RUBBER (THE). By William C. Geer. The Century Company, New York. \$1.

The reticence of large manufacturers about their labors has resolved itself into a new sense of partnership with the public. The processes of great factories are no longer things of secrecy and mystery. There is a terse, authoritative eloquence about some of the newer type of industrial generals when they make speeches or write books. "The Reign of Rubber," by Dr. William C. Geer, Vice-President of the B. F. Goodrich Company, of Akron, Ohio, exemplifies just this trait. It is an excellent record of the epic of rubber. It tells all about its sources, growth, manufacture, and uses. A final chapter deals arrestingly with the future of rubber.

BY THE WAY

A FRIEND "caps" our item about Pen Mar, Calxico, Mexicali, etc., with this: "I can 'go you one better'—a town named for three States. Where Kentucky, Ohio, and West Virginia come together, there is (in West Virginia) a village named Kenova."

Texarkana is the name of a town on the borders of Texas and Arkansas, and it has the unique distinction, so it is said, of postmarking its letters with the names of two States—TEX-ARK.

Sir Philip Gibbs tells in "Harper's Magazine" about being introduced to an audience by a man who had forgotten the lecturer's name. "We have on our platform to-night a man," the chairman began, 'whom it is unnecessary to introduce, whose name—er—whose name—er' . . . here he cast a beseeching glance at me, and I murmured 'Philip Gibbs' as he bent slightly down over the speaker's desk. He rose triumphantly and introduced me, with a sweeping gesture and a bow, as 'Sir Frederick Boggs.'"

A well-known physician who once saw the skeleton of the "Irish Giant" in London writes to us, apropos of a paragraph in this column, as follows: "The cause of his gigantism is disclosed at the floor of the skull. This shows that the 'pituitary body' was greatly enlarged. This curious body or gland, normally weighing only 5 to 10 grains and only about the size of the tip of the little finger, is essential to life. It governs the development of the body. In O'Brien's case the cavity or cup in the bone for this gland is very large. Evidently the overgrowth of the gland produced the overgrowth of the whole skeleton."

A feature in the "Armistice Day Program" issued by the Bureau of Lectures of the New York City Board of Education for the public schools consists of songs, addresses, and poetical selections. Among the last is one called "Who Won the War?" The peculiar personal allusions call for a wider publicity even if the "poetry" does not. Here are two stanzas:

Who won the great war,
Who chased the foe?
"I," said the Italian,
Sitting on his
Blooded stallion;
"I brought him low
With my bald d'Annunzio;
I won the war."

Who won the great war,
Who stopped the foe?
"I," said Great Britain,
At her teacups
Calmly sittin';
"I held him low
With Lloyd George and Jellicoe;
I won the war."

From the "Journal" of the American Medical Association:

"Don't buy thermometers in the summer; they are lower in winter."

"THAT OLD SWEETHEART OF MINE"

*"I can see the pink sunbonnet and the little checkered dress
She wore when I first kissed her and she answered the caress
With the written declaration that, 'as surely as the vine
Grew round the stump,' she loved me—that old sweetheart of mine."*

IT'S James Whitcomb Riley, of course. No other American poet ever touched simple human experience with the same wonderful sympathy and charm. He wrote a verse for every mood; he stirs every kindly emotion with his deeply sincere humor and pathos.

A little book containing five of Riley's most popular poems, one of his best humorous stories, and a brief sketch of his life and works has been published. It is offered without obligation to adult lovers of good literature to promote a wider knowledge of the

Memorial Edition of

James Whitcomb Riley

More than 1,000 masterpieces at a few cents each

For years there has been an insistent demand for *all* of Riley in one fine, popular priced set. That demand can now be satisfied.

All his poems, all his short stories—the masterpieces that have caused the schools of his native state to have a Riley Day once a year—these are in these ten beautifully bound and illustrated volumes.

Every cultured home should at least know something about Riley and his work. Without obligating yourself, send for

"Poems and Stories Every Home Should Know"

Five Riley poems that will live forever; poems and stories that every American should know are printed in this little book; with beautiful illustrations by Howard Chandler Christy; an appreciation of Riley's humor by Mark Twain; and the high lights of Riley's life.

No obligation, but you must act now—to-day. Fill in the coupon; the book will come to you at once by mail.

FINANCIAL DEPARTMENT

The Financial Department is prepared to furnish information regarding standard investment securities, but cannot undertake to *advise* the purchase of any specific security. It will give to inquirers facts of record or information resulting from expert investigation, and a nominal charge of one dollar per inquiry will be made for this special service. All letters of inquiry should be addressed to THE OUTLOOK FINANCIAL DEPARTMENT, 381 Fourth Avenue, New York.

FINANCIAL INQUIRIES

A MAN wrote us not long ago, stating that he owned a certain $5\frac{1}{2}$ per cent bond which he had purchased at 96. "Since that time," he wrote, "the price has advanced to 104 $\frac{1}{2}$, and the yield is therefore so low that I should like to sell and invest in something giving me a higher return." It seems almost inconceivable that a man should fail to realize that it is the purchase price which determines the yield of an investment. Certainly if a person buys a 5 per cent bond at par it is easy to see that the yield is exactly 5 per cent. If later the bond advances in price to 110, the yield is still 5 per

cent so far as he is concerned, and in addition he has a ten-point profit; for the man who bought at 110 the yield is about $4\frac{1}{2}$ per cent.

A letter from a woman just three days ago asked our opinion of the stock of a small concern in the Middle West. She said she had a large percentage of her savings invested in this stock, and wanted us to write her at our earliest opportunity whether we considered it a safe investment or not. Now there are thousands and thousands of small corporations scattered throughout the country; obviously it is impossible to be familiar with them

STRAUS BUILDING - CHICAGO

STRAUS BUILDING - NEW YORK

'What "40 Years Without Loss" Means to Any Investor

THE record of an investment House may be judged by the safety of its offerings, the volume of its business, and the length of time it has marketed securities.

A small business for a long period of years—a large business for a short time—neither may mean a real test of the safety of the securities offered.

The best test is: Has the House in question done a large enough business, over a long enough time, without loss to any investor, to make its record really significant?

Apply this test to S. W. Straus & Co. The House, a nation-wide Institution, has been in business forty years, selling hundreds of millions of dollars of safe securities to investors without a single loss. Surely this record is a significant one.

The reasons for this record are fully set forth in our booklet, "40 Years Without Loss to Any Investor." Write for it today. Ask for

FORTY YEARS WITHOUT LOSS TO ANY INVESTOR

© 1922—S. W. S. & Co.

1, and in many cases when their securities are not listed on any exchange—traded in with some degree of activity it is a long and well-nigh impossible task to find out about them. We did know in this particular case, however, that the stock was highly speculative. We wrote the lady that if she were not in a position to assume the risks involved our suggestion was that she consider selling and reinvesting the proceeds in something safer. If we had wished to run the risk of being considered impolite, we might have added rather bluntly that it is an indication of intelligence to investigate the safety of an investment before buying, not after.

From a minister there came a curious letter the other day. He had fifteen shares of a stock he had bought at about 5. His broker had advised him to sell when the price reached 103 and with the proceeds buy a stock selling at 55. Of his latter stock our correspondent already owned some shares purchased around 90; by buying more at 55 he figured to bring the average cost per share down to about 72. He wanted to know what we thought of the scheme and what our opinion was as to the future course of the two stocks in question. Well, in the first place, the two stocks he mentioned we regard as speculative, and any intricate scheme depending for its success on speculative stocks doing certain things we regard as foolhardy and nothing more. Further, it is impossible for us or any one else to indulge in anything more than a guess as to what stock prices are going to do. Predictions are frequently interesting, and sometimes they are correct, but in this complicated world there are so many things which can happen that a man must be of an extremely trusting nature to invest his hard-earned money in prophecies. Presumably our correspondent does not play cards for money or roll dice, but if ever a man was gambling he was. Here, again, we might have run the risk of being rude and telling him so in so many words.

It is interesting to observe how slow many people are to recognize that changes have taken place. We all know that a few short years ago high-grade bonds could be had to yield 7 per cent, and in some cases more. Since that time bonds have advanced in price and yields declined in proportion. Yields on high-grade issues are one to two per cent lower than they were. Many people refuse to acknowledge this changed condition and still seem to think they can invest their money in safe bonds returning from 7 to 8 per cent. They scan the market quotations, select 7½ and 8 per cent bonds selling at par or thereabouts, and write to ask if they are considered good investments. The answer is, that if they were they would not be selling at par or thereabouts. It does happen sometimes, perhaps, that a bargain may be picked up, but it does not happen frequently, and it is well to view with suspicion any security selling out of line with the prevailing market.

A man wrote us recently about an in-

“We enclose our check on The Equitable in Paris”

AMERICAN FIRMS engaged in foreign business are finding many advantages in carrying interest-bearing accounts with The Equitable's offices in London and Paris. Among the advantages are:

Payment of foreign bills by check—saving of a considerable sum yearly in interest—elimination of speculation involved in meeting obligations at future dates—replenishment of balances when exchange rates appear most favorable—establishment of a valuable local reference overseas—first-hand trade and credit information.

The Paris office, moreover, maintains a Foreign Travel Service Bureau which aims to save our clients' buyers or salesmen time and trouble. The bureau, which is in charge of an experienced travel man, arranges itineraries, buys railroad and steamship tickets, assists in obtaining passport visés, reserves hotel accommodations, etc.

The London and Paris offices are complete banking units, from which radiates a world-wide system of correspondents. The officers of our Foreign Department will welcome an opportunity to explain our service in relation to your specific needs.

FINANCIAL DEPARTMENT (Continued)

vestment of his mother's. We investigated the security in question—a preferred stock—and wrote him that if his mother could not afford to run risks, as he said, we should suggest her selling, for the stock was rated highly speculative. He had written that the last thing she was in a position to do was to speculate. Upon receipt of our letter he wrote us again, thanking us, but saying that a friend had advised his mother to hold the stock for a year longer and then sell, because it would very probably advance twenty points or more in that time; he wanted to know if, under the circumstances, we didn't think it might be wise to wait. In his first letter he had stated that he didn't want his mother to speculate; his second letter, in effect, asked our approval of a speculation. In other words, in the interval he had joined the army of optimists who find it so difficult to realize that in speculation the chance of loss is greater than the probability of gain.

A reader in Canada wrote in to say that on an investment of \$500 he had made a profit of \$1,000 in the past six months. He had bought some mining stocks on margin, "and," he wrote, "if I, who know nothing about investments, can do so well, I figure that you who are in a position to know can give me advice which will make a lot more money for me." We remember seeing a cartoon some years ago of a crowd of men in a café, all well dressed and prosperous looking except one shabby individual who was reading the stock ticker over in one corner. The caption was, "Find the man who made a lot of money on his first stock speculation."

Occasionally people ask us how they can sell some building lots which they own in some out-of-the-way part of the country. We are sorry, but we do not know. Real estate is a local proposition, anyway, and, besides, it is outside the province of a financial department. We might, however, risk the following suggestion to people who are thinking of buying real estate: "Never buy land without seeing it first."

To people who write inquiring how to raise capital to promote inventions, oil companies, new manufacturing concerns, and all kinds of new enterprises we are obliged to say we can offer no advice. Our function is to do all we can to help our readers with their investment problems; we can offer no advice in regard to speculation—except leave it alone—and we cannot find lucrative jobs in the banking world for young men who desire to get their hands on the country's purse-strings. For instance, a woman wrote us from the Southwest the other day that, as the representative of a certain concern, she was making on an average \$500 a month. She wanted to become a bond saleswoman and deal, as she expressed it, "not in hundreds of dollars, but in thousands." A laudable ambition, perhaps, but we cannot tell her how to sell bonds successfully, and the fact that she is a success in her pres-

ent position is no guaranty of success at selling bonds. It is a wise man who knows his limitations and does not overreach himself. This applies forcibly to investing, which is a business in itself, and should not be attempted by the inexperienced without the help of some one in a position to give them some protection against a false step. Speculation is an even more complicated business than straight investing; at best one needs good luck to be successful at it, and luck is never consistently good. The inexperienced speculator, or the man who speculates at long range, might better give his money to some deserving charity.

We are impressed by the large number of inquiries that come in regarding the value of securities after the investment has been made. This is frequently a case of locking the stable door after the horse has been stolen. It often happens that after an investor has made the purchase he begins to worry about the ultimate value of his securities.

There is seldom any necessity for haste in investing money. It is much better to investigate first than to be sorry afterwards. There are always plenty of attractive securities available, and the investor should beware of the salesman who tries to hurry him into buying a security by stating that the price will soon go up. This "hurry-up" method is a favorite one with venders of doubtful securities.

In general, we think it advisable to purchase only securities which are listed on one of the principal exchanges. There is a distinct advantage in being able to secure a daily quotation on a bond or stock. The investor is thus always able to keep track of the current worth of his holdings, and he has always a market available in case he finds it necessary to sell. This, however, does not apply to real estate mortgages, which should be regarded as a permanent form of investment to be held until maturity date.

We have frequently repeated the warning against endeavoring to secure too high a rate of return. We think it is a safe rule not to endeavor to secure a higher yield than the average current rates of money. Every prospective investor can easily ascertain current money rates from the reports of the daily papers. Where the current rate is ranging from $4\frac{1}{2}$ per cent to 5 per cent it is dangerous to endeavor to secure a yield of 7 per cent, as the high yield in itself indicates some doubt as to the status of the security. This of course is a general rule which has many exceptions, but it is a safe one to stick to for the average small investor.

We often receive letters from persons who are worried because their bonds have declined a few points in the current quotations. If proper care has been made in the selection of the security to start with, there is no need to worry about daily fluctuations in the market price in the case of gilt-edge bonds. These fluctuations are entirely due to the changing current rates for money.

GROWTH

There's a vast difference between the orderly growth of a cultivated field and the choking advance of the jungle. One enriches while the other destroys. The same holds true of unrestrained business expansion as opposed to carefully directed growth.

The Continental and Commercial Banks are interested in the orderly growth of business through sound financing. To individuals and organizations similarly interested, our resources, facilities, and close co-operation are cordially extended.

The CONTINENTAL and COMMERCIAL BANKS

money for commercial purposes, interest rates will rise and the current market price for bonds will fall. But the person who is holding for an investment need pay no attention to these fluctuations. They have no bearing on the intrinsic value of his security.

Let us again emphasize the rule of not being in a hurry to make an investment, but of securing, if possible, definite information regarding a security from some one who has proper financial knowledge before the investment is made. Beware of making an investment upon the advice of a friend. Our mail

indicates that this is a very prolific source of loss. The friend may have the best intentions in the world, but it is amazing how often ignorant advice is given under the guise of friendship. It is far better to secure the advice of your local banker, of a first-class bond house, or of the financial department of one of the leading magazines before making a commitment. Again let us repeat, "It is better to be safe than sorry."

Perhaps we have overstressed the seamy side of the financial department, but experience has taught us that certain elementary facts cannot be emphasized too strongly. We are happy to say, however, that the vast majority of the inquiries we receive are of such a char-

acter as to make us pardonably proud of the good sense possessed by Outlook readers.

QUESTIONS AND ANSWERS

Q. I have \$3,500 worth of registered 3 per cent United States Liberty Bonds. The tax-exempt feature of these bonds possesses no advantage in my case, and I feel that my bonds should command a higher rate than 3½ per cent. Would you advise changing these bonds to United States 4½ per cent Liberties?

A. The only advantage in holding the 3½ per cent bonds is the tax-exempt feature. These are therefore held chiefly by people of large income. Where this feature is not of importance we believe that these bonds should be exchanged for the 4½ per cent Liberties.

Banking Credit and Service

THE MODERN, fully-equipped bank supplies to the business community both credit and service.

When you have both available, commensurate with your needs within one institution, you have a *complete* banking connection.

This Company is in a position to meet the needs of a business for credit accommodation, in harmony with sound banking practise, whether the requirements be extensive or moderate.

In addition to placing adequate credit facilities at the disposal of its customers, this Company has the organization and equipment which enable it to render *every* service in domestic banking, foreign banking, and in all trust relationships.

We shall be pleased to discuss in detail with you the exceptionally broad facilities which an account with us places at your command.

so as to take advantage of the higher rate of interest. The security is the same in each case. The $4\frac{1}{4}$ per cent bonds are now selling about one point lower than the $3\frac{1}{2}$ s. In making the exchange you would also, therefore, secure about one point profit.

We also suggest that you consider the new Government long-time $4\frac{1}{4}$ per cent bonds which have just been issued. These are also selling a trifle below the $3\frac{1}{2}$ per cent bonds and are of equal security. In your case, it would seem that you are sacrificing interest by holding the $3\frac{1}{2}$ s for the sake of the tax-exempt feature, which you state you do not need.

Q. Will you kindly give me a report on the present standing of the American Telephone and Telegraph stock?

A. American Telephone and Telegraph stock is considered as an especially good investment stock because of the nature of the business and the great stability of the company's earnings. The report for the first six months of 1922 shows net earnings of \$32,364,133, an equivalent of \$5.75 a share earned on the amount of capital stock outstanding during the first six months period. This is at the rate of \$11.50 a year per share. This company recently offered its stockholders the right to subscribe to \$150,000,000 of new stock at par. Practically all of this stock has been subscribed for, which of course increases the total outstanding capitalization and makes a corresponding increase in the amount of earnings necessary to pay the present 9 per cent dividend. The report for the third quarter of 1922 shows earnings well in excess of dividend requirements. The business of this company is such a necessary and stable one that its net earnings fluctuate but little from year to year. The demand for new telephones is constantly increasing, and there is therefore every assurance that the company will continue to cover its dividend requirements with a satisfactory margin, even allowing for the recent addition to its capitalization. The report for the first six months shows that the company now has more than 210,000 stockholders, which is an indication of the wide popularity of this stock as a suitable investment for the small holder. The stock is now selling around 122, which gives a yield of somewhat over 7 per cent.

Q. I wish to invest \$4,000 in good bonds. Can you suggest the names of some good securities?

A. It is a little difficult to give this without a knowledge of your exact requirements. We submit, however, the following list of bonds for your consideration:

American Smelting and Refining Company, first 5s; price about 93 $\frac{1}{2}$.
United States Rubber Company, first 5s; price about 88.
American Sugar Refining Company, 6s; price 102.
Bush Terminal Building Company, first 5s; price 91 $\frac{1}{2}$.
Wilson & Company, first 6s; price 100.
Delaware and Hudson, secured 7s; price 100.
Père Marquette, first 5s; price 90 $\frac{1}{2}$.
Southern Railway, first 5s, price 96 $\frac{1}{2}$.
Great Northern Railway, 7s; price 111.

Are You Building for "Sixty"?

WHILE working and earning for today, every individual should also see to it that there is a surplus building up for the years of declining earning power which are sure to come.

The Halsey, Stuart & Co. Investment Plan fits perfectly into such a scheme. It establishes a means of *obliging* the investor to save and invest regularly a determined part of his income — then makes his savings grow remarkably through the process of compound interest.

An Accumulation of \$50,000 in Safe Bonds

at age 60 or before is within the reach of men of even moderate income. Business men, professional men and high-salaried executives can set a much higher mark and build toward it with assurance.

Our booklet, "A Sure Road to Financial Independence," tells how the Halsey, Stuart & Co. Investment Plan fits all ranges of incomes—shows how to apply it on incomes from \$2500 to \$50,000 a year. Let us send you a copy, without obligation.

Spring days now!
Come to Tucson

Can you remember a sparkling spring day?

Air like velvet. Flowers drinking in sunshine. Blue, clear skies. What wouldn't you give right now for such a golden day?

Every day from October to May in Tucson, Arizona, is a spring day. Chrysanthemums and roses bloom. Lawns are green. Children play outdoors.

Half-Mile High Plateau

Surrounded by lofty, gorgeously colored peaks, Tucson lies upon a half-mile high plateau. It is a modern city of 25,000, with good hotels, reasonable rentals, golf and town clubs open to visitors, fine shops, schools and churches. From October to May the mean monthly temperature never exceeds 72° or falls below 49°. Little rain. No fog or winds.

Reduced Fares on All Lines

Through Pullman service to Tucson via Rock Island, Southern Pacific, and connecting lines, is available at reduced fares. Fifty-three swift hours from Chicago, or only seventy-three from New York, and you are where springtime is beginning.

You Will Enjoy This Booklet

The luxurious sunny days and revitalizing life in the open that you have dreamed about are described and pictured in "Man-Building in the Sunshine-Climate." For all who seek rest, recreation, physical up-building, or relief from pulmonary troubles this booklet will be of surpassing interest. Just send the coupon.

The Dollar

The daily actions of most of us are influenced by the messages received over the telephone, and yet few of us stop to think of the men and women, and the mechanisms, which help to make that daily service possible.

Maintenance, repairs, and the work of handling calls, must constantly be carried on in good times or in bad, and they must be paid for, in order that your telephone service may be continued.

The average dollar will buy to-day less than two-thirds of what it would buy before the war. This means that it costs,

on the average, half as much again to buy most of the things that are necessary for keeping the country going; but the advance in telephone rates is far less than this average.

In fact, gauged by the present purchasing power of the dollar, telephone service in the country as a whole is costing the subscriber less than it did in 1914.

The Bell System generally has been able to meet higher commodity prices and increased wages by means of new economies in operation and the increased efficiency of loyal employees.

Feels good and prevents infection!

An after-shaving application of diluted Absorbine, Jr. leaves the skin cool, soothed and refreshed. It is the liniment with the clean, pleasant odor.

It is an effective antiseptic for razor cuts and scratches. It is cleansing, healing and prevents infection.

Its germicidal properties are excellent for conditions of sore throat; used regularly as a gargle it destroys germs that otherwise may cause serious trouble.

After brushing the teeth, use Absorbine, Jr. as a mouthwash. It keeps the mouth and breath sweet and clean; and destroys crevice hidden germs that cause decay.

Tour Nature's Wonderland with Luther Burbank

There's romance which began before Man came to the earth, whose fascination is unknown to most of us. It is the life, habits and progressive development of plants.

This advertisement is to offer to you a free booklet which is the key to a world of new interest and inspiration. The coupon below will bring it to your home without obligation. You have heard of Luther Burbank, the internationally famed "plant wizard;" of his perfect flower, his spineless cactus, the celebrated "Burbank Potato."

Burbank not only has made plants grow where the species never grew before, but he has caused Nature to *create* new varieties. He is more than a plant cultivator—he is the premier *plant breeder* of all times.

And now Luther Burbank tells *you* his secrets. What flowers, fruit, vegetables you can grow in your yard or on your farm; how you can make each plant yield more; and even how you can breed new varieties—all this and more for the pleasure

Because no advertisement can begin to do justice to the interest, beauty and practical value of this remarkable library, an attractive booklet has been published to tell more about it. It contains a brief biography of Mr. Burbank, telling how he rose from a small beginning to his present eminence; evidence of what others have done working in the manner of Burbank; illustrations from the complete set, in full colors; and constructive Burbank experiments that you may actually put into practice.

You will find this booklet well worth sending for. But only a limited edition has been published, so clip the coupon NOW—and send for it TO-DAY.

and profit of men, women and children who are willing to learn from the master the absorbing story of

How Plants Are Trained To Work for Man By LUTHER BURBANK

These eight beautifully bound and illustrated volumes are a description by Burbank of the results of his actual work. He demonstrates what can be done; he sets new ideals and novel problems.

Here for the first time is presented in convenient and authoritative form all that the world is eager to know about this unique genius of the plant world—the interesting facts of his long and fruitful life, the secret of his success, his methods and discoveries. They are invaluable alike to the amateur and the professional plant grower, for they cover the whole field of plant culture from helpful details to the bolder innovations that have given Burbank the name of "miracle worker" and "wizard."

THE MAIL BAG

ARE THERE MANY SUCH CASES?

MADAME ALINE JEANNIN, a woman of about fifty, cultivated and refined, with property both abroad and here in America; a resident of Waterbury for seven years, whose son-in-law is Captain Albert Lusher, an American citizen, who served overseas in the war; sailed for Europe July 5, on the Paris. She went over at the request of her lawyer, who wished to have her transact some business in Switzerland. When she came to return, she submitted her passport to the steamship authorities. It was perfectly regular, and had been properly viséed by the Swiss Consul in New York. She had noticed on the passport the clause requiring that the holder of the passport on returning to America should get it viséed by the American Consul. The steamship people told her that nobody ever paid any attention to this clause. I may stop here to say that I noticed the same clause on my own passport when in London this summer, and inquired by telephone of the American Consul-General's office, and the person answering laughed over the telephone and told me to disregard it.

When Madame reached Havre to embark on the Paris, after her trunks had been put aboard the steamer and the tender was about to put out, the American official who examined the passports told her that she ought to go back to Basle and get a visé. It was evidently too late then, with her passage paid and her trunks beyond recovery. When she reached New York, on September 9, she was detained at Ellis Island on account of her failure to comply with this technicality. She had to sleep in a hammock, without decencies or privacies, was compelled to mix with the riff-raff of Europe, and not allowed to communicate with her son-in-law, Captain Lusher, for ten days. He, however, obtained permission to attend the hearing of her case on September 19. When he arrived at Ellis Island on that day, he was informed that the hearing had been held on the 18th. At this hearing no opportunity was given Madame Jeannin to have either counsel or friends present. Captain Lusher was able to obtain a pass for the first time and was allowed to have his first interview with her. He found her in a deplorable condition. The examining board had put this lady, in great distress of mind and broken down by sickness, through what is known in police circles as the "third degree."

The facts of this case becoming known to citizens of Waterbury who were in touch with persons of influence in Washington, an appeal was made, and as a result almost at once Madame Jeannin's release was secured. Except for this interposition she would have probably been deported. On September 20 she

was brought to Waterbury and placed in a hospital. For ten days she hovered between life and death. She is now on the mend, but she is still in the hospital, a month after her release from Ellis Island. Her doctor says that had she been deported she would have probably died at sea.

It strikes me that this story fits Russia better than America. I think this is the way in which it will strike the readers of The Outlook.

A. R. KIMBALL.

Waterbury, Connecticut.

[It certainly seems outrageous and unreasonable if there is no kind of discrimination used as between some disreputable person who is trying to force a way into this country and a woman who, according to our correspondent, is of undoubted character and has simply failed to comply with a technicality.—THE EDITORS.]

A QUESTION OF WHISKERS

Is there any real authority for the editorial use of "sideburns" instead of "burnsides" on page 230, October 11?

Whenever, in recent years, I have met with the transposition of the name I have assumed that it is by one unacquainted with the Civil War and General Burnside; but I do not wish to place the editorial staff of The Outlook in this class.

(Miss) A. R. GRIFFITH.

Los Angeles, California.

[Of course you are right in saying that the word "burnsides" came from the hirsute appendages of the distinguished Civil War general. The inversion of his name has, so far as we know, no dictionary authority. It is used as a humorous and colloquial twist, however, by many people. We used it, conscious of course of the origin of the word. Perhaps the slight percentage of humor in the change might well be sacrificed to preserve the name of the soldier who successfully employed this particular type of adornment.—THE EDITORS.]

MANY INVENTIONS

THE Preacher says, "God hath made man upright; but they have sought out many inventions" (Ecclesiastes vii. 29). Why that "but"? Although tempted to "claim everything," inventors, as thinking men, must be aware that—whatever the underlying reason—the riddle that teases their ingenuity is also stimulating other inventive minds. It rarely occurs, however, that two clever men step forward on the same day with the same world-illuminating idea. That was the case on February 14, 1876, when Alexander Graham Bell and Elisha

Gray both filed in the United States Patent Office descriptions of appliances for the speaking telephone.

The difference between them was this: Young Bell filed application for a patent—and received it; young Gray filed a caveat, or warning to other inventors, to protect his idea and method of embodying it. The application for a patent is in law presumed to be for a completed invention (which nevertheless is often incomplete); the caveat is presumed to protect the principle of an invention yet to be completed (although it may be a complete one). In Gray's case, I read in his volume on "Electricity and Magnetism" the following statement: "If I had filed my description of a telephone as an application for a patent instead of as a caveat, and had prosecuted it to a patent without changing a word in the specification as it stands to-day, I should have been awarded the priority of invention by the Courts. . . . I am borne out in this assertion by the highest legal authority." And he adds his specification, which closes: "I claim as my invention the art of transmitting vocal sounds or conversation telegraphically through an electric circuit."

While the press, after Dr. Bell's death last summer, was sympathetically sounding his well-deserved praises as a man of great and varied scientific achievements it would have been ungracious to seem to begrudge him the universal tribute; but it appears to me only fair, now that his general eulogium is established as the inventor of the telephone (the greatest of his many deeds), to let his closest competitor share the glory, although he missed the immense material gain, of that wonder-working invention.

And there is a curious further point. The Outlook of August 16 last, in its article on "The Inventor of the Telephone," has this: "He once said: 'I now realize that I never should have invented the telephone if I had been an electrician. What electrician would have been so foolish as to try any such thing?'" And he refers it all to his lifelong "study of vibrations." A strange statement, if he really did make it, ignoring the fact that it was only after a strenuous and famous legal contest that he was awarded priority over the claim of an electrician for the invention—and that chiefly as a matter of legal technicality in the form of filing their respective claims in the Patent Office. Elisha Gray's first patent (1867) was for telegraphic appliances, and after that he received about fifty patents, nearly all in connection with telegraphic or telephonic electrical apparatus—multiple telegraphy, typewriting telegraph (stock ticker), telautograph, transmission of

¹ Nature's Miracles: Vol. I. Earth, Air, Water; II. Energy, Sound, Heat, Light; III. Electricity, Magnetism. Fords, Howard & Hurlbert, New York, 1900.

musical melodies and harmonies (the suggestion to him of the articulating telephone), and divers switches, relays, combinations, etc.—all electrical and promotive of marvelous efficiency in public service. He died in 1901.

Surely, in honoring our benefactors, among the names of Bell, Edison, Marconi, and the rest that of Elisha Gray should stand high and not be forgotten.

JOHN R. HOWARD.

Morristown, New Jersey.

WHAT ARE DEBATES FOR?

HAVING followed with interest the progress of Anglo-American debating, I greatly enjoyed Mr. George L. Moore's recent article and the editorial comment introducing it. I gained an insight into the benefits of scholastic debate during my attendance at the North-western State Normal School of Oklahoma, which, like all the Oklahoma State schools, emphasizes the value of debate as an aid to education. To my mind, it is of far greater importance in the development of a young man than seems to be generally conceded by the Eastern schools; at least, by those with which I am familiar.

It would seem that the modern tendencies of educational development are to direct the student's thought into too definite channels of predigested information and fail to give him the incentive toward self-investigation and expression. The practice of debate in vogue in many American schools certainly counteracts this tendency and presents fields of thought outside the beaten path, the investigation and development of which are of untold value to the student.

It is unfortunately, though not surprisingly, true that the interest in debate is far surpassed by that in athletics. This being the case, and granting the benefits of scholastic debate, would it not be well to analyze the two fields with a view toward putting a little football enthusiasm into debating contests?

The American youth loves a fair fight. As athletic contests cater to that desire, they have gained a popularity far in excess of other equally essential fields of scholastic development. Why not, then, borrow a little thunder from football and make our debating contests rival those of the gridiron? To show that this is far from being an impossibility I shall describe briefly the system in vogue in the Oklahoma State schools when I attended them.

There were at that time six State normal schools, three in the eastern and three in the western part of the State. To encourage interest in interscholastic debate each group of three schools formed a Triangular Debating Club. Each school selected from its various debating clubs and student body two teams of three speakers each. These teams prepared opposite sides of a pre-arranged question; one team remaining at home, and the other journeying to one of the other schools in the triangle.

Thus on a given date six debates were held simultaneously in the State. At a later date the winners of each triangle decided the State championship. The judges of the contests were prominent lawyers or college professors from outside the State. It is impossible to enumerate the advantages of the movement or to describe the interest that it aroused and sustained from the first elimination contests in each school until the State championship was decided. It is safe, however, to say that all who were fortunate in taking part gained a lasting benefit from the experience.

That is but an example of what can be accomplished by proper direction and co-operation. The system may have had its defects, and unquestionably improvements could have been, and doubtless have been, made. Aside from that, is the fact that practically the entire student body gained a two-sided insight into questions that could have been brought to their attention in no other way.

Mr. Moore has interestingly described the popular vote method of judging in England, but has shown all too plainly that such a system cannot meet with favor in American schools. In discussing the decisions of the Interallied War Debt Cancellation question he says: "At all three places the vote overwhelmingly favored cancellation, a commentary not so much on the merits of the debating as on the state of mind of the British college students." Judges of a debate are as important as referees in a football game, and should be selected with equal care. Not only must they be authorities on logic, argumentation, presentation, etc., but they must be able to judge the argument as presented uninfluenced by their personal opinions of the question. The average man in the audience cannot meet these requirements. He has neither the specialized training necessary nor the ability to judge impartially. Practically every question has its popular side, but a popular decision is not always a just one. Incidentally, I should hardly hope for a favorable decision were I supporting the negative of the Bonus question before an American Legion audience.

In the editorial comment referred to it was pointed out that ill effects might result from the necessity of the participants in debate arguing against their convictions. That has not proved the case in the Oklahoma schools. On the other hand, it has been a decided benefit. In the same issue of *The Outlook* containing Mr. Moore's article was another by E. K. Parkinson, who, in discussing the average business man, says: "But still more deplorable is the limited capacity of these men for any intellectual enjoyment outside their chosen field. They can talk golf, baseball, racing, yachting, and automobiles, but beyond that they are as dumb as an oyster." Had these men had the opportunities of scholastic debate, wherein they would have been required to study thoroughly

the great variety of debated questions, not only from the angle that most appealed to them, but from the other fellow's point of view as well, their oyster-like qualities would be much less evident.

The editorial comment also stated that "our debates as at present conducted are distinctly unreal. They do not move the hearers because the speakers themselves are not moved; there are no convictions involved." Also that they "do not evoke the interest of the general student body, nor do they call out the talents of the real college leaders." Unfortunately, interest alone is an unsafe guide for the student who wishes to acquire a broader vision. Rather is he led by desire of progress or thrill of adventure to journey into new fields. As he begins to familiarize himself with his new environment he finds he has cultivated an interest where none previously existed. Just as if we limit our reading to that alone which upon the surface is interesting, the masterpieces of literature would be displaced in our schools by the latest best sellers. I would venture to state that in the triangular debates carried out by the State normal schools of Oklahoma the interest of the student body rivaled that aroused by the State championship football games. And one witnessing such a contest could hardly contend that the speakers lacked conviction or that the audience was unmoved.

Mr. Moore's description of the British open forum method of discussion suggests an improvement that might well be made in American scholastic debate. By throwing the question open to general discussion after the principal speakers have finished the greatest advantage would be given to the greatest number. And, after all, the real purpose of debate is to train men to reason intelligently and speak easily and convincingly before an audience. I had the opportunity of seeing this tried out in the A. E. F. during that heart-breaking period after the armistice, when all thoughts were turned homeward but little movement in that direction was evident. Senior Corps Chaplain Thompson, of the Second American Corps, to whom fell the almost impossible task of keeping the homesick Yanks contented, utilized the open-forum idea one evening each week with remarkable success. A few speakers were selected in advance to open each side of the argument, and it was gratifying to hear the prompt and interesting responses from the audience at large. I might also say that, as my duties in the service threw me into intimate association with the Tommies, I was amazed and delighted at their seemingly universal ability to talk easily and interestingly upon almost any subject. If such breadth of information and clarity of presentation can in any way be traced to their open forums, we can do well to imitate them.

.. GOD'S DARK ..

THE Dark is smooth as velvet,
And gentle as the air,
And he is good to children
And people everywhere.

The Dark can see and love me
Without a bit of light.
He gives me dreams and resting;
He brings the gentle night. (C) J. M.

JOHN MARTIN'S BOOK The CHILD'S MAGAZINE for Children from Three to Ten

INSURES THAT NIGHT THOUGHTS, AFTER MOTHER HAS TURNED
OUT THE LIGHTS, SHALL BE FEARLESS, WHOLESOME, AND HAPPY

WHAT IS JOHN MARTIN'S BOOK ?

For the sake of conforming with postal regulations, it is called a magazine and is issued on a specific date. In all other respects it is a book, printed in two colors on tough stock, and so strongly bound that it is practically indestructible. It has a gay cover, a title page, and is full of pictures.

It is a book; it is respected as such, and loved as a book friend.

WHAT DOES JOHN MARTIN'S BOOK DO ?

It makes happiness. It forms good morals, good taste, good manners. It provides excellent art and correct English. Without preaching, it teaches consideration of others, fearlessness, honor, truthfulness, obedience, patriotism. It companions in an intimate, personal way, leading naturally to constructive, wholesome thinking, and leaving in the mind the sanest, most desirable impressions.

WHAT DOES JOHN MARTIN'S BOOK CONTAIN ?

Engaging stories of real life
Whimsical fairy tales
Helpful corrective stories
Retold classics

Bible stories
Verse and nonsense
Myths and legends
History and romance

AND

A definite department of things to do, to make, to color, to paste, to guess, to play.

JOHN MARTIN'S BOOK

NEEDS no censorship. The most careful mother knows that she can safely allow the children to take it directly from the postman and read it through. Our high renewal percentage proves that, once in a home, John Martin's Book stays.

AN IDEAL GIFT

THAT LASTS FOURTEEN MONTHS AND LIVES A LIFETIME

M. CLEMENCEAU'S VISIT TO AMERICA

FATHER VICTORY, as Georges Clemenceau was called by his fellow-countrymen, became during the closing months of the war the impersonation of France's will to survive. Now as a visitor to America he remains an impersonation of that spirit. Because we welcome that spirit we of America greet him.

Eighty-one years of age, having served his country during two German invasions, having seen the idea of self-government and civil liberty emerging from the confusion of the rule of Napoleon III take form in the present Republic, having been the joyous warrior of politics for nearly fifty years, having followed throughout the guidance of what has been called by his biographer his "vigilant and apprehensive patriotism," having seen the partial failure of his efforts to safeguard France against the dangers he still apprehended even in victory, he believed that he still had a message from France which America would be willing to hear.

No one who saw him preside at the plenary sessions of the Peace Conference at Paris, heard his incisive decisions, watched his mobile hands gloved in gray, caught his expressions of quick understanding, can doubt his intellectual acuteness, his sense of humor, and his alert will. He has the mind that looks forward.

He is not a stranger to America. Over fifty years ago he lived and taught here for a while. Since his earlier sojourn the sky-scrapers have arisen (not high enough, he says; not near enough to the moon) and the Nation has grown proportionately in extent and in stature.

Almost immediately following his arrival he visited the grave of Theodore Roosevelt. Of course his schedule included a call upon ex-President Wilson and President Harding.

BUSINESS MEN AND INTERNATIONALISM

WITH the continuing failure of governments to settle by political action the economic problems growing out of the World War, far-sighted business men are beginning to ask whether they cannot do something through the ordinary channels of commercial relationship. The creation of an International Chamber of Commerce is the latest contribution of business men to

(C) Keystone

CLEMENCEAU ARRIVING IN AMERICA

the movement for world peace and unity. The International Chamber was formed two years ago in Paris to study the great field of economics and trade. It has now become truly international in scope, with a membership embracing nearly thirty nations of North and South America, Europe, and Asia.

The American section is now at work preparing a programme for presentation to the next annual Convention, which will be held in Rome in March, 1923. Mr. Merle Thorpe, editor of the "Nation's Business," which is the organ of the United States Chamber of Commerce, informs us that the American section is engaged in the following work:

It is evolving a basis for a uniform ocean bill of lading.

It has prepared a comprehensive code for international arbitration to eliminate costly and ineffective litigation between business men of different countries, and for the purpose of making this plan effective an International Court of Arbitration already has been named.

It is working on a plan for the collection and dissemination of comparable statistics.

It is about to publish a list of pre-

ferred definitions of trade terms used in international transactions.

It is urging the removal of export taxes which are a hindrance to the freedom of trade.

It is committed to a policy of instituting measures for the conservation of fuel and raw materials.

It is urging unification of legislative provisions with respect to bills of exchange and other export problems.

It is calling attention of governments to the burdensome war-time restrictions in regard to passports and visés.

It is making a careful study of the great losses which business men suffer through lack of adequate laws for the protection of international property and for the suppression of methods of unfair competition.

It will suggest remedial measures for the protection of trade-marks, copyright, etc.

It is engaged in drafting a uniform basis for legislation which will remove existing unfair and burdensome tax practices, such as double taxation.

It is hoped that a representative delegation of two hundred leading American business men will attend the meeting at Rome in March. A large group will leave New York about the middle of

February, and will visit important trade centers on the Continent and along the Mediterranean on the way to Rome.

One of the great advantages of this particular kind of an industrial convention is that its deliberations and recommendations can be reported back to almost every community in the United States through the United States Chamber of Commerce. If the business men of this country can really unite on a few fundamental principles of international economic relationship, they will find Congress very willing to embody their ideas in necessary legislation. The trouble is that up to this time the "business interests" of the United States have been too often more vitally interested in log-rolling on tariffs than they have been in the adjustment of international trade and finance.

GOVERNOR SMITH AND SENATOR COPELAND

If all candidates victorious in the recent election can make as good an impression upon their communities as Governor-elect Smith and Senator-elect Copeland made in New York the other day at a dinner of the Chamber of Commerce, they will enter upon their political duties with the good wishes of all their constituents.

Mr. Smith in beginning his speech, and alluding to the popularity of brevity in after-dinner speakers, told the following entertaining story:

I remember one day there was quite a hearing in the Assembly Chamber on an appropriation bill to build what was known as the great western gateway between the city of Schenectady and the village of Scotia, and spread around the chamber were a number of maps and engineers' profiles, and big long and lengthy arguments going into hours and hours. And a clergyman came down from Schenectady who, when it was his time to talk, rose and said: "Governor, I am a great believer that short sermons bring large collections."

"Now," he says, "everybody in Schenectady wants this bridge, and if you give it to them you will be helping the city of Schenectady, you will be helping the State, you will be helping the country, and God will bless you for it." And he sat down. When he was on his way out one of the attachés of the Executive Chamber stopped him and said: "Father, that was quite a long speech you made."

"Well," he says, "I heard he was going to sign the bill, anyway."

Governor Smith then proceeded to a serious statement of some of the policies which he would endeavor to carry out when he is inaugurated as Governor. He asked the business men whom he was addressing to support the completion, maintenance, and effective operation of the Erie Canal, which is now known as

the "Barge Canal;" to get behind the movement known as the Port Authority for planning and reorganizing the harbor facilities of New York City; to get behind a movement for the inauguration of a sound and effective budget system in the State Government; to support him in his urgency of a reorganization, coordination, and simplification of the government departments in the State; and to urge in connection with this organization "a Constitutional amendment to lengthen the term of the Governor. It is a positive joke to be electing a Governor for this State for two years. Everybody knows it; he is just in there a year and a half when he is running again, and I say this in a very serious way, because I have had the personal experience."

Senator-elect Copeland is a physician, and has been Health Commissioner of the City of New York, from which position he has just been promoted to the United States Senate. He urged a policy of sound hygienic laws for the Federal Government, not only for domestic reasons, but because of the menace of disease coming in from foreign countries. Apropos, he told the following interesting story:

Last year there came into this port a ship from which the United States Public Health Service landed four persons suffering from pneumonia. They were sent to the Long Island College Hospital in Brooklyn. The hospital authorities, becoming alarmed, telephoned me, and I assigned one of the Board of Health experts to see these four cases of pneumonia. Not one of them had pneumonia, but three had well-developed cases of typhus, one of the most dreaded of epidemic diseases.

The ship which brought them here was tied up at the dock and the passengers were on the dock ready to be dispersed through the city and the country. I sent them back on the ship and the ship back to Quarantine for the Federal authorities to re-examine. More careful inspection revealed nineteen cases of typhus on that ship, and a number of the victims died in our harbor.

This experience and the resulting events brought home to me the real attitude of Congress toward National and international health matters.

It seemed to me that such a slip-up must be due to lack of personnel and equipment at Quarantine, so I went to Washington to discuss the situation with the Federal authorities. It was frankly admitted that such a lack existed, and I was told that \$500,000 was the sum needed to guard this port against disease from abroad. To my amazement, no request for the money was pending and no plan had been made to ask Congress for the money.

On my demand to know why, I was informed, reluctantly, that Congress looks with unfavorable eyes upon requests for the Public Health Service and treats all its requisitions with coldness.

Determined to have New York and the country protected, I marched over to Congress. Here I was sent from pillar to post, and finally I landed in the office of the Chairman of the Appropriations Committee of the House, Congressman Good, of Iowa. He listened to my story, but seemed unimpressed. Finally he said:

"Doctor, the trouble with you New York men is that you want a lot of money to beautify your Harbor." My reply was: "I don't care whether you beautify the Harbor or not. I never see it. I don't care whether you protect New York or not—the Board of Health of New York City will do that, but what we are trying to do is to save Iowa."

Immediately Mr. Good lost his listless air.

"Iowa," he shouted. "Do you mean to say that Iowa is in danger of typhus?"

"Certainly I do," I said.

"Well," said Mr. Good, "that's different. Something must be done about it at once."

And Congress appropriated a half million dollars to guard New York Harbor against the admission of foreign disease.

Senator Copeland made an impassioned appeal for the treatment of immigrants in accordance with the laws of humanity rather than the laws of mathematics. He denounced the present three per cent Immigration Law, and said (we think with reason, for *The Outlook* has long made the same contention) that you cannot admit immigrants to the United States either safely or humanely on the percentage system. Dr. Copeland's expressed views on the immigration problem were so sound that we hope much from his influence in passing reasonable legislation on this complicated and important question when he enters the Senate chamber.

AN EXPERIMENT IN RAILWAY OPERATION

It is useless to blink the fact that there is a very large, and possibly growing, body of public opinion in this country inclined to favor Government ownership and operation of steam railways. At all events, there are thousands of plain, matter-of-fact Americans, neither radicals nor theorists, who are wondering whether the admitted political evils of Government ownership and operation would be greater than the evils which arise from selfish financiering and from conflicts between labor and capital under private ownership. The only practical experience this country has had in Government operation was during the war, an experience not wholly assuring to those who fear the red tape and inefficiency of bureaucracy. Americans who are open-minded on the question, and who wish to learn what is best for the general social and economic welfare without regard to preconceived notions or the dictates of self-interest,

A CASE FOR CAREFUL DIAGNOSIS

are about to have an unusually interesting object-lesson in Canada.

The Canadian National Railways, Government owned and operated, have a mileage of about 22,000 miles and constitute the largest government-owned system of railways that the world has ever seen. With the railways there is affiliated under the same management a great system of transportation by ocean and inland steamers. The Canadians are a practical people, like ourselves, and, like all English-speaking countries, the spirit of individual initiative and enterprise is the dominant spirit in Canada. Socialism or Communism has never gained any foothold there. But the Canadians have had some unfortunate experiences with privately owned railways, and they apparently propose to see what Government operation will do. Perhaps the best proof that the experiment is not a visionary one is found in the fact that the post of President and General Manager of the Canadian National Railways has been accepted by one of the greatest railway operators in the world, Sir Henry Thornton, now of England, but an American by birth and education.

Sir Henry is about fifty years of age. He was born in Pennsylvania; went to St. Paul's School at Concord, New Hampshire, and the University of Pennsylvania; and entered the engineering department of the Pennsylvania Railroad, where he held various important engineering offices; and finally became General Superintendent of the Long Island Railroad. In 1914 he was called to England to take the managership of the Great Eastern Railway, in which position he made such a striking success that during the war he was called upon by the English Government to have general executive charge of British transportation, both by rail and by water, with the rank of major-general. It will thus be seen that he is no theorist. If he should successfully meet and solve the problems of the relation of Government to railway operation in Canada, his judgment and opinion about the very real and perplexing difficulties of railway transportation in the United States ought to have great weight. Wise men who want to inform themselves about the future development of railways in this country will keep their eyes on Sir Henry Thornton.

THE NEW PARLIAMENT: THE ELECTIONS

THE British Parliament, which assembled on November 20, will enter on its first important task after the formal address from King George when it takes up the ratification of the Irish Constitution. This must be accomplished before December 6. For this reason economic

MAJOR-GENERAL SIR HENRY THORNTON,
PRESIDENT CANADIAN NATIONAL RAILWAYS

and political legislation will by common consent be held in the background until that immediate task is accomplished. There is little or no doubt that Parliament will see the importance and desirability of carrying out Great Britain's share in the work of establishing the Irish Free State.

The Parliament now assembled represents two convictions among the people of the country. One is that Mr. Bonar Law truly represented popular feeling when he argued that what the country needed was quiet and restfulness and that the administration of Lloyd George was too adventurous, too sensational, and too changeable to meet the views of the people—in other words, that a change toward "normalcy" was eagerly desired. The other conviction that brought about the political overthrow was that of economic pressure; the labor element and the radicals are concerned about unemployment, while the middle classes and the manufacturers are concerned about high income taxes. It is to be remembered, however, that it is by accepting trying conditions as to taxes and employment that Great Britain has been able—to quote Lloyd George's phrase again—to make the pound able to look the dollar in the face; the exchange rate for English money is far stronger than that of France and most other European countries.

The Conservative victory in the elections was so great that the party has an absolute majority over all the other combined elements in the House of Commons. It controls 319 votes as against

a total of 296 votes in possible opposition if all party divisions and odd men outside of parties should be combined, which is altogether unlikely. The pro-Coalition Lloyd George members have decreased from 129 to 44. Yet the Conservatives fell far behind on the popular vote; some estimates say that less than forty per cent of the total vote went to Conservative candidates.

PARTIES AND ISSUES

THE most outstanding feature of the Opposition of the new Parliament is that now for the first time the Labor Party becomes the leading Opposition party. It almost doubled its representation in the last Parliament and now numbers over 120 members. Its present leader is John Robert Clynes, and there is some significance in the fact that a former Labor Party leader, Arthur Henderson, suffered a severe defeat at the polls. Previous to the actual assembling of Parliament there was some question as to who should be the recognized leader of the opposition in the House of Commons. Two precedents seemed to conflict. Usually the leader of the Opposition is the leader of the largest Opposition group; but also usually that man is a former Prime Minister; in this case there are two former Prime Ministers in the House, Lloyd George and Asquith, and the leader of the largest Opposition group is a Labor member. The question was easily and pleasantly settled, however, when, as the members fell in line to enter the House of Lords for the first organization meeting, Mr. Asquith (who as the older of the two former Prime Ministers would take precedence over Lloyd George) stood aside and motioned to Mr. Clynes to join the present Prime Minister, Mr. Bonar Law, at the head of the line.

The notable gain in the Labor Party in size and importance appears to be due, not to its advocacy of a tax levy on capital, which is a radical political proposal still in its infancy, but to the general dissatisfaction of the masses in England with industrial conditions. It does not represent a movement toward limited industrial supremacy, such as exists in Russia; it may be noted that a Moscow Bolshevik organ, while rejoicing in the Labor victory in England as the base of a proletarian offensive against capitalists, remarks: "Frankly, we place no hope on English labor in a revolutionary rôle, as the composition of the party does not inspire confidence."

WINNERS AND LOSERS

THERE were some singular personal results in the elections, due to special feeling about individual candidates rather than to general principles. Winston Churchill, for instance, was manfully

defeated, standing fourth among his rivals, while the winning candidate was a prohibitionist. Lady Astor was re-elected by a vote of 13,000 after a lively and even bitter contest, throughout which she maintained her reputation for force, originality, and popularity. The election of the famous economist Sidney Webb as a Labor candidate is one of many indications that the English Labor Party is not made up solely of representatives of labor unions. Mr. H. G. Wells, the novelist and historian, was defeated in the London University election.

In the cases of Arthur Henderson and of some other notable defeats the comment of English papers is to the effect that, as a matter of course, a seat will be found for the person defeated. This means that some generous and supposedly less important member of the party who has been elected will resign and that his constituency will be kind enough to elect the defeated man. The technical process of such a proceeding is odd and, to an American, amusing. The defeated member takes "the stewardship of the Chiltern Hundreds." That is, he accepts a commission as a royal official for the district once known as the Chiltern Hundreds, and, having done this, he can and must resign his membership in Parliament, as a member cannot hold a royal commission of honor and profit. Thereupon some one is elected in his place, and he forthwith resigns his appointment to the Chiltern Hundreds, an office which has no duties, but a nominal salary of twenty shillings, which makes it a "place of honor and profit," and hence is inconsistent with membership in the House, and the office is open for the next member who wants to resign.

EUROPE AND THE NEAR EAST

As the Lausanne Conference on the Near Eastern problem opened there was a strongly optimistic feeling in the press of Europe. It seemed to be the general opinion that the Turks overplayed their hand in making extreme demands in advance. The result, unless all forecasts are mistaken, has been a genuine and positive drawing together of the Allies. Conferences between the British Foreign Secretary, Lord Curzon, and the French Premier, M. Poincaré, have brought about a mutual understanding as to what issues are really important. A new element entered when the Fascisti leader, Mussolini, now Premier of Italy, indicated pretty strongly that he would contend vigorously for equal rights for Italy in determining matters that affect her interests.

We in America are not so much interested in the exact drawing of boundaries as we are in the safety of Europe against Turkish aggression and war, the pro-

(C) Underwood

THE GREEK EXODUS FROM EASTERN THRACE—PRIESTS REMOVING THE FURNISHINGS OF THEIR CHURCH AT LULE BURGAS

tection of American citizens and of Christians generally against Turkish, Greek, or Balkan cruelty, and the preservation of trade and commerce.

The exodus from Thrace continues to be a heartrending spectacle. Whatever may be said of the faults of other Balkan nations, none of the non-Turkish races in the Balkan countries are willing to take the risk of fire and slaughter. These peoples in vast numbers are struggling from Western Thrace into Greece. One result is that the Turkish leaders are beginning to clamor for a plebiscite in Western Thrace, evidently believing that, since they have now frightened the Christian peoples away, a Turkish majority might perhaps be obtained.

The two things which are expected to

receive most attention at Lausanne are whether Turkey shall be allowed to fortify the Straits and whether the long-established system of the so-called capitulations shall be abolished by Turkey. In the one case Turkey would be free to make closed seas of the waters east of the Straits; in the other, the protection needed by foreigners living and doing business in Turkey would disappear.

The flight of the Sultan from Constantinople on a British ship and the appointment by the Nationalist Assembly of Abdul Medjid to be Caliph (but not Sultan) are important only as indicating the complete ascendancy of the Kemalists.

FRANK BACON, ACTOR

THEORETICALLY the dramatic critic demands of a play that it should at least have reasonable construction and a well-balanced cast of interesting characters; but once in a while there appears a play which defies the canons of criticism and yet deserves the success it wins because of one single character that dominates the play, makes plot and the other players insignificant, and delights audiences, simply because the actor and the part are one. Familiar examples are Joe Jefferson's "Rip Van Winkle" and Warfield's "The Music Master." To these must be added Frank Bacon's "Lightnin'." He played the part in New York for 1,291 consecutive performances and had acted it 2,000 times altogether, when in Chicago he was stricken with the heart attack that resulted in his death on November 19.

Mr. Bacon created the part of Lightnin' Bill Jones in a double sense, for he not only played Lightnin', but he in-

Photo by Abbe

FRANK BACON AS BILL JONES

vented and shaped the character in the writing of the play, with collaboration in other parts and in the construction. There have been, we believe, some attempts to produce the play without Frank Bacon in the cast, but it would be an extremely good imitator that could satisfy any one who had enjoyed Bacon's slow drawl, dry humor, cheery optimism, gentle friendliness, and altogether lovable personality. One feels sure that these were qualities of the man as well as of the actor—and those who knew him confirm the impression. His great success followed forty years of hard work as actor and manager. Few actors of our time have given such pleasure to so large a number of people.

ROBIN PLUS DOUGLAS

THERE is always romance in Robin Hood, whether we find him in the old ballads, or Sir Walter's "Ivanhoe," or in the well-known comic opera, or in the remarkable moving picture now being enjoyed by countless thousands. As Douglas Fairbanks plays the rôle, he is part Robin, part Puck, and part "Doug." Robin as thus shown does not quite correspond to the excellent description of him written long since as "the ideal outlaw, courteous, liberal, and reverent." Even in the first part, where Mr. Fairbanks is the chivalrous Earl of Huntingdon and his affinity is for the most part kept under the restraint suited to a champion of the tournament, antics are introduced that are hardly knightly, and this peer of the realm is made to act as if he had never seen a gentle lady before in his life. When he becomes Robin Hood in the forest, he does not act the part; he skips, runs, and jumps it, and always with the engaging grin that gains the affection even of critics. For the skilled and careful work of the actor who lives his part we must look in this film play to Mr. Wallace Beery, who plays the part of Richard the Lion-Hearted, and to Mr. De Grasse, the villainous Prince John. But Douglas is Douglas, and no one at heart wants him to be a great actor.

Dramatically speaking, the play has been constructed with skill; its action carries on; plot and continuity hang together; the spectator does not become listless or uninterested—quite the contrary.

As a brilliant spectacle and as an elaborate attempt to picture twelfth-century people, their costumes, customs, wars, weapons, castles, huts, wealth, poverty, tragedy, and jollity, "Robin Hood" is truly remarkable. The attention to detail is as noteworthy as the setting and the mass movements of soldiers, knights, horses, and crowds. The action is so rapid (often decidedly too

rapid) that one really needs to see the play a second time to recognize in full the interest of the details and to appreciate the magnitude of the care and thought that have been given to the production and the designing of this ambitious and almost stupendous drama.

THE SUPREME COURT AND THE JAPANESE QUESTION

THE opinions recently delivered by the United States Supreme Court through Mr. Justice Sutherland in connection with the question as to whether Japanese aliens in this country may have a right to naturalization have a wide bearing on racial as well as legal questions.

There were two cases, but both practically rested on the same questions. We will briefly state the facts in one case. A young Japanese living in Hawaii applied to the United States District Court for that Territory in 1914 for citizenship in the United States. It is interesting to recall what we said at the time, that this man, by name Takao Ozawa, was so well thought of by the white people in Hawaii that many white professional men and business men contributed to a fund to provide expense money for the testing of his right to naturalization. Ozawa was born in Japan, brought to this country as a boy, lived here twenty years, was a graduate of a California high school, and had three years in the University of California. He was married, his children went to American schools, his family attended American churches, and they all spoke English perfectly. The present decision specifically says, "That he was well qualified by character and education for citizenship is conceded."

The Federal District Court of Hawaii denied his petition, holding that as one born in Japan and being of the Japanese race he was not eligible to naturalization. An appeal was made to a Circuit Court of Appeals. That Court took a course quite correct, although not, we think, very common; that is, it certified three questions, which it sent to the United States Supreme Court, requesting instruction. The present decisions form the reply. The Court, so to speak, boiled down the three questions into two. The first was whether the Naturalization Act (1906) was limited by a certain statute published later. The Court makes it perfectly plain that it is so limited, and it is not necessary here to give the technical reasons. The second question is, in effect, whether Ozawa, the appellant in the principal case, is eligible to naturalization

under the Naturalization Act so limited. This the Supreme Court decided in the negative.

As the law stands, the naturalization of aliens is limited to "free white persons and to aliens of African nativity and to persons of African descent." The word "free" has now no significance, as there are no slave whites, and the Court holds that the word "free" means non-slave. Therefore, as regards aliens other than Africans, the whole question is what the word "white" means.

The Supreme Court holds that the words "white person" are synonymous with the words "a person of the Caucasian race." This makes the test in any individual case racial. The Court cites many decisions in former cases to the effect that the words "import a racial and not an individual test" and it agrees with the view as fortified by reason and authority. It points out that a color test is quite impracticable.

Having reached this point, the natural expectation of the reader of the decision is that the Court will proceed to define what is meant by the words "a person of the Caucasian race." It does not, however, find it necessary to do that, because the cases before it were of men belonging to a race admitted to be not Caucasian. The Court does, however, go so far as to recognize that the words indicate "a zone of more or less debatable ground outside of which, upon the one hand, are those clearly eligible, and outside of which, upon the other hand, are those clearly ineligible for citizenship."

Our friends in Japan should bear in mind two things about this decision. One is that the highest American Court is here not establishing a new policy but simply interpreting and applying the existing law. The other is that neither the opinion of the Court nor the law which it interprets implies any idea of racial inferiority or superiority.

The law which the Court interprets is in substance nearly as old as the United States itself. Originally it confined naturalization to free white persons. Eighty years later the statute was changed to permit the naturalization of people of African descent. It is obvious, therefore, that the application of this law to the Japanese is simply carrying out a long-established National policy. It is obvious too that the very phraseology of the law forbids the thought that the naturalization of aliens is determined by a theory of Caucasian superiority, for the simple reason that Africans, who are not Caucasian, are admitted to citizenship.

The reason underlying the law as it has stood for generations on the statute-books is to be found in the feeling that

he differences between certain races are so pronounced that it is better to keep those races separated. These differences exist between the white and black races; but these races cannot be kept separate in America by any naturalization law because of the existence here as native Americans of millions of blacks. These two races, however, can be kept separate from other races by laws which will discourage, if not wholly prevent, the permanent residence here of large numbers of other races, and among these laws are of course laws regulating immigration and naturalization.

The question whether the American people will abandon their aversion to race mixture is for the present at least academic. There is no prospect of any change in their point of view on this subject. If anything appears to be certain, it is the determination of the American people to prevent the settlement here of masses of people of the yellow or the brown race. They have shown that determination by acts excluding the immigration of Asiatic peoples.

The question, however, still remains whether it is wise to exclude from citizenship those Asiatics who have been admitted. The children of these Asiatics born on American soil are American citizens by right of birth. Is it wise to have these American citizens brought up by parents who can never hope to be Americans themselves and who are forced to have, therefore, an alien loyalty? Is it wise, moreover, to have communities composed of people whom the law treats as hopelessly foreign? It is one thing to undertake to keep out those whom the Nation feels it cannot assimilate in mass; it is quite another thing to undertake to render those whom the Nation admits unassimilable.

The law is now unmistakable in excluding Japanese from naturalization. If there is to be any change, it will have to be made by Congress.

Fortunately, it does not appear that this question, so far as the Japanese are concerned, is likely in the near future to prove perplexing. If, as the Federal Government assumes, the "Gentlemen's Agreement" reinforced by the present Immigration Law is preventing the incoming of Japanese as permanent residents, the question of the citizenship of those who are here will in the course of a generation or so gradually settle itself. Children born in this country will automatically be citizens, and when the older generation passes the people here of Japanese origin will have no occasion to apply for citizenship papers. Japan as a nation can have no interest in the naturalization question, for she can hardly with reason urge the aliena-

tion of her own subjects. Moreover, Japan herself makes the naturalization of foreigners in Japan very difficult. The question is complicated by the problem of dual allegiance, on the principle established and observed that "once a Japanese is always a Japanese."

The United States and Japan can respect each other in no better way than by each respecting the other's rights to define its own citizenship.

THE GREAT FAILURE OF LA FOLLETTE

ROBERT MARION LA FOLLETTE is generally accepted as a leader among liberals. He would be so classed in any country. It is as a liberal that he has impressed his own State of Wisconsin. He more than any other individual is regarded as responsible for the body of legislation in which Wisconsin has been in advance of many, if not most, of the other States of the Union. It is as a liberal that he has impressed the Senate. Indeed, there he is regarded as among the most extreme of the liberals.

If liberalism is defined, as it has been in a book by one of the most self-conscious liberals, Harold Stearns, as "hatred of compulsion," Mr. La Follette can hardly be regarded as any more liberal than others who affect to believe in liberalism; for among the doctrines which La Follette advocates are few which do not involve the exercise of governmental compulsion, and particularly the compulsive power of taxation.

It is the authority to be exercised by Mr. La Follette in the Senate by virtue of his position on committees dealing with taxation and finance, as described by Mr. Barry in an article on another page of this issue, which gives the more conservative Senators concern.

If Mr. La Follette were simply a radical leader as pictured by Mr. Barry, conservatives as well as liberals might welcome his rise to new power. America needs spokesmen for radical opinion as well as conservative; perhaps it needs radical leaders more than conservative leaders because of the natural conservatism of the people and of their institutions. Mr. La Follette, however, has never commanded the confidence or secured the support of the great mass of progressive citizens.

The reason is not because these people of naturally liberal mind differ with Mr. La Follette in opinion; it is because they distrust his judgment and understanding.

For the distrust of Mr. La Follette which has persisted for many years he himself has given good cause. And in no time of his career did he furnish

more occasion for such distrust than in the period of National crisis preceding and during the war.

It is said on Mr. La Follette's behalf that his course was directed by his conscience. If Mr. La Follette followed his conscience when he denounced, not the men who blew up the *Lusitania*, but the people who were blown up; if he followed his conscience when he used his influence to weaken resistance to the aggressive designs of Germany; if he followed his conscience when he permitted appeals to an American electorate to be made on the ground of the interests of alien states without denouncing such appeals; if he followed his conscience when he allied himself with those in Wisconsin who have made service to the country in time of war a political liability, then Mr. La Follette's conscience is an unsafe guide.

There were Tories in the time of the Revolution who were conscientious; but the American people did not pick from among them the political leaders for the newly born Republic. There were advocates of disunion and slavery in the North during the Civil War who were conscientious, but the Nation did not pick from among them the leaders to guide it toward union and freedom. Mr. La Follette has placed himself among those who in times of National crisis have failed the Nation in true leadership because they have failed in clear vision.

POETIC PULMOTORS

A PROSPECTUS for a new poetry magazine drifted into The Outlook office the other day. The burden of its song is to be found in the following statement:

The poetry revival of recent years has done much towards stimulating an interest in the art. This interest, however, has hardly been general, for the revival, it is now evident, was chiefly among the poets and *litterati*. As a result, a large number of lovers and patrons of the other arts who should have been reached (and who, it was supposed, had been reached) still remain untouched by the movement.

The analysis of the situation seems to be correct, although the remedy proposed, the establishing of another poetry magazine, hardly seems to us adequate. Poetry, by right of its origin and inheritance, deserves to be as popular and as widely appreciated as music. Indeed, it might well find a larger audience, for the printed poem can reach many places where even the phonograph record is barred because of expense.

Perhaps modern poets themselves are to be blamed somewhat for the lack of general interest in their work. Too

many of them have been writing for writers, oblivious of the fact that the greatest of literature is that which has in it large elements of popular as well as technical appeal.

Of course those poets who in our own day have reached the largest audience are not necessarily those who are doing the most enduring work. If popular appeal is made the sole test, then Robert W. Service would loom up out of all proportion to his true worth. To ask poets to write for readers rather than writers is not to ask for any lowering

of poetic standards. It is to ask them to search for those elements of beauty which are universal, to interpret the general through the particular rather than to treat the particular as an end in itself.

The failure of many modern poets to see life clearly and as a whole is perhaps both a cause and a result of the limitation of the present audience for poetry. Good poetry, both ancient and modern, will come into its own again when there is a more general application of the methods of teaching poetry described by

Mr. C. Harlow Raymond in his "Book Table" article in this week's Outlook. There is, we believe, an underlying instinct for poetry which can be awakened and developed if the right encouragement is given.

THE PROHIBITION ISSUE IN A NUTSHELL

PERSONAL liberty ends where public injury begins.

SHERMAN ROGERS.

THE FALL OF THE COALITION IN BRITAIN

BY MAJOR-GENERAL SIR GEORGE ASTON, K.C.B.

WITH the fall of the leaf in England has come the fall of the Coalition and the return to party government. Far be it from any one who is more interested in principles than in politics to take part in the conflict of personalities that is now raging over questions about who is responsible for this development, and whether it will be a good thing or a bad thing for the country or for the world in general. The main points so far disclosed are that the watchword of Mr. Bonar Law's party is likely to be "Stability, not sensation," a determination to reduce our foreign commitments in the East so far as they can be reduced with honor, and, possibly in connection with these pronouncements, the fact that the 5 per cent war loan, the barometer of our financial stability, stands steady at 101½, or thereabouts.

The cause of a political upheaval, like the origin of a war, is always difficult to trace. Each of them can be compared to an explosion in a magazine. It may be easy enough to determine who applied the spark, but if there had not been an accumulation of explosive material there would have been no explosion; and it is never easy to discover the origin of the accumulation. There is no doubt that for the past two years or more there has been a sense of disquietude in this country about the extent of our military commitments, especially in the East. Our foreign policy since the war has been terribly costly to the British taxpayer. Irak, Palestine, and the defense of the Straits have cost us many millions, and in no single case, in these or in other departures in our foreign policy, has any responsible Minister been able to pronounce that our naval and military experts have been consulted about the armaments entailed by the policy that was adopted. Appeals to these "experts" have always been deferred until emergencies, easily foreseen, have actually occurred. We can go further than that. Not only has the armament aspect of our foreign policy been ignored, but events have been viewed with grave anxiety by the General Staff

of the army. As soon as the late Field Marshal Sir Henry Wilson was relieved of his responsibility as Chief of the Imperial General Staff he said as much in public. It may be asked, "Why, then, did he not resign?" The answer is to be found in the British Soldiers' Bible, the Field Service Regulations. We read there that the strength of forces to be maintained in peace or mobilized for war is a matter of policy, for which the Government is responsible. The War Office is responsible only for efficiently organizing, training, and equipping the forces voted by Parliament.

This sense of disquietude about our foreign policy was undoubtedly one of the explosives which had for some time been accumulating in the political magazine. Our expenditure in Irak was avowedly undertaken to help the new state to make a start, and to fulfill our pledge to the Arabs when, with their help, we destroyed the Turkish armies in 1918. Expenditure in Palestine was undertaken for similar reasons, and also in order to provide a national home for the Jews. Expenditure on the defense of the Straits, which has gone up by leaps and bounds, is due to our having made that business "our charge" under the terms of the Treaty of Sèvres, now a dead letter. All this heavy expenditure, be it noted, was undertaken on behalf of other nations; an altruistic and highly commendable policy, which had the support of the nation until it was realized that the heavy taxation and industrial distress in Britain was largely due to our pouring our money into the sands and seas of the Near and Middle East. Even so, we did not provide enough troops in our Constantinople army to support our proclaimed policy of keeping all armed forces outside the "neutral zones" surrounding the Dardanelles and Bosphorus. It was that which brought matters to a head.

The spark which ignited the magazine that exploded and blew up the "Coupon" Government was undoubtedly the official description of the Government's action that was issued to the press during a

fateful week-end in September. We do not even now know who was responsible for the blunder. That it was not made by any permanent official has been established. It must have been made by some Minister more apt to act upon impulse than to rely upon sound judgment. That is a personal matter, of politics rather than of principles. It was against the principles disclosed that the readers of the newspapers of that week-end stood aghast.

Only a few months after dispensing with the services of Indian troops in defending the Straits (a cause which they might not have had at heart) we had appealed to all the self-governing nations of the Commonwealth for aid. Australia and New Zealand responded; the remainder took time for thought, not understanding the issue. This appeal may or may not have been called for; on that there may be differences of opinion. We had also appealed to our late Balkan Allies—Rumania, Serbia (now expanded into Yugoslavia), and Greece (a belligerent in a war in which we had proclaimed our neutrality). It was that procedure, as reported in what claimed to be an official announcement of our policy, that caused the greatest anxiety in the public mind. What happened to that appeal we have never heard. It might, so it appeared, have led to a great war between Turkey (backed by France and perhaps Italy) and Greece, Yugoslavia, and Rumania, backed by ourselves, with the attitude of Bulgaria doubtful. It seemed to the public as if the foreign policy of the Coalition Government had resulted in breaking our Entente with France and Italy, had forced us to enlist the help of the Balkan States, and was landing us in a war in which we had no desire to embark.

Looking back upon the critical weeks through which we have passed, that seems to be the immediate cause of the fall of the Coalition, and with it, in the words of Lord Grey of Fallodon, the passing of something that was not wholesome out of our conduct of public affairs.

WHAT JAPAN IS LEAVING

I-TSINGTAU

BY ELIZA RUHAMAH SCIDMORE

TSINGTAU, the model Foreign Settlement or European city, which the Germans built at the entrance of Kiaochau Bay, Shantung Province, together with the surrounding area which constituted the former German leased territory, will be formally transferred to Chinese officials on Saturday, December 2. The last Japanese troops withdrew from the railway line May 4 and sailed from Tsingtau May 9, their final withdrawal delayed at the request of the Chinese, who in that brisk revolutionary season did not have ready the necessary police to guard the railway and its properties. For the same reason, the transfer of the leased territory was delayed by request after the ratifications of June 2. The treaty provides for the Chinese to take over the railway next March, but the Japanese are anxious to be relieved of it now.

The whole area of the leased territory, the actual ground space over which China resumes sovereignty (200 square miles), is roughly that of the District of Columbia or Greater New York, one-half of one per cent of Shantung Province, all that the Germans leased for ninety-nine years from March, 1898, and all that the Japanese captured by force of arms in November, 1914. Tsingtau, the city itself, cannot be literally "returned" to China, any more than the German-built railway can be "returned," since neither existed until the Germans came and built them. The territory was leased for a definite time, but the town site and the strip of land for the railway up to Tsinanfu, one iron mine, and two coal mines up-country were bought outright from private owners and became German property pure and simple. In the Treaty of Versailles, "Germany renounces in favor of Japan" was the wording of Article 156, which relates to this leased territory, while in Articles 130, 131, 132, and 133 she "waived," "abrogated," and "ceded" other rights, interests, and leases in China to Great Britain, to France, and to China itself.

It was a sorry-looking site for a future city when Prince Henry of Prussia and Admiral von Diederichs held their formal flag-raising on Harbor Hill in March, 1898. There was the shallow, muddy bay, fit for the anchorage of small gunboats only, until a harbor should be constructed, with a bold hill at the southern entrance and a range of barren hills running across the clay plain on the north shore to join the foothills and the Laoshan Range, which formed the east boundary of the leased territory. The surface of these hills and the land has been washing into and silting up the landlocked bay for all the

SHIZUOKA-MACHI, THE MAIN STREET OF TSINGTAU

centuries that the inhabitants have been lopping off the branches and grubbing up the roots of all green and growing things that were not food or forage. The nearly circular bay, about fourteen miles across, shrinks to half that size at each low tide. In the twelfth and thirteenth centuries Arab dhows and Cantonese junks came to this bay to trade, and Kiaochau, "the Glue City," had great renown, as also the near-by "Black-Ink City." Kiaochau is now ancient, crumbling, and literally decaying, as its scores of odors loudly proclaim, and is no longer a seaport. It lies eight miles inland from its junk port of Taputau, which is a seaport by the grace of the moon and the tides only. At all other times only slender trickles of sewage meander through the four miles of ooze that the twelve-foot drop of the tide leaves exposed. One reaches Kiaochau City by train, forty-two miles from Tsingtau, although it is only twenty miles in air line. Once within the gates, one goes back ten centuries. During those extraordinary discussions in the Senate over the Versailles Treaty Kiaochau and Tsingtau were hopelessly mixed up, as none of the orators evidently had looked at a map. One of the eloquent raved about "Kiaochau and Tsingtau, those two great ports;" a Versailles delegate spoke of "Kiaochau (the port of Tsingtau);" and there were bulls and breaks of this order past counting. They then took to Shantung, an easier word to pronounce, and it was "Shantung" and "all Shantung" every time they spoke, until they convinced

themselves that the Japanese were in occupation of and administering the whole province of Shantung, save for the period that "Shantung Peninsula" had vogue, and the Senate solemnly and unanimously voted their sorrow that "Articles 156 and 157 of the treaty were disregarding of the true rights and deep-seated desires of more than thirty-six millions of Chinese inhabiting the Peninsula!" all innocent of the fact that there were, not that many millions in the whole province, and that the greater part of the Shantung Peninsula was comprised in the great British leasehold of Weihaiwei and its special zone, and that its people had not been affected in any way by the treaty. There was such a welter of bad geography that it was timely for Clark University to establish a special school of geography at once, declaring us an illiterate people geographically—eighth-grade pupils the whole lot of us.

There stood only a temple to the Goddess of the Sea, a mud fort, a magistrate's house, and the few wretched shelters of some fishermen when the Germans came. The "China Sea Directory" for 1894, a precise and unemotional work, drew a dismal picture of the landscape: "The general appearance of the land about the bay is barren in the extreme; the dry parched soil (yellowish clay interspersed with occasional blocks of granite) has a most uninviting appearance." "The villages were all far back towards the hills, and the fishermen retreated there when the Germans had bought their seashore;

MAP OF THE GERMAN LEASEHOLD AT TSINGTAU TAKEN OVER BY JAPAN AND NOW RELINQUISHED TO CHINA

shacks. The German who took over the magistrate's *yamen* plastered the walls of the inside court and painted there a bold panorama of Tsingtau in its earliest aspect, which remains an interesting record. It had faded sadly by 1914, and the first Japanese occupant called up a painter in the Reserves and had the picture restored.

With a clear plot and no inheritance of old streets, roads, buildings, or slums, the Germans could plan the ideal city. They leveled hills, filled up gullies, reclaimed the foreshore, and extended dry land far out over the old mud flats. The ocean side, facing southward on blue water, was reserved for official constructions and villa sites, with the crescent beach beyond for a bathing resort, summer hotels and villas, park, and racecourse. Within the bay they allotted a quarter for Chinese running back from the junk harbor, and the level land stretching away from the commercial harbor was destined for railway yards, factories, and godowns. They built a mole three-quarters of a mile long to deflect the silt streams from the chosen harbor area of 1 1/6 square miles, dredged out a great harbor with a depth of ten and thirteen meters, surrounded the inner basin with stone docks, warehouses, and railway lines. There were a giant crane and a floating dock, and every modern harbor facility. Twenty million gold marks went to harbor works alone; as much more to the town site its public works and utilities— asphalt streets, macadam roads up to the edge of Chinese territory in every direction, sewers, water-works, electric light and power plants, abattoirs, ice factories, schools, hospitals, clubs, police and railway stations, villa and apartment houses to shelter German officials and employees, even a sanitarium up on the

side of Laoshan. They carved the double-headed eagle deep on the Diederich Stein, the sheer face of Harbor Hill, with a grandiose inscription in German text. More millions of good gold marks went to build twelve forts, on the beach and on the circle of hills around the town, each of granite and reinforced cement, with steel cupolas, underground magazines and labyrinths, besides barracks for one hundred and two thousand men each; forts that were the latest and loudest word in defense until the siege of Liège, since which they are but relics, souvenirs, laughed at as obsolete and antiquated by military men. They built a veritable castle for the Governor-General's residence on a breezy hill-top overlooking town and ocean, and there was violent debate in the Reichstag at the 800,000 marks it cost. But the big spending, the initial outlay, was ended in that first seven years, and there remained only the equivalent of 250,000,000 marks¹ to be supplied by German taxpayers for the annual budget of the purely military and official station. The 1,000 German civilians of the first years grew to 2,500 by 1914, and the garrison of nominally 3,000 men was increased to more than 5,000 when all the Reservists and Austrian ships' crews were gathered there for the siege.

The Germans planted trees and trees and trees all along the water-front, the streets and terraces, and the country roads; trees to the top of every hill and along the dried-up watercourses, and a double line of acacias all the 256 miles of the railway to Tsinanfu, with dense groves around each station house. All the scorching rock faces in the town were concealed by cool green vines and

bushes, and rambler roses festooned themselves along park rails by hundreds of yards. In the forest behind the bathing beach there were nursery gardens and a forestry school. There were free seedlings for all and free instruction for Chinese, but only paid employees benefited. The native mind does not yet understand or accept the forestry idea. "If my ancestors never planted trees to leave to me—only trees for their own coffin planks—why should I plant trees just to look green for my children?"

It was a model garden-city suburb worthy of Dresden or Frankfurt. I had seen it in its earliest years, when it was only a harbor and a skeleton of its ground plan, and its future trees were all tied to sticks, and again in an intermediate stage. By 1914 it was the completed dream, the perfect thing, and all Teutons, blatantly, chanted of this monument to German *Kultur*. The Prinz Heinrich and the Strand Hotels were the best on the China coast, and there were forty-two miles of motor roads. There were direct Norddeutscher Lloyd steamers to Europe every fortnight, and fast trains with sleeping and dining cars took one to Peking in twenty-four hours, and to Pukow, on the Yangtse, in the same time, for connection with Nanking and Shanghai. Two military bands played and a thousand foreigners strolled on the beach each summer morning, and it was *Deutschland über alles* surely. There was always the grand idea in each German head, too, that that double line of acacia trees would follow the twin rails on and on, across all Asia to junctions at Bagdad and Berlin und Weltmach!

Then all the world went to war, and the ultimatum of the Emperor of Japan, August 16, 1914, numbered the days of German Tsingtau. The port was blockaded, the railway was cut, and the Kiushiu regiment, landing at Laoshan Bay, was joined by the British contingent—800 Wales Borderers and 800 Indian troops under Col. Barnardiston—who fought with those Satsuma soldiers up over the rear slopes of Laoshan to the destroyed sanitarium and down to unite with the main Japanese forces (30,000 men of all arms) advancing along the railway line to the final assault. This was the "British army" of which the Senators ranted and blamed equally for "the conquest of Shantung." The graves of eleven British soldiers killed before Tsingtau have places of honor in the little English cemetery on the road to the water-works. The tablets of 1,214 Japanese killed before Tsingtau are preserved in a memorial temple on a hill near the reservoir. That Tsingtau campaign was a military promenade—mere "autumn maneuvers" the stay-at-home officers called it—a methodical affair, carried out exactly as prearranged in the war games at the military college, a parallel to the French battle of the Couronne at Nancy.

The Japanese had to repair, restore,

¹ This figure seems excessive. Our information puts expenditures for 1914 at \$4,762,000, of which \$2,015,000 came from local revenue.—The Editors.

From a photograph by Charles Hodges

A PANORAMIC VIEW OF THE MODERN CITY OF TSINGTAU CREATED DURING THE GERMAN AND JAPANESE OCCUPATIONS

and reconstruct everything on the face of their new inheritance. The ravages of war were obliterated within a year, and the model settlement was made to blossom with more rambler roses and more thousands of cherry trees on top of the prophetic gift of a thousand cherry trees to the new park by Marquis Komura in 1905. They literally made two of everything grow where one had grown before. They cut a record of their victory on the face of the Diedrich Stein, the line of Japanese seal characters chiseled straight down across the swelling breast of the double-headed eagle. They built schools, hospitals, and a much-needed market house, literally miles of dwellings and factories, extended roads and sewers; and, after repairing the wrecked water-works, constructed a new water station on the boundary of the territory that doubles the supply. One sees no water at either the old or the new water-works, only the reverberation under a motor's wheels telling that one has left the flat macadam road and is running over a stone-paved dry river-bed, which becomes a roaring torrent when clouds empty themselves on the barren hillsides. A row of gigantic steel buttons on the bank are the tops of artesian wells, from which the powerful electrically driven machinery sucks the water, and forces it to city reservoirs.

Tsingtau has been a happy refuge for retired Chinese officials to enjoy their fortunes in safety. Prince Kung and other Manchus fled there after the revolution that ended the Empire, and, although they retired to Tientsin during the siege, they were glad to return and enjoy law and order under the Japanese flag. The present transfer to Chinese control may be a dilemma for them.

Count Otani, former lord Abbot of the Hongwanji Temple in Kyoto, was another distinguished recluse, and Russian refugees of the better class, relics of the old Court circle, found asylum too. In the summer of 1920 the Italian aviators in their Rome-Tokyo flight made a long repair stop at Tsingtau, and held aerial high jinks over the beach and bay every day. Also came Mme. Semionoff—one of

the Mme. Semionoffs rather—down from Chita, with mountainous baggages to this haven of safety. Dark-haired, vivacious, well-gowned and jeweled beyond all reason, she distinctly added to the international gayety. Her ropes of pearls and great rings to each finger joint were enough to make a burglar die of coveting, while often at night a monstrous sapphire would flash blue fire and electric wings across the dining-room—a jewel as unique as the Czarina's great hexagonal emerald which made Rue de la Paix gasp last summer, and very possibly from the same august jewel-box.

There have been more than 20,000 Japanese resident in Tsingtau these eight years—officials, great and petty merchants, and lesser folk—all enjoying the summers but shivering at the mention of the long, hard, cruelly cold winters. Officials of the Colonial and other offices have been waiting in Tsingtau from year to year for relief, for the war to end, for the treaty to be made and ratified, and for the Chinese to begin negotiations. Half their children are at home—"with his grandmother in Tokyo," "with my sister in Osaka," and other relatives in the home islands—for schooling. When the Germans had turned over the Tsingtau records and archives in Berlin in February, 1920, all these were sure of going home before the autumn. But the Chinese flatly refused to open negotiations for the territory they were waiting to possess, for the country was in the midst of the so-called Students' Movement then, and passionately patriotic youths and very young school-children were screaming in street processions, raiding shops, and making bonfires of any one's Japanese goods, and having the time of their lives. No Chinese official dared risk his head by discussing things with the Japanese then, and a Shantung Governor who told the children to attend to their school-books, and their parents would attend to public policies, promptly lost his job. But for the Washington Conference they would still be howling for "Shantung," as they too came to call the little leased territory, and at the same time refusing three times

over requests to name negotiators and begin work to that end. German property-owners began to gather immediately after ratifications in 1920, and tourists like myself, scenting a possibly picturesque ceremony, were in Tsingtau in May and June, but to no account.

There have been more Chinese in Tsingtau of late than in German days—20,000 resident and 20,000 floating population—drawn first by the great demand for labor in reconstruction after the surrender, and since employed in the many industries and works instituted by the Japanese. The Chinese quarter was hardly their very own, or run in their way ever. Their houses had to be built according to German specifications, whitewashed, numbered, and, in the early morning only, ornamented with neat garbage-bins. There were sanitary regulations savagely enforced, inspections without cease (no evasions were possible), and there were always the fines, the big stick, the mailed fist, and the German language! The Chinese saw the sad joke, and hoped for some respite from the new masters; but, alas! the Japanese were madder about sanitation and smells than the others, and could think up a lot of things the Germans didn't know. The newcomers built a market house and shooed them and their baskets of produce in off the curbs; and built tenement-houses at smallest rentals to reduce the crowding; and big barracks for the thousands of laborers passing through the port at the seasonal exodus to and return from Manchurian bean fields. No more sleeping as the coolie might please, on docks and railway tracks, in parks and doorways. No slums, no open mud wallows, were permitted; no cesspools or garbage heaps at back or front doors. No dead animals or mangy dogs could lie in the streets. No drying skins and heaped entrails from household slaughtering could cumber the principal streets, as in happy Kiaochau City across the bay. A charity hospital for Chinese gathered in as many extraordinary and unknown cases as in any part of China. Some successful efforts at compulsory education and playgrounds were provided for

street children. Rows of granite flagstones were laid at either side of the immaculate street pavements, and iron-shod cart wheels and knife-edged wheelbarrow wheels soon learned to keep to

those stone runways strictly. Even the wheelbarrow's shriek was silenced by municipal order. Chinese police saw to it that municipal flower-beds were respected, and a municipal millennium

had arrived. Germans and Japanese have set a high civic standard, and the Chinese should respect its traditions and keep Tsingtau the perfect thing, the model city of the Far East.

II—SHANTUNG

BY CHARLES HODGES

ASSISTANT DIRECTOR OF THE DIVISION OF ORIENTAL COMMERCE AND POLITICS, NEW YORK UNIVERSITY

MAP AND PHOTOGRAPHS BY THE AUTHOR

AFTER a battle royal, in which Japan's capture of the key to North China from the German leaseholders at the opening of the Great War was but the first skirmish of a struggle that extended from Far Eastern Foreign Offices and the Versailles Peace to the Washington Conference itself via the American Senate, the Japanese are evacuating the prize of Kiaochau.

The international hue and cry over the question of Japan's control of Shantung was not raised merely because of the leasehold of Kiaochau Bay and the charming Teutonic-Nipponese watering-place of Tsingtau. Japan did not have to "own" the 55,984 square miles of

Shantung Province or govern some thirty millions of Chinese packed 550 to the square mile in order to control its future. That was a matter for what statesmen call "economic imperialism"—to all intents and purposes conquest by railway, bank, and business diplomacy.

When the German Empire occupied this corner of the old Middle Kingdom during the "battle of concessions," ostensibly as reparations for a missionary outrage, it was for the very purpose of effecting the economic penetration of China. The object of Japan was the same, and was clearly evidenced from the first days of the Great War. It was to make out of the privileged position so

easily seized from the Germans in Shantung a new Japanese preserve that would have affected the future of all North China. Japan had done this once before in the case of Manchuria, just across the Gulf of Pechili from Shantung.

THE ECONOMIC STAKES

When the Japanese military occupation of the German interests in Shantung was completed in 1914, the tangled skein of hard-handed diplomacy, business, and a new nationalism in the East was brought before the world for unraveling.

The 400 square mile leasehold, including Tsingtau engirded by the 2,500

A MAP PREPARED BY THE AUTHOR OF THIS ARTICLE IN 1919, SHOWING THE POINTS OF STRATEGIC INTEREST FROM THE ECONOMIC STANDPOINT INVOLVED IN THE OCCUPATION OF THE SHANTUNG PENINSULA BY THE JAPANESE

BUILDINGS CONSTRUCTED BY JAPAN IN THE HEART OF THE SHANTUNG PENINSULA, 250 MILES FROM TSINGTAU. THESE REPRESENT (LEFT) THE MILITARY BARRACKS AND (RIGHT) THE JAPANESE BANK AT TSINAN, THE CAPITAL OF SHANTUNG PROVINCE.

square miles of neutral zone about Kiaochau Bay, does not tell the whole story. The lodestone drawing the Mikado's land into the Shantung adventure consisted of (1) coal deposits much overrated; (2) iron resources of considerable magnitude; and (3) new commercial opportunity promising to relieve the pressure in part on Japanese industrialism. An accurate understanding of the Japanese stakes here would include, therefore, a 256-mile shoestring of railway stretching from the city of Tsingtau as the railway terminus and harbor to Tsinan, the capital of the province, where the hinterland of North China could be tapped by existing connections with the Chinese Government trunk line running north and south—which were to be fortified by subsequent concessions.

Japan, it must be remembered, occupied this railway zone from the sea to the interior as though it were Japanese territory. A gore ten miles wide was driven through the heart of Shantung, the only modern communications within the province itself being garrisoned, policed, and politically administered with Japanese civil courts along the railway and its branches to the mines. Within the full extent of the zone, the Japanese succeeded to all the special rights of exploitation wrung by the Germans from China in 1898, and even revived many concessions voluntarily relinquished by the latter prior to the World War.

DIPLOMATIC FORTIFICATIONS

The present settlement has been reached only because one by one various agreements upon which, as diplo-

matic fortifications, the Japanese depended for their tenure in Shantung have been broken down.

The recession of Japan's position is marked by four stages. First, Japan forced on the Chinese the ill-advised Twenty-one Demands of 1915 as an ultimatum to stifle diplomatic efforts to oust the Japanese from Shantung, leaving the Mikado's land for practical purposes master of the situation. Second, not satisfied with either the secret treaties of 1917 under which the Allies assented to Japan's programme or the grip on China developed during the Great War, Japan maneuvered the Peking Government in 1918 into two new agreements. These marked a turning-point in the Japanese policy. On the one side, they strengthened the grip of Japan on Shantung through new railway rights. On the other side, they yielded to the Chinese the military control and civil administration of the existing railway. Third, the Peace Treaty signed at Versailles gave everything to Japan with the unwritten commitment that she was eventually to restore Chinese sovereignty while retaining material economic advantages. Fourth, the negotiations just consummated to carry out the provisions of the Washington Conference settlement provided for a retrocession to China of political control exercised by Japan; the nationalization of the disputed railway communications; the turning of the strategic extensions over to "an international financial group;" the surrender of the original German cables, the Japanese wireless stations at Tsingtau and inland at Tsinan, and public properties; and Japan's renunciation

of "all preferential rights" claimed from Germany.

THE REAL MEANING OF THE SETTLEMENT

The significance of the Shantung settlement cannot be overestimated. Japan, it is true, gains material and moral compensation for doing the right thing; but China assumes obligations which she has yet to prove her ability to meet.

Japan has accepted a foreclosure of public opinion East and West upon her actions. They involved the perpetuation of the old order in the Orient, a breeder of war through militant political and business aggression from a dangerous use of military power. In this picture of the outcome of a bold bid for a new dominion in the Far East there is no hostility toward the Japanese people. Yesterday Japanese statesmen perhaps had reason to think this was the surest way to prosper the Mikado's land. Today those in the high places of Tokyo wisely sense the costly futility of the whole approach to position in the East based upon international ill will and distrust. These leaders of Japan, shaking off the burden of War Office diplomacy, are realists in world politics still; but they understand that the politics born of the Great War have been far too costly to serve further useful ends.

Great as has been the lesson of Shantung to China of the dangers of national backwardness, it has meant far more to Japan. Disillusioned as to the dividends from abuses of national strength, awakening from the alluring dream of empire, workaday Japan is now bent on capitalizing the more certain returns from neighborly friendship and confidence.

A RADICAL IN POWER: A STUDY OF LA FOLLETTE'

BY RICHARD BARRY

AN impression prevails that La Follette's political apogee was reached in 1912, when he seemed to be a stone's throw from the Presidency. On the contrary, he is only now, ten years later, approaching the peak of his political power, which will reach a very high curve beginning March 4, 1923.

In the next Congress no man will have greater potential influence. In the field of economic legislation, the most important with which Congress has to deal, it will be extremely difficult to put anything through against him, and whatever he desires to originate will have a high chance of success.

In fact, for the coming six years Robert M. La Follette will be practically the American Chancellor of the Exchequer—if we had such an office. It sounds absurd, considering his policies and his record. To many it may sound alarming. But it is true.

This is not primarily because La Follette is La Follette—one of the most vital and consistent political economists in public life anywhere in the world. It is not only because the late elections have given the balance of power in Congress to the radicals. Yet each of these causes enters into the result.

La Follette will be the new arbiter of American economic legislation through the operation of the rule of seniority in the United States Senate.

Months ago, anticipating the results of this election, I asked Lenroot what would happen in such an event. Would La Follette be permitted by the Senate to rise to the place of Smoot and Townsend? "Never!" he exclaimed; "the rule of seniority will be first abrogated." I asked Smoot the same question. "It is possible," said he. It is likely that Lenroot's certainty has been modified since November 7.

This apparition of the intense non-compromising radical in the seats of the mighty is not a new one in the sight of history. It is one of the commonplaces of political evolution. Yet it never fails to startle its contemporaries. And the American public is going to be startled when it sees La Follette next to the former seat of Aldrich and of Penrose.

Consider the situation. La Follette, ending eighteen years in the upper house, is now the third member of both the Inter-State Commerce Committee and the Finance Committee. These two committees, with the Committee on Appropriations, control economic legislation. As appropriations concern only expenditures, practically all creative policies affecting the economic life of the country originate either in the Finance or in the Inter-State Commerce Committees. Committee chairmen, together with ranking members of the majority party,

(C) 1922 John A. Glander

"FIGHTING BOB"

This portrait of La Follette helps us to understand the fact that as a young man he wrote to Booth and offered a suggestion to the latter as to an improvement in his histrionic technique

as the Senate is organized and operates, practically dictate legislation.

In the present and the last Congresses La Follette has been a constant menace to the conservative Republican leaders, yet he is only the third member of the two important committees. To prevent his entering the conference committee on the Tariff Bill—this is the solar plexus of Congress, for it is here that all tariff schedules are really written—the former rule taking in the three ranking majority members of the Senate Finance Committee was changed to take into con-

ference with the similar committee (Ways and Means) from the House only the two ranking members.

But they can't keep La Follette out of conference in the drafting of any economic legislation in the next Congress, for McCumber's defeat in North Dakota will advance Smoot to the chairmanship of the Finance Committee and will make La Follette the ranking member. And in conference there must be at least one of the minority, so the majority will have to be represented by at least Smoot and La Follette.

What a joining of forces—Smoot and La Follette; ultra-conservative with ultra-radical! The two have but one trait in common—industry. The only rival Smoot has in the Senate for hard work is La Follette. The only man in the upper house who keeps his nose on the grindstone like La Follette is Smoot. By similar sticking-at-it these two beavers have each gnawed a way into the inner citadel of prestige and power; they are as far apart in conclusion on all major economic policy as the negative and positive electrodes of a battery, yet over each flows one ægis, the Republican banner.

A complex government!

So delicate, so complex, that it is the solid apparition of this same La Follette which presents the distinguished, able, and adroit Senator Smoot with the hardest problem of his life. Smoot's problem is twofold. Through the withdrawal of Warren he advances to the chairmanship of the Committee of Appropriations, a place for which no man is better suited, one which fits his talent and temperament exactly, one from which the Republican leaders will deeply regret to see him go.

Yet the rule of the Senate is that no man may hold at the same time the chairmanship of two major committees, and the defeat of McCumber advances Smoot to the chairmanship of the Finance Committee, and, however much he may desire to relinquish that, he would not dare to do so, for doing so would automatically advance La Follette to the chair.

This is not his gravest problem. Smoot is next in line for the Presidency of the Mormon Church, an office which any good Mormon considers the most exalted on earth. The President, Heber Grant, is very old, and likely to die at any moment. If Smoot were ready to take the Mormon Presidency, Grant would probably resign immediately.

Smoot's affairs, however, concern the present consideration only indirectly, although they reveal what a thin line holds La Follette from chairmanship of the Finance Committee of the Senate, the place Penrose said he would not trade for the Presidency, the job Aldrich always believed to be the most desirable in the Government. Even though not in the chair, being next to it gives him a veto power over its acts.

There is a similar thin line between La Follette and the chairmanship of the Inter-State Commerce Committee, where, in the railway problem, chief among others, will have its most effective consideration in the immediate future. Only the time between now and March 4 next, his own resignation or death, or the abrogation of the seniority rule, can prevent La Follette from taking the place now held by Townsend, of Michigan, the ranking majority member, who, against every expectation, is defeated.

This is the situation, these are the facts doubtless uppermost in the mind of Senator McCormick, who seeks, with others, to abrogate the seniority rule and who appeals to Lodge, titular leader,

for assistance. It is clearly within its power for the Senate to abrogate the seniority rule. But will it do so?

To abrogate that rule not only would take La Follette from his ranking membership in the Inter-State Commerce Committee and in the Finance Committee, but it would also depose Borah from ranking membership of the Foreign Affairs Committee, Norris from the chairmanship of the Agricultural Committee, and Johnson from the chairmanship of the Patent Committee. Perhaps Johnson, but not Borah or Norris or La Follette, could be reconciled.

No. The Senate, perhaps with internal grumbling, and perhaps to the dimming of the Republican record, will not become so radical as to unseat the radicals in the name of progressivism.

Observe, then, the irony and the fatality of La Follette's approach to his political zenith; now, as always, opposed by the majority of his party, a voice in the wilderness, a pioneer in legislation, the man far in front, and yet concretely a bulldozer; a "visionary" triumphant with realized statesmanship!

In the Republican National Convention of 1908 (I choose one thread of thought to dramatize his career) La Follette presented a minority platform rejected by the Convention. Of its thirteen planks twelve have since become law. No matter. In 1908 the Republicans couldn't see them. One of the planks rejected by that Convention

was the direct outgrowth of a decade of legislative work in Wisconsin at a time when, in the words of Roosevelt, that State was "the political laboratory of the Nation." It called on Congress to give to the Inter-State Commerce Commission initiative in examining and in establishing freight rates.

Twelve to fifteen years ago the country was upset over this issue, yet it was but a rivulet to the main stream of a mighty reversal in American policy to which La Follette was then, as now, committed—Government ownership of the railways.

In the election of 1922 he was still contributing rivulets to this stream. He contended specifically in Wisconsin for a law compelling corporations to make public their income statements and tax returns. He won, but only after a four-year fight.

These two incidents may be connected with a thread on which can be strung the principal tenets of La Follette's political faith. Thus we may clearly see the base both of his principle and his policy. He wants Government ownership of all natural monopoly. That is his ultimate goal. But he will accept anything, adopting much, inventing more, that will even faintly approach his goal.

In 1923 (probably) he will be ranking member of the Senate Committee on Inter-State Commerce, and as such entitled to a seat at every conference, with a practical veto power (in conjunction with the Democratic minority) over

(C) 1922 John A. Glander

"OUR BOB"

The smile that gains a thousand votes

suggested legislation within this purview. Succeeding Townsend, he will be pledged (a) to a repeal of the Esch-Cummins Law; (b) to a revision downward of freight rates; and (c) to full publicity for every fact concerning railway ownership, value, cost, and management.

How near is he approaching his goal? To some extent, certainly; but how near?

When to the Republican National Convention of 1920 he submitted a minority platform (rejected, of course, just as were his in 1908, 1912, and 1916), a derisive shout went up at his sheer audacity in calmly demanding that the Government take over *in toto* all meat-packing plants and allied industries. "Allied industries!" What did that mean? Why, groceries, naturally. That would mean grains, cereals, fruits, sugar—everything eatable.

Most of the Republican delegates merely gasped. They hardly even took him seriously. Why, he was as bad as a Socialist, they said. True, only he was worse. The Socialist party of Wisconsin refused to indorse him, on the ground that he was too radical for them.

The ordinary Republican could not think beyond this point. Relief was sought and found in the report that La Follette was "crazy." This talk went around like a prairie fire. Men of the highest reputation and of the most respectable character have said to the writer (in confidence, as though consumed with pity), "You know La Follette is pathologically crazy." One told me that he had a doctor's report confirming this, a report alleged to be based on examination during La Follette's retention in a sanitarium for treatment for mental lesion. But this same man once told me that Henry Ford's family intended to apply for a guardian for him.

What are the facts about La Follette's sanity? Poetically, they may be stated in the words of Dryden:

Great wits are sure to madness near allied,
And tain partitions do their bounds divide.

• La Follette, who, from the standpoint of economic legislation, is the outstanding political genius of his time, often pushes his point with such desperation that his frenzy appears irrational—surely so to an opponent.

• Practically he is sound as a nut. His devoted followers of the Wisconsin hustings, who have returned him to the United States Senate by an almost unanimous vote, who have given him the Wisconsin Assembly unanimously and the Wisconsin Senate and State Government by a two-thirds majority, do not think they have given their suffrages to a madman. Two of his former physicians with whom I have talked do not take seriously the question concerning his sanity.

• La Follette's intense emotionalism (his Celtic derivative, if you please) has brought him to a nervous breakdown

on several occasions. The most notable was at the Philadelphia publishers' banquet in 1912. Few knew then that his beloved daughter lay critically ill. She was, in fact, operated on early the next morning. La Follette's heart and mind were with her as he faced his most critical audience.

• His devotion to his family is beyond the ordinary. A Senator who knows him well (not an adherent, but a sympathetic admirer) said to me recently: "I believe La Follette's mind was saved during the war by the illness of his son, Robert. The Senator's devotion to the boy he loved removed him from the worst of the storm against him."

• The "worst of the storm" may appear, as I set it down now, unbelievable. When he entered elevators in the Senate office building, its occupants usually vacated and let him ride alone. When he entered street cars, people left through both doors. Clubs in Madison to which he had belonged since his days as a university student expelled him. His next-door neighbors in Washington not only ostracized him, but kept tabs on his callers and followed each with adjurations to avoid him in future. The Senate, whose members knew him best of all, placed him in coventry while it held in committee against his repeated appeals for public trial the charge against him of "treason," refusing to give him or any one an inkling of its ultimate act. Meanwhile his spiritual bath in vitriol proceeded under a torrent of Nation-wide execration such as few men have ever survived, and it should be noted that of the six Senators then denounced by Wilson as "a little group of willful men" he alone remains in public place.

Perception of the intensity and extent of all this was avoided, as if providentially, for a year and a day, during which period the Senator did not go to the Capitol or to his office, but remained constantly as nurse and companion at his son's bedside. Thus he escaped, without knowing it, the worst of the storm, which might well have tried the reason of even the most courageous of men.

When La Follette at length appeared in his seat in the Senate, though every member knew that he had been waging a single-handed fight with death for the life of his beloved son, and that he had won the fight, not one came forward to greet him. He sat there in the most conspicuous place, on the aisle in the front row, directly under the eye of the Vice-President, practically a pariah.

After a few minutes a bellow came from a rear seat. "Why, there's La Follette!" And the bull elephant of them all shoved a ponderous way down the aisle, the first to grasp in fellowship the outraged hand. "How's your boy?" he queried, in genuine concern. It was Penrose. Following his lead, the herd closed in, and the humanities were resumed.

Closely following this the Senate re-

jected the proposition to expel La Follette for his war-time utterances. "I believe," said to me recently a Republican Senator, "that our action in almost unanimously rejecting the proposal to expel him marked a definite change in La Follette. At least I personally date from about that period a new mellowness in his spirit. There is no sting or bitterness or gall in him any more. He is as determined and uncompromising as ever where he believes his principles are involved, but he seems to have outgrown the feeling that he is an Ishmael, with his hand against all men, and all men's hands against him. If I am right, he feels now that the Senate is ruled by an elemental sense of justice that nothing can shake."

His faults? La Follette's chief fault (and, so far as I can see, his only fault) is that he is of French-Irish extraction. In a civilization pluming itself so often on a Nordic supremacy this may be an amiable weakness in an author or a college professor, but in a politician, especially when he approaches a place of chief power, it easily becomes a crime.

A man who defies the steam-roller is an object of commiseration or of ridicule; when he survives the steam-roller he becomes an object of hatred. A celebrated stabilizer or harmonizer of the Republican party said to me not long ago: "La Follette is a big man, all right. The way he always has kept Wisconsin behind him proves that; but he'll never amount to anything because he won't play ball; there's no team-work in him; he don't get the signals."

Another Republican, often employed by the Senate organization as the "liaison officer" between it and La Follette (a finished diplomat has been required for this delicate operation in the past, and the importance of his labors will increase) said to me: "La Follette gets the signals all right, but not from the team; he gets them from his own inner self. Don't believe, however, that he can't play parliamentary ball. He is one of the best at that game I ever saw, and with his new strategic advantages I don't see how any one can beat him."

Many mistake La Follette's accents for his premises. Read one of his speeches, and you will see in it only prosaic statements of fact, with an appeal to logic, meriting consideration, however much you may differ with the conclusion. Hear him deliver the same speech, and you may easily be confused by the violence of the utterance and the exuberance of the gesture.

His is the ebullition of a boiling geyser which affects manner and method, but not the substance; this geyser of oratorical intensity startles with its perpetual fount of sizzling steam; yet too many who think it is only vapor forget that its permanent origin is far down in the bowels of the earth.

For La Follette will rise, I believe, out of his period and will be seen in perspective as the enshrined demos of the principle of pure democratic govern-

ment, a principle as ancient as the cliffs and mounds of the aborigines who once dwelt on this continent. His destiny is, and has been, to embody that principle consistently, concretely, and effectively. He lacks the slightest particle of patience with any compromise with that principle. Whether it is right or wrong, practical or impractical, successful or unsuccessful, he is it.

Thirty-five years ago he was doing the same thing in Wisconsin that he did before the last election—holding vast throngs with the hypnotic force of his dynamic personality and the human appeal of his dramatization of economic problems. The *intelligentsia* of the State said then that he was only a demagogue who would wear himself out shortly. They have kept on saying that for over a generation, until he has worn himself into a place in Washington wherein he is one of the four or five individual forces slated to rule the Government of the coming few years.

Is he a demagogue? A demagogue, I

take it, is one who courts popularity by appealing to the baser passions of the mob. Remember, then, that La Follette over and over again has taken his established popularity in his hand, as it were, and apparently has thrown it away by espousing some cause admittedly and proven to be unpopular.

One of his college classmates said to me recently: "Knowing Bob La Follette intimately for fifty years, I conclude that his strongest trait is a delight in overcoming obstacles. He would rather have the mass against than with him; he glories in such a contest. In this he is the reverse of the demagogue. Rather, he is a pathfinder, a discoverer, a political evangel. Though I am sure he is scrupulously honest, both practically and intellectually, I believe that if two ways to the same end were open to him, one without and the other with opposition, he would deliberately choose the road with opposition, provided he did not thereby sacrifice a principle."

This is the shrewdest portrait I have

seen painted of "Battle Bob." He never seems to find enough exercise either for his intellectual or for his spiritual muscles.

Barney Baruch hails "Al" Smith's victory in New York as "the greatest personal vindication in the history of American politics." Is it? Consider the vindication of La Follette. Smith's majority in a vote of over two million was about 400,000, or $1\frac{1}{2}$ to 1. La Follette's in a vote of about 400,000 was 275,000, or 5 to 1—very much the biggest of a career accustomed to big majorities. Statistically, at any rate, it appears that La Follette's vindication is about three times as impressive as "the greatest personal vindication in the history of American politics."

Now he will continue on the road of his manifest destiny, that of a political prophylaxis working within the Republican party. The party has usually opposed his irresistible force, but, since the beginning of the century, it has not been able to proceed without him.

SOLSTICE

BY LESLIE NELSON JENNINGS

WHOSE lips are thirsty for the sun-ripe fruit
That, in successive season, follows bloom?
Who loiters in the orchard with his flute
Of pensive airs and elegies? For whom
The dance of leaves and the blue scarves of smoke
Against the twilit, melancholy sky?
The winds have gathered round him like a cloak
To make more secret still his going by.

Autumn is but a mask before his face,
The frozen fields a vestiture; and where
His hand has rested, in whatever place,
Water will run no more and boughs be bare.
Last night I heard a step. . . . Now God be thanked
For this good harvest and these green logs banked!

LUMBER CAMP HONESTY

BY SHERMAN ROGERS

INDUSTRIAL CORRESPONDENT OF THE OUTLOOK

"WHATEVER gave you the idea that ninety-five per cent of men want to play fair?" snapped a member of one of the first audiences I addressed in the East. Before I had a chance to answer, he added, "It's all right for you theoretical geniuses to expound these wonderful theories from a platform, but I have long since found, by bitter experience, that beautiful theory and cold reality aren't always the closest of friends."

"Well," I answered, "it's late. Suppose we go into the dining-room and have a cup of coffee, and I'll tell you what started a belief that has since grown to positive conviction that ninety-

five men out of a hundred are fundamentally square."

"I'm from Missouri," laughed my interrogator, as we sat down, "and will have to be shown."

I proceeded to show him as well as I could by telling him the following story of my early days in a lumber camp.

I was engaged in a Pacific coast steam logging camp as a "rigging slinger," which is probably as hard a job and as unpleasant a one as there is in a high lead logging camp. It doesn't mean that all beginners take that job, because they don't. It takes a husky man to stick with it, but you do get a first-class opportunity to study human nature—not

the rigging slingers alone, but those rough, fighting workers who compose the entire yarding crews.

Although I had worked in the woods in the intermountain section of Idaho, where the timber was small and all logging performed by hand, for many years, I found that my past logging experience was practically valueless in a steam logging camp.

In due time Christmas rolled around. I had saved a small amount of money—as money goes even in a logging camp—but to me, who had been down and almost out for quite a while, my faith in everything shaken, my pay check seemed like a small fortune. As I recall it, my

check amounted to \$186. As the workers in the camp were paid off for the week's Christmas holiday, given in all Western logging operations, the superintendent called me in and asked me if I was returning after New Year's. I assured him that I would be back. "All right," he said. "I've noticed that you never take a drink."

"No," I answered, "I haven't so far in life. I don't intend to start in this week."

I was curious to know why the superintendent asked me the question, but, on my query, he answered: "I take it that you must be green in the woods, and I just wanted to tell you that while you're downtown if you don't 'blow your money' you'll likely have a fair amount of change left when the vacation is over."

"Don't worry about that," I replied: "I'm not going to spend any of it, only for a hotel, a few picture shows, and a ticket back."

"No! no!" growled the superintendent. "I didn't want an oration on what you're going to do with it, but I've noticed that you're not familiar with the customs of the woods. While you're in town you'll continually meet some of the boys from the camp who are broke. They may ask you for a few dollars. When they do, don't ask any questions: just give it to them, as long as it is in small amounts, and don't worry about it; you'll get it back."

The superintendent was right. During the week I spent in town it seemed to me that the lumberjacks had spent their money with remarkable suddenness. Practically every man I ran into passed a very friendly greeting with a string attached, the string being a good-natured request for "a coupla dollars."

On the evening of the third day I counted up. I had just about enough left to get back. However, before I reached the boat I had given out \$10 more to three friends who hadn't fared very well in the various "spending academies" dotting the streets in the famous skid-road section below the totem-pole in the "Queen City."

Yet I was buoyed up with the positive assurance of the superintendent that I would get it all back. "Maybe not this month," he told me, "but it'll all come back in the course of two or three pay days." But during the following week, bounding through the brush with the fourteen to twenty foot heavy "choker" cables at \$3.30 a day, I couldn't help but become a little pessimistic about "getting it all back." Before the first of the month rolled around I was downright nervous, and I frankly told the superintendent that I had regretted the fact many times that my hundred and fifty-odd dollars I had loaned out were not safely reposing in a savings bank.

"Just as good where it is," he replied. "The savings bank might 'bust,' but these lumberjacks that you have loaned this money to aren't going to all die at once."

I knew that the loans were widely distributed. I hadn't kept track. I didn't know just how many men owed me, nor what amounts. In all, I think there were about thirty-five or forty loans, ranging from one dollar to fifteen. But what made me most nervous was the fact that not over thirty per cent of our crew had come back. A goodly part of the men I had loaned money to had gone out to other camps in various parts of the State. I didn't even know the names of most of them, and certainly hadn't the slightest idea where they had gone.

SHERMAN ROGERS'S ALASKAN ARTICLES BEGIN IN NEXT WEEK'S ISSUE. THEY HAVE A VITAL BEARING ON THE FUTURE OF A GREAT TERRITORY

To my intense surprise, on the third, fourth, and fifth of the first month my mail had the appearance of a collection agency. It seemed that all of a sudden I had become decidedly popular somewhere. Most of the envelopes contained a bill. Very few of them any other notice—a one-dollar bill, a two-dollar bill, or a five-dollar bill—leaving me no wiser than before as to who had sent it. I got back over a hundred dollars that first month. By March 1 a few odd one-dollar and two-dollar bills had come in. By March 5 the entire amount had come back with the exception of one \$7 loan and a \$5 loan. I figured, by March 10, that I had probably lost the last.

During March a man in our camp was badly hurt, and I took him to the hospital. We arrived at the institution at about one o'clock in the morning. I remained long enough to see him into the ward reserved for men hurt in logging operations. As I entered the ward I heard: "There he is now! Hey, you!" I walked over to the bed from which the call came, and recognized a former worker in our camp, but I didn't recall anything further to bring him to mind.

"You loaned me \$5," he blurted out. "I've been in the hospital here for six weeks, and I haven't been able to send it to you. I just got my compensation check from the State this morning, and here's your \$5. Thanks very much."

I then went to bed, to get up two hours later to catch an early boat back up the canal. At that hour the "skid road" is practically deserted. I hadn't advanced very far when some one yelled and started on a run toward me. Instinctively I felt, "Here's a hold-up." I started to run. My pursuer was in good shape. Every few minutes he yelled lustily for me to stop. I put up a good race, but he steadily gained. However, I had reached Railroad Avenue by this time—out in the open glare of the electric lights. I figured I was safe, but the man chasing me didn't stop. He ran up to me, put his hand in his pocket, and wrathfully exclaimed, "You big chump! I've been looking for you all over since I came to town. I knew I had borrowed \$7 from somebody. As you passed the alleyway back there, I recognized you, and instantly recognized the fact that I owed you the \$7. Here it is. Thanks. See you again some time."

As I walked to the boat landing I realized that I had made thirty or forty promiscuous loans to men without knowing whether I should ever see them again, to men who had no money a week after pay day, to men who knew full well they probably would never see me again, and yet one hundred per cent of those men had returned their loans to me. In other words, one hundred per cent of these practical strangers had proved themselves to be square.

This experience was the beginning of the creed I have since grown to have perfect confidence in—that ninety-five per cent of men want to play fair.

UNDER FOUR PRESIDENTS

THE AUTOBIOGRAPHY OF OSCAR S. STRAUS

CHAPTER XIII—THE PARIS PEACE CONFERENCE

NOW that the curtain of armistice had descended upon the world's most devastating war, the League to Enforce Peace was endeavoring to co-operate in every possible way with President Wilson and the official delegates to the Peace Conference, and with similar organizations in Europe, to bring into existence a League of Nations.

I had been made chairman of the Overseas Committee, and on the afternoon of Theodore Roosevelt's funeral former President Taft and I met to confer regarding the work to be done. Both of us were very much depressed by the death of our friend. Taft felt grateful that "Theodore" (as he always called Roosevelt) and he had some months earlier re-established their long-time former friendship, which had unhappily been interrupted by political events.

Mr. Taft courteously told me that he was glad that I was going to Paris, and that he believed I might render a great service in helping to secure an effective League of Nations. He hoped I would have conferences with Balfour, Lloyd George, and Léon Bourgeois, and that I would be able to show them what kind of a League we and, as we thought, the American public generally wanted. At my request, Taft agreed to write me a letter, signed by himself, as President of the League to Enforce Peace, and by A. Lawrence Lowell, chairman of the Executive Committee, giving me full authority to take whatever action in Europe that I might consider wise. I told Taft that I wanted a letter which should expressly state, among other things, that I was to support our official delegates, as it would not do for America to show a divided front.

He told me, what I also had known from conversations with Roosevelt, that Roosevelt had latterly expressed himself in favor of such a League of Nations as we stood for. I reminded Taft that Roosevelt had been the first in recent years to emphasize the subject of a League of Nations, having done so in his Nobel Peace Prize address.

A YOUTHFUL LORD CHANCELLOR

Reaching London on February 4, 1919, I promptly conferred with the members of the British League of Nations Union. Sir Willoughby Dickinson, M. P., gave me full details of the meetings that had been held by the English, French, and Italian leagues in Paris.

While in London we dined with our new Ambassador, John W. Davis, formerly the Solicitor-General of the United

International

Some of the main actors in the imposing drama of the Peace Conference. Left to right: Messrs. Lansing, Wilson, Clemenceau, Lloyd George, and Bonar Law

States. Both he and Mrs. Davis, in the short time they had been in London, had won the esteem of official England. At this dinner I had a long conversation with the new Lord Chancellor, Lord Birkenhead, formerly Sir Frederick Smith, who held a distinguished position at the British bar, and had been Attorney-General in the last Cabinet. In the latter part of 1917 he had visited the United States, where I had met him. He was then only forty-seven years of age, but looked much younger, and therefore quite unlike the typical Lord Chancellor robed in venerable dignity. He told me that he was the youngest Lord Chancellor, with one exception, that had ever sat on the woolsack. He had the youthful and vivacious face of a man in the thirties. He said that nothing would please him more than, when he was no longer Lord Chancellor, to practice law in America, but he said that precedent would not permit a former Lord Chancellor to return to the bar and practice his profession. He was very outspoken in his opposition to a League of Nations, saying that it was a Utopian idea.

As a dinner guest of Sir Arthur Steele-Maitland, M. P., Under-Secretary of the Foreign Office, I met my old friend Viscount Bryce, who was then about eighty-two years of age. He was still in the best of health and his mind was as alert as ever. He brought me a copy of his recent brochure, "Proposals for the Pre-

vention of Future Wars." Maitland strongly favored a League of Nations.

BEHIND THE SCENES OF THE PARIS CONFERENCE

We arrived in Paris on February 9, where our friends Mr. and Mrs. Edward Mamelnsdorf had generously placed at our disposal their comfortable apartment in the Rue Montaigne, which was most conveniently and centrally situated and saved us the necessity and difficulty of securing accommodations, all the hotels being jammed full. At the Crillon Hotel, headquarters of the American Delegation, we conferred with Colonel House, with whom arrangements were made for the fullest co-operation between our League and the Official Commission. We also conferred with Mr. Gordon Auchincloss, son-in-law and secretary of Colonel House, who, after consulting with the latter, gave me in confidence a typewritten copy of the Articles of the League entitled "Draft as Provisionally Approved." He said that the Colonel wanted me to have this, so that I might study it. I was told that the outlook for the adoption of a League was very discouraging because the French Delegation, headed by Léon Bourgeois, insisted upon two additional clauses—(1) the control by the League of the manufacture of all armaments and of all war industries, and (2) an

Bain

Léon Bourgeois, head of the French Delegation, who was persuaded by Mr. Straus to accept the League of Nations covenant as preliminarily drafted

international military force to defend the French frontier, which, Bourgeois insisted, quoting from a former speech of President Wilson, "was the frontier of civilization."

President Wilson had emphatically objected to the proposed additions.

When I informed Colonel House that I was about to call on Léon Bourgeois at his home across the Seine, he said, "By all means, go," and added that Bourgeois's attitude "had put the League on the rocks."

Arriving at Bourgeois's house late in the afternoon, we were told that he was in the Senate and would not return until late. While there, however, I met my friend and colleague on the Hague Tribunal, Baron d'Estournelles de Constant. He said he would see to it that we met Bourgeois that evening, and Baron d'Estournelles and Bourgeois arrived at my residence promptly at seven o'clock that evening.

Bourgeois presented the interposing difficulties and the divergence of views between him and President Wilson and Colonel House. I explained to him, more fully than he seemed to have appreciated before, that the war-making power was lodged by our Constitution exclusively in Congress, and that even if the President should agree to the additional articles, if these articles would in any way conflict with the war-making power as provided for in the Constitution President Wilson's assent would be without effect, and would never be ratified by our Senate.

Here the telephone rang, and M. Bourgeois was informed that the President of the Ministry, M. Clemenceau, desired to see him at once. Bourgeois

said he would shortly return, and hurriedly left us. In the meantime we continued the conversation with d'Estournelles, who, being familiar with our American system, was better able to appreciate the problem. I told him plainly that Colonel House had said to me that afternoon that "the League of Nations was on the rocks."

BOURGEOIS AGREES TO ACCEPT THE COVENANT

Bourgeois returned in half an hour, and we resumed the discussion. After explaining more at length our Constitutional provisions, I told him that if the proposed League were made too strong it would be useless, so far as America was concerned, since it would not be ratified by the Senate. Knowing what a strong advocate he had always been of the League of Nations, as he was and had been for years past the President of the French League of Nations Society, I asked him whether he would prefer having no League rather than a League as drafted, without the two articles he had proposed.

He frankly replied that, if that were the alternative, he would prefer to have the League as drafted. He then referred to the fact that at our last Congressional election the Administration had been defeated, and therefore, as he understood it, the President represented a minority party. I told him that, while such would be the case under the European system, it was not so under our system, and then read to him from my letter of credence "to support the President," explaining that the President of our League, Mr. Taft, along with Dr. Lowell, myself, and many others, were not of the President's party, yet I was authorized and instructed to support the President.

Bourgeois replied that at the Plenary Session of the Conference, which was to be held on the Friday following, namely, on the 14th, at the Quai d'Orsay, in view of the American position which I had made clear to him, he would support the "Draft as Provisionally Approved," but that he wanted me to appreciate that they had politics in France as well as we had, and that therefore he would, at any rate, have to present at the Conference the two articles referred to, if for no other reason than for their popular effect; but that I could rely on it that his Government would in the final analysis accept the Covenant or draft as provisionally presented by the representatives of the fourteen nations which had participated in its preparation and had preliminarily agreed to it.

When Bourgeois and d'Estournelles departed at about ten o'clock, I called up Colonel House, and, after briefly informing him what had taken place, I told him that the League was "off the rocks." He expressed his great gratification, and on the following morning when I met him he said that he had informed the

Colonel House, who, on Mr. Straus's arrival in Paris, immediately ushered him behind the scenes of the Peace Conference

President, who desired heartily to congratulate me.

When Colonel House had informed me that "the League was on the rocks," it was more real than figurative; for at the session of the Commission on the League held the evening before, the French members having insisted upon an international army to guard the frontier, and President Wilson having point-blank refused to agree to it, an *impasse* had been reached, since neither side would give way. The Commission thereupon adjourned, apparently without any possibility of coming to an understanding. Considerable bitterness was developed in the discussion, as I learned, between the President and M. Bourgeois. It was at this stage that I fortuitously arrived at the Crillon to report that our Committee, by calling on M. Bourgeois, had been able unofficially to take up and discuss with him the situation, which officially had apparently passed beyond the stage of further discussion. Therefore it proved a great relief to the President and Colonel House, as well as to Clemenceau and Bourgeois, that we had been able to remove the *impasse* by inducing the French delegates to agree to support the Covenant as preliminarily drafted.

The next day I met Baron d'Estournelles at lunch, and he informed me that Bourgeois had expressed himself gratified with the clarification I had given him and that I could rely upon the Covenant being adopted as we had agreed.

AT THE IMPOSING PLENARY SESSION

On the morning of the 14th, while I was at Colonel House's office, I received a copy of the Covenant, which had just been put in print, as re-edited by the Sub-Committee of the League of Nations.

under the chairmanship of Lord Robert Cecil. While I was there, President Wilson came in to meet the representatives of the American press. When he saw me, he expressed his high appreciation for our services and helpfulness. The President made a brief address to the correspondents, beginning in a semi-humorous vein, and then giving a general description of the Covenant as finally drafted, explaining that where so many nations were involved no one's individual ideas could be fully satisfied, and that there had to be yielding on all sides. Wilson added that he would have liked to see some definite provisions regarding the protection of religious minorities, and referred to several of the other outstanding provisions.

Colonel House asked me to see Bourgeois again before the Plenary Session, which was to take place that afternoon, saying that he had heard that Bourgeois was going to oppose the Covenant. I immediately called on Bourgeois again, and told him precisely what the Colonel had said, but Bourgeois assured me that there had been no change, and that the Covenant, or, as it was styled in French, *Le Pacte*, would not be opposed.

That same afternoon I went with former Ambassador Henry White, one of our official delegates, to the Session of the Plenary Conference at the Quai d'Orsay, which convened at 3:30 o'clock. I accompanied him into the Conference room, a large, vaulted, ornate chamber known as the Clock Room, where were seated, at the tables arranged along three sides of a square, with an inner row of seats arranged in the same way, the delegates of the thirty nations.

On the outside of the square were the tables for the secretaries of the several nations. At the head of the table sat M. Clemenceau; to his right was President Wilson, and on his left was to be Lloyd George, but, as he was not present, Lord Robert Cecil sat in his place. Next on the right was Mr. Lansing, and next on the left was Mr. Balfour, and so on in order. In the rear of the chamber were a number of distinguished persons and other officials of the Powers. To one side was another large room with arched entrances, occupied by the correspondents of the press of the world.

The proceedings began at four o'clock. The ushers closed the large entrance doors leading out into the foyer, and all was still and in expectancy when Clemenceau rose and, in his usual brusque and unceremonious manner, announced that "Monsieur Wilson" would have the "parole," meaning the floor.

WILSON READS COVENANT

President Wilson arose, calm, dignified, and entirely self-possessed, and, after a few preliminary words, stated that the representatives of the fourteen nations which composed the League of Nations Committee had unanimously agreed to the Covenant, consisting of twenty-six articles, to be presented to

the Conference, representing, according to the estimate, 1,200,000,000 people.

He read the articles of the Covenant, one by one, interpolating here and there brief explanations. The title "Covenant" had been given the document by Wilson, a designation he had previously used in one of his speeches. This was regarded as most appropriate, since the pact was not a treaty or convention, but something higher and more sacred, hence the scriptural designation "Covenant," such as God had made with Israel.

After reading the articles, Wilson made an address of about thirty minutes. It was clear, forceful, and in his inimitable style. In closing he said: "Armed force is in the background in this programme, but it is in the background, and if the moral force of the world will not suffice, the physical force of the world shall. But that is the last resort, because this is intended as a constitution of peace, not as a League of War. Many terrible things have come out of this war, gentlemen, but some very beautiful things have come out of it. Wrong has been defeated, but the

rest of the world has been more conscious than it ever was before, of the majesty of right."

Lord Robert Cecil then spoke briefly, and I will quote a single passage from his address: "Finally, we have thought that if the world is to be at peace, it is not enough to forbid war. We must do something more than that. We must try and substitute for the principle of international competition that of international co-operation."

Bourgeois declared that he proposed amendments which he thought he ought to mention; that, while his country had accepted the text which had been read, the amendments were mentioned so that, as the text went before the world, the amendments might also be considered, to the effect that we ought to have a permanent organization to prepare military and naval means of execution and make them ready in case of emergency.

President Wilson as he appeared on his arrival in Paris for the Peace Conference

tained his previous amendments, which were as follows: "The equality of nations being a basic principle of the League of Nations, the High Contracting Parties agree to accord, as soon as possible, to all aliens, nationals of States, members of the League, equal and just treatment in every respect, making no distinction either in law or in fact on account of their race or nationality." He then added: "I feel it my duty to declare clearly on this occasion that the Japanese Government and people feel poignant regret at the failure of the Commission to approve of their just demand for laying down a principle aiming at the adjustment of this long-standing grievance, the demand that is based upon a deep-rooted natural conviction. They will continue in their insistence for the adoption of this principle by the League in the future."

George Barnes, the English labor leader, upheld the argument of Bourgeois for an international force. Venizelos referred to the amendments of France which had been held back because of constitutional barriers of acquiescence on the part of certain countries. He thought those countries should make an effort to remove those barriers, but that, if they could not do so, then France should recede from her position. Mr. Hughes, of Australia, interposed a question demanding to know when and where the discussion of mandatories would take place, to which Clemenceau replied that the document would rest on the table and would be discussed at a distant date. Thereupon he abruptly adjourned the session.

CIVILIZATION'S GOLDEN CHAPTER

As the delegates moved out, I met President Wilson, who asked me for my opinion about the Covenant. I replied that it was much more comprehensive and forceful than I had believed it possible for the nations preliminarily to agree upon. He expressed himself as much gratified. I believed then, and do yet, that but for Wilson's prestige and dominant leadership of the Conference, so far at least as the Covenant was concerned, it would perhaps not have been formulated, if ever, until after the Treaty of Peace was concluded. At any rate, I very much doubt if an agreement could have been arrived at.

After my conversation with Wilson, Bourgeois said to me that he hoped I was satisfied with his remarks in support of the Covenant, that he had to refer to the amendments he presented so that they might receive consideration. I told him that he had followed the course he had agreed to when he spoke to me two nights before, that, while he would refer to his amendments, he would nevertheless support the Covenant.

When I had returned to my apartment, I wrote in my "Random Notes: "I regard this day and its happenings as the golden chapter in the history of civilization." Notwithstanding what has

since happened, I have not abandoned hope that such may yet prove true.

AT TEA WITH GENERAL SMUTS

Two days before the meeting of the Conference, Hamilton Holt and I had tea with General Smuts, the distinguished South African delegate. He is a man of very pleasant appearance, rather short in stature, and with his florid complexion looks like a veritable Dutchman. He was then apparently about fifty years of age. He would hardly, from his appearance, be taken for a soldier, but rather for a student. He had given much detailed study to the subject of a League of Nations, and from his brochure "The League of Nations—A Practical Suggestion" (1918) more of his suggestions as there set forth entered into the articles of the Covenant than those proposed by any other of the delegates, including Willson. Smuts advocated in this brochure that "the League should be put in the very forefront of the programme of the Peace Conference," the same position that Willson afterward successfully pushed forward. In the preface of his brochure, dated December 16, 1918, Smuts says:

To my mind the world is ripe for the greatest step forward ever made in the government of man. And I hope this brief account of the League will assist the public to realize how great an advance is possible to-day as a direct result of the immeasurable sacrifices of this war. If that advance is not made, this war will, from the most essential point of view, have been fought in vain, and great calamities will follow.

Dining soon afterwards with Sir Robert Borden, then Premier of Canada and

FINAL events in Paris connected with the Peace Conference are described next week by Ambassador Straus in the closing chapter of his Autobiography. He depicts important conferences with President Wilson, Colonel House, Alexander Kerensky, Venizelos, refugee Russian statesmen, and others. He reports the London meeting of the allied societies for the League of Nations. He tells of his return to America and of the efforts to secure American participation in some kind of League of Nations. He closes with a terse and illuminating appeal for individual states to conform their policies to the world's common needs.

one of the British delegates, we met several of his colleagues. Balfour was expected, but he had been compelled to return to London that day. Sir Robert was an important member of the British Delegation, and made some very helpful suggestions. He opposed Article X of the Covenant, which provides that "the High Contracting Parties undertake to respect and preserve as against external aggression the territorial integrity and existing political independence of all States, members of the League," etc., the same article that eventually met with so much opposition in our Senate, and doubtless was the principal cause for the Senate's failure to ratify. At that time it was generally rumored that Borden would be selected as Ambassador to the United States to succeed Lord Reading. He would doubtless have made a most acceptable representative in Washington of the British Government, exceptional as it would have been to have the British Empire represented by a colonial official. No one could have been sent who understood our country and our people better.

PERSHING NERVOUS BEFORE MAKING A SPEECH

Washington's Birthday was celebrated by the American Society, which gave a luncheon at the Hôtel Palais d'Orsay. There were present about one hundred and fifty Americans. It was a notable assembly, and I had the pleasure of sitting next to General Pershing, with whom I had a lengthy talk. We spoke, among other things, of the proposal that our country should take a mandate to govern the Ottoman Empire or any part of Europe. Great propaganda had been made that we should take a mandate for the Ottoman Empire. Pershing agreed with me that this would lead to endless complications and would not be approved at home. I also talked with Colonel House upon the subject, who was of the same opinion. Pershing was evidently quite nervous, for he was expected to speak, and he was making some notes. It appeared to me that he was more disturbed than if he were about to enter into a serious military engagement.

I had lunch the next day with Boris Bakhmeteff, Russian Ambassador to the United States, at which I met Sazonoff, former Minister for Foreign Affairs under the Czar's régime. We spoke of Russia and the possibility of reconstruction.

I was told that the late Czar was kindly and humane, but that he had been completely misled and dominated by crafty Ministers who were plotting and intriguing one against the other; that Russia was not, by reason of the ignorance of its people, fitted to become a republic, but that it must have a government powerfully centralized, and that its best hope would be the restoration of the monarchy under Grand Duke Nicholas as constitutional ruler. Sazo-

noff said it was a pity that Petrograd was not taken by the Allied fleet.

On February 26 the Union of Associations for the Society of Nations, together with the European Bureau of the Carnegie Peace Foundation, gave a luncheon in honor of Ambassador Sharp and myself at the Cercle Interallié, at which M. Léon Bourgeois presided. There were present some seventy-five guests, mostly delegates and French officials, including Sir Robert Borden; Venizelos, the Greek delegate; the Rumanian Minister; M. Vesnitch, the Serbian Minister; and the Brazilian Ambassador. At the conclusion M. Bourgeois arose and, although there were to be no set speeches, expressed the regret of the French nation that Ambassador Sharp would in the near future relinquish his post, and complimented his Administration upon its work of the past four trying years. He praised my effective helpfulness in regard to the League of Nations, and stated that he not only greeted me as a twin, because he was born in the same year as I was, but also as a Frenchman, since my father, who was born in 1809,

was a Frenchman by birth, and because my great-grandfather was a delegate to the Conference which was summoned by Napoleon during the first decade of the past century.

In reply, I stated that an American, to be truly patriotic, should understand our early history, and that no American with this knowledge could fail to have a love and sense of gratitude for France, our ally in the establishment of democracy, as we had so recently been her ally for the liberation of the world.

LANSING IS SIDE-TRACKED

My conferences regarding the League of Nations while it was under discussion and formulation by the Committee of the Conference having charge of that subject were held with Colonel House and his secretary, Mr. Auchincloss. On February 27 I had lunch with Secretary Lansing. It had been quite obvious to me that even before this he had been practically side-tracked, and that Colonel House had replaced him from the beginning, doubtless by direction of the

President. This was very evident so far as the League of Nations was concerned.

Mr. Lansing informed me that he had pointed out a number of technical objections to the Covenant as formulated, which, he was sure, would prove a fruitful source of difference and would make trouble. It seemed to me that he was evidently not conversant with the various stages of discussion regarding the articles of the Covenant.

I referred to the entire omission in the second draft of the section respecting civil and religious liberty and the protection of minorities, which was contained in the tentative draft, but was finally omitted because Japan had insisted that the equality of races be included, whereupon the whole subject had been omitted. I suggested that the entire subject, which was in fact a Bill of Rights, now that it had been excluded from the Covenant, should be incorporated in the treaties to be made with each of the new nations. Lansing agreed with me that that should be done and would, under the circumstances, be the best plan.

THE JERICHO ROAD

BY HENRY VAN DYKE

IN the big, bare inn at the top of the Jericho Road three travelers were sitting around an open fire, for the night was cold. They were persons of some importance in their time, being rich, and their many followers—servants, guards, horses, and beasts of burden—crowded the alcoves around the courtyard of the khân.

One of the three was a Roman tax-gatherer from Jerusalem; the second was a Persian silk merchant from Ecbatana; the third was a Greek theater director from the rich city of Gerasa, beyond the Jordan. They had often met before at the same khân, for their business frequently called them to traverse this dangerous road. They were always glad of a meeting and a friendly talk over a cup of mulled wine, no religion having yet been discovered to forbid such cheerful and warming fellowship. So they rested and told their stories, as travelers like to do.

"But where is our old companion, the good man from Samaria?" asked the Roman. "He is usually on the road at this season, with his sacks of corn from Dothan and his skins of wine from Jezreel. There is a good market for them in Jerusalem now."

"Perhaps he is waiting," said the Persian, "for the market to rise a little more. He understands his business, that Samaritan. But he is kind, very kind—the blessing of Ahura-Mazda is upon him."

The Greek smiled.

"It is so," he said, "excessively so. He never loses a chance to perform a work

of mercy, to bind up the wounded, to pour out money for the distressed. And I never knew a man to have so many chances. I will wager that even now he is picking up some poor wretch on the Jericho Road and taking care of him. That is what delays him. It has become a habit."

At that moment, as if a bell had called him, the Good Samaritan entered. He was dusty and a little out of breath, but he made the Oriental salutations of politeness as usual, and sat down with his friends by the fire.

"Another?" asked the Roman.

"Yes," replied the Samaritan, "another—in truth, several others."

"How many does that make," asked the Greek, "since we first met here?"

The Samaritan threw up his hands.

"I do not know. I have lost the count. Since I began to travel this road, some thirty years ago, it has been the same thing every year, sometimes twice a year. Always robbery, outrage, murder—people lying in their blood by the roadside, women violated, little children cut to pieces. This time it was a poor man of the sect called Nazarenes whom they beat till they thought he was dead. His wife they stabbed to death and two girl children they abused into madness. I and my servants did what we could for them and brought them here for safety."

"Such things ought not to be in the Empire," said the Roman, gravely. "Who is guilty of these offenses against justice and the Roman peace?"

"Always the same tribe," said the Samaritan. "They call it 'taking toll.'"

They say their religion authorizes it, and after they have done it they wash their hands and say their prayers. But the name of their god must be Satan, and the blood on their souls will not wash out."

"But this tribe must be subdued," said the Roman. "They must be taught and bound to keep the peace."

"Subdued is an easy word," said the Persian; "but in my country there are tigers which cannot be changed into cats. You cannot trust them if they smell blood."

"It is so with this robber tribe," said the Samaritan. "Time and again one army after another has beaten them, and they have cringed and fawned and promised to be good. But when they are forgiven and the army withdraws they break out again to rob and rape, to butcher and burn. True, they let us pass because we are strong and well armed. But for the weak and helpless they have no mercy but torture and no compassion but the grave. Year after year the same brutality, the same horror! My gorge rises at the bloodiness of the Jericho Road."

"But why," asked the Greek, very softly, "just why do you not go around by some other way? You would escape these sights that trouble you so deeply and cost you so much money in charity. It is none of your affair, after all. What are the Jews to you, except as customers? Why not abandon the Jericho Road?"

The Samaritan looked at him, and then answered, sharply and firmly, -

if he had often thought of the question and had the answer ready.

"For two reasons. The first is the same that brings you here. We all need that road in our business. It is the shortest and best way to Jerusalem. The second reason is one that perhaps you may not share. To avoid the Jericho Road would not deliver me from its horrors. I should still see them in my heart—the wounded, the outraged, the slaughtered—they would haunt me and cry for help. Are they not of the same flesh and blood as we are? God knows they have cost me enough. But I

give it willingly. I only wish I could do more for them."

"You can," said a deep voice close behind the travelers. They looked up in surprise, and saw a man clothed in rough garments of camel's hair, with a leathern girdle round his loins. He had come in quietly and stood leaning on his long staff, gazing sternly into their faces.

"You can do much more, all of you. You must do more if you would meet your duty. You are rich. You have power. Put a strong guard on this path-way of blood and shame. Make this

tribe of robbers and murderers afraid, since they understand no other argument. It is even more merciful to prevent cruelty than to heal the wounded. It is even more righteous to protect the helpless than to comfort them in their misery. This ought ye to do, and not to leave the other undone. I charge you in the name of God. Patrol the Jericho Road!"

The four travelers looked at one another with wondering eyes, for the stranger spoke with authority. When they turned around again to question him, he was gone into the night.

BENITO MUSSOLINI

BY EDWARD CORSI

FASCISTI LEADERS HONORING THE "UNKNOWN HERO"

Premier Mussolini is at the right, followed by General Diaz, Admiral de Reval, and other officials, as they proceeded to the tomb of the "Unknown Hero," where allegiance to the King was sworn by the new government

BACK in 1892 a group of enthusiastic radicals met at Genoa and ushered the Italian Socialist party into existence. In the same year, and practically at the same time, the Silesian Convent at Faenza opened its huge iron door to admit a wild-eyed lad into the service of the Church. "He seems quite vivacious," remarked the rector to the hopeful mother of the lad, "but I reckon he'll do."

A number of years later a mass of workmen were conducting a strike in an industrial section of Romagna. The strikers were alone in their fight, abandoned by their leaders, disowned by a hostile Camera del Lavoro. There had been plenty of mass-meetings, plenty of agitation. Demands were made and rejected. Hopes of victory were fast vanishing. At the eleventh hour out of the mob comes a youth with fire in his eyes

and hatred in his heart. He must speak. "Comrades," he shouts, "you have had enough words, enough speeches, enough demonstrations, enough nonsense! You have the strength of numbers and the force of arms! You have no head! Here, take mine! This is the hour of revolution—revolution at once!" The discouraged mob stood aghast in the presence of this mere youth who dared to speak of revolution. But his words had penetrated. The mob reacted in all its fury. The passion of revolution took hold of the abandoned strikers. "To the railway! To the railway! Revolution!" shouted the frenzied men and women. But they had hardly advanced when a troop of cavalry compelled them to disperse. They fled to their homes. The revolution was blocked. The youthful agitator, beaten by superior force, downed in his plan of battle, was led away by a

kindly hand, disillusioned but not discouraged. He would try again. He was born for the revolution.

The wild-eyed lad at the Silesian convent and the youthful revolutionist urging the mob to action were one and the same. To-day, after thirty-odd years of agitation and leadership, Benito Mussolini is at the head of the Italian Government, realizing the aspirations of his youth.

Millions of newspaper readers the world over are asking, Who is this Mussolini? What kind of a man is he?

Not excepting the romantic d'Annunzio, this *enfant terrible* is the most picturesque figure in all Italy. If I could find his prototype in America, I would engage in comparisons. But, fortunately, or unfortunately if you will, America breeds no Mussolinis. Men of his type are to be found in Latin countries, where temperament and impulse abound. As a man he is unique, *swi generis*. As a leader he is not to be compared. At this time of writing he has his country in the palm of his hand, to crush it if he pleases, to save it if he so wills. He is the organizer and the builder of the Fasci. He is also their master mind.

He comes from the soil, and he hates democracy. He speaks with provincial pride of the little Roman town of Varano de Costa, where, forty years ago, he first saw the light of day. His father, an iron worker, was an ardent Internationalist who suffered imprisonment for his loyalty to Marx. His mother, not unlike many Italian mothers of her day, hoped to have her Benito a priest of the Church. But, as destiny would have it, Benito was a rebel from the day of his birth, a rebel against the clergy, against society, against law and order. The Silesian fathers got rid of the vivacious lad with a sigh of relief, and he later took to teaching. He did not teach for long. The atmosphere of the schoolroom, like that of the chapel, bored him. He craved for action, for adventure, for life. He abandoned the schoolroom and set out for Switzerland. The news of

his father's arrest on the day of his departure failed to hold him back. He is not a man who will hold back. He went right ahead to Yverdon, arriving there with two lire in his pockets. After roaming for days from job to job, he was finally arrested and imprisoned on a charge of vagrancy. He returned to Italy, determined to "upset the world and everybody in it." He did.

Mussolini was born for the pen, and he followed his inclination. As a boy he had written many articles and much bad poetry. In Switzerland he had worked as a mason. He would be a journalist. In Trento he joined the martyr Cesare Battista and wrote for "Il Popolo." He gave himself to the cause of Italian irredentism, employing his pen, which was also his sword, with fierce hatred against Austria and the Austrians. He left Battista and founded "La Lotta di Classe" in Forlì. His articles and editorials were so bitter, so venomous, so belligerent, that all Italy came to know Mussolini, the merciless revolutionist. He demanded the leadership of the Socialist party, as he has demanded the Government, and the party surrendered. He assumed the editorship of the "Avanti," the official organ of the Socialist movement, and, fearing "neither Rome nor hell," set out to "put blood, nerves, and iron in a huge empty body." Under his leadership the Socialist party assumed a belligerent attitude in Italian politics. Mussolini was the bitterest agitator and the most aggressive propagandist the Italian Socialists had ever seen. He was not for the class struggle. He was for class war.

Then the World War came. A deep love of country, slumbering for years in the heart of the revolutionary, came to life with the first booming of the guns. Mussolini could not resist its magnetism. He was a born fighter, a man for the trenches, a dynamic human force. The policy of neutrality decided upon by his party was not for him. He would not be a pacifist. He could not be. He cried out for war, and he ceased to be a Socialist. "Traitor!" shouted his comrades. "Scoundrels, cowards!" thundered Mussolini.

On November 15, 1914, the first issue of "Il Popolo d'Italia," the bitterest anti-Socialist organ in Italy, appeared on the news-stands of Milan. Through its columns Mussolini cried out for war—for war against Austria and Germany, for war against the Socialist and Communist parties, against all the enemies of Italy. He fought for and in the war. All Italy listened to the emotional, dramatic, inspiring war speeches of Mussolini, the redeemed. Four years later he began the organization of the Fasci. The first to respond to his call were the Arditi.

What has happened since then is practically a matter of common knowledge. With his million Fascisti, who compose the most remarkable movement of youth in the history of any nation, he has brought the Socialist and Com-

Wide World Photos

THE FASCISTI MARCHING INTO ROME—A SCENE AT THE VICTOR EMMANUEL MONUMENT AS MUSSOLINI'S FOLLOWERS TOOK POSSESSION OF THE CITY

munist parties to their knees. He has assumed absolute control of the Italian Government. It may truly be said that in the hands of this man lies the fate of Italy.

Mussolini is an eccentric man of remarkable force and initiative. Though he betrays a childish sentimentalism in his acceptance of political ideas, he is inclined to be egotistical, cruel, and unscrupulous. He is not a cultured man. He abhors the academic mind and hates the doctrinaire. His articles are superficial, his speeches abound in adjectives. But he is as aggressive with his pen as with his tongue. The editorials in "Il Popolo d'Italia" are venomous, menacing, and always polemical. One of the editors of the Fascista organ gives this picture of Mussolini at work in his office:

In the editorial offices there is complete silence. Mussolini is at work. Facing him, on the wall, hangs the black flag of the Arditi, with its prominent skull and dagger; on the table, between the barricade of books and the mass of manuscripts, rests his revolver; a bit further, on a volume of Carducci, a hunting knife, with its blade of steel, glitters in the sunlight; close to his inkwell is another revolver, a smaller one of feminine elegance. On the bookcase—rather, on a mass of manuscripts never to be published—are boxes of bullets; near by rests his Fascista cane. In this formidable armory, standing out in perfect contrast to the black flag, Mussolini loads, murmurs, shrieks, threatens, and explodes. He hammers out his thoughts. His pen cuts deep into the paper. He works like a workman. He glories in his work.

"Clemenceau," says Nitti, "has been throughout his whole life a formidable man of destruction." Mussolini differs from Clemenceau only in that he can

also build. He is a doer of things. He believes in accomplishment, in achievement, and has no patience with men who will not act. In his large, protruding eyes there is bitter determination and much iron. He built up the Socialist party and then abandoned it. He followed with the building of the Fasci. He will now build an iron government.

Mussolini, unlike many of the party leaders in Italy, cannot be credited with firm political convictions. He is continuously in a state of political change. Even to-day the public opinion of the country is hopelessly divided on what Mussolini actually believes and desires. He has been a Socialist and a Socialist leader for many years. But was he truly a Socialist? Did he fully grasp the Marxian theories of government? It is difficult to answer the question. I am inclined to believe that he was lured by the romanticism of the Socialist movement. He loved to fight, and the Socialist party, the class struggle, offered him the opportunity to fight. He has never believed in reform through the ballot. He believed and believes in the right of might. As a youth he believed in industrial and political revolution. As a leader of the Socialists he believed in *settimane rosse* and *la guerra di classe*. In the war he was a soldier of the trenches. In peace he guided his Fascisti through civil war.

To-day, with the reins of government in his hands, this man, ferocious as a tyrant and human as a child, promises to restore law and order. "Democracy," he has said, "has failed in Italy. This is the day of the dictatorship."

Will he restore the Government to all the people of Italy or will he continue to dominate single-handedly, as he has dominated from that day in Romagna when he urged the striking workmen to revolution? The nation awaits breathlessly the next move of Benito Mussolini.

THE BOOK TABLE

TWO EXPERIMENTS

BY C. HARLOW RAYMOND

"YOU ought to write something about that," said the head of the English Department in a big preparatory school. "Those are two unusually interesting experiments."

The two other English teachers completing our group, talking shop after a full day of reading for the College Entrance Board examinations, urged the same thing. And so I have done so. There is nothing new about the experiments, but perhaps my writing about them may help to encourage some of us teachers who in the routine of the daily task may have become tired, discouraged, or mired.

So much for introduction, except—they really aren't experiments; they are proved facts.

Four years ago I wished to demonstrate to myself the truth or falsity of certain theories of my own as to a boy's liking for poetry. For years, in classes corresponding to eighth grade or a little higher, I had had some very interesting results in getting boys not only to read poetry, but also to compose verse. I wanted to see what could be done, while carrying the regular work of the course, with a class a year older, corresponding roughly to first-year high school boys, in which there should be no picked boys except such as the alphabet in its natural order dropped into my lap. Accordingly, I took a class of youngsters from thirteen to fifteen years old.

Now I believed that the supposition, held by many, that boys as a rule dislike or hate poetry is absolutely false. I held, and still hold, that almost all boys have within them a genuine fondness for poetry. If a teacher believes that they have not and proceeds to teach with that view-point, he will not discover their liking, and beyond question he will arouse in most boys so great an aversion to poetry that he may shut the door to their enjoyment of it, not only during the period of adolescence, but possibly for all time. On the other hand, if a teacher really loves poetry and takes the standpoint that men are but boys grown up and have in common an inherent love for that which is clean and true, strong and brave, and fine and beautiful, he will find, if he shows any wisdom in his teaching, that there will be a ready response to his love for poetry on the part of the boys. This response will of course vary with the boy, but rare indeed is he who does not care for some kind of poetry.

In my experimental class, besides our work in grammar, composition, and prose reading, we read Thompson's "British Verse" from the beginning. After we had discovered that Dan Chaucer used a form of simplified spelling and got away with it when we

couldn't, worse luck!—and had a deliciously humorous way of picturing the people of his day, who were remarkably like ourselves in spite of their queer clothes and manners, we raced through the ballads and found that, naive and crude, exaggerated and absurd, though they might be in places, they had swing and sincerity, incident and plot, and appeal in every case. Then we came to the lyric poetry of Elizabeth's age and of Shakespeare. One week I read to the boys in the class the four or five of Shakespeare's sonnets included in the "British Verse," taking up one or two a day and explaining them very carefully. After that I asked each member of the class to choose the sonnet he liked best, and to bring in for the next recitation a carefully written paraphrase of it. When that was done, I told the boys I wished each one to memorize the sonnet of his choice. They of course found that they were able to learn it in no time. Shortly after that they studied Milton's sonnets. It was simple then to compare the Shakespearean and the Italian types of sonnets.

It was now some time after Christmas, and I was ready for the experiment, of which the boys had no inkling. One Monday morning I said, "Now, boys, we'll try something new to-day. We'll all write a sonnet. I think most of you can do it in the forty-five minutes."

The expression of surprise and incredulity on the faces of some of the youngsters was most amusing. Most of them had never tried to write verse. What was there that they could write upon? I told them that the subject-matter was simple. They had been reading a good deal of love poetry. They, being experienced in all such matters, could easily write a love sonnet. They could write the octave on a description

of "her," though who "she" was I did not know except in the case of Jack. The sestet could begin with "but," though what the "but" would lead to, I had no idea. What more did they, being intelligent boys, need? Keep quiet and get busy.

Their imagination was tickled. The competitions they had had in rhyming words and in synonyms and the training they had had in the rhythm of verse now stood them in good stead, and they tackled the new game in earnest. I had asked them to write a sonnet in forty-five minutes if they could. I knew well enough that I could not have done such a thing at their age, and I question whether many of my day and generation could have. Could any of these boys do it? Quietly and eagerly they worked—no sound in the room except once in a while a boy tipped to me to ask for advice. By thirty-five minutes one boy was through; by forty, three more; by forty-five, eight out of the class of sixteen. All but two had more than eight lines. The work of all of them was in true sonnet form with correct versification. The boys who had not finished were allowed two or three days extra, but were asked to get their sonnets in as soon as possible. They did.

When we discussed the sonnets, some of which were humorous, some serious, all better than I had dared hope for, we realized that writing verse was not so difficult, after all. We next decided to write ballads. Accordingly, we took twenty minutes of a recitation for each one to think out plots for ballads. These were read in class and criticised by the boys. Then I asked that they try to get their ballads in within a week. Well, we had some great ballads. They ran the gamut of mystery, disguise, and the supernatural, lily-white maids, damsels with golden hair, true love triumphant, tragic death. There were flaws in the meter at times—as there should be in all true ballads!—and in diction and in plot it was still possible, if one desired, to criticise; but, as in the case of the sonnets, I was able to congratulate the boys heartily for the fine work they had done.

We had great fun one recitation with limericks. Then a little later I told the boys I wished to try another experiment. I wanted them to put either the First or the Twenty-third Psalm into verse. And I told them why I thought such an exercise would be helpful. Again I gave them plenty of time. They found this versification harder, as I expected; but I was astonished at the results they obtained. Most of the boys chose the Twenty-third Psalm, and they used all kinds of meter. One boy, I remember, used an anapestic trimeter for the First Psalm. When we read and discussed the verse, mixed in with the boys' versions, I gave them a number of poetic (?) paraphrases from an old

Food for many minds awaits the readers of The Outlook's "Book Table." There is Lloyd Morris's review of "Ariel," by José Enrique Rodó, entitled "A Philosopher from the Plate." There is interesting biographical material in Henry C. Shelley's "Centenary of Thomas Hughes." Herbert Gorman has given us an article which might be called "Confessions of a Book Reviewer," and Hubert V. Coryell continues his previous essays on boys and books by an article giving the boys' point of view of "What Makes a Book Worth Reading."

metrical version of the Psalms, printed about 1800. At the end of this joint reading up popped the hand of one of the boys. "Mr. R—, I think some of our verse is better than some of that in the Psalms." I agreed with him.

Every year we give a prize for the best verse written by any boy in the form. By this time my boys were ready for the contest. I told them I hoped a member of the class would win it, but the one thing I really cared for was that each boy should give the best of himself in the contest. Each member of the class I asked to write at least one piece of verse on any subject he pleased. Most of the class wrote more than one. In fact, boys were bringing verse right along for me to look over. There was war verse and love verse, humorous, reflective, serious and tragic verse, narrative, lyric—all verse; and it ran from limerick length to that of many stanzas. The prize poem of our section, according to the judgment of the boys, gave the experiences of a Buddy in the war; it had at least forty quatrains. It was an unusual product for a boy of fifteen or so. It won the prize for the form.

At the suggestion of the class, we collected our best work, which I handed in to the head master to read. We were very proud of our collection.

Now of course the youngsters had not written great poetry, and probably never will. But, according to their age and their ability, they had done their best. Moreover, they had gained much more that is valuable. They had learned by their own failures and successes to appreciate the right word in the right place, the beauty of the perfect line, the lilt and rhythm or mighty swing of it, the appeal of apt and lovely figures of speech, the charm and magic of all true poetry. Poetry to practically every one of them is for all time an open book, and many of them have read already much in its golden pages.

Since then I have not had an opportunity to teach a group of young boys in the same way. What teaching I did with younger boys the next year was necessarily along different lines. Practically all my time since then I have had to devote to classes preparing strictly for the College Board examinations.

Now our school believes in preparing for the restricted examination in English, on the ground that the drill and training of a definite prescribed course can be given in such a way as to implant a better knowledge of the essentials of English than can the comprehensive plan, and at the same time can be made interesting. A criticism of the restricted plan often heard is that it compels the study of books that the boys hate. "We still teach Burke's 'Speech' and Milton's minor poems," said a teacher in English last June to me. "Why the head makes us, I don't see, for every boy hates Burke and Milton. I wish the head would let us teach the easier books prescribed under the restricted plan or else the comprehensive. It's absurd to make boys study stuff they

To answer all of which in the reverse order—a thing I was not so foolish as to attempt in any form or order with the teacher in question, for inevitably there is a great gulf between us regarding essentials—I would say in passing: (1) that it is very difficult, to put it mildly, to teach boys or anybody what they hate; (2) that the question arises why boys should hate those books—is it the book, the boy, or the teacher that is at fault? (3) that the fact that other books may be easier does not necessarily prove their greater value or more abiding interest—indeed, probably proves the reverse. On all this I could write at length, but that is another matter.

Personally I have not found that boys hate Milton's minor poems or Burke's "Speech on Conciliation." When the poems and the "Speech" are made clear to them, almost all boys like them very much. Boys with imagination prefer the poems; those with a logical mind, the "Speech." Last year I assigned for memory work any passages of twelve lines each in "L'Allegro," "Il Penseroso," and "Comus." Practically nine boys out of ten learned twenty lines or more from each poem, and one boy memorized all of "L'Allegro" and "Il Penseroso," and between sixty and seventy lines of "Comus." They liked the poems, especially the two shorter ones. All of which goes to prove that boys do not necessarily hate poetry, and leads to the other experiment I wish to write of here.

To prepare for the restricted examination there is so much work assigned that we have practically no time allowed to ask boys to do such things as to write original verse. However, I care for poetry, and poetry in relation to life, so much that I am not content merely to keep to the prescribed list. All the time I am attempting to lead the boys' thoughts into life, and at all times I am holding to the tried and proved, and seeking to add the new. This past year, led by certain results I had gained beforehand, I experimented in one direction in earnest. I wished to see what fruit we were obtaining from the two anthologies of British verse we use in our lower forms, and to see how far a liking for verse would carry boys. One day I copied on the board before class Gilder's exquisitely beautiful sonnet "The Sonnet." At the opening of each of my recitations I read the sonnet with comment on its author, form, and content. It took about two minutes in each of my four classes. After that the regular recitation proceeded as usual. I noticed, however, that two or three boys copied the sonnet while the recitation was going on. I said nothing; neither did they.

The next recitation there was Oppenheim's "The Slave," the next Kilmer's "Trees," then Carolyn Wells's "The Spelling Lesson"—I was running the gamut of variety to reach all types. At least one boy copied the poem of the day in every case. As I was embarked on a voyage of adventure and discovery, I

tried all sorts—Emily Dickinson's "A Prairie," Knowles's "A Thanksgiving," Father Tabb's "Influence," Newbold's "Messmates," Hovey's "The Sea Gypsy," and so on and so on. And in every case at least one boy copied the poem. I expected the boys to enjoy the beauty of Fred Knowles's "On a Fly-leaf of Burns's Poetry," or Thompson's "Gifts," but I questioned what the response would be to Alice Meynell's "The Lady of the Lambs;" for my boys are no goody-goodies, but simply wholesome American boys. To my surprise, when I read her poem in each of my sections, a silence fell of such a sort as comes only when every boy is held. One fellow, as I finished reading, exclaimed: "Not much like the modern girl!" I noticed that many boys copied the poem.

I selected my poems, not merely from various volumes of poetry, but also from clippings I have gathered through many years from friends, and from current magazines and newspapers. "The Lie," for example, written on the board on the day it appeared in the New York "Times," made a hit. Soon I found that boys from my own sections and also from those of other masters' were making collections of verse too. They also wished to look over my collections and to copy what they liked. Boys have spent a whole afternoon in my study reading and copying. Others were sending the verses home. One boy knew that dad would chuckle over a bit of verse on golf. I found that I was being asked, "I did not think the poem in the 'Times' yesterday very good; did you?" Boys began to bring to me verse that had appealed to them. Some very good verse they brought. I was almost always glad, if it was not too long, to copy it on the board, or, at any rate, to read it to the class. Naturally, all this led to many a talk about verse and poetry.

Don't tell me that boys don't like poetry; most of them do. Give them a chance, and you'll find the truth of my statement. And often the love is where you least expect it. Three years ago I received a letter from a boy who had been a member of my house for three years and had then gone to college. He had been in the English class of one of my associates. It was a homesick letter from a boy in entirely new surroundings. In it he wrote:

"Among some of the things that come back to me are some of the poems in the 'British Verse.' They are so fastened in my mind that they, like L—, can never be forgotten. I would like it very much if you would have the — Company send me one of those books C. O. D. It is a book I do not feel I can do without, and do not want to try to."

When he had first appeared at school, he had seemed simply a rough, uncouth fellow, absolutely undisciplined, and far below the ordinary boy in ability and capacity. Realizing, however, that he was greatly handicapped, he had plugged and plugged, and had become more amenable to discipline. By the time he left school he was entering into his

ve for poetry. I am persuaded that there re countless boys who in the drill of very-day recitations, when a teacher hows that he loves poetry, are obtaining, perhaps unconsciously, that glimpse f the glory of English poetry that akes for truer, finer living in the sight f God and man.

THE NEW BOOKS

SPORT

FOOTBALL AND HOW TO WATCH IT. By Percy Duncan Haughton. Illustrated. The Marshall Jones Company, Boston. \$3.

If football were as simple a thing to explain as squads right, we should need o Percy Haughton to compile an illustrated and animated imitation of the Infantry Drill Regulations, which would begin at the beginning with a photograph of a football and continue till all ad been said that might be said. The fact is that football is far too complex o be explained for the average spectator in one volume. Moreover, Mr. Haughton realizes that many of his readers will fall a that class of spectator which watches he game "in blissful ignorance of the simplest rudiments;" which leads us to wonder why the author did not follow the Infantry Drill method long enough o begin nearer the beginning. Surely among the blissfully ignorant will be ome who, if they appreciate the object f the game, are not able to tell a quarterback from a tackle. On the whole, however, the author wisely keeps a mind his readers' capabilities while ntroducing them to some of the finer oints that distinguish good football rom bad. He never becomes so technical as to become involved.

Mr. Haughton's course of instruction ncludes, besides the chapters we might xpect on attack and defense, several hat touch on the historical, medical, ental, and moral aspects of the game. he more one knows, the more one will ee, seems to be his guiding principle. All this information is tied up in a neat undie ready to take home, in Chapter X, wherein Mr. Haughton himself goes o a football game and describes what he ees. The public should congratulate itself that the author has such a whole-ome fear of boring his readers with old facts, for his book is brightened by n easy, straightforward manner, by a ongenial acquaintanceship with human ature, and by a remarkable array of otographs from a collection used at larvard for coaching purposes. Mr. laughton will accomplish his first object, which was to add materially to the njoyment of those who like to watch otball.

He will perhaps accomplish a second bject. Football, like other sports, has uffered from too zealous sport writers a fact for which Heywood Broun half pologizes in his hearty Introduction). he spectacular and the physical have een over-emphasized. By placing em-atically the mental before the phys-ial, by seeing the fifty-yard run only as he accomplishment of eleven men, by

Honor These Seals

A NATION-WIDE movement is carrying on a warfare against the scourge of Consumption. In saving over 100,000 lives last year, it actually *cut the death rate from tuberculosis in half.*

Each year these organizations sell Tuberculosis Christmas Seals. The proceeds from these sales are devoted to the work of caring for and curing tuberculosis patients and to educational and other work to prevent the dread disease.

Buy these Seals and urge your friends to buy and use them. To do this is both Charity and Patriotism.

game, Mr. Haughton has made a notable contribution towards restoring a proper balance between football and the public. We agree with him that the sport is distinctly worth while; and we should like to see it remain so.

TRAVEL AND DESCRIPTION

GARDEN COLOR. By Mrs. C. W. Earle and Others. Illustrated by Margaret Warfield. E. P. Dutton & Co., New York. \$8.

This beautiful book was first published some fifteen years ago and thoroughly deserves republication. The four chapters not only furnish information for lovers of carefully planned gardens but show affectionate interest and love for the flower world. The color sketches by Margaret Warfield are charming; especially is this true of those which set forth the brilliant and rich colors of the autumn garden.

MISCELLANEOUS

ALICE MORSE EARLE BOOKS (THE). The Macmillan Company, New York. \$2.50 each.

We are glad to note the republication in uniform edition of the readable and curiously interesting volumes by Alice Morse Earle and to know that there is evidently a steady demand among readers for them. The list includes "Old Time Gardens," "Home Life in Colonial Days," "Child Life in Colonial Days," "Sun Dials and Roses of Yesterday," and "Curious Punishments of Bygone Days," and we believe that what is to many the most entertaining of the whole series, namely, "Stage Coach and Tavern Days," has been, or will be, included in the set. Mrs. Earle has remarkable zest and skill in collecting queer or romantic material about such subjects as those indicated by the titles. She is fortunate enough also to have her books adequately and pleasantly illustrated.

CONTRIBUTORS' GALLERY

RICHARD BARRY is a newspaper man who was war correspondent for "Collier's Weekly," "Century Magazine," and "Westminster Gazette" during the Russo-Japanese War, and correspondent with the Atlantic Fleet in the cruise around the world in 1908. He has been in newspaper work in Milwaukee, New York, and California, and is at present on the staff of the New York "Times" Sunday Magazine. He has numerous books to his credit, among them "The Fruit of the Desert," "Petroleum Prince," and "The Bauble."

HENRY VAN DYKE has a record of accomplishments too varied and too lengthy to begin to enumerate here. Angler, author, pastor, lecturer, ex-Minister to the Netherlands from the United States, Commander of the Legion of Honor, and Professor of English Literature at Princeton University—these are some of the titles and occupations to which he can lay claim.

ELIZA RUHAMAH SCIDMORE and **CHARLES HODGES** undertake the task of discussing the situation in Tsingtau. Miss Scidmore is a much-traveled lady, with an eye that sees keenly and a pen that writes vividly. She is the foreign secretary of the National Geographic Society and the author of several books. Mr. Hodges was out in the Far East during the latter part of the Great War, making an investigation of the political and business conditions underlying world politics. In the course of this work he examined the circumstances surrounding the Japanese occupation of Shantung, discussing the situation with Chinese, foreign, and Japanese residents along the railway and in the leasehold of Tsingtau. Part of this work was of a semi-official character for the United States Government.

LESLIE NELSON JENNINGS is a poet who has just moved from California to New York. Some of his poems have previously appeared in The Outlook.

EDWARD CORSI, the educational director of the Harlem Community House, contributes an article on the leader of the Fascists, Benito Mussolini, with whom he is personally acquainted. Mr. Corsi has just returned from a three-months' study of political conditions in Italy, where he was special correspondent for "La Follia," the leading Italian

THE MAGIC OF MODERN BUSINESS

WE live in the age of the machine. Practically every article that the hand touches or the eye rests upon is the product of a machine. Our food, our clothing, and the materials from which our homes are built are all put into consumable form by machinery. And now we are employing machines to run our business offices for us—human fingers and brains are being replaced by metal keys and whirling wheels and levers.

Picture the counting-room of Charles Dickens's day, with its ancient gray-haired bookkeeper, perched on a high stool, laboriously making entries in a huge dog-eared ledger with a quill pen. Picture him again adding up long columns of figures over and over to arrive finally at the correct result. Once again, picture the junior apprentice busily transcribing copies of the office correspondence into an antiquated letterpress which gradually grew fat and unwieldy with old age. The efficient office manager of to-day smiles at these visions of a bygone business age and asks how anything was ever accomplished under such conditions. Modern business demands speed and accuracy. The development of business machines has not only met, but has anticipated, these demands and has completely revolutionized accounting and office management.

The recent Business Show held in New York City offered a most interesting demonstration of these new methods. The casual visitor at this show was visibly impressed with the magic of modern business and the speed and accuracy with which the old laborious tasks are now performed. The invention of the typewriter was acclaimed as a tremendous step forward in the handling of correspondence and business records. But we now have machines that are a whole bookkeeping staff in themselves. The latest accounting machines now manufactured by the leading typewriter companies actually perform all kinds of bookkeeping operations. They make the necessary entries and by the necessary addition and subtraction which they perform the books can be kept in proper balance at all times with the least possibility of error. The latest calculating machines not only add and subtract, but can also be used for the purpose of multiplication and division with a little practice. Thus the fallibility of the human brain in calculation is supplanted by the infallibility of the machine.

The portable style of typewriter has become very popular because of the convenience with which it can be carried from place to place. It is widely used by writers and newspaper men as well as business men who travel and who can thus carry their typewriter with them.

In offices where letters are mailed in large quantity speed in addressing is desirable. To meet this requirement an automatic feeder has been devised which feeds the envelopes into the typewriter.

W. L. DOUGLAS

\$5 \$6 \$7 & \$8 SHOES FOR MEN and WOMEN

W. L. Douglas shoes are actually demanded year after year by more people than any other shoe in the world

BECAUSE W. L. Douglas has been making surpassingly good shoes for forty-six years. This experience of nearly half a century in making shoes suitable for Men and Women in all walks of life should mean something to you when you need shoes and are looking for the best shoe values for your money.

W. L. DOUGLAS shoes in style, quality, material and workmanship are better than ever before; only by examining them can you appreciate their superior qualities.

fast as the actual addresses can be written. When the letters are ready for mailing, we have the latest folding and mailing machines ready to do their part of the job. The folding machine, as the name indicates, folds the letters or circulars to the proper size to fit the envelopes at a very rapid rate. They are then fed into the mailing machine, which seals the envelopes and affixes the stamps.

Where a Government mailing permit is used, the proper permit is stamped on the envelope and the number of envelopes thus stamped is recorded on an automatic register. The register is then removed from the machine and taken to the post office after an allotted number of letters have been stamped, where the proper record for mailing is checked against the daily mailing statements.

In connection with the preparation of circulars of all kinds, we might mention the various duplicating and printing machines which print and fold circulars of all the usual sizes and are in effect small printing plants in themselves. The latest machines of this type can even handle color printing with very effective results. The use of addressing machines with properly kept stencils expedites the addressing operation and is the best method of keeping a thoroughly up-to-date mailing list.

The use of cash registers in retail stores is now too familiar to require particular comment. They offer the very best possible means for the retailer to keep an accurate check on his daily sales and on his cash. The cash register has a wide variety of uses in proper retail accounting. Charge making, re-

Backward youngsters or illiterate adults learn quickly and have fun doing it with Vic's Self-Writer. Aluminum strips having the letters imbedded, and the child learns by tracing indentation with pencil. Price with neat case and tablet \$1. Try 5 days and if not delighted, money will be refunded.

VIC HANSEN WALLACE IDEAS

Putting a High-Power Publicity Machine To Work for You

IT may never have occurred to you that the publicity machinery of The Outlook can perform valuable personal services for you.

ONLY TEN CENTS A WORD

For only ten cents a word you can advertise your wants in the Classified Department of The Outlook. The favorable results may surprise you as they have surprised many other users of this effective service.

We recently published an announcement headed "Have you a Rare Book, a Carved Chest, or a Personal Talent to Sell?" and that announcement led many of our subscribers to use the Department of Classified Advertising for the first time.

Another announcement entitled "Inquiries at 7 Cents Each" led many others to the door of opportunity.

The present announcement will lead still others to profit by the machinery of this department.

WHAT HAVE YOU TO SELL?

Other advertisements urge you to buy. But this one invites you to sell.

Those of you who have read The Outlook regularly for years without having made use of this classified advertising service have overlooked a practical opportunity of unusual possibilities.

If you are in need of a household helper, companion, nurse, governess, teacher, or business or professional assistant, you will probably find that a small advertisement in this department will bring prompt and gratifying results.

The steady growth of this department bears witness to its ability to get results.

Decide now what you need or what you want to sell, and then send us your advertisement before you forget about it.

THE MAGIC OF MODERN BUSINESS (Continued)

chines are another very valuable aid where a large volume of daily cash sales necessitates the frequent changing of currency.

In plant management and cost accounting machines now have their place as well.

Automatic registers are employed in stockkeeping and perpetual inventory systems; cost systems, production control systems; planning, routine, and despatch systems; tool checks and tool inventory systems; and for keeping all forms of records in manufacturing plants.

Time recorders are used for making proper time studies in manufacturing operations. The starting time, stopping time, and actual elapsed time of an operation is thus checked for detailed study. The use of the ordinary time clock is familiar to every one. Time records are employed for many purposes, particularly in checking clerical and factory time work. Recording door locks are made which show the day, hour, and minute a door is opened or locked. Time machines can control all factory costs in the process of manufacturing.

We might describe many other new methods for simplifying and rendering more efficient the work of the business office. Manufacturers of office appliances have also developed the "service idea" to a high degree. They maintain staffs of experts who are prepared to study the equipment needs of a business and to then specify the particular machine in their line which will best accomplish the desired work. An investigation of present developments in business equipment will frequently result in tremendous savings in time, labor, and general all-round efficiency.

WANTED—CARTOONS AND PHOTOGRAPHS

THE OUTLOOK wants to receive cartoons from its readers, clipped from their favorite newspapers. Each cartoon should have the sender's name and address together with the name and date of the newspaper from which it is taken pinned or pasted to its back. We pay one dollar (\$1) for each cartoon which we find available for reproduction. Some readers in the past have lost the dollar bills to which they were entitled because they have failed to give the information which we require.

The Outlook can also use good amateur photographs of interesting and timely scenes or events. We pay \$3 for each one accepted, if suitable for a half page or smaller; \$5 if selected for full-page reproduction. We especially want snapshots made by the person submitting the photographs. Postage should be inclosed for return of photographs if not available for our use.

Address The Outlook Company, 381 Fourth Avenue, New York.

MR. C. E. BROOKS

FOR MEN OF BRAINS
Cortez CIGARS
—MADE AT KEY WEST—

IN the "Stag Cook Book," which is described as "a man's cook book for men," several well-known personages tell how to cook their favorite dishes. President Harding, it seems, likes waffles better than almost anything else; Secretary Hughes says, "My favorite dish is corn bread and honey," and gives a recipe for the first-named delicacy; Charlie Chaplin likes steak and kidney pie and knows how it should be made; Dr. Frank Crane tells how to cook round steak so it will be as tender as fried chicken; Stewart Edward White confesses that a camp dish called "Mulligan" is exactly to his taste; Chick Evans likes tomato soup best if you cook it his way; Charles W. Eliot has a "favorite menu" consisting of clam soup, corned beef hash, and baked Indian pudding; Basil King likes lobster à la king (or King), but adds this curiously archaic note: "Unless brandy or sherry can be added it is useless to attempt this dish."

William J. Bryan contributes to the above list of recipes one for French-fried onions, saying that he has introduced the dish on dining cars and into many private homes; Will Irwin likes ham and eggs, and in his recipe says, "Cook the ham until it is cooked enough;" W. T. Benda tells of a Polish soup called "Barshck with Ushka;" Walter Prichard Eaton won't tell about his favorite dish because it is a family secret, but gives a recipe for mince pie; Montague Glass prefers bouillabaisse to anything else in the eating line, and takes two pages to tell how it should be made; Charles P. Steinmetz admits that he has never before been consulted about gastronomic matters, but says he likes meat loaf best and gives careful directions for making it; Judge Lindsey likes bran muffins and Otis Skinner "Artichokes, Mister Antonio" style, which he says enables you to "understand why an artichoke need not taste as flat as boiled hay."

Here is a variation on an old theme, as worked up by the "Annapolis Log:"

Peter Piper played a pot of poker,
A pretty pot of poker Peter Piper
picked.
But a piker with a poker picked on
Peter Piper,
And pocketed the poker-pot that
Peter Piper picked!

The Sanford, Florida, "Herald" is credited with an announcement that must have been cheerful reading to the local undertaker at least. It is headed, "Looking Forward to a Pleasant Time Being Had by All:" "— & Son have a new hearse and as far as hearses go it is a beauty, being finished in the very latest design of burnished silver called 'molten silver.' . . . — & Son are well equipped to take care of all the funerals in this section of the country having two fine funeral cars with the prospects of the old car being turned into an ambulance. Like everything else on wheels hearses with the horses and other

equipment have given way to the new motorized funeral cars and if one must ride in this car it will certainly be satisfactory."

"Two years ago," a writer in the "National Geographic Magazine" says, "the little seaport of La Paz, in Lower California, had more dollars per wagon-load of population, perhaps, than any other town in the western part of the world." La Paz, it seems, is one of the most important pearling ports in the world, and the price of pearls had climbed high. "In the crown jewels of the Emperor of the dissolved Austria-Hungary," the writer goes on, "there was—and no doubt the pearl specialists know where it is to-day—a great black pearl. That gem was found in the careless hands of an Indian baby playing on the beach at La Paz."

Among the few things that were left undestroyed in or near Smyrna after the entry of the Turks were the remains of the great aqueduct of Alexander, so called. These majestic ruins really date from the Roman occupation, and the massive piers and great arches (a triple arcade, like those of the Pont du Gard in France) are said to have the characteristics of the best work of the Imperial epoch, Great buttresses added to strengthen the arches are believed to be by the engineers of Marcus Aurelius.

Signs of improving industrial conditions are seen in the numerous labor agencies on the Bowery in New York City. One of these has a placard in its window calling for "Coal miners—Hungarians, Liths, Russ, Poles, Slavs, Spaniards." The spelling out of the first-named nationality instead of using the familiar abbreviation "Huns" is doubtless due to war-time memories. "Liths" of course stands for Lithuanians.

Salvage remuneration to the owners, officers, and crew of a rescuing vessel, amounting to \$25,000 in all, as awarded by a Canadian Admiralty Court, was apportioned as follows: Owners, \$17,000; captain, \$1,500; first officer, \$700; second officer, \$550; chief engineer, \$800; second engineer, \$500; wireless operator, \$500; divided among members of the crew, \$3,500. The case got into the courts because the owners of the rescued vessel thought just one-half of these amounts was proper compensation for the service rendered.

In the new Senate, to convene next year, there will be two physicians—Dr. Copeland, of New York, and Dr. Ball, of Delaware. Senator Shipstead, of Minnesota, is a dentist by profession. Two college presidents are included in the Senate's personnel—Fess, of Ohio, and Ladd, of North Dakota. Senator Norbeck, of South Dakota, is described as a "well-digger." "In matters of grave public policy," the New York "Evening Post" remarks dryly, "he should have no difficulty in getting down to the bottom of things."

Victrola

REG. U.S. PAT. OFF.

Christmas morning — and in come the greatest artists !

The surprise and delight of a Victrola for Christmas! Music appropriate to Christmas; music for every day in the year; music so lifelike that the greatest artists select the Victrola as the one instrument to carry their art into the home. CONTRIBUTORS' GALLERY

J. M. KILE is the author of "The Farm Bureau Movement" and a regular contributor to the leading agricultural publications. He was formerly associated with the American Farm Bureau Federation and has investigated the farm problem thoroughly.

MONTROSE J. MOSES is a New York editor and dramatic critic of distinction. He was for two years on the editorial staff of the "Literary Digest," and has been a dramatic critic for the Reader Magazine, the "Independent," and the "Book News Monthly," and has contributed on the drama to the Encyclopedia Americana and the "Cambridge History of American Literature." He has edited numerous volumes of collected plays, such as "Representative Plays by American Dramatists," "A Treasury of Plays for Children," and has himself written "Famous Actor-Families in America," "Henrik Ibsen, the Man and his Plays," "The American Dramatist," etc.

FROM Paris, where he is chaplain of Saint Luke's Chapel, Dr. Frederick V. Clappett sends us a delightful sketch of London with the intriguing title of "Sad Optimists."

HAROLD VINAL, editor of "Voices," a journal of verse, is author of "White April," which was published last spring, and of "Sea Windows," which will be brought out shortly.

WITH Chapter XIV, "Final Scenes in a World Drama," published in this issue, end The Outlook installments of the Straus autobiography which are included in the volume "Under Four Administrations." This issue also contains the first of a series of articles by Sherman Rogers, equally absorbing, although entirely different. These papers were written after Mr. Rogers had spent the summer in Alaska, studying its needs, and they have a vital bearing upon the future of that great Territory.

IMPORTANT TO SUBSCRIBERS

THESE CHILDREN HAD ONLY ONE BOOK

A THIN, PATHETIC, POORLY PRINTED LITTLE SPELLER

If with the poverty of resources suffered by these children, we compare the wealth of remarkable children's books recently brought to our attention during Children's Book Week, we realize the responsibilities which they bring. Thoughtful parents will censor every volume that comes to their children's hands during the taste-forming, foundation-making years of childhood. Such parents will find just what they are seeking in

JOHN MARTIN'S BOOK *The CHILD'S MAGAZINE For Children from Three to Ten*

A magazine built like a book with every page reflecting the same discrimination that you yourself would have used. Now more than ever is that discrimination necessary, for youth and adolescence are presenting greater problems than ever before.

Safeguards are down. The reserves upon which we used to depend for the protection of our young people have been scrapped, and they meet one another on a new footing. Perhaps this frankness is better than the attitude we know and trusted, but one thing is sure:

The child who is to pass safely from the sheltered home atmosphere to the crass realism of the present day must have a foundation of honor, fearlessness, and honesty, and a poise that comes with a recognition of true values.

JOHN MARTIN'S BOOK

IS one of the most potent influences for right building in America to-day. No commercial consideration takes precedence over what is right for your child.

IT STANDS FOR AND IMPARTS

Happiness
Confidence
Companionship
Imagination
Honor

Good Taste
Good Manners
Consideration
Obedience
Patriotism

Truth
Loyalty
Reverence
Self-Respect
Sincerity

It is well printed in two colors on tough paper with strong binding and gay cover and there are pictures on every page.

JOHN MARTIN'S BOOK ROOM FOR YOUR CHILDREN

is a charming spot where the BEST BOOKS, not all books, are beautifully displayed, courteously presented, and intelligently selected. It is—

A NATIONAL CENTER

The Outlook

DECEMBER 6, 1922

THE PUEBLO INDIANS WITH THEIR BACKS TO THE WALL

IN a population of over a hundred million a mere eight thousand is a paltry number. It is hardly enough for more than a good-sized village or a tiny city. In a community like New York or Chicago eight thousand could disappear and hardly be missed. And when the eight thousand are not white people with votes, but merely Indians, their number seems the more insignificant.

There is a bill now before Congress affecting the property rights of eight thousand Pueblo Indians in the State of New Mexico. It is not surprising that this bill received practically no attention in the Senate. It was brought before the Senate by Mr. Bursum, of New Mexico, on September 11. He explained that it affected the titles to about five thousand homes in his State. Some of these titles were granted by authorities under the Spanish Government, others by authorities under the Mexican Government. Some of the claimants to lands which the Indians also claim base their right to the land on peaceable pos-

session for twenty years. On assurance that the bill simply provided a method for quieting these titles by suits at law, and that it was recommended by the Interior Department and by the Commissioner of Indian Affairs, and also agreed to by the parties to the controversy, it was, in the most casual manner possible, "reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed."

Now it appears that the Pueblo Indians are very much disturbed at the passage of this bill. Representatives of twenty pueblos have appealed to the people of the United States against this bill, which, they declare, "will destroy our common life and will rob us of everything which we hold dear—our lands, our customs, our traditions."

Evidently the bill is not at all agreed to by the Indians themselves. Nor is it agreed to by certain white friends of these Indians. It is true that the bill provides chiefly for a legal method of settling disputes as to the titles of these lands; but that does not at all tell the whole story. There are two features which seem to us on their face certainly doubtful and probably objectionable. One feature is the transfer of jurisdiction. This transfer is twofold. It transfers the jurisdiction over some of the administrative questions from the Bureau of Indian Affairs to a court of law which by its very nature is not suited to settle administrative questions; and it transfers jurisdiction over some of the most important questions from Federal courts, which are removed from prejudice, to State courts, which are much less able to deal with local Indian questions without prejudice. The other

feature is that of establishing ownership of land by virtue of possession without color of title. If this bill is passed, undoubtedly Indians will be deprived of land, and even of the right of proving superior title.

The Pueblo Indians are not nomadic. The lands they possess are not like other Indian reservations. As their name indicates, they inhabit pueblos, or villages, and have a kind of civilization of their own.

Certainly the House of Representatives should not pass this bill.

It is not merely the rights of these few Indians that are at stake; it is the honor and good faith of the United States.

IN AID OF AMERICAN COMMERCE

THE President, in his address to Congress on the measure commonly called the Ship Subsidy Bill, described it correctly as an attempt to promote our merchant marine, and with it our National welfare. The aid proposed is not strictly a subsidy, because it is not a bounty or gift, but an advance to be paid back. The method of the bill's operation is this: Create a fund by taking out ten per cent of all import duties paid in. Call it the Merchant Marine Fund. From the fund advance money to American built and operated ships on a sliding scale as to speed and tonnage. Do this for not longer than ten years. Let all accounts be open to Government inspection. Wherever a ship begins to earn more than ten per cent on the investment, stop the advances and demand back yearly half of that ship's profits over ten per cent until the whole amount is repaid. Let these ships carry our mails free.

The financial argument for this bill which President Harding has so much at heart is, as he believes, that it would stop waste and thus save money. It may cost \$40,000,000 a year for ten years, but we are now losing \$50,000,000 a year above receipts in order to keep up our foreign trade in America. Why should we do this? The reason is thus put by one advocate of the bill: "We must sell our surplus products of the farm, mine, and factory in the same competitive markets in which the owners of the foreign ships are trying to sell similar surplus products of their own. A swell chance

PRESIDENT HARDING ADDRESSING CONGRESS IN JOINT SESSION NOVEMBER 21 ON THE SHIP SUBSIDY BILL

we will have to sell our goods from our rivals' delivery wagon!"

The general situation as the President views it is tersely described by him in a few compact paragraphs:

Three courses of action are possible, and the choice among them is no longer to be avoided.

The first is constructive—enact the pending bill, under which, I firmly believe, an American merchant marine, privately owned and privately operated, but serving all the people and always available to the Government in any emergency, may be established and maintained.

The second is obstructive—continue Government operations and attending Government losses and discourage private enterprise by Government competition, under which losses are met by the public Treasury, and witness the continued losses and deterioration until the colossal failure ends in sheer exhaustion.

The third is destructive—involving the sacrifice of our ships abroad or the scrapping of them at home, the surrender of our aspirations, and the confession of our impotence to the world in general, and our humiliation before the competing world in particular.

A choice among the three is inevitable. It is unbelievable that the American people or the Congress which expresses their power will consent to surrender and destruction. It is equally unbelievable that our people and the Congress which translates their wishes into action will longer sustain a programme of obstruction and attending losses to the Treasury.

The bill is, as we write, under consideration and has the right of way in Congress. It is evident that there will be many attempts to amend it or to substitute another measure in its place.

LUKE WRIGHT: SOLDIER, ADMINISTRATOR, AMBASSADOR, SECRETARY OF WAR

THAT a Southerner, as a boy a private soldier in the Confederate army, and later a Democratic leader, should become the first American Ambassador to Japan and Secretary of War under a Republican Administration (that of Roosevelt) is an indication that sectional issues have become a thing of the past and also that party considerations may occasionally be waived with public advantage.

Luke E. Wright, who died in Memphis on November 17, at the age of seventy-seven, was a native of Tennessee and did valuable service in that State as Attorney-General, as a criminal judge, and particularly in organizing the fight against the yellow-fever epidemic in 1878.

When the free silver issue came to a

crisis in 1896, he found himself unable to vote for Bryan and became an adherent of the Democratic Palmer-Buckner hard money party. It was not his political activity but his vigor, and even severity, as an administrator that led to his appointment by President McKinley in 1900 as a member of the Philippine Commission. During the absence of Mr. Taft, who was Governor-General at the time, General Wright acted in his place and carried out with ability the policy of the United States as already firmly established by Mr. Taft. When the latter became Secretary of War, General Wright was his natural successor as Governor-General, and in that capacity served with distinction. Finally, in 1908, President Roosevelt appointed General Wright Secretary of War upon the resignation of Secretary Taft.

Few Americans have given to their country more arduous service or have accomplished more of solid and substantial importance in administrative work.

FOOTBALL.

DESPITE the activities of some of the sport writers, the football season has come to a successful conclusion. The game to-day has a greater hold upon the popular mind than ever before. Even the Yale Bowl, holding nearly 80,000, was this year twice filled to capacity. At the game with Harvard, applications for seats came in in such floods that graduates of the two universities were limited to two seats each. When the Bowl was built, it was supposed to provide accommodation for the "sisters, the cous-

ins, and the aunts" of the graduates. Possibly some graduates may look forward to the time when their social problems can be simplified by the excuse, "You know, we are only allowed to apply for one ticket this year."

Of the old Big Three, Princeton alone has been uniformly victorious. The schedule included a dramatic game with the University of Chicago, which Princeton won by a score of 21 to 18. The three-point margin represented three goals after touchdowns. The new rule that the additional point must be made from a scrimmage has added another touch of interest and uncertainty to the game. On the whole, this change in the rules seems to have been a successful innovation.

Yale in the course of the season lost to Iowa, Princeton, and Harvard. Harvard succumbed to Brown and Princeton.

The hard-fought contest between West Point and Annapolis went this year to the cadets. The Army won all its games except two tie games with Yale and Notre Dame. The Navy, in addition to defeat at the hands and feet of its service rivals, lost to the University of Pennsylvania.

Other teams with notable records of success are: Syracuse, defeated only by Pittsburgh; Lafayette, which was beaten by Washington and Jefferson; Iowa, with a clean slate; Michigan, with a similar record except for one tie with Vanderbilt; the University of Pennsylvania, which lost close games with Alabama and Pittsburgh and was awaiting, as we went to press, its annual game with

Paul Thompson

THE ARMY-NAVY GAME—CONROY, CAPTAIN OF NAVY, THROWING BREIDSTER, CAPTAIN OF ARMY, AND MAKING A FIVE-YARD GAIN

Cornell; Cornell, which had the same test after a triumphal progress through a comparatively easy schedule; Notre Dame, victorious save for one tie already mentioned; and the University of California, which has rolled up 410 points against 34 by its opponents.

Now, from the mass of conflicting statistics and verbal reports, the sport writers will proceed to construct championship teams of players, some of whom they have never seen in action, and to award supreme honors or supreme ignominy to colleges which care little for either so long as they beat their best-beloved enemies. It has been a good season except for football dopesters, but we have no hope that this fact will prevent them from prophecies and *ex post facto* explanations when October comes again.

PAINTING WITH SUNLIGHT

THE progress of American photography finds its best representation in the annual volumes published by the society of Pictorial Photographers of America. This society has now for three years published a volume containing the best work of its members and other photographers. We print two representative pictures from this book on pages 602 and 603 of this issue.

The latest volume of the series is the best which has been published and shows a much more general understanding of the essentials of pattern and form than the two previous collections. Fuzziness is not the only quality which nowadays distinguishes the artistic photographer from his more commercial-minded brother of the news agency. Nor is the artistic photographer satisfied any longer with the conventional and easy composition of landscape framed by the trunk and the overhanging branch of a tree. The best of the modern photographers are boldly attempting to solve the same problems of shadow, light, and balance which have excited the interest and attention of modern painters.

THE MOVIES IN COLORS

MOVIE fans take notice! A revolution has broken out in the art and industry of screen plays.

A great defect of moving pictures has been the lack of color. The staring black and white of the ordinary photographic film is tiresome to the taste and fatiguing to the eye. Various experiments have been made in coloring moving-picture films, but none have been very satisfactory until the problem was

P. & A. Photos

RAMSAY MACDONALD, ENGLISH LABOR LEADER

taken up by Dr. Daniel F. Comstock, of the Department of Physics and Optics in the Massachusetts Institute of Technology. In association with Dr. Herbert Kalms, an electrochemist of distinction, Dr. Comstock has perfected a process, based upon the chromatic optics of color photography, by which the colors of nature are reproduced in the film and may be thrown on the screen by any projecting lantern. The inventors call their process "Technicolor," and a technicolor film play is now running at the Rialto Theater in New York and attracting the attention of artists as well as of the general public.

The producers have chosen a Chinese setting and characters for this play, perhaps because of the variety of colors which Chinese fabrics and embroideries afford. They have found a young Chinese lady to take the part of the heroine or tragedienne of the play, a Miss Wong, about whom we should like to know more than is given in the scanty information of the programme. She is both charming and gifted—a genuine artist.

In this respect the play, called "The Toll of the Sea" and based on John Luther Long's "Madame Butterfly," has an international appeal. But its chief interest lies in its revelation of what may be done to make the moving picture a thing of beauty by the reproduction of the natural colors of flowers, landscapes, fabrics, and the human face. Those who can should see this picture, not only because of its human and æsthetic interest, but because it is likely to prove to be a historical episode in the development of what is now a great industry and may become a great art.

IRELAND AND ENGLAND

THE execution of Erskine Childers occurred just as the British Parliament took up for action and probable approval the Irish Free State Constitution. To such approval the Conservative majority and Prime Minister are positively committed.

What effect will the execution have on the fortunes of the Free State? There are many who think that it may fan the flame of hostility, increase the activity of the irregular forces of the De Valera faction, and possibly make it necessary for the Free State to call in British aid to quell the so-called Republican army. On the other hand, those who maintain that the De Valera forces are little better than brigands, with no mandate from the Irish people, while the Free State Government and its army have been authorized by a majority of Irish voters to act for them, declare that the execution was just, and also expedient, and that the time has come when the Free State proclamation that insurgent killings would be punished as murders, and not as acts of war, should be enforced and respected.

Erskine Childers was an Englishman and a Protestant; it is said that his wife was an American and an ardent advocate of the Irish Republic. Childers served with credit in the Great War; he was converted to the Sinn Féin cause; he was an admirer and colleague of Griffith and Collins, but sided against them when the division came between those Sinn Féiners who accepted a Dominion form of government and those who chose to fight to the bitter end for complete independence.

Childers was tried on the charge of carrying arms without permission, an offense now legally punishable with death. It is admitted by every one that he has been a leading executive in the plans of the insurgents, and he is often called "the brains of the movement." It was not shown, so far as the reports state, that he ordered the killing of Michael Collins or other specific acts of lawless violence. If it had been so proved, there would be less feeling that the death penalty was excessive and that a better course might have been banishment or imprisonment. The fact that English papers denounced Childers as a renegade may have influenced the decision, and doubtless there was a feeling in the Free State that Michael Collins's assassination should be avenged. One writer describes Childers as an Englishman by birth, an Irishman by conviction, and a fanatic irreconcilable and relentless.

Apart from the emphasis laid on the

¹Pictorial Photography in America, 1922. Published by the Pictorial Photographers of America, Art Center, New York. \$3.

Irish question, and the fact that the Lloyd George Liberals voted to a man with the Conservatives in the first division of the house, the opening of the British Parliament was chiefly marked by the exuberance and unparliamentary manners of the members of the greatly enlarged Labor Party. The unemployment question came promptly to the front. One new member, Mr. Newbold, pointed out that he was the first elected member of the Communist Internationale who had stood at the foot of the throne, and added that it would not be the last by a long chalk. Another remarked:

In the House of Lords to-day I witnessed a scene that made my blood boil. I saw all the pomp and splendor of this country, and I had just come fresh from the law courts of Glasgow, where I have been trying to prevent workmen, women, and children from being ejected from their homes, not because they had committed a crime, but because there is no work for them.

The present system is responsible for the murder of tens of thousands of people, and I am sent here on the distinct understanding that I do all in my power to overturn this system.

The new leader of the Labor Party and leader also of the Opposition is Ramsay Macdonald, a brilliant speaker, a bitter opponent of the war, but also now an avowed opponent of Communism. He is a theoretical and intellectual Socialist; his chief aide is the economist, Mr. Sidney Webb. Mr. Macdonald at the outset declared his intention to carry on political action through constitutional methods.

NEAR EAST QUESTIONS AT LAUSANNE

In the early sessions of the Lausanne Conference the two most notable sensations have centered round the utterances of two nations not formally represented at the Conference, the United States and Russia.

If there were any belief that the American "observers" at the Conference were to confine themselves to listening, it was dissipated when Mr. Richard Washburn Child, our Ambassador to Italy and the head of our delegation at Lausanne, made a statement as to American rights in the Near East. He made it clear that the United States has strong views for an open door to all nations in commercial matters, for the continuance of extraterritorial rights in Turkey, against any bargaining for special economic privilege as between nations formally represented at the Conference to the exclusion of American interests, and against secret treaties.

this is really but a repetition of Secretary Hughes said in his reply

CHRISTOPHER MORLEY

author of "Shandygaff," "Parnassus on Wheels," and "Songs for a Little House," and of a thousand delightful whimsicalities in his daily column in the New York "Evening Post," once wrote of The Outlook: "From time to time I have offered one-act plays to various magazine editors; usually they are greatly shocked and reply that a one-act play is quite outside their province. I have a ridiculous feeling that The Outlook would publish even a one-act play if it thought it amusing or for any reason at all worth ink."

Whether or not Mr. Morley had any ulterior motive in thus complimenting the broad-mindedness of The Outlook we do not know. We only know that shortly after the publication of the letter he sent us a one-act play entitled "Bedroom Suite" and that this play is soon to appear in The Outlook. With the finesse of this editorial approach in mind we are thinking of recommending Mr. Morley's name to the President when the next vacancy occurs in the diplomatic corps.

to the invitation for American representation at Lausanne.

This American declaration has brought out important comments from interested nations. Thus Great Britain has positively indicated its approval of these American ideas. Its chief representative at Lausanne, Lord Curzon, has spoken definitely in approval of the principle of the open door and against any unfair compact as regards the valuable oil interests in Mosul. On the other hand, Ismet Pasha, the Turkish delegate, has been stirred by Mr. Child's utterance to make extreme claims as to the future of Turkey. He asserts that Turkey under the Nationalist Government must be treated as entirely independent and self-governing.

Russia, through recognized representatives, backs this Turkish position, and is especially peremptory in its demand that foreign navies should enter the Dardanelles and the waters to the east only as all naval vessels are admitted to the waters controlled by another government. Soviet Russia also maintains with Turkey that mandates over former Turkish territory are null and void and that Turkey itself should control the Mosul area. In fact, Russia seems now set upon supporting Turkey's most extreme attitude, including the abolition

of the capitulations and, as Mr. Rakovsky, the principal Russian representative in Lausanne, puts it, "the liberty of the Straits from foreign domination."

All this discussion has brought out the fact that there are important American interests in Turkey about which we have a right to be heard. For instance, Dr. Gates, for many years the President of Robert College, in Constantinople, which is the largest educational institution in the Near East, declares that the Kemalists Turks for the future will not tolerate any minority population, and that the Christian minorities have already practically been driven out, so that the twenty-five thousand pupils who were in American-managed schools have disappeared and the schools are closed. Naturally, Dr. Gates, Dr. J. L. Barton, of the American Board, who is also in Lausanne, and others interested in American institutions think that those institutions, as well as the Christian minorities and the extraterritorial rights, should be protected in so far as they are American by separate treaty with the United States.

Secretary Hughes and Ambassador Child between them have certainly cleared away the foggy state of mind which has seemed to prevail among a good many Americans and has led them to believe that because we could not take part in the Sèvres Treaty, as we had not been at war with Turkey, and because we did not wish to take part in any territorial divisions or scrambling for advantages, therefore we had no rights at all in the Near East. As a matter of course we have precisely the same rights we have always had, and we may properly use all diplomatic means to protect those rights.

CLEMENCEAU

THE visit of Georges Clemenceau to this country is an international event of the first importance. It may have no direct political effect; at this writing the indications are that it will not. But it is sure to have a social, educational, and moral effect, and sooner or later social, intellectual, and moral forces find expression in political policies.

Mr. Clemenceau must not expect that the remarkable tokens of popular admiration and affection which he has received are any indication that Congress or the Administration will modify their attitude on German reparations, the cancellation of foreign war debts, or the protection of France by alliances or agreements. Or that it will disarm American criticism of the French Government for its pro-Turk and anti-Armenian policy. What he may rightly

THE ACTION OF THE TIGER

(Henry V, Act 3, Scene 1)

Drawn for The Outlook by Usa Gombarg

This is the way the 'Tiger' appeared to Usa Gombarg, a Russian cartoonist who was driven from his native land by the Revolution. He has caught Clemenceau in the most eloquent and emphatic moments of his address at the Metropolitan Opera House, in New York City. The sure draughtsmanship of such a cartoonist as Usa Gombarg permits him to take liberties with his subject which the average American newspaper artist could not indulge in without appearing malicious. The Continental cartoonists seize upon the characteristics of expression and action with uncanny quickness and certainty. Other drawings by Ma. Gombarg await publication in The Outlook

morally, and materially. In other words, some method must be found for mobilizing the moral forces of the world.

LYNCHING A NATIONAL EVIL

LYNCHING is a stain on the Nation. Americans denounce Turkey for the massacre of Armenians. Americans have counted it a reproach against Russia and against Poland that those two countries in the past have tolerated Jewish pogroms. In holding Turkey and Poland and Russia guilty Americans have not made any allowance for the fact that there are undoubtedly Turks and Poles and Russians who have deplored such wholesale crimes. The reason why we in America have held these nations responsible for such forms of murder is that in each case Governmental authority has either been exercised to promote the crime or has deliberately refrained from suppressing it.

When, on the other hand, critics of America have charged this Nation with the guilt of lynching, Americans have resented the accusation. It is not pleasant for a free and liberty-loving people to be classed with those whom they have denounced. In a measure the resentment on the part of Americans at the attempt of foreign critics to hold the whole Nation guilty of lynching is justified. There has never been any evidence that the Government of the United States has been a direct accomplice in any lynching as the Czar's Government was an accomplice in pogroms or the Turkish Government has been an accomplice in massacres. Nevertheless the American people are not free from blame for the evil of lynching; for lynching is not merely a local evil. So long as the Government of the United States fails to exercise all the power at its command to prevent such lawlessness, so long will other peoples have the moral right to hold the whole Nation in some measure responsible for every mob that attempts to work its vengeance upon its victim.

If the National Government were so feeble that it could not do anything to eradicate the evils of lynching, there might be some ground for asserting that all that Americans could do to remove the stain of lynching from the Nation would be to explain to foreigners that the Nation was powerless to do anything of itself. The Nation, however, is not powerless. Again and again it has been established that there is Federal police power. That power, it is true, cannot be exercised except to enforce authority granted by the Constitution to the Federal Government. The Constitution,

P. & A. Photos

CLEMENCEAU REVIEWING A GUARD OF HONOR AT THE NEW YORK CITY HALL

expect is that the American people, as the result of his visit, will have a finer and more sympathetic appreciation of French civilization, the French intellect, the French temperament, and French virility. The picture which Clemenceau presents in his own personal bearing, of a combination of courage, frankness, faith, persistence, and indomitable vigor, is truly a splendid one. In this respect he is not only doing a service to France, but a service to the moral qualities of the human race.

We have just seen a letter from a young New York matron, who heard Clemenceau two weeks ago give his notable extemporaneous speech at the Metropolitan Opera House. It so confirms our own judgment of the real mission of Clemenceau that we desire to pass it along to our readers:

Last night I heard the message that Clemenceau came over to America to give to us, and it was a stirring and impressive occasion, even though one did not agree with all of his point of view. The Metropolitan was filled with a brilliant audience which waited in eager expectancy for the "Tiger" to appear. Suddenly he came briskly across the stage, and the whole audience rose to greet him with hearty enthusiasm. From the dress circle we wondered whether that rather small, frail man could make himself heard in the great opera house, but when he rose to speak our doubts vanished as the strength of his voice filled the house. He spoke with great simplicity, and yet with real

dramatic power, and through it all was the charm and delightful humor that no one knows how to use better than a Frenchman. As he stood there, alone, speaking for France, Clemenceau seemed a lovable and yet pathetic figure, although his vigor and the fire of his eloquence filled us with admiration. Perhaps the most dramatic moment was when he suddenly turned toward a box above the stage, and with outstretched arm appealed to Paderewski as a witness to what he was saying about the making of history at the time of the armistice. With those two world figures who had taken so large a part in the history of the war a picture of that time seemed to be brought vividly before our eyes. The audience was most responsive to Clemenceau's message, even when he scored America frankly as a "quitter," and the crowd as a whole seemed to agree with him and to receive his points with enthusiasm. His courage and sincerity were inspiring, and when he ended, after an hour and thirty-five minutes in which his vigor never flagged, we felt that we had heard a truly great man.

A civilization which can produce such a character and personality is truly a great civilization. The day of armed political alliances seems to have passed. It certainly has so far as the United States is concerned. What must be hoped and worked for is an effective combination of those in every country who believe, as Clemenceau believes, in a system of international justice that shall give every man an opportunity to make the best of himself mentally,

however, has granted the Federal Government authority to deal with this very thing. The Fourteenth Amendment to the Federal Constitution provides that no State shall "deny to any person within its jurisdiction the equal protection of the laws," and that "Congress shall have power to enforce, by appropriate legislation, the provisions of this article."

It is obvious that when an officer of a State fails to employ the resources at his command to protect a person under his care from a lynching mob, the State, through its agent, is denying to that person the equal protection of the laws.

Congress, representing the people of the whole Nation, has therefore the right to enact legislation to hold the States severally responsible for protecting people against lynching.

It is for the purpose of exercising this right of Congress that the Dyer Anti-Lynching Bill was introduced into Congress. It has passed the House of Representatives and is now before the Senate. It provides that any State or municipal officer who neglects or refuses to make all reasonable efforts to prevent the lynching of a person in his charge is guilty of a felony punishable by imprisonment not exceeding five years or by a fine not exceeding five thousand dollars, or by both fine and imprisonment; that any such officer who conspires with the mob shall be guilty of felony, punishable by imprisonment for not less than five years or even for life; that the trial of the accused in these cases shall be by Federal court; that any county in which a lynching occurs shall be subject to a forfeit of ten thousand dollars to be used for the benefit of the victim's family or other dependents, or otherwise for the use of the United States; and that if the victim is taken from one county to another both the county in which he was seized and the county in which he was put to death shall be liable to pay the forfeiture.

There is strong legal authority for holding that such a law would be Constitutional. The American Bar Association in its meeting in San Francisco last August resolved that "further legislation should be enacted by the Congress to punish and prevent lynching and mob violence." Whether all the provisions of the Dyer Bill would be upheld by the Supreme Court no one can be certain; but it is by no means certain that they would not be upheld.

In spite of what Mr. Miller says in his article on another page, this bill is not aimed at any section or at the defense of any race. It is aimed at an evil that has disgraced practically every section of the Nation and that has brought disrepute upon the Nation without respect

to section. Mr. Miller says the States can and should stop lynching, and that if they do not the Nation should and must do it. We believe that in this Mr. Miller speaks, not only for the South, but for the whole country. It is not enough for those who object to the Dyer Bill to point out its defects; they must prove that there is a better, a more effectual way to stop this evil. So far no better way has been found.

THE SPIRIT OF OBSTRUCTION

WRECKING houses is a necessary business, but it is subordinate to house building. Opposition to what is wrong or stupid is often needed, but not so often as promoting what is intelligent and right. We suppose that the men who engage in the business of pulling down old buildings derive much satisfaction from the rather dramatic display of power. Here, for instance, is a massive structure that is in the way of some new improvement. The man who undertakes to pull that building down must find some delight in directing the force that is overthrowing those solid walls of brick and stone. The very speed with which destruction takes place is a stimulant. Similarly, there is some pleasure undoubtedly to be derived in setting one's self against a powerful political or social movement and impeding it or diverting it from its natural course. It is much easier and much more dramatic to withstand than to plod along, to pull down than to build up.

In the last four years it has seemed as if the country and its political representatives had formed the habit of obstruction. We have been very wise perhaps in deciding what should not be done. There have been a score of intelligent discussions of the faults of the Treaty of Versailles to one intelligent suggestion as to how it could have been bettered. There have been scores of critical comments upon the shortcomings of Europe to one intelligent and practical suggestion as to what Europe can do to make the shortcomings up.

This obstructionist spirit has seemed to become almost habitual with the American people. The election in November was not an election for; it was an election against. Most of the talk as to what the new Congress will be consists in estimating the power of this group or that to impede some proposed legislation. Perhaps we may even come to spelling bloc b-l-o-o-k.

Here, for example, is the bill for aid to the American Merchant Marine. No one doubts that there is a task before the country that ought to be done. The

Nation needs carriers for its manufactured goods, just as a department store needs delivery cars. If we are going to sell our goods in the markets of the world, we cannot depend upon hiring messenger boys from other countries if we are going to sell on even terms. We must provide our own messenger service, or else give up competing on equal terms with other manufacturing nations, such as Japan and England, and even, in time, nascent Germany. At the same time we have an enormous fleet of vessels lying idle. For the Government to operate these vessels itself has proved impracticable. There is a definite proposal now before the country that the Government should get out of the business of operating ships and turn it over to private owners on an understanding that in return for certain benefits they will put their vessels to certain public service. All the opposition has so far consisted in denouncing that bill. Virtually none of it—certainly none that has made any public impression—has consisted in any intelligent alternative proposal. The people who are against what they call a ship subsidy do not seem to be united for anything.

Here, for another example, comes our good friend Georges Clemenceau to tell us what France thinks. Of course he is greeted with a warm and affectionate demonstration. Public discussion, however, of his interpretation of the needs of France consists mainly in informing M. Clemenceau of the view of American Senators and others concerning the mistakes France has made, or concerning what the United States will not do. Within the memory of people scarcely beyond middle age France has been invaded twice. It is easy to tell France what she should not do about it and what we will not do about it; but who among all American critics are giving France any sensible and plausible suggestion as to what she or we can and should do?

And here, to cite the most familiar and persistent example, we have prohibition. Nothing is easier than to point out certain defects in the law and in its enforcement. Foreign visitors seem to think that Americans are engaged in doing nothing else. When these critics of prohibition are asked, "Do you want the return of the saloon, the bar-room, the grog-shop?" they are very nearly unanimous in protesting, "Of course not." They do not like prohibition. What, then, will they have in its stead? If there has been any consistent reply from any of the large body of these numerous critics, we have yet to hear it. The dispensary? Ask South Carolina. Beers and light wines? What kind of beer? How light wine? Who will sell them?

Should they be taxed? How are you going to have any trade in liquor without reviving the liquor trade? It is much easier to tear down the Volstead

Act and the Eighteenth Amendment than it is to design and erect any decent, durable structure in their place.

Apparently every now and then the

American people need to have somebody ask them, even if it has to be a Tweed: "What are you going to do about it?" with the emphasis on the "do."

WHAT SOUTHERNERS THINK OF THE DYER BILL

SPECIAL CORRESPONDENCE

BY E. E. MILLER

EDITOR OF THE "SOUTHERN AGRICULTURIST"

THE Federal Child Labor Law, lately declared unconstitutional, was passed to meet an alleged delinquency of the South in the protection of its children. It was passed by the votes of other sections over the protest of the South, and whatever rejoicing greeted the Supreme Court's decision came from the South.

The proposed Federal law against lynching is also—when one frankly faces the facts—aimed at the South, and at the lynching of Negroes in the South in particular. While it is opposed by representative citizens of all sections, the most vigorous and concerted opposition comes from the South. The fight against its enactment is largely a fight of Southern sentiment against the sentiment of other sections. Southern opposition has been intensified and strengthened by the decision against the Child Labor Law.

Because Southern votes in Congress and Southern newspaper utterances were strongly against the one measure when it was being debated and are now strongly against the other, it should not be inferred, therefore, that Southern sentiment is unanimous in either case. In the 1921 report of the Tennessee Bureau of Workshop and Factory Inspection I find this sentence, "The Federal Child Labor Tax Law has helped materially in the enforcement of the Child Labor Law." Most Southern people, I am persuaded, while naturally feeling that child labor should be regulated by the States rather than by the Federal Government, recognized that some States were not doing their duty, and would have been quite content to see the Federal law remain in force.

So an increasing number of Southerners are coming to look with tolerance on the idea of a Federal law against lynching. This does not mean that there is any acceptance of the provisions of the Dyer Bill. A few Southern Congressmen voted for that measure, but the ablest Southern Republicans opposed it. I have yet to hear any Southerner in private conversation approve its provisions. So general is this condemnation, so strongly voiced has it been from all sections of the country, so manifestly unfair are some of the provisions of the bill, that one does not have to venture far into the realms of prophecy to say that it is not going to become a law without being materially modified. Nor

does one have to assume much legal lore to doubt its constitutionality. Disregarding this particular bill, then—as one well may—there remain some important questions it has raised for the South to consider—the question of whether the prevention of lynchings should be left entirely to the States, even when they fail to take adequate steps of prevention, for one thing; for another, the question of whether a Federal law, even though undesirable, may not become necessary; the question of whether the public sentiment of the

do not mend our ways very decidedly, Federal legislation will be had."

These men, because of their interest in the welfare of the colored race, might be expected to take the view that the protection of the individual in his rights as a citizen and the promotion of racial harmony could become of more importance than the preservation to the States of their right to the exclusive use of the police power. Yet I found a Southerner of the truest type, Dr. T. N. Ivey, editor of the official organ of the Methodist Episcopal Church, South, taking practically the same view. "The States should suppress lynchings and punish lynch-ers," Dr. Ivey said in effect. "If they will not, public sentiment will force the Nation to take a hand, and it should. Whether the States have already sinned away their day of grace I do not know."

A former professor in the University of Tennessee, long in the South, but of Northern birth and Republican ancestry, was firmly of the opinion that the Nation had both the right and the reason to act if lynching became a National problem. Yet this man put more stress than any educated Southerner I have talked to in a long time on the naturalness of the feeling that leads to lynchings and the incentive to the use of force—even illegal force—that exists wherever there is a large population that understands and respects no law but the law of force.

Both contrasting with and complementing these views are those of a thoughtful Negro leader, Professor Isaac Fisher, of Fisk University. He favors a Federal law and pleads with Southern lawmakers to welcome, not oppose, "Federal assistance—not interference"—in the stamping out of a great evil. Only an awakened public opinion can stop lynchings, he says; a Federal law will be but the beginning of the work necessary to be done. "Any one who imagines that habits of thought can be changed by legislative enactments needs to turn back and read again the history of civilization." Federal law is needed, not because it will stop lynching all at once, but because it will strengthen public sentiment against it, make the task of State and local officials in protecting the weak and ignorant easier, and give hope and courage to the Negro race.

This call for immediate Federal action voices the feeling of Negroes generally. The Negro mind—so far as one outside

THERE is a river longer than the Mississippi which flows northward from Great Slave Lake to the Arctic Ocean. One can only hazard a guess at the future of this vast region which Stefansson declares may some day be the seat of a great civilization. Last summer

FULLERTON WALDO

journeyed the length of the Mackenzie and back again. He has given us a series of colorful sketches of the manners and the men of this north country. They will begin in next week's issue of The Outlook.

South will be against a Federal law for all time and under all circumstances.

Having definite views of my own on the first two questions, I have lately been trying to find out just what representative Southerners who have studied the subject of lynchings think of the ultimate possibility and desirability of a Federal anti-lynching law.

Three men of Tennessee who have given much thought to racial relationships and have done much to create a sentiment against mob violence are Dr. Edward Mims of Vanderbilt University, former Governor A. H. Roberts, and Mr. Bolton Smith. These men are agreed that Federal action should come only as a last resort—that is, only when the States have made it clear that they will not take adequate measures to prevent lynchings and to punish the members of lynching mobs. Yet Dr. Mims says, "If local and State government cannot stop lynching, then the Nation must and will." Or, as Mr. Smith puts it, "If we

the race can judge—is filled with the horror of lynchings. The race fears the lynching mob and resents with intense bitterness the thought and feeling that tolerate mobs and their unholy deeds. Without Professor Fisher's understanding of the limited results that Federal legislation can achieve, the Negroes generally see in it their only hope and long for it with an intensity not generally appreciated.

The Negro view can be taken* for granted. That the views of the men I have been quoting are the views of the majority of Southern whites I very much doubt. I am inclined to think that the majority view was presented by the business man who said that he was opposed to both lynchings and a Federal law against lynching. "I do not believe the Federal Government ought to interfere with matters that can be handled locally. I believe its interference would provoke resentment in the South and do more harm than good. No community is going to take kindly to the exercise by an outside authority of powers it has been itself exercising. The Governors of the States are the men who can do most to prevent lynchings. A State police force in every State would be a great help. Only the development of a general feeling against lynching can finally end it. This feeling is steadily being developed. A Federal law would check rather than aid its development."

A young man with an interest in things political expressed similar opinions: "The Federal Government is interfering in too many things now. What is needed is not more laws, but better enforcement of the law we have. Even if things go on as they have been going, I am opposed to a Federal law. It will be better for a few lynchings to go unpunished than for the National Government further to weaken the power of the States."

This is the view taken by most Southern politicians and newspapers, the view probably yet held by the majority of our people. I think there is no doubt, however, that the majority holding this view is all the time becoming smaller. The conviction that lynchings must be stopped—by the Nation if the States cannot or will not do it—steadily deepens. The people of the South are coming to feel a sense of shame for their long endurance of this crime against democracy and humanity, and most Southern States are now making an honest effort to put an end to it. If the three or four States that yet seem indifferent remain so, they will find themselves before long without the support or the sympathy of the States that are trying to erase the blot that now clings to the whole South.

Thoughtful Southerners are coming, too, I think, to realize that it is finally by public sentiment rather than by law that lynchings will be stopped. Much can be done, beyond doubt, by the speedier trial of persons accused of crime, but this could be carried too far in individual cases. Much can be done by prompt, energetic action that will make evident the purpose of public officials to enforce the law against mobs and mob members. Too much can scarcely be done along this line. In some States, at least, public sentiment is even now with the official who is not afraid to put down mob violence with a strong hand if necessary, and officials are showing a determination along this line they did not so fully display a few years ago.

"Any Governor can enforce the law," said Governor Taylor, of Tennessee. "It is all nonsense for a man in office to say that he cannot. If he is willing to act and not afraid, he can do it, and public sentiment will back him up in it." Governor Taylor has shown commendable

energy in law enforcement and has unquestionably had the backing of the public. In some instances and in some sections an official might not have this public support, and with public sentiment against him the most vigilant and active of officials might not be able in extreme cases to prevent a lynching. It is seldom, however, if the proper effort were made, that the leaders of a mob could not be apprehended and put to trial.

Personally, I believe that lynching must be stopped—in the South and elsewhere. The States can and should stop it. If they do not, the Nation should and must do it. National legislation can be prevented, and should be prevented, only by the earnest effort of the States to protect their citizenship. If National legislation becomes necessary, and is wisely conceived and fairly administered, it will commend itself to the thoughtful Southerner, just as the Federal Child Labor Law, despite his objections to its passage, was coming to commend itself.

Right now what is most needed is not more laws, either State or Federal, but a quickened sense of public duty and individual responsibility in the matter. The people who would end the crime of lynching can do most to accomplish their desire by bringing home to the public mind the horror, the futility, and the danger to our whole fabric of government of such lawlessness. Similarly, the men who are concerned to preserve to the States their ancient rights can do most to accomplish that end by bringing to the citizens and the officials of the States in which lynchings most frequently occur a realization of the fact that civilization will not much longer tolerate the repeated and unpunished murder of men—black or white, guilty or innocent—by excited and passionate mobs.

ENGLISH AND AMERICAN UNIVERSITIES

BY M. C. HOLLIS

SECRETARY OF THE OXFORD UNION SOCIETY

THERE is an old tradition of some two years' standing that any Englishman who visits America (and, he who reads might almost suspect, many who do not) must necessarily write his impressions of how prohibition does not work and how American universities do, and generally, from a perhaps three weeks' experience, tell Americans how they ought to manage their country. As I write Professor Stephen Leacock's "Discovery of England" lies before me. I have, I hope, learned its lesson. The tradition will by me be more honored in the breach than in the observance. My Discovery of America is that it is a land whose hospitality is almost staggering. My impression of my first visit to America is that it will

not be my last. Beyond that I will not commit myself. I am an original Englishman, who believes that the problems of America, educational or otherwise, must be solved by Americans.

My task is less ambitious, and perhaps less impertinent. I have had the good fortune to be a member of a debating team from Oxford University which has been touring a few of the Eastern American universities, and I have been asked to write of the differences between Oxford and these universities. How far the universities which I have visited are typical of American universities, and how far, therefore, my remarks are capable of generalization, I simply do not know. I should imagine that there is no such thing as an American uni-

versity and that Harvard is a great deal more like Oxford than it is like one of the big State universities of the Middle West. I can write only of what I have seen, and I have seen these seven universities—Bates College in Maine, Swarthmore, Columbia, Yale, Harvard, and the University of Pennsylvania.

And of the other term of my comparisons and contrasts. I am comparing, not with "the English university"—which is a phrase that means nothing at all—but with Oxford. And whatever the English university would be like, it would certainly not be like Oxford and Cambridge.

Between Oxford and the Eastern universities the first difference by which every one must be struck is the funda-

mental difference of system. I was told by a professor at Columbia that he often used to be asked how it was possible to enter "Oxford College." The phrase is natural to an American and extremely amusing to an Englishman. For in America, as I understand it, the words "college" and "university" are used more or less indifferently. A man "goes to college" and he means merely by that that he goes to a university. It is therefore natural to speak of going to "Oxford College." For the constitution of a university in the United States is not like the Constitution of the United States. The only universities whose constitutions are like the Constitution of the United States are Oxford and Cambridge.

Just as the United States consists of united States, so Oxford University consists of united colleges. There are, I think, twenty-six colleges at Oxford, to one or other of which practically every undergraduate belongs. He will live and eat and sleep in the college buildings when he first comes, as we say, "into residence." Even when, after two years, owing to overcrowding, he is turned out of college and has to find lodgings for himself in the town he is still a member of his college. He may still dine in the college hall any night that he wishes to do so, and it is to the college authorities that he is responsible for the work that he does (or does not). At Oxford we are Democrats rather than Republicans. The college rights are very jealously guarded. It is the college which is responsible for all internal discipline, and, as recent experience has shown, it is practically impossible for the University authorities to touch an undergraduate if the college authorities see fit to take his side.

There are two very prominent features of American university life of the development of which, owing to this college system, Oxford has never felt any need—the class and the fraternity. Take first the class. Some ten days ago I watched at Columbia the tug-of-war between the freshmen and the sophomores, and I heard and partly saw its preliminary processions. Those repetitions of "One-Nine-Two-Four" and "One-Nine-Two-Five" were the most curious things that I heard in all America. What was the reason for this violence of loyalty? Why should a man feel any community to another man simply because, if all went well (and, after having heard of the psychological tests which Columbia imposes, that in itself was almost inconceivable), they would both graduate on the same vague day some two or three years hence? It is impossible to understand a loyalty without feeling it, and no doubt I am wrong in thinking that this class loyalty must be a very artificial thing, perhaps even a non-existent thing, as a genuine emotion, like another class loyalty, that very empty "solidarity of the proletariat" of which we hear so much.

or at Oxford we do not have class

loyalty because we do not need class loyalty. The college system supplies us with our lesser loyalty, our hated friend and ever-present enemy, whom we meet and to whom we talk every day of our lives and whose existence is so essential to the existence of a university. All the athletic contests that are not inter-university are inter-collegiate. The colleges, varying as they do considerably, are still nearly enough equal in numbers to make this possible. And this college loyalty is certainly no artificial thing. By 1936 the class of 1926 can exist only, I suppose, as a memory. But a college is a lasting thing, a building, perhaps half a thousand years old. It is something substantial to which the old graduate can return, and he need not find a contemporary in order to find a sharer of his loyalty and his love. It is only in an arithmetical sense that this college loyalty can be called a lesser loyalty, for if two old friends were to meet they would soon forget that they were Oxonians in their remembrance that they were at Balliol or at Christ Church together.

The complete absence of this consciousness of year makes almost unintelligible to us the system of "hazing," which still survives in some American universities. There, too, it seems to be dying. At Oxford we never hazed. Before the war there was a certain formality of intercourse between a freshman and a senior (a senior is with us any one who is an undergraduate and not a freshman). The freshman would not speak to the senior until the senior had first called and left his card. But after the war we found that freedom had rather abruptly ceased to broaden down from precedent to precedent. An ex-colonel of forty-three might be a freshman and an ex-schoolboy of nineteen a senior. Our English sense of humor, even if, as Americans say, it does not exist, was sufficient to kill Oxford's last relics of class consciousness.

American friends often used to ask me whether at Oxford we have "fraternities." But fraternities, like classes, supply in American university life a need which Oxford, because of her college system, does not have. The object of a fraternity is, as I understand, to give the student somewhere to live. With us the college is above all things the place of residence. The difference is, first, that a college is, as I have tried to show, much more besides; and, secondly, that admission to a college comes, not through the election of those who already belong to it, but the passing of certain tests and examinations which the college authorities ordain.

We thus ought by rights to be free from the main charge against American fraternities—that they encourage the clique—but we are not. The fraternities, limited as they are, still survive at Yale, satisfying, as far as I could make out, no want whatsoever of their members. So at Oxford. I have shown that

we have no need for fraternities, but that is a different thing from showing that they do not exist. We can eat, we can even entertain in our private rooms, but still we must needs have our clubs. And there at least we jealously and uselessly reserve to ourselves the privileges of cliquishness. The Oxford Club is more like the Eating Club of Princeton than anything else that I saw in America, only it is more an addition to and less a part of our life than the Princeton Eating Club seemed to be.

There is, or has been, a very close parallel in England to the American fraternity, but it was not at Oxford or Cambridge, but at the English public school. The English public school is not, like the American public school, public. It is the most exclusive and expensive private, or, as you would say, preparatory, school in the country. It was, it is true, stolen from the public and only the name now remains as record of the theft. Eton, for instance, was founded by King Henry VI to provide an education "for seventy poor scholars." For these seventy scholars accommodation was provided in the college. As time went on, the reputation of Eton's education grew and people would come from afar to share it. Where were they to live? They formed themselves into groups and took lodgings with landladies about in the town. These landladies were called *dames* and the houses *dames' houses*. The *dames' houses* at Eton a hundred years ago were, so far as I can discover, very like the American fraternities of to-day. The difference (and the downfall) was that their inmates were younger, and therefore noisier, than the university students. The noise defeated the *dame*. The evolution of the last hundred years has been that the *dames* have paid the penalty of their incompetence, which was to change their sex. They have been replaced by the house master—teacher and housekeeper in one—and fraternity has become *paternity*, with the house master as a very paternal autocrat. The self-determination of the organization has been regularized out of existence. Is not this almost what ex-President Wilson wished to see happen at Princeton, and will history repeat itself?

There was one side of Oxford life about which Americans seemed everywhere much better informed than I was. It was the Oxford tutorial system. I confess that it had never occurred to me before that Oxford had a tutorial system, but, on thinking it over, I suppose that it has. To use a tutor in order to teach I had always thought too obvious a device to be dignified by the name of system. But it has apparently been accepted as such in America, and even rejected as such and opposed as such. But acceptance and rejection and opposition are none of them really acceptance or rejection or opposition to the Oxford system. For the Oxford system of teach-

ing implies the Oxford system of getting a degree, and that is a system which does not exist in America.

In America degrees are gained by taking a certain number of courses, and to take a course means, as it seems, to go through a certain prescribed ritual. Whether the Oxford system is or is not popular depends on whether it is or is not a part of the ritual. Thus at Princeton I found that it was, and was therefore accepted. At Harvard it was not. It was therefore looked on as a mere extra, and very properly disliked. But at Oxford it is neither a part of a ritual nor an extra. It is a convenience.

The confusion comes from a failure to realize the difference between the Oxford lecturer and the American lecturer. The Oxford lecturer is like a porter. Just as a porter is a person who offers to carry your grip for you, and if you prefer to carry it yourself it is your business, so a lecturer at Oxford is a person who offers to help you to get a degree, but if you prefer to get it without his assistance it is your business. And it would not be unfair to add that with some lecturers it is very much easier to get it without assistance.

Oxford University requires a student, before it will give him a degree, to have slept for forty-two nights during each of the three terms of three years within three miles of Carfax (a crossroads in the center of Oxford) and to have passed two public examinations—that is to say, to have written two series of papers which convince the appointed examiners that he knows as much about

his subject as he ought to know. How he acquires that requisite knowledge is his own business. If he is one who learns easily from lectures, there are lectures and there is a tutor to advise him to which lectures to go. But, if not, let him shut himself up with his books and never enter a lecture-room.

At Yale and at Swarthmore I was allowed to attend classes. At Swarthmore I am sorry to say that I was noticed and the ordinary course of study was interrupted in order that the class might enjoy the much more highly educative experience of laughing at my complete ignorance of the history of British foreign policy. But Yale was made of sterner stuff. The subject was the growth of trades unions. What I may call the lecture part of the class might well have been a lecture delivered at Oxford, except that the Oxford lecturer would not have known so many facts. What was very un-Oxonian was the preliminary written questions to see if the students had read what they were told to read. An Oxford lecturer, like Gallio, would have cared for none of these things, and, if he had, his class would have told him to mind his own business.

I saw much else that was new and wonderful. I found that universities in America have publicity agents. In England we still pretend, having first taken care not to succeed, that we wish to keep out of the papers. At Harvard I was shown the mysteries of your university journalism, and, as a harassed university journalist myself, wondered at the free-

dom and energy and imagination which could find facts enough to fill a daily newspaper. At Columbia I tripped even more badly, and joined the great lost army of contributors. But Swarthmore was perhaps our most interesting experience. There we found—what does not exist in England—honest co-education in working. It was so honest that I even had to debate against a lady. The co-education of Oxford means that men and women, as a concession, are allowed to live in the same town and, when they have finished doing that, to write the same letters after the name. Oxford's interpretation of the equality of the sexes is to call its women students Bachelors of Arts. Cambridge has women students, but no interpretation of the equality of the sexes. It is therefore the more praised of Professor Leacock. But it was a novelty to go into a university dinner and sit down between two ladies. I was surprised, and perhaps the test of co-education's success at Swarthmore is that everybody else present was surprised that I was surprised. But of that I cannot say.

The trouble everywhere was the shortness of time. I had never time to judge. I was whirled into a university life that was very different from any that I had ever known. I told it to join the League of Nations, and then I was whirled out of it. Nothing was left but a remembrance of wonderful friendship and hospitality and a great longing to come again and learn more truly what manner of men and women they are who give these great gifts.

PLUM TREES

BY HAROLD VINAL

I THOUGHT that beauty was forever dead
Until I saw wild plum trees in the night,
Beyond a ruined wall, a garden bed,
Blown into moonlight, shivering and white.
I thought I was too young for May and spring,
Too new to tears and country lanes and grass;
Then suddenly I saw this lovely thing.
Now where dead kings went do I move and pass.

Wild plum I will remember till I die,
How on an April night I saw it first.
Here in this windy city do I cry
For olden loveliness to quench my thirst.
There is a crumbling wall I used to know
Where on a night like this the plum trees blow.

SAD HOPTIMISTS

SPECIAL CORRESPONDENCE FROM PARIS BY FREDERICK W. CLAMPETT

IS London filled with gloom?
The question is not original. In point of fact, it has been so often asked of late as to become almost commonplace.

The crowds of tourists entering Paris from London do not hesitate to speak their minds. To the average Parisian such sentiments as the following are quite familiar: "The atmosphere of London is positively depressing!" "What a burst of sunshine here compared with London!" "How glad I am to escape from that grim, gloomy city!"

The Paris press, too, has dwelt upon this drab theme. Nor is the London press silent. There is an almost brutal frankness about the editorials of the English press. Papers like the "Daily Telegraph" and the "Morning Post" have alluded again and again to the strange depression that seems to have gripped the heart of the Empire. Indeed, it is said to have spread throughout the country, like the insidious germ of "walking typhoid."

One London daily actually offered a prize of ten pounds to be handed by its agent to the man or woman who might be heard to utter the heartiest laugh. If Dr. Samuel Johnson were only living!

A laugh bribe is a new species of graft, and England is serious enough to make it possible. The prize has yet to be won.

Then there is the "Brighter London Movement," in which the Church and State have combined with grim determination.

The two most talked-about men in England to-day seem bent on winning that prize. Between the royal smile of the youthful Prince of Wales and the subtle smile beneath the stubby moustache of Lloyd George it would be hard to make the award.

Now, assuming that the press and the public both express the truth, there is

presented a most fascinating study. The very mystery that beclouds it makes it much more interesting than the somber diagnosis of sleeping sickness.

As an earnest student of the signs of the times, I confess that the subject laid strong hold upon me. But the climax was reached when an old friend of mine—a noted Baltimore physician—introduced the matter as we chatted over a cup of tea in the Hotel Crillon in Paris.

"How I wish," said he, earnestly, "that I could prolong my stay that I might examine into this London gloom from a purely psychological angle!"

That remark, casually made, brought into instant play a plan that had long lodged in my sub-conscious mind.

Then and there I confided to my friend the physician and alienist my determination to cross the Channel, visit prominent men in London, tackle the man in the street, and learn the facts at first hand. Above all, to watch and to listen.

The enthusiasm of my friend was a source of the greatest inspiration. He prepared for me with much care a plan of campaign which I promised to carry out to the letter.

In this spirit I entrained in the Gare du Nord for Calais, *en route* to London, and the story that follows is a faithful and impartial chronicle of events.

The channel between Calais and Dover, it must be confessed, is not conducive to serenity of mind. High speed in a heavy sea has a disturbing influence over mind and matter.

So must have thought the eight men who filled a first-class compartment in a Dover-to-London express. We looked one another over in caustic silence. As the minutes flew by I began to realize that my mission had already begun on English soil.

It was a clear case of one American in the midst of a bunch of Englishmen. Alpine sticks, rubber coats, and plumpy

kits heaped high in the racks suggested Switzerland.

After the first hour the silence became painful.

We were like an order of monks, octave in number, observing the vow. There we were, passing through the rich fields of Kent, amid a golden harvest that seemed to reflect God's sunshine, and as glum as a group of sightseers in the devastated regions of France.

Three of the men at length took out their pipes and gazed vacantly into the unfilled bowls. The fourth opened out the "Morning Post"—a paper larger than the French roll of bread called *baguette*, and almost as crusty. Unopened magazines rested on the knees of the two men in front of me, while the seventh, a heavy-set, ruddy-faced man, slowly uncovered a sandwich.

Its contents broke the silence. The man at his side turned away his head with an angry look, and I heard him mutter, or rather whisper, a word that rhymes with ham.

That was the only word spoken in the space of three hours. There was real solid comfort to me in the screech of the engine's whistle.

My mind recalled the language of the good Book, and I could not help comparing my state with that of the angels when "there was silence in heaven about the space of half an hour."

How to break the intolerable silence was the problem.

Finally, I made a feint, to use the language of the prize ring, to get an opening. Taking a cigar from my case, I slowly searched in every pocket for a match; and, failing, reopened the case with a well-heaved sigh in order to replace the cigar.

The feint worked like a charm. The gentleman at my side, who had broken that long silence with the word that rhymes with ham, struck a wax match

and, with a courteous bow, handed me the light.

I broke the silence sure enough; but, alas! the breakage soon closed in under such frigid conditions.

"Tickets, please," sounded good. Victoria Station looked still better, and I stepped on the platform with a feeling that I had emerged from a retreat of Dominican Friars.

Save for the "Good day, sir," of my friend who had already spoken one word, we made our exit in silence.

Thus the four words spoken came to one word per hour, which was a great disappointment to me, as the determination to listen was the chief object of my journey.

So pronounced a silence must have had a strong underlying cause, thought I as I was being driven to my hotel.

Might it possibly be the British way of qualifying for membership in the "English-Speaking Union" of two great nations?

My friend the alienist had advised me to "be sure and see a humorous film in one of the London theaters," so that I might study the effects.

"Shoulder Arms," by Charlie Chaplin, was at Terry's, and I knew it was a "topper," as the English would say. I found a full house, but I likewise found that every funny hit—and the play is saturated with humor—was received with a strange kind of suppressed chuckle.

Once in a native theater in Peking, China, filled with half-naked, perspiring Chinese, I had heard that same peculiar sound.

The risible organ seemed to emit a groan, like a laugh strangled in its birth.

At a cinema in the Boulevard des Italiens in Paris, a few evenings before, roars of laughter greeted a film far inferior to the sparkling humor of "Shoulder Arms."

Even in dear old Dublin, amid the tragedy of civil war, where life is positively insecure, I witnessed a remarkable outburst of humor in the Galety Theater, in spite of the sharp crack of rifle shots heard between parts.

It was late that night when I was fortunate enough to pick up a taxi on the Strand and escape from that seductive "red-light life" that leaves misery and death in its trail.

Bright and early next morning I drove to London Bridge. Dismissing the driver, I took my place on the north corner, where I planned to remain some hours, as congested toiling humanity was passing by—an after-breakfast scene of man "going forth to his work and to his labor until the evening!"

It was indeed wonderful, both sight and sound, as the hour of nine struck—the strange, low rumble as thousands of men and women passed over that bridge, like the distant sound of great waves out of "the homeless sea" breaking on the shore.

But it was a truly awe-inspiring sight, just like the old-time march of the shell-makers of the war—grim, sullen, unresponsive.

From "Punch" (London)

The Rev. Septimus Jolliboy, having read of efforts for a brighter London, tries to introduce a little gaiety into his parish visiting

PUNCH POKES FUN AT ARTIFICIAL HILARITY

It reminded me, on an immense scale, of a painting in the Grand Palais of Paris, depicting a procession of New England Puritans on their way to church.

Leaning against a pillar, after his all-night beat, was a policeman, giant in stature. As I stood by his side I looked up into his strong, honest, tired face as he yawned for sleep. Then I touched his breast, where a war badge illumined his tunic, at which he touched my American Legion button with a smile, and we shook hands as comrades.

After a long chat I asked him: "Why the mischief, sergeant, are the people so serious, so gloomy, at this hour of the morning?"

He looked at me for a few moments, bit off the end of the Havana I had given him, spat into the Thames, and said, slowly: "Tgh taxes, sir, small wages, 'ightpenny drinks;" and after a few moments he added, "and Lud George, sir."

It was easy to see that the same question had already entered his mind.

The rest of the day was spent in tramping through the great highways of the city. Along the Strand, from Leicester Square to Piccadilly Circus, in the great arteries between Knightsbridge and the Thames, I made my way. Beggars everywhere! Ex-service men, crippled, in worn-out uniforms, passing the hat while their brass instruments made discord more discordant. Women with outstretched hands and the old cry or moan, "For God's sake, sir." London's beggars would form an army larger than the regiments behind Coxey on the march to Washington.

Now I realized the need for the "Brighter London Movement." Sober, overserious faces, groups of unemployed muttering to one another around Trafalgar Square. Not a smile, not a laugh

anywhere! Dark houses, dim in the mist, drab as 10 Downing Street.

Said my friend the alienist to me, as we were parting in Paris: "Above all things, be sure and attend a sitting in the House of Commons; there you are sure to find the pulse-beat of the nation."

All my plans had been carefully laid.

Having entered the lobby of that historic House, I sent in my card by one of the officials to T. P. O'Connor, M.P.

Presently he appeared in his quick, short stride, with his kindly smile and hearty way, so well known to his host of friends. We had not met in many years.

"Tay Pay," as his friends love to call him, is a brilliant son of old Erin, statesman, journalist, nationalist, gentleman.

He is the venerable "Father of the House" by length of service, and as a debater has few equals.

Our meeting was happy, congenial, reminiscent.

Drawing from his vest pocket a little inlaid snuff box, he took a pinch or two, with the evident relish of an old toper sipping his port. But no man may indulge in his *prise de tabac*, as the French say, without penalty. Small clots of brown powder, like finely ground coffee, darkened his gray mustache and made strange streaks down his double-breasted coat.

He smiled when I explained my mission in London.

"Well, now, just look over there," he said. "Surely you don't see anything gloomy in Lady Astor." Glancing round, I saw a slight, graceful woman of charming countenance, dressed in a dark, tight-fitting gown, commanding the close attention of three members who seemed to hang on her words.

Lady Astor was wreathed in smiles, as if crowned with a garland of roses.

"True, Mr. O'Connor," I replied; "but, after all, this is a case of one Irishman

pointing out to another Irishman a typical American lady with English citizenship."

As he was about to reply an usher approached and handed him a card. Transferring it to me, he said, lowering his voice, "Remain for Lloyd George—he'll surely speak," and we shook hands.

The galleries were packed, but the House was half empty. Dense and heavy was the atmosphere. Unsettled weather, with storms, was registered by the House barometer.

Soon I saw that the members were in an ugly mood.

Naturally, my first keen desire was to get a glimpse of Lloyd George, whom I had not seen for many years. Seated next to Winston Churchill, with his feet propped against the Treasury bench and his body at an angle as if reclining on a "davenport," the eyes of the Prime Minister were closed in a kind of parliamentary sleep, and his snow-white hair fell in clusters on his collar. The Milky Way of the war!

This peculiar state of somnolence is the unique inheritance of the great leaders in British politics.

In that same spot, historic and sacred, such men as Pitt and Gladstone, Disraeli and Balfour, had, in their day, passed into this camouflaged trance while undergoing the baptism of fire.

As a matter of fact, in this self-imposed psychic state intuition and imagination, memory and strategy, are keenly at work. And they were all needed on this memorable day, for Lloyd George was the target of attack from every quarter of the House.

The members were sullen grim, aggressively hostile.

Not a single sally of wit to strike a note of brightness.

The Irish, who in the days gone by were like a freshly opened bottle of dry Pommery, were gone, never to return.

There was a fierce growling sound, such as one hears before feeding time in a zoo.

The difference between the Parliament of Gladstone and the last Parliament of Lloyd George is the difference between an iron clipper homeward bound, with full sails set in a spanking breeze, and a battered ship, with every sail rent, scudding before the storm.

Clynes, the Labor leader, struck home with almost brutal force, without mincing words. Several members, including Lord Percy of Hastings, spoke with a studied impediment—a most painful hemming and hawing—a style which is supposed to preserve the traditions of the British Parliament, and at the same time stamp the aristocratic dignity of the speaker.

One Labor member, bearing the historic name of Jones, was offensively personal and bitterly crude. One of his most finished periods closed with scathing reference to "those Union jacks and jackasses." His was "the effort of an owl blinking at an eagle."

Throughout this vulgar harangue the

Prime Minister, against whom the attacks were hurled, remained absolutely in repose. Yet I had no doubt his mental dynamics were in abnormal activity.

Finally, as if to cap the climax, Lord Robert Cecil rose from the Opposition bench and in deep, labored tones of bitter criticism brought the Prime Minister severely to task.

The instant he concluded Lloyd George rose quickly to his feet, like a giant refreshed with sleep.

As, if by magic, the members came rushing in from every entrance, and in less time than it takes to tell the House was packed.

With a smile of perfect confidence Lloyd George faced that hostile House.

Culture, ease, and perfect poise marked the language and delivery of that master of assemblies. With a rich tenor tone, without taint of accent, he might easily pass for a cultured New Yorker. For fifty minutes he compelled absolute attention when, without a single note, he tore to shreds the weak parts of his opponents' arguments and disposed of the smaller fry with stinging invectives.

The Coalition was like a ship in the vortex of a typhoon stormed by huge seas from every angle, and Lloyd George like Captain McWhirter, of Conrad's creation, masterfully alone on the bridge.

Like the late Theodore Roosevelt, he is a perfect master of terse sentences, simple in structure, pregnant with meaning, logical in sequence, delivered with a punch.

But there is one striking difference.

Roosevelt's invectives were accompanied by a certain fierceness of facial expression that laid his victim low.

The sting of Lloyd George's sarcasm, though deadly as the "poison of asps," is driven home with a smile sweeter than that of the coyest maiden and a gentleness of speech softer than the purring of a cat.

While the member bearing the historic name of Jones wilted visibly beneath the venom of his sting I forgot all about the Sermon on the Mount and gloated over his well-deserved spasms of torture.

As it turned out, this happened to be Lloyd George's last speech as Prime Minister in the British House of Commons, and it was worthy the place, the theme, and the man.

My mind was strangely agitated as I walked out of that historic House and imaged the strife, the outbursts of anger, the ingratitude to which I had been a witness there. The pulse-beat of the nation registered a high blood pressure, telling the story of a great unrest, a near upheaval, explaining the psychology of London's gloom.

A few days after it was my good fortune to spend a week with a man who was singularly competent to cast what Lord Bacon calls "dry light" upon the subject.

In the American colony of London there is a merchant who has amassed a

large fortune in the export and import trade. For the past fifteen years he has resided in London, representing his firm. Though an American, he worked hard for Britain during the war, and is now identified with the British efforts for reconstruction.

From this man, a friend of twenty years' standing, I looked for a clear, lucid explanation at first hand. Nor was I disappointed.

On my way to his office I found myself one hour ahead of my appointment, so I entered St. Paul's Cathedral to while away the time.

My ramblings brought me to the world-renowned whispering gallery. At the courteous invitation of an official who waxed eloquent over its marvelous acoustics, I crossed to the other side of the gallery that we might give it a test.

Placing my mouth close to the wall, I first asked him if he heard me distinctly, and he replied, "Distinctly, sir."

Then I whispered: "Will you please explain to me why Dean Inge is called the 'gloomy Dean of St. Paul's'?"

There came back this clear and suggestive reply: "'E ain't gloomy, sir; 'e is what they call 'ere a sad hoptimist."

London is filled with sad hoptimists.

The visit with my friend, as I had hoped for, struck at the root of all the trouble.

The result of many conferences might thus be summarized.

True, the gloom of London was never more pronounced. There's a pall over the city. Was it to be surprised at? England was hard hit. England is now hard hit. Well-nigh one million of the flower of her manhood "gone west," for London is England. Half as many maimed, blinded, helpless. Homes broken up. Taxes sky-high. Industrial unrest. Unemployed exceeding 1,400,000. Socialism steadily advancing. War on private enterprise. Bolshevism in disguise. Society in transition. Foodstuffs soaring in price. Pensions overweighted. State Church weakening. Irreligion rife. England in her dismal isolation. Alone in Europe, without a single ally. Ireland in rebellion. India a slumbering volcano. Egypt divorced. The Moslem world at enmity. Debts staggering. One thousand million dollars due to the United States. The pride of England crushed.

Will she recover? Surely.

But when?

"After fifteen years of business dealing with Britain, I have yet to meet the crook."

"Painfully reserved, absurdly undemonstrative, strangely proud, the British, who discarded mourning during the war, have bled internally."

"Peace of soul, tranquillity of mind—that's her need."

"Gare du Nord."

The shout was welcome. Hailing a taxi, I stepped in, and Paris—gay, volatile, laughing Paris—looked good. As Dr. Coué, of Nantes, well said, Why worry?

A FLAPPER'S APPEAL TO PARENTS

BY ELLEN WELLES PAGE

IF one judges by appearances, I suppose I am a flapper. I am within the age limit. I wear bobbed hair, the badge of flapperhood. (And, oh, what a comfort it is!) I powder my nose. I wear fringed skirts and bright-colored sweaters, and scarfs, and waists with Peter Pan collars, and low-heeled "finale hopper" shoes. I *adore* to dance. I spend a large amount of time in automobiles. I attend hops, and proms, and ball-games, and crew races, and other affairs at men's colleges. But none the less some of the most thoroughbred superflappers might blush to claim sisterhood or even remote relationship with such as I. I don't use rouge, or lipstick, or pluck my eyebrows. I don't smoke (I've tried it, and don't like it), or drink, or tell "peppy stories." I don't pet. And, most unpardonable infringement of all the rules and regulations of Flapperdom, I haven't a line! But then—there are many degrees of flapper. There is the semi-flapper; the flapper; the superflapper. Each of these three main general divisions has its degrees of variation. I might possibly be placed somewhere in the middle of the first class.

I think every one realizes by this time that there has been a marked change in our much-discussed tactics. Jazz has been modified, and probably will continue to be until it has become obsolete. Petting is gradually growing out of fashion through being overworked. Yes, undoubtedly our hopeless condition is improving. But it was not for discussing these aspects of the case that I began this article.

I want to beg all you parents, and grandparents, and friends, and teachers, and preachers—you who constitute the "older generation"—to overlook our shortcomings, at least for the present, and to appreciate our virtues. I wonder if it ever occurred to any of you that it required *brains* to become and remain a successful flapper? Indeed it does! It requires an enormous amount of cleverness and energy to keep going at the proper pace. It requires self-knowledge and self-analysis. We must know our capabilities and limitations. We must be constantly on the alert. Attainment of flapperhood is a big and serious undertaking!

"Brains?" you repeat, skeptically. "Then why aren't they used to better advantage?" That is exactly it! And do you know who is largely responsible for all this energy's being spent in the wrong directions? You! You parents, and grandparents, and friends, and teachers, and preachers—all of you! "The war!" you cry. "It is the effect of the war!" And then you blame prohibition. Yes! Yet it is you who set the example there! But this is my

point: Instead of helping us work out our problems with constructive, sympathetic thinking and acting, you have muddled them for us more hopelessly with destructive public condemnation and denunciation.

Think back to the time when you were struggling through the teens. Remember how spontaneous and deep were the joys, how serious and penetrating the sorrows. Most of us, under the present system of modern education, are further advanced and more thoroughly developed mentally, physically, and vocationally than were our parents at our age. We hold the infinite possibilities of the myriads of new inventions within our grasp. We have learned to take for granted conveniences, and many luxuries, which not so many years ago were as yet undreamed of. We are in touch with the whole universe. We have a tremendous problem on our hands. You must help us. Give us confidence—not distrust. Give us practical aid and advice—not criticism. Praise us when praise is merited. Be patient and understanding when we make mistakes.

We are the Younger Generation. The war tore away our spiritual foundations and challenged our faith. We are struggling to regain our equilibrium. The times have made us older and more experienced than you were at our age. It must be so with each succeeding generation if it is to keep pace with the rapidly advancing and mighty tide of civilization. Help us to put our knowledge to the best advantage. Work with us! That is the way! Outlets for this surplus knowledge and energy must be opened. Give us a helping hand.

Youth has many disillusionments. Spiritual forces begin to be felt. The emotions are frequently in a state of upheaval, struggling with one another for supremacy. And Youth does not understand. There is no one to turn to—no one but the rest of Youth, which is as perplexed and troubled with its problems as ourselves. Everywhere we read and hear the criticism and distrust of older people toward us. It forms an insurmountable barrier between us. How can we turn to them?

In every person there is a desire, an innate longing, toward some special goal of achievement. Each of us has his place to fill. Each of us has his talent—be it ever so humble. And our hidden longing is usually for that for which nature equipped us. Any one will do best and be happiest doing that which he really likes and for which he is fitted. In this "age of specialists," as it has been called, there is less excuse than ever for persons being shoved into niches in which they do not belong and cannot be made to fit. The lives of such

people are great tragedies. That is why it is up to you who have the supervision of us of less ripe experience to guide us sympathetically, and to help us find, encourage, and develop our special abilities and talents. Study us. Make us realize that you respect us as fellow human beings, that you have confidence in us, and, above all, that you expect us to live up to the highest ideals, and to the best that is in us.

It must begin with individuals. Parents, study your children. Talk to them more intimately. Respect their right to a point of view. Be so understanding and sympathetic that they will turn to you naturally and trustfully with their glowing joys or with their heartaches and tragedies. Youth has many of the latter because Youth takes itself so seriously. And so often the wounds go unconfessed, and, instead of gradually healing, become more and more gnawing through suppression until of necessity relief is sought in some way which is not always for the best.

Mothers, become acquainted with your children. Be the understanding, loving, happy comrade of your daughter. Become her ideal. And strive to live up to the ideal you set for the woman who is to become your son's wife. Be his chum. Be young with him. Oh, what a powerful and wonderful influence you are capable of exerting if you only will!

Fathers, find out what is within the minds and hearts and souls of your children. There is a wonderful, an interesting, and a sacred treasure-house there if you will take the time and pains to explore. The key is yours in return for patient understanding, sympathetic encouragement, and kindly wisdom. Make love to your daughter if necessary! Make her realize the depth of your love and make her feel that you have confidence in her ability to live up to your standards of upright womanhood. Be your son's best pal. Make his interests your interests. Encourage him to formulate a workable philosophy of life. And remember this: A little merited praise means so much! A little encouragement goes such a long way!

Oh, parents, parents everywhere, point out to us the ideals of truly glorious and upright living! Believe in us, that we may learn to believe in ourselves, in humanity, in God! Be the living examples of your teachings, that you may inspire us with hope and courage, understanding and truth, love and faith. Remember that we are the parents of the future. Help us to be worthy of the sacred trust that will be ours. Make your lives such an inspiration to us that we in our turn will strive to become an inspiration to our children and to the ages! Is it too much to ask?

ALASKAN TRANSPORTATION BEYOND THE END OF THE RAILWAY. THE METHOD IS MODERN THOUGH THE ROAD IS DIRT

ALASKA, THE MISUNDERSTOOD

THE STORY OF THE BAD ROADS AND ADMINISTRATIVE FETTERS
THAT ARE TYING UP ALASKA'S BURIED MILLIONS, AND SOME
PROPOSALS FOR THE CORRECTION OF THE DEFECTS

BY SHERMAN ROGERS

INDUSTRIAL CORRESPONDENT OF THE OUTLOOK

ON a scorching hot day in July, while strolling through Fairbanks, Alaska, at noonday, I suddenly noticed a sight so ludicrous as actually to bring tears to my eyes. Behind a barn, in the blazing sun, stood three tourists wearing heavy parkas. They were furred from head to foot, as if for a final dash to the Pole, and were standing alongside a dog-sled; perspiration was rolling down their faces in streams, as the grinning camera man took another picture of the "frozen North." The thermometer, right at that moment, must have registered fully 90°. I could scarcely believe my eyes; and then it suddenly dawned on me how Alaska tourists obtain the photographs that flood the States.

"What's the big idea?" I asked one of the gentlemen who had just removed his Arctic costume.

He fairly sputtered with anger.

"I live in Boston," he snapped, "and for many years I have wanted to make a trip to Alaska. I wanted to see Eskimos in their igloos. I wanted to see snow-covered wilderness in summer. I wanted to see some wild Alaskan life. And here I am in Fairbanks, five hundred miles in the Alaskan interior, and it's hotter than it was in Boston; cowbells wake me up at night, and I'm nearly chloroformed by the aroma of strawberry patches, flower gardens, hay meadows, and grain fields. Do you see any Eskimos around here? Why, the only time these interior and southeast-

ern Alaskans see Eskimos is when they take a trip to the States and go to the circus. And, to cap the climax, at dinner last night, in a café just as modern as the cafés in Boston, I found Fairbanks-grown tomatoes and Fairbanks-raised strawberries on my bill of fare; and this where fur-coated Eskimos are supposed to be chasing polar bears over fields of ice."

"Well," I finally managed to interrupt, "does that disappoint you?"

"It certainly does," he answered heatedly. Then he added: "I am *delightfully* disappointed. But the folks back East won't ever know it. I'll send them this photograph, and they'll think I am standing abaft an igloo, and I guess that's the way everybody else that has come up here has been 'kidding' his friends back home for the past fifteen years."

The Bostonian was right. I don't suppose there is a tourist visiting Alaska who is not *delightfully* disappointed when he encounters the same B.V.D. and outing-flannel climate he left back in the States. Certainly the Alaska immortalized in novels is an entirely different country from the land we still call, in some parts of the States, "Seward's Folly."

JUNEAU CLIMATE A PARADISE COMPARED WITH THE MIDDLE WEST'S

Back in 1849 California was supposed to be wild, and I suppose Alaska was about the same kind of a frontier

twenty-five years ago; but there is nothing within the Territory to-day to substantiate the wild stories written about the early days of the gold rush. As for night life in Alaska, it compares favorably with that of the most strait-laced New England towns. There is certainly no place in the United States where there is better order, or, rather, where there is less disorder, than in this Territory.

In considering Alaska we must bear in mind that it is really composed of three empires—southeastern, the interior, and northern. Northern Alaska has Eskimos, polar bears, walruses, and other Arctic life that we have read so much about. The only trouble has been that most people in the States have not been able to discriminate between Arctic Alaska and temperate Alaska. Point Barrow, where Arctic life exists, is as far removed from Fairbanks, Anchorage, Seward, Ketchikan, or Juneau as Labrador is removed from Miami, Florida, both climatically and geographically. An Eskimo walking down the streets of Fairbanks would cause a riot. If he appeared in Juneau, he would be a seven-day wonder.

I met a family in Juneau that had formerly resided in Cleveland. I asked the lady of the house if it wasn't somewhat difficult to stand the rigors of the northern climate. She laughed outright.

"Well," she answered, "we endured Cleveland winters, and Juneau is certainly a paradise compared with Cleve-

land either in winter or summer. We have been North eight years in all; spent five winters here, and three back home; the five years we have lived here during the winter months the thermometer has never reached zero. Do you imagine it takes a rigorous person to stand such a climate?"

This was followed by peals of laughter and further remarks about the silly ideas of people in the States regarding the climate of Alaska.

Southeastern Alaska has an Oregon-Washington climate, due to the Japanese Current, which has the same effect from Ketchikan to Cape Spencer as it has on Puget Sound, resulting in very mild winters and extremely delightful summers. Very seldom, in the last twenty years, has the thermometer reached zero in this entire section.

The interior of Alaska, made famous by exaggerating novelists, has a climate closely duplicating Minnesota in the winter, and Maine or Oregon in summer.

ALASKA'S IMMENSE RESOURCES

Alaskan towns are as modern as any towns of their size in most modern sections of the Central West. Tourists will find accommodations like those in their own cities; they will find as good, and more reasonably priced, hotels in Ketchikan, Juneau, Seward, Anchorage, and Fairbanks as in any average city of fifty thousand population in the United States. They will find that they can purchase any article in Alaska at about the same price that they can in the most modern department or drug

store in the average Central Western city. They will find as many automobiles in Juneau, Seward, Anchorage, and Fairbanks as in any modern Western town of similar size.

Resources? The tremendous resources of our northern empire have of course sometimes been unintentionally exaggerated. Alaska is not an Aladdin's Lamp. But its resources will compare favorably with those of any State in the Union. However, until the proper development has taken place it is impossible to estimate even approximately the probable value of Alaska's natural resources. They are varied and immense. Of that there is no question. Coal, oil, copper, gold, silver, lead, marble, timber, fish, fur, agriculture. No single State in the Union can boast of the great variety of assets that Alaska contains; yet the Territory is in the same position that California, Oregon, Washington, or Montana was in the early days. It takes money to develop progressively—lots of money.

By this time the reader undoubtedly has in mind the question that is in the minds of one hundred million Americans, which is, substantially: If Alaska has all of these resources, why doesn't more "big capital" go up there? That's easily explained. I will first draw a picture of Alaska in 1909, when the Territory was on the highroad to tremendous development. Railway financiers were feverishly endeavoring to build railways from Valdez, Cordova, and Katalla through the Copper River section to Fairbanks. Men from all over the

States were putting up capital to drill oil wells and develop coal fields, and were becoming interested in many other enterprises. Then, all of a sudden, practically overnight, through the influence of Gifford Pinchot, all the coal lands, oil fields, and timber lands of Alaska were withdrawn from public entry and placed in a National reserve. This act dealt a staggering blow to the fifty thousand white residents of the Territory, whose only chance to prosper lay in the natural development of the resources of the North, just as the original pioneers of our Western States prospered when capital began to develop resources that were of absolutely no benefit to any one until outside money was brought in.

WHEN ALASKA FLOUNDERED HELPLESSLY

An enthusiastic backer of the Pinchot conservation plan in Alaska frankly stated that because of the way the conservation plan was handled by Congress Alaska has been put back at least twenty-five years. "There is no question at all that, despite whatever merit there is to the conservation plan—and I am in favor of it—it remains a matter of fact that the moral rights of fifty thousand people in Alaska were utterly ignored, as the rights of no other people have ever been ignored under the American flag. Not only were the Alaskan resources withdrawn, but those who invested money were branded as criminals, prosecuted as such, and fortunes were expended in clearing their names," continued my informant.

I do not care personally to go into the

AN ALASKAN FARM SCENE

Pinchot-Ballinger, or Wickersham-Guggenheim, quarrels of thirteen years ago. It will do no good to revive old animosities; especially when hatchets have been long since buried and onerous conditions entirely changed; but I do want to say that I am firmly convinced that a majority of those persecuted in Alaska in 1909 had intentions that were every bit as honorable toward the Territory as those who were concerned in the persecution.

Alaska floundered helplessly for years; not because the lands were withdrawn, for Alaskans are not bitterly antagonistic to the conservation plan, but because for years after the conservation ruling took effect there was no system established by Congress that would permit rational, legitimate development of timber, coal, or oil lands. As a direct result, thousands of people left the Territory because the farmer had no place to sell his goods, therefore there was no necessity of clearing a farm; and every other line of industry dependent upon the development of natural resources steered clear of the North.

DOORS NOW WIDE OPEN TO NEW CAPITAL

These years of heartbreaking inertia on the part of Congress have resulted in inexcusable hardships to the Alaskan pioneers. And, while the people of the United States, as a rule, still believe that the same oppressive conditions exist, that idea is almost wholly groundless.

The present leases governing the manufacture of timber, the mining of coal, and the drilling of oil are, in the main, liberal and just. Whereas ten years ago a man with capital was viewed with suspicion the moment he set foot in Alaska, to-day he is met with open arms. He may be screamed at by Territorial politicians, but he will be warmly welcomed by every solid citizen from Ketchikan to Nome. He will be eagerly given every possible co-operation by

various bureau chiefs. He will find that a major part of red tape has been removed. He will find also that the onerous restrictions of the past have been almost completely eliminated. He will be treated as a desirable neighbor and a gentleman. It will be immediately apparent to the possible investor that the Government is not only friendly, but extremely desirous of rendering every possible aid to operators in a sincere effort to bring about the progressive development of the Territory's latent resources. The successful business man will find that the old animosity toward men of money and enterprise has been totally forgotten. That is the great difference between Alaska to-day and thirteen years ago.

"GIVE 'EM ROADS"

This being true, although hardly known in the United States, the natural question comes up: What is to be done now to promote the development of Alaska? I can give my opinion in very few words. First, a wholesale, thorough construction of roads and pack trails; second, centralization, on Alaskan soil, of the many bureaus that govern the resources of the Territory.

The construction of good roads is by far and wide the most cardinal necessity for the upbuilding of Alaskan prosperity and the development of its agricultural and mineral resources. Give Alaska everything that her enthusiasts have proposed, but omit a sweeping programme of road construction, and the Alaskan interior will be in about the same stage of retarded development twenty years hence as now. Waive everything else, if necessary, but give Alaska roads—good roads, lots of roads—and it will come into its own more suddenly than even its own people ever dreamed possible.

I would like to write the words "give 'em roads" in every sentence of my Alaska articles; I would like to have the

phrase "lots of roads" so indelibly branded into the minds of Senators and Congressmen that the mere mention of Alaskan road appropriations would place unstinted support behind every request of the Alaska Road Commission. Roads developed every pioneer section of the United States—they will magically develop Alaska.

Let me say to the Appropriations Committee of Congress that every dollar spent on good roads in Alaska for commercial purposes will create one hundred dollars of extra wealth; while every needed road-building dollar refused will bring hardship to struggling pioneers and stagnation to proper development.

The Alaska Road Commission is the one bureau in the North that is absolutely free from red tape. Colonel James H. Steese and Major John C. Gottwals, president and engineer officer, respectively, of this Commission, are two wonderfully efficient, rugged, "red-tapeless" men. They are not of the arm-chair variety, but have traveled thousands of miles by dog-team in winter and pack-train in summer over the various mineral and agricultural districts of Alaska. They know where roads ought to go; they know where trails should be built; they know every district where construction is most urgently needed.

SINGLE COUNTIES SPEND MORE ON ROADS THAN ALL ALASKA SPENDS

This Commission has performed wonders with the meager money that has been available, but the moneys given it have been a mere pittance of the amount absolutely necessary. This Commission requested a \$10,000,000 road-building appropriation of Congress to cover a period of ten years, which was half of what it should have called for; yet Congress granted a 1922 appropriation of less than \$500,000 for the Alaska Road Commission. It is scarce.

JST OUTSIDE OF FAIRBANKS

enough to take care of the upkeep of some of the most necessary roads already built. This action of Congress resulted in the elimination of new road construction at a time when it was most sorely needed.

Alaska covers an area nearly twice as great as the original thirteen colonies, and yet all moneys expended within the Territory for roads and trails during the past twenty-five years are less than the sums that small Western counties have individually spent in the same period.

What a travesty of Congressional liberality!

Long before I reached Fairbanks I was heartsick at the deplorable infrequency of passable roads or trails. Moneys that had been spent on roads in these districts had been well spent, but the amounts available had been pitifully small. Everywhere I rushed in mining districts and agricultural sections lack of roads overshadowed every other necessity as Mount McKinley would overshadow a molehill.

The immediate development of interior Alaska depends almost entirely on the prospector, and the ability of the prospector to spend the summer out in the hills depends upon transportation. In the wake of the prospector will follow general development. Mining camps and industrial enterprises will spring up where lode mines are uncovered and development takes place. Farms will be cleared up when local demand is created; but the farms will not be cleared and worked until other development does take place.

NOT A MOUNTAIN FULLY PROSPECTED

An old grizzled prospector in the Willow Creek district said to me: "There are few prospectors in the hills of Alaska to-day, because of transportation conditions. There isn't a mountain in Alaska fully prospected. Three-quarters of the mineral-bearing area of the Territory has never had a prospec-

tor's pick in it. A prospector must earn a grubstake during the winter, and he cannot do this when he has to spend the winter taking supplies by dog-team into the country he wants to work, because during the winter he should be somewhere on a pay-roll making a grubstake. Pack-trails to use during prospecting stages and good roads built when promising mines have been opened up would immediately result in thousands of prospectors heading for Alaska. The Alaskan interior can't progress without the prospector, then the small operator, and finally the large operator. No prospector, no small operator, no major development."

Alaska needs not less than a \$15,000,000 road-building programme, covering a period of eight or ten years. The Territory being a difficult country in which to construct roads, those in charge of road-building must know several years ahead exactly the amount of money they can spend. Road work could then be efficiently planned and executed.

UNCLE SAM OWNS OVER NINETY-NINE PER CENT OF ALASKA

The reader must realize, in considering northern development, that the United States Government owns ninety-nine and a fraction per cent of the lands of Alaska. If, therefore, the Government that owns these millions of acres of agricultural, coal, oil and timber lands will pay a fraction of the taxes it would expect private owners to pay, and will expend this money on roads and other development within the Territory, Alaska will come into its own and will not only cease to be a liability to the United States Treasury, but will be such a tremendous asset as actually to pay more than its proportionate share of National obligations for all time.

Regarding the Alaskan bureaus, four or five bureaus, operated by experts, are necessary to proper administration of Alaskan affairs from a Terri-

torial standpoint. I found the major bureaus in Alaska administered by efficient men who knew their business. But there are too many minor bureaus befogged with petty jealousies. It has been suggested in many quarters that Alaska be put under the control of one man, but I don't agree with that view. Alaskan resources are too varied and too great for any one man to become thoroughly familiar with them all; but there isn't the slightest necessity for the present five-thousand-mile red-tape correspondence over minor details. Most of the troubles with the Alaskan bureaus are due to overlapping functions and long-distance correspondence.

HOW TO REMOVE THE NIGHTMARE OF THREE ADMINISTRATIONS

In my opinion, however, the great controversy of centralized administration, on which reams and reams of articles have been written, animosities aroused in nearly every locality in the Territory, and storms of passion raised in both Washington and Juneau, can be easily settled to the entire satisfaction of the people of Alaska, the Government of the United States, and the citizens residing below the 54th meridian.

I believe that the Secretary of Agriculture, the Secretary of the Interior, the Secretary of Commerce, and the Postmaster-General should appoint assistant secretaries who would reside in Alaska during their tenure of office, and that this board of four men, empowered to settle *Alaskan affairs in Alaska* without five thousand miles of red tape and its attendant misunderstandings, should meet at least one week out of every month in order expeditiously to handle all overlapping questions and all business within the Territory.

The Governor of Alaska, in my opinion, should be the chairman of this board, with a voting power equal to that of each of the four assistant secretaries.

Such an administration would imme-

diately establish confidence all over the United States. It would be enthusiastically received and confided in by the pioneers of Alaska, and it would result, in my opinion, in the immediate elimination of a vexatious question that has been a nightmare to three Administrations.

ABSENTEE LANDLORDISM A PERIL

These five men, due to the importance of their position, would naturally be the highest type that could be selected by the Cabinet Secretaries. The Governor, selected by the President, would be a man of great ability. The present Governor, Scott C. Bone, is just such a man. With a stroke of a pen the cry of absentee landlordism—a highly justifiable expression—would cease to be heard. Autocratic individual power and so-called bureaucracy would be eliminated. And I may add with emphasis that autocratic individual power—or rather, bureaucratic control—is the bugaboo that has kept industries out of Alaska, from a psychological standpoint, if nothing else. The idea of risking their all on the fairness or judgment of one man or one bureau has not appealed to either large or small American investors and operators.

The work of the bureaus would not be restricted, nor their efficiency impaired; questions and contentions could be set-

tled in days or weeks, where it now takes months, or even years. In short, red tape, the bane of the North, would be decisively cut. Alaskans would be jubilant, the Government and all people protected, and the investor and operator encouraged by the establishment of a Cabinet *on the ground* that would act as a final board of review and adjustment. Order would dethrone chaos, confidence and action transplant doubt and inaction.

My next week's article will deal almost solely with the forests of Alaska. However, I want to say here that Southeastern Alaska has 70,000,000,000 feet of the most accessible and cheapest logging pulp timber in America, which, contrary to popular opinion, is within easy transportation of American paper markets. The Forestry Bureau is quite free of red tape and long-distance correspondence, and administered with highly merited efficiency. At least a dozen pulp and paper manufacturers have assured me that they would like to engage in business in Southeastern Alaska; they are satisfied with the Government Timber Contract with the exception of one clause—the readjustment of stumpage rates every five years is left to the sole decision of the chief Forester, with appeal only to the Secretary of Agriculture, who would naturally favor the Forester—therefore these operators were

not interested. The first pulp manufacturer I submitted my "cabinet" plan to pounded his fist on the table and said: "Under such a régime I would have a paper mill in Alaska inside of a year. No reasonable man asks more than a fair deal, and such an arrangement would guarantee a fair deal. It would clear up the whole thing."

The Alaskan forests will supply 2,000,000 cords of pulp wood perpetually, due to the forestry regulations, which prevent the cutting of small timber, resulting in rapid reforestation due to the tremendous rainfall and absence of fire danger. There is a large amount of overripe timber in Southeastern Alaska, and every year of procrastination means that much of a total loss.

I found the Alaskans were not narrow-minded regarding Alaskan administration; they do not desire what is not justly due them; they realize the relative position as to Alaska and the United States Government, but they are very bitter against absentee landlordism.

Wonders have been accomplished in eliminating red tape in Alaskan affairs during the last two years. Give Alaska roads—lots of roads; give her an authoritative administration *on Alaska soil*, and the northern Territory will come into its own.

UNDER FOUR PRESIDENTS

THE AUTOBIOGRAPHY OF OSCAR S. STRAUS

CHAPTER XIV—FINAL SCENES IN A WORLD DRAMA

Paul Thompson

Dr. A. Lawrence Lowell, President of Harvard, with whom Ambassador Straus was closely associated in the effort to secure the ratification of the Treaty of Peace

FROM time to time representatives of the Balkan and East European nations came to my apartment to confer with me, doubtless because of my diplomatic experiences in that part of the world, and because of my relationship with Colonel House and our official Commission. Venizelos came to discuss the claims of Greece to additional territory to the north, and on the western littoral of Asia Minor, and to the islands adjacent. He explained, as an ethnological basis for such a claim, that the Greek race was purer and less mixed in that part of Asia Minor and in the islands than in Greece proper.

The day after the Plenary Session of the Conference and the preliminary adoption of the Covenant President Wilson returned to America. I talked with M. Bourgeois, M. Venizelos, and several of the chairmen of the allied societies for a League of Nations, and we agreed to hold a conference of the delegates of the various societies. Chiefly because of our desire of having with us Sir Edward Grey, who was the chairman of the British Society, and Lord Bryce, both of

whom at that time were not entirely well, we decided to hold the conference in London instead of in Paris. It was subsequently decided to hold it March 11 to 13, 1919, to discuss the draft of the Covenant as preliminarily adopted, and to consider such changes and amendments as might be deemed advisable, which, when acted upon and adopted, were to be presented to our respective official delegates prior to the next meeting of the Plenary Conference, to be held after President Wilson's return.

Accordingly, on March 11, the delegates representing America, Great Britain, France, Greece, China, Yugoslavia, and Rumania assembled in London—in all, about fifty in number. I was chairman of the American delegation.

At the first meeting of the Conference, held at Caxton Hall, Westminster, Lord Shaw was elected chairman, and W. J. T. Griffith secretary. The various articles of the Covenant were discussed, together with the amendments and changes proposed by the delegates from the several countries. On behalf of our delegation, I offered a resolution regarding the free exercise of religion as well as freedom from civil and political discrimination because of religion, which resolution, after discussion, was unanimously adopted. The resolutions that were adopted M. Bourgeois was authorized to present to the Allied Prime Ministers.

After adjournment I returned to Paris,

(C) Harris & Ewing

Eleutherios Venizelos, with whom Mr. Straus was in frequent conference regarding the claims of Greece to additional territory

WITH this chapter The Outlook's serial publication of Mr. Straus's reminiscences is concluded.

These chapters, amplified and with much additional material which has not appeared here, are being published by Messrs. Houghton Mifflin Company, of Boston, in book form. The book is entitled

“UNDER FOUR
ADMINISTRATIONS”

and on March 24 made a report to President Wilson, who a few days before had returned from America, and sent him the resolution proposed by the American delegates, namely, to add a new article to the Covenant as follows:

The High Contracting Parties, realizing that religious discriminations give rise to internal dissatisfaction and unrest which militate against international concord, agree to secure and maintain in their respective countries, as well as in states and territories under the tutelage of other states acting as mandatories on behalf of the League, the free exercise of religion as well as freedom from civil and political discrimination because of adherence to any creed, religion or belief not inconsistent with public order or with public morals.

To this proposal President Wilson replied, saying: “I am indeed interested in a religious liberty article in the Covenant, but am trying to reach the matter in another way.” He doubtless had in mind to cover it in treaties with the new nations for the protection of minorities, as was subsequently provided

in the treaty with Poland and with the Balkan States.

RUSSIAN REFUGEE STATESMEN

At a luncheon with the Russian group of refugee statesmen in Paris, I again met M. Sazonoff; M. de Giers, formerly Ambassador at Constantinople; M. Bark, formerly Minister of Finance under the Government of the late Czar; and M. Boris Bakhmeteff, the Russian Ambassador to the United States. They all spoke most disparagingly of Russian conditions at the time. M. Sazonoff criticised and complained of the Peace Conference, which, as he stated, had in no way condemned Russian Bolshevism, and its failure in so doing had encouraged the Bolsheviks. He said that had the Allies taken Petrograd, which could have been done with very little sacrifice, that would have been the beginning of the end of Bolshevism and would have rallied the Russian people, who would themselves have destroyed the Bolsheviks. He added that Russia's cruel treatment of the Jews under the Czar's Government was an indefensible wrong, and doubtless contributed to driving some of those who had suffered most into the ranks of the Bolsheviks.

While Sazonoff was talking I wondered why he and some of his colleagues in the Ministry had not prevented the outrages against defenseless Jews which resulted in the horrible pogroms which shocked the moral sensibility of the world.

It is true that Sazonoff belonged to the so-called liberals of Russia, and they did not have the courage to stand up for the basic principles of humanity when in office, which they now, doubtless, sincerely proclaim. Such is the withering and dispiriting effect of auto-

cratic government upon its own highest officials, who often lack the courage, even if they have the vision, to correct abuses; and because of this moral cowardice they prepare the way and supply the motive that sooner or later expresses itself in revolution.

Napoleon is reputed to have said that the treatment of the Jews in every country is the thermometer of that country's civilization.

Several times a week during this period conferences occurred in my apartment with representatives of the Eastern and Balkan States. Information had reached Paris that serious persecution of Jews was threatened in Prague and throughout Czechoslovakia; and on March 25 a conference was arranged between M. Edouard Bénès, Minister of Foreign Affairs of the Czechoslovakia Republic, and several gentlemen representing the American Jewish Committee and the American Jewish and Zionist Committee, consisting of Julian W. Mack, Judge of the United States Circuit Court; Professor Felix Frankfurter, of Harvard University; Aaron Aaronson, head of the Agricultural Experiment Station of Palestine; Lewis L. Strauss, the assistant of Herbert Hoover; and myself.

Letters from Prague from two of the Food Administration officials reported that a press propaganda was carried on against Jews, and that several attacks upon them had been made; that a movement was on foot to deport a number of them to Pressburg, the hotbed of Bolshevism.

M. Bénès pointed out that if any pogroms occurred, which these reports foreshadowed, it would seriously prejudice his country and would alienate American sympathy, which in turn might result in discontinuing food ship-

ments to his country. He stated that he was a disciple of President Masaryk and always shared his liberal social and political views; he said he would at once telegraph President Masaryk, who, he knew, would do everything in his power to suppress the anti-Semitic agitation. We were impressed with the enlightened statesmanship of M. Bénès, who since then has shown himself to be one of the foremost statesmen in middle Europe. He assured us that any persecution of minorities in his country would be contrary to its organic laws and in direct violation of the principles and policies upon which it had been determined to organize the state, and that we could rely on it that no efforts would be spared in securing equal justice for all without regard to race or religion.

From Sir Robert L. Borden, the Premier of Canada and one of the delegates of the British Empire to the Peace Conference, I received on March 21 a copy of his memorandum on the several articles of the Covenant. I found them well conceived and in the main admirable. He opposed Article X as drafted. He wanted it either stricken out or clarified. I sent him a copy of a speech of Mr. Taft's of March 5 referring to the same subject.

THE MONROE DOCTRINE CAUSES COMPLICATIONS

At the request of Colonel House, on April 11 I had another conference with M. Bourgeois. The Commission on the League of Nations of the fourteen nations, under the chairmanship of President Wilson, had the night before held a protracted session discussing the revision of the Covenant, at which President Wilson offered the revised Article XXI containing the special provision regarding the Monroe Doctrine, as follows:

ARTICLE XXI

Nothing in this Covenant shall be deemed to affect the validity of international engagements such as treaties of arbitration or regional understandings like the Monroe Doctrine for securing the maintenance of peace.

M. Larnaud and M. Bourgeois, the French representatives, both objected to specific reference to the Monroe Doctrine, and made long speeches in support of such objection. Colonel House desired me to impress upon M. Bourgeois the reasons for this amendment and why it was necessary specifically to mention the Monroe Doctrine, because without it it would not be possible to have the Covenant confirmed by the Senate. As I did not know M. Larnaud, I thought it best to discuss the subject with M. Bourgeois, so that he might confer with his colleague. In company with Baron d'Estournelles de Constant, I called on M. Bourgeois at his residence. I soon learned that M. Bourgeois did not object to specific reference to the Monroe Doctrine, but he desired, in return for his assent, to obtain President Wilson's

assent to the amendments Bourgeois had offered respecting a general staff and control or supervision of the military force that each of the states was to supply to support the League. As the Commission was to meet again to finish the consideration of the Covenant, he agreed to confer with M. Clemenceau, saying he would have to learn the other's views. He further said it must be determined how best to formulate the article especially referring to the Monroe Doctrine so as not to conflict with the general provisions.

At the session of the Commission that evening at the Crillon Hotel, which lasted until after midnight, the article as quoted above, specifically mentioning the Monroe Doctrine, was adopted. Colonel House gave me the exact wording of the article, which I at once cabled to the League to Enforce Peace in New York, with the request that Mr. Taft be informed. The same day I received a cable from Mr. Taft and Dr. Lowell, forwarded by Acting Secretary of State Frank L. Polk, to the effect that, in the opinion of the Executive Committee of the League, specific reference to the exclusion of the Monroe Doctrine from the jurisdiction of the Covenant of the League was absolutely necessary to secure confirmation by the Senate. On the following day Taft cabled me that the Monroe Doctrine amendment was "eminently satisfactory."

I immediately advised President Wilson, sending him a copy of the cable. The next day I received the following letter from him:

18 April, 1919.

My dear Mr. Straus:

I have been very much cheered by your kind letter of yesterday, with the message which it quotes from the League to Enforce Peace and from Mr. Taft personally, and I want to thank you very warmly for your own kind personal assurances of satisfaction with the results of our work on the Covenant.

Cordially and sincerely yours
WOODROW WILSON.

MY ADDRESS AT THE SORBONNE

On April 23, on the invitation of Professor Stephen Hayes Bush, of the State University of Iowa, who was in charge of the Free Lecture Course of the American Expeditionary Force, I delivered an address in the Grand Amphitheater of the Sorbonne. The great hall was filled with about one thousand of our officers and men who were taking courses at this ancient institution of learning.

I took as my subject "America and the League of Nations," and showed in what respect the Covenant provided definite sanctions to make peace decisions effective. I pointed out that following the war, for the first time in history, the dominant power of the world rested in democratically governed nations, and that theirs was the opportunity and the responsibility to make provisions that such a war shall never happen again;

and that now it was the duty of statesmanship to translate the victory won in war into greater security for the future peace and happiness of the world. I quoted from the speech of President Poincaré in welcoming the Peace Delegates, in which he had described the reasons why America entered the World War. He had said: "It was a supreme judgment passed at the bar of history by the lofty conscience of a free people to

International

Alexander Kerensky, former Premier of Russia—"he looked more like a student than like a leader who had stood in the storm center of political turmoil"

rescue her mother from the humiliation of thralldom and to save civilization."

That same evening, M. Nicolas W. Tchalkovsky, President of the Archangel Government of Northern Russia, called at my apartment to discuss with me conditions in Russia. I had met him before when he was in Washington in 1907, after his escape from prison in Siberia. During several periods before that time he had lived in Western United States, where he had engaged in farming. He had formerly belonged to the group of social revolutionists. I spoke with him about the Hoover plan of sending food into Russia, to which he replied that if an armed force could be sent there it would be better, but that without an armed force the Bolsheviks would use the provisions for their own Red Guard. I explained to him that that could not be done, since the agents of the Food Administration would themselves supervise the distribution, just as was done in Belgium during the German occupation.

He did not seem to think well of the whole plan, and considered that it would be of advantage to the Bolsheviks politically, and would make the people believe it was a recognition of their régime. He seemed to think that the Bolshevik authorities could not stop fighting in Russia even if they wanted to, as their several generals acted independently.

He spoke of Lenine as an honest, strong-headed, misguided fanatic, who he believed would in time discover his error and would have the moral courage and honesty to throw up his hands. Trotsky, he said, was quite another sort—an ambitious adventurer.

WILSON ADDRESSES THE PLENARY SESSION

The Plenary Session of the Conference was called to order at the Quai d'Orsay on April 28, at 3 p.m. I again attended with our official delegate, former Ambassador Henry White. The representatives of the thirty nations were seated as before. I was given a seat just behind the American Commission. The Session was presided over by M. Clemenceau, who showed no signs of the effects of his recent wound by an assassin's bullet. He opened the session with a few words, then called on President Wilson, who declared in a matter-of-fact way that, since he had read the articles of the Covenant to the Conference at the previous session (February 14), and since all the delegates had the Covenant as amended before them, he would confine himself to pointing out the amendments and the reasons therefor.

The immense hall was packed, as on previous occasions. After President Wilson had made his statement, which was rendered into French by the official interpreter, he moved several resolutions, one nominating Sir James Eric Drummond as Secretary-General of the League, and one that Belgium, Brazil, Greece, and Spain should be members of the Council pending the selection by the Assembly of the League.

As Chairman of the League to Enforce Peace, I wrote a letter to the President on the following day offering my congratulations upon the adoption of the Covenant. To this I received the following reply:

Paris, 1 May, 1919.

My dear Mr. Straus:

Thank you with all my heart for your generous letter of the 29th. It has given me the greatest pleasure and encouragement, and I want to take the opportunity to say how valuable in every way your own support of and enthusiasm for the League of Nations has been. It is a real pleasure to receive your unqualified approbation.

Cordially and sincerely yours
WOODROW WILSON.

After the Plenary Session and the adoption of the Covenant of the League of Nations, I felt that my duties in Paris were at an end. The winter had been very strenuous, and the weather had been very inclement—much rain and

very little sunshine. I decided to take a rest, and was advised, because of some slight ailment in my left leg due to impeded circulation, to take the baths at Bagnoles de l'Orne. The usual régime there is to take twenty-one baths. After I had taken eight, I received a letter from Colonel House saying that he would regard it most helpful if I would return to America at as early a date as possible. He informed me that the counsel for the American Commission, David Hunter Miller, was also returning; that passage had been secured for both of us on the U. S. S. Mount Vernon, which was sailing from Brest on June 2. He stated that it would be rendering a valuable service if I would confer with some of the Senators, so that they might be fully informed regarding the discussions and details of the negotiations as they progressed.

I accordingly returned to Paris, and on May 27 had a conference with Colonel House, who again impressed upon me the services I might render in returning to the United States, since no one was more familiar than Mr. Miller and I with the meaning and significance of the articles of the Covenant, nor therefore better qualified to answer the criticisms and objections that had been made.

In the course of conversation, he said that, in his opinion, Woodrow Wilson would not become a candidate again for President unless the Treaty were rejected, which might force him to run against his will in order to save the Treaty; but should the Treaty, however, be ratified, there would be no occasion for him to become a candidate.

THE STUDIOUS KERENSKY

The day before this, while I was paying a visit at the Hotel Continental, I met Jane Addams and Lillian Wald, and with them was Alexander Kerensky, the former Premier of Russia. They asked me to meet Kerensky, which I did. He proved to be not at all the kind of man in appearance that I had pictured. He did not resemble the Russian type. He was clean-shaven, rather spare, a little above medium height, and seemed about forty years of age. He looked more like a student than like a leader who had stood in the storm-center of political turmoil.

Kerensky told me that he did not believe in Kolchak, principally because he regarded him as a tool of the British and Russian nobility. Kerensky expressed himself as opposed to having the Allies recognize Kolchak unless it was conditioned on definite guaranties that a free democratic election be held so that the people might decide what form of government they desired.

We left Paris for Brest on May 30. The Mount Vernon carried some five thousand officers and men of the Sixth Division. We were all very comfortably provided for on the ship, and it was most interesting to observe the system and order with which the five thousand

officers and men were taken care of. They were a jolly lot, happy to return home, and without exception conducted themselves in a correct and orderly manner. We had a delightful crossing; the weather was fine and the sea was calm.

"HONEST BROKERS" FOR THE LEAGUE

Shortly after my return to the United States the League to Enforce Peace called a meeting of the Executive Council to determine what action it could best take to further the ratification of the Treaty, which was now being vigorously debated in the Senate. It was decided that Mr. Vance McCormick and I should be a committee to confer with the President. We subsequently desired to add Dr. A. Lawrence Lowell, President of Harvard University, to our number, provided it would be agreeable to the President, which Mr. McCormick was to ascertain when arranging for the appointment. The President designated August 6 as the day on which he would see us, and accordingly Dr. Lowell, Mr. McCormick, the Secretary of the League, Dr. Short, and I went to the White House.

President Wilson assured us that, while he was somewhat tired, he felt in good condition. He said he had had a number of conferences with individual Senators who had objected to the ratification of the Treaty, and that he had given them explanations regarding the main points in dispute, namely, Article X, guaranteeing against external aggression; Article XXI, providing that nothing in the Covenant should be deemed to affect the validity of the Monroe Doctrine; and Article I, providing that any member of the League may, after two years' notice, withdraw from the League. These were the main subjects covered by the reservations formulated by the moderate group headed by Senators Kellogg and McCumber.

We suggested that it might be of good result if the President could in some public and formal way make his explanations and interpretations regarding these points. The question was how this could best be done. The President believed it would be preferable if one of the Senators of the opposition addressed to him a letter of inquiry, so framed as to enable the President to give his views.

After our conference with the President we went to the Senate, and found the Committee on Foreign Relations in session, examining Secretary of State Lansing. Senator Hitchcock suggested that we call on Senator McCumber, but, as he was not then in Washington, Dr. Lowell and I called on Senator Kellogg. The latter told us what we already knew, namely, that he was in favor of the League and was scheduled to make his speech in the Senate advocating the ratification of the Treaty with the reservations his group had formulated, which reservations he felt confident were not in the nature of amendments, but interpretative only, and therefore would

not require resubmission either to the Plenary Session or to Germany.

Dr. Lowell and I outlined our plan regarding the letter to the President, asking for his interpretation of the articles above referred to. While Senator Kellogg personally favored this plan, he said he would first have to confer with the members of his group, and he believed they would be favorably inclined. We then inquired whether the President's interpretations and clarifications might not serve the purpose of making the reservations unnecessary. The Senator said "no," but that the reservations could recite the fact that they were based upon the President's interpretations. We arranged that Senators Kellogg and Hitchcock should confer upon the subject with a view of preparing such a tentative letter of inquiry, which might be shown to the President in advance, and to which the President could reply, giving his interpretations.

In all of these conferences between the Senators of the various groups we acted as the "honest brokers" for the League. Senator Hitchcock thought very favorably of our plan, and believed it would work out advantageously. Dr. Lowell and I felt gratified with our day's work, though, as matters developed, nothing came of this plan.

In this connection I cannot refrain from quoting a story which Dr. Lowell told apropos of the problem. The story, as I recall it, was that a noted colored preacher was holding a service in which he read a chapter from Isaiah referring to the seraphim. After the service one of the colored brethren asked the preacher what was "the difference between a seraphim and a terrapin." The latter, rubbing his head, replied: "My son, I grant you there is a difference, but they have made it up."

Unfortunately, while there was, in words at least, if not in context, a difference between the reservations offered by the Administration group, the group of mild reservationists, and the majority group, yet, for reasons that I need not enter into here, they did not "make it up."

THE WORLD'S COMMON NEEDS

In concluding this chapter and in closing these memoirs I cannot resist reflecting how much wiser the Allied Powers and America were in the conduct of the war than in the making of peace, and afterwards. In war they finally pooled their strength and won; in the peace-terms they again drew measurably apart. The men who framed the peace terms subordinated world policies to home politics. The United States, by reason of a contest between the Administration and the majority group in the Senate, allowed its sense of world responsibility to be negated by partisan differences. Reconstruction is being halted. And why? Because the leading statesmen of the Entente Powers still lack the economic wisdom, or, what is

the equivalent, the courage, to shape their international policies along world economic lines. My own country, in withholding its co-operation, is equally culpable. The result is tension and derangement in the relationship of nations.

As the malady from which this and

other countries are suffering is world-wide, so must the remedy be world-wide. And America cannot free herself from the responsibility by isolating herself and refusing to do her part in applying the remedial measures necessary to restore normal conditions. The remedy does not consist in the lessening or

weakening of sovereignty by individual states. It consists in the enlargement of their sovereign functions in concert with and in just relations to other states for the administration of common interests. It requires no surrender of sovereignty for individual states to conform their policies to the world's common needs.

A WORD FROM THE FELLOW WHO GROWS YOUR BREAD AND MEAT

BY O. M. KILE

I'M the fellow who plows the ground, plants the seed, keeps the weeds down and the tilth up, harvests the crop, and starts it on its way to your dinner table.

I put in two or sometimes three years in raising a steer that you and your neighbors eat up in the form of sirloin steaks or roasts at a single meal.

My wife, five children, and myself live on a 160-acre farm in a Midwestern State. The tax assessor says that my farm is worth \$25,000, and the man who holds the mortgage thought it was worth \$30,000 when he sold it to me several years ago.

I've been farming now for nearly twenty years, and it seems to take about the full time of myself, my wife, and my two oldest children from before sunup to after sundown to make things go. During the summer I have to hire extra help.

We had a couple of fairly good years during the war, but didn't make anything near what the high prices might lead you to believe. The trouble was that the things we had to buy—labor, fertilizers, implements, groceries, shoes, and clothes—all went up more than farm crops did.

And then two years ago our crop prices dropped with a thud. The only way we could get along was to stop buying and save what cash we had to pay taxes. Most of the interest on the mortgage went unpaid that year.

But we went ahead, thinking that it would be only a little while until the prices of the things we must buy would get down to our level again or else that our crop price level would go up somewhat. You folks in the cities can't get along for any great while, you know, unless we farmers keep on buying the things you make. I'm told we buy about forty per cent of all the merchandise sold.

But we were doomed to disappointment. We went ahead and raised nearly as big crops as we did under war-time pressure—and our prices have sagged on down. Your prices, on the other hand, have gone up. You had the organization—both to set prices for your labor and to price your finished products—and you did not permit your prices to drop to our level.

As a result of these two trends—your prices upward and ours downward—our crops haven't much purchasing power to-day. Experts of the United States Department of Agriculture tell me the purchasing power of the farmer's dollar in September was only 64 cents—only two points above what it was in 1920 when agriculture struck bottom, and the whole country soon felt the effects.

What I am wondering is, why can't you folks and we farmers get together

a little better in regulating these matters?

You can't prosper when we can't buy; and we can't prosper unless you have the money to buy our products. It does seem as though we ought to be able to manage things a little better and not continually seesaw back and forth, to our mutual loss.

Then there is another thing I want to mention. You go to the store and pay 60 or 70 cents a pound for steak or for lamb chops, and 10 to 12 cents a loaf for bread. You say to yourself, "Gee, the farmer must be getting rich these days!"

Would you believe it if I told you that I got only 9 cents per pound for that meat and 2.8 cents for the wheat that went into that loaf of bread? Well, that's what I got, according to figures worked out by marketing officials.

Of course I know that my steer was not all sirloin steak, and that wheat had to be ground into flour, baked into bread, and delivered to your kitchen door; but some of our experts have been looking into this matter, and it is perfectly plain that the costs of distribution are excessive.

You see, we farmers have been organizing a bit ourselves. You may have noticed some of our activities in Washington during the last session of Congress. But our chief aim is to find a way to distribute our products more economically. Of course we are going to try to get more for our crops. That is very natural. Yet we want to see that you get them for less. We know you would buy more if you could get things cheaper. And there are lots of folks who go hungry because foods are so high by the time they get them. Now the only possible way for us to get more at the same time you pay less is to cut down the costs of distribution.

So here, again, is a place we must work together. We farmers are forming co-operative selling organizations to reach out as far toward your table as we can. Isn't it about time that you did something to reach out and meet us? In England and Scotland half the population buys through co-operative purchasing societies. Maybe co-operative purchasing organizations would be a good thing in American cities.

Think it over. Meet us half-way.

A BILLION-DOLLAR BANDIT

This is the title which the boll weevil has earned for himself by his depredations in the cotton fields of the South. The story of what this destructive pest has accomplished is told by W. H. Kirkbride in a forthcoming Outlook article.

CUTTING THE COST OF MILK DELIVERY

WHO WILL REAP THE BENEFIT? FARMER, MIDDLEMAN, OR CONSUMER?

PICTURES FROM AN OUTLOOK READER

This picture illustrates a new iceless method for shipping milk in bulk used on the New York Central Railroad. By this method the use and handling of cans is eliminated and two hours' time saved in unloading a milk car at terminal. Each container carries 645 gallons of milk, the equivalent of 60 ordinary milk cans. The containers are hoisted from car to motor truck by a crane in slightly less than two minutes. The milk is emptied by a spigot shown inside of open door. The milk is maintained at a proper temperature by heavily insulated glass-lined tanks

In this photograph Deputy Commissioner of Markets Mrs. Louis Reed Welzmler, of New York City, is seen inspecting the new milk container system, which eliminates the need for ice and the use of ordinary milk cans and achieves a greater degree of sanitation. Nine containers on a milk car will carry 5,825 gallons of milk, much more than the type of milk car using cans. The car from which the container has been hoisted is seen to the left

THE BOOK TABLE

THE ART OF READING PLAYS

BY MONTROSE J. MOSES

THE great difference between the play that is seen and the play that is read is the difference between direct emotional appeal and imaginative visualization. John Galsworthy's "Loyalties"¹ is an excellent illustration of this, for it is now being played in New York, and it has just come from the press in book form. The cast is an unusually long one, there are five changes of scene, and seven shifts, all in the compass of a tensely stirring three-act drama. If there is one thing about Galsworthy as a dramatist, it is that his types are always clear cut and his purposes always well defined. And, what is more, these purposes are indissolubly bound up in the web and woof of his characterization. Therefore in reading him you have to do some portraiture on your own part.

There are of course several aids that a dramatist can render, the most distinctive being the full and literary stage direction which at the entrance of a character offers you a chart of the main psychology of the human being as suggested by feature, dress, and manner. These are the novelist's elements which the playwright, since the early days of Shaw, has brought in to help the printed play. And, as in this instance of Galsworthy's "Loyalties," since the plot—which is one of an adventurous kind—hinges on the architecture of the house and the position of the characters, the first aids to reading are further drawn upon by the printing of diagrams locating the architecture and furnishing of every scene.

These are the mechanical devices which insure the ready fixing of the necessary "atmosphere" before a play is read. On the stage all this is visualized at the rise of the curtain. Some years ago it would have been impossible to interest the reading public in what might be called the shorthand script of a story where vital "talk" is set down as representing vital moments in the lives of characters. It happens that in "Loyalties" there is more external action than is usually found in this dramatist's discussion of abstract principles which govern society. You will recall that "The Silver Box" is concerned with two standards of justice; there is indelibly stamped on our minds the poignancy of "Justice" which helped to reform the prison laws in England. In these plays Galsworthy does not fail to resort to external action; that is necessary in the theater. But it strikes me that "Loyalties," which studies the tendency of man to act in groups, to stand by class strata and professional bonds of interest, is a little more the-

White Studio

DIANA BOURBON AS MABEL DANCY AND CHARLES QUARTERMAINE AS RONALD DANCY IN "LOYALTIES," AT THE GAIETY THEATER, NEW YORK CITY

Galsworthy's new play is a searching study of the loyalties of profession, affection, race, and class, and their effect upon human lives. Captain Dancy's theft of money from a Jewish fellow-guest at a house party is the pivotal point of this keen-edged piece of social analysis

atric than usual: This is not a fault; the plot calls for it. Bound up in the social fabric of English life, Galsworthy presents the play as a study which calls for the most active constructive imagination the reader has.

"Loyalties" is a success on the stage; it will be eagerly read in print. That the latter case is true brings me to the point which makes me feel that Mr. Granville-Barker is justified in enthusiastically planning for "The Exemplary Theatre."² The printing of plays and the reading of plays measure the awakened state of the public interest in the theater. If some of our most astute minds turn from the theater of triviality with well-reasoned and justified disgust, they do not turn from the drama, but rather toward it, in a form where it can be judged closely and studied as an art.

The publishing of plays is coincident with the increased study of drama in our schools and colleges and with the establishment of Little Theater groups throughout the country. When Mr. Granville-Barker came to America several years ago, this phenomenon of play-houses in the arid plains of Arizona and on the wharves of Provincetown broke over him as a revelation. Everywhere he went he found workshops, leagues for the betterment of theater audiences, amateurs crying in the wilderness—not for the vapid parlor farces of a bygone generation, but for dramas they had been reading, which probably had been rejected in managerial offices as too "highbrow." Knowing Mr. Granville-Barker's enthusiasm, which must always be converted into action, is it small wonder that he should return to London and deliver himself of a profound treatise outlining the many ways in which an Exemplary Theater might arise on

¹ Loyalties. By John Galsworthy. Charles Scribner's Sons, New York. \$1.

² The Exemplary Theatre. By Harley Granville-Barker. Little, Brown & Co., Boston. \$2 net.

the foundations of a proper education, where the theater takes its proper place amid public institutions for the welfare of human kind? He had, in years gone by, written an exhaustive ledger, with William Archer, on the "Scheme and Estimates for a National Theatre." In his new book his thesis in no way deserts his old love—a National Theater or a Shakespeare Memorial; it merely turns the earth to prepare the public soil for its growth. And that soil consists of all those educational values which the amateur movement has created. The book is heavy reading. Mr. Granville-Barker is very serious. But, thank goodness, there are some folks writing about the playhouse who will not take it lightly for fear of not being taken seriously.

I wish I might say, however, that the Little Theater movement in America had been of permanent effect on the theatrical situation. There are many books on the subject. The theaters have sprung up like weeds, and they have encouraged the spread and growth of the one-act form among our writers. But mostly these theaters have been pioneered by very zealous and, alas! jealous groups, which have failed to interrelate themselves. And it is only in unity of purpose and exchange of policies that such activity may permanently affect the country at large in its theater amusement. Professor Samuel Eliot launched his ambitious scheme of "Little Theatre Classics" in 1918. Since then he has issued four volumes in a series which has its excellences, though they are overtopped by limitations. To clip a classic for a small mold and in so doing to preserve the literary excellence and the dramatic force of the original is daring. In the main, Mr. Eliot has succeeded, and he has, further, the justification in so doing by the fact that many of these miniature Tom Thumb pieces have been used by colleges and Little Theaters. But what I want to call attention to is that in 1918 he began his preface with the statement that this movement of Little Theaters was one of the most important facts in the theatrical situation of that time. Yet in the fourth volume he turns his sarcasm in full force on the taste of these amateur groups. Evidently, in his previous volumes the amateur players have found the meat of the past too strong; evidently, they want romance of a different kind. But it seems as though something were wrong in the state of Little Theaters. My reaction to the "Little Theatre Classics" is that even in foreshortened form—however skillfully the pruning might be conducted—the garniture is not worth the effort unless a full-fledged performance be given in the same spirit that Ibsen's "The Pretenders" was given by the Yale Dramatic Association. Besides which, if the Little Theater movement truly helped the spread of the one-act play, and if our various drama anthologies are worth

anything, I believe, there is a sufficient one-act repertory to avoid such editing of the classics. What I do feel about the "Little Theatre Classics" is that in the four volumes which now end the series the casual reader gets a sort of extension course on the drama through significant periods, even spilling into the Persian and Indian territory, ably conducted by Mr. Eliot. He of course emphasizes that primarily his effort is to call attention to the acting possibilities of these dramas which he puts under a reducing glass.

But I turn more hopefully, in the spirit of recommendation, to Percival Wilde's "Eight Comedies for Little Theatres," written with a technical skill and with a refreshing originality which places him high in the ranks of the one-act-play exponents. The volume shows him also in another light—as a writer of children's plays, for there is no recent drama more sure of welcome in the nursery than his "The Dyspeptic Ogre," which to me is worth much more than the cleverness of "In the Net" or the other brightly etched comedies based on a twist and turn, thoroughly legitimate, but none the less contrived. The Little Theaters have reached for Mr. Wilde with avidity; it is to him, rather than to Mr. Eliot, that I would see them turn. For the refreshing thing about the Little Theater movement has been that it did not smack of the academic, even though many among the amateurs came from the colleges; it has merely been a sincere outburst of popular liking for the best in the drama, which, if it could not be had in the regular theater, must be read in print and immediately transferred to the amateur stage, provided royalties were not prohibitive.

Constance D'Arcy Mackay's name is more closely identified with the community stage and the school than with the Little Theater, though she has written a fine review of Little Theaters. "Franklin" is a long play, however, which smacks of her desire to knock at the door of the professional theater. Unlike Louis N. Parker, whose "Disraeli" is avowedly a thing of the theater, correct in its main outlines of portraiture, but shocking to the historian, Miss Mackay begins her play with a mass of historical justifications, and has an appendix which further gives her historical references. Notwithstanding, "Franklin" is an ingeniously constructed piece of work, probably a little too evident for our professional stage, but intensely instructive for the amateur, should it be given. Somewhere Miss Mackay has failed in her constructive interest; her plotting is too much a desire to get in everything which should be given for a correct portrait of Ben. But it reads well, and should have a welcome among a large class of players.

The printed play is not always intended for the amateur stage. It is likewise a measure of literary change, and

from it can be deduced the advance made among dramatists and the change in public taste. I think one reason why Owen Davis's "The Deteur" should be hailed with acclaim is that Mr. Davis once upon a time wrote such melodrama as "Convict 999." But, in addition, I welcome it as an example of sheer realism, written with sincerity and conviction, and with a minimum of external manipulation of action for stage effect. It is a quiet writing of a simple theme—the wear of New England life on the soul of a farmer's wife, and her fight to break from environment. While she loses under circumstances fraught with some dramatic effectiveness, the play ends with a shout of determination to go on. And such a note of non-defeat is strictly American. I mention this play among the isolated examples that have come to me for review, not because it is any better than the others, but because it illustrates a National characteristic liked in the American drama—the indomitable spirit that brooks no defeat. St. John Ervine's "The Ship" is strictly of the "younger generation" type. To him civilization is confronted by the problem of the new generation pointing an accusing finger at the mess in which the world finds itself. And, as in "John Ferguson," the older generation has to pay, though Ervine is fair in hinting that both sides have their claims. "Rutherford and Son," by Githa Sowerby, chants the same theme, in dissimilar plot. Arnold Bennett's "Milestones," Stanley Houghton's "The Younger Generation" are of related interest. But the *dénouement* of this drama can be guessed before the plot advances far, and that is a fault with the play which follows so closely an attitude already exploited by others.

Against these two plays I pit Andreyev's "The Waltz of the Dogs," a drama of disillusionment, of queer unsettled mentality, and of Russian pessimism which was clearly defined in "He Who Gets Slapped." It is a coloring of Andreyev's own philosophy, a dismal theme most strangely, fascinatingly developed.

The amateur might run to such a drab play; but its spiritual content can only be suggested through supreme handling. I think there is no better material to be had for the unprofessional player than is contained in the many anthologies listed below. There could be no "Treasury of Plays for Women" without the unseen protagonist, Man. The four volumes offered this season—"Contemporary One-Act Plays of 1921," "Representative One-Act Plays by British and Irish Authors," "Representa-

THIS is the du Pont Oval It is the trade-mark only of E. I. du Pont de Nemours & Company, and appears only on products made by E. I. du Pont de Nemours & Company.

You will find it on the labels of Paints, Varnishes, Enamels, Lacquers—a complete line of such products that beautify and protect your home, your factory, your car, your furniture, etc.

It identifies the lovely articles of Pyralin Toiletware that adorn your wife's dressing-table.

It is stamped upon the rolls of Fabrikoid that go to the country's great makers of automobiles and furniture, for upholstery to the makers of fine luggage and to the bookbinders and half a hundred other industries.

The textile mills, the leather plants and two score other manufacturing industries find the du Pont Oval on the containers of the Dyes they use.

It identifies the Explosives which release the ores needed by industry and fuel to keep you warm, which blast paths through mountain and forest for your roads, which clear and drain land for larger crops bringing food for your table at lower cost. On shotgun shells, it insures the safety and accuracy of your shooting.

And users of Pigments, Acids and Heavy Chemicals of many varieties, know this du Pont Oval as a mark of the highest quality.

* * *

The du Pont Oval appears on this varied, this seemingly unrelated family of products, because of the ability of du Pont Chemical Engineers, who have been able to utilize the chemical knowledge or the basic raw materials that we need in our prime industry the making of explosives in making these articles that the du Pont Company feels are of value and service in other industries and to the public.

In the future and now we can only glimpse it the du Pont Company hopes to contribute as it has in the past, to the comfort, the security and the prosperity of the American home and American industry.

The Chemical Engineer is a strange mingling of abilities a coupling of the man of science with the manufacturing expert. He is a chemist who knows manufacturing as well as his science, and who can take the laboratory's discoveries on the experimental scale and put them into production on the larger scale of commerce. His province is the *practical* transformation of matter from useless to useful forms. And he has brought into the world's manufacturing plants a new knowledge, a new set of abilities, that has revolutionized industry in the past generation.

This is one of a series of advertisements published that the public may have a clearer understanding of E. I. du Pont de Nemours & Co. and its products.

HERE ARE GIFT BOOKS *Unusual!*

An Old Story Told in a New Way

Longfellow's poem, in an unusual and beautiful setting with prose version of the wanderings and sufferings of the Acadians based on research among the old documents at Boston, Philadelphia and New Orleans.

Michael the Fiddler, Benedict the Farmer, Rene Leblanc, the Poormaster of Philadelphia, all contribute their share in painting a vivid picture of these peaceful yet unfortunate people. Miss Bailey's remarkable literary ability has woven a story around historical facts that arouses the deepest sympathy and interest. Young and old will enjoy this opportunity to become more closely acquainted with this romance of fact which is even stranger than fiction.

EVANGELINE

By Henry Wadsworth Longfellow

Historical Prose Version by Carolyn Sherwin Bailey
Illustrated . . . Cloth . . . Price \$3.00

This is indeed a de luxe edition of *Evangeline*. Its size is 7x9, printed on fine, clear paper from easy reading type. The jacket is a beautiful reproduction of a painting by Marion Powers. Twenty remarkable duotone illustrations from a photo play give the book an added interest and charm. The ideal gift book of the year.

Paper, printing and binding are of highest quality. A charming gift book.

THE THREE MUSKETEERS

Adapted for Juvenile Readers

By Carolyn S. Bailey

Illustrated in color by Harold Brett. . . . Price \$3.00

The best books for children are the old books that have been published for many years. Often, however, they dwell too much in matters of interest to the adult mind only.

In producing the de luxe edition of this wonderful old tale the editor has retained all the adventure and romance clothed in Dumas's own words and has expurgated everything the child is not interested in—and should not read.

Printed on clear white paper from generous size type with good quality binding and attractive jacket, the de luxe edition of *The Three Musketeers* is a book that any youngster—and many a grownup—will be pleased to receive as a gift.

OLD TIME TALES

By Lawton P. Evans

Illustrated in color by E. P. Ottendorff . . . Price \$2.50

An unusual book containing in story form a general résumé of world history from the earliest records to modern times. The first part of the book contains stories based on ancient mythology before the time of actual historical record. The remainder of the volume contains authentic historical stories. This book makes an exceptionally fine gift for young folks, as it not only interests but educates.

Bradley Quality Books

THE BOOK TABLE (Continued)

tive One-Act Plays by Continental Authors," and the one just referred to—offer in total seventy-seven dramas of varying lengths. Some of the authors are well known, others are new, entering the field because of the attractiveness of the dramatic form: Many of the plays are mere exercises in construction; others are mere dialogues that are bright and dexterous. At times I am tempted to say that the technique of the one-act play is not understood by more than a small percentage of those writing for the theater. Certainly, Galsworthy, for example, is not any sort of an exponent. I smile over the volatile spirit of Christopher Morley in his "Thursday Evening" and "Rehearsal;" I think that Floyd Dell is on the road to something in "Sweet and Twenty," and then when I'm through I am convinced he isn't. I read Harry Kemp's "Solomon's Song," and I realize he is a poet and somewhat of a dramatist too, and then in bulk I thank any literary movement which is strong enough to keep these writers writing until some day they may grow in the way of the theater. Even the British and Irish authors are not entirely loyal to the one-act play, not as much so as the Continental authors. But on the Continent we find sophistication which partly destroys originality of experiment. After all, I believe we in America are more likely to master the one-act form than they are abroad. Because our interest is more of a piece with the short form, and our patience has to be stimulated with action if the play is long.

So, altogether, these books that have come to me for notice are a hopeful revelation. The level is high, indicating an unusual level of public taste. The printed play is holding its own with other forms of literature.

THE NEW BOOKS

FICTION

CARNAC'S FOLLY. By Gilbert Parker. The J. B. Lippincott Company, Philadelphia. \$1.75.

Not, in our opinion, one of Sir Gilbert's best books. The mechanics of a good story are all here; but one fails to feel much emotion or care much for the characters. It is incredible that so intelligent a person as the hero should allow his whole life to be haunted by a mock marriage, or that even as a "fool boy" he could have lent himself so ingenuously and completely to the wiles of those who managed the fraud.

JANE AUSTEN'S NOVELS. 6 vols. Illustrated. E. P. Dutton & Co., New York. \$12 for the set.

What stands out to the eye in this new edition is the really charming colored illustration by C. E. Brock, which sets out the characters with all Mr. Brock's recognized ability to reproduce the costumes and settings of the eighteenth century. As to the novels themselves, it is not necessary to speak. Those who like them are those who

Individuality and Distinction in Home Decoration

system by the employment of all modern resources in getting quickly into touch with its members.

Each member of the League ordering one of its productions receives in effect an exclusive and unduplicated design, made for him individually by the artist; as it is owned by few others or no others in his community. But, unlike the ancient method, he does not have to commit himself to accept it before the replica has been carefully examined and approved in his own home.

The League places him in practically direct touch with the creative artist. By its help it enables him to make *care and thought* do far more for the individuality and beauty of his home than mere lavish expenditure of money could do. A work of art such as the Greek-Pompeian lamp, if only one lamp like it had been made, would have cost rather more than three thousand dollars. The League can produce it for less than one-hundredth of that price or less, because its membership is so widespread, and because those who wish to subscribe for identical replicas of it can be reached so quickly.

For the same reason, of course, the League is in a position to offer to the foremost artists and designers, who would not think of selling their designs to the "trade"—payment as large, or larger, than would be paid by very wealthy collectors. Each member of the League is in a position to share in the advantage of this. He receives one opportunity to subscribe for each of the productions contemplated or offered by the League, but is under no obligation to do so.

A painter, a sculptor, and a noted decorative expert collaborated in the design of the lamp—Olga Popoff, Muller, painter and sculptor, a student of Rodin—Andrew P. Popoff, painter, student of the Beaux Arts—and John Muller, architect for many buildings noted for their distinction and beauty. The result is a design of dignity, richness and grace which at once distinguishes it unmistakably from the ordinary commercial products of "factory designing departments."

That is but one example of the art productions the Decorative Arts League is arranging for its members. The League is a most significant development in art and in the decoration of homes of culture. And the best guarantee of the permanence of the growth it has already attained, is the pleasantly business-like and entirely self-supporting basis on which it does its work.

IN every community there are a few families distinguished not so much by wealth as by taste and discrimination in the selection of all the things that surround them in their homes, and by their instinctive and consistent avoidance of the mediocre things that one sees displayed by the dozen in stores and also in most other homes, in wearying duplication.

They give some thought to the art of finding, selecting, and purchasing the right things. They know that success in doing that is not so much a matter of money as of intelligent care. These are the men and women who, in every part of the country, are welcoming a young organization (which in reality is reviving a custom that is almost as old as art itself)—who see at once the important uses they can make of it, and who are joining in the movement as soon as they hear of it. In comparatively few months the League has had an amazing growth—a growth which art collectors, a year or so ago, would have said was impossible.

The Decorative Arts League has taken the ancient system,—by which patrons of art joined in little groups and subscribed for replicas of any beautiful design that pleased them, even while the design was still in the hands of the artist,—and has vitalized that

We Lend it Gladly

WE ask the privilege of sending the Greek-Pompeian Floor Lamp, the Muller-Popoff design, for your own use in your own home. We lend it for your examination and comparison; for the judgment of yourself, your family, and those of your friends whose opinions in matters of beauty and art have weight.

When the carrier delivers it you hand him the small charge for postage, and \$3.85 which is the deposit, and is *returnable*.

Put a bulb in the lamp, attach it to a socket and begin using it. Two, three, or four persons can read by its light at the same time. Find, by a few experiments, the best position in the room for it. It can be moved with one hand and without rising from our easy-chair.

Note the change it makes in the whole appearance of your living-room, drawing room, library, or bedroom—the greater distinction and individuality it gives to its surroundings. View it as if you were a visitor, entering the room for the first time. Note how it harmonizes with the plan of decorations in your home, where a lamp of garish, over-accentuated or mediocre commercial design would strike a note of discord.

These are the Tests of True Art and of Real Beauty

Notice how within a few hours it no longer seems strange to have it there—and how it takes its place as part of the permanent furnishings and decorations by which your home environment expresses our individuality.

No lamp of mediocre or garish design can withstand them successfully. Then, too, besides noting the changed appearance of the room, notice the beauty and effect of the lamp itself—the exquisite fuller-Popoff Greek-Pompeian design—first, when lighted and viewed from a short distance; second, when viewed from another room or from the hall; third, when it is not lighted, and when the room is lighted by daylight. A perfect lamp-design must be beautiful in all three of these tests.

We ask you to make these tests and comparisons in your own home. Send the coupon now.

DECORATIVE ARTS LEAGUE, 175 Fifth Avenue, New York City

What Better Gift—

or the Friend you hold in highest esteem? What gift can express so clearly your knowledge of your friend's good taste and discrimination, his love of rare and beautiful things, and his appreciation of exquisite *quality* in art?

And what can better express your wish that the thing you send him shall be as *permanent* a source of luxurious enjoyment and artistic pleasure, as the esteem and love of which it is a remembrance? A remembrance that is *worthy* of the sentiment or which it stands,—a thing of classic dignity and never-fading race, in whatever surroundings it may be placed.

You can order these lamps sent direct to your Friends, in your name, with the special announcement card provided by the League. You can pay for them on the same basis as if they were delivered to you.

IMPORTANT—Already, as this is written, orders are being received faster than these lamps can be made at present. We are increasing the number. But it is certain now that orders that are postponed too long will be too late. The number we have arranged to make this season cannot be increased. Act on this

A Work of Art, Sent on Approval

Compare thoroughly.
That is why this lamp is
loaned to you

VISIT the art importers, the decorators, the jewelers, the large stores, and the commercial electric show-rooms. See if you can find *any* lamp that even approaches it in beauty and artistic perfection—even at twice or five times the price at which *this* beautiful lamp can be yours (if you act promptly).

WE do not "selling" in the ordinary commercial sense. The lamp must sell itself to you—on your own judgment and comparison. If it does not . . . send it back, any time within five days. (That is all the "selling" that the Decorative Arts League relies on—all that it has ever needed for any of its productions.)

We will return your deposit at once, and in full; and you will be under no further obligations whatever.

SO you see clearly that, when you accept the loan of this lamp and hand the carrier your \$3.85 deposit, you are not risking the sum. You are not risking either money or annoyance.

On the contrary—you are accepting on the pleasantest and safest terms, an opportunity to get a lamp of superb beauty and artistic perfection—and an opportunity to prove to yourself, *before* you decide to keep it, that for a lamp of equal or nearly equal beauty and distinction, you might have to pay three times or five times as much.

IF we could think of any pleasanter, fairer, more confident way to offer the League's productions, we would do it,—but we cannot.

Works of beauty and permanence — heir-looms a century from now. A lamp design made by the Muller-Popoff group, and owned by the "D. A. L."

This low price is a test

This lamp was designed to sell for \$36. We want to see if, by offering it at a much lower price, we can secure enough orders to cause a great saving in the cost of production and distribution, and without a loss to the League. So, as an experiment, we are offering it at \$19.85.

For the present, this is only an experiment. We cannot guarantee that the price will not be raised. Your Approval Request should be mailed at once.

Lamp is about 5 feet high. Finish rich Statuary Bronze. Base and cap are cast in solid Mollum. The upper shaft is seamless brass. Shade is parchment, brass bound. Outside decorations are in three colors; the top and bottom bands in deep red, the design in dark green, the background graded in brown.

Inside the shade the reflecting surface is of a delicate pink tone diffusing a warm and mellow glow. The gracefully curved arm is pivoted at the shaft so that the lamp can be raised or lowered with a single touch.

Just above the bulb another pivot enables the shade and the bulb to be tilted to throw the light at an angle. Fifteen feet of cord, with two-piece attachment plug. Wiring is inside the shaft and arm.

The lamp is complete, ready for the bulb to be put into it. Weight packed is about 22 pounds. If desired you can cover the shade with silk or other fabric to match any particular surroundings.

The regular price was fixed by the League at \$36, but the introductory price, and to members of the Decorative Arts League was \$19.85 (which may have to be discontinued).

The price has not been advanced yet. You can have one of the Muller-Popoff Greek-Pompeian lamps—if you act at once—at exactly the price paid by members of the Decorative Arts League. And you can become a member without cost or obligation.

For the CHRISTMAS STOCKING

One year's subscription to

ST. NICHOLAS

and one book of your own choice

All For \$5

THERE is no more helpful gift for a boy or girl than a year's subscription to St. Nicholas. For less than the cost of your morning paper, you can give delightful St. Nicholas plus one of the most interesting books ever printed for a boy or girl.

Select any one of these books:

KIM—by Rudyard Kipling

A book every boy should read, and will re-read. Tells of India, the land of tigers, intrigue and mystic lore—and how the son of an Irish soldier grew up in the native secret service, and foiled well-laid plans of the foreign enemy.

St. Nicholas Christmas Book

A careful selection of the most striking Christmas stories and poems that have appeared in St. Nicholas Magazine. The kind that even the "grown-ups" like to read on Christmas Day. Intensely interesting.

—or any one of these fine books:

Driftwood; a Story of the Mississippi River

Stories of Useful Inventions

The Complete Radio Book

Pretty Polly Perkins

During 1923, St. Nicholas will print the best stories of the most popular writers for boys and girls. Some of these authors are Ralph Henry Barbour, Emilie Benson Knipe and Alden Arthur Knipe, George Inness Hartley and Samuel Scoville, Jr. All have the knack of telling a fascinating story about wholesome, wide-awake boys and girls.

Reading St. Nicholas makes better-informed, broader-minded girls and boys. Prize contests develop initiative and perseverance. Articles on travel, science, sports, camping, topics of the day—all make St. Nicholas a powerful force for permanent good.

Send your subscription as soon as possible, so the book, first copy of St. Nicholas, and a handsome Gift Card will arrive before Christmas Eve.

THE BOOK TABLE (Continued)

agree with Sir Walter Scott when he said of the author: "That young lady had talent for describing the involvements, feelings, and characters of ordinary life, which is to me the most wonderful I ever met with. The big Bow-Wow Strain I can do myself, like any now going; but the exquisite touch, which renders ordinary commonplace things and characters interesting from the truth of the description and the sentiment, is denied to me."

ROPE. By Holworthy Hall. Dodd, Mead & Co., New York. \$1.75.

A light-weight story, but none the less amusing. Henry's rally from a life of elegant leisure to a fighting existence as the manager of a movie theater is capitally worked out. He has to make good or lose a fortune. He makes good, and has the additional satisfaction of outwitting his Puritanical aunt and her scheming and dishonest husband.

SAINT JEANNE D'ARC. By Minna Caroline Smith. The Macmillan Company, New York. \$2.25.

A new semi-historical and semi-fictional narrative of this saint's life, for saint she now is. It has imagination and earnestness and leaves one filled with enthusiastic belief in Joan's personality and honesty. The author takes a more literalistic, and therefore ecclesiastical, view than most students of the psychology of spiritual sincerity would accept. The book is an addition to the literature of the subject, which is always of intense human interest.

BOOKS FOR YOUNG FOLKS

JOHN MARTIN'S BIG BOOK. The John Martin Book House, New York. \$2.50.

This is the sixth of the "Big Books" published annually, and that fact alone indicates the popularity of the idea among children. This particular volume has a picture on every page, and over sixty of the pictures are in color. Its contents are varied and include all sorts of things from fairies to bears, together with much fun and nonsense of the kind small children like. That John Martin knows what this is, his long experience and success in catering to children proves. From the same house come several small books for children, some of which have a little instruction, but all of which are primarily picture books.

BIOGRAPHY

DAVID LUBIN: A STUDY IN PRACTICAL IDEALISM. By Olivia Rossetti Agrest. Little, Brown & Co., New York. \$3.50.

Many self-made men become absorbed in the pursuit of personal success; David Lubin was of a different mold. He came to America a poor boy; "went West;" amassed a fortune; but never lost his idealistic view of life. He became an influential factor in great movements; and his life-story is told in this book by a sympathetic co-worker who imparts her admiration for Lubin's character and achievements to the reader.

HISTORY AND POLITICAL ECONOMY

NEW PALESTINE (THE). By W. D. McCrackan. Illustrated. The Page Company, Boston. \$5.

The author, while doing relief work in Jerusalem, published a daily paper

“—and just because I played good auction bridge”

A YEAR ago I hardly knew what an invitation looked like. Today I receive so many bids to house parties and bridge luncheons that sometimes I scarcely know which to accept. Of course, I always knew a lot of people in my home town, but when I moved to the city I was almost appalled to live in a community with people who want to know who your great-grandfather was.

“I am not a social climber, but I guess every girl likes to have a circle of friends—to know nice people. One day my husband and I went to a Charity Bridge. My partner, a woman who is a social leader, seemed very much impressed by my game from the start. Finally a situation came up where I had to make a sound decision or we would be set. She made trump. One of our opponents doubled, I sat there with a lot of hearts in my hand and one missing suit. What should I do?

“A year ago I should have been in a panic, but now I knew absolutely what to do and I did it. We won the hand and the rubber. This woman was my friend for life. From that time, invitations seemed to come to me out of the blue sky. I must say that I think I am one of the most sought after girls in the town. I owe it all to learning to play Auction well. And I learned almost before I realized, just by reading ‘Auction Bridge in Twelve Lessons’ and by playing the hands described with the special packs of cards that are a part of these lessons. In a week, after I received the lessons, I learned more about the game than in three years previously, just stumbling along and listening to the wrong kind of advice.”

Everyone must play Auction

THIS girl's experience in learning to play masterful Auction can be your experience, too. Auction Bridge has become one of our chief social diversions. No one loves a poor player as a partner. A good player is always welcome.

What fun is there in being a “dub”? It is so easy to play good Auction that it is foolish to blunder along, repeating

the same mistakes, trying a partner's patience—a social liability instead of an asset.

Auction Bridge is founded on definite rules of play. A few key principles can be adapted to a wide variety of hands. There is very little guess work about Auction when you really understand it. It is probably the most scientific card game in the world. It is certainly the most fascinating. The only people who think Auction is a game of luck are those who don't know how to play it.

Let a master of the game teach you sound methods

MILTON C. WORK is the leading authority on Auction Bridge in the world. His text books are the accepted standard. His opinions are the last word in Auction. The new method of teaching Auction perfected by Mr. Work called “Auction Bridge in Twelve Lessons” enables you to learn a good, sound game in an astonishingly short time.

You will find immediately when you play a hand and read the lesson relating to it that Bridge is not at all a game of luck or chance. Skill counts every time. It is easier to play good Bridge than poor Bridge—when you know how.

When playing for prizes or stakes, haven't you wished that you knew just a little bit more about the game so that you wouldn't be on the loser's end? You may be astounded at the improvement these lessons may make in your game in a single evening.

Every hand has possibilities. It is the hands where re-entry cards make it possible to take tricks or where an unexpected play upsets your opponent's calculations that the expert has an advantage.

Milton C. Work

If you are fond of Bridge, you know the thrill that comes when you have executed a masterful play. If you only play Bridge because you are obliged to, when you learn to play a sound game, you will seek opportunities rather than to avoid them.

The complete course “Auction Bridge” consists of six packs of lesson cards, containing 96 typical hands, together with twelve clearly written explanatory lessons, each lesson covering 8 hands.

Our special offer

As a SPECIAL introductory offer we will send you, for \$1.75, the first two lessons and the pack of lesson cards containing 16 typical hands. You will be amazed to find how much you can improve your game. Do not send any money in advance. Just pay the postman \$1.75 when the lessons arrive, plus postage. Then, when you have studied these lessons and have found how simply and easily you can become a master of Bridge, you may, if you desire, order the balance of the lessons, and the money you have paid will be credited.

MILTON-BRADLEY COMPANY 82 Park Street, Springfield, Mass.

I am interested in “Auction Bridge in 12 Lessons,” by Milton C. Work, which provide a short cut to masterful Auction. Please send the first two lessons and special lesson pack No. 1, containing the first sixteen hands which these lessons cover.

I understand that I am to send no money now, but merely to pay the postman \$1.75 plus postage on their arrival, and these lessons will become my absolute property.

CROWELL'S COLOR BOOKS

John Halifax, Gentleman

By MISS MULOCK. With 12 illustrations in color by Oswald Moses and G. F. Nichols. 540 pages, 8vo. Gilt top, net \$2.50, postage extra.

Among the fine and upstanding stories of English literature, one must always include "John Halifax."

The Last Days of Pompeii

By EDWARD BULWER-LYTON. With 12 illustrations in color by Alberto Pisa. 422 pages, 8vo. Gilt top, net \$2.50, postage extra.

Among historical novels—that class of tale charged with the task of making the dead past live again—"The Last Days of Pompeii" will always be accorded a commanding place.

Lorna Doone

By R. D. BLACKMORE. With 12 illustrations in color by Christopher Clark. 600 pages, 8vo. Gilt top, net \$2.50, postage extra.

"Lorna Doone" will never lose its popularity. Merely to say that it is one of the most charming love stories ever written does not begin to describe its appeal. There is something in the adventurous spirit of John Ridd and the tenderness of his sweetheart which set this tale aside as one of the classics of romance.

Les Misérables

By VICTOR HUGO. Translated from the French by Isabel F. Hapgood. Complete in one volume. With 12 illustrations in color by Bayard and Jeannot. 1,384 pages, 8vo. Cloth, gilt top, net \$3.00. Half morocco, net \$6.00. Postage extra.

When one is asked to name the supreme novels of the world, the name of Hugo's masterpiece rises at once to the lips. His "Les Misérables" is one of the three greatest and by many considered the first of all.

Romola

By GEORGE ELIOT. With 12 illustrations in full color by Colonel R. Goff and others. 580 pages, 8vo. Gilt top, net \$2.50, postage extra.

"Romola" is the only historical romance from the pen of the foremost of English woman novelists. Its scene is laid in Florence, at the end of the Fifteenth Century, and its outstanding figure is the great churchman, Savonarola.

Scottish Chiefs

By JANE PORTER. With 12 illustrations in full color by Sutton Palmer. 715 pages, 8vo. Gilt top, net \$3.00, postage extra.

"Scottish Chiefs" ranks as one of the foremost of historical romances. First published in 1809, it has enjoyed so many re-printings and been translated into so many tongues that its fictional interest has come almost to be accepted as historical fact. It weaves around the figures of William Wallace and Robert Bruce a wealth of action closely related to history.

Shakespeare's Works

COMPLETE ONE-VOLUME LARGE TYPE EDITION. With an introduction by Edward Dowden, LL.D., and 20 illustrations in color by Gertrude D. Hammond. 1,112 pages, 8vo. Cloth, gilt top, net \$5.00. Postage extra.

This single volume is packed with a richness unapproached by any other single book in the world (after the Bible), and is necessary in every well-ordered library.

Adam Bede

By GEORGE ELIOT. With 12 illustrations in color by Gordon Browne. 490 pages, 8vo. Gilt top, net \$2.50, postage extra.

The story is unforgettable because of its sincerity, its masterly characterization, and fidelity to life. That a latter-day artist has caught this spirit and reflected it so faithfully in his canvases, lends added charm to the present edition.

The Cloister and the Hearth

By CHARLES READE. With appreciation by A. C. Swinburne. With 12 illustrations in full color by Alberto Pisa, E. T. Compton, and others. 730 pages, 8vo. Gilt top, net \$3.00, postage extra.

Although Charles Reade wrote many books, his larger fame today rests upon his masterpiece, "The Cloister and the Hearth." It represents the age-long struggle between the natural desires of a man for a home and family, as against the churchly law of celibacy. But further than this the story recreates for us in a wonderful way the civilization of the Fifteenth Century.

THOMAS Y. CROWELL COMPANY . Publishers . New York

Photographs and Cartoons

THE OUTLOOK can always use good amateur photographs of interesting scenes or events. We pay \$3 for each one accepted, if suitable for a half page or smaller; \$5 if selected for full-page reproduction. We especially want snap-

shots made by the person submitting the photographs. Cartoons are also desired; if accepted we pay \$1 each. Postage should be inclosed for return of photographs if not available for our use; cartoons are not returned.

The Outlook Company, 381 Fourth Ave., New York

THE BOOK TABLE (Continued)

for several months during 1920. This fact will indicate the practical, progressive character of his book. It is full of information about present-day Jerusalem and other parts of Palestine, and is written in the concise, clear-cut way that one might expect from the author's training. Palestine will always be a center of interest to the Christian world as well as to those of Jewish faith, and this book will be of special suggestiveness to ministers and Sunday-school workers, while the student of current affairs will find it scarcely less valuable.

ESSAYS AND CRITICISM

MODERN ENGLISH ESSAYS, 1870-1920. Edited by Ernest Rhys. 5 vols. E. P. Dutton & Co., New York. \$6 for the set.

This collection of essays selected from English and American literature of the last half-century is notably readable, and the reason is that the editor has been at great pains to choose essays which, if we may say so, are not "essayish." They range through all possible kinds of topics, from Edmund Gosse's "Cats" to Augustine Birrell's talk about Carlyle. The volumes are like the essays in that they are small and agreeable. At least fifty different writers are represented. We note among them only three Americans—Vida Scudder, James Russell Lowell, and Brander Matthews. Each volume has as frontispiece an attractive silhouette portrait of an essayist.

SCIENCE

OUTLINE OF SCIENCE (THE). Edited by Professor J. Arthur Thomson. Vol. IV. G. P. Putnam's Sons, New York. \$4.50.

This is the fourth and concluding volume of this valuable work. We know not where to find so comprehensive and readable an account of the principal scientific ideas of our time. The style is lucid, the chapters are short and not overburdened with technical terminology, and the numerous illustrations are intelligently selected and well printed.

Two wonderful books for friends of trees

TREES AS GOOD CITIZENS

By Charles Lathrop Pack
President American Tree Association

In simple words, with clear pictures, this book tells how to identify shade-trees; how to select varieties for every location; how to keep trees healthy and *everything* about trees.

Home owners, students, teachers, nature lovers and civic officials will find it necessary, instructive and interesting. Any one can enjoy it. Every home owner should have it.

Cloth bound, 268 pages, 16 full color-plates; 125 other illustrations.

By mail, postpaid, only \$2.00. On approval.

THE SCHOOL BOOK OF FORESTRY

By the same author

Your appreciation of our forests will become greater as you read this book, which brings the clean, sweet, invigorating air of the woods into your home. How to know forest trees; why trees are necessary to prosperity; how to conserve our richest natural asset.

Cloth bound, 159 pages, liberally illustrated.

By mail, postpaid, only \$1.00. On approval.

AMERICAN TREE ASSOCIATION

1214 Sixteenth Street

Washington, D. C.

"IT'S NOT A HOME WITHOUT TREES"

Give them the priceless gift of Protection

THE greatest gift which you can bestow may be the gift of wise provision for your family's future.

They will not see it; they may never even hear about it. But if a certain day should come, then they would understand, and appreciate, and remember.

They would find that you had made your will, putting your wishes for their welfare into the tangible form of directions to your executor.

They would find that careful plans had been made to protect, for their benefit, your property, life insurance, and other affairs.

They would find the burdens of estate management being attended to by a trust company. They would find the trust company sympathetic and considerate in all its dealings with them. They would know their inheritance was in safe hands.

You should make this vital gift of protection. Then you can give your other gifts with a freer hand and a freer heart.

Ask a Trust Company

for a copy of the booklet, "Safeguarding your Family's Future," which fully explains the advantages of trust company administration of estates and trusts, and outlines steps which you can take to protect those who will inherit your estate.

RAIL CAR USED ON SIDE-LINES FOR PASSENGER, EXPRESS, AND MAIL SERVICE.
REQUIRES ONLY ONE-MAN OPERATION

THERE is a new era dawning for America. To-day city and country are being rapidly tied together by a new link which will make it possible for us *all* to have twenty-four-hour eggs for breakfast, milk from last night's milking, vegetables still wet with the dew, and any number of things which have heretofore been the prerogative of the gentleman farmer. No longer will the individual find it necessary to wrestle with the cutworm and swap garden lore over the fence with his next-door neighbor, for his wife will be able to purchase fresh vegetables in the open market for less than he can grow them, and of a better quality.

On the other hand, the wife of the farmer is coming into her own. Up to ten years ago the life of the woman on the farm was one eternal round of petty duties. To-day the farmer's wife is part of the near-by community. She shares its interests, belongs to the Woman's Club, attends lectures, knows her neighbors, is able to talk understandingly on public questions; she joins classes in domestic science, reads the magazines, and follows along with her children in their work at school.

She shops in the near-by town and she knows values. No longer is she dependent on the itinerant peddler for sleazy calico and thin-bottomed pans. She attends bargain sales, supports local merchants with her trade, stands for better merchandising, and knows to a cent just what commodities are worth. She visits the moving-picture shows and enjoys educational films. She knows why unsanitary methods are a public menace, and she finds herself enjoying the neighborly competition which makes her butter a little better and more in demand than that of her neighbor next door.

What has brought about this change, and what is all this doing toward the making of a broader and better America?

All the way down the annals of history progress has been marked by better communication. Isolated sections cannot grow beyond a certain point. Interchange of commodities, interchange of ideas, has meant not only the upbuilding of commerce but the mental advancement of every community.

While the introduction of the automobile has meant much to the pleasure-loving members of the community, it has played a much greater part in its readjustment of social conditions. Children are carried to school by auto-bus without tying up motive power which is needed for work on the farm; small-store keepers are learning better business methods because of better touch with the outside world and increased business; and women are patronizing home markets because they are able to get there and make personal selections. Then, too, the city worker finds it possible to live in the outlying districts and still go to his work in town even if he is not the possessor of a car, for bus lines are gridironing outlying districts; the rural motor express is making short work of carrying commodities and transportation is just at the other end of the telephone.

An interesting experiment was made some little time ago by a local Chamber of Commerce in New York State. The purpose was to provide better transportation facilities for out-of-town residents and to increase local business.

A waiting station was built in a central location of the town, and in the station were placed a number of small bins, each bin being marked with the number of a motor-bus route. Packages sent to the station by merchants are deposited in the proper bin, and may be claimed by the passenger on a special ticket or are delivered at the homes by the motor-bus driver, who drops them off at the respective houses as he covers his

route. A small fee is charged, and the expense is sometimes borne by the merchant and sometimes by the customer. As the busses serve the country district for a radius of eighteen miles, this has proved not only a distinct service to country buyers but an immense stimulant to local trade. Telephone orders have increased to such an extent that telephone order desks have been installed in many of the stores and special buyers fill orders by personal selection, becoming so well acquainted with the needs of their trade that they make selections with almost unerring accuracy.

Maintenance costs, including salary of the attendant at the terminal, are covered by the profits from the news-stand, which sells the usual run of popular

magazines and candies, and by the small charge for package storage. Each bus driver carries a key to the station, and the door is unlocked by the first one who comes in the morning and is locked again by the man who covers the last route. Increase in local trade has proved remarkable even to the most enthusiastic sponsors of the plan.

Not only has the motor bus brought the outlying district into close touch with the city, but it has been a flexible means of bridging temporary gaps in transportation. In the Far West it has penetrated to those isolated sections whose inhabitants have many of them never seen a railway. Twelve thousand motor trucks are used to take children to school in this country and hundreds

of bus lines have been established with regular scheduled routes.

Not less difficult than that of the out-of-town resident has been the position of the railways in handling passenger, mail, and light express service on their side-lines. Little jerk-water railways have often been willing enough to give service, but the expense involved in providing a crew of three or four men to operate the engine and combination passenger and freight car not only ate up the profits of that branch but those of the others as well. Fare for half a dozen passengers a day, a little freight, and a few bags of mail does not offset wages, coal, and the standing charges of equipment.

With a view to relieving their diffi-

*Guaranty
Service*

A Cotton Shipment and Banking Service

ONE of our customers in the South recently had demonstrated to him the value of a banking connection through which he could obtain adequate credit and service.

He had made a shipment of cotton to a Liverpool firm. On its arrival, a certain proportion was not accepted by the consignee. Its disposition now became a problem to the exporter.

Through our New York Office we extended the shipper credit with which to repay the British firm for the unaccepted cotton. Through our Liverpool Office

we arranged sale of the cotton on a basis satisfactory to our customer, and attended to the collection of the proceeds for him.

This Company finances a large volume of American cotton exports. It has developed a service which is of genuine value, not only in routine matters, but in such emergencies as the foregoing, which are inevitable from time to time.

Similarly, manufacturers and merchants in practically every line find our service an asset in their business.

We shall be pleased to discuss in detail with you the exceptionally broad facilities which an account with us places at your command.

It's Easy to Prevent Rust and Tarnish

Just rub the metal with 3-in-One Oil.

Rust and tarnish are caused by the oxygen of the air attacking the metal. Moisture or salt in the air helps along this chemical action.

3-in-One The Universal High Quality Household Oil

penetrates the tiny pores of metal and forms an invisible coating that keeps air away and sheds water like a duck's back.

Use frequently on all metal about the house, except that which is lacquered. Dampen a cloth with 3-in-One and go all over your gas or gasoline range, particularly the inside of the oven where moisture from cooking collects.

Everything metal that is used infrequently should be rubbed generously with 3-in-One before putting away.

Get the 3-in-One habit. It's a good one. 3-in-One is sold at all good stores in 1-oz., 3-oz., and 8-oz. bottles and in 3-oz. Handy Oil Cans.

THREE-IN-ONE OIL CO., 165 R. Broadway, New York City

D-380

PUTTING WHEELS UNDEP INDUSTRY (Continued)

culty, the motor-truck companies came to the rescue with the offer of a rail car which would fill all their requirements and yet permit of one-man operation. This car is fashioned much like a motor bus, except that it has flanged wheels and a place for mail or light freight. It is operated over side-lines by one man and tests have proved that it not only maintains good speed and takes the inclines as well as the ordinary train, but that it is a bear for heavy snow and plows through it like a steam-engine. A very necessary requisite for the side-line car. At the present time something over twenty roads are operating these rail cars, with excellent results.

And just as the motor bus fills a great social need, so the motor truck is giving us a quick and economical method of transporting commodities over short hauls. The truck is not only bringing in produce from the outlying farm to the city dweller, but it is carrying back to the farmer in its return loads the commodities he needs for running his farm and for the comfort of his family.

There are said to be something over a hundred concerns operating trucks on sixteen regular routes which pass through New York City and which cover the country to the south through New Jersey, Pennsylvania, and Delaware to the District of Columbia, and to the north they extend all over New England. These companies not only haul produce and fruit, but also manufactured articles.

As an example of the opportunities which present themselves for motor-truck distribution, the Port of New York offers an excellent illustration. Within a trucking radius of the Port of New York 8,000,000 people are supplied with thousands of tons of food every year. The more directly and more rapidly this tonnage can be transported from shipper to consumer, the less will be the waste, the better the quality, and the lower the cost.

Throughout New England farmers have been quick to use the motor truck to reach city tables with their produce. It has been estimated that the Boston Post Road alone carries \$15,000,000 worth of commodities a year. But this does not cover merely foodstuffs and farm produce, although thousands of dozens of eggs are one of the largest individual items. Manufacturers have found that for small articles which have great intrinsic value and for transporting commodities where crating or boxing would be necessary in railway haulage, the truck offers an easy means of moving them. Farm produce is packed in baskets and no heavy packing is needed even for such breakables as eggs.

How to keep transport costs at their lowest figure is continually in the mind of every transport company. The American Railway Express, whose tonnage amounts to the millions, found that standing motors and idle drivers constituted a large share of their expense. Now

CRANE UNLOADING DEMOUNTABLE BODY
FROM FLAT CAR TO TRUCK

they keep their drivers busy and use demountable trailers, which are backed up to the loading platforms and are loaded while the driver takes out the already waiting load, which is quickly attached to his traction chassis. In Chicago and New York terminals hundreds of these traction units are continually on the move, picking up and releasing loaded and unloaded trailers. In all, the American Railway Express operates something over 3,400 trucks.

Much this same plan has been adopted by one of the largest drug chains in the country in supplying their local stores in and around New York City. Careful analysis proved to them that at least within a radius of forty-five miles of their warehouses they could deliver more economically and satisfactorily by truck. Not the least of the considerations included the more rapid turnover of money invested, owing to the rapidity of truck delivery, which eliminated long waits on sidings and lost sales through uncertain delivery.

This company uses seven large cranes, which are adjusted to their shipping platform and which permit the hanging of extra auto bodies. When the truck arrives in the morning, it deposits an extra body. Within a few minutes a loaded body has been attached to the chassis and it has made way for another truck, thus materially decreasing the space necessary for loading platforms. Extra bodies are always in the process of loading and the chauffeurs are not obliged to waste any time standing around.

In the Far West, where great stretches of country are without railway transportation, motor haulage has greatly facilitated and lowered the cost of distribution. It has been estimated that not less than 4,000 motor trucks are used in California for contract hauling, and the traffic count shows an average of 286,375 truck miles a day. In the fruit belt motor transport is the ideal solution for the handling of perishable fruit, and great fleets of trucks are continually

Just what
is Listerine,
anyhow?

YOU'LL be interested to know just why Listerine is so efficient and so safe as an antiseptic—why it has grown so steadily in popularity for the last half century.

Listerine consists of antiseptic oils and essences, such as thyme, eucalyptus, baptisia, gaultheria and mentha, scientifically combined with a saturated solution of boric acid.

Thus it has a two-fold antiseptic effect—first, the liquid itself halts infection; then upon evaporation it leaves a film of pure boric acid to protect the wound while Nature heals.

Its action is safe and sure. Don't be without it at home. For with Listerine near at hand you enjoy that comfortable feeling of *knowing* the antiseptic you use is both efficient and safe.

The booklet that comes with each bottle explains more fully

some of its many uses

A safe, unirritating antiseptic for cuts, wounds and scratches, affording protection against infection while Nature heals.

As a gargle for sore throat to ward off more serious ills

As a spray in nasal catarrh. A safe and fragrant deodorant in matters of personal hygiene. Delightful after shaving. Effective in combating dandruff. Useful in many skin disorders.

As a mouth-wash to correct unpleasant breath [halitosis]

Lambert Pharmacal Company
St. Louis, U. S. A.

By the author of "White Shadows in the South Seas"

ATOLLS OF THE SUN

By Frederick O'Brien

THE new book deals with those blazing coral wreaths upon the equatorial Pacific known as the Dangerous Archipelago, which are among the most amazing habitations of man. Mr. O'Brien spent months among the Paumotuans taking part in their daily lives.

Moreover, in the new book he tells of further adventures in the Marquesas Islands, and the reader meets again those unforgettable native figures—Exploding Eggs, Vanquished Often, Daughter of the Pigeon, Seventh Man Who Wallows in the Mire, and many others who first appeared in his "White Shadows in the South Seas." Profusely illustrated from photographs. Price \$5.00.

OUR REPUBLIC

By S. E. Forman

This is literally a book that no American can afford to be without. It is an authoritative, up-to-date, entertainingly written history of the United States from the earliest times down through the Armament Conference. It is about the country's business as well as about its wars; it is about its industrial life as well as about its political life. It is not a text-book, and the emphasis is quite properly on the marvelous development of the country. America's story is one of the most romantic and stimulating of all national histories. Illustrated. Price \$5.00.

OUR MEDICINE MEN

By Paul H. DeKruif

A vitriolic, scathing, enticingly readable criticism of certain absurdities, abuses, preposterous effronteries which the author finds in the medical profession of to-day. (\$1.75)

SIDELIGHTS ON AMERICAN LITERATURE

By Fred Lewis Pattee

Acute, original, eminently readable comment on Mencken, O. Henry and other writers of present-day interest. (\$2.00)

SHOUTS AND MURMURS

By Alexander Woolcott

The delightful record of impressions of a thousand and one first nights by a passionate play-goer. (\$2.00)

THE SHAKESPEARE GARDEN

By Esther Singleton

A beautiful book—of Elizabethan gardens, of the flowers Shakespeare mentions, of suggestion for a Shakespeare garden. (\$3.00)

THE SOCIAL TREND

By E. A. Ross

This author who "can make sociology as interesting as most novels" herein indicates various currents in contemporary human affairs, especially as they affect America. (\$1.75)

Distinguished Fiction

THE WIND BLOWETH

By Donn Byrne

A new, full-sized novel by the author of "Messer Marco Polo," which James Branch Cabell called "a magically beautiful book." (\$2.00).

TWO SHALL BE BORN

By Marie Conway Oemler

A new novel by the author of "Slippy McGee." *The Boston Transcript* says: "It is full of humor, amusing situations and dramatic intensity." (\$1.90)

MUMMERS IN MUFTI

By Philip Curtiss

A novel of unusually effective characterization and delightful humor. (\$1.75)

SEA WRACK

By Vere Hutchinson

A powerful English novel which the London critics are comparing favorably with Emily Bronte's masterpiece, "Wuthering Heights." (\$1.75)

WINTERGREEN

By Janet Laing

A Scotch seacoast story with a good deal of the charm that was Stockton's. (\$1.75)

(Send for our two new illustrated catalogues—one of books for grown-ups, the other of books for children)

THE CENTURION, an illustrated monthly booklet of magazine size containing news about our authors and extracts from their books, will be sent regularly and without charge to anyone upon request.

Address **THE CENTURY CO.**, 353 Fourth Avenue, New York City

PUTTING WHEELS UNDER INDUSTRY (Continued)

carrying the fruit from fields to canneries, to the railways for shipping, and to the near-by towns for quick consumption. In fact, California is gridironed with motor-transport routes.

This year the California fruit crop has exceeded all expectations, and every effort is being made to rush the fruit to the canneries to save the crop, owing to the shortage of freight cars. In talking with one of the representative bankers from the State at the recent Bankers' Convention, he stated that the raisin crop alone exceeded three hundred million pounds, which is three pounds for each man, woman, and child recorded in the Census. Regardless of the Eighteenth Amendment, the vineyards are also making an excellent showing, and wine grapes are selling for five and six times as much a ton as they were before the country went dry.

Throughout the Middle West, where great stretches of prairie make shipping difficult and where transportation by rail often necessitates from three to four transfers of freight in what might be a twelve-hour trip, local business men have seen a big field in the establishment of motorized express. With the advent of good roads express truck routes have been established through many sections of the country.

Seattle, Spokane, Portland, and Tacoma, in the Pacific Northwest, are alive with motor-truck transportation companies, as are the States of Nevada, Arizona, Utah, and Colorado, which even have their ore-carrying fleets. The recent unparalleled production of the Southwestern oil fields would have been impossible but for the motor truck, and Texas, with its 150,000 miles of roads, would stagnate but for motor transport.

A new development which is even now in an experimental stage is "logging" by motor over corduroy roads. In some sections of the Far West this logging by motor has been found more satisfactory in certain cases than the old-fashioned method of "running" the logs, especially so in the case of fine timber or for purposes of rapid delivery, and for these specific purposes it threatens to supersede the old system. It also has the advantage that on return trips supplies may be brought back to the camp and better communication maintained with the world outside.

Speaking concretely, motor transport has done much for the country's economic needs. It has facilitated transport by expediting the short haul. It renders auxiliary service to the railways; it enlarges the farmer's market, shortens the time of delivery, and reduces the spread of price between the producer and consumer. It is in no sense a competitor of the railways, for it moves in an altogether different field. Railways, waterways, and motor transport each have their place. To insure economical distribution each should be used to the full measure of its effectiveness.

WINTER VACATION VOYAGES

White Star Liner ADRIATIC (24,541 tons)

Jan. 6, Feb. 24, 1923

Each of these distinguished trans-Atlantic liners is favored by travelers of discrimination for her steadiness, de luxe quarters, cuisine and service. These special winter voyages invariably attract those who require utmost service in their journeys to and from the sunny vacation lands that edge the Mediterranean.

THE PRETTIEST LAMP YOU EVER SAW

Direct to you
at Dealers' Prices

This exquisite lamp is of a type and quality for which you would have to pay \$10 in any store selling lamps. It is of artistic Tudor rose design, and was given a place of honor on an onyx pedestal at a recent lighting show because of its extreme beauty. The shade is 8 inches in diameter and is of finest double silk, with Tudor rose rosette and edging of gold braid. Instead of asking you to go to a store and buy this appealing lamp, we're offering it to you direct, at the same price which the dealer would pay for it, or just half of what he would charge you for it. **THINK OF IT!**

BY THE WAY

Plantin, the famous old-time printer of Antwerp, founded a business which flourished for three hundred years. It was then bought up by the municipality of Antwerp and the establishment converted into a museum. An American tourist who visited it recently describes in the "American Printer" an incident of his visit, thus:

"An attendant was at one of the old wooden presses, and a form of type was on the bed. He was selling prints from the form for two francs each. I asked to be allowed to pull a proof. I took hold of the handle and pulled. He told me to pull harder. I pulled harder. (I don't think I'd care to have been a pressman in the old days.) He took the proof and examined it; then shook his head and pointed out that the margins were not straight. With Plantin traditions back of him he wouldn't pass the print, but made me pull another."

This interesting survival of old publishing days narrowly escaped destruction during the war, as a bomb from a Zeppelin fell near it and laid waste a large space.

Dear Mrs. McGowan across the hall was speaking of the trouble she's been having with her car, "Motor Life" reports. "But everybody has trouble lately," she said; "and it's nothing in the world but them using these raw materials at the factories."

"In The Outlook of October 11," a subscriber writes, "an article on 'Platinum' contains this sentence: 'Platinum is one of the heaviest things in nature, being passed only by iridium, with which that metal is always associated, and by tungsten and molybdenum.' Platinum, with a specific gravity of 21.48, is surpassed by two other metals of the platinum group — iridium and osmium. The latter, with its specific gravity of 22.48, is the heaviest substance known. Tungsten is a little lighter than gold, and molybdenum is but little heavier than iron."

Patience was the subject of the teacher's discourse, the "Argonaut" says, and to illustrate her point she drew on the blackboard a picture of a small boy sitting on the bank of a stream, fishing. "You see this lad, children," she said, beaming on her pupils. "He's fishing. Well, even the pleasure of fishing requires patience. He must be prepared to sit and wait." And she dilated on the importance of being patient. "Now, then, can any of you boys tell me what we need most when we go fishing?" she invited. Like one voice came a chorus from the class: "Bait!"

"I must say, cook," said the lady of the house, as reported by the London "Morning Post," "that of late your work has been very perfunctory." Before she could continue, cook broke in with: "Thank yer kindly, mum. I've been here three months now, and though I've tried my best, that's the first bit of praise I've had since I've been here."

WEBSTER'S NEW INTERNATIONAL DICTIONARY

How much this vast fund of information will be enjoyed in your home! It will be admired, treasured, and used not only during the holiday season but for months and years to come—a constant reminder of the giver. This "Supreme Authority" answers all kinds of questions about *words*, *people*, *places*, questions of *what*, *why*, *how*.

Wise parents well know its value in making home study easy and effective. This work is a necessary part of every home, school, and office. A century of developing, enlarging, and perfecting under exacting care and highest scholarship insures accuracy, completeness, comeliness, authority.

Here is proof that settles the matter when it comes to selecting a dictionary:

The NEW INTERNATIONAL is the *standard* of the Federal and State Courts.

The *standard* of the Government Printing Office.

Indorsed by State School Superintendents.

Universally recommended by Statesmen, College Presidents, Educators, and Authors.

The Colleges voted overwhelmingly in favor of WEBSTER as the *standard* of pronunciation in answer to questions submitted by the Chicago Women's Club.

The actors from all over the country recently voted overwhelmingly *in favor* of Webster.

Adhered to as *standard* by over 99 % of the Newspapers.

All States that have adopted a large dictionary as *standard* have selected WEBSTER'S NEW INTERNATIONAL

400,000 Vocabulary Terms.
30,000 Geographical Subjects.
12,000 Biographical Entries.
Thousands of Other References.
2,700 Pages.
6,000 Illustrations.

NEW WORDS as barrage,
Boche, ace, camouflage, tank,
Fokker, lorry, soviet, etc.

The only dictionary with the
new divided page, charac-
terized "A STROKE OF
GENIUS."

Type matter is equivalent to that of a 15-volume
encyclopedia

WRITE for a sample page of the *New Words*, specimen of Regular and India Papers, also booklet "You are the Jury," prices, etc. To those naming *Outlook* we will send *free* a set of Pocket Maps.

THE BIBLE IN ILLINOIS

I HAVE read with interest your editorial "The Bible in California" in The Outlook for November 15, and sympathize fully with your interpretation of the situation. This is not the only instance of the kind. The Supreme Court of Illinois handed down a similar decision a number of years ago, and on the same grounds—namely, that the Bible is a "sectarian book." In this case the decision was not with regard to any particular translation, but with regard to the Bible itself.

The new State Constitution, recently offered by the Constitutional Convention which has been working on it for several years, which is to be submitted to popular vote December 7 next, provides that it shall not be unlawful to read the Bible in any version in the public schools of the State. F. J. GURNEY.

The University of Chicago.

OUTSIDE AN EDITORIAL OFFICE LOOKING IN

OWING to some misadventure with the mails, I have only just received my copy of The Outlook for October 11, and have therefore just discovered that valiant and delightful defense of the editor as such, entitled "Inside an Editorial Office Looking Out." As a person of some experience with editors, I have no fault to find with the argument for the defense, and no more bias in favor of that miserable sinner the would-be contributor than would naturally be expected of one of the tribe. Still, I am willing to offer a little feeble testimony on his behalf.

In regard to office boys, my only objection to them is their disconcerting *hautcur*. The icy gleam in their eyes has a diminishing effect on your size, like the comparative figures in an illustrated table of statistics. But I never encountered an Outlook office boy, so we can leave him out of the discussion. The next person in line is the reader, and of that functionary I have the following experiences to relate. At an annual meeting of the Authors' League, several years ago, a young woman, a reader for a magazine, arose to bring what she evidently regarded as a serious charge against the would-be contributor. He didn't always use the right kind of clip to keep the sheets of his manuscript together; it should not be a clamp, but a removable clip. Reasonable enough, so far. But she proceeded to add that this was the cause of the rejection of many stories. The reader might be interrupted or called away, and on her return to the manuscript the sheets would have flopped over, compelling her to find the place again. Frequently, in such cases, she threw the article aside. So much for the result of a mechanical error upon the writer's labor and ambi-

tion. If you wish to have your work considered, do not inconvenience the reader; this was the case, as gravely stated by the reader herself. Personally, I was not guilty, as I always use the proper clip when one is needed; but I was angry with that reader, and so I am still.

One more instance. The editor of a certain periodical once said to me, "You haven't sent us any verse for a long time." "Haven't I?" I retorted. "I've sent several poems, but they came back like boomerangs." "That's strange," said he; "I never saw any of them, and I have entire charge of the poetry. In future address them to me personally." I did so, and had a poem accepted which had been returned by that very magazine. Is it any wonder that I continued to address that editor personally? I am absolutely sure that he is not one whose judgment could be influenced by friendship or any form of favor. The instance simply shows that readers do sometimes stand in the way. There must be readers of course, and no doubt they are mostly conscientious persons; but if the poor would-be contributor has a certain fear of them, is it altogether unreasonable?

I have another bit of testimony which suggests that the personnel of all magazine offices are not completely impervious to interested considerations. On one occasion I received an editorial request for a certain change in an accepted poem. I am not usually concerned about "the dot of an i or the crossing of a t," but I felt that this particular change would ruin the poem, so I went post-haste to the office, and asked to see one of the editors. I was met with the usual cool and suspicious politeness, until I added, "about an accepted contribution." "Oh, an *accepted* contribution," exclaimed the custodian of the outer hall, with a complete change of tone. "Certainly, madame; take a seat." I was admitted to a sanctum, and forthwith appeared, not a formal substitute, but a really-truly editor, looking as human as anything. I explained my difficulty, he agreed with my view, and the poem was saved. The point is that to the writer of an *accepted* manuscript the temperature of the place had gone up about twenty degrees. We-ell, why not? There is human nature inside the office as well as outside; and where opposing interests are frequently involved a certain amount of antagonism is apt to be developed.

The case in The Outlook editorial is ably and fairly sustained. I do not quarrel with any of its conclusions, any more than with its delightful humor. In the case of the editors of The Outlook, it would never occur to me to doubt their sincerity and good judgment. And of course editors in general are not nearly as black as they are painted. But neither is the would-be contributor. What can he do but offer his wares?

And even if experienced, he may err; and he knows that to betray inexperience is a capital crime. Editors differ on minor points; and a contributor, other than a "PROMINENT and WELL-KNOWN writer," always feels nervous. Hence his apprehensive, unreasonable attitude. As I once heard a Negro orator say, "How would *you* like to be a problem?"

One thing I know: I shouldn't like to be an editor. They can't imagine the sympathy I have for them, in these days of frenzied art and excessive production. The antagonism is accentuated by the clash of schools. Such is my own dislike to freak poetry that if I were an editor I should probably become perfectly brutal. And yet they are gentle souls, until you find out what they are thinking. Just one thing I wish they would not do—thank you so touchingly for the opportunity to see your manuscript. It is too ironical for endurance, and adds force to the gesture with which you crumple up that rejection slip and slam it into the waste-basket.

MARION COUTHOUY SMITH.

THE CASE OF MADAME JEANNIN: THE OTHER SIDE

IN the issue of The Outlook for November 29 Mr. Arthur R. Kimball, well known to us as a responsible and patriotic American citizen, told the story of Madame Aline Jeannin in a letter to the editors. She is, the letter stated, a woman of culture and refinement, owning property here and abroad, who on her return to America from a visit abroad was detained at Ellis Island because of her failure to comply with a technical requirement as to a visé of her passport. There, the letter further stated, she "had to sleep in a hammock, without decencies or privacies, was compelled to mix with the riff-raff of Europe, and not allowed to communicate with her son-in-law, Captain Lusher, for ten days." When he did see her, he found her "in a deplorable condition," "in great distress of mind and broken down by sickness." Only by orders from Washington was she saved from being deported, and "for ten days she hovered between life and death."

It seemed proper to the editors of The Outlook to call the attention of the Commissioner of Immigration of the Port of New York to this matter and to offer him an opportunity to comment upon it. We print below the letter received in reply to our request. It seems to us quite inadequate as a defense of the treatment she received at Ellis Island, although it may be a good technical defense for her detention there and for the legal decision reached to deport her. The Commissioner tells us that the law allows no difference of treatment as between an alien immigrant and an alien who has lived some time in America.

gone to Europe for a short visit, and returned home here to her daughter, who is an American citizen, wife of an American officer. Well, there ought to be! The Commissioner no doubt states the law correctly; we think Congress ought to consider this when it revises the present law.—THE EDITORS.

As regards the case of Aline Burri Jeannin, I have gone into this matter thoroughly, and find that all the trouble that came to Madame Jeannin, and the inconvenience and trouble caused this office, could have been avoided by her had she paid due respect to the laws of the United States in the first instance. When she arrived here, she was not in ignorance of the fact that she had not complied with the State Department's ruling regarding passport visés, and everything that followed is due to just that fact. When she arrived here, her passport showed that she had "been warned not to proceed without visa." The Immigration Department is bound to respect the State Department's rulings, and every alien must be held until the State Department waives the visa. If the State Department declines to waive a visa, the alien *must be deported*.

As for the delay in passing upon her case, you no doubt are aware that under the present Quota Law the steamship companies are permitted to bring in twenty per cent of their yearly quota each month. This means that from July 1 until the quotas for certain countries are exhausted Ellis Island is simply swamped with immigration, and the small force of employees here are unable to cope with the situation. All during September detentions were running as high as 2,000 daily, with anywhere from 500 to 800 cases pending to be heard by Boards of Special Inquiry. This office had no alternative but to detain Madame Jeannin. From an immigration viewpoint, there was nothing else to do. As soon as it was possible to hear her case (she naturally and equitably had to take her turn with others, whose detention was not caused by any deliberate act of their own, as in the case of Madame Jeannin) she was given a hearing, her case was forwarded to Washington, and the State Department saw fit to waive the visé. If Madame Jeannin suffered in health by her detention here, it is a matter of keen regret. However, I cannot understand the attitude of disregard by foreigners for American laws. Had she followed the advice that was given her, she would in all probability never have had to come to Ellis Island at all.

As for the statement contained in Mr. Kimball's letter to you, that she was not allowed to have counsel present at her hearing, this illustrates the fact that he does not know that the immigration laws do not permit counsel present at the special inquiry hearings, nor is one necessary. Ellis Island was created by Congress as a place where aliens (and no distinction is made in the law between "immigrant aliens" and persons who are not citizens) may present their

credentials to enter the United States. The law is framed to meet a very definite and critical problem in this country, and has to be framed broad enough to apply to all aliens. While every possible comfort is given to aliens who are detained here with the appropriation Congress allots, it cannot be expected to be a hotel. I assure you that Mr. Kimball's statement of "third degree" methods is grossly exaggerated. He surely, as an American citizen, would not claim that the United States has no right to promulgate a law and state what questions aliens must answer. Nor do I understand how Mr. Kimball can state that the lady in question "had to sleep in a hammock." Such a thing is unheard of at Ellis Island. I further note that Mr. Kimball states that he was assured when in London that he needed no visa on his passport. I take it that Mr. Kimball is an American citizen. The immigration laws do not apply to him. But had he arrived here, an alien, without a visé, he would most certainly have been detained. The fact remains, however, that in Madame Jeannin's case, the Consul told her that she would require a visa, and notified us that she had sailed in spite of his warning. It seems a pity that Ellis Island is called upon to bear abuse for administering a law passed by Congress for the protection of the United States. If at any time The Outlook cares to send a representative to Ellis Island to look into conditions here and the problem that we are called upon to solve, I shall be very glad to see him, in order that The Outlook may be in a position to judge for itself when stories of this kind come to it.

ROBERT E. TOD,
Commissioner.

DEVASTATION IN ENGLAND —UNEMPLOYMENT

IN the issue of The Outlook for September 27, 1922, appears an article entitled "A Germanized English Policy," by Elbert Francis Baldwin, which, though it gives an excellent statement of France's present position, grossly misrepresents the point of view of Great Britain. I have no doubt that the writer himself would be the first to admit that a reconciliation of the diverging points of view of France and England is one of the most imperative needs of statesmanship to-day. No matter how misguided the policy of one country may be deemed, the true aim should be to grasp the underlying cause of that policy, and not to attempt conversion by any criticism which, however meant, appears abusive. There is a growing tendency in these countries themselves to air their differences of opinions by calling the other side names, and the inevitable result is the widening of the existing breach. All the more reason why American writers, speaking to American

audiences, should refrain from even seeming to fall into the same error.

For over two years now England has had between 1,500,000 and 2,000,000 men continuously out of work. The actual number who suffer through partial or temporary employment is far greater. This is a frightful index of suffering. Hungry people and idle people are just as much indications of the aftermath of war as shattered villages. Nor can these unemployed find work again as long as the economic chaos prevails in Europe.

It is true that England must have customers, because without customers her people will starve. A reparations policy which will continue indefinitely the present state of things will be fatal to England. In the long run, it will be also fatal to France.

The reason for this is plain. Whether we like it or not, the various countries of Europe are far from being self-supporting economic units. The dislocation or unrest of one is reflected sooner or later in all of the others. Particularly is this evident in England. England manufactures and sells to the world. To do this the greater portion of her population has been drawn into factories, coal mines, shipyards, or other lines of endeavor looking to the selling or carrying of goods abroad. No dwelling on the crimes of Germany can alter the fact that she was, and is, an important and necessary element in the interdependent economic structure of Europe. For England to seek to have Germany again for a customer is not an act of misguided chivalry to a defeated foe, nor a gesture of hypocritical forgiveness; it is an act of self-preservation.

It may be open to question whether the steps which England proposes are those which in the long run will prove to be the right ones, but in criticising these steps it is unfair to be wholly blind to the stark necessities motivating England's policy. It is true that France's claim for security is too often disregarded, but no friend of France, however ardent, can expect to win sympathy, let alone suggest a working policy, who fails to take into account the needs of England, which in their way are just as imperative.

HENRY G. HOTCHKISS.

PRAISE FOR THE OUTLOOK'S INDUSTRIAL CORRESPONDENT

BY TELEGRAPH FROM BUFFALO, NEW YORK.

HEARD Sherman Rogers speak to-day at industrial conference. It was the most stirring address of the meeting. One of the strongest I have ever heard. The good Rogers is doing is incalculable.

HARRINGTON EMERSON.

[Mr. Emerson is a veteran and distinguished efficiency engineer. He has not only a record of achievement as a planner of industrial enterprises, but he is also a vigorous and incisive speaker and writer.—THE EDITORS.]

A Startling Book

IF AMERICA FAIL!

By Samuel Zane Batten

Our national mission and our possible future. Dr. Batten discusses first the meaning and mission of America; then reviews the field of history and notes the great causes of the decline and fall of nations, and considering America again, finds those familiar diseases at their old-time work. The second part of the book is constructive, showing how the national life may be purged, and its mission for the world fully performed.

CONTRIBUTORS' GALLERY

FULLERTON WALDO, with his experience as a newspaper man, is probably able to observe in greater detail and then to portray more vividly and graphically to his readers the life and manners along the Mackenzie River than many another man. The first of a series of sketches of this country appears in this issue. Mr. Waldo, a former editorial writer for the "Ladies' Home Journal" and war correspondent, is now associate editor of the Philadelphia "Public Ledger."

"WORKING FOR THE GOVERNMENT" is what Herbert E. Morgan, of the United States Civil Service Commission, has been doing for the past twenty years. During that time he has had an exceptional opportunity to study the processes of government, particularly with regard to the civil branch.

LIEUTENANT-COMMANDER K. C. MCINTOSH shows in his article in the Financial Section of The Outlook that he is as much at home in an economic discussion of money and credit as he is in aeronautics. Lieutenant-Commander McIntosh is now in the Navy Department at Washington, after having spent some time in Pensacola, Florida, at the Naval Air Station.

TWO officers discuss the results for the United States Navy of the decision made last year at the Washington Arms Conference. Dudley W. Knox, a captain of the United States Navy, was retired last year for physical disability after more than twenty-nine years of active service, which included service on Admiral Sims's staff during the war. He is the author of a book entitled "The Eclipse of American Sea Power," and is the present naval editor of the "Army and Navy Journal."

The second half of the discussion is by B. B. Wygant, who is a Commander on the U. S. S. California, at San Francisco.

ERNEST HAMLIN ABBOTT, whose signed editorial on the effect of the Conference is published in this issue, represented The Outlook at Paris and Washington.

BARON S. A. KORFF, formerly assistant Governor-General of Finland under Russia's first free Government, is now in Washington. He has just returned from a trip to Europe and is well acquainted with recent developments there. Few men have such accurate and general information and such sound judgment upon international affairs. At the Institute of National Politics at Williamstown a year ago last summer he was one of the lecturers, and next to Lord Bryce he made the greatest impression. He sends this brief account of the present German Government at our request.

HENRY BELLOWES is the managing editor of the "Northwestern Miller." He is musical critic of the Minneapolis Daily "News" and has been a colonel of the Minnesota Home Guard.

The Upward Climb

WHO were these far-distant ancestors of modern man? What did they do, and how did they live? What did they eat?

Above all, how did the human race climb from that dark past into its present place? Why and how did the big jaw and little forehead disappear, and turn into the lofty head of modern man? How and why did man cease to look on the ground and look to the skies?

Sometimes men lose heart over the world as it is to-day, but one glance backward into that dim past is the most encouraging thing that man can have, for it gives incredible hope for a glorious future.

The wonderful complete story of man's upward climb is told with all the romance, all the vividness of that greatest of novelists—

H. G. WELLS

in
the

Outline of History

Now for the First Time —

4 Handy Full-Size Volumes. Profusely Illustrated — 100 Extra Illustrations. Completely Revised by H. G. WELLS himself

Discovery of Fire

First Cooked Food

The First Sail

Domestication of Animals

Although more than a million copies have been sold here and abroad, practically the only complaint we have heard of Wells' "Outline of History" has been that it was too bulky to handle, too big to hold comfortably while reading.

So we decided to bring it out in a form that would be not only convenient and easy to handle, but as handsome a set of books and as beautifully illustrated as any History made. That meant starting all over from the very beginning, setting everything anew in fresh, clear type, gathering from the

four corners of the earth a hundred of the most famous historical paintings for illustrations.

Mr. Wells threw himself into this task with all his marvelous enthusiasm. For a long time he had felt that certain parts of the "Outline" needed elaborating, certain other parts revision. This was his chance. Starting at the very beginning, he made changes on every single page of the text, rewrote whole chapters, added page after page of new material.

One Fourth Off!—SEND NO MONEY

And the Review of Reviews, Too!

And now, at last, we can offer you the new, revised, illustrated history, complete in four beautiful, durable, cloth-bound volumes, in convenient library size, at 25% less than the price of the original 2-volume set!

Think of it! Thoroughly revised, printed from brand-new, clear, readable plates, with a hundred famous historical pictures from the great art galleries of the world, and bound up into four durable, cloth-bound, library-size volumes—all for a fourth less than the ordinary 2-volume set would cost you even now in any book-store!

Wells begins with the dawn of time. Before there were men. Before there were even reptiles. In broad, magnificent strokes he paints the picture, bringing you straight down to today. He shows the thread of human purpose binding men together the world over from one age to another.

And where Wells stops, the Review of Reviews takes up the story. It ties together the events of today the world over, shows their

relation one to another, gives you a background of facts for your daily news.

There is but one condition—that you mail the attached coupon at once. Such an unusual offer as this cannot last long. You must act at once.

Send the coupon—without money.

If for any reason you are dissatisfied with the History, if it doesn't seem to you the utmost of book value and satisfaction, send it back and cancel your order. There'll be no quibbling—no questions asked.

An Offer That Amazes Every Art Lover!

Nearly \$2,000,000.00 worth of the World's Greatest Paintings were used to produce this exquisite "Old Master" Lampshade—yet it is yours, on approval, for only \$2.95. It ought to be a beauty, and it is! Exclusive shops would ask 3 to 5 times this special introductory price.

HERE at last is a lampshade that is a "creation"—the result of a real inspiration—the happy thought of a true artist.

Never before have beauty and real usefulness been so happily wedded as they are in this charming, exquisite shade. Never has a really novel decorative idea like this been so splendidly carried out—and placed within the easy reach of thousands of homes, at a price that is far less than its handsome appearance would suggest.

Four Master-Pictures— Lighted as in a Gallery!

The artist who conceived the idea for the "Old Master" Lampshade was familiar with all the great paintings that hang in the famous public galleries of Europe and America. He was accustomed to seeing them under the best possible lighting conditions—illuminated by concealed lamps, bringing out the full beauty of each tone and shade. So he was dissatisfied with the ordinary way of displaying framed reproductions of these pictures in the home. Then came the inspiration! Why not print beautiful reproductions of celebrated master-works upon a parchment-like material, and display them in a lampshade, illuminated by the lamp they conceal?

After many experiments to determine the very best way of carrying out this remarkable idea, the Van Buren Studios produced the "Old Master" Lampshade. The result is a lampshade that combines all the beauty of form and color-harmony that the most skillful arts and crafts designers could furnish, with an absolutely novel feature—our masterpieces of painting, matchless in beauty and priceless in value!

Every Home Should Know A Few Great Pictures Well

In the home circle, around the evening lamp, you read the books, papers, and magazines which keep you in touch with what the great world is doing, thinking, and saying. Isn't that the natural place to also become familiar with the best that the world possesses in the art of painting? The "Old Master" Lampshade practically brings to your home some of the very greatest pictures themselves—not in the form of dull, one-color prints in books—but flooded with the original colors, made vivid and real by the light of your own lamp, through a remarkable, unequalled process of reproduction that brings you, in miniature, the full color equivalent of the actual paintings.

Four Great Subjects

You can enjoy the "Mona Lisa," by Leonardo da Vinci, the original of which hangs in the Louvre Gallery, and which if it could be purchased at all, would bring a million dollars! You can feast your eyes upon the dark Castilian beauty of Velazquez "Spanish Lady," valued at \$250,000. You can possess the great Rembrandt's wonderful painting, "Lady With a Pink," for which Mr. Altman paid several fortunes. And lastly, you can appreciate the famous artist Holbein's "Portrait of Lady Guilford," valued at a quarter of a million dollars.

Send No Money

One look at the shade in place on your lamp (the ring fits over any incandescent bulb) will tell you more about its beauty and attractiveness than a page of enthusiastic description. So we invite you to see "Old Master" shade in your own home before own it. Five whole evenings' enjoyment

Every Home Will Be Proud of It

This beautiful shade, 12 inches in diameter, and standing 7 inches high, is strongly built upon a framework of lacquered brass, which supports the rich background material. Trimmed with bronze-tape. Will last for years. Ring fits any electric bulb. Gives the "finishing touch" to any room.

LADY WITH A PINK. By Rembrandt
Owned by the Metropolitan

DECEMBER 13, 1922

INVISIBLE GOVERNMENT

IF there is one thing more than another that Americans require of their political affairs, it is that they should be open, aboveboard, and discussable by all. Invisible government and secret influences form the antithesis to democracy. We have and will maintain freedom of speech and of the press, subject only to the apothegm stated the other day in these columns, "Personal liberty ends where public injury begins."

The most moderate programme put forth by defenders of the revived Ku Klux Klan shows its purpose to influence legislation, public opinion, and political elections. It has a right to do all this if it acts openly and fairly. It has no right to work secretly by underground methods to inflame racial and religious prejudice in order to bring about political or legislative action. If one says this to a defender of the Klan, he replies, "Well, the Knights of Columbus do the same thing." We have seen no evidence of this; but, if it is so, then that or any other organization so acting is subject to precisely the same criticism. Meanwhile it is notorious and self-evident that the Klan cunningly tries to twist into one cord the three hateful strands of anti-Jewish, anti-Catholic, and anti-Negro prejudice. Help yourself, in effect the Klan says, to your own special hatred! All this is distinctly un-American.

There is no objection to secret societies in themselves. Any one can name offhand several that are admirable as sources of social enjoyment, of mutual benefit, of fraternal benevolence. Ceremony and ritual are attractive to many people, and it is true that many secret societies are not merely harmless, but beneficial. Yet, in order that the worthy associations should not be confounded with the objectionable, it is at least desirable that all should be registered with the State authorities and the names of their responsible officers be available for purposes of inquiry. Emphatically this is desirable in the case of an organization like the Ku Klux Klan, founded originally as an instrument of terrorism, and lately revived in an effort to foster race and religious animosity and to throw the influence of its secretly banded members on this or that side of a political issue. We are not permitted to know when and why the Klan's influence is thus exerted, and in such a

Kirby in the New York World

THE HOODED COBRA

situation fair discussion is impossible. Just lately, for instance, one newspaper correspondent remarked:

One of the surprises of this year's election was the success of a candidate for Governor of Oregon, with Ku Klux support, and the adoption by the voters of that State of a law designed to do away with all private schools and all parochial schools at which a feature of the teaching is instruction in religious matters.

It may be that the Ku Klux Klan was influential in the election of a Governor in Oregon and in the adoption of the school law—and it may not; how can we tell what an oath-bound society has done? The same thing applies to the election of Senator Mayfield in Texas, "said to be" due to Klan efforts. We don't want "said to be" in American political life, we want open politics as well as open diplomacy.

When the present Klan revival was new, there were several acts of violence charged against local Klans. The National officers of the Klan in one or two

instances expelled the local chapter; in other cases the Klan was declared to be wrongly accused. Thus was exposed instantly one danger attached to those who ride by night "to do justice to wrong-doers;" others may imitate them from evil and personal motives. The Klan saw the light; and it is fair to say that this sort of lynching *à la masquerade* seems to have ceased. There remains to the mystery-loving "joiners" the oddly mingled delight of mask, gown, and torch, with the joy of alliteration, and the inconsistent pleasure of seeing in newspapers flashlight photographs of their midnight ceremonies.

THE CASE OF THE MILLIONAIRE COMMUNIST

WILLIAM BROSS LLOYD made a speech in Milwaukee, Wisconsin, in January, 1919, in which he advocated what he called "revolutionary preparedness." It was in order to enable those who wanted a change in government or in social order, not merely to advocate

effectively their ideas, but to put them in force by violence. In the course of his speech Mr. Lloyd said:

We want to organize so if you want to put a piece of propaganda in the hands of everybody in Milwaukee you can do it in three or four hours. If you want every Socialist in Milwaukee at a certain place at a certain time with a rifle in his hand or a bad egg, he will be there. We want a mobilization plan and an organization for the revolution. You want to get rifles, machine guns, field artillery, and the ammunition for it; you want to get dynamite. . . . You want to tell off the men who are to take the dynamite to the armory doors and blow them in and capture the guns and ammunition there so that the capitalists won't have any. Dynamite the doors of the banks to get the money to finance the revolution.

This man, the son of Henry D. Lloyd, the late economist and reformer, and thirty-eight others were indicted for conspiring to advocate the overthrow of the present form of government in America by violence, and to that end unlawfully and wickedly and feloniously to engage in various forms of propaganda, including selling and distributing books, aiding in the organization of the Communist Labor Party, assembling in meetings, and raising flags and banners and other insignia.

The indictment was in twelve counts and was brought under the law of the State of Illinois which makes such offenses punishable by imprisonment. That law was passed on June 28, 1919—a few days more than five months after Lloyd's speech from which we have quoted. Of course neither he nor his fellow-conspirators were indicted for this speech. They were indicted and twenty of them were arrested, tried, and convicted for acts subsequent to the passing of the law. This speech of Lloyd's, however, together with other words and evidence as to the activities of some of the accused prior to the passage of the law, was introduced as evidence to show the intent of these men in advocating the doctrines that they did advocate after the passing of the law.

The jury was satisfied that the men they convicted were guilty of a conspiracy to overthrow by violence or other unlawful means the representative form of government now secured to American citizens.

Punishment of the convicted was delayed by the elaborate technical objections of their counsel; so it was not until the latter part of November that Lloyd and some of his co-defendants began to serve their prison sentence. Almost immediately Governor Len Small, of Illinois, commuted the sentences and the men were released.

Probably this case would have gained

no such notoriety except for the fact that among those indicted was one man, Lloyd, who is reputed to be a millionaire, and another, John Reed, a Harvard graduate, who after the indictment died in Russia and is accounted as a hero by the Bolsheviks.

LEGALITY AND EXPEDIENCY

THAT these men were legally convicted there can be no doubt. Every imaginable technical objection, as well as every effort which to a non-legal mind would seem reasonable, was employed by the counsel of the accused to prevent conviction. A reading of the case might suggest to a satirist a subject for an operetta as pertinent to the complexities of the law as Gilbert's "Pinafore" was pertinent to the official red tape of the British navy. Into these technical objections it is not necessary to go. It is sufficient to say that they were for the most part overruled by the trial Court and rendered unavailing by the Supreme Court of Illinois on appeal. The counsel for the accused petitioned the United States Supreme Court to act in the case, but Justice Sutherland refused a writ of error on the ground that the matter was one for the Illinois Supreme Court to handle.

From the decision of the State Supreme Court one of the justices of that Court dissented on the ground that the so-called Overthrow Statute, which these men were convicted of violating, was "so vague and general and so clearly against the American doctrine of freedom of speech as to be held unconstitutional." In reaching this decision he was not swayed merely by Constitutional considerations, for he acknowledged that one question about which he was exercised was whether drastic penalty for these men was "the best way, from a public standpoint, to counteract the tendency of their views."

It was evidently because of doubt as to the justice and expediency of the law against the advocacy of violence that Governor Small released the prisoners. At any rate, in releasing them he said: "These men are not criminals." And he added that they had already suffered severely and that no great good could come from longer incarceration.

Very possibly in England these men would not have been imprisoned, or even tried. The length to which violent speech can go with impunity in that country often astonishes Americans. Conditions there, however, are not parallel to those here. National security in Great Britain does not rest upon loyalty to any theory of government; it rests upon the traditions of the British people. In this country loyalty is not to a tradition, but to an ideal, and to destroy that

loyalty is to destroy the substance of the Nation itself. To put a man like William Bross Lloyd in prison may not be the best way to safeguard the institutions which he attacks (and which, most illogically, he appeals to for refuge when he is caught trying to destroy them); but the instinct which frames laws against the activities of such foolish and reckless men is a sound instinct. Free governments have the right to protect themselves. The Lusk Law in New York, which puts all schools and school-teachers under the burden of proving their loyalty, is an unwise if not unjust method of exercising that right; the Overthrow Statute of Illinois is not in the same category with the Lusk Law, and is much more defensible, but we are not convinced that the Overthrow Statute is in every respect a wise method. There are some objects which can best be obtained, not by repression, but by patient and wise education.

AN INTOLERABLE FILIBUSTER

BY employing obstructive tactics a minority in the Senate has forced the majority to withdraw from consideration, and from any practical chance of passage, the Dyer Anti-Lynching Bill.

We are not greatly concerned over the failure of the Anti-Lynching Bill to become a law. Even at best it would have been an experiment. We believe it is an experiment that ought to have been tried. It is a reproach to the whole American people that lynching, with the connivance of officers of the law, can continue in this country without any action on the part of the Nation itself. If the States which have tolerated lynching in the past will eradicate it without Federal action, so much the better. But they have not eradicated it. Perhaps some better measure than the Dyer Bill can be devised. Perhaps it is necessary to wait until indignation against the lynching evil becomes so overwhelming that no reasonable doubt about National legislation can remain.

What does give us concern, and we believe should give all American citizens concern, however, is that a minority in the Senate can with impunity dictate to the Senate by means of such a filibuster as was employed by the Democrats with the approval of so conservative a leader as Senator Underwood. What the Democrats did was to interpose a practically endless series of frivolous motions. One motion, for instance, was to insert the chaplain's prayer. Another was to insert in the journal the time at which the President *pro tempore* of the Senate gave up the chair to Vice-President Coolidge. Another method was to insist upon the reading of the journal in full. Motions of this sort, which were frankly

and obviously dilatory, were permitted. This sort of thing is outrageous. No legislative body ought to allow itself to be tied up by technical rules which can be employed for the prevention of the very purposes for which that legislative body exists—the consideration and discussion of legislative measures and action upon them.

HOW LONG?

FROM New York was drawn one-tenth of the A. E. F. Yet four years after the war not a single new Governmental hospital has been completed within the boundaries of New York State.

The Government was offered a free site for a tuberculosis hospital at Liberty, New York, a town which is equipped by climate and experience to care for patients in the best possible way. The Government refused this offer and proceeded to purchase a site for a hospital on the shores of the Hudson River at a cost of, we are told, \$100,000. After the expenditure of many thousands in the building of foundations, the work on this hospital has been stopped. No one seems to know whether the work has been permanently abandoned or not. Letters to Washington result merely in arousing to renewed vigor the well-known bureaucratic game of "passing the buck."

We cite this case of the New York hospital merely because it seems typical of the whole method by which the problem of the veteran has been handled. If the Administration is wise, it will bend its utmost efforts to end the régime of broken promises, procrastination, and ineptitude which has marked the activity of the Veterans Bureau. If the Republican leaders are not convinced that the situation should be cleaned up for humanitarian reasons, they should at least show that they are aware of the fact that the hospital situation is full of political dynamite.

A WOMAN JUDGE OF OHIO'S SUPREME COURT

ONE of the notable incidents of the recent election was the choice of Florence E. Allen as a Judge of the Ohio State Supreme Court. Judge Allen is the first woman to receive that honor in Ohio, and, so far as we know, is the first woman Supreme Court judge in any of the States. A well-informed correspondent sends us the following sketch of Judge Allen's career: "She was born in Salt Lake City, graduated from the Western Reserve University, and received her law degree from the New York University Law School; practiced law in Cleveland for five years, was ap-

Keystone

FLORENCE E. ALLEN, ELECTED JUDGE OF
THE SUPREME COURT OF OHIO

pointed assistant prosecutor, and one year later was elected Common Pleas judge, in which position she has made a record for common sense, justice, and efficiency. Judge Allen did not enter the primaries, but was placed on the judicial ballot by petition as an independent candidate after Democrats and Republicans had nominated two candidates each."

In an article in the New York "Times" we are told that undoubtedly Judge Allen is the first woman judge to preside on the bench in a case of murder in the first degree and to sentence a man to the electric chair, the only death sentence pronounced in Cleveland for thirteen years. Another important and peculiar case tried before her, it is stated, was that of William H. McGannon, Chief Justice of the Municipal Court of Cleveland. Judge McGannon was tried for murder, acquitted, and then indicted on the charge of suborning perjury in the evidence at the first trial. He was tried for perjury before Judge Allen, toward whom he was so contemptuous during the trial that he was repeatedly reprimanded by the Judge. He was ultimately convicted, and was sentenced by Judge Allen to ten years' imprisonment, with the remark that the law applied even more to judges than to other citizens, as judges were familiar with it.

In a statement made since her election Judge Allen says: "We conducted a campaign with very limited funds, without organization, and with the definite opposition of the two political parties. The issue of my election was not important; but the fact that 490,000 voters disregarded party lines and gave us

their support marks a real advance toward an independent judiciary."

An Ohio jurist and lawyer of distinction in a private letter to a member of The Outlook's staff indicates some regret that Judge Allen should be removed from the Common Pleas Court because there is great difficulty in obtaining judges of the right qualifications for that bench and Judge Allen has there made an excellent judge and one of ability and dignity. He gives his personal impression that Judge Allen was elected to the Supreme Court rather because she was a woman than because her special qualification for this position was greater than that of her opponent, Judge Hough, but admits that others might differ as to this.

THE FREEDOM OF THE STRAITS

THE Lausanne Conference reached a critical point in its discussions when on December 4 Mr. Tchitcherin for Russia outlined the Soviet position as regards the straits of the Dardanelles and the control or freedom from control of the waters to the east, including the Sea of Marmora and the Black Sea. The Turkish delegates declined on that day to state their position, and thus the matter stands as this issue of The Outlook is going to press. It seems to be an open question whether the Turks will concur completely in the Russian views or whether Turkey is beginning to be a little distrustful of Russia, perhaps a little more receptive to the ideas of the Allies as to the Straits, and may therefore show a disposition to reason and a peaceful agreement.

In all this discussion we constantly hear the phrase, "The freedom of the Straits." What does it mean? Turkey, Russia, and the Allies all agree that there should be freedom of commerce through the Straits and the waters to the eastward. Turkey has claimed, and Russia now claims in behalf of what the Soviet considers Russia's interests as well as Turkey's, that Turkey should be treated as an independent, free, and equal nation and assumes from this that Turkey should have a right to fortify any part of Turkish territory, including that adjacent to the Straits. This would mean that no warship of the Allies could pass through the Straits in peace or in war without the specific consent of the Turkish Government, and this in turn means that, in case of serious trouble in the Near East, Great Britain, France, and Italy would be halted at the Straits just as the British navy and army were halted in the Great War.

Now there is a plausible and apparently logical argument for the view just stated. If Turkey, or, for that matter,

Russia, had a trustworthy, representative government; if either nation were now a good neighbor to the nations of western Europe; if the Turks were not muttering about the exclusion of all Christians from their territory, and practically demanding with Russia's aid to control the business and the international relations of the entire Near East—in such a case the claim might be considered reasonable.

What Russia demands is not freedom of the Straits, but unbridled power for Turkey, or Turkey and Russia combined. Great Britain has controlled the Straits of Gibraltar for over two hundred years, and she has never used that control to oppress other nations. Could Turkey be trusted in the same way as regards the straits of the Dardanelles? The Allies do not think so; the only question is, how far they are willing to go to prevent what would be a menace to their interests in the Near East and to the peace of Europe.

Mr. Tchitcherin, in his speech of December 4, demanded for Russia an absolutely closed waterway to warships, and in support of his demand stated, the despatches say, that Russia had suffered five years from an open waterway, during which time her Black Sea ports were bombarded and insurrections assisted in consequence, and that Russia could not and would not permit in the future England's hand to be at her throat. Furthermore, in answer to the British representative, Lord Curzon, Tchitcherin asked whether England "was at the table as arbiter of the world's destinies." Russia, he said, demanded that she be recognized as one of the great Powers, in complete equality with England, and did not recognize England as arbiter.

One hopeful sign for the Allies' contention is that Rumania and Bulgaria are adverse to the position which has, up to the date mentioned, been maintained by Turkey and Russia in regard to the Black Sea. Rumania and Bulgaria are opposed to militarizing the Black Sea and in favor of every possible extension there of the freedom of commerce.

The attitude of the Turks toward the peoples of western Europe is shown in their treatment of Christians in territory claimed by Turkey. The newspaper despatches say that the Turks have ordered out of their territory every Greek now living in it; that this, if completely carried out, will result in the banishment from Turkish territory of nearly two million Greeks since the beginning of the war; that between five hundred thousand and six hundred thousand Greeks now in Asia Minor were ordered to get out by November 30, and

that when this order was extended so as to date December 15 Ismet Pasha said that if Greeks stayed after that date he could not be responsible for their safety—which, coming from a Turk as regards Greeks, is practically a threat of wholesale slaughter. The Turks even asked that the three hundred thousand Greeks in Constantinople should be compelled to move, but they may reconsider that demand.

All this, taken in connection with the wholesale migration of Greeks and other Christians from Western Thrace, has flooded nearby regions with great masses of people, mostly poor, many of them in distress and without any apparent economic future.

A country which will do this is not one to be treated as an equal by the great nations of western Europe.

THE VENGEANCE OF GREECE

THE high political and military positions of the six men executed on November 28 in Athens, the inhumane circumstances of at least one of the executions, and the fact that the men were condemned by a court martial instead of a civil court stirred and startled readers the world over. Three of these men had been Premier (Gounaris, Protopapadakis, and Stratos), two others had been Cabinet Ministers (Theotokis and Baltazis), and the sixth, General Hadjaneftis, was in command of the Greek army so disgracefully routed by Kemal. Gounaris was seriously ill when condemned; he was taken in an ambulance to the scene of execution and there was put upon his feet and shot, together with the other five.

Essentially, these executions were an act of vengeance. They represented anger and shame endured by the people and army of Greece for being led into a trap. So far as the political culprits were concerned it is charged that they led Greece into this trap, not to restore peace or to defend Greece, but to save themselves from political downfall. Gou-

naris, whose illness made his execution so revolting, was perhaps the worst offender, for it was he who, more than any other man, was responsible for the driving out of Venizelos, the restoration of Constantine, and even for the vacillating, treacherous conduct of Greek policy which so long delayed the country from joining the Allies in the Great War. His fellow-Ministers who were shot were sharers in this tortuous and base political conduct.

For a time it seemed more than probable that Prince Andrew, a brother of ex-King Constantine, would share the fate of these six men. He was saved from death and allowed to go into exile only because of his humiliating plea that as a general he was a mere figure-head, knew practically nothing of military affairs, and did what he was told.

The Greek Revolutionary Committee, which ordered the courts martial and the executions, is now the only existing government of any real power in Athens. Great Britain promptly showed its disapproval of the bloodthirsty character of the act by breaking off diplomatic relations through the withdrawal of its Minister from Athens. It is intimated in London that it is expected that the Revolutionary Committee will soon give way to a more responsible government and that relations may then be resumed. The executions were denounced fiercely in the British Parliament. The new Labor leader, Mr. Ramsay Macdonald, is quoted as saying: "The executions represent acts that must shock the whole world. If these men were guilty of acts that would justify such punishment, the highest, most deliberate formalities should have been observed before the sentences were carried out." The Prime Minister, Mr. Bonar Law, said that the Greek Government had been previously warned that if the men were executed Great Britain would withdraw its representative. When this was done, he declared that "in taking this action his Majesty's Government was actuated by the general consideration that it is contrary to the practice of civilized governments to put to death outgoing Ministers on account of the failure of their policy."

Of course it was something more than failure of a policy that these men were charged with; but the trial and executions smack more of the Middle Ages than of the Twentieth Century.

TWO POETS DIE

THE world of letters is the poorer by the death of Alice Meynell and of Josephine Preston Peabody.

Alice Meynell and her husband, Wilfred Meynell, laid the world under a

The First of

articles on the enjoyment of music will be published before the end of the year. It is entitled

"WHAT IS GOOD PIANO-PLAYING?"

Photograph by Francis Brugulere

A SCENE IN "R.U.R.," A THEATER GUILD PRODUCTION NOW PLAYING AT THE FRAZEE THEATER, NEW YORK CITY

The Robots have wiped out mankind with the exception of Louis Calvert, who they believed possessed the secret of manufacturing Robots. They spared his life in the hope that he might be able to teach them how to perpetuate their kind

large debt by their discovery and protection of one of the truest poets of the last century. The friendship which the Meynells gave to Francis Thompson was one of the most fruitful gifts which the history of letters records.

Guests who entered the Meynell home in Portman Square for the first time soon discerned that fundamental beauty of Mrs. Meynell's character which made such a gift possible. There are many people who can give things; there are few who can give of themselves abundantly and understandingly.

To sit at the Meynell table, to see in the flesh the children, now grown to manhood and womanhood, of whom Francis Thompson sang, was an experience worth crossing the ocean for. Mrs. Meynell of course will be remembered, not only for her personality, her hospitality, and her friendship with Francis Thompson, but also for a slender body of authentic poetry. Her work was instinct with faith in beauty and faith in humanity.

In the same week in which Mrs. Meynell died America lost a younger writer of high accomplishment. Josephine Preston Peabody (Mrs. Lionel Marks) gave to the American stage its most successful poetic drama. "The Piper" won the Stratford-on-Avon prize in 1910 and was successfully produced both in London and New York. Its New York

production was perhaps the greatest achievement of the ambitious National Theater.

She will be remembered, however, for more than this one successful play. Two of her earlier volumes, "The Singing Leaves" and the "Book of the Little Past," should be found in every library. Her last work, a drama of high literary distinction, was published just a few months ago. It is called "Portrait of Mrs. W." It is yet to receive the test of stage presentation.

THREE PLAYS

THE Theater Guild opened its season with one of the most striking plays recently produced in New York—"R. U. R.," a drama from Czechoslovakia, by Capek. Its title stands for Rossum's Universal Robots, a chemically produced race of servants and laborers, created by Rossum and his successors with the purpose of eliminating the curse of Adam from the human race. These curious creatures, resembling men and women in almost everything but the power of emotional experience, are shipped out from the factory in thousands. They work, fight, and die for their masters in stolid submission. It is only when the sentimental wife of the factory manager persuades the chief chemist to labor to give these manikins souls that the Robots revolt. Led by a few of the

super-manikins, they succeed in exterminating the human race save for a single man.

The play, as its plot would indicate, is melodramatic in character, but it is a melodrama shot through with flashes of brilliant satire. The play is produced in a manner fully up to the best Theater Guild tradition. It is now playing at the Frazee Theater.

For its second play the Theater Guild produced a drama of personality by A. A. Milne called "The Lucky One." It deals with the jealousies of two brothers. In the hands of Galsworthy the theme might have been interesting. Mr. Milne, however, does not treat it even with his usual deftness of dramatic technique. The first act is all exposition, and so much happens off stage between the first and the second acts that half of the latter is also used up in explaining the situation.

Very much more skillfully handled is Mr. Milne's "The Romantic Age," now playing at the Comedy Theater. The play is clean and sweet, yet not too sweet to limit its appeal to matinee audiences of schoolgirls. The heroine, played by Miss Margalo Gillmore, searches longingly for a fairy prince. She finds him, but not exactly in the form which she expects. The dénouement of the play is the thing that saves it from treaciness.

THE WASHINGTON CONFERENCE A YEAR AFTER

SCENE—*Anywhere in the United States.*

DRAMATIS PERSONÆ—A PUBLIC-SPIRITED CITIZEN and a PRESS CORRESPONDENT.

Public-Spirited Citizen—There ought to be a "blue sky law" against you fellows.

Press Correspondent—What have I done now?

P. S. C.—It's not what you've done now, but what you did a year ago.

P. C.—A year ago? That was when I was in Washington.

P. S. C.—Exactly. That was when you were boosting the stock of the Washington Conference on Disarmament. Now see what's become of the concern. Bankrupt!

P. C.—I deny both allegations. There wasn't any Conference on Disarmament; and it isn't bankrupt.

P. S. C.—No Conference on Disarmament? Tell that to the Marines. And, as for its being bankrupt, just look at any newspaper. Instead of scrapping battleships by the wholesale, the big naval Powers are standing pat. Here's a headline for you: "British Stop Junking Ships Under Treaty. Will Disregard Washington Pact Until France and Italy Sign, Commons Told." Here's another: "British Call Halt in Ship Scrapping. Washington Says No U. S. Vessel Will Be Scrapped Until Treaty Is Effective." And you don't need to be told that France is holding up the naval treaty and is showing no intention of ratifying it. So there you are. That whole grand Conference of yours gone to wreck. Instead of scrapping battleships they've scrapped the treaty. When a fellow gets caught promoting a get-rich-quick scheme, he's lucky if he keeps out of jail. I think you're lucky to be at large after promoting this get-peace-quick scheme. Anyway, you can't fool me again.

P. C.—I suppose I oughtn't to be surprised; but I am. How long did that Conference last, do you remember?

P. S. C.—A couple of months or so.

P. C.—Yes; almost exactly three. And you read a good deal about it?

P. S. C.—Oh, yes; till I was tired of it.

P. C.—And that's the impression you got—a Conference on Disarmament which resulted in a treaty for scrapping the big navies of the world. And you are an especially intelligent representative of the Intelligent Public. It can't be your fault that you got that idea. It must be ours, whose duty it was to tell

you about it. Naturally, with that impression of the Conference you think it has proved a failure. Certainly there hasn't been any disarmament, and the big navies are as big as ever. That, however, doesn't show that the Conference was a failure; because it wasn't a Conference on Disarmament and there wasn't any proposal to scrap or even reduce a single navy. It wasn't chiefly a Conference about navies at all.

P. S. C.—What's the joke?

P. C.—No joke about it. That's the time I expected you to be surprised; and that is just where most of us press correspondents failed in our job. Naturally, naval men think of it as chiefly a naval conference because it did affect the Navy. Even so good a naval officer as Captain Dudley W. Knox (Retired) says of the Conference: "America's great experiment of trying by example to bring about general reduction of naval armaments and cessation of competitive naval building appears to have failed." So perhaps it is not surprising that you, a civilian, should have a somewhat similar impression—except for the fact that you are a civilian. The Washington Conference, in fact, has already proved to be a huge success. Even from the naval point of view it is far from being a failure. Have you patience to let me try to explain?

P. S. C.—Shoot!

P. C.—Thank you—not only for your permission, but for anticipating my thought. I was about to speak of shooting. If you aim at a target and hit it, you succeed; but if a sympathetic bystander thinks you are aiming at something else, he will be disappointed. Your very success will be his disappointment. That is what happened at the Conference a year ago. A good many bystanders—you among them—thought that the Conference was aiming at disarmament and missed. In fact, it was aiming not at disarmament at all; but at two other things, and hit them both.

One thing it aimed at and hit was the limitation of naval armament.

It was not trying to destroy existing ships; it was trying to stop the building of new ones.

And it succeeded.

There were three great naval Powers racing with one another—America, Great Britain, and Japan—each trying to see how big and powerful a navy it could have in comparison with the other two. On November 12, 1921, America said to the other two: "Let us stop this race now—where we are—to-day. If we do, we shall each of us retain just as powerful a battle fleet as we have on this day, and no more. That requires some

figuring. Some of us have battleships or battle-cruisers partly built. Those will have to be figured into the total strength. Some of these partly finished vessels will have to be scrapped, and some of the old ones that are of no special use ought to be scrapped so as to make everything square. But the main thing is for each of us to stop trying to outbuild the others, and to stop now." After Great Britain and Japan had looked over America's figures, they found them substantially correct, and agreed to stop the naval race. And they have stopped it. They have all three scrapped some, if not most, of their old ships. They haven't yet scrapped their new construction, because the treaty hasn't yet been ratified by France and Italy, and until it has been the scrapping of new construction would be without any authority of law. But every one of the three has stopped the naval ship-building race. That is what I call success. This is one thing that the Conference aimed at and hit.

It is true that France has not ratified the treaty, and therefore the treaty is not technically in force. But France was not really in the naval race. Through no fault of her own, she was so far behind that she was not really a competitor. During the war she was so busy building guns for Americans and others, as well as for French soldiers, to use in resisting the Germans that she had no money or time or energy for building any battleships. And Italy, too, was not a competitor. France and Italy were included in the treaty because they were strong and friendly nations of considerable naval strength, but not because they were in the race, for they weren't.

In the meantime each of the three chief naval Powers has the right to keep its navy up to the strength it had a year ago; and every American should make himself a committee of one to see that the United States does so. I am with Captain Knox and Commander Wygant on that.¹ Each country made a real sacrifice in stopping the naval race; and each country gained enormously also in stopping it. There is no present prospect that any one of them will start it again. That alone is enough to make the Conference a success.

But that is not the most important thing the Conference aimed at.

As I have just said, it was not chiefly a naval conference.

Armament is, after all, something external and material; and limiting armament is negative. The Conference aimed at something mental and moral, and something that was positive as well. And it hit that too. That was its big-

¹ See the opening sentence in Captain Knox's article in this issue of *The Outlook*.

² Commander Wygant's article, as well as Captain Knox's, is in this issue of *The Outlook*.

gest success. You've probably overlooked it entirely.

P. S. C.—I confess I have.

P. C.—You are not to be blamed. Most people easily overlook invisible things.

P. S. C.—That's natural.

P. C.—I suppose so; but it oughtn't to be. And a press correspondent does not do his job well unless he enables people to see the invisible and to understand that it is only the invisible that is really important. Mr. Mark Sullivan is one of the ablest press correspondents in Washington. In some respects he is without an equal. I have known him to make some invisible things quite plain. But at the Washington Conference he seems to have failed to see the most important thing it was aiming at, perhaps because it was invisible. In his book "The Great Adventure at Washington," which records in most interesting fashion the doings of the Conference as he saw them," he writes: "Our minds were intent" (he means his mind was) "upon what we regarded" (that is, what he regarded) "as the great adventure of the Conference, the immense historic effort to agree upon self-imposed limitations on naval armament;" which perhaps is not surprising; but near the end of his book he adds: "The questions of the Far East were not an essential part of that great adventure. They, to a large extent, were a subject apart." That's where Mr. Sullivan missed the invisible.

If every big naval Power understood the rest of the world and was itself understood, had no suspicion of other Powers and was itself unsuspected, regarded its naval power as a means not of aggression but of police protection solely, and entertained no idea of self-aggrandizement at the expense of others, there would be no need of a campaign for limiting naval armaments. What makes big navies dangerous is suspicion, misunderstanding, selfish and shortsighted ambition. The big navies are visible; but the danger lies in what is invisible behind them. And that is where the Far East comes in. That is what made the Far East not "a subject apart" from the Conference, but the

most important and fundamental subject of all.

China and the Pacific Ocean have long been a storm center of international rivalry, a swirl of national ambitions. Russia, Germany, Great Britain, France, Japan, and even some of the smaller countries like Holland and Belgium, have contributed force to the storms in that vast region. In all these storms the chief victim, herself feeble and inert under the control of corrupt military chieftains, has been China. With such storms America at first had very little to do; but it happened that America became increasingly involved in them at the very time when the storms began blowing from the direction of Japan. Without knowing much about Far Eastern affairs, most Americans for several years were growing more and more suspicious of Japanese militarism and aggression; and at the same time the Japanese were becoming more and more unfriendly toward their old friend, America. This situation was not helped at all by the alliance between Japan and Great Britain; it was made very much worse by Japan's seizure of the German leasehold in the Chinese province of Shantung, by her imperious Twenty-one Demands upon China, and by her military occupation of Siberia when she was supposed to be acting as a partner of America in helping, and not subduing, the Russians. Under these circumstances, the talk about limiting naval armaments without removing the cause would have been frivolous. Now what has happened? Japan is out of Siberia. Did you see that in any scare heads in the newspapers?

P. S. C.—No, I missed that.

P. C.—For a very good reason. There weren't any scare heads. But Japan is out, just the same. Did you know that Japan was practically out of Shantung—not merely the port, but even out of the railway zone that runs all the way up into the interior of the province? And did you know that there has been a great internal change in Japanese government by which the old military control of Japan's foreign policies has been weakened and appears to be on the way toward removal altogether?

P. S. C.—To tell the truth, I haven't taken much interest in the internal politics in Japan.

P. C.—This isn't politics merely; it's a change in the spirit and tone of Japan in her relation to other countries. And you must have noticed the change in the feeling of Americans toward Japan. There is no such suspicion as there was a year ago last summer. And it's not Japan only. All the nations that were represented at the Washington Conference are in an entirely different relation

to China and the Far East from that of a year ago. Don't misunderstand me. There is no golden age suddenly come on the world. There is no new world order; but there is all the difference between a condition in which war was threatening and a condition in which war is, to say the least, improbable. It's not merely the treaties that were adopted at the Washington Conference so much as the invisible spirit behind them that has changed the situation.

If the things that have occurred as a result of the Washington Conference had happened as a result of a war, the papers would have been full of them.

P. S. C.—You seem to think it is still a going concern?

P. C.—Yes, sir; with its stock way above par.

ERNEST HAMLIN ABBOTT.

THE SPEAKABLE TURK

MUFTY-ZADE K. ZIA BEY, son of a former Turkish Ambassador and for ten years a resident of the United States, returned to Constantinople after the armistice, taking with him his American bride. As he professes, he "was anxious to show her his country, and in "Speaking of the Turks," just published by Duffield & Co., he seeks to do as much for us all.

Are Christians persecuted there? According to Zia Bey, "at the time of the conquest of Constantinople, Mehemet IV not only recognized the entire freedom of religion of the non-Turkish races, but even exempted them from all duties to the state. When it is realized that these privileges have survived nearly five long centuries, the stories of persecution will be considered as greatly exaggerated as the news of the death of Mark Twain." They are fabricated by missionaries and the Near East Relief, as "a well-managed campaign following an energetic propaganda by which Turks are represented as committing wholesale massacres and atrocities is always sure to bring substantial financial assistance for Armenians and Greeks, and incidentally to secure a longer lease of life to the jobs of all those employed in relief and missionary work."

However, the flow of money is "carefully canalized into Greek and Armenian channels alone. What difference does it make if hundreds of thousands of Turks are dying? We do not ask help. Why do not the foreigners take in their own homes their pet children, their cry-babies, and leave us alone to heal our wounds? Are they afraid that public opinion in their countries will—through direct contact—realize too soon the

¹The Great Adventure at Washington: The Story of the Conference. By Mark Sullivan. Illustrated by Joseph Cummings Chase. Doubleday, Page, & Co., New York. \$2.50.

No other book that I know of gives so coherent and vivid a picture of the Washington Conference as this. Its emphasis on the naval features of the Conference, which renders it defective as an interpretation of the Conference, is one of its virtues as a picture of it. Mr. Sullivan's book is peculiarly free from signs of prejudice. His frankness is never clever or cynical, and therefore his honest judgment is such that even those participants in whom he finds defects may read his comments with interest and profit. He has succeeded admirably, not only in recording his own observations, but in selecting for quotation the comments of other observers. This book is not merely of contemporary interest, but is valuable as a source book for the historian. It is not often that a useful historical document is as readable as this.

E. H. A.

hypocrisy of their pets? . . . An old saying states that it takes one Jew to fool two Christians, one Armenian to fool two Jews, and one Greek to fool two Armenians." In business the Turk claims to have found this true. "As commerce, finance, and industry developed, the non-Turkish elements of the country obtained a solid economic grip and used it in their endeavors to choke the Turks."

Is there polygamy in Turkey? Or slavery? Zia Bey finds neither. Says he:

This is a true narrative of Turkey and the Turks as they really are, so I have to speak the truth even at the risk of shattering many legends. I am bound, therefore, not to fall in line with the traditions established by other writers who never fail to refer to a servant in a Turkish household as being a "slave," and to the ladies of a Turkish family as being "wives." The truth is that slavery was not generally practised in Turkey even before the Civil War in America, and the "wives" referred to by most of the foreign writers either exist only in their imagination or else are the sisters, sisters-in-law, daughters, or cousins of the head of the family which foreign writers innocently or purposely represent as his wives. Of course there might be several wives in the same household—but not the wives of the same man.

Indeed, the status of women in Turkey is now all that any rational feminist could demand, for "the daily contact of Turkish women with the public during the war years resulted of course in tearing down the social walls which had so far secluded them. . . . The emancipation of Turkish women became complete."

Apparently Zia Bey has read "Haremlik," by Demetra Vaka (Mrs. Kenneth Brown), for, after paying his compliments to "the higher-class Greeks," who, though "not Venizelist enough to don a Greek uniform," maintain "a cunning and insidious propaganda," he remarks:

To obtain the sympathy and the moral support of certain nations which, like America, are imbued with the spirit of fair play, some of their women write sweet articles where the keynote is the loveliness of the Turks individually, their innocence, their dearness, and their romanticism, cunningly interwoven with stories—supposed to be personal experiences—which emphasize in descriptions, if not in words, the ignorance of the Turks, their administrative or business incapacity, how they still practice slavery and polygamy, and how they commit political murder and atrocities. The broad-minded but misinformed public believes in these camouflaged false accusations because of the hypocritical profession of love interwoven with them.

The "broad-minded but misinformed public" should instead read Pierre Loti,

he contends, and "if there is any one whose talent is equal to that of Pierre Loti and has the courage to publish his opinion, he can thoroughly count on all the help, assistance, and gratitude of the whole Turkish race, much maligned in American literature."

Confusedly broad-minded is Zia Bey himself. In his chapter on Robert College he deplores its sectarianism and tells us, "Recognizing the one Almighty God and all his prophets, I never hesitated to go into any church of any denomination and raise my thoughts in prayer."

Coming from a "terrible" Turk, this may seem a bit odd, but are Turks in reality at all terrible? Says Zia Bey:

An American lady—it being her first day in Constantinople and her imagination being full of all the horrid things she had heard about the Turks in America—was rather nervous until she met my wife, who breezed in to greet her in a perfectly American way. Needless to say that a short while after she was laughing with us at the reputation of being "terrible" which the Turks have abroad.

Queer logic this—as queer, almost, as that by which massacres become inventions of the Near East Relief, polygamy and slavery a "legend," the emancipation of Turkish women "complete," and Loti's romances a contribution to knowledge. Throughout "Speaking of the Turks" he proves too much, leaving the impression that he is aware of having his hands full and rather more. One cannot help wondering what was his sensation on again beholding Turkey after ten years' residence in America. Perhaps shame!

HOW HISTORY IS MADE

THE story I have to tell is not of any particular importance except in showing how history is made by the daily newspaper. Hundreds of thousands of modern readers get their sole impressions of political events and political characters from the daily press. They have no means of referring to original documents or state papers. There is a moral here for editors, which, however, I do not propose to draw. I merely wish to relate an incident of editorial misinformation which has come under my own observation. It is as significant, perhaps, as it is amusing.

On September 30 the New York "Times," a responsible and careful newspaper of the first class, published an editorial commenting on the surrender of the notorious Moroccan bandit, Rai-

suli. In the course of its editorial it made this positive statement, which on its face bears all the earmarks of being based on accurate and official knowledge. I have italicized the most important assertion:

President Roosevelt may be said to have introduced the humorous knave [Raisuli] to the American people. Who can fail to remember that droll gesture of Mr. Roosevelt to the Republican party in convention at Chicago, "Perdicaris alive or Raisuli dead"?—a telegram prepared for transmission to the Sultan at Tangier, *but never sent*. It fixed attention upon the Republican Convention, it roused the country. "Just like Teddy!" was the admiring comment.

If the statement were true that President Roosevelt deliberately wrote a telegram, never intending to send it, for the purpose of bamboozling the American people in a Convention which he hoped would nominate him, the fact would automatically assign him to the most contemptible class of pot-house politicians. A friend of mine, holding a responsible official position in one of the most important financial institutions in this country, called my attention to this editorial statement of the "Times" with considerable anxiety. He is an admirer of Roosevelt's achievements and character, but if the statement by the "Times" were a historical fact he felt that it would shake his faith in a great American. I told him that I knew nothing more about the incident than was current in 1904, but that I would see what I could discover.

My first step was to go to George B. Cortelyou, now President of the Consolidated Gas Company of New York, and Secretary of Commerce, Postmaster-General, and Secretary of the Treasury under President Roosevelt. As a member of President Roosevelt's Cabinet I thought he might remember the circumstances under which the Raisuli telegram was written. He did remember, of course, the Raisuli episode, but could not, naturally, speak definitely of dates or details after a lapse of eighteen years. He suggested seeing William Loeb, Jr. Mr. Loeb was Secretary to President Roosevelt from 1903 to 1909; was later Collector of the Port of New York; and is now an executive of the American Smelting and Refining Company. Somewhat later, at a Committee meeting of the Roosevelt National Memorial Association, of which Mr. Loeb and I are both members, I told him of my quest. He recollected the incident very well, and remembered Roosevelt's asking Mr. Hay in his presence to cable to the American Consul at Tangier, "We want Perdicaris alive or Raisuli dead." Mr. Loeb added that he always supposed the

cablegram was sent, but it might be conceivable that before it was coded and despatched *Perdicaris* was surrendered. Mr. Loeb further suggested that Mr. Adee, who has been Assistant Secretary of State since 1886, and who is probably as familiar with the historical records of the State Department as any living man, might be able to furnish exact information. In the meantime, at this Committee meeting of the Roosevelt Memorial Association, its Executive Secretary, Mr. Hermann Hagedorn, suggested that the "Life and Letters of John Hay," by William Roscoe Thayer, would undoubtedly refer to the *Perdicaris* affair. We got a copy of the "Life of Hay" from the Association's library, and found in Volume II, on page 383, the following:

One example of Secretary Hay's success in securing immediate attention to an ultimatum occurred in June, 1904, when an American citizen, Ion H. *Perdicaris*, was seized by *Raisuli*, a Moroccan bandit, and held for a ransom. After much shilly-shallying, and threats by *Raisuli* that he would kill his prisoner unless the money was speedily paid, Hay cabled to Gummeré, the American Consul at Tangier, June 22: "We want *Perdicaris* alive or *Raisuli* dead," adding that "he [Gummeré] was not to commit us about landing marines or seizing custom house."

"June 23. My telegram to Gummeré had an uncalled-for success. It is curious how a concise impropriety hits the public."

"June 24. Gummeré telegraphs that he expects *Perdicaris* to-night."

"June 27. *Perdicaris* wires his thanks."

So speedily did even a brigand, apparently safe in the depths of Morocco, recognize the note of command in the voice from overseas.

What Mr. Hay meant by a "concise impropriety" is probably an allusion to

the very undiplomatic but very delightful and effective language of the phrase, "We want *Perdicaris* alive or *Raisuli* dead."

The proof now seemed pretty complete that the telegram, which the "Times" asserts was never sent, was actually sent. But I wanted to clinch the matter. I therefore wrote to Mr. Adee on November 23, inclosing the "Times" editorial, and saying:

At Mr. Loeb's suggestion, I am writing to you to know whether there are any records to show whether the cablegram was actually despatched or not. Mr. Loeb thinks there is a very remote possibility that before the message was coded and despatched, word may have come in of the return of *Perdicaris*, which made the actual telegraphing of the message unnecessary. I hesitate to add to your burdens, but as a matter of historical accuracy I think these facts may be of some interest.

Apparently the question was considered by Mr. Adee of sufficient importance to refer to the Secretary of State, for on November 29 Mr. Hughes himself replied as follows:

"My dear Mr. Abbott:

"I wish to acknowledge the receipt of your letter of November 23, 1922, enclosing a copy of an editorial article in the New York 'Times' of September 30, in which it is stated that the telegram containing the expression '*Perdicaris* alive or *Raisuli* dead' was prepared but never sent by the Department. You wish to know whether the telegram was actually despatched."

"On June 22, 1904, the following telegram was sent to the American Minister at Tangier, Morocco:

We want *Perdicaris* alive or *Raisuli* dead. Further than this we desire least possible complications with

Morocco or other powers. You will not arrange for landing marines or seizing custom house without specific directions from this Department.

(signed) HAY.

"A paraphrase of this telegram is printed in the 1904 volume of 'Foreign Relations,' page 503.

Faithfully yours,

(Signed) CHARLES E. HUGHES."

Perhaps it may seem that a good deal of unnecessary detail is given in the foregoing relation, but each link of the procedure is purposely presented as an indication that even newspapers, when they try to make history, can by a little painstaking get the exact facts. It may be added that the distinguished statesman who presided at the Republican Convention of 1904, when Roosevelt was practically nominated by acclamation, said to me that the "Times" implication that the *Perdicaris* cablegram was written for the purpose of arousing enthusiasm at the Convention is grotesque. He added that not only was it unnecessary for Mr. Roosevelt to write a telegram to arouse enthusiasm in his behalf, but that no telegram from him could possibly have stopped the enthusiasm or hindered his nomination.

Since this article is written in behalf of accuracy, it should be said that if the name of the Moroccan bandit is spelled with an "s" in one place and with a "z" in another, it is not the proof-reader's fault. The State Department and the New International Encyclopedia prefer the former spelling, while Mr. Thayer prefers the latter. The "Times" version of the incident, however, is just as dead as *Raisuli* would have been if he had not heeded President Roosevelt's "droll gesture" in behalf of American rights.

L. F. A.

PIERCE BUTLER, NOMINEE FOR THE UNITED STATES SUPREME COURT

SPECIAL CORRESPONDENCE FROM MINNESOTA BY H. A. BELLWS

FOUR or five years ago it is probable that the entire Northwest would have regarded the appointment of Pierce Butler, of St. Paul, to the Supreme Court of the United States with the kind of satisfaction that ordinarily accompanies gratified local pride. It would have felt that in thus recognizing the Northwest's foremost lawyer the President had shown both wisdom in his choice of an able man and good judgment in acknowledging the claims of a part of the country not previously represented in the Nation's highest tribunal.

Even as little as six or eight weeks ago, it seems unlikely that the appointment would have created much active protest. November 7, however, exercised a profound influence in the Northwest, less on the thoughts of men and women than on their readiness to translate these thoughts into action. The victory of La Follette in Wisconsin, the triumph of the once-repudiated Frazier in North Dakota, and, above all, the defeat of Kellogg by Shipstead in Minnesota—these things have sharply intensified the zeal of all the elements in the Northwest opposed to conservatism.

Thus it has come about that the appointment of Pierce Butler was the signal for a double outcry in his own State—an outcry of enthusiastic applause on the part of Republican and Democratic leaders alike and on the part of the State bar and bench generally; an outcry of bitter indignation on the part of those whose votes had just elected Henrik Shipstead to the Senate.

A general Northwestern estimate of Mr. Butler would unquestionably place him in the same category with Senator Kellogg. Both are prominent corporation lawyers in St. Paul, and the agri-

cultural population of the Northwest has little love for corporations, lawyers, or the cities. Minnesota having just voted to unseat Senator Kellogg in favor of a dentist representing the Farmer-Labor party, the feeling in certain quarters regarding Mr. Butler's appointment is only a little less violent than it would have been if President Harding had appointed Senator Kellogg himself to the vacancy.

The opposition has taken specific form in many editorials in the labor press, in protests to Senators, and, above all, in a long letter to Senators Ladd and La Follette from an anonymous professor in the University of Minnesota. This letter charges Mr. Butler with unfitness for a high judicial position on the grounds of violent prejudices, high-handed and domineering methods, and what the critic regards as an excess of devotion to the cause of his clients, sometimes leading him to disregard the ethical if not the legal principles of justice.

Sifted down, these charges amount to this: that Mr. Butler has always been a man of vigorous action, absolutely fearless, and at times relentless in doing what he believed to be right, and that he is an extraordinarily able lawyer. For fifteen years he has been one of the regents of the University of Minnesota, and because he has steadfastly resisted shilly-shallying sentimentality on the one hand and political wire-pulling on the other he has won many enemies through his distinguished service to the State.

Once Mr. Butler has clearly made up his mind as to what ought to be done, he has repeatedly shown an indomitable will in bringing it to pass, and this has naturally created among his enemies a tradition as to his violent prejudices. But his whole career as a regent of the University bears testimony to his in-

Keystone

PIERCE BUTLER, NOMINATED FOR SUPREME COURT JUSTICE

variable willingness to hear all sides of every controversy and his zeal in studying it from every possible angle before making up his mind.

As a lawyer Mr. Butler has done his work well—too well, his opponents argue. He has been a shrewd and zealous advocate; does that fact unfit him for being an impartial and wise judge? Those who make such a claim challenge the whole theory of appointing lawyers to the bench. Mr. Butler's integrity has never been seriously questioned; the objection made by his enemies is simply that he has served his clients too well.

In answer to this, it may be pointed out that some of his most important clients have been the people themselves. Shortly after his admission to the bar he became assistant county attorney for

Ramsey County, in which St. Paul is situated, and two years later, in 1893, he was elected county attorney. In 1909 he was appointed Special Attorney-General for the Government by Attorney-General Wickersham in the prosecution of the bleached flour cases, and again in 1911 in connection with the criminal prosecution of the Chicago meat packers for violation of the Sherman Act. Two years ago he was retained by the Canadian Government as counsel in its proceedings to determine the price to be paid to the Grand Trunk Railroad when its properties were taken over.

On the other side, he was for some years general attorney for the Chicago, St. Paul, Minneapolis and Omaha Railroad, and from 1913 to 1918 he was counsel for the conference committee of the railways in connection with their physical valuation. Most of his work for the past twenty-four years has been in the general practice of law.

In his own State Republicans and Democrats have united, almost without exception, in commending the appointment. They feel that he has amply proved his ability as a lawyer, and, far more than that, his sound wisdom, his courage, and his high ideals of public service. Nearly every one who knows him personally believes that he can serve the country, as for fifteen years he has served the State University, impartially, fearlessly, and wisely. A great many people throughout the Northwest, however, regard his appointment as a direct blow to those who have just succeeded in electing Frazier and Shipstead to the Senate. They object to him, not for the reasons alleged in most of the published protests, but because, as a St. Paul corporation lawyer, they link his name with that of his fellow-citizen and friend, Frank B. Kellogg.

Minneapolis, Minnesota, December 1, 1922.

CUNO'S CABINET

SPECIAL CORRESPONDENCE FROM BARON SERGE A. KORFF

IT is a decidedly new departure for Germany to have Mr. Cuno form his Cabinet of non-partisan Ministers. Perhaps it is also a departure from the classical forms of parliamentarism. The Cabinet of Wirth was still composed on the old lines; the parties of the majority selected their representatives to make up the Government, and, as so often happens with parliamentary coalitions, they were able to keep the power in their hands for only a short period. The position of Wirth was made a trifle stronger than he really deserved only on account of Germany's international plight. The break-up, however deferred, had finally to come. Neither Wirth nor his colleagues could hold the parties together any more.

The reason is easy to find. Germany is living through a severe internal

crisis. Her social structure, put out of joint by the war, is being readjusted and reshaped, and mostly at the expense of the middle classes. The war, the painful peace that followed, recent profiteering, the fabulous drop of the mark, all that tended to produce new social elements, and this in turn increased the social struggle, intensifying the claims of the two extremes; the monarchists assiduously work for restoration and possibly vengeance, the Socialists had to revise their own programme according to the new conditions and digest the disappointment of the Russian experiment. In this last respect one can notice great progress made by the Socialist leaders of Germany, which brought about the remarkable reunion of the Socialist factions; the extreme radical elements have realized their

mistaken position, built exclusively on the hopes of being able some day to follow the example of Lenin; they have come back into the fold of their former companions-in-arms, the majority Socialists. This in turn increased enormously the power of the latter, and a clash with the *bourgeois* parties became inevitable, upsetting the weak Cabinet of Wirth.

Under these circumstances, nothing was left for President Ebert but to call in an outsider, some person who would be free from party allegiance and who would be able to form and run a government on non-partisan lines, a so-called "business" Cabinet. This promised a little more stability and it promised a better chance for tiding Germany over the crisis.

Cuno's position will be nevertheless an

extremely difficult one; he won't have many friends anywhere; he will be harassed by enemies and opponents from all sides, and probably deluged by all sorts of foolish criticism. Yet he has a good chance. He is himself a moderate business man, sufficiently experienced and cool-headed to attend to the business side of the Government work; the administration of the country will probably run smoothly, conducted on strictly non-partisan lines. This in itself is a great advantage, leaving more time for the Government to concentrate its attention on the main political problems that are now distracting Germany.

There is no doubt, however, that in this last respect Cuno is confronted with a formidable array of difficulties. First, there is the pressing French claim for reparation payments; will Cuno be able to press out of the people the necessary money? Secondly, there comes the problem of the falling mark; will the new Government be able to find means to stop it and, in particular, to curb those

P. & A. Photos

WILLIAM CUNO, THE NEW GERMAN CHANCELLOR, LEAVING THE REICHSTAG IN BERLIN

elements that endeavor to create artificial causes for the further decline of the mark? Thirdly, Germany needs badly to revise her international relations; in this respect Cuno has an easier task; he will have to concentrate his attention on the relations to England and Russia, and a certain co-operation in both cases seems inevitable. And, fourthly, the greatest problem of the day constitutes the internal social struggle and the necessity of finding means to avoid a monarchical restoration, to restrain obstreperous Bavaria, and save the German federal union. Will Cuno succeed in this, his most difficult task? Only the future can tell; the difficulties, no doubt, are in some ways overwhelming and the present outlook rather discouraging, but certainly not hopeless. A satisfactory solution, on which, by the way, the peace of Europe depends very much, will be found only on condition that Cuno proves strong enough and sufficiently tactful. His first steps are quite promising in both respects.

Washington, D. C.

FASCISM IN ITALY

SPECIAL CORRESPONDENCE FROM ELBERT FRANCIS BALDWIN

SOME months ago, during the Cannes Conference, in this excellent Hôtel Suisse, lived one Benito Mussolini. He is now Prime Minister of Italy.

The hotel proprietor, M. Keller, has been telling me about him, as follows: "He has ambition and pride. He will go far. Those who think they see in him only a passing phase will find themselves mistaken. He knows his Italy too well for that. . . I see that he has come out for loyal support for the King. That is good. But he did not impress me as very strong on that side. Perhaps you could hardly expect it from an extreme Socialist."

Benito Mussolini, the son of a blacksmith and Socialist of the Italian Romagna, was born at Doria, in the province of Forlì, about forty years ago, and so from his earliest years he knew that Fiume lay across the Adriatic. He began his work-days as apprentice to a stonemason. In addition to being a stonemason himself, he has been a gardener, a weaver, a railway porter, a violinist, a fencer, a Socialist agitator, an editor, a soldier in the Alpini ranks, and, finally, the founder of the Fascisti.

This party takes its name from the *fascis*, or bundle of rods bound together, borne by or in front of officials of the old Roman Republic and Empire, as symbols of their power in imposing law and order.

Mussolini's early course had been rather in agitation for resistance to law and order. His professions of extreme Socialism, not to say Communism, his publication at Lugano, Switzerland, of an incendiary sheet, "L'Avvenire del Lavoratore" (the Future of the Workingman), and his alleged extra-legal course

earned for him a decree of expulsion. This was the more significant as the Swiss Government has been the most tolerant of any in affording a refuge to extremists of all sorts. From Switzerland Mussolini went to Germany and Austria, and, returning to Italy (1910), founded a weekly paper, "La Lotta di Classe" (Class Conflict).

From these vagabond years it is a relief to turn to Mussolini's more inspiring war record.

That record really began long before Italy entered the war. It dates from Mussolini's meeting in Austria with Cesare Battisti, the Italian patriot and martyr of the Trentino, then under Austrian sovereignty. Mussolini's fiery revolutionary soul now began to be awakened by a new cause—that of Nationalism, pure and simple. He even published a book (1908) about it and the Trentino.

His curiously mingled ideas of Socialism and Nationalism were seen four years later when, in Italy, he fulminated against the Tripolitan war and was imprisoned for it, while in 1914 we find him at the head of the Red Week Revolution in the Romagna, which apparently endangered the throne itself.

Later in the year the World War began. Italy was out of it, but Mussolini did not propose that she should remain out of it. He now founded his third journal, the "Popolo d'Italia," so that he might have a militant organ for combating the propaganda of the powerful Socialist "Avanti," which favored continued Italian neutrality, thus playing into Germany's hands. Mussolini, on the contrary, advocated Italian intervention on the Entente side.

In the war itself he was wounded at Cividale (1916). And when the war ended it found him as violently Nationalist as he had been Socialist before. He had not to wait long for an opportunity to show the fervor of the change which animated him.

The occasion arose in this wise. After the war the extreme Socialists rose to unprecedented power. It finally became so great that in Turin and other industrial centers they actually seized factories and workshops from their lawful proprietors and managers and themselves tried to run those factories and workshops. There could be but one end to this. It almost seemed as if Russia's tragic experiences were going to be reproduced in Italy. A long period of unrest now occurred, and it took the clever Giolitti ultimately to bring the extremists to economic reason.

But, though at the time the world did not realize it, more than economic reason was involved. Despite the brilliant Italian army triumphs at the end of the war, the social revolutionaries, not content with their ghastly disintegrating influence at the time of the Caporetto disaster, now began openly to show, not only indifference to the army, but often contempt and even hostility. If such an attitude could once have been accepted by the Communist Mussolini, it could no longer be accepted by the Nationalist Mussolini. What! was this the attitude that for one moment could be shown towards an army that by its victory at Vittorio Veneto, by the armistice it compelled Austria to sign (four years ago this very day!), had utterly vanquished its foe of centuries, had redeemed what

had too long been *Italia Irredenta*, and had bound together all Italian patriots as never before?

Such an amazing attitude was of course intolerable to these patriots. Mussolini instantly found that it was intolerable to him too. From the moment (1919) when he first observed it, his burning passion for unpatriotic, Communist, revolutionary ideas definitely capitulated before his vision of a patriotic counter-organization. The project gradually took form in his mind. It was to be a great irregular citizen army, to back up the regular army in every way, to be its friend and propagandist, and as well to back up the officers of the civil law by ruthless deeds of violence, if necessary, whenever the administration of those officers seemed weak.

At first Mussolini called his new organization the "Fascio della Vittoria," because he wanted to emphasize the army's victory and to influence respect for that victory. But as circumstances and time went on, and the new organization was itself a long way from victory, he changed its name to "Fascio di Combattimento."

The first meeting was held in a school house and was attended by hardly a hundred persons. Socialist and Communist as he had been, Mussolini had the sense nevertheless now to appeal especially to the middle classes. His instinct proved to be sound, for they received the appeal with fewer misgivings than did the lower classes. Little by little, however, Mussolini captured the imagination of increasing numbers and assured himself of their support. He also found support in a high quarter, for Premier Giolitti himself was delighted to discover some patriotic offset to unpatriotic Bolshevism.

Mussolini organized his followers like an army, and in this availed himself of the services of regular retired officers. He even organized the special services of arms, ambulance, aviation, and supply.

He had of course to contend with the "lunatic fringe" found on the skirts of every reform movement. These lunatic followers often got out of hand. They frequently made punishments worse than the original crimes. Burnings and murders by Communists were avenged by worse burnings and murders by Fascisti. Now and then there came along such a burlesque as yesterday's, when a crowd of Fascisti seized the secretary of a Communist society in Rome, shaved his head bare, painted thereon the green, white, and red of the Italian flag, and paraded him up and down the Corso.

Yet, despite all their self-assumed power and its often criminal exercise, the Fascisti grew until they numbered many hundreds of thousands and enjoyed more than proportionate power. For instance, two years have sufficed to reduce the Italian Bolsheviks, and last summer when the Socialists declared a nation-wide strike in all industries the Fascisti put it down in twenty-four

hours. They thus saved Italy at a critical time.

Dazzled by success, they began to go further. By brute force they deposed lawfully constituted civil authorities from their seats. Whole municipal administrations were then seized, as in Bolzano, Trent Pavia, three weeks ago. They entered the barracks and magazines and helped themselves to arms and ammunition with surprisingly little difficulty—the army had long regarded them with a generally benevolent eye.

Then we heard that they were going to march on Rome. Most persons doubted that they really would. But they did—thousands and thousands of them in black shirts (the emblem of rebellion), flags and banners flying, bands playing.

And when they arrived, lo! all the political parties but theirs had apparently melted away before their display of force, and even the police were noticeable by their absence, while there was the King himself asking the Fascisti chief to form a Cabinet!

Whatever his previous experiences have been, Benito Mussolini has had no experience in governmental administration. This fact, combined with his youth and his career as a revolutionary agitator, filled all law-abiding citizens with grave fears as they witnessed the astounding spectacle of a constitutional monarch handing the reins of government to such a one.

Two things have saved the situation. Victor Emmanuel is wise and courageous to a very remarkable degree, and the new Premier, still in his rebel's black shirt, showed a sudden realization of what the crisis really meant, and instantly acted in accordance with that realization. He had the acumen to see that in order to awaken complete popular confidence his Cabinet must not consist of Fascisti exclusively. Accordingly, he invited, not only some men of other parties, but some very authoritative personages. He actually dared ask Armando Diaz, the head of the army, to become Minister of War, and a great admiral, Thaon di Revel, to become Minister of the Navy. Doubtless acting under royal pressure, these men accepted. To be Minister of Public Instruction he secured Giovanni Gentile, Professor of Philosophy in the University of Rome, and those well informed concerning educational problems in Italy say that a better choice could not have been made. Perhaps the same might be said of Teofilo Rossi, whom I saw and admired at the Genoa Conference, and who now becomes Minister of the Treasury. The Mussolini Cabinet, therefore, though overwhelmingly and in some cases ridiculously Fascist, contains not only representatives from the Democratic, Liberal, Popular (Catholic), and other parties—no Socialists, however!—but, what is much more, contains some men whose names are accepted by many as sufficient pledges for the country's security and welfare.

For the present this is all very well in its way. But what of the future?

What are we to expect from Mussolini's domestic policy when he imprudently and impudently begins by seizing newspaper offices—especially that of the Milan "Corriere della Sera," the paper having deservedly the widest circulation of any in Italy, a paper whose loyalty, broad vision, and moderation have never been doubted?

And what are we to expect from Mussolini's foreign policy if, following that outlined in his own editorials in the "Popolo d'Italia," he acts aggressively against England and France in the Mediterranean? Or against Jugoslavia, as one may gather from his utterances a few days ago that Fiume and Dalmatia should not despair but confidently await their redemption? Yet Mussolini knows as well as any one that Italy by treaty has pledged herself to respect the sovereignty of the Free State of Fiume.

Let us hope that the responsibilities of high office will give Mussolini something more of an "international mind" and, above all, lessen his indifference to constitutional forms of government, so that Bolshevism, which at one time might very well have looked towards him as its potential leader in Italy, will now find in him more than ever a stern foe.

Fascism is unlike the forms of most other revolutionary movements. Certainly in our latter-day history it stands unique. As the new Premier remarked the other day at the Naples Conference of his party: "Fascism is the most interesting, the most original, and the most powerful phenomenon that has appeared in the world since the war."

Interesting? Yes.

Original? Yes.

Powerful? Yes; but will the Mussolini Cabinet last? To this question from me to-day a local banker with interests in Italy replied, "It may last six weeks." Another man declared, "It will last six months."

We shall see. Whether weeks or months, may no bloodshed stain its course or mark its administrative transformation into something else!

After all, the Mussolini Cabinet is but the temporary outward sign of an inward strengthening. That strengthening of determination to will and to do must remain, in the opinion of all of us who heartily join with the Italians in the cry of "Viva l'Italia!"

But to obtain this permanent result many Fascisti will have to revise a fundamental misconception; the deeds of a dictatorship imposed by force are not the deeds of a government of all the people established by law. And all Italians may remember that a revolution under the guise of ruthless enforcement of law may lead to as much ultimate tyranny and disintegration as would a revolution merely inspired by the desire for greater freedom.

Cannes, France.

pose. It has now, we are glad to say, been recalled from the House of Representatives, to which it had been sent, because an aroused public opinion made evident its unjust and oppressive character

THE TREASURE-HOUSE OF SOUTHEASTERN ALASKA

BY SHERMAN ROGERS

INDUSTRIAL CORRESPONDENT OF THE OUTLOOK

A STREET IN KETCHIKAN

TAKE the Thousand Islands in the St. Lawrence, put a few mountains on them, and you have a southeastern Alaska setting. The landscape from Ketchikan to Cape Spencer, and, for that matter, to Resurrection Bay, has no equal in the world for scenic beauty. I have met several world-renowned globe-trotters who have assured me, in no uncertain terms, that the tourist can see more wonderful, matchless scenery of every description in Alaska in a three-week trip than could be seen in a year's world tour.

I want the reader to bear one thing in mind throughout this article, and that is the striking accessibility of the entire southeastern section to the markets of the world. Ketchikan, Alaska, is a trifle over six hundred miles north of Seattle, Washington, and enjoys practically the same climate. The steamships now plying the Alaskan route easily make the trip in two days. The fast Atlantic greyhounds would make it in twenty-four hours.

Southeastern Alaska is composed of numerous islands, heavily timbered with a very thick growth of spruce and hemlock, and in the extreme southern section considerable yellow cedar of excellent quality. This section of the Territory—an empire in itself—is endowed with wonderful harbors and conveniently located waterfalls, sufficient to guarantee cheap hydroelectric power for pulp and paper mills and other manufacturing.

I have, since I returned from Alaska, put the query to men in all walks of life from bank president down to newsboys, and I haven't as yet received an intelligent answer regarding the accessibility of the southeastern empire. The first man I spoke to was the president of one of the largest banks in New York.

When I told him that a thirteen-knot boat reached Ketchikan in two days from Seattle, he nearly fainted. "Why," he blurted out, "I thought Alaska was almost totally inaccessible, and that it was actually situated on top of the world!"

From Ketchikan north to Cape Spencer is about four hundred miles. The principal resources of the territory embraced are pulp timber, fish, and mines of various kinds. That doesn't mean that the resources are restricted to these three elements. Practically every natural resource of the North American Continent will be found in commercial quantities in this section. A large portion of the timber is ripe, and overripe, and the pressing necessity at this time is the establishment of pulp and paper mills to take advantage of the rapid growth. At the same time the number of mills must be restricted, and will be restricted to guarantee a perpetual supply of pulp timber. As near as has been figured out up to the present, the forests of Alaska will furnish two million cords of pulp wood a year for all time, which would amount to more than a third of the total amount of news print paper used in the United States.

There is no section of North America so practically situated for natural reforestation. The rainfall is sufficient to preclude all possibility of forest fires, and the annual growth is tremendous. The forestry laws of Alaska are regulated so as to prevent the cutting of small timber, and, as a natural result, about every fifty years the areas cut over will be entirely reforested. In fact, the cutting of large timber will enhance the growth of young trees.

The Alaskan Forestry Bureau up to May, 1920, was hopelessly tied up with red tape, when the Forestry Service

modified their Alaskan timber regulations, and on January 1, 1921, the Forestry Service established an Alaskan Division, with headquarters at Juneau. Prior to that time the Forestry Service was more or less stifled under endless red tape, due to the fact that the Forestry office in charge was situated in Portland, Oregon. At the present time fully ninety-eight per cent of forestry affairs are handled in Juneau by Charles H. Flory, Forester in charge. He has complete control of cruising, plotting, sales contracts, and is not hampered in his operations by the head office in Washington. Only major details of large contracts are referred to the Washington office, and even in that case the recommendations of the Chief Forester are adhered to. Mr. Flory is one of the most efficient timber men I have met in many a day. He knows his business, is intensely practical, cuts red tape to the bone, and his whole heart and soul are wrapped up in the securing of substantial pulp and paper mills near the great Alaskan water-power projects. There is nothing hazy about his ideas—nothing impractical about the timber development policies he advocates. He realizes, as every one familiar with Alaskan timber resources does, that the southeastern section of our northern empire is the coming Mecca of cheap paper manufacturing. He realizes, at the same time, that every year of delay in securing these mills means a heavy loss, not only to the progress and prosperity of Alaska, but also to the taxpayers of the United States, who would greatly benefit through stumpage sales.

I fully agree with Mr. Flory regarding the accessibility, quantity, and quality of pulp timber covering the islands from Ketchikan to Skagway. There is no place on the American Continent where logging operations can be carried on so cheaply, due to the remarkably short distances from timber to salt water and the proximity of all timbered areas to ample water power.

I spent ten days tramping over part of the timbered area of Admiralty Island, which doesn't contain the best Alaskan pulp timber, by any means. I was amazed at the size and quality of the spruce; trees sound as a bullet and six feet in diameter were not uncommon, and one of the main tracts I looked over contained a large area that would cruise better than one hundred thousand feet to the acre. I found the timber thicker and larger than that of the famous northern Idaho pine belt. One small tract of twelve hundred acres, situated directly on the shores of a natural harbor, contained between forty and fifty million feet of wonderful clean timber averaging about fifty per cent spruce.

and the balance hemlock. Certainly few tracts in the famous northern Idaho timbered areas, or that of northern Wisconsin, Michigan, or Minnesota, originally contained so heavy a stand of timber. To be sure, the Great Lakes and Idaho timber carry "quality" that is not encountered in Alaska, yet for paper manufacturing I do not believe that southeastern Alaska timber can be duplicated, taking into consideration easy logging, a climate permitting all-year operations, extremely cheap stumpage, large quantity, and natural cheap water power. Any doubt as to the success of pulp and paper manufacture could be quickly dispelled by crossing the narrow straits to the British Columbia side, where several large pulp and paper concerns have made a signal success, not only of paper manufacture, but of successfully competing in the world markets. Seattle newspapers, and, in fact, nearly all Pacific coast dailies, are turned out on paper purchased from British Columbia manufacturers, whose supply is identical with southeastern Alaska pulp timber, and carries the same transportation rates. In fact, an official of a British Columbia paper mill assured me that southeastern Alaska was better situated than the district he drew his supply from, from every standpoint.

It is easy for the theorist to howl that transportation eliminates Alaska from the pulp field. Statements of that kind make good copy. The only trouble is that, like all other academic theories, they don't hold water. The success of the great pulp mills on the British Columbia coast silences every argument of pessimistic theorists regarding the practicability of paper manufacture in Alaska.

I don't blame any paper manufacturer for having refused to go into southeastern Alaska under the red tape conditions existing in the Alaska Forestry Bureau up to January 1, 1921. Since that date there has been a small pulp mill established in Alaska. At the present time several large companies are negotiating for substantial areas of timber, with the intention of erecting pulp and paper mills.

During the entire year the Forestry Service has expended every effort to cruise and allocate timber in accordance with requests it has already received for desirable timber tracts.

There is one clause in the timber contract, as stated in my first article, that has proved a stumbling-block, but this clause will, in all probability, be removed shortly. However, there are desirable features in the Forestry rules and regulations that are not only reasonable, but give the operator advantages that he would not have through private purchase. In the first place, when the intended purchaser applies for a tract of pulp timber the Forestry Service picks out a water-power project, and then allocates to the intended purchaser all timber adjacent to

A GOLD-MINING COMPANY'S PLANT AT JUNEAU

the power. He is given a contract for thirty years, with fifteen more years additional, if necessary, to carry out operations. The Government really carries the burden, as the timber does not have to be paid for until ready to cut, relieving operators of tremendous outlays of money for stumpage purposes. This eliminates payment of taxes, and, although the stumpage rates are adjusted every five years, in all probability the increased stumpage will not amount to more than, if as much as, accrued taxes on privately owned timber. It gives a company the opportunity of using all its money for manufacturing purposes instead of having millions tied up in stumpage.

We will take, for example, one of the large tracts that is now being surveyed and advertised. This tract contains two billion feet, and is directly adjacent to a wonderful water-power project, with a natural harbor and excellent mill site. To purchase this amount of timber on outside sale would necessitate an outlay of at least \$2,000,000. As only a nominal deposit is required, the tremendous saving to an operating company is patent, especially when the operator is relieved of the tax burden. No taxes and no stumpage outlay for uncut timber are certainly worthy of the careful consideration of any legitimate concern.

Quite true, there is one clause that does not appeal to American pulp manufacturers. I have talked to many of them. They have frankly assured me that they were greatly interested in Alaska forest products. They were quite satisfied with the Government contract—up to the clause I described in my last article, namely, that the Chief Forester has the sole power to name the new stumpage rate every five years. Quite true, he must base the new price on sales that have actually been made during the five years of other Alaskan timber. This undoubtedly is a protection, but large operators have pointed out that it leaves ground for irritating discrimination, especially if the operating company should have in the meantime in-

curred the prejudice of the Chief Forester for either real or fancied reasons.

Proof of the pudding is generally in the eating. The radical changes in the Forestry policy in Alaska are brought to light when interviewing sawmillers and loggers engaged in the manufacture of lumber in various parts of southeastern Alaska. While the sawmills are small, they have taken care of Alaskan needs, and this year have exported several million feet of timber to foreign markets.

The remarks of the managers and owners of the mills are interesting. They assured me that under the old system, before the Forestry office was established in Juneau, the delays and red tape tied around practically every business transaction were very discouraging. I was assured, however, by every actual operator I talked with in Alaska that under the present system they could ask for no better treatment, and that they really fared as well as if they owned the timber outright. They received co-operation from the Forestry Service that was worth a great deal to them. The red tape had been almost entirely eliminated, and of course from the standpoint of small business, where thousands were invested instead of millions, they were not so deeply concerned over the arbitration clause. The lumbermen frankly declared unstinted admiration for the caliber of the men in the Alaskan Forestry Bureau from a standpoint of judgment, efficiency, promptness, and genuine friendly attitude. However, the most prominent sawmill operator in the Territory told me that if it were possible to arbitrate before a competent board real or fancied discrimination on readjustment stumpage rates there would be a dozen operators in Alaska where there is one now. "So far as I am concerned," he added, "with the present Forester, I would as soon take his judgment as that of any board, but that may not be the case with his successors."

I have talked to several operators since the plan outlined in my first arti-

cle went to press. They have assured me that if there was a cabinet established in Alaska that would act as an arbitration board, where the Chief Forester's adjustment prices could be appealed for adjudication, Alaska in a remarkably short time would find pulp mills on available tracts.

An Alaskan cabinet would act as a board of review, and would guarantee adequate protection against any possible discrimination on the part of a Bureau official. In other words, as I have already pointed out, the cry of autocratic Bureau control would be stilled forever.

Let me again impress the reader with the fact that there will be a perpetual supply of timber in southeastern Alaska, which is not alone due to the heavy rainfall, but to the peculiar nature of the soil where timber is found. "It rains here some, and then some," a prospector assured me, when I inquired about weather conditions; then the grizzled old-timer related the following story, which, in my opinion, was outrageously overdrawn.

A missionary had rounded up the natives around Ketchikan, in the early days, and, after opening up the Sunday meeting, informed his Indian congregation that he would use as his text the story of Noah and the ark. After assuring his hearers that after forty days and nights of rain the earth was flooded, the missionary was interrupted by an old wrinkled Siwash. "Did you say that it rained for forty days and nights, and the whole world was flooded?" inquired the Indian. "That's true," replied the missionary. "Heap big lie," grunted the disgusted redskin. "It's rained here both day and night for forty years and no flood yet."

Southeastern Alaska was first made famous by the Treadwell Gold Mine, which quickly established the reputation of the greatest low-grade gold producer in the world—an enviable reputation held until 1917, when a great cave-in on the shore line of Gastineau Channel flooded the principal operating unit. It is questionable if this mine will ever be pumped out because of the tremendous expense involved in erecting a coffer dam. The flooded mine, although worked for nearly thirty years, still contained enough ore for fifteen years' operations. The Treadwell Company, however, are working several other smaller properties on Gastineau Channel.

Adjacent to this property is the Alaska-Juneau, a mine containing tremendous ore bodies, but, unfortunately, of such low grade that profitable operations have only recently been effected. In bringing this great property into the profit column, a new star has been added to the firmament of the world's great mining engineers, the new star being P. R. Bradley, General Manager of the Alaska-Juneau Mine. Mr. Bradley, during the month of June, 1922, brought the total cost of mining and milling the milling gold-ore product to a fraction over 41 cents per ton. After care-

ful calculations, 3 cents per ton was added to cover all overhead, making a total cost of only 44 cents per ton. This remarkable feat practically cuts in half the cheapest methods of mining formerly known. When I was informed of the June cost sheet of the Alaska-Juneau, I pooh-poohed, as every one else was doing at the time. I had to be shown, and told Mr. Bradley so. "All right," he said; "we will go through the mine tomorrow."

We went through a great tunnel many thousand feet long to the point where the Bradley cave-in stoping system was in operation. We viewed the wonderful electrically operated car system where forty ten-ton-capacity cars were pulled by an eighteen-ton electric locomotive; then back to the mill, where the most modern mining machinery in the world was in operation. As we started through the mill I told Mr. Bradley that his system of operation was wonderful, but it didn't explain a 41-cent mining and milling achievement. "Don't get excited," he replied. "Keep your eyes open." A few minutes later I stood on a platform overlooking a great sorting belt where four men were picking off gold-bearing quartz, and the slate went over into conveyors, and thence to Gastineau Channel. I realized in a flash that I was viewing the "reason" of 41-cent operations. The great Alaska-Gastineau mill had been compelled to close down because the cost of operation exceeded by a few cents a ton the total gold recovery. This failure was attributed to the fact that the Gastineau ran three tons of barren slate through the mill to every ton of gold-bearing quartz. This heavy percentage of slate going through the mill caused a prohibitive cost of operation, and the mill—the largest and most modern in the world—closed down and is now being dismantled. Mr. Bradley's Alaska-Juneau had the same trouble. Due to the stoping systems used, about three-fourths of the rock brought to the mill from the mine was pure slate. For

several months every effort was made to invent a system that would permit a cheap segregation of the slate and quartz. Bradley solved the problem by installing great conveyor belts by which, at a trifling cost, a few men easily sort out one ton of quartz and let three tons of slate go into the channel without going through the crusher. The success achieved by this new method of cheap milling will mean much to the future of low-grade mining in Alaska.

There are several promising mines in the immediate vicinity of Juneau; especially the Ebner Mine, which lies directly northeast of the Alaska-Juneau.

Funter Bay, located on upper Admiralty Island, has every indication of becoming one of the great camps of southeastern Alaska. There are two large properties being developed close to the bay, and these, if proved, will enjoy harbor and cheap milling facilities second to none in Alaska. The Pekovich claims cover an area of twelve hundred acres, containing several large veins of low-grade free milling gold ore, with one small vein of high-grade that is now being shipped. Back on Mount Robert Barron, on the Pekovich, is located an immense vein of copper-nickel-gold ore of fair value. The owner of this property has carried on development work for many years under great difficulty, but at the present time the main tunnel, which is nearly two thousand feet long, is credited with being less than a thousand feet from two large ore bodies. If these ore bodies are tapped, showing equal values of surface ledges, Funter Bay will become a second Gastineau Channel.

Directly opposite the Pekovich mine is a group of claims known as the Nowell-Otteson group. Work has progressed in the development of these claims for the past twenty years. However, it seems that a lifetime effort of the owners will be rewarded in a short time. Recent encouraging developments tend to justify the hope that this property will soon

AN ALASKAN POTATO RANCH

THIS IS THE KIND OF ROAD THAT ALASKA NEEDS—A SAMPLE FROM THE KETCHIKAN DISTRICT

take its place among the gold producers of Alaska.

On the opposite side of Mount Robert Barron lie the Williams and Brown claims, where high-grade prospects are being developed. The greatest high-grade gold mine in Alaska is located on Chichagof Island. This mine, known as the Chichagof, located on Klag Bay, works a crew of 175 men, operates two mills, and is one of the highest dividend payers of the North. Near this wonderful property several other high-grade prospects are being developed. They include the Hirst-Chichagof, the Falcon properties, the Apex group, the Elnide, Brown Bear Gold and Copper group, and the Stag Bay claims. The Pacific Coast Gypsum Company operates a large gypsum mine near Iyoukeen Cove. Large quantities of high-grade gypsum are produced and shipped to Tacoma in barges.

In the Lynn Canal District, across Chatham Strait from Funter Bay, several ledges carrying silver and lead are being prospected on Howard Bay and William Henry Bay. The Alaska-Endicott property has a tunnel of sixteen hundred feet completed, and a mill is now being erected.

In the Hyder District, at the head of Portland Canal, many silver claims are being developed. Activity in this section has been given a tremendous impetus since the discovery of the Premier Mine, a property that is shipping large quantities of very rich silver ore to the Tacoma smelter. Mining experts declare that this is one of the richest silver properties in the world. This mine was developed after having been turned down by several noted mining engineers. Engineers had driven a tunnel to a point where discovery of ore seemed improbable. A hard-rock miner who was not an expert got a chance to carry out his theory, which conflicted with the opin-

ions of mining engineers. He drove a cross-cut only a few feet when he discovered the largest and richest silver-ore body in the North.

The new Alaska group, Riverside group, Hovland claims, Lucky Boy group, and many others are now carrying on extensive prospecting, and, according to mining men, give promise of permanence. There is probably more excitement in this district than in any other part of southeastern Alaska.

From all reports emanating from the Hyder District, this camp is rapidly taking its place as one of the greatest silver producers on the continent.

There is a remarkable story about this district of a visit of two very well known mining engineers, many years ago. In their reports they stated that the Portland Canal section would never develop paying mines. This story was very similar to that of the engineers who investigated the coal deposits in the State of Washington in the early '90s, declaring, in the first place, that the coal had little value, and, second, that there would never be enough of it found for successful operation. To-day Washington has gained National fame for both the grade of its coal and the size of its deposits.

There has been more development in the Hyder District in the last six months

SHERMAN ROGERS'
third article
on Alaska
will be published
in next week's
issue of
The Outlook

than there had been in many years before.

The marble deposits of southeastern Alaska are being developed; especially the Tonkeen quarries, although an excellent grade of marble can be found on many of the numerous islands that make up the Alexander Archipelago.

Large nickel deposits have been uncovered on Yacobi Island. There is, however, still some question as to whether the metal can be profitably mined, owing to the conflicting mineral elements the ore contains.

The mines and prospects on Prince of Wales Island known as the Ketchikan District are being developed with promise of successful operation, especially the Rush and Brown Mine, which has already produced a fair tonnage of copper ore. A large amount of development has taken place on this property, which is equipped with modern machinery and a narrow-gauge railway.

Summing up the mining possibilities of southeastern Alaska, I will quote a conservative, successful business man of Ketchikan. He said: "Every one of the myriad of islands of southeastern Alaska contains surface indications of valuable minerals—gold, copper, silver, lead, gypsum, marble, or nickel. Many promising prospects are being opened up, and several heavy producing mines in operation, which should prove to any one with common sense that this part of the Territory will always be a permanent mining country. The possible prospecting ground has scarcely been scratched over yet, and the future will undoubtedly witness the discovery of many paying properties. I have been in mining camps all my life, all over the world, but have never seen a section that can beat this. But it takes men who are willing to risk, who can afford to risk, both time and money. There will be many fortunes made. At the same time, there will be many thousands of dollars lost, as in all mining countries. I want to impress on your mind that you should not buy a single share of Alaska mining stock until after careful investigation, but if purchasers will investigate before they buy and eliminate the gold from the dross they have as good a chance of good returns here as any place on earth. But it isn't a tenderfoot country. For strong-willed, determined men southeastern Alaska ranks with the best."

From an agricultural standpoint the southeastern section of the Territory has a wonderful climate for all kinds of berries, small fruits, vegetables, and dairying. I saw as fine a herd of Holsteins near Juneau as could be found anywhere in the States. Farming will develop into a stable industry when paper mills and mining enterprises develop a local market.

Southeastern Alaska, with its fine climate, its great varied resources, and its easy accessibility, will be the great commercial center when faith and confidence in Governmental policies are firmly established by administration of Alaskan affairs on Alaskan soil.

ETCHED IN ACID

BY LESLIE NELSON JENNINGS

"**D**RINK without meat." . . . You could not draw
A truer portrait if you tried.
She lives, and though I never saw
The lady, still I'm satisfied.

Red wine undoubtedly is good,
Well racked, warm garnet in the glass;
But what is claret, lacking food?
Not thus in *vino veritas*!

Meat without salt insults the guest,
But there's no madness on the plate;
And many a table has been blest
By men who missed the salt, yet ate.

No; I'll go thirsty if I must!
Ditch water's not so mean a draught
When the contracted throat's adust,
And not so difficultly quaffed!

"Drink without meat." . . . Your sketch, complete
To the last shadow, makes me wish
For fools who bolt their liquor neat
No better than an empty dish!

"EVEN THE DOGS"—

THE FIRST OF A SERIES OF ARTICLES ON THE MACKENZIE RIVER COUNTRY

BY FULLERTON WALDO

THE bank of the Slave River at Fort Smith is steep as a house roof, and your shoes are filled with sand as you slide to the bottom toward the steamer, with a suit-case in each hand. If your hands were free, you would be flailing the mosquitoes and the bulldog flies beclouding you. The bulldog flies are half again as big as bumblebees; fat and greasy as they are, they do more buzzing than biting among human beings, but they drive the horses frantic and they pester the dogs.

Fort Smith is the "capital" of the Northwest Territories, and the starting-point of the Mackenzie River steamers. When you land at the bottom of the sandslide, at the gang-plank (which is all the wharf there is), the view is bounded north, south, east, and west by dogs, hungry dogs. There really isn't so very much more to be seen on the river-bank at Fort Smith, if you except Mrs. Conibear and her store, the Roman Catholic mission with its farm and hospital, and the spruce-tree gallows with an open grave at the foot. The gallows was used in 1921 for the first murderer, but he was given sepulture in the tiny cemetery, and the grave is left open to save trouble next time.

There was a wait of eleven days before the Hudson Bay Company's steamer started—twelve days later than advertised in the season's schedule. There was plenty of time to study the dogs, and the interest was reciprocal. There they stood, a score at a time, knee-deep the muddy water, their eyes fixed on door of the cook's galley. Their

Indian masters, whom they served so faithfully all winter, had turned them off to fend and find for themselves all summer long, on the beautiful Bolshevik theory that if you are not at work you do not need to eat. There is an abundance of fish in the river at the foot of the rapids; but the fish are in the river, not ashore, and the Indian does

not propose to go fishing for a dog. So the dog starves or depends on what is thrown from the steamboat; for the forest in the summer season has very little that he can catch by hunting. The bush is so thick that the advantage is all on the side of the rabbits and the squirrels, if any are there.

I can see Mink now, filling up the whole breadth of the gang-plank, waiting for me to appear. He was white, like a polar bear, except where he had come in contact with tar used for the boat-seams. He was only two years old, but the struggle to get enough to eat had aged him. It was hard to take his picture "close up," for he always wanted to eat the camera. He watched every motion of my hand, and hope sprang eternal. Hungry as he was, he had to learn to eat dog-biscuit from my baggage. The "husky" is accustomed to three dried whitefish a day—when he can get them—on the trail in winter; one gulp per fish, and his supper is over. Dog-biscuit makes him chew, and he fears that while he is chewing another dog may get his rightful portion.

Mink and his rivals caught flung scraps from the deck almost unerringly. They knew that if they missed there was scarcely the ghost of a second chance. One big black brute was a fiend for pouncing on the rest, and more than once the red blood showed on the white coat of the gentler Mink ere the ruffian could be driven off. I have seen the bully repeatedly drop what he was eating to snatch at another dog's meal.

There were three puppies, like young

MY FAVORITE, "MINK"—THE MOST PATIENT WAITER AND THE GENTLEST SPIRIT OF THE LOT

A TRAPPER'S CACHE FOR PROTECTION AGAINST DOGS

lion cubs, that scrimmaged about amid the legs and bushy tails of the rest to be, like Autolycus, the snappers-up of unconsidered trifles. I don't know how an Eskimo dog grows up. The other dogs seem determined he shall have nothing. Only their friendly, fawning mother was the champion of the little fellows; the other dogs took their part, it is true, but took it to eat it.

All the way to the Arctic Ocean the scene is repeated. The steamboat whistle is a signal for the starved dogs to run to the beach and stand in the water if they are free. Unhappily, in most of the few small settlements the Indian dogs are so savage from long abstinence that they must be tied or chained. Their condition moves the pity of all who see them with other than Indian eyes. The Indians, polite as they are to the white man, are endlessly cruel to their four-footed dependents, great and small.

Said one horse-loving superintendent of transport: "I sold two splendid horses to a trading company for \$600. They, in turn, sold them to an Indian. The Indian worked them so hard, in the heat, amid the mosquitoes and black flies, that in a day and a half the first horse died, and the second was dead in two days. I wouldn't have sold the horses if I'd known an Indian was to have them."

The last horse is 1,200 miles down the river; there are 450 miles of suffering dogs beyond that.

The young dogs, not yet entirely embittered and disillusioned, want to make friends. They come doubtfully, wagging a placating tail and sliding their muzzles along the ground. But if you brandish a stick or hurl a stone—well, that is only what they expect; it is the Indian way. The great game of the Indian boy is to throw stones at the dogs. A whistle of welcome mystifies them; a caress is the last thing they expect, and food at a stranger's hand is unutterable and inexplicable bliss. I used to commandeer the ship's garbage-pail, over-

flowing with vitamins and calories, and carry it along the bank to where the Indian dogs were tied. They ran about in frantic circles and tugged at their stakes as the pail drew near; the Indians laughed and thought it a great joke. The dogs that were not tied converged upon the intruder bearing gifts. Even when the last gaunt bone-bag had licked the pail till it shone they followed after, eagerly. You always felt the despair of him who said: "There is a lad here, which hath five barley loaves, and two small fishes; but what are they among so many?" And you never knew the joy of seeing a miracle of multiplication performed; it was forever depletion, never repletion.

The dogs ate everything but orange-peel. There was a single exception when a dog swam into deep water even for that. The fights were harrowing. They could not be entirely forestalled even when you strewed the repast along the beach. For a dog, as soon as he had gobbled what lay in his immediate vicinity, poached on the adjoining preserves. The best way was to throw the

food at close range directly into the jowl of the dog for whom it was intended, keeping the animals as widely scattered as you could.

"They'll never eat fried eggs!" exclaimed a dentist *en route* to the Coronation Gulf Eskimo. But the dogs proceeded to refute him. One egg fell squarely on the nose of a rampant "husky." He shook it off, instantly put a firm detaining paw upon it, and grabbed it from under his own foot ere his nearest rival could snatch it from him. Another dog swam out and retrieved by the lid a can to which flecks of butter adhered. He stood by patiently while I dumped out the water and scraped it for him, and then he licked the can till it was burnished like a heliograph and almost ate the stick. The dogs could teach us a lesson in Hooverizing. They waste nothing.

Greely, the Arctic explorer, looking over the side of the ship when Schwatka rescued him, mournfully exclaimed when he saw the refuse emitted from the kitchen: "If we'd only had a little of that, we needn't have lost our gallant men!" As you watched a poor ravenous, nervous cur with his head in your pail for the last rancid smear on the inner surface, while he kept an eye out lest you have a blow or a kick for him, you felt again acutely the maladjustment so many humans in China and Russia and Asia Minor have still more piteously known. What a crime it is to waste food, when there are so many starving on two legs and on four!

Fortunately, the Royal Canadian Mounted Police are to wrestle with the problem of implanting in the Indian that providence for his dogs which the Indian

DOGS PLOWING AT FORT SMITH, CAPITAL OF THE NORTHWEST TERRITORIES

has so seldom and so slightly exhibited. If the Indians pitch their tents in a Mackenzie River settlement and let the dogs shrivel and agonize—as the dogs'

reward for enabling the Indians to live in winter—the Mounted Police are to send masters and dogs back to the bush till the dogs are fed by the hunting and

the fishing. The plan is barely begun; its consummation will be warrant for a pean of rejoicing from all dog lovers, and friends of the Indian too.

WORKING FOR THE GOVERNMENT

A CIVIL SERVICE EMPLOYEE GIVES AN INSIDE VIEW

BY HERBERT E. MORGAN

“ALL hope abandon, ye who enter here,” would be an appropriate legend for the portals of all Government office buildings,” said a former member of Congress writing in a popular magazine. In his view, a young man or woman who enters the Civil Service of the United States flings away ambition at the start and is certain to prove a failure. He holds the belief that the Government service offers little incentive to initiative, is lacking in the spirit of competition, which makes for endeavor, and is devoid of the elements which tend to develop self-reliance, healthy ambition, and efficient service.

That is one story. Here is another, quite different:

Grover Cleveland was a good judge of men. Most big men are. That quality has much to do with their success.

One day, after a Cabinet meeting, President Cleveland said to the Postmaster-General: “There is a young man named Cortelyou who is serving as stenographer to the Fourth Assistant Postmaster-General. I want him over here in the White House.”

“But, Mr. President,” replied the Postmaster-General, “we can’t get along without Cortelyou. You can’t have him.”

The President merely smiled in his well-known quiet way. The next day George B. Cortelyou, stenographer, reported at the White House.

About the first thing Cortelyou said to the President was this: “I think I ought to tell you, Mr. President, that I don’t agree with you in politics. I think you should know that before you assign me to work.”

The President told him he cared not a rap about his politics; that he himself could look after politics for the whole official family; that stenographers were expected to do stenography.

Cortelyou served as stenographer and executive clerk to Cleveland, as assistant secretary and secretary to McKinley, as secretary to Roosevelt, and as Secretary of Commerce and Labor, Postmaster-General, and Secretary of the Treasury. He left the public service to become President of the Consolidated Gas Company of New York.

There have been other instances of subordinate employees rising to Cabinet portfolios.

In 1878 a young man named Howard entered the Government service as an

assistant entomologist. To-day the name of Dr. Leland O. Howard is known wherever bugs are known. He knows more about bugs than bugs know about themselves.

Dr. Charles W. Stiles is a world authority on intestinal parasites. He is a development of the United States Public Health Service.

I could fill a good-sized volume with brief biographical sketches of former Government messenger boys, minor clerks, and scientific assistants who are now holding important executive and professional positions in the Federal Civil Service. I could fill another book with stories of men and women who through their training in Government offices and laboratories have achieved both fame and fortune in private industry. One may achieve fame by working for the Government, but not fortune.

Which of these two stories is a true picture of the prospects offered by Government employment? Either may be. The young man or woman who enters the Civil Service of the United States may drift along with the tide, settle in some nice, quiet eddy, and watch the stream flow past bearing craft richly laden with opportunity for service, extending an invitation to climb aboard. If he elects to be one of these leisurely onlookers, exerting himself only enough to keep from being dismissed for inefficiency, he may comfortably grow gray in the Government service. So he may in any large organization. There is always plenty of hack work for the mediocre. The Government service is not unique in that respect.

On the other hand, the Government service offers a wide field of opportunity where individual tastes may be developed and where real constructive work—big, interesting, clean work—may be done. Those who seek to amass wealth will find little opportunity for doing so in work for the Government, but the Civil Service has much to commend it. Whether one is satisfied to work for the Government depends a good deal upon his definition of success.

However, it is not because you expect sometime to work for the Government that you should be interested in the Civil Service, Mr. Business Man and Mrs. Housewife, but for the reason that every taxpayer is vitally concerned in Government employment methods; because it costs such a tremendous sum to pay the great civilian army; because

Government employment policies have a certain effect upon employment standards in private business; because Government business and private business are so closely interwoven that any lack of full efficiency in Government establishments, any delay in Government processes, must affect industry; and because the diverse things your public servants do for you have so much to do with your daily comfort and convenience.

Do you know that of all the men, women, and children earning a living in the United States, one in 85 works in the Federal Civil Service? If you add to the 550,000 Federal civil employees the Army and the Navy and the hosts of State, county, and municipal employees, and then make a further allowance for the dependents of those who actually do Government work, you will realize that Government employment is an important economic problem.

Your Federal civil servants are constantly striving to increase and improve the output of your farms. They are bringing new seeds and plants to America from all parts of the world and endeavoring to grow them profitably in American soil. They keep a watchful eye on the food you eat, that it may be free from poisons and adulteration, and safeguard your health in a hundred other ways. They collect your letters and packages from a mail-box in New York City and deliver them at the road gate on your ranch in California. They mint the coin and print the paper money you use in the transaction of your daily business. They count you and your neighbors periodically. They dig canals, and make ice-cream and cheese in food experiments. They build battleships and study the habits of bugs. They burrow into the ground and fly into the air in search of scientific knowledge for your benefit. They do ten thousand things that affect the life of every citizen and that are accepted as a matter of course.

All of these people are in the employ of every taxpayer. It is the duty of taxpayers to see that their civil servants return in service dollar for dollar for what they receive. It is no less their duty to see that the employees have just compensation for the service that they render.

This idea that Civil Service employees are the paid servants of the people is important and should be kept in mind by employees as well as employers. Some-

times the employers make strange demands upon their employees, as, for example, the woman in the Middle West who wrote to the Civil Service Commission asking for the names of the members of the United States Supreme Court, "and will you please send me one of the new buffalo nickels." Her letter was replied to with every courtesy and consideration, as it properly should have been. The employer is entitled to service; he pays for it when he pays his Federal taxes.

The Federal Civil Service has been much discussed of late in the press, in Congress, in official circles, and by the public generally. A few out-and-out spoilsmen have shown their heads. The number of intelligent American citizens who advocate the spoils system of appointments to public offices is comparatively small. Those who do are not seeking efficiency, but votes; and they are not far-sighted enough to see that patronage is a party liability, not an asset. The friends of the merit system of appointments, and they are legion, know that the present employment system has defects which exist in spite of, and not because of, the laws and rules governing the Civil Service. The friends of the merit system seek to go forward, not backward. They believe that in its employment policy the Government should not be content with striving to equal the best methods of private business, but that the Government should serve as a model for private employers.

It is a mistake to suppose that all Government business is less efficient than all private business. It is also a mistake to expect all Government business to be transacted as efficiently and as expeditiously as the best-managed private business. It can't be done. A certain amount of so-called red tape is necessary in the transaction of public business because it is public business. If you are running a grocery store of your own, you will run it pretty much to suit yourself. You will keep your books on your cuff if you want to. The profits or losses are your concern, and not your neighbor's. But if you are chairman of the board of directors of a corporation operating a country-wide chain of grocery stores, you will see to it that no shareholder has an opportunity to charge you with dishonesty or mismanagement. You will have it all down in black and white, and you will have checks on your subordinates all along the line, and you will insist upon a lot of system and formality. Congress, the board of directors for the one hundred and ten million shareholders in the great business of American government, specifies on the statute-books with particularity how the Government business shall be conducted in order that the interests of the shareholders may be conserved. This makes for "red tape." The big corporations have almost as much. Private business has this advantage, however: delay may mean money loss, and money loss means explanations to shareholders, and pos-

sibly a new directorate; or it may mean a shrinkage of your own purse if the business is yours. Therefore private business is speeded up. In the matter of finance there is no essential difference between public business and private business, but there is a human difference.

I have said that the friends of the merit system recognize the weaknesses of Government employment methods. They know that inefficient or otherwise unworthy employees sometimes are not removed when they should be, largely because of outside pressure brought to bear in the interest of employees slated for dismissal. They know that the Government service lacks a definitely planned and well-organized employment policy that follows an employee through his entire official life and sees to it that he does what he is paid to do and is paid for what he does. They know that haphazard practices in assignments of work and in promotions have brought about glaring inequalities; that the salaries paid by the Government are relatively low, and that therefore the rate of "turnover" in Government forces is abnormally high, particularly among the very classes of men and women whose retention would keep the service strong and healthy; that there are legal restrictions on transfers from one department to another that retard the fitting of square pegs into square holes; that excluded from the merit system are too many of the higher offices which should stand as a reward for meritorious service, but which, in fact, are often held as payment for service to the political party in power. They know these things, and they know that the way to correct them is not a return to anything approaching the waste and corruption of the years before the passage of the Civil Service Law of 1883.

Steps are being taken to improve the Federal Civil Service. The Retirement Law, now two years old, was an important move in the right direction. It was aimed at the evil of superannuation in Government offices. It is in no sense philanthropic, but is based upon sound

business principles. Under this law thousands of aged Federal employees have been retired with a small annuity, in no case exceeding \$720. Already there is ample evidence of the value of this law in promoting the efficiency of the service. The employees contribute 2½ per cent of their pay toward the maintenance of the retirement fund, and thus far the Federal Treasury has not been called upon to contribute; but actuaries estimate that eventually the Government must share in the expense of the fund.

A bill providing for the reclassification and readjustment of salaries and duties in the Government service has passed the House and is now being considered by the Senate. This bill is commonly known as the Sterling-Lehlbach Reclassification Bill, being sponsored in the Senate by the Hon. Thomas Sterling, Chairman of the Senate Civil Service Committee, and in the House by the Hon. Frederick R. Lehlbach, Chairman of the House Civil Service Committee. The outstanding features of this bill are a standardized system of positions, with qualifications defined and compensation fixed, applying to all departments and offices alike and taking the place of the present statutory and lump-fund positions; provision for amending the specifications or adding new positions from time to time as needed; rates of compensation more nearly adequate than those now in effect; removing present restrictions on transfers from one department to another; and efficiency ratings under central jurisdiction, upon which ratings increases or decreases in compensation and retention or dismissal will depend.

It is hoped that this bill will become a law before the present session of Congress adjourns. It has indorsements enough, including that of the Chamber of Commerce of the United States, to effect a Constitutional amendment. It is regarded as a most important step toward a genuine merit system in the Federal service, a merit system that contemplates not only appointment, but promotion or reduction and retention or dismissal strictly on the worth to the Government of the individual.

In the auditorium of the National Museum at Washington, at three o'clock in the afternoon of July 11, the President and the Director of the Bureau of the Budget addressed the third semi-annual meeting of what the President calls "the business organization of the Government," expressing appreciation of economies effected during the fiscal year just closed and urging further effort in that direction throughout the new fiscal year. The gathering consisted of Cabinet officers, bureau chiefs, chief clerks of departments and independent offices, officials of the Bureau of the Budget, co-ordinating boards, Army and Navy officers, and budget officers attached to the departments and offices who were appointed to serve, in addition to their usual duties, as auxiliaries to the Bureau

ARCHIBALD RUTLEDGE

of the Budget in their respective offices—about five hundred in all. The expenditure of billions of dollars is in the hands of these men and women.

Of these five hundred Federal employees, easily four hundred hold positions in the competitive classified Civil Service, or Presidential appointments through promotion from competitive classified positions. Most of the four hundred came up from the ranks; great numbers of them secured the major part of their higher education through night study in the universities of Washington. Many schools of special class or collegiate grade in Washington are practically supported by night students who work in the departments. This is the

kind of Federal employee who does not seek the nice, quiet eddy.

The Bureau of the Budget is real business. It is saving real money for taxpayers. General Charles G. Dawes resigned from the directorship of the Bureau on June 30 to engage again in the banking business in Chicago. He was succeeded by General H. M. Lord, formerly Chief of Finance of the War Department.

Dawes was a go-getter in the Government service, if there ever was one. A remarkable thing about General Dawes is that he writes music. I heard some of it played by Fritz Kreisler, and it is good music. When Dawes has you on the carpet shaking his finger under your nose and calling you a pinhead, you

can't imagine his writing anything sweeter than "Where do you go from here?" I have it on good authority that while in France during the war Dawes did nothing but play a piano for two days to get his nerves in shape. But that has nothing to do with the Civil Service.

I repeat, Mr. and Mrs. Taxpayer, your civil servants are your concern. Keep your eye on them. If they don't return a just stewardship, raise thunder about it. But remember, they are human, and, being human, they need the most human of all incentives to good work—promise of reward for work well done. If you hold that before them, they can't kick if you fire them when they fall down.

WU PEI-FU'S PERSONALITY

BY UPTON CLOSE

Snap-shot by the Author

"GENERAL WU PEI-FU'S AFFECTIONS ARE GOLD-PLATED TEETH AND A SPORTY MANNER OF HOLDING A CIGARETTE WHICH HE PRETENDS TO SMOKE"

General Wu can be identified by his cigarette in this picture. He is overshadowed by the big Moslem General Ma Fu-hsiang, who stands next to him. This Mohammedan "caliph" of northwestern China, whom the author had known upon the borders of Tibet, happened into the Loyang General's headquarters on the same day that the author did. Next to General Ma is Hsiao Yao-nan, the Tsuchun of Hupeh, one of Wu's commanders. Wu Pei-fu became interested in the correspondent's camera and ordered a hundred of them for his Intelligence Department

GENERAL WU PEI-FU'S headquarters are reached by a trip either northward from Hankow or southward from Peking to Chengchow, the junction point of the Peking-Hankow Railway with a little Sino-Belgian line which is working its way into the heart of China. From Chengchow (just south of the Yellow River), which is a boom city of gaudy-fronted shops and hastily erected mud hovels, the road picks its way westward, sometimes on top, sometimes through, and sometimes under the hills of soft loess, which may be described as a plastic, non-sticky fertile clay that, owing to the continual action of wind and water, refuses to "stay put." Here and there, framed between the steep sides of grass-carpeted ravines, appears a pleasing picture of the almost

golden waters of the Yellow River, with the purple mountains of the northern bank in the background. Temples surrounded by pine groves are perched on top of steep hills, giving as fantastic an impression as a cloud picture. Now and then the railway plunges through a settlement of cave-dwellers whose doors open off the right-of-way to habitations hollowed out of the cliffs behind them. It was this type of snug cave-

IN a recent issue we printed by the author of this sketch an article describing Wu's career and his aims as a leader of China's unification.

dwelling which sheltered the forebears of the race of Han and which houses thousands of their descendants in the provinces of Honan, Shensi, and Kansu to-day.

Shortly before arrival at Loyang one sees out across a little plain between the railway and the river the immense stacks and buildings of the arsenal which Yuan Shi-kai planned to make the greatest in China and which Wu Pei-fu is striving to complete. Honanfu, or Loyang, itself is a straggling low-walled town of one-storied huts and wear-hollowed muddy streets, with nothing to remind the visitor of its ancient glory but the flat rock upon which may be seen the eight fundamental geometric figures said to have been carved there four thousand years ago, a bent and hoary oak tree of the Han dynasty two thousand years old, and eight miles to the south of the city the Grottos of Buddha, unparalleled for both the immensity and multiplicity of figures carved from the limestone cliffs.

One may take a Peking cart through the canal-like streets to the headquarters of General Wu, which stand on the plain four miles to the southwest of the city, and which are connected by a spur to the railway. Reaching the barracks which stand row upon row, he passes down the wide tree-lined avenues between them, and enters a building no different from its neighbors, which is distinguished as the General's headquarters only by the two flags crossed over the gateway. Here, in a style which appears to border upon hardship, Wu Pei-fu lives in a most informal manner among his staff and men. He usually begins the day by drilling before breakfast with his men on the field. This fraternization is in strong contrast to the austere isolation and armored motor cars of Chang Tso-lin, and is an important factor in Wu Pei-fu's military strength. The confidence which Wu's officers have in him and their personal devotion to him make his organization

capable of sustaining severe reverse—an unusual thing in Chinese armies.

Wu Pei-fu, now forty-seven years of age, is an exceptional Chinese in many personal characteristics. He has the golden-brown eyes occasionally found among the race of Han. He is direct in his gesture and speech, and dispenses entirely with that circumlocution which is the ordinary basis of Oriental courtesy. In his cotton Chinese gentleman's gown he looks anything but a military commander, but in uniform his features and bearing take on an austerity which borders on cruelty. His affectations are gold-plated teeth and a sporty manner of holding a cigarette, which he pretends to smoke. Nothing in the line of luxury at his headquarters is to be seen greater than a Ford car, in which he travels back and forth to the railway spur.

General Wu is a native of Shantung, which has produced so many of China's men of fame and notoriety. His parents still live as small landed proprietors in Tungchou, on the Shantung Peninsula. He was graduated with a Hsiutsai or "B.A." degree, about the time of the Manchu overthrow, from the old Chihli Military Academy. From then until he became a national figure he was engaged as an officer in the various civil wars of the past Manchu régime, it having always fallen to his lot to take part in arduous border expeditions in Shensi, Szechuan, and Hunan.

Even Wu Pei-fu's enemies admit that he is one of the few men in China who cannot be bought. Indeed, if he could, he would have proved much less troublesome to Chang Tso-lin, who accumulated in Mukden a sum of thirty million dollars in silver for buying off opposition not otherwise removable. Certain it is that if Wu Pei-fu has made money out of his power, as has every other Tuchun of recent years, he has not spent it upon personal adornment or comfort.

General Wu, in addition to being China's only military chief who is an accomplished soldier, is one of the few Tuchuns who is regarded as a classical scholar. His application of Confucian dictums to China's present political situation gives a new turn to that ancient philosophy. Here is an example:

Speaking at the reception given in his honor by the Wuchang and Hankow Chambers of Commerce, Wu Pei-fu inculcated upon the audience a basic principle of classical Chinese philosophy contained in "The Great Learning" of the Four Books. Instead of discussing general political topics in the ruling Mandarin tone, General Wu gave a scholarly discussion of the *Ta Hsioh* theory as it applies to modern politics in China.

The principle brought out from the Four Books reads: "Their thoughts being sincere, their hearts were then rectified. Their hearts being rectified, their persons were cultivated. Their persons being cultivated, their families were regulated. Their families being regulated, their states were rightly governed. Their states being rightly governed, the

whole Kingdom was made tranquil and happy."

The above theory was propounded by Wu Pei-fu as the only panacea for salvaging China politically. He began his classical harangue by emphasizing the importance of following the *Ta Hsioh* theory and discrediting all high-sounding political theories advanced by Chinese political aspirants, who only threw the state into chaos. Let all those who claim to be anxious to save China set upon the task by beginning from the bottom up—let them make their thoughts sincere, rectify their hearts, cultivate their persons, regulate their families, rightly govern their states, and then bring the nation into a state of tranquillity and happiness. Here, again, Wu Pei-fu is in strong contrast to Chang Tso-lin, whose youthful education consists of what he could pick up as a bandit's apprentice and who is now taking lessons in conventional Chinese courtesy with a view to fitting himself for more genteel society.

General Wu is too matter-of-fact to be good company. There is one time when

he is interesting. That is when, at the end of a meal with his officers and guests about the table, he leads them in singing his version of the "Marseillaise" or the patriotic and military songs which, with some of his student soldiers, he has composed and set to music. The enthusiasm with which he takes part in these songs convinces the onlooker beyond a doubt of his sincerity. For it is easy to simulate sentiment in speech, but harder to do so in song.

I give below a rough but literal translation of a marching chant composed by Wu on the foundation of an ancient battle song. The metrical form is faultless, being the ancient 9-7-5-5-4-4 play on synonyms. An insight into the little commander's psychology can perhaps be gained through this composition of his. Certain it is that one who has seen him at the table, with his military band behind him, directing his officers and guests in the chant which varies in content from historical allusions and international relations to the war-cry of savagery, will never forget the sight. It is called:

THE ANCESTRAL LAND ENLIGHTENED

I. RECALL OUR ORIGIN

The Great Middle Kingdom boasts
four thousand years.
Hsien Yuan founded it—
He invented the compass
And suppressed Chi Yu.¹
In the dawn of enlightenment
My country was first.

II. THE PROCLAMATION

Daily the strife increases,
The tigers sharpen their teeth.
If I kill not men—
Will men therefore spare me?
Ten years I have studied my sword.
How about using it?

III. THE COUNTRY'S GLORY

Heaven impels me against the outside
aggressor.
A month—three communiqués—I
shall conquer.²
With a sword like the autumn rain
And a seven-starred blade
Shall I establish my nation in pres-
tige
Encircling the continent.

IV. THE FEELINGS OF THE PEOPLE

Shall the God-enlightened Glorious
endure foreign contumely?
Death to our oppressors. Should I,
too, die,
Let me enter the Spirit Gates with
fearless integrity,
Not as a ghost which shrank at
death.
This has fate
Decreed to me, alone.

V. SELF-SACRIFICE

Man may live one hundred years.
Is it not pitiable if he lives as a reed
or a tree?
Mu Lan³ enlisted;
Should I, a male, draw back?
For country I devote my body;
Is it not my obligation?

VI. TO WAR!

I, of strength, proclaim
I will eat bran, sleep under a tent—
Let loose the battle lust,
Pluck up my courage.
Should I be made captive
I swear to return not alive.

VII. ATTACK

Blood lust upon us, we advance by
river and land.
To-day the causes of the two forces
are adjudged.
We charge through the bullet-rain,
Our countenances change not by a hair.
Here is our opportunity for victory—
Beat the drums!

VIII. ENCIRCLING

Cut off their supplies! Stop their
retreat!
Break down the defenses! Take the
city!
You are like a tiger in his lair?
I am a Feng Fu!⁴
Stick the banner on high
Ten thousand years!⁵

IX. THE TRIUMPH

Cover the smoke, suppress the war spir-
it, in obedience to orders, return.
Trumpets and drums shake the earth
with their thunder.
To-day the victors—
Yesterday the Battalion of Death!
The elders welcome
With three glasses of old wine.

X. THE COUNTRY'S ARMY

The ancients said, Will may overcome
destiny;
A thousand of the same heart can
fill in the sea.
Japan has her "Society of Welded
Spirits."
The West has its oaths of blood and
iron.
Our oath is eternal, changeless.

¹ Mythical symbol of lawlessness.

² The Chinese historical expression similar to "I came, I saw, I conquered."

³ The Chinese Jeanne d'Arc.

⁴ The Chinese Amazon who rid the land of tigers.

⁵ The Chinese "Banzai."

FIVE—FIVE—THREE

I—ONE YEAR AFTER THE NAVAL CONFERENCE

BY CAPTAIN DUDLEY W. KNOX, U. S. NAVY (RETIRED)

NAVAL EDITOR "ARMY AND NAVY JOURNAL"

AMERICA'S great experiment of trying by example to bring about general reduction of naval armaments and cessation of competitive naval building appears to have failed. Both at the Washington Conference and during the nine months since its adjournment we have set an eminently fine example in these respects, but there has been no commensurate response from the other naval Powers. Consequently America's naval strength has steadily declined relative to other Powers and continues to do so. The passing of the recent elections now permits a survey of the whole question and an estimate of necessary remedies for such an unsatisfactory condition, free from any color of political bias.

Mr. Hughes's initial proposals for the scrapping of ships and the subsequent limitation of new construction was extraordinarily generous. It contained no element of selfishness. America offered to set the pace, to sacrifice relatively much more of her naval power than was suggested for any other nation.

At first the response to our unprecedented example was encouraging. All accepted the proposals "in principle." But when it came to detailed specifications, so many modifications were insisted upon by Great Britain, France, and Japan as to destroy the cardinal principle of mutual concession upon which Mr. Hughes's comprehensive plan chiefly depended. There was no appreciable tendency to follow America's lead in offering more than was asked. On the contrary, the foreign attitude appeared to be one of accepting advantages that had been offered and then of seeking to gain still more.

For several weeks Japan strove diligently to demonstrate that this *status quo* basis of limitation entitled her to a ratio of 7 to 10 instead of the proposed 3 to 5. It was finally proved to her satisfaction that by every method of calculation that could be devised her correct ratio was even less than 3 to 5. Japan then insisted upon a drastic limitation of naval bases in the western Pacific, the effect of which was greatly to enhance the strength of her navy relative to others in that region.

Great Britain strenuously sought the abolition of submarines or their limitation to small numbers and dimensions. The advantage which she would derive from such provisions, especially over France, caused the latter to interpose such vigorous objections, sustained by Italy, as to defeat the British proposals.

Thereupon Britain flatly refused to consider any limitation whatever upon cruisers, destroyers, and other auxiliary types of ships suitable for anti-submarine warfare.

Thus was America's example of unselfishness ignored. In spite of her demonstrated willingness to go even further against her own interests than the very generous initial proposals, still none would follow. The influence of a good example failed to bring about effective reduction of armaments.

It was one of the cardinal features of Mr. Hughes's original plan that the reduction and limitation was to include all naval types of ships. If this element of completeness had been retained, then, regardless of details, the final agreement would have been effective in its main purposes of reducing naval strength to a fixed limit and abolishing competitive building. The exclusion of the auxiliary types and the inclusion of only capital ships and airplane carriers in the final agreement opened the door to nullification of such purposes, which were then made dependent upon the individual future choice of the nations.

The nullifying effects of the omissions regarding auxiliary naval ships arise from the inherent possibility of substituting strength in auxiliaries for strength in capital ships. For example, a single battleship reinforced by a great number of light cruisers, destroyers, submarines, mine-layers, etc., may be many times stronger than two or more battleships accompanied by only a small force of such auxiliaries. The inadequacy of partial limitation by agreement is manifest, unless the nations individually should freely choose to extend such limitation to include all types of ships.

Under these circumstances of partial failure of the Conference America again set a conspicuous example of sacrifice, in the hope of giving permanence to the spirit of the limitation, even though its letter was deficient. Such hope was translated into no uncertain terms. The naval enlisted personnel was reduced almost immediately to more than thirty per cent below the minimum peace requirement for a 5-5-3 navy of all types. Out of a total of 280 first-line destroyers more than 170 were laid up out of commission, with practically no naval personnel on board, and a risk of serious deterioration thus incurred. This notwithstanding a great deficiency relative to other Powers in light cruisers, for which destroyers may serve as a partial substitute. More than seventy other

ships of various types permitted by the Treaty to be retained were also placed out of commission. The letting of contracts was suspended for a number of additional destroyers and submarines whose construction was already authorized by Congress and was not prohibited by the treaty. In spite of a complete lack of modern light cruisers in the Navy compared with 41 of this type possessed by Great Britain, 11 by Japan, 4 by France, and 5 by Italy, we refrained from undertaking or projecting the construction of any new ones. It is true that work upon 10 already in an advanced state of completion was continued, but these had their counterparts in the new construction in hand in other navies. In general substance, the United States reduced her Navy as a whole to less than seventy per cent of that allowed her by the letter and spirit of the treaties.

The hope that this impressive post-Conference example might influence other nations to extend the principle of limitation to all classes of ships, and to reduce their aggregate forces substantially below the strength fixed by the Treaty, seems to have been vain. The resumption of competition has already begun.

Five months after the Conference adjourned Japan announced a revision of her pre-Conference building programme for auxiliary naval types. To the 10 or 11 light cruisers already under construction were added 8 or 9 more. Similarly, about 24 destroyers and 24 large submarines were projected to augment nearly the same number then on the stocks. It was not made clear that the above is the maximum in these types which Japan intended to complete before 1927.

The eminent British naval authority, Mr. H. C. Bywater, states that this building programme revision was made by the Japanese with the object of rectifying the deficiency in battleships as represented by the 5-3 ratio. He states further that the characteristics of the newly projected Japanese ships preclude the assumption of purely defensive objects; that "no reasonable doubt exists as to the purpose for which all these swift Japanese cruisers and huge underwater boats are being built; . . . they are designed for attacking an enemy's communications and merchant shipping, for carrying out oversea raids, and generally for offensive operations at a great distance from their home ports." The same authority estimates that, considering

A NAVAL SEAPLANE ON THE LOWER DECK OF THE U. S. S. LANGLEY. SEAPLANES ARE CARRIED TO THE UPPER DECK BY AN ELEVATOR AND THERE LAUNCHED BY A CATAPULT

Japan's new programme, the ratio of strength in light cruisers is: Japan, 3; United States, 1; and in submarines Japan 7, compared with about $5\frac{1}{2}$ for us.

Four months after Japan's decision for new construction was published Great Britain announced a programme for two new great battleships. There is absolutely no need for such additional vessels to maintain Britain's overwhelming preponderance against any possible combination of European navies, or against any other navy except that of the United States. Even against us the building of these ships means much more than an endeavor merely to preserve an equality. The naval status under the treaties gave England a substantial superiority over us by reason of her surplus of auxiliary naval vessels, her luxury of overseas bases, her great merchant marine, her superabundance of seafaring population, and other important elements of naval strength. Yet, in spite of all this, and in addition, notwithstanding our drastic reductions of naval strength below Treaty limits, Britain now decides to maintain her full treaty quota of battleships. Like Japan, she fails to respond to our example of cutting armaments below the allowances and ceasing competitive building.

It is not alone in new construction that Britain and Japan have failed to follow our lead of downward competition. Their last naval budget, which would exclude the projected construction, was in each case roughly forty per cent greater than ours on a 5-5-3 basis. Yet, relatively speaking, they are paupers and we are rolling in wealth. The personnel question furnishes another example. Our cut to less than seventy per cent of the peace requirements of personnel for the "Treaty Navy" has not been met even approximately. Both Britain and Japan have kept practically full peace complements. The significance of this cannot be appreciated without considering that Britain's Naval Reserve is three times greater than ours, and Japan's more than twice as great. Moreover, the reservoir of maritime population of both these Powers is very much greater.

From time to time misleading headlines and statements in our press have given the impression that Japan and Britain are anticipating ratification of the Treaty in the execution of their scrapping programme. It is true that they have scrapped some obsolete vessels of no practical value, and have taken a few steps preliminary to scrapping other somewhat antiquated ships of

very doubtful value. But the United States has done likewise. None of us have substantially altered our battleship strength. Most of the preliminary work can be easily restored at small cost in case the Treaty ratifications fail to be exchanged. The evidence afforded by the scrapping situation is inconclusive as to the influence of the spirit of the treaties upon the nations that are concerned.

Now that the election is past, there is opportunity for America to review her naval situation exclusive of any political element. The question is properly National, and not partisan. Persistence in the effort towards progressive disarmament by example appears certain to result in an early reduction of our naval power out of all proportion to our National interests and welfare. Already the true ratio of naval strength, disregarding any consideration of strategic theaters of operation, stands at about United States 4, Great Britain 5, Japan 3. For operations in the western Pacific, where an effort to defend the Philippines would necessarily take our fleet, the existing ratio is about Japan 3, United States 2. Moreover, we are steadily losing aggregate strength while the others are gaining. The deterioration of our ships is much more rapid than theirs,

owing to our insufficient personnel. For the same reason our efficiency is crumbling, while theirs remains virtually con-

stant. We have no new ships projected to balance the prospective increase in the navies of Britain and Japan. Surely

the situation calls for a prompt remedy. None other than a restoration of the 5-5-3 ratio will suffice.

II—THE PROBLEM OF TO-MORROW

BY COMMANDER B. B. WYGANT, UNITED STATES NAVY

ENGLAND, by accepting the naval ratio proposed by Mr. Hughes a year ago, sacrificed her position as the foremost naval power in the world, in a manner to elicit admiration from all those whose eyes were not so covered with the film of prejudice as to blind them to the greatness of the sacrifice.

And it hurt.

Can it be supposed for an instant that it was easy to relinquish that which has been so jealously kept and guarded for centuries—no longer to boast that "Britannia rules the waves"?

Japan also made sacrifices.

After her experience following the war with China, when she was forced by aliens to give up the fruit of victory, Port Arthur, only to view in bitterness of heart its calm appropriation by rapacious Russia; and in view of the general feeling, whether justified or not, that she was outwitted at Portsmouth, is it to be wondered at that she should be apprehensive as to the results of Conferences? The decision to participate at all was taken with misgiving. Another sacrifice that Japan had to make was in the position of inferiority that she was forced to take before the world. This was translated in material terms, by the 5-5-3 ratio, and she has sworn to preserve this status of inferiority for fifteen years.

It is all very well to say that Japan's navy was actually in less proportion than that decided upon; nevertheless that proportion would not have obtained for long without a very material increase in the American Navy over that already authorized.¹

The relative status in capital ships will now obtain for at least fifteen years.

It is true to say that England is financially unable to pit herself against America in a competition of armament, but this fact does not vitiate the sacrifice.

The essential thing about a sacrifice is that it shall be thought a sacrifice, for "thinking makes it so."

And America has given most of all.

She has sacrificed the certainty of sea supremacy should she have desired it.

With a greatness of generosity that becomes her greatness of power, she has flung away three hundred millions and more of construction so as fittingly to set the example of lofty purpose. And this is far beyond what she has called for from others. Added to these are the possibly lesser sacrifices entailed by the operation of the other agreements; sacri-

fices that are inseparable from any co-operative action.

As a result of the Conference there will, for the present, be less spending of money in peace for war preparation, but the greatest gain of this meeting cannot be measured in money values.

The supreme service that the Conference has rendered mankind is in the advance made in national understanding, perhaps the greatest achievement in that direction ever accomplished.

This brief and entirely inadequate appreciation of the results of the Conference is necessary in order that what follows may not lead to the belief that the Conference as an influence for good has been underestimated.

If one talks with others about the causes of events, there will always be found a vast disparity in methods of reasoning. Ask who began the war, for instance.

"The Kaiser," says one, "with a cynical disregard for the results of his ambition."

"Prussianism and its insistence on *Deutschland über alles*," another.

"The money bags of the munition maker hungering for more fatness."

"Economics," yet another, and so on without end.

On the opposite side there is the same disagreement.

"The recalcitrance of the Slavs."

"The selfishness of England."

"The necessity of protecting the Fatherland ringed about with enemies."

Now the strange thing about it is that there is at least a grain of truth in practically all the causes that are set forth.

There were a million and more causes of the war, and the fact that one cause operated does not at all prevent the other causes from having done so.

This is a hard thing for the mind to grasp.

Just because the cause of the war lay in Germany's wish to "assure her place in the sun" does not controvert the fact that it also lay in the desire of Russia to protect Serbia from the bullying of Austria.

Just because America entered the war animated by the highest ideals of right and justice does not disprove the fact that she also entered it because American ships were being sunk.

What are the causes of war?

What drives a nail?

The hammer?

The arm that wields the hammer?

The man that builds the house?

The thought that planned the house?

Causes and effects in this world are not simple, they are infinitely complex.

The causes of war are many and complex.

Selfishness and the hate of selfishness, greed and the hate of greed, the nature of man and the desire to improve that nature—all are among the causes of past wars and will be found among the causes of future wars.

The Conference on the Limitation of Armaments has done a mighty service, but to believe that the limitation of armaments or the concluding of the Four Power Treaty or any other accomplishment of the Conference has removed the probability of war is unutterably fatuous, as fatuous as to deny that wars may not sometime cease forever.

The results achieved may, indeed probably will, lessen the probability of war, but there is no hope that the likelihood of war does not now exist.

Conflict is of the essence of nature.

Man has systematized the process, but he has not yet suppressed the tendency.

Let us consider a few of the more probable causes of war.

The habitable parts of the world are being rapidly filled up and those parts already filled are being stuffed to overflowing.

It needs no seer to predict the friction that is bound to accompany the crowding and redistribution of peoples in the near future; that is, when the present unoccupied or sparsely occupied places are comfortably filled. The Conference, being convened principally for other purposes, has only very indirectly touched upon these questions.

Another prolific present cause of friction, and consequently a potential cause of conflict, lies in the artificial obstructions, in the form of tariffs, placed in the way of the free distribution of raw materials and of manufactured products throughout the world. The business man and the workingman are at one in their demand for the levying of these taxes, seeing correctly enough their immediate interest in their exaction and not being able to visualize the eventual benefit that would universally result from their elimination.

The Conference was not concerned with the settlement of these questions save in a very minor and unimportant way.

In addition to this strong desire to restrict the amount of foreign goods that enters into one's own country there runs along parallel with it an equally strong desire to sell one's own goods in foreign countries, as shown in the struggle for the markets of the world.

In the United States, for example, the loss of foreign markets with the stop-

¹ The displacement tonnage ratio between capital ships of the United States and Japan after authorized programmes had been completed on January 1, 1923, would have been about 100 to 98.

page of certain exports would throw thousands of men out of work, with ensuing disarrangement of the industrial fabric. Suppose that the export of manufactured steel were stopped for three months. We export over three hundred million dollars' worth in that time. Not only would steel plants be shut down but all other industries would be affected, shares of other stocks would go down, there would be much selling on the exchanges, less money to be put into productive enterprise, and so much consequent loss in wages. It is imperative for the preservation of industrial contentment that markets be found.

Now, the American workingman demands, and justly demands, a standard of living that not only must be kept high, but one that must be bettering itself continually. So long as domestic demand increases sufficiently fast there is no great necessity for foreign markets in order to insure an increasing wage, but eventually a population saturation point will be reached, and just as the population must then overflow (or the increase must be stopped), so likewise must the distribution of goods overflow or else the condition of the worker becomes static.

These great forces of economics are only just beginning to be felt in their strength, owing to the comparative past sparseness of the population of the world.

The Conference did not, and probably could not, really help this situation much. The principle of the Open Door in China has been reaffirmed and other agreements have been made, but the struggle for markets in the undeveloped regions will continue.

Of the countless causes that tend to create misunderstanding and conflict, three rather important ones have been mentioned:

The pressure of population.

The artificial impediments in the way of free flow of goods.

The struggle for markets.

These causes will apply with particular force to America, fast becoming settled, apparently rooted in the habit of erecting trade barriers, and rightly jealous of the standard of living that prevails.

What does all this mean?

It means that the likelihood of war in the world is great in the rather near future.

It means that America as the greatest nation of the earth cannot escape the chance of involvement, indeed the certainty of it indirectly and the probability of it directly.

By virtue of possessing the next most powerful navy in the world, and financial and industrial strength far surpassing that of any other nation in the world, America was able to call such a conference as was held with a practical certainty that such a call would be well received, and was able to dominate this conference. We still retain numerical equality with the most powerful nation in capital ships, but have given up the possibility of such numerical superiority as would in itself have insured success in future war, which superiority could have been retained only at great expense. This was done by the expressed will of the American people and under the direction of four of the ablest statesmen in the country. It was well done, and well it is that it was done, but the voluntary reduction of our Navy was evidently made with the understanding that the agreement would be lived up to and that, in view of the dangers that confront us as set forth above, such reduction was the maximum consistent with our National safety.

Are we living up to the terms of this agreement?

The capital ship strength of our Navy was specifically defined, but that is only a part of the Navy, for "Men fight, not ships."

If we are to have a Navy, it must be clearly borne in mind that it exists for one purpose, and but for one, and that is *to win war*. Anybody can fight, but the best man wins. The Navy of the United States must be able to win in any war that we may become involved in, and, being restricted as to numbers, it can win only by superiority in efficiency.

How are we to obtain that efficiency?

It can be obtained only by sending the ships to sea. Ships laid up deteriorate rapidly, while at sea they have to be kept up to the mark. At sea any defects in construction will develop and are corrected, while in port they may exist unknown. It is only by keeping all

of our ships manned and at sea much of the time that we can be assured of that degree of efficiency in machinery, gunnery, and communications which is essential to victory.

And the officers and men, how are they to learn to make war while the ships are tied up to a dock or lying at anchor? True, much can be accomplished by study on the part of those in high command, but all the study in the world is useless without actual practice as nearly like that which will be encountered in war as is possible to obtain. Ships newly manned are practically useless for fighting until their crews have lived and worked together for some time. We have many examples of that in history. Vivid in the memory of Americans is the case of brave Lawrence, who went to his death in the Chesapeake. The French fleet blockaded for twenty-two months in Toulon by Nelson, who kept the sea during that whole period, is another. When the French ships went to sea they lost their topmasts in a gale and had to put back into port for repairs, while Nelson's ships, manned by experienced sailors, suffered not at all.

It needs salt spray to make a sailor; it needs target practice to make a gunner; it needs maneuvers to make a tactician; and these can be had only by sending our ships to sea.

The American people are heavily burdened by debt and are sorely taxed to pay it, but they have the right to have the situation put before them clearly before making a final decision.

It has been determined that we need a Navy to use in war.

This Navy is of no use unless it can win.

The only way to insure its winning is to enable it to keep the ships in commission and send them to sea and pay the price.

If after hearing the facts the American people are content to have a moderately good Navy instead of the best Navy, that is their undoubted privilege. When war comes, the Navy, whatever there is of it, will do its level best, but if inadequately trained many a mother's son will meet his death who would have been living but for lack of a fighting chance.

THE BOOK TABLE

A PHILOSOPHER FROM THE PLATE

BY LLOYD MORRIS

OUR acquaintance, in the United States, with the contemporary literature of Latin America is so restricted that Mr. Stimson's felicitous translation of the "Ariel" of José Enrique Rodó¹ is to be regarded as especially auspicious. For it serves to introduce to an English-speaking audience the work of a writer whose influence has extended wherever Spanish is spoken, a philosopher whose ideas found expression in unusual beauty.

Rodó was born in Montevideo, Uruguay, exactly fifty years ago. His youth was spent in an atmosphere of scholarship, and at twenty-six he was Professor of Literature in the university of his native city. Three years later he deserted academic life to enter politics, and for a considerable time was a member of the national Parliament. The sixteen years from 1901 to 1917 were compact with activities at once various and uniform; from every field touched by his interests Rodó drew nourishment for his philosophy of idealism. His personal life was remarkably of a piece with his central doctrine of perpetual and unremitting self-renovation. "*Reformase es vivir*" (to recreate one's self is to live) are the opening words of his most notable book; like Emerson, he counseled that we should "live ever in a new day." And he put his theories vigorously to the test. Parliamentary debate, miscellaneous journalism, economic investigation, and the criticism of literature and art he successively turned to account in applying his theory of life to divergent spheres of human interest; could any subject be alien to one whose ideal was the complete man? His intellectual concentration was as intense as its expression was various, for his writings reveal a familiarity with foreign literature that might well be envied by a mind devoted exclusively to scholarship. Rodó insistently advocated the necessity of travel as a means of self-renovation; ironically, he never left Montevideo until 1917, when he was appointed European correspondent by "Caras y Caretas," a Buenos Aires weekly journal of wide influence. He went to Spain, proceeded almost immediately to Italy, and after a brief illness died at Palermo in May, 1917. Three years later, with much ceremony, his body was brought back to Montevideo to be buried beneath a magnificent monument erected by the nation.

"Ariel," his earliest and in some ways his most charming book, is an excellent introduction to those central ideas which he later amplified to their full

JOSÉ ENRIQUE RODÓ

philosophic implications in the "Motivos de Proteo" (Motives of Proteus). Taking the form of the imaginary valedictory of a spiritual teacher to the students who are about to leave him, it is less a statement of a theory of life than an invitation to formulate one. It is an eloquent summons to the humane life as the Greeks defined it, a poetic defense of the claims of Ariel rather than Caliban to determine the ideals of civilization. Life in Greece, he observes, was held to be noble only when it was founded upon "the concert of all human faculties, in the free and chartered liberty of all energies capable of contributing to the power and glory of mankind." Thus it was that Athens "could exalt at once the feeling for the ideal with the real, reason with instinct, the forces of the body with those of the spirit. It chiseled clear the four sides to the soul." This rational and harmonious development of the multiple forces of personality constituted for Rodó the culture of the humane life.

"The basic principle of your development," he says, "... should be to maintain the integrity of your humanity. No one function should ever prevail over that final end. No isolated force can satisfy all reasonable objects of individual existence, as it cannot alone produce the ordered concert of collective existence. And, like deformity or dwarfing to the body, is, to the soul, the result of an exclusive object imposed on individual action and a single manner of culture."

Social evolution, he points out, results in the growing complexity of civilization in a constantly increasing heterogeneity in life. As general culture increases, the field of individual activity tends to be more and more restricted to narrow specialization. But the humane life demands, not the intensive cultivation of a single aptitude, but the balanced exercise of all human capacities; how, then, is the determinism of individual vocation, the tyranny of materialism, to be circumvented? Rodó, like

¹ Ariel. By José Enrique Rodó. Translated, with an Introductory Essay, by F. J. Stimson. Houghton Mifflin Company, Boston. \$1.25.

Emerson, would answer, that to live the life of reason means to share nobly in as many forms of experience as we may: "Shrug not your shoulders before any noble and fecund manifestation of human nature, under the pretext that your own individuality ties you of preference to a different one. Be attentive spectators where you may not be actors." He seems here to foreshadow the theory that Croce, applying to the materials of aesthetics, has contributed toward our understanding of art; that the function of the spectator is to recreate the experience of the artist. So Rodó, counseling the enlargement of the inner life, points a way to vicarious experience.

One of Rodó's most notable contributions to the interpretation of ideas is his sense of the epic significance of the doctrine of evolution. Very largely that doctrine has served modern thought by clarifying our sense of the past, and its distinctive emphasis both in philosophy and literature has been upon the lowly origin of life. But for Rodó its implications in the future are far more valuable. If the present is the sum total, the complete consequence of an infinite past, why should not its chief value be what it portends of the future? Thus he counsels that "every one who devotes himself to propagate and preserve in contemporary America a disinterested ideal of the soul—art, science, ethics, religious belief, a political policy of ideals—should educate his belief in the persevering preparation for the future." It is to the interest of this future no less than to the satisfaction of the present that the individual shall cultivate his own capacities to the fullest extent possible. The reason for this, only hinted at in "Ariel," is stated at some length in the "Motivos" in that doctrine of perpetual self-renovation which gave to Rodó's philosophy the name of "proteanism." In every human being, he says, there is an inexhaustible reservoir of spiritual capacities, largely unknown. This reservoir enables us, if we fall in one direction, to seek a new orientation, since the frustration of one power is compensated for by the discovery of another. Every one should therefore be the Columbus of his own personality, since reality and the future, as well as the past, lie within us. Life is a perpetual becoming, and so is truth; it is therefore the duty of the individual constantly to subject his ideas and feelings to the test of new knowledge as it is created. In that way alone is it possible to insure control of experience by the spirit.

"Ariel," which is an invitation to this life of the spirit, is likewise a denunciation of the philosophy of utilitarianism. Rodó finds two causes assigned for the dominion exercised by utilitarian ideals: the tremendous discoveries of natural science and the wide diffusion of democratic ideas. To offset the conception of science as serving only through its practical applications, Rodó recalls to "minds the ideals of pure science; we could not, he warns us, confuse the

search for truth with the perfection of mechanical conveniences. Nor does he find in the ideals of democracy any inherent materialism. Can democracy, he asks, meet the tests of culture and civilization? The question is complicated by the fact that in the Western Hemisphere the first hundred years of democratic experiment were largely preoccupied with the conquest of physical nature. Like science, democracy was under the necessity of being practical. But the final test is not one of materialism: "The civilization of a country acquires its grandeur not by its manifestations of material prosperity and predominance, but by the higher order of thinking and feeling thereby made possible." Democracy begins by leveling unjust superiorities, but the spiritual world, as well as the natural, abhors an absolute equilibrium. By proclaiming the universality and equality of human rights democracy will ultimately proclaim the predominance of mere number unless it carefully maintains some conception of legitimate superiorities, such, for example, as moral excellence. In this, as in other matters, Rodó puts his faith in

science, joining to the conception of equality of opportunity the doctrine of natural selection in the moral domain. To that consecration of mediocrity which to him appears to be the most damaging perversion of democracy he opposes the ideal of a democracy that is "just and noble, impelled only by the knowledge and sense of true superiorities, in which the supremacy of intelligence and virtue, the only limits to the just equality of man, receives its authority and prestige from liberty."

The work of Rodó has very directly influenced thought both throughout South America and in Spain, not only in its expression in literature, but in the theory and practice of education as well. Like Emerson and Whitman in the United States, like Ruskin and Arnold in England, his concern was to reinterpret for his time the final values discerned by the spirit. He enunciated no definition of the truth—for him truth, like life, is in process of becoming—but rather directed his energy to sowing a disinterested desire for knowledge and beauty as the two paths upon which truth may be met.

THE NEW BOOKS

FICTION

CAPPY RICKS RETIRES. By Peter B. Kyne. Illustrated. The Cosmopolitan Press, New York. \$2.

Cappy Ricks, our friend of former stories, retires, and not once but several times; and the more he retires, the more he comes back, bubbling over with energy, courage, and generosity. The first part of this book is one of the liveliest sea tales of the war ever written.

CLAIR DE LUNE. By Anthony Pryde. Dodd, Mead & Co., New York. \$2.

Mr. Pryde's stories always give the satisfaction of introducing the reader to people who talk and act like intelligent and cultivated persons. He always has a story situation also to which the talk and incidents lead up, so that the interest really does culminate at the climax. The present story certainly is as well written as any of his books, though his two earliest novels were tenser and more vivid.

KINGMAKERS (THE). By Burton E. Stevenson. Dodd, Mead & Co., New York. \$1.90.

One of the best of all the many tales that center about revolutions and plots of restoration in imaginary petty kingdoms in the east of Europe. Here the plotting itself takes place in Monte Carlo, and the poor king never does get his crown back. We won't say that this story is as charmingly written as Stevenson's "Prince Otto," but it is as good as or better than "The Prisoner of Zenda."

MYSTERIOUS OFFICE (THE). By Jeannette Lee. Charles Scribner's Sons, New York. \$1.75.

A woman detective, who (as in a former book) unearths criminals on the condition that she shall start them in a straight line if possible, here unravels the queer theft of \$25,000 in bills from

the top of a desk. Any one of several people might have taken it; three (we believe) confessed to taking it; none of those three did take it.

HISTORY AND POLITICAL ECONOMY MISSISSIPPI VALLEY BEGINNINGS. By Henry E. Chambers. Illustrated. G. P. Putnam's Sons, New York. \$4.50.

The early history of the Mississippi Valley is told in this well-printed book in a pleasant narrative style that makes easy reading. The settling of this great valley constituted one of the most important phases of America's development, and it deserves the ample and sympathetic treatment here given.

ESSAYS AND CRITICISM

NEIGHBORS HENCEFORTH. By Owen Wister. The Macmillan Company, New York. \$2.

Mr. Wister writes with strong feeling and an acute sense of character and human passion about American, French, and English soldiers in the Great War. He segregates individuals and makes them talk and act as real men, not like tin-hatted gods or moral idealists. Incident and talk are selected so as to throw out the reality of the fighting men who certainly should and must henceforth be neighbors.

MISCELLANEOUS

EVENING POST (THE). By Allan Nevins. Boni & Liveright, New York. \$3.50.

Reading the New York "Evening Post" would be an education in itself, if uneducated readers were eager to accept the "Post" as an Alma Mater. But its appeal has always been to the highly educated—to people of scholarly instincts, of fastidious tastes, of high intellectual standards. Despite, however, the limited circulation imposed by its quality, the "Evening Post" has for more

than a century of our National history been an influential factor in making that history; and the story of its career and influence is here told in a way that is highly interesting. The book is by no means merely a friendly encomium of a newspaper by one of its editorial staff; it is an independent, virile study and review. Alexander Hamilton, William Cullen Bryant, John Bigelow, and E. L. Godkin, as chiefs of the "Post," made it one of the world's great newspapers and set standards that are loyally followed by its present editors. Every newspaper man, every thoughtful newspaper reader, would be the better and wiser for becoming familiar with the contents of this book.

TRAVEL AND DESCRIPTION
HUNTERS OF THE GREAT NORTH. By Vilhjalmur Stefansson. Illustrated. Harcourt, Brace & Co., New York. \$2.50.

Mr. Stefansson is a first-class writing man as well as a first-class hunter and explorer, and no one, young or old, can take up this book without becoming absorbed in its accounts of Arctic life. The author has many original points of view, and when he takes the reader into his confidence as to these, his pages are most entertaining.

INCA LAND. By Hiram Bingham. Illustrated. Houghton Mifflin Company, Boston. \$5.

Professor Bingham tells in this handsome and well-illustrated volume the story of his expeditions in Peru conducted in recent years under the auspices of Yale University and the National Geographic Society. The remarkable discovery of the Inca city of Machu Picchu receives extended treatment, and the account will prove of absorbing interest alike to the archæologist and the lover of travel books.

FINANCIAL DEPARTMENT

The Financial Department is prepared to furnish information regarding standard investment securities, but cannot undertake to *advise* the purchase of any specific security. It will give to inquirers facts of record or information resulting from expert investigation, and a nominal charge of one dollar per inquiry will be made for this special service. All letters of inquiry should be addressed to THE OUTLOOK FINANCIAL DEPARTMENT, 381 Fourth Avenue, New York.

EVERYBODY'S MONEY

BY LIEUTENANT-COMMANDER K. C. McINTOSH, SC., U. S. N.

FOR generations a quarrel has been carried on between economists on the subject of money and prices. The bone of contention is the so-called "quantity theory." Those who uphold it will seldom admit that there is even a subject for dispute involved—that the quantity theory is sufficiently obvious to be axiomatic. Their opponents are equally certain that to believe in the correctness of the quantity theory implies

a lack of fundamental logic—almost of good sense. Outside of the quarrel are the only persons to whom the solution is of any real import. Laws of price are everybody's business, and currency legislation is every one's concern. Our money must be dependable or we cannot get our business done.

To gain recognition as an economist of weight a man cannot be a fool; and when wise men begin describing so universal a

A Strong Industrial Bond

THE GULF OIL CORPORATION OF PENNSYLVANIA, with its subsidiaries, is one of the largest petroleum producers in the United States, operating more than 3,700 wells and more than 2,200 miles of pipe lines. The corporation owns a fleet of 17 ocean steamers, as well as tugs, barges, and other equipment.

Net earnings of the Gulf Oil Corporation and its subsidiaries, as reported, for the 5½ years ended June 30, 1922, were not less than \$9,000,000 in any one year, and averaged more than \$16,000,000. The annual interest requirements on total present funded debt aggregate \$2,110,000.

We offer and recommend for investment the 15-year 5% Bonds of this Corporation. A descriptive circular will be supplied on application to any of our offices.

Bonds for Your Special Needs

This Company offers recommended bonds of all approved types. It advises regarding proper diversification of investment holdings, and is prepared to assist the individual investor in making selections best suited to his own special needs. In making recommendations due regard is given to taxation requirements, security of principal, yield, maturity, and other essential factors.

At any of our offices, you will find our complete facilities at your disposal.

thing as money with a dissonance of opinion equal to that of the blind men about the elephant it is evident that they have different definitions for money.

The definitions usually given in the textbooks are in support of that statement. Does an exact definition exist in any standard text? If so, does it stand unchallenged? I believe not. Text after text, however, defines the *qualities* necessary for any commodity to possess in order to serve as Money. And four times out of five, after giving them, the same texts will later call a Federal Reserve note "money" and debate whether or not checks are "money." One chapter will be headed "Money" and the next "Credit." A succeeding chapter lumps them both and treats them alike under guise of currency or circulation or media of exchange.

In my pocketbook at present are four bills: a \$20 Federal Reserve note, a \$10 gold certificate, a \$5 note of the Series of 1890, and a \$1 silver certificate. How much *money* have I?

Starting at the only point upon which all schools of economic thought agree, each bill represents something. If that something has the *qualities necessary to serve as money*, the bill may be called a title deed to money. In other words, it proves that I have money somewhere. If, however, the something represented has not those qualities, I submit that my possession of the bill is evidence of something entirely different.

The \$20 bill is new and unworn. Presumably the 90 or 120 days of maturity of the trade acceptances or other paper behind it are incomplete. This bill, then, at a 4 per cent rediscount rate, really proves, in the last analysis, that I have a prior lien upon \$20.84 worth of, say, bolts and nuts, now being unpacked by a retailer; and that I am secured against loss through the sale of those bolts and nuts by the ample margin of about \$16 in gold. I do not own that gold. It is merely arrested temporarily and held until the Federal Reserve Bank proves to me that my \$20.84 worth of bolts and nuts will really sell for that much. Obviously, my bill does not represent anything which can be used as money except that \$16 in gold, and *I do not own that*. This bill cannot be money.

Now the \$10 bill. It states plainly that in the vaults of the Treasury there lie two hundred and thirty-two and two-tenths grains of gold; that the gold is mine; and that I can get it if I go and ask for it. This is money without a doubt.

Next, I have a green and black bill stating that the United States will pay me \$5. That is all it says. It means that this great country of ours owes me \$5 and admits it—nothing else. It is a loan without interest. Five dollars' worth of my work has been paid for with the Government's credit—nothing else. This bill is not money. It is the same sort of promissory note that you and I might issue.

Lastly, another bill offers me "One Silver Dollar"—not "One Dollar in Sil-

Building a Greater West

OLD prairie trails that once echoed the trotting of stage coach horses are now lively streets pungent with gasoline. The trail blazers have passed to Unknown Lands, leaving to their sons the ability to turn *opportunity* into *results*.

The Greater West was only a vision when the rich resources of mine, farm, ranch and fruit lands were first tapped. Even now that it is real, the future looks more golden than ever. And newcomers quickly become as keen Western optimists as the native born!

It is a pleasure for National Shawmut Bank to help keep the West in close touch with the manufacturers of goods that have made New England world-famous. Machinery, tools, rubber, footwear, textiles, paper—these are products of highly specialized skill. The volume of these goods shipped to the West is proof that Western requirements are fully met.

There are many routine banking and also more personal services which this bank can perform particularly well for Western banks and businesses, because of our broad acquaintance with *all* New England activities.

FINANCIAL DEPARTMENT

(Continued)

ver." It does not state whether the dollar was coined from 60-cent pre-war silver or dollar-an-ounce Pittman Act silver; so I do not know whether my dollar is worth 40 cents or more, or 60 cents or less. Call it 50 cents, with the brassage. This bill, then, means that I own half a dollar in money and another half-dollar in promises.

This completes the inventory, and I find that I have only \$10.50 in money in my possession. I do not feel aggrieved, however, for the credit is liquid and negotiable. It is "good." I may have little money, but I have \$36 worth of power—power-in-exchange represented by currency. I do not care whether the power arises from gold, silver, promises, or bolts and nuts. It is good power, and I have it. Its source no more concerns me than the name of the chef who cooked my dinner.

Lifting a sack of wheat or a barrel of molasses requires one sort of power. Completing a business transaction, great or small, requires another kind: but whether muscle or purchase is involved, power is required. Can any one contend that the more muscle a man has, the harder he must work to shoulder a bushel of wheat? Is the amount of power necessary to do anything measured by the power one happens to have? *Does the size of the units by which power is computed change the total amount necessary to get our business done?* Of course not. The power required is regulated by the business itself, by the weight and inertia of the wheat, by the power-in-exchange of the thing we buy.

In my four bills power is represented by four different things—three of them commodities and the fourth a psychological phenomenon. The gold I am certain about. I know what it is worth the world over. I know that its power-in-exchange is not stable; but I know that it changes very slowly—more slowly than any other commodity possessing the necessary "qualities." The silver in which I have title is, I know, worth less than I gave for it; but I have the Government's word that I will not lose when I pass that bill along to another man, and I believe the Government.

The bolts and nuts are worth \$20 to me now. They may be worth \$18 or \$22 next month; but I am not interested for by that time they will have been sold and \$20.84 in gold will have been paid to the Federal Reserve Bank to cover my note. I will then have money. Right now, however, I have control of bolts and nuts.

The Government's credit is good with me for the same reason on a larger scale. When that bill was issued, the Government had no money, but it had control of future taxes and goods.

So, broadly speaking, my power arises from two things—my ownership of money metal or my mortgage upon marketable transferable goods or future supplies of money metal. Here the streams of thought divide. We are at

a beginning of both sides of the quantity theory quarrel.

The quantity theory is not a theory of money, but a theory of credit. As a hundred and ninety per cent of our "currency" "circulation," loosely called money, is credit pure and simple, it is not difficult, however, to see why it is considered a money theory. At the start, however, and they may be in their ideas, the quantity theorists stand convicted of unreason and language.

In plain English, the quantity theory states that the more units of money a country has, the less each one of them will buy, i.e., the higher will be the prices of "goods." They invoke the law of supply and demand, and some of them say that they cannot admit even the possibility of discussion.

At the start, we must rule out the blindly "anti-quantity" men who would aim absolute stability for gold and place all the fluctuation of prices upon other things. That is obviously a ridiculous assumption. If gold had never been used as money, its power-in-exchange, its relationship, would plainly depend upon comparative quantity and would rise and fall. Since gold, the most stable of commodities fit for use as money, has been chosen as money, we must not lose sight of the fact that it is still a commodity, and still subject to power fluctuation. These fluctuations, admittedly affected by quantity, have been considered as money fluctuations; but they are really fluctuations of the commodity power, not the money power. If they were not, we would find two gold prices current, as far apart as the two silver prices now obtaining in the United States, and the gold would be all coin or all bullion alternately, as these prices varied. It was only on account of its superior stability as a commodity that gold was selected in preference to other metals, like platinum and silver, as standard money. The commodity price of gold still rules, only partially enhanced by its new use as money and the consequently increased demand for gold. We use such gold as we need for Treasury reserves and coinage. We use the rest as commodity gold. If we coined it all, prices in terms of money would not be affected; we would use what coin we needed; hoard a little, and so decrease the supply; and melt the remainder down into ingots and jewelry. No matter what the supply of gold metal, there will never be more gold money in use than people want to use. Since the price of gold is its metal price, and so a worldwide price, the amount of gold money in any given country has no effect whatever on prices. In fact, in a country where only gold money was used in business and enough of it was in use to meet all currency needs, we would soon find lower prices, not higher; for the very unsoundness of all-gold-and-no-credit would pull all business into a permanent depression. An increase in the quantity of gold money would make no more difference than an increase of muscle to the heat-lifter of the first part of this arti-

Men seek the deciding "yes" or "no" of the analytical chemist because his conclusions are based on facts—facts which he is best equipped to gather—best qualified to weigh and judge.

"Yes" or "No" to a Bond?

When you come to The National City Company for bonds you come to an organization with resources enabling it to gather and weigh carefully the essential facts back of every bond it recommends.

At any one of our offices in more than 50 leading cities you will find a cordial welcome by men who are constantly studying investment problems—and who will gladly help you select high-grade bonds.

These experienced men are well qualified to analyze your present holdings, and may be able to suggest advantageous changes.

Regardless of the size of your investment account, we invite you to come and see us, or to write for our Current List of Bonds of liberal yield.

(Continued)

cle. Some of the money and some of the muscle would remain unused, for the amount of coin we possess makes no change in the amount of metal the world possesses, and nothing else counts.

However, we do not use gold exclusively as currency, nor even as a greater percentage of our currency. Nine-tenths of our normal business legally avoids the use, not only of money, but of public or Government credit. The circulating media are private credit instruments. When the rush of optimism comes, a lot of people overvalue their ability, and sellers and lenders do not care to take too much of their private credit. To get business done they now need public media of exchange, and the cry arises that "money is scarce." If their business is sound, productive, and helpful, and they are selling or moving goods, they can get these media in the form of Federal Reserve notes, which are really private credit guaranteed by the Federal Government.

In the old days the Government issued its own credit—greenbacks.

In both cases prices rose and rose and kept on rising until the crash came and depression settled down; and the quantity theorists claim this as proof of their creed. Here in this country are several instances—1855, 1870, 1883, 1892, and 1919—where the supply of credit circulation was enormously increased and prices went climbing. To make it even stronger, 1919 found an unprecedented quantity of gold in this country. The case seems to be plainly proved. And yet—

In all these years the great increase in circulating "money"—and nothing but circulation can matter much—has been credit, not gold nor gold certificates. We know that gold—and so gold certificates—derives its price from its commodity power-in-exchange. We can raise or lower the price of a gold dollar suddenly only by Professor Fisher's method, by changing the amount of gold in each dollar. In this case, not the gold, but the standard dollar has changed. Instead of saying, "Each gold dollar is worth less," it is more correct to say, "Each dollar is worth less gold."

Just as the only way suddenly to change the price of a gold dollar is to change its metal content, so the only way to change the price of a credit dollar is to change its credit content. The world's supply of credit, or a country's supply, is popularly supposed to be infinite in theory; but it is not infinite nor even indeterminate. It is merely so far, undetermined in dollars and cents language. The exact total we cannot tell; but we know that it is measured by the amount of future goods under control, by the total of the manufactures and crops and imports for the next hundred and twenty days. "Hindustan" can tell us exactly what our total credit volume was last year. Records of several years past and trade barometers can tell us what it should be next year. As gold is our standard—and here is our big confusion—we must measure that

credit in terms of gold. When we start to issue our credit dollars, however, our checks, acceptances, commercial paper, greenbacks, and Federal Reserve notes, we have, as a rule, overlooked one corner of the triangular estimate. Consequently, we have now and then got into trouble by forgetting that both credit and goods must be measured in gold, not each other. We can control supply of goods, and so affect prices; but we cannot, with a given amount of certain future production, change the price measured in gold by an abundance of credit dollars. We can change prices to you and me by too much credit money, I grant; but I submit that that has nothing to do with it, for by doing so we abandon the standard. And it is a question of standard. When the total of credit dollars exceeds the gold-dollar price of the total credit in existence, we have merely depreciated our credit standard in terms of gold. Prices are not high because a lot of credit dollars are floating about, but exactly the reverse. A lot of credit dollars appear because we have first made the gold price of credit dollars low. As soon as we do that we have two standard dollars, the gold dollar and the less valuable credit dollar. Gresham's law never fails, so we immediately have to use the bad dollars, and the good dollars drop into stockings and melting-pots. I believe that we can prove this by the same historical in-

stances cited above in alleged support of the quantity theory.

In 1855 people had an idea that the only thing necessary to prosperity was high prices. They argued that a dollar was a dollar, and that every extra dollar was a community gain. The State banks, therefore, issued credit dollars by the bale. They kept no account of the true volume of credit, and they did not even accept gold as a standard. Consequently, the more they overestimated their credit, the lower the actual power-in-exchange of their dollars, and the more of them were necessary. Prices rose of course. Prosperity did not. In a little while (1857) our creditors wanted payment, dollar for dollar; but they wanted good, gold dollars. We had only credit dollars worth about 35 cents in gold; and we crashed, and a lot of the world went down with us.

In 1870 we had been building railways at a feverish rate, working off the excess energy left adrift at the end of the Civil War. Governments and States helped these roads excessively. We needed a great deal of circulating currency, and thought we needed even more; for we again overestimated the future production which our new transportation would inspire. The National Bank Act helped a little, but it was limited by the supply of gold bonds. To make up the deficit, we again poured out credit dollars. We had learned one lesson—that private or State bank credit would not hold up its own price; so we issued Federal credit—greenbacks. The same thing happened. The total gold price of our one hundred and twenty days' production remained the same. We simply called a smaller fraction of that production a dollar's worth, depreciated the standard, raised prices and had to issue more money. The smash came on settling day, as usual, but we were still stubborn. It took three failures—1873, 1884, and 1893—to teach us that gold prices rule and that we cannot control gold prices.

The year 1919 was different. In that year the gold standard was generally accepted and was supposed to be in force. This was not true in Europe, for gold had been abandoned through dire necessity; and the countries of Europe had to mortgage, not merely one hundred and twenty days, but many years, of future production. Gold as a world-wide medium of exchange had ceased to function. Gold continued, however, to be the "common denominator," the standard, while the gold price of currency was driven down. At the same time, the production of goods fell off, lowering the credit total; and demand for goods increased violently, raising prices in terms of gold. Of course a huge volume of cheap credit francs and credit pounds and credit lire appeared. They had to; but they had nothing whatever to do with making prices. Goods were measured in gold; the use of gold had fallen off and demand was low, and the demand for goods was tremendous. That is the story of 1919.

How, then, did we avoid a panic in

Will Be Sent Without Cost

This booklet "How to Select Safe Bonds" has been prepared from the long and successful experience of Geo. H. Forman & Co. Every investor should know the facts it gives about getting a higher yield with positive safety.

EIGHT WAYS to Test the Safety of Every Investment

- 1 **Is Your Investment Protected By Property of Permanent Value?** "How to Select Safe Bonds" tells why investments should be protected by property having a permanent value well in excess of the amount of the entire loan.
- 2 **Does Your Claim Command Payment Before Other Obligations?** "How to Select Safe Bonds" tells what securities come before all others in obligation to pay promptly and fully.
- 3 **Has The Property a Sufficient Earning Power?** "How to Select Safe Bonds" tells why a safe property must have an annual earning power of at least two and a half times the total annual interest on the loan.
- 4 **Is The Property Adequately Protected By Insurance?** An important consideration, as fire often wipes out overnight a valuable property.
- 5 **Is It Properly Managed?** "How to Select Safe Bonds" tells why proper management is essential to insure prompt payment of interest and principal upon maturity.
- 6 **Is The Title Clear?** "How to Select Safe Bonds" tells a sure way of insuring against loss through faulty title.
- 7 **What Is The Moral Character Of The Borrower?** As important as proper management—explained in this interesting booklet.
- 8 **Who Offers The Securities You Buy?** "How to Select Safe Bonds" tells why even the experienced investor must depend for safety entirely upon the reputation and length of service of the Banking House offering the investment. It tells of the conservative policy of painstaking investigation and selection which has made it possible for George M. Forman & Company to sell bonds for 37 years without loss to a customer, large or small.

MAIL THIS REQUEST BLANK

Let "How to Select Safe Bonds" show you definitely how you can enjoy, with absolute safety, a larger income from your investment. Mail this request blank for your copy of this interesting booklet. No obligation.

THE TEMPLE TOURS

65 A Franklin Street, Boston, Mass.

Summer of 1923! Cultured Parisienne to three young ladies. Unusual opportunity to learn French and see Paris and environs under personal and intelligent guidance. Short trips to England and Switzerland. The young ladies will be accompanied by an American teacher of French. \$375. Outlook.

"See America First"

written by O. O. Heistand in collaboration with Charles J. Herr, published through Regan Printing House, Chicago, is a story of the growth of America. The author took a motor trip through the eastern part of the United States—Niagara, the Hudson, Boston, New York, and the Berkshires. He set down his impressions for others in such a fashion that it would be very easy for some one else to travel the same paths. There are numerous pictures and valuable itinerary. Price \$2. Orders should be sent to CHARLES J. HERR, Westcott Hotel, Richmond, Ind.

FINANCIAL DEPARTMENT

(Continued)

1920? Demand fell off, liquidation went ahead, all the symptoms of panic were there, but no panic. Because, blindly perhaps, we have set an automatic meter upon our credit dollar which keeps it at a steady price measure in gold. When business is hustling and prices go up (i. e., when the demand for goods outstrips demand for gold and relationships are changed), we supply the gaps in our circulating media with Federal Reserve notes instead of inconvertible greenbacks or Clearing-House certificates. A Federal Reserve note cannot be issued except on visible, irrefutable evidence that the credit total, the production of the next one hundred and twenty days, has been increased by the amount of the note and a little more.

This is the gist of the quarrel. The supporters of the quantity theory represent the present borrowers and future sellers—they talk in terms of credit dollars. The opponents of the theory represent the present lenders and future buyers, and they are talking of gold dollars of 23.2 grains each at the current price of gold as metal. Of course they cannot agree. As long, however, as they do not try to influence the money legislation which affects all of us, why should we greatly care? For you and I have still a third definition for money: "A balancer of accounts—something dependable which gets our business done."

Cough-Colds

IT IS not what we say, but what our patrons say of Vapo-Cresolene that conveys the strongest evidence of its merits.

Effective weight control diets, acid and bland diets, laxative and blood-building diets, and diets used in the correction of various chronic maladies.

The book is for FREE circulation. Not a mail-order advertisement. Name and address on card will bring it without cost or obligation.

HEALTH EXTENSION BUREAU
294 Good Health Building, Battle Creek, Mich.

A Negro paper quotes Stephen Graham as reporting in "The Soul of John Brown" that a Negro minister had complained to him of the absurdity of making pictures of white angels for the children of the black race. "You surely would not like them black?" said the interviewer. "We give Sunday-school cards to our children with white angels on them. It's wrong," was the reply. "Black angels would be ugly." "No more ugly than white. . . . Isn't it absurd for us to be taught that the good are all white, and that sin itself is black?" "It does seem to leave you in the shade," Mr. Graham admitted. "Expressions such as 'black as sin' ought to be deleted from the language. One might as well say, 'white as sin,'" argued the Negro. It would be interesting to know how native Africans picture their ideals of goodness. It is well known that they look upon a white skin as unbeautiful. "You who are black!" is said to have been a form of reverential address uttered in presenting a petition to the Zulu kings in olden times.

Apropos of the above paragraph, it may be noted that a holiday display of colored (black) dolls is to be seen in a Brooklyn store window in a section where Negroes live, with the sign, "Colored Dolls Sold Here."

Adam Smith, author of "The Wealth of Nations," was a keen student of current events. A letter written by him in 1776 and now offered for sale by a London bookseller reads:

"... The American Campaign has begun awkwardly. I hope, I cannot say that I expect, it will end better. England, tho' in the present times it breeds men of great professional abilities in all different ways, great lawyers, great watchmakers, clockmakers, etc., etc., seems to breed neither statesmen nor generals."

The apple, according to an exchange, is the most famous of fruits, for it has figured in at least four stories of world-wide fame—the apple of the Garden of Eden, the golden apples of Atalanta, the apple of the William Tell legend, and the falling apple which was seen by Newton and which suggested to him the law of gravitation.

"Physical culture, father, is perfectly lovely!" exclaimed an enthusiastic young miss just home from college (as quoted in the "American Legion Weekly"). "Look! To develop the arms I grasp this rod in both hands and move it slowly from right to left."

"Well, well," replied dad, admiringly, "what won't science discover next? Why, if that rod had straw on the other end, you'd be sweeping."

Three battles in American history, according to a recent book, left no survivors. One took place in the Powder River country, near Fort Phil Kearney, where Captain Fetterman and eighty

men met their death at the hands of Red Cloud's warriors in 1866. Another was in Montana on the Little Big Horn River, in 1876, when Custer and over two hundred men lost their lives. At the Alamo, in 1836, the followers of Bowie and Davy Crockett fell to a man beneath overwhelming forces under Santa Anna. "Thermopylae had its messenger of defeat; but from the three foregoing battlefields came no survivors."

An unsolicited testimonial to a Washington physician's skill, published in the "Journal" of the American Medical Association, reads in part as follows: "I had poison oak bad. I came to you and got me relief. I will sure recommend your stuff to all the boys who are here. I believe in giving the devil what is do him and am writing so you will know that I appreciate the same. Very truly ——. P. S. If I sell some of this stuff for 2 a dose can I figure on keeping the other 50c.?"

A champion girl typist told a newspaper reporter recently how she acquired her facility and endurance. "Typewriting," she said, "is like any other form of athletics. If you want to compete in speed contests you must go into training and cut out pie and coffee and other harmful things like that, and work, work, work!" Five years ago she wrote 88 words a minute. Now she can write 137 words and aims at 150.

"The brightest feature of the British railway situation is found in the happy relations between the companies and their men," according to "The Engineer" (London). "Never, during the hundred years of railways, has this aspect of the railway position been so good. There is, at present, a noticeable *esprit de corps* among the men, a greater desire to give a day's work for a day's pay, both in the operating and the manufacturing and repairing branches. . . . We believe, and will almost go as far as to affirm, that the attitude of the men is the result of the unions having been recognized and of the men themselves having been given a greater interest in the operation of the railways."

Recently, in Switzerland, according to the "Writer," a citizen was brought before a magistrate charged with failing to return a borrowed book, and sentenced to spend two days in jail and to pay a fine of forty francs, in addition to the value of the book. The magistrate in passing sentence said: "A book is a family utensil, like furniture, and is necessary to the welfare of the family." "The Writer" adds: "A practical way to secure the return of borrowed books is to put in the place of the book taken from the library shelf a piece of cardboard about the size of the book, on which is written the title of the volume, the name of the borrower, and the date when the book was lent." And, it might be added, when it is to be returned.

America's Race Heritage

By Clinton Stoddard Burr

Brooklyn Citizen—"A book that has long been needed."

Boston Globe—"A plea for careful restriction of immigration is what this interesting volume sets forth."

New Orleans Times-Picayune—"Extremely interesting . . . the kind of book our people should read and take to heart."

Illustrated, indexed; price \$4.20 postpaid

CHARLES SCRIBNER'S SONS, NEW YORK

Why Children Don't Obey

OBEDIENCE is the foundation of character. Yet how many parents discover constantly that their instructions to their children carry no farther than around the corner. And wilfulness, selfishness, jealousy, disrespect, untruthfulness, ill-temper and many other unpleasant qualities are directly related to that first great fault of disobedience.

New Methods for Old

Until now, scolding and whipping seem to have been about the parents' only methods. But new methods have been discovered which make it easy to train children to obey promptly, pleasantly and surely without breaking the child's will, without creating fear, resentment or revenge in the child's heart, as whipping does. This new method is based on confidence. When perfect understanding and sympathy exist, obedience comes naturally and all the bad traits that children pick up so easily are not given a chance to develop.

Do You Know How to instruct children in the delicate matter of sex? to always obtain cheerful obedience? to correct mistakes of early training? to keep child from crying? to develop initiative in child? to teach children instantly to comply with command — "Don't touch!" to suppress temper in children without punishment? to teach punctuality? Perseverance? Carefulness? to overcome shyness? These are only a few of the hundreds of questions fully answered and explained.

Highest Endorsements

This new system, which has been put into the form of an Illustrated Course, prepared especially for the busy parent, is producing remarkably and immediate results for thousands of parents in all parts of the world, and is endorsed by leading educators. It covers all ages from cradle to eighteen years.

Free Book

"New Methods in Child Training" is the title of a startling book which describes this new system and outlines the work of the Parents Association. Send letter or postal today and the book will be sent free—but do it now as this announcement may never come to your notice again. THE PARENTS ASSOCIATION, Dept. 112 Pleasant Hill, Ohio.

TO "SEE HISTORY BEING MADE," READ

Under Four Administrations

By Oscar S. Straus

[Only a portion of which has appeared in *The Outlook*]

CONFIDANT of monarchs, Presidents, Premiers, poets and scholars, America's most illustrious living diplomat in turn takes the reader unreservedly into his confidence. . . . Distinguished figures move in a continuous and vital stream through these memoirs—Lloyd George in a jocular mood at dinner, Kipling looking after his daughter in society, the Sultan sipping coffee from diamond-studded cups, Grover Cleveland at midnight suppers of delicatessen and beer, Rumania's Queen at her typewriter, Roosevelt under a Christmas tree at the White House. . .

"To read this fascinating autobiography is to see history being made. . . . Mr. Straus's remarkable life has been lived on five different continents, and has for fifty years been tirelessly identified with the world's most dramatic events."—*New York Times*.

"If you are tired of novels, bored with history, or fed up with biography, you will find sure relief in the engrossing pages of 'Under Four Administrations.'"

—*New York Herald*.

BOOKS FOR GIFTS

My Years on the Stage

By JOHN DREW

OLIVER HERFORD writes in *Life*: "The glamour of the golden age of American Drama is happily reflected in the mirror of this narrative whose valuable records and commentaries together with the directness and the good style of its telling place it at the head of all the personal dramatic histories of late years." Fully illustrated, \$5.00

Three Plays

By LUIGI PIRANDELLO

"Six Characters in Search of an Author," a recent success in London and a present sensation in New York, is to be produced this winter by Pitoeff in New York and Reinhardt in Berlin and Munich. The publication of it, with two other plays also in his characteristically original and brilliant manner, has moved the critics to say that "the publication of Pirandello's 'Three Plays' seem to us now as important a work as the first publication of Shaw's plays." First American. Limited to 1500 copies. \$3.50

Beasts, Men and Gods

By FERDINAND OSSENDOWSKI

When a book has in it the thrills of wild adventure; the thrills of exploring an all but unknown land; the thrills of penetrating the mysteries of the world's oldest and strangest religion; and the thrill of a revelation of conditions of enormous importance to civilization—it is the book to buy, to read and to give to your friends. \$3.00

The Life of Cardinal Gibbons

By ALLEN SINCLAIR WILL

A record of the manifold activities of James Gibbons as parish priest, missionary bishop, metropolitan archbishop and Prince of the Church, and an account of his contacts here and abroad with rulers and statesmen, of his influence in labor circles and wherever the questions of the day demanded his wise consideration. These volumes deserve to stand beside the life of Phillips Brooks, of Theodore Roosevelt, or of your favorite American whoever he may be. With portraits and other illustrations. Two vols. \$10.00

The Romantic World of Music

By WILLIAM ARMSTRONG

HENRY T. FINCK, the musical critic of the *New York Evening Post*, commends this book of anecdotes about the famous singers whose friendships the author has shared: "It is the most personal and entertaining book on musicians published in years." With 20 portraits. \$5.00

William Dean Howells

By DELMAR GROSS COOKE

BRANDER MATTHEWS writes in the *International Book Review*: "It is the kind of book which Howells himself would have been glad to read and perhaps even to review. . . . It is because Mr. Cooke is as keen-eyed as he is open-minded that this study of the work and of all the works of a great artist in letters is likely to hasten the day when the abiding value of Howells's contribution shall be more widely recognized and more solidly supported." \$3.00

Our Unconscious Mind

By FREDERICK PIERCE

It should be read by every one interested in Auto-suggestion. Very simply and clearly he describes the work of Cœné and Boudouin; discusses some of the extreme claims for auto-suggestion and offers a practical method for its application to everyday life. \$3.00

The Caveman Within Us

By WILLIAM J. FIELDING

A penetrating study of personality. Mr. Fielding shows how a lack of working adjustment between the subconscious forces of our nature and the forces of surface and social life is the cause of all kinds of minor troubles which can be eliminated. \$3.00

At any bookstore, or if not, they can be had, postage extra, from

CHARLES JOSEPH BONAPARTE

His Life and Public Services

By Joseph Bucklin Bishop

This is an able biography of an outstanding American whose long record of public service showed him a powerful force for good government. As Attorney-General, stood shoulder to shoulder with Theodore Roosevelt in his strenuous fight against trust domination. Mr. Bishop has caught admirably the spirit of the man—his fearlessness, integrity and characteristic humor.

THE NAVAL COMMISSION APPOINTED TO CONFER WITH THE BRAZILIAN GOVERNMENT

Front row, left to right: Captain L. M. Overstreet, Captain Thomas E. Kearney, Rear-Admiral Vogelgesang, head of the Commission; Captain J. J. Cheatham, Commander V. S. Rossiter, Commander A. W. Fitch. Back row, left to right: Commodore D. G. Ellyson, Commodore A. T. Boatsgard, Lieutenant J. D. Pennington, Commodore R. S. Holmes, Lieutenant P. S. Carroll. An article by Captain Overstreet entitled "Naval Strategy as Affected by Aircraft and Battleships" will be published in an early issue of The Outlook

THE AMERICAN NAVAL MISSION TO BRAZIL

THE United States Naval Mission to Brazil sailed December 9, on the Pan-American of the Munson Line. This mission is the first of its kind ever sent out by this country. It consists of sixteen naval officers and nineteen petty officers of our Navy. It is headed by Rear-Admiral Vogelgesang, Commandant of the Brooklyn Navy Yard. The sending of this mission to Brazil has considerable political significance and should help our relations with Brazil and Pan-Americanism. The French Government sent a military mission of French army officers to Brazil some time ago. There has been considerable interest in naval circles throughout the world to see what country Brazil would invite to send a naval mission to assist in reorganizing the Brazilian navy.

It is significant that Brazil chose to invite America to send this mission. The officers in the mission are men who have specialized in naval strategy, the operation of submarines, destroyers, mine-laying, naval engineering, the gunnery of battleships; with an experienced aviator, a doctor, and a paymaster. The nineteen enlisted men are all the very best mechanics of our Navy and include torpedo men, radio men, engineers, turret captains, gunners' mates, machinists, aviation mechanics—in fact, skilled men

able to deal with any mechanical problem in the fleet. Our Secretary of State and the Brazilian Ambassador in Washington signed a formal agreement covering a period of four years as the life of the mission.

A Washington correspondent of The Outlook states that Brazil claims that her military expenditures to-day are forty-five per cent less than they were in 1913; that she was not able during the war to do anything to strengthen her Navy and that costs during the first few years after the war were prohibitive; so that her Navy is not sufficient even for the proper defense of her long coast-line, large area, and population. She has but two modern battleships. Brazil's delegate at the meeting of the Disarmament Commission in Geneva several months ago opposed the plan proposed for international limitation, on the ground that it would never permit Brazil to build a navy yard (she has none at present) and that it would give her insufficient national defense.

NEWS MAHAN WOULD ENJOY

THE Navy Department has announced that the Atlantic and the Pacific fleets are to be united under a single commander. This announcement should mean much to the American people.

It is essential that our fleet, now that the race in battleship construction has

been practically eliminated, should even more than ever be maintained at the highest level of efficiency. With the fleet divided and under separate commands, this ideal was impossible of attainment.

A fleet is something more than an aggregation of ships. It must function in peace time as a unit if it is to be effective in times of National crisis. Its leader must not only know the vessels under his command, but must also know the personalities and the mental attitudes of his captains. They, in turn, must be familiar with the method by which their chief approaches the problems before him.

Under Secretary Daniels all this advantage was thrown away by the adoption of a policy of division which the naval history of every nation has shown to be fallacious. The new order not only means increased naval efficiency, but it also assures the American people that politics will not govern the disposition of their first line of defense.

A FAMOUS COLLEGE OARSMAN

FIFTY years ago next summer Robert J. Cook, familiarly known to several generations of college oarsmen as Bob Cook, set himself deliberately and almost stolidly a double task. One was to pull Yale out of the slough of defeat; the other was to better the style and form of American amateur rowing. As a

freshman he had literally forced himself into the 'varsity boat by strength and persistence—a member of one of the crews he later trained, Mr. R. D. Paine, tells in a book of reminiscence a queer story of the efforts of the upper-class crew members to bluff off the freshman farm boy, and of his success through sheer might of muscle and readiness to fight at the drop of a hat. That year (1872) Yale, on the Connecticut River, came in last of a long string of boats with Amherst Agricultural College at their head. Cook, elected captain after that defeat, knew that the fault was largely in the stroke, for a stronger set of men than that crew is rarely seen.

Inquiry led Cook to believe that Oxford was the best place to study rowing scientifically. He quietly said, "I am going to England," got President Porter's permission to drop back a class (from 1875 to 1876), and borrowed moderate funds (some \$300, it is said) from those who had faith in his idea—and some undergraduates had faith enough to pawn their overcoats to help "quixotic Cook," as others called him.

The next year Yale led in the race, the "English stroke" was acclaimed, and the fast "donkey-engine" short stroke that took the heart out of a heavy man, whereas the long sweeping stroke utilized his strength to the utmost, became a thing of the past. There have been, and are, varying theories about what the "English stroke" originally was and as to how far it furnished the model for present-day rowing science. Cook always said that he believed in a combination of English and American rowing ideas. At all events, as interpreted by Bob Cook, the new stroke was a surprising advance on former practice, and it is historically true that he started a new era of college rowing. The crews he coached did not always win, but his work as coach for twenty years or so was a big asset to his college. He was, we believe, the first amateur trainer and coach of a college crew.

Bob Cook's recent death has revived many stories of his early days. One is that when he got to Oxford he at first was accorded scant attention. However, the story goes, some one did invite him to a crew supper one evening, and while there he was asked if he could wrestle. "He replied that he could—a little—and forthwith he threw every oarsman in the room. After that Oxford was his, and all its rowing secrets were revealed to him." As a matter of fact, much of his knowledge was gained from a long course of instruction from Saltus, the Oxford boatman and famous builder of shells.

Cook certainly will be remembered as a good oarsman, good coach, and good sportsman.

TRYING FOR A COMPROMISE AT LAUSANNE

RECENT sessions of the Lausanne Conference have developed a more reasonable attitude than prevailed at first. The Turks have shown no disposition to insist on the extreme demands made nominally in their behalf, but really for selfish national motives, by the Russians. A great point was gained when it was essentially agreed by all the Powers except Russia that the Dardanelles Straits should be unfortified by Turkey and open to warships for passage under conditions and agreements to be reached after discussion. An international commission may supervise the operation of such a plan. It is obvious that the whole case rests upon these conditions yet to be agreed upon. Russia, for instance, as we write, is reported to say that she would never sign an agreement which should allow each nation as many warships east of the Dardanelles as are possessed by the greatest maritime Power of the Black Sea—that is, Russia. So, too, if Turkey, as is proposed, is at liberty to fortify the coast everywhere except on the Straits themselves, and to do this without reference to the extent of the fortification, it might be that the theoretical opening of the Straits would be a farce in case of war.

The inclination to compromise shown by the Turks followed, and very possibly was influenced by, the representations of the head of the American group of observers, Ambassador Child. His statement was not as clear as it might have been, but it opposed fortification of the Straits and was willing to admit of restriction as to the use of the Straits by war-vessels. It is quite probable that an agreement will be made that will limit the size and number of war-vessels in such a way as to satisfy Russia's angry opposition to anything comparable to British control of the Black Sea, and at the same time to make it possible for the navies of the Great Powers to prevent serious trouble in the Near East.

The question of deportation of non-Turkish people in Asia Minor and Constantinople and that of the continuance or non-continuance of the extraterritorial privileges heretofore accorded to non-Turkish peoples have both been put aside during the important discussion on the Straits. Turkey probably will be open to reason on these subjects, although she has interjected an ill-timed intimation that she will not allow Christians or Jews to marry or be divorced in Turkey, or to own land there—all of which sounds as if she meant that she would have no courts in Turkey except her own, which are notoriously unfair to all outside interests or rights.

An interesting letter from Lausanne,

written by Mr. Elbert F. Baldwin, of The Outlook's staff, will be found elsewhere in this issue.

THE EVACUATION OF TSINGTAU

As already reported in The Outlook (for example, in the article on "What Japan Is Leaving," in the issue for November 29), the date for Japan's evacuation of Tsingtau in the Chinese Province of Shantung was set for December 2. But December 2 came and went, and the Japanese remained. So much suspicion has been aroused by the Japanese occupation of that former German leasehold in China that this apparent breach of a pledge might naturally have aroused an outcry if the explanation had not been at once forthcoming. This was, in brief, that the Chinese had requested the Japanese to postpone their departure.

The reason for this was the danger threatened by Chinese bandits. In anticipation of the removal of the Japanese authorities, these bandits appeared with the prospect of easy looting. In dread of what might happen, many inhabitants of the city made preparations for flight. It is reported that trains out of the city were crowded with refugees. The Chinese officials were unprepared to give the city proper protection, and asked the Japanese to remain on guard.

The Chinese Government at Peking thereupon acted in a characteristic Chinese fashion. Instead of assuring proper police protection to the city, it paid over one hundred thousand dollars to the bandits to refrain from violence. Moreover, it is reported from Peking that a thousand of the bandits have been incorporated in the Tsingtau police force. So everything is arranged most happily.

According to a despatch from Tsingtau, the Chinese flag was raised over the Administration Building there on December 10 for the first time in twenty-four years.

Japan has shown her good faith.

IRISH AGAINST IRISH

NOTHING could be more deplorable than the hateful and tragic struggle that is going on between the Irish who uphold the Free State and the Irish who are permitting all sorts of lawless acts in the name of an ideal republic. So far as form is concerned, the Free State is now established. Its Constitution has been accepted by the Irish Provisional Parliament and by the British Parliament. Timothy M. Healy, a tried and true Irish patriot, has been appointed Governor-General, and this is said to be the first time that a Governor-General for a Dominion has not been a titled Englishman. The Free State Government is organized and in most respects is working satisfactorily. Yet

OUR FOREIGN POLICY!

From Henry Harrison, Brooklyn, N. Y.

International

TIMOTHY HEALY, GOVERNOR-GENERAL OF THE IRISH FREE STATE

there is an inter-Irish, irregular, bloody combat going on, with assassination on one side and retaliation on the other. No wonder that Ulster now refuses to join the Irish Free State.

The policy of retaliation was not successful when it was half recognized by the British Government in the "black and tan" troubles; it remains to be seen whether it will work as between two factions of Irish people. The argument for it is that nine-tenths, as some say, of Irish voters are in favor of the Free State; that the small remainder do not fight in the open as in war, but kill and destroy where there is no resistance; that the only way of dealing with them is through implacable measures. On the other hand, many deprecate the official announcement that whenever political assassinations occur the Free State authorities will execute prisoners who have been found guilty of carrying arms contrary to law, and that these executions will be through courts martial. The execution of four fairly well known rebel leaders which followed the execution of Childers was of this nature. It certainly would be less repellent to humane sentiment if the men executed under the reprisal order were those who had been found guilty of some definite

act, such as plotting assassination or committing specific outrages. The executions were followed by various acts of violence, and it is still doubtful whether the new policy will help or hinder the establishment of the Free State.

The Irish Senators are generally men of recognized ability and moderation. The names include those of Sir Horace Plunkett, William Butler Yeats, George Russell, Lord Mayo, and Lord Dunraven. These and others of their colleagues certainly fill the condition of the new Constitution that the Senators should be "citizens who have done honor to the nation by reason of useful public service, or who because of special qualifications or attainments represent important aspects of the nation's life." There are to be sixty Senators, with a term of twelve years.

THE STATE OF AGRICULTURE

There is no Government report which is of greater importance than that of the Secretary of Agriculture. Secretary Wallace, one of the ablest men in the President's Cabinet, has in this year's report of his Department placed graphically before the country the condition of American farms.

For the past three years farmers, com-

prising one-third of the population, have labored under a serious disadvantage as compared with other groups of workers because of the disproportionate relationship of prices. Secretary Wallace says:

Certainly no other industry could have taken the losses agriculture has taken and maintain production, and we have no evidence to show that any other group of workers would have taken the reduction in wages in the spirit in which the farmers have taken their reduction. Many thousands of farmers have not been able to weather the storm, notwithstanding their strenuous efforts. Thousands who purchased land during the period of high prices have been obliged to give up the struggle, let their land go back, lose all the money they paid for it, and start anew. Many thousands of renters who had substantial savings invested in farm equipment and live stock have gone through the same experience and have lost everything.

Apparently the Secretary believes that the turn in the road has been reached. He continues:

It is fair to say that in general the farmers of the United States are in a better position financially now than they were a year or eighteen months ago. Farm products are selling at considerably higher prices, and it is estimated the aggregate value of the crops in the country this year is about \$1,250,000,000 more than last year.

Another reason for rejoicing he finds in the willingness of those engaged in industry, commerce, and finance to bring about a more favorable adjustment for the farmer:

Such people are coming to realize more and more the menace to themselves in conditions so unfavorable to agriculture as those of the past three years. Their attitude towards the farmer has changed from that of a benevolent paternalism such as was so much in evidence during the ten years preceding the war. They now understand more clearly that their own future is inseparably linked up with the farmer, and that in doing what they can to help him get on his feet again they are helping themselves as well.

Rightly the Secretary says that agriculture cannot be placed upon the exact basis of which manufacturing is capable, but he believes that much can be done to improve present conditions.

It will never be possible for the farmers to relate their production to profitable demand with the nicety of the manufacturer, both because they cannot control the elements which influence production and cannot estimate demand so closely. Neither will the farmers ever be able to organize, as have the labor unions, and by rules and regulations and disciplinary measures compel obedience to policies adopted. They can, however, bring about a better adjustment of production, and especially of marketing, to the needs and purchasing ability of

THE FEDERAL FACT-FINDING COAL COMMISSION

The Commission, composed of seven members including former Vice-President Marshall, will make a thorough investigation of the bituminous and anthracite industries with a view to the prevention of strikes. In the picture, left to right, around the table, are: Judge Samuel Anshuler, of Aurora, Illinois; George Otis Smith, of Washington, D. C.; Thomas R. Marshall, of Indianapolis, Indiana; John Hays Hammond, of Washington, D. C.; Charles P. Neill, of Washington, D. C.; Clark Howell, of Atlanta, Georgia

(C) Harris & Ewing

possible customers if they will perfect their organizations and call to their aid men skilled in interpreting conditions which influence supply and demand. Better adjustment of farm production is worth striving for. Both the farmers and the consuming public would be benefited through more stable production, and therefore more stable prices.

Secretary Wallace brings to his present office the background of lifelong experience with farms and farm conditions. His words are worth listening to.

A STATE TAX ON COAL

THE United States Supreme Court's ruling that Pennsylvania is entitled to tax her output of hard coal fastens a burden upon the class of consumer least able to bear it—the householder. For, while the State will collect this ad valorem tax of $1\frac{1}{2}$ per cent from the producer, the latter will of course collect it indirectly from the consumer. Thus to successive wage boosts at the mine, which in turn increase the retail price of this necessity, is added a tax which is expected to bring the Keystone State a revenue of at least \$7,500,000 a year.

In reaching its decision the Supreme Court was concerned only with the legal aspect of the case; whether such a tax was fair to some twenty other hard-coal-consuming States did not enter into the question. The Court merely ruled that any State can impose a tax upon its products before they are put into interstate commerce, even though other States are large consumers of such prod-

ucts and do not produce them. So Pennsylvania lays the coal tax at the mouth of the mine, before it actually starts on its road to other States, and compels the people of these States to pay a special tax to help support Pennsylvania. And the higher the price of coal, the greater will be Pennsylvania's pecuniary benefit.

At present the tax is 15 cents on every \$10 ton of coal. But there is nothing in the Federal Constitution that would prevent Pennsylvania from increasing the tax to any amount she pleases. There is, however, the Pennsylvania user of domestic-size anthracite to consider, for upon him as well as upon the outsider the coal tax falls. Were it not for the fact that the voter of Pennsylvania has it in his power to rise up and smite the Legislature which passed the law should an exorbitant tax be levied, the danger of an increase in the tax might be very real, for most of the anthracite mined in Pennsylvania is burned in other States.

Pennsylvania can impose this tax without a qualm, because Pennsylvania has no competitor in the production of hard coal. Her monopoly, in fact, is more complete than that of any other State over any widely used commodity. Having such a monopoly, it can legally place a tax on the residents of other States by forcing the tax into the price the consumer must pay or go without warmth.

Since Pennsylvania is permitted to levy a tax against her sister States on a household necessity in which she has

a practical monopoly, other States may follow her example. In fact, Minnesota already taxes her output of iron ore. The possibilities in this direction are not to be disregarded.

Another dangerous possibility in the instance of Pennsylvania is that the coal operators may be permitted to fix prices and the union official the wages of miners without fear of competition. There is no practicable substitute for anthracite at this time, although the high price of the commodity and the uncertainty of its supply because of strikes have caused many consumers to seek substitutes, such as oil and soft coal. But anthracite is still considered a household necessity in some twenty States.

COAL SHORTAGE AND COAL SUBSTITUTES

SIX months ago a well-informed correspondent of The Outlook said in an article in this journal, "The people of the United States are facing a certain shortage of anthracite coal next winter." He based his belief on the fact that during the two months of strike that had then elapsed the shortage in hard-coal mining was such that it would be difficult to catch up with it. For months following the strike continued, and when it ceased there was a shortage of millions of tons of anthracite.

The people who use hard coal have for the most part taken the situation philosophically, have not shown signs of desperate alarm, and are doing their best to cope with the situation. Not

much gain has been made toward wiping out the shortage of coal. The United States official figures of production show this. It is evident that where substitutes can be used for hard coal or economy can reduce the amount of fuel used it is every one's duty to act in accordance with the pressure of the situation. Federal and State authorities have published careful and practical suggestions in this direction, and such an article was published in *The Outlook* for November 22. Soft coal of good quality, coke, and smaller sizes of anthracite than are usually regarded as desirable for furnaces may, with care, be used to advantage in this crisis.

Meanwhile the Coal Commission appointed by President Harding, commonly called the Fact-Finding Commission, is, no doubt, studying the situation carefully. We hope that it has its agents directly on the field and that it is not depending solely on printed statistics and the evidence of experts, whether union experts or operators' experts. This is the kind of situation that is best met by original investigation through skilled and reliable personal representatives.

Assuredly, the public which uses hard coal is entitled to know whether coal owners, union miners, coal-carrying railways, and distributors are all doing their best. For instance, we hope that there will be a thorough and drastic inquiry into a statement credited by the New York "Tribune" to Mr. C. J. Golden, President of District No. 9, of the United Mine Workers of America, one of the three districts in the anthracite region. Mr. Golden, according to the "Tribune," charges that the order by New York's State Coal Administrator to use for domestic purposes some of the so-called "steam size" of anthracite "will serve only to give added profit to the coal operators, who are flooding the market with the steam sizes because of the much larger profit which the sale of these grades nets them."

Mr. Golden, according to this article, asserts that "hundreds of miners who could be at work producing freshly mined domestic sizes are walking the streets without work," while at the same time the coal producers have "loaded thousands of cars with coal from the culm banks for which they knew there was no demand."

This is a very serious charge. It amounts to saying that the mining companies are deliberately refusing to do their best to get the proper sizes of domestic anthracite coal to consumers and are abusing the situation to force the sale of undesirable sizes.

The article states that Mr. Golden is to go before the Fact-Finding Commis-

sion some time in January. Certainly the Commission should lose no time in putting such a charge to the test. If it is a partisan lie, it should be exposed; if it has any truth in it, the truth should be known.

PRESIDENT HARDING'S ADVICE TO CONGRESS

A READING of President Harding's Message, which was delivered in Congress on December 8, leaves upon the mind of any one but an extreme partisan an impression of a personality rather than a policy. This is not of itself the sign of any defect. On the contrary, at a time like this, when there is evidently much unrest and confusion of mind in the people, it may be actually a virtue in the Presidential Message that there should be no appearance of an attempt to formulate for the people any policy that could be termed definitely radical or conservative. And yet the Message does not give the impression of a series of unrelated, much less of inconsistent, recommendations. There is a unity in the Message which is supplied by the personality behind it. Some of the recommendations are obviously acceptable to men considered progressive; some are in line with measures advocated by men who class themselves as radical; some of the recommendations are plainly dictated by considerations which appeal to men who are regarded as conservative. From the Message it would be hard to gather evidence that the President himself belonged to any group. The path which the President has marked out for himself seems to cut across various domains; but all the while one is impressed by the fact that the man who is following that path is a man of good will, of experience, of open mind, of conviction without excess of emotion and without obtrusive prejudices. So far as it expresses a political philosophy, the Message is that of one who apparently has taken advice from many sources and has come to his conclusions by the process of weighing in each case the counsel that he has received and accepting that which, in his judgment, turns the balance on the side of common sense and practical wisdom.

The political effect of such a Message is in some respects like that of one which might be drawn up with the design of enlisting the most varied kind of support and of dividing the opposition. How, for instance, is it conceivable that the so-called radical group can be mobilized enthusiastically in opposition to

the President because of his recommendations concerning railway labor legislation when that same group find that the President is strongly in favor of some of the things that they want, such as the extension of credits to the farmer and the adoption of a Constitutional amendment permitting a Federal child labor law? There is no indication, however, that the Message was drawn up with any such design. There is, on the contrary, every indication that it is the expression of the President's mature judgment upon the subjects with which he deals. Its spirit is such as to make any criticism of it which is purely factional or partisan seem unworthy. The Constitution provides that the President "shall from time to time give to the Congress information of the state of the Union, and recommend to their consideration such measures as he shall judge necessary and expedient." President Harding's Message makes the impression that he has been guided, not by political design, but by his judgment of what is necessary and expedient in making his recommendations.

AN OUTLINE OF THE MESSAGE

For the severest problems of government President Harding finds a single cause. It is, to use his own phrase, the "readjustment of the social and economic order" after the World War. More specifically, he finds it to be the attitude of individuals toward this readjustment—the fact that every one, to put it broadly, wants war-time compensation with pre-war expenditures, seeking readjustment for everybody except himself.

If the President could convince, not Congress, but the great majority of his fellow-countrymen of this, he would probably save Congress from a good deal of its legislative task. It is obviously impossible for the President to do this directly; but if this very simple idea (which probably is one of the ideas which called forth from a Congressional critic of the Message the scornful comment, "Latitude, longitude, platitudes") could be made the subject of editorials, and sermons, and conversations the country over for the next few months we imagine that the whole people would be saved from many of the difficulties that are ahead of them.

The President does not expect a restoration of the old order; he does not think that any one regards it as desirable; but he believes that humanity needs to be committed to "the tranquil ways of peace." In this he is not thinking primarily of international relations, but rather chiefly of the social, financial, and economic problems at home; for, as he says, "every nation must be able to carry

on for itself, else its international relationship will have scant importance."

As an example of the desire for war compensation with pre-war costs he cites the coal and railway strikes. Both of these he condemns as unjustifiable, and he holds both labor and the "heedless forces of reaction" accountable.

By the railway strike the distress of the American farmer was increased. That distress was, however, evident before the strike. So far as it was due to what the President calls "precipitate deflation" it was somewhat relieved by Congressional acts. The President believes that the Farm Loan Bureau should have its powers enlarged and that there should be created in the Federal Land Bank a division to deal with productive credits with special reference to credits for the production of live stock. In addition he urges measures for better and cheaper transportation. To avoid paralysis the President finds it easy to believe that the transportation of the country needs "complete reorganization on some new basis." Incidentally he urges a closer connection between the rail lines and the sea carriers, the utilization of our inland waterways, and the use of the motor truck, not as a competitor, but a feeder and distributor in conjunction with the railway. In securing lower costs of transportation on staple products the five per cent horizontal reduction in rates proved, the President said, futile. What the President desired last summer and proposed informally was a heavier reduction on basic commodities such as farm products and coal, leaving the other commodities untouched. The President opposes Government operation because "it was Government operation which brought us to the very order of things against which we now rebel, and we are still liquidating the costs of that supreme folly." Economies must be made out of the margin left over from the fifty to sixty per cent of railway earnings which go into wages. There should be more intercarrier co-operation, with mergers of lines into systems, interchange of freight cars, economic use of terminals, and consolidation of facilities. The President thinks well of the proposal to provide a central agency under the jurisdiction of the Inter-State Commerce Commission as a means of financing equipment. So much for the material side of the transportation question.

But there is a human side. The Railroad Labor Board showed a lack of power to deal with the subject. The President praises the attempt of Congress in establishing that Board, and declares that some such agency must be a guaranty against even the threat of discontinued service. He recognizes the

right of men to labor or to cease to labor as they choose; but he asserts the right of the Government, which safeguards the men's interests while they work, to insist upon their not leaving work under conditions that destroy the service of the railway itself. This view of the President has been interpreted as the advocacy of a law prohibiting strikes. This is not a statement on the part of the President; it is an inference from what he says. All he asserts is the right of the people to adopt measures to prevent strikes. He distinctly says he wishes he could bring a precise recommendation to that end, but he does not make any recommendation specifically on that point. He believes that such a tribunal as is needed should be, not one composed partly of partisans, who represent managers and wage-earners, respectively, but one wholly impartial. He goes further than this, for he thinks the Railroad Labor Board should be abolished and in its place there should be a labor division in the Inter-State Commerce Commission to decide disputes relating to wages and working conditions. It ought to be relieved of hearing minor disputes which should be left to negotiation.

Evidently in answer to criticism, though not specifically mentioning any, the President refers to the flexibility of the recently adopted Tariff Law as a means not only of safeguarding American interests but of keeping open "the paths of such liberal exchanges as do not endanger our own productivity." Internationally he wants our voice to be heard, but as "that of good counsel, not of dictation."

The President thinks it is important to meet the "recrudescence of hyphenated Americanism," and "to make the alien respect our institutions while he accepts our hospitality;" but he thinks it still more important that all in the United States respect and abide by the Nation's laws. In particular, he refers to the widespread disregard of prohibition, deplors its political effects, and urges rigorous and literal enforcement. If the prohibition statute is contrary to deliberate public opinion, which the President does not believe, the enforcement of it will direct public attention to the requisite change in the law. Since both Federal and State Governments are charged with enforcement, the President purposes to invite the Governors of States and Territories to a conference with the Federal executive authority.

For the regulation of the alien he urges the speedy passage of the Alien Registration Bill and a measure for providing examination of aliens abroad. Especially for the education of the im-

migrant he believes in co-operation of the National authority with the States.

The President urges the adoption of two Constitutional amendments—one enabling Congress to legislate against the evils of child labor, the other to provide for the restriction of the issues of tax-exempt securities.

After touching upon reclamation and irrigation, upon the fuel problem, which is now under study by a Fact Finding Commission, upon the question of prices, upon the super-power programme drawn up as a result of a recent survey, and upon the plan for drafting all the resources of the Republic in case of war, the President closes with a brief reference to international relations. Again expressing hostility to any "super-government" or "armed alliance," he makes a reference to the treaty between the United States, Great Britain, France, and Japan which provides for consultation in case of any dispute arising concerning the islands of the Pacific. Of this he says:

The Four-Power Pact, which abolishes every probability of war on the Pacific, has brought new confidence in a maintained peace, and I can well believe it might be made a model for like assurances wherever in the world any common interests are concerned.

This has been regarded as the most significant statement in the whole Message. We do not think it is necessarily an announcement of any plan for a similar treaty dealing with European questions or questions concerning the Atlantic area. The President hoped, as he plainly stated at the time, that out of the Washington Conference might come other conferences based on the same principle, and as a consequence of the treaties there made other treaties might later be drafted in the same spirit. Whether this statement in the Message is anything more than a reiteration of that wish we do not know; but, even if it is only that, it is significant as an indication that the American Government believes that treaty has already proved its value.

THE MOST CONTROVERSIAL SUBJECT

It is impossible for us to discuss all the President's recommendations here. With the purpose of them all we find ourselves in general agreement. On the most controversial subject in the whole Message, the prevention of strikes on such public utilities as the railways, the President has spoken with courage, for he must have known that it would arouse the antagonism of leaders of organized labor; but he spoke not as a representative of any group in the Nation, but as the representative of t

whole people. And his position on the subject is impregnable. No group has the moral right or ought to have the power to cripple the transportation of the country. Whether, lacking that right but trying to exercise the power, any group should be restrained by law or should be brought to a better mind by persuasion is, after all, not a question of principle but a question of means. We are of the opinion that the greatest progress toward the prevention of such strikes is by means which will bring managers and men together about a common table and to a common understanding. If in the meantime, for those who are obstinate and recalcitrant, a law making a strike on a railway a criminal conspiracy is necessary, the people have the right to enact such a law. We doubt, however, whether such a law would prove of any great avail toward a permanent solution. We expect much more from what has already proved the more efficacious—such an organization of men and managers as has been in operation on the Pennsylvania Railroad.

With the other recommendations of the President we expect to deal as they come up for action in Congress.

CAN A POET MAKE A LIVING?

WE are gratified to discover that this important question has been answered with enthusiastic affirmation by a writer in a magazine called "The Poet and Philosopher," which drifted into The Outlook office not long since. The issue in which this answer appears is some months old, but the question and answer are eternally pertinent.

Rightly enough, the author of this important document says that the question of a living is of the greatest moment to the poet. There have been three answers, we learn, to this question. The first is that the poet will not receive reward enough to pay for his postage stamps. The second is contained in the rosy-colored picture painted by literary sharks and teachers of the trade of literature. And the third is the more modest and intermediate answer which the author himself puts forth.

He is a very cautious soul, this writer; he is frank enough to say that it will take the poetic apprentice three or four years of unremitting application before he can expect much remuneration from his efforts. In this period before the future poet bursts from his chrysalis the writer recommends stenography, printing, reporting, teaching, proof-reading, or photography as a means of sus-

tenance. Trades like that of "the butcher, the baker, and the grocer" are to be avoided "as getting away from that atmosphere of imagination and refinement in which the poetic art most flourishes." It is a pity that Mr. Masefield did not know of this before he missed his chance of success by serving as a bartender in New York. We feel, too, that there is something to be said for the trades of butchers and bakers and grocers, despite the fact that they lack the atmosphere of imagination. A surreptitious chop, a loaf of bread, or a pound of chocolate borrowed on occasion might be used as an offset to the air of materialism surrounding such trades.

The period of preparation is divided conveniently into three sections—"the first year the poet will devote all his energy to making himself a master of the art of poetry, . . . the two following years he will be solicitous mainly in making his name known." We suspect that this latter period is too short. We have seen poets solicitous over this important item long beyond the period of two years. Some of them have been more solicitous over this than over the quality of their workmanship.

The schedule for the poet during this period requires him to have one hundred poems published in some fifty magazines and newspapers and printed gratis if pay is not forthcoming. The fourth year is consumed in the preparation of a volume of poems, and full details are given as to the size of page, print, length and number of poems. One hundred pages, or 80,000 ems, is the allowance for the achievement of at least pecuniary sufficiency. This book is to sell at a profit of \$200 for the first year's sale and \$50 for each succeeding year. As a new volume of poems is thereafter to be printed each year, of course the total will soon mount to a living income. The proposition is even simpler than the minds of those readers who accept it as a gospel of success.

One thing we neglected to note. It is the subject matter of those poems upon which the poet is to mount the ladder of success. He is advised to "sing of the deeds of great men, of the deeds that they have accomplished, of their hills, dales, valleys and streams." Apparently, however, one must be careful of one's choice of great men, their hills and dales and what grows upon them. Elsewhere in this same issue of "The Poet and Philosopher" we find a sonnet submitted to the editor of this magazine in a prize contest. The poem received only a second prize, largely, it seems, because it was addressed to Luther Burbank. The explanation follows:

Luther Burbank is an American, and, in his field of Horticulture, justly

celebrated, still the cultivation of potatoes, which first brought him fame, places him rather in the ranks of commonplace personages; and poetry always eschews the commonplace. Cultivating potatoes, and vegetables, even though subsequently he turned his genius to the rose, is not a topic that is going to spur Pegasus [*sic*] to the top of Mount Parnassus.

Theocritus and Virgil please take note.

ADOPTING A VILLAGE

IN her account of "Christmas at Hattonchâtel," printed elsewhere in this issue, Miss Skinner keeps herself modestly in the background. From her story it would be impossible to derive any idea of the part that she has taken in the resurrection of that ancient and picturesque French village. The story which she tells would not have been possible except for the work that she has done.

That work started while this town in the St. Mihiel sector was still occupied by the Germans. Miss Skinner was then within the French lines. She saw the little town through a field-glass, and then and there adopted it.

At that time there was little left of it but the hill, for the village had been under bombardment for four years and a French officer told her that the Germans would probably blow that up when they left it. "Then," replied Miss Skinner, "I will rebuild what is left of it."

In the meantime she made arrangements with the French Government for finding and caring for the scattered population and for putting into proper institutions at her expense all the little children and old people until the Germans were driven out and rebuilding could begin.

As Miss Skinner has herself explained, France rebuilds her own villages and expects to refund all that has been spent by her friends in actual rebuilding. "But," adds Miss Skinner, "there are 'luxuries' that France cannot afford." Among these luxuries is a public *lavoir*. This is something that Miss Skinner has supplied, and now, instead of carrying the family wash down the six-hundred-foot hill to the little pool in the plain and up again, the women of the village can do their washing in an inclosed Gothic *lavoir* with running water at the top of the hill. There is also in the town now a dispensary. In the fields are a threshing-machine and a reaper. There are cattle and poultry and rabbits. And men and women whose homes were there are taking heart again.

Hattonchâtel is not the only village

which Miss Skinner has helped to bring back to life. At the request of the French, she has become the president of an American branch of the French committee for the liberated villages, and has been speaking and writing to Americans in behalf of the adoption of French villages, not in order to put American-made villages in their place, but to re-

build ruined French villages in the French way.

Miss Skinner is a graduate of Vassar and President of her class; and the story of what she has done is recounted in a little pamphlet which was written for the information of her classmates. She was born into an atmosphere of service, for her father devoted much of his time

and of his means for the community in which he lived—Holyoke, Massachusetts. It is true that Miss Skinner had means which she could devote to this purpose; but it is herself that has counted rather than anything that she had.

This is a story of what one American woman has done and what other Americans can help to do.

NEWBERRY'S SUCCESSOR

A STUDY OF SENATOR COUZENS

INTERVIEWED FOR THE OUTLOOK

BY RICHARD BARRY

TRUMAN NEWBERRY, ex-Senator from Michigan, has, I have been told, about three or four million dollars, only. His successor, James Couzens, late Mayor of Detroit, received in 1915 from Henry Ford a single payment of thirty million dollars for the outright sale of his stock in the Ford company. Before he received that sum he had as much money as Newberry or more. Compared to the former Senator from Michigan, the present one is a vastly richer citizen.

Yet the arrival of the two men in the United States Senate strikes exactly opposite reactions from the public. The election of Newberry through a use of money which was widely deemed improper created a scandal which cost some of his friends their political lives and eventually forced him to resign. The appointment of Couzens (into which the question of his money does not enter) is greeted with a chorus of approval from both press and public men. Henry Ford, from whom he parted in anger seven years ago, says he is the best choice that could be made. His Democratic colleague, Ferris, the first Democratic Senator ever elected from Michigan, says he is the best man the Republicans in that State have. From the dominant party there is no publicly voiced dissent.

No man could begin his career in the upper house at Washington more auspiciously than does Senator Couzens, and yet there is that millstone of thirty-odd millions around his neck. How did he do it?

To answer that question and to suggest to the readers of *The Outlook* what may be expected from Couzens in his new environment I recently spent part of an afternoon with the new Senator, and found him vividly frank and copiously willing to assist in an articulation of his energy and purpose in public life.

For several days the reporters had been striving to secure from him expressions of opinion on moot subjects likely to engage the attention of the Senate in the near future—on ship subsidy, on

prohibition, on farm credits, on railway legislation, and so on.

"I told them all," he said as we disposed first of this momentary phase of his mental attitude, "that I am refusing to commit myself on National problems until I get to Washington and have a chance to study them. I am frank to say that I don't feel certain enough of my opinion on any of these subjects to commit myself now. I am open to conviction. When the proper time comes, I will decide."

"Many are assuming, however," I objected, "that, as Governor Groesbeck appointed you to heal a sore occasioned by a so-called reactionary, and especially because of your record as the most conspicuous champion in the country of municipal ownership, that shortly you will become classified as a progressive."

"I don't want to be classified at all," was the sharp rejoinder, spoken like an executive of big business across his desk, and little like any brand of politician to whom the interviewer is accustomed. "I am not begging the issue when I say I don't know what progressivism is."

"You are familiar with the history of American politics for the past ten to twenty years?"

"Yes—and no. I have never belonged to any political organization; have never taken any active interest in National politics, have never written or spoken a word on any National issue. It may have been a mistake to appoint a man like me to the Senate. I don't know. We will see."

He said this with impersonal naïveté the sincerity of which could hardly be questioned. In fact, the whole impression taken from him was that here is a mentality of simple strength and lucid candor long accustomed to deal in materialisms, only newly adjusted to the humanities, but eager to transfer his physical yardstick to impalpable problems, and unhesitant in his certainty of the outcome.

"But when you reach Washington," I insisted, "you will immediately confront

a practical question which will require an immediate answer. The progressive bloc is organizing for tactical legislative procedure in the new Congress. Whether you desire to or not, you shortly will be compelled to declare yourself for or against it. Can't you tell me now where you will stand when that time comes?"

"No, I can't, because I don't know myself. If this bloc you call progressive is for something I believe in, then I'll be with them, but I'll not commit myself to any group for all its programme. I may be with the farm bloc on some things, but not necessarily on all things. By this I don't mean that I have figured out just how much I am with them, for I haven't. This goes for the standpatters, too. I'm likely to be with them in some things. The standpatters are not always wrong."

Which seemed to the writer in the nature of an epigram, but, as with many good epigrams, its author was unconscious of the creation of a *mot*.

"There is one National problem on which you can hardly fail to have a very important opinion," I continued; "that is concerning the railways. You are an imposing authority on city transportation. What, then, do you think of National transportation? For instance, as you are thoroughly committed to municipal ownership, do you extend that belief to include Government ownership?"

"No." The answer was decisive and inclusive as he elucidated. "The two things are radically different. The car lines of a city are a simple problem, comparatively. I mean they are a single unit, comprehensible in the view of all the citizens of the municipality. It is right, in fact inevitable, that the community should own and operate them, for then at all times it can have control of the officers and methods of operation."

"With National transportation a new element is injected. The people directly and vitally concerned cannot at all times or at any time have supervision and control. That is why I am against Government ownership of the railways. I

P. & A. Photos

JAMES COUZENS, THE NEW SENATOR FROM MICHIGAN, WITH HIS DAUGHTER-IN-LAW, READING THE TELEGRAM FROM GOVERNOR GROESBECK OFFERING HIM THE SENATORSHIP

don't believe in absentee landlordism. Government operation has to be managed at a distance, presumably from Washington, by men who do not come in direct contact with the people and the problems they affect. Besides, it was tried and failed."

For the moment we dropped the subject there, but later we came back to it, and then it appeared that the opinions of the new Senator, on this subject at least, might be open to change. It was after he had told me of the many failures of the city of Detroit, over a period of twenty-five years, to secure municipal ownership, including the failure of several of his own early plans, that I referred to the alleged failure of Government operation of the railways during the war, and asked him if he did not see some new way in which to overcome the objections to Government ownership to be read by practical men in the lesson of experience.

"I think Government ownership is quite likely to become a fact," Couzens continued, "and I don't know that I'll oppose it; but there will have to be some change from the late war-time operation to remove it from the danger of bureaucracy. Perhaps regional opera-

tion may be this solution. Cut the country up into zones, and make each rule itself with local men, local methods. Then you might avoid absentee control, absentee ownership. The evils of either will kill any enterprise."

"Pursuing this line of thought," said I, "we come naturally to the question of ship subsidy. Ships are but an extension of land transportation. What about 'Government aid' there, to use the words of President Harding?"

"Can't say. Haven't thought of it—haven't studied it."

"You'll have to vote on it."

"There's time enough for that after I get to Washington."

Which recalled a remark Kitchener made to me in his Calcutta office many years ago in describing why he preferred American engineers to all others. "European engineers," said K., "may be more carefully trained and more certain of procedure, but I found in the Sudan that when other engineers refused to go ahead because they saw no way of operation the American was willing to start in with a whistle and then build a locomotive up to that."

Senator Couzens is starting in, as I came to the conclusion, with only a

Senatorial whistle, but quite confident that he can build a locomotive under and to fit it.

Aside from the journalistic interest inhering in Couzens just now, due to his succession to the dethroned Newberry, and the collateral question (already tentatively answered) of how far he may try to carry his theories of public ownership of public utilities, another National development or trend of development is imperatively suggested. I refer to the entrance of the big business man into the realm of practical politics, not indirectly, but as an actual executive. Mr. Couzens is a conspicuous exception to the rule that our captains of industry avoid political office. Therefore I asked him what it is that prevents business men, as a rule, from seeking or accepting political office.

"Very few of them are fitted for it at all," he replied, without the slightest hesitation, "and there is one fundamental reason which is very clear. Of course I mean men at the top, men who have made good in commerce and industry on their own, men who have had the responsibility of directing large enterprises. Men like this have become accustomed to dealing with things as things. A dollar means just a hundred cents, no more, no less. Machines mean just so much, no more, no less. Inevitably and automatically they reduce the value of men, and without ever meaning to be inhumane or inconsiderate, to one common denominator. What is worse for them if they ever get into politics, as business men, if successful in a large way—nobody ever talks back to them. They give orders, and the orders are obeyed. That is all there is to it.

"In politics you reverse this process. You take orders, and you take orders from the people, and it is pretty hard for a man who has all his life given orders and who has been taught by every one with whom he came in contact that his orders are just, and that even if unjust they have to be executed without delay or criticism; it is pretty hard for that type of man to begin all over again. He has to, or he can't succeed in politics.

"Take my own case, if you will. I don't mind telling you exactly how it has been with me. Until 1915 my whole life was concerned exclusively with business. For a long time before that Henry Ford and I had divided the responsibility of the Ford Motor Company. He had charge of manufacture; I had charge of finance, purchase, and sales. My sway in my department was the same as his in his. If he wanted to put five wheels on the Ford car, I was not consulted. If I wanted to buy ten million tires or open a branch in South Africa, I did not consult him. When he built his new factory, his office was placed in the end near the power house, mine in the end near the bank. In my department I was the Ford Company, and I never had occasion to brook interference or criticism. This went on

without one single word of inharmony between us, until one day during the war he took occasion to countermand one of my orders concerning material going into the paper he published. A quarrel resulted that lasted no more than thirty seconds, and that is the only time I ever had the slightest misunderstanding with Henry Ford. I resigned instantly, and sold out to him shortly after.

"What was I to do? Still young, barely fifty, in perfect health, with more money than I knew what to do with, my taste for business suddenly seemed satisfied. I might have founded another motor company, but that didn't appeal to me. While in this frame of mind I was appointed Police Commissioner without the slightest idea of what it might mean. Then for three years I fought thugs, prostitutes, and the press. At least I began by fighting the press. I kept that up until I learned that the thing to do is to ignore it.

"A public man is a fool if he tries to control the newspapers, and he is a bigger fool if he is controlled by them. Those first years I was very deeply hurt by things printed about me. I knew they were unjust. I was giving my time and the best of my ability to the city of Detroit, and so far as I could see was receiving only public misrepresentation. But I thought it over, and came to the conclusion that, while the experience was new for me and hurt, still nearly all public men who did their duty had to endure about the same sort of stuff. A man can't set himself up as a target if he don't want to be hit.

"I was kidded into standing for Mayor. Some of my friends said I was so unpopular I couldn't be elected dog-catcher. Indeed, it did look that way. But I was elected Mayor, and then came the practical proposition: Was I to float through that job, or was I to set myself at it the same way I had set myself at being Henry Ford's partner?

"Nobody could answer that except myself, the same as nobody could ask it except myself. Now, I have been called all sorts of things. I have been called a Socialist and I have been called crazy. But I am certainly not a Socialist and I leave you to judge as to whether or not I am crazy. I had no theories at all about municipal ownership when I first went into office. In fact, I had never given the subject any thought.

"But Detroit needed new railways and she needed to have the old ones better run. It was the biggest problem we faced. I said to myself: 'I am Mayor of all the people, so I am going to try to find out what they really want, and then I consider it is my job to discover the most economical way to give it to them.' Same mental operation I would have used at the Ford factory in contracting for a year's supply of rubber or steel. The only difference was that, instead of dealing with a single man who never questioned my judgment, I was dealing with a million people whose

ideas on the subject were open to prejudice by innumerable journalistic and other attacks.

"However, it was clear to me that the people of Detroit wanted municipal ownership. They had been trying ineffectually and half-heartedly to get it for twenty-five years. It was simply a question of having some one point the way. Somebody had to make it a practical business proposition. That seemed to be my job. The logic was so plain that I couldn't possibly have escaped it. If I remained Mayor, I had to do that or stultify my conscience.

"Yet, don't think it was easy. The people turned down proposition after proposition I put up to them. That didn't discourage me. It only made me conclude that I hadn't found the right way. Finally I got the railways to agree to a court appraisal of the existing property. This came to thirty-one and a half millions. I thought it was three or four millions too much, but, as a business man, I had learned that it is sometimes well to pay a little more than a thing is worth if you have to have it. So I recommended the purchase at the appraised figure. Again the people turned me down. Then I said to them: 'You have been crying for municipal ownership all these years, and yet you turn down every practical proposition I put up to you. Now it's time for you to put up or shut up. Give me fifteen millions, and I'll build some lines of our own.' They did, and then the fun commenced. By the time I was building a mile a day the privately owned lines capitulated and were ready to sell at any price. Finally the city bought them in for nineteen and a half millions.

"Perhaps that experience did me good. The people weren't so far wrong, after all. As a business man I'd have paid twelve millions more for those lines than we were obliged to pay for them, although I must say that the twelve millions was not clear gain, for we wasted some money building our own lines.

"The seven years has taught me that in politics it is give and take. You don't get the quick results you do in business, but in the long run they are just as, or even more, satisfactory. Moreover, a man cannot hold political office without expecting to have his every act subject to criticism and repeal. I don't mind saying it's a hard lesson for a successful man to learn."

The writer had heard two rumors concerning the motive prompting Governor Groesbeck in the appointment of Couzens to the Michigan Senatorship. One was that he had been selected as the best man to block the political aspirations of Henry Ford. Another was that the amalgamated traction interests of the country had engineered the appointment so as to remove Couzens from his (to them) dangerously successful sphere of influence in the operation of the municipally owned street railways of Detroit. The new Senator was frank in

discussing both, neither of which he credited.

"I don't see how I can block Henry Ford's political aspirations," he said. "I can never be a candidate for the Presidency, for I was born in Canada. Besides, I am confident that, if the Democratic party does not nominate Mr. Ford, he will run independently in the next campaign. He cannot see that a man must have a career in politics, just as in business. A man cannot start at the top in one any more than in the other. Mr. Ford would be the last one in the world to expect that any one should begin his business career at the head of a company, say, like his own. Yet he thinks he can begin in politics as President of the United States. If I had been appointed Senator straight from the Ford office, it would have been a foolish political blunder. I doubt if I would have been considered at all if I had not been first Police Commissioner and then Mayor of Detroit."

"Do you think the Governor was influenced, even unconsciously, by the traction interests who want you out of the Mayoralty?"

"No; but, even if so, it does not make much difference. The justness of the principle of municipal ownership is not dependent on the retention in office of any one man, or any two, or any three men. And my leaving the Mayoralty will not affect the operation of the street railways of Detroit. Municipal ownership is established there for all time to come.

"It will spread to other cities, too. I am satisfied that the people of all large cities want to own their own street railways. It is simply a question of finding out how to do it. I also believe in the municipal ownership of other public utilities, but only where that ownership can exercise an immediate supervision.

"Some people confuse this idea with that of Socialism, with which it has little in common. At lunch to-day a high official of one of the New York gas companies, who was ridiculing my ideas, said to me, 'How would you like it if some one proposed that the Government should take over the operation of the Ford company?'

"'What shallow thinking!' I replied; 'the Ford company has no monopoly unless it be one self-created by superior skill and energy and organization in a field naturally open to all. I am for the widest possible freedom of opportunity in any such class of enterprise.

"'But when you come to street railways or gas or electric or telephone companies, there is no field for competition. There is an inherent monopoly in the nature of the business itself, and the people not only have a right to own and operate it, but it is a duty they owe themselves, and one which is absolutely certain to be observed universally sooner or later.'

"My gas company friend then asked me if I didn't think private companies

secured more 'efficiency' than public ones. 'Suppose I please you by saying, "Yes" (which isn't always justified), what difference does that make?' I said. 'I'll answer the question with another: Is your home always run in the highest degree of efficiency? I'll venture to

say no. Moreover, you wouldn't allow any outsider to come and install an "efficiency" system in your home. It's your home, and it's run to please you and that's enough. The city's streets and the public utilities of a city are its "home," and the people want to run it

themselves; they want to say how it shall be run and what it costs to run it; and if there is any profit they want the benefit of it, just the same as they ought to be willing to stand for any expense that is necessary to get satisfactory service.'"

THE TURCO-BOLSHEVIST MENACE

EDITORIAL CORRESPONDENCE FROM THE LAUSANNE CONFERENCE

BY ELBERT FRANCIS BALDWIN

(C) Keystone

ISMET PASHA, TURKISH REPRESENTATIVE
AT LAUSANNE

HERE at Lausanne, in 1912, Turkey signed a peace treaty.

Here at Lausanne, in 1922, Turkey now proposes to sign another peace treaty.

What a difference the decade has made! What a totally different and startling difference! Then the Turk, vanquished in the Tripolitan War with Italy, gave up to her the Turkish North African possessions, and humbly too. But quickly, later, the Turk was to become yet humbler, for the Balkan League, formed by the genius of Venizelos, expelled him from all his European possessions save the Constantinople district.

The Turk was to become still humbler because the World War stripped him of that district and of Mesopotamia, Syria, and Palestine. The Turk had been called a Sick Man before. He was indeed a Sick Man now.

Nevertheless here he is back again in Lausanne, not sick at all but very well, very brash—in fact, better and more of a going concern than he has been for at least two hundred years.

His resurrection has been due to three
ags:

(1) The culpable negligence of the Entente Powers.

(2) The quick-wittedness of the Bolshevik.

(3) The new direction given to the Young Turk movement by Mustapha Kemal and his associates and, in particular, by their recent victory over the Greeks and expulsion of them from Asia Minor.

In 1919, the year after the World War, had the Powers spent less time in framing a League of Nations and more time in quickly concluding peace treaties with Germany, Austria-Hungary, Bulgaria, and Turkey, we should not have had to wait until the summer of 1920 before the particular treaty with Turkey was signed. That time lost was precious time gained for the Kemalists and Bolsheviks. It gave to the Kemalists a chance to grow strong enough to resist ratification by the Turkish Parliament in Constantinople and to denounce the whole treaty by means of the new Parliament set up at Angora. It gave to the Bolsheviks just the opportunity desired of spreading their propaganda throughout the Orient by the use of Kemalist Turkey as a propagandist. They took successful advantage of this opportunity. Had the Entente Powers used ordinary prevision and had they been united, they might have prevented some of the mischief which arose between the close of the war and the present day.

Two years ago a Turco-Bolshevist treaty was signed by which Russian resources were placed at Turkey's disposal. From that time on millions of dollars' worth of rubles have come to Turkey from Russia. Arms and ammunition have come too; the Turkish troops today, it is said, are to a large extent armed with British and French rifles, originally sent to Denikin and Wrangel and captured from them by the Bolsheviks. Greece has been defeated by Turkey in war, therefore, not only by the undoubted military skill and bravery of the Ottoman troops, but also because of Bolshevik Russia's material support.

This support would have been serious enough were the Turk still a Sick Man. But a leader had arisen in Islam. He knew how to build a real civil and military government. Perhaps no single

(C) Underwood

AMBASSADOR CHILD, AMERICA'S
REPRESENTATIVE AT LAUSANNE

individual is to-day more significant of the mighty change which has occurred in Turkey than is Mustapha Kemal.

To make a long story short, the result is that the Turk comes to Lausanne not only a well man but, what is far more menacing, with the Bolshevik behind him.

Together they appear here ostensibly for peace, and many naïve negotiators of peace, meeting them, have seemed, during this first week of the Lausanne Conference, to have taken them at their face value, not at their real value.

What the Turks and the Bolsheviks are after is, not peace, but war. Under all these supposed arrangements for peace they would like to do something to involve the Powers in conflict, no matter what solemn promises may be signed.

We have but to note the history of the past two or three weeks to be sure of this. The Turk, for instance, entirely disregarding the recently signed Mudania agreement, has demanded immediate possession of Constantinople and immediate abolition of the Capitulations (the long-recognized rights of foreigners to enjoy the independence of their own

courts). And the Bolshevik, by the mouth of Vorowsky here, the other day demanded Turkish control of the Straits and added: "We oppose turning them over to the League of Nations, because it is an organization of *bourgeois* states from which we cannot get a fair deal." Doubtless Vorowsky was thinking of the special treaty between Angora and Moscow of January 5, 1922, by which the fifth article bound the two Powers to decide only after mutual agreement their policy as regards the Straits. Thus Bolshevism can prevent Kemalism from accepting terms at Lausanne which it does not approve.

Both Turk and Bolshevik, be assured, look beyond the Straits. They are thinking of the Balkans as well. Do you suppose that the Turk is satisfied with merely getting back into Europe and enjoying his old boundaries? Not he. Flushed with recent victory, he dreams of a still farther advance.

The Bolshevik, by supporting the

Turk, also dreams of a Bolshevik foothold in the Balkans.

Will this meet with opposition from the western Powers? Yes. Opposition talk, surely, and here at Lausanne a-plenty. But how about deeds instead of words? How about force, war? There, too, the Turk and the Bolshevik are ready for you. They see a possible western armed opposition—but they also see an eastern front made up of Turks, Russians, and Germans. They are not forgetful of Germany's longing for revenge. We would then see just how many soldiers and how much ammunition Germany has been secretly training and preparing during these recent years.

The Lausanne Conference has completed its first week. Thus far it has considered matters like a plebiscite for Western Thrace, or like giving Bulgaria a neutralized avenue to the Aegean Sea (our Government's announcement on a well-selected day of an open-door policy being of greater potential importance),

and has thus far but touched the fringe of the first of the four real matters in hand—the boundaries of Turkey-in-Europe, the freedom of the Straits, the Capitulations, and the protection of the Christian minorities in the Turkish Empire. From what I can ascertain here, these matters are to be presented by a diplomatic and really quite united Entente front.

Suppose they are. And suppose the Turk actually signs a fairly reasonable treaty of peace. Would it be worth the paper it is written on? Will the Turk, especially with the Bolshevik behind him, hesitate to break his promise as immediately and as cynically as he did the Mudania agreement?

The Lausanne Conference will be worth while, not because of the Lausanne treaty, but because of the impression it makes upon the Turk and the Bolshevik that under the velvet glove of peace lies the iron hand of force.

Lausanne, Switzerland, Nov. 27, 1922.

SOME IMPRESSIONS OF A TRIP TO EUROPE

SPECIAL CORRESPONDENCE BY BARON S. A. KORFF

A TRIP to Europe in these days is no longer an unmixt pleasure. Not so much on account of physical discomforts, for traveling arrangements have been much improved lately. One does not lose trunks or miss sleeping-cars as easily as two or three years ago. Even visas, those curses of war time, are obtainable without much difficulty, though invariably with endless delays. It is the moral side of the picture that is so depressing for travelers from America; the prevailing suffering, the social and economic disorder reigning everywhere in Europe, the moral degradation, the hopeless absence of improvements, the dejection of so many people in so many countries—it is such things which create the striking contrast with the quiet and well-being in the United States. The discouraging aspect of this situation is the overwhelming evidence that there is worse still to come, that all Europe is far from being freed of her troubles and perhaps will be for a very long while.

Conditions in England I found were much worse than I had expected. England is living through a very severe crisis, both economically and socially. There is ample evidence that an economic storm is hanging over the country. The burden of taxation has reached a point which is fairly crushing some of the middle classes; although the Government has somewhat reduced the per cent (from 30 it has gone down to 25), the taxes are still exceptionally heavy.

Unemployment is the most conspicuous feature of the situation. Young men, single and in groups, walk the streets of provincial towns and patiently wait to

pick up a penny here and there. Begging was always conspicuous in London; now it is increased tenfold. Men, sometimes in military uniform, cripples and war veterans, sing and beg on all corners of the London streets, or play cheap instruments, standing or crouching on the sidewalks.

Socially there has developed in England a dangerous crisis, too. It is the necessary consequence of the war. Some time must pass before the nation can adapt itself to new conditions. Some of the former middle classes are bound to disappear, having been crushed and ground down by modern conditions. New ones are growing up, crystallizing rapidly, replacing the old ones. This naturally causes pain to the nation and accounts for much of England's present-day trouble. Only her sound finance can save England from an economic breakdown. The banking system (the City) is still healthy, helping to pull through this crisis.

In France, by the way, just the opposite has happened. While the country is sound economically and is steadily building itself up and growing in strength, the finances are in a disastrous condition and at the mercy of most unscrupulous elements, creating that unsympathetic impression abroad, and in particular in America, that French conditions are not satisfactory. France is not out of danger yet, but if one compares the situation with that of England, one can easily see the advantages France has over England. Perhaps just here we have the main reason of the disastrous opposition existing between these two countries.

Whatever one thinks of their respec-

tive grievances, when one travels in Europe at the present day one can easily see and feel everywhere that just this unfortunate opposition of France and England is at the root of all Europe's modern troubles. There will not be, and there cannot be, any peace in Europe while this lasts. This applies to every European question; to the Near East and Turkey, to the German reparations and monarchical threats, to Russia and the Balkans, and finally even to the League of Nations. The latter will certainly remain impotent and without significance or authority as long as these two great Powers are at odds. Without exaggeration, one can say that this strange antagonism is a dangerous threat to the peace of the world.

Both sides are impatient of each other in a like degree. The French papers are full of vilifying attacks on English statesmen. Last summer Lloyd George was their special target. The English heartily reciprocate and flirt with the Germans to spite the French. To an outsider there seems very little to choose between the two. And, naturally, many evil elements make capital out of this fatal quarrel; the Turk is saved by it, the Bolshevik is strengthened, the German monarchists become hopeful of vengeance and of escaping the reparations.

On the other hand, Germany seems much better off than could be expected. At least the countryside lives quite contentedly, producing the minimum necessary for each family. The Government, however well intentioned, is exceedingly weak and has no ways of pressing out of the population the surplus that it needs for reparations. Outwardly there

exists a visible improvement in the conditions of the people. Some shrewd observers have pointed that out lately; for example, the well-known English correspondent, Mr. Robert C. Long (in the November number of the "Fortnightly Review") tries to explain this fact by a willful and systematic *Puff* on the part of the Germans and by showing that the German taxes, though apparently overwhelming, really do not overwhelm, and that there exists still a wide margin for the further fall of the mark compared, for instance, with Russia.

In the cities of Germany, and especially in the larger ones, of course there is much misery. As in England, some of the middle classes are being ground down and ruined by present conditions; pensioners, professors, teachers, old men and women, living on modest incomes, are terribly hurt by these conditions, and in particular by the continuing fall of the value of the mark. But in the country, in agricultural Germany, all this is hardly felt, and an outsider gets the impression that only one thing keeps Germany from flourishing—namely, the fact that France prevents this by "sitting on the lid."

It is no longer the question of reparations that bothers the French, nor the hope of getting money, products, or services out of Germany. It is, rather, this possible regeneration and rapid improvement of their eastern competitors. True, the improvement or regeneration has not yet started, but all is ready as soon as the pressure of France disappears. And one may be quite sure that the developments in such a case will be startling. Foreseeing this, France holds Germany down, endeavoring to build up, meanwhile, her own shattered strength and to prepare herself very carefully for the inevitable moment when she will finally have to face free competition with a restored Germany. Thus the question of reparations seems to be for the moment mere camouflage for much more serious considerations. France will hold down the lid as long as she possibly can.

England knows it, too, and is very much alarmed at the gradual increase of French strength. Here we have probably the main reason for English opposition to modern France. It is an old and well-established principle of English policy to prevent by alliances or *ententes* with the weaker ones any single Continental Power from becoming predominant. This is why England was against Napoleon; why she systematically opposed the expansion of the Russian Empire; why she went into the disastrous Crimean War against Czar Nicholas I, whom she dreaded; why she fought Germany in the recent war; and why, finally, she is at present against France—because the latter country is gaining tremendously in economic strength and in political influence on the Continent of Europe. This is why England coddles Germany and why the English Government tries systematically to keep Russia weak and under Bolsh-

evik administration, whereas France speculates on a stronger Russia, in order to get back as much as possible of her capital sunk in Russian enterprises.

These strange political paradoxes and contradictions can be summed up as follows: France wants Germany to remain weak as long as possible, while she herself builds up her economic resources and political influences, and hopes for a stronger Russia, which could repay in the future the French debt; whereas England prefers to see Russia weak and impotent, to be able to exploit freely the Russian markets, and does not mind nor fear a recuperating Germany, and in some cases is even ready to co-operate with the Germans in order to secure eastern European markets, which she needs so badly.

The Bolsheviks meanwhile make good profit out of this strife between their most dangerous opponents. They are the typical *tertius gaudens*, sitting on the fence and watching France and England blindly destroying the very foundations of the Versailles Peace. Verily, this treaty is built on three main principles, and all three of them are now being diligently destroyed by the former Allies: the treaty rested, first, on the alliance and co-operation of France and England; secondly, on the absence of Russia from the political stage of 1919; and, thirdly, on the presumption of lasting weakness of Germany, vanquished and humiliated. At present we can easily see that the reverse conditions prevail: France and England are busy quarrelling and vilifying each other; Russia is unexpectedly coming back, and, in the Turkish question for example, asserting herself in a most surprising manner; and Germany too is showing unmistakable signs that her former weakness had no permanent character at all. No wonder that thoughtful men begin to wonder what will come to Europe when the Versailles pact finally crumbles to pieces.

Then there is the Polish question, too, overhanging eastern Europe that bothers modern statesmen and, not least of all, the French Government, which so recently and so unwisely helped the Poles to develop their dangerous imperialism. Poland is at present faced by great difficulties; she has the second largest army in Europe, she is militaristic, aggressive, very self-complacent, and at the same time economically one of the weakest countries of Europe and in the throes of a great social crisis. Poland with her 30,000,000 is much weaker, for instance, than Czechoslovakia with her 14,000,000 or Yugoslavia with also 14,000,000 inhabitants; Poland is surrounded by potential enemies—130,000,000 Russians on one side and 70,000,000 Germans on the other, and on both frontiers there is much feeling of hostility; Poland has a national and class problem to solve, which seems to be one of the most difficult European problems of our times; she has only shattered economic resources, imports that cannot be balanced

by exports, ruined industries that do not succeed in recuperating, and so forth. In consequence many troubles might develop in this eastern storm center of Europe.

In Scandinavia and Finland, on the contrary, conditions are very different. One can somewhat rest there from the European squabbles. It is one of the very few fortunate corners of Europe, where conditions have become normal and independent of the French, English, or German contest. Scandinavia always was more or less self-sufficient, and Finland is rapidly becoming so. These four peoples—Swedes, Norwegians, Danes, and Finns—realize very well that all their future happiness depends on such self-sufficiency; all their recent endeavors are concentrated on securing such an independent position. On the whole they succeed very well, perhaps even too well, as in some respects self-sufficiency has led to self-complacency, which is always dangerous and in glaring contradiction with modern ideals of international co-operation.

Of the four, Finland lately has changed most. She has become very markedly independent in her economic position. Of course there always remains hanging over her the "Russian danger;" the Finns feel it very keenly. Nobody can tell yet what the future Russia will be, what surprise the psychology of the awakening Russian nation has in store for the outside world. If it ever develops imperialistic or chauvinistic tendencies, there naturally will arise a tremendous danger for the small border states, Finland among them. It is not imminent, however, and these tiny nations have ample chance of preparing for the event and trying to avoid it. In this respect the best means would seem to be to endeavor to keep the friendship of Russia and carefully to avoid national irritation. Unfortunately, not everything is satisfactory in this respect. Such irritation does not exist on both sides of the Russian frontier; this is bound to increase the dangers of the situation for the smaller nations.

One strange thing strikes the traveler in Scandinavia; namely, the fact that gold is actually at a discount. Nobody seems to want it, invariably preferring paper money; whereas silver is very much sought and valued higher than paper money. Silver is bought by silversmiths for jewel settings and ornaments, while gold is hardly ever used any more. In Copenhagen some banks actually refuse to accept for exchange English sovereigns. Before the war this would not have seemed possible, the sovereign always being considered the most welcome and reliable piece of money. Now it is of no special use to any one; while the American dollar, in bills or coin, is the most popular currency everywhere.

After having seen these European troubles and felt the mutual suspicions, jealousies, and envies everywhere, a traveler returns to the United States as to a haven of peace.

An eighty-five-year-old Jewish rabbi, who came here from a little town in Russia. After the quiet surroundings in which he had spent his life, the New York sky-scrapers filled him with a very great and deep wonder

ELLIS ISLAND THROUGH RUSSIAN EYES

ILLUSTRATIONS BY USA GOMBARG

MISERY is leveling the peoples of the world, and Ellis Island is their meeting-place. Here they weep and exchange stories, here are reached the lowest depths of despair and the most sublime heights of happiness; mistress and servant, rich and poor, they sit side by side as equals, for the only riches of which they can boast is the hope that America will permit them to land. Small wonder that this is the first subject to attract the responsive imagination and prolific pencil of Usa Gombarg, one of the most recent arrivals from—it is hard to say where; since it has taken him almost four years to cover the distance from Petrograd to New York, a journey that should be made in two weeks. But this is the fate of many.

Usa Gombarg spent many years delighting the Russian public by his spirited caricatures of great men and women and great events, adding to these a fine sense of humor, a gentle satire, and sometimes a grim warning. He was a contributor to all the leading publications,

and during the last few years he was the editor of "Art," a magazine published in Petrograd, similar to the "International Studio" in its aims and appearance.

With the Revolution Mr. Gombarg started his wanderings, and Russia lost just another man of talent. He worked his way to Kief, drawing for local publications, and finally reached Warsaw, where his versatile pencil attacked Poland's political troubles with vigor. However, Europe offers few opportunities at present, so Mr. Gombarg continued his westward course—*en route* for the United States. He reached Genoa during the Conference, and his portraits of the participants were featured in the New York "World." He arrived in the United States quite recently.

To Europeans Ellis Island is a mysterious mechanism from which emanate strange decisions, so it is natural that the first subject selected on American soil by Mr. Gombarg was this "Island of Tears." He spent a day there sketching, and, since a steamer from a northern

port had just arrived, his subjects were Jews—Jews from Poland, Jews from the Ukraine—all fleeing from persecution, civil strife, pogroms, and starvation. And while he sketched they told him of their past lives and of their future dreams, always in that dull monotone in which people speak of unspeakable horrors when the horrors have become habitual.

The Jews of the Ukraine and Poland bore the brunt of the war, for one army after another passed through the towns where they had small stores, and there is no doubt that they were victimized. Soldiers do not hesitate to pillage when they need something. With the Revolution in Russia new persecutions started up in the Ukraine and thousands of Jews poured into Poland, where conditions were already unspeakably bad. It is fortunate that relief agencies have been active in taking care of this mass of homeless and disoriented people, for there is no work for them, and their only hope lies in America.

NATALIE DE BOGORY.

The Ghettos of the Ukraine are responsible for thousands of Jews similar to the one Mr. Gombarg picked out. This man's wife was killed during a pogrom and he was stranded in Bessarabia for a whole year, picking up a precarious living, starving most of the time, before he found relatives in the United States to whom he could come

The widow of a wealthy manufacturer from the Ukraine, where he was killed during a pogrom. She lost the sight of one eye. For two years this woman has been tossed about, always living in the hope of reaching a daughter who resided in Chicago. The old woman finally reached the shores of America. But her daughter was dead. And she has been detained for the authorities to decide what disposition to make of her case

A Jew from Belarossia, a province of Russia, where he was a wealthy lumberman. His one great regret, which he voices persistently, is that he was unable to bring to America with him his two fine horses

A Jewish cab and truck driver, wearing the official cap of the izvoitchik in Poland. His great ambition is to drive an automobile, and he discusses a car in terms of the stable

A Jewish father and mother from Poland, who came here to a son, who himself was nine years old when he came over. They did not recognize the dapper youth of twenty-one in American store clothes who came to claim them

This man was the president of Ukrainian Jewish societies. What will the United States offer him?

A Jewess from Russia, who arrived here with her daughter and grandson, to join the daughter's husband in this country. At Cherbourg the boy's hand became infected and he was obliged to remain behind. The grandmother fasted during the entire journey, spending her time in prayer for the recovery of the boy and his safe arrival

THE HEART OF ALASKA¹

BY SHERMAN ROGERS

INDUSTRIAL CORRESPONDENT OF THE OUTLOOK

CHICKALOON COAL MINES

TRANSPORTATION being without doubt the greatest necessity of every section of Alaska, we are brought face to face with the building of the Government railway from Seward to Fairbanks—a distance of 467 miles.

Grave doubts have been expressed in some quarters regarding the necessity of constructing this road. Theorists only could offer an objection. It was every bit as necessary as the building of the Northern Pacific and the Great Northern to develop the Northwest. It was the business of the Government to build this line—a bounden duty. No private operator could have built it, since ninety-nine per cent of the resources of Alaska are owned by the Government, and are therefore tax free. Without these two strips of steel from the coast to Fairbanks a few years would have witnessed the practical depopulation of the entire Alaskan interior, bounded on the west by the McKinley Range and on the east by the Richardson Trail. In this area is contained a major portion of the agricultural lands, coal districts, placer districts of the Alaskan interior, as well as several very promising lode-mining sections.

It is true beyond a doubt that this railway will not pay operating costs for several years—it may be a generation before a return will be earned on the original investment. Whatever time it takes makes very little difference so far as the principle of the construction is concerned. Beyond all doubt the road is absolutely necessary for Alaskan development.

I believe that the road was constructed in a thoroughly efficient manner. It was built during the high period of wage rates, when materials were at the highest peak. It was constructed with all possible despatch, and the scores of responsible business men I talked with from Seward to Fairbanks voiced unstinted praise for the efficient methods employed in building the line. It is an excellent railway, constructed with seventy-pound steel, and soon will be practically all ballasted. Colonel Frederick Mears, Chairman of the Alaska Engineering Commission, builders of the Government road, is a highly efficient engineer. Although in the Government service, he is not of the red-tape variety. He knows what he wants to do, knows how it should be done, and does it. Colonel Mears had a very efficient staff of assistant officers, including several men who have few equals in their line.

These men were confronted with tremendous obstacles. The work completed is a monument to their genius, and I do not believe that it would have been possible to secure better talent under private management. I have only unstinted praise for the wonderful work accomplished by these men, but I disapprove of the freight rates formerly inaugurated by ex-Secretary Lane—much lower, true, than the Copper River Railroad schedules, lower than the old long-distance river rates; but this road should, in my opinion, be for a few years purely a development project, and there should be no relativity between the rates charged and the expenses of operation. The country will never develop and the road will not pay without population.

The quickest way to *get* population is to offer, at least temporarily, the best possible inducements.

If there was ever need of a protecting subsidy anywhere on earth, it should be given in cheap rates in the Alaskan interior. James J. Hill, in early Great Northern days, established rates to pioneers that were amazingly low. One of his directors assured him that the rates charged would not pay for coal alone. Mr. Hill replied: "We have two strips of steel running through a peopleless empire. If we charge a high freight rate now, the few pioneers along our road will pull up stakes and leave. Our road will only pay when thousands of pioneer settlers improve the land, work out the timber, grow grain, and ship. Settlers mean eventual success; lack of them, failure. If we haul freight for pioneers practically free for a year or so, we will eventually get it back with a high rate of interest, because we will get increased freight every year from that time on. A discouraging freight rate will mean two streaks of rust."

Then he made a statement that, in my opinion, applies to the Alaskan railway. He said: "A railroad traversing a new country should establish a rate that will pay a fair return when the country is practically developed."

Because of this far-sighted policy the Great Northern was the only Western continental railway that never faced a receiver.

I realize the difficult position Colonel Mears occupies in regard to granting development rates. The Alaskan Engineering Commission must go before Congress for new appropriations to complete the construction work and make up deficits in operation. I quite understand the fact that the Commission desire the best balance-sheet possible in demonstrating the earning power of the entire project, knowing, as they do, that Congress is becoming restless regarding Alaskan appropriations. If Congress has any inclination to look askance at appropriations to make the Government railway a success, it is as short-sighted as a logger in Idaho who had \$6,000 worth of cedar poles piled up on skidways two miles from the railway. A buyer contracted to purchase the poles, and the logger asked bids to put a road in to haul the poles out. The lowest bid was \$1,000. The logger threw up his hands and declared he could not afford the outlay. The purchaser was stupefied. "Build the road, man; you spend \$1,000 and get \$6,000. In other words, you get back \$6 for \$1." "That may all be," replied the logger, "but I have the \$1,000 liability *before* I have the \$6,000 asset, and I don't want the liability."

Congress would be as short-sighted as

¹Two other articles on Alaska by Sherman Rogers appeared in The Outlook for December 6 and 13, 1922.

the logger if it objected to backing the Alaska railway to the limit.

When wagon roads and trail feeders have been constructed, thoroughly tapping every district adjacent to the Government road, and encouraging rates established, the interior will flourish, the railway will eventually prove a financial success, and its construction will go down in history as the turning-point of Alaskan development.

Pessimistic "foreigners" and some "checakas" going over the road declare that it traverses a barren, impossible country; that it is a white elephant now, and always will be. That is what timid philosophers said about Kansas, Oregon, Washington, and California in the early days. Arguments of this nature are childishly groundless. The 467-mile strip of steel from Seward to Fairbanks covers a country with as great possibilities as any like length of road west of the Mississippi in the early days. This road taps the Hope and Sunrise quartz and placer mining districts, where the Hirshey mine is located on Palmer Creek. A mill has been in operation on these claims for some time, and considerable gold has been taken out. Many claims are being prospected in this district and show promise. In the Sunrise district the Canyon Creek group of placer claims are being developed by the construction of a dam for hydraulic mining on a large scale. There are several large placer claims in this district that will be worked extensively when water ditches have been completed.

The Matanuska coal district embraces many thousands of acres containing deposits of high-grade and semi-bituminous coal. Several companies are operating with success, and development work is being carried on. The Chickaloon, Baxter, Evan Jones, Moose Creek, and Eska developments have been the most prominent in this field so far. The

KENNEBECOTT, ALASKA

Chickaloon prospecting has created the most attention. The work on this mine has been carried on by the Navy Department in conjunction with the Department of the Interior for developing high-grade coal deposits for Navy purposes. The coal veins being explored in this development are much smaller than other veins in this district, but are of a much higher grade than Moose Creek, Eska, Evan Jones, and Baxter. As a rule, the coal veins in the entire district dip from forty to fifty degrees and vary in thickness from three to twenty feet. However, a few veins of lignite have been discovered that lie nearly flat.

There has been a great deal of interest aroused by the now famous "Bain" statement. H. Foster Bain, Chief of the Bureau of Mines, made a flying visit to the Matanuska and Chickaloon field, and in a speech in Anchorage made some remarks that, in my opinion, were not correctly understood. At any rate, Mr. Bain did not say coal would not be found in paying quantities. He did say that the district was faulty; that extreme development would be necessary before large unfaulted deposits would be discovered. There is nothing new or

startling in this statement. Every Government geographical report issued regarding coal in this district for the last fifteen years has contained this information. Mr. Bain also stated that at present he did not believe the coal mined in this district could be handled on a competitive basis for consumption in the United States.

Experts and geologists have just as much faith in the Matanuska field now as they ever had, and that is a great deal; but if any one ever went into this district with the idea of developing large unfaulted bodies of coal with little financial outlay he displayed poor judgment and total lack of mining ability. The Matanuska district covers a very large area, with numerous outcroppings of coal, and experts who know the field and have made a study of it for years are fully convinced that extensive prospecting will open up unfaulted deposits that will eventually permit of commercial mining.

The Navy Department and the Interior Department did not engage in the Chickaloon development in a slipshod manner. The coal has been thoroughly tested and proved to be thoroughly acceptable for high-grade Navy purposes. Over a million dollars were spent on the development of this project under the direction of the Alaskan Engineering Commission. Several hundred thousand dollars were spent on a coal-washing plant, and nearly three hundred thousand dollars on buildings and other extraneous development. Prospecting was going on full blast when the Disarmament Conference decided on limitation of navies, simultaneously with General Dawes's decision to limit appropriations, and, as a result, overnight, appropriations for Alaskan development were completely cut out and work immediately suspended.

However, let me say here that naval officials and Interior Department officials have just as much faith to-day in the Matanuska and Chickaloon fields as they ever had, and, in my opinion, it is only a matter of time before this field will be developed—first to supply local purposes, and later for general commercial trade sales.

I personally know very little about

RAILROAD CONSTRUCTION IN ALASKA—THE HURRICANE GULCH BRIDGE

coal. I am simply basing this opinion on the opinion of Nationally known geologists and coal experts who are thoroughly familiar with the ground and have been watching its development closely.

A few miles farther up the line from Matanuska brings us to Wassila, gateway to the Willow Creek mining district, which is located twenty-five miles from the railway. This field is seventy miles from Anchorage. A good wagon road is completed to within from five to twelve miles to the various mines of this district. Fair roads have been constructed to the various properties. But the cost of transporting supplies and mining machinery over the last seven miles amounts to more than all water and rail charges and the haul over twenty-two miles of completed road. The lack of money to complete the last few miles has prevented at least two mills from going into the district.

The district, in the opinion of geologists and mining experts, is one of the most promising in the Alaskan interior, from the standpoint of a high-grade camp. There are about twenty-five mines and prospects in a very limited area, and the ore, which is all of the free milling gold variety, is extremely rich in gold content.

About two million dollars' worth of gold has been taken out, and extensive development work is in progress on the various properties. There are several stamp mills in operation, and the owners of the recently developed Drumheller mine, adjoining the Talkeetna mine, are building the largest mill in the district this fall. The great ore body encountered in this mine, which is extremely high grade, places the district in the "permanent" class; and the Drumheller property becomes one of the richest gold properties in the North. The principal properties in this district are the Lucky Shot, War Baby, Gold Bullion, Gold Cord, Mabel, Opal, Rae Wallace, Gold Mint, Kelley Mines, the Consolidated Gold Mines, and the Hatcher Claims.

North of and close to the Willow Creek district a wagon road is being contracted to the Cache Creek Placer mining district, where fourteen hydraulic outfits are now in profitable operation. The Cache Creek country promises to be a steady producer.

The Matanuska Valley traversed by the Government railway is one of the largest farming sections in Alaska, containing tens of thousands of acres of level and rolling highly productive soil. At the present time many homesteaders are improving ranches in this vicinity. Hay, grains, and vegetables of all kinds are grown successfully in this valley, and as mining development takes place, so that the farmers can enjoy a steady market, this district will be one of the most prosperous and permanent on the railway.

In the Talkeetna district, north of Willow Creek, very promising copper prospects are being developed that give

promise of substantial tonnage for the railway.

The Broad Pass, the McKinley Range, and the Kantishina Mining districts will, in my opinion, furnish enough tonnage when developed to make the entire railway pay. In the Broad Pass section Wells Brothers have for many years carried on prospecting operations on a large body of low-grade copper ore. The excessive expense of taking in supplies retarded any permanent development because of the prohibitive cost. The railway now traverses within eighteen miles of this copper deposit.

Back of the Wells Brothers' claim on Ohio Creek some of the most promising silver-lead veins in the interior have been encountered. These veins run from five to seven feet in thickness and are of an exceptionally high grade; and although, because of the high cost of former transportation, only two hundred feet of tunneling has been done, the prospects have the earmarks of permanence. The fact that this entire district contains base metals will mean heavy tonnage for the railway when proper development has been carried out.

The Kantishina district is too well known to take up much space in this article. This district lies within sixty miles of the Government railway, and contains some of the richest high-grade lode properties in the Territory. Silver-lead ore predominates. However, there are indications of paying deposits of gold, copper, and other metals. The ore that has been taken out of this district was taken out at a cost of over \$100 per ton, and yet, with this heavy expense, six hundred tons were taken out and shipped to the smelter in California at a profit. The cost of transportation alone was \$65 per ton.

It will cost less than \$4,000,000 to construct a railway in this district, and about \$1,000,000 to put in a first-class Government road that can be used by auto truck. High-grade galena ores have been recently discovered on Copper Mountain, which is only forty-five miles from the railway.

The Kantishina and McKinley districts contain the most extensive silver-lead ores north of Cape Spencer, and give promise to rival the Portland Canal section, where the Premier Mine is located. The principal properties being developed in the Kantishina district are those on Copper Mountain, the Quigley-Dalton property, the Red Top Mine, the galena claim, and scores of others that have recently been located and light prospecting done.

The next district tapped by the railway is the Healy River coal fields. The Healy River coal district presents one of the most wonderful coal-mining views in the world. One of the greatest engineers in the country told me that in all of his experience he had never viewed such a wonderful scene. I agree with him. Faulty, yes; but the tremendous coal deposits, although of sub-bituminous grade, can be mined more

cheaply than coal in any other section of the country. A mountain of coal lies within four miles of Healy station, which is now being tapped by railway spur; and this mountain contains 261 feet of solid coal veins. The mountain has the appearance of being cut squarely in two with a sword. It is one thousand feet high, and contains sixteen veins of coal, dipping back into the mountain at an angle of fifty-two degrees. The first vein at the base of the mountain is forty-seven feet thick, of solid coal matter. The next one contains twenty-seven feet, the third one twenty-five feet, and thirteen other veins vary from seven feet to twenty feet in thickness. This coal is being mined for one dollar per ton, and will be mined somewhat cheaper later on. The quality of the coal is between lignite and bituminous—called by several coal-mining engineers "sub-bituminous coal." It gives a terrific heat, although at the present time it shows an inclination to pulverize. It is being developed by private enterprise, and gives promise of being one of the greatest industries in the interior, even if it never supplies any more than is needed for local requirements. The interior of Alaska has been held back for lack of cheap fuel. This trouble will be eliminated when the Tanana bridge at Nenana is constructed, and coal can be shipped from Healy to Fairbanks without reloading at the Tanana River. This bridge will be completed by the first of February, 1923, and will give direct connection from Seward to Fairbanks without water transfer.

Now we come to Fairbanks, in the heart of the great Tanana Valley, at present the most highly developed agricultural area in Alaska.

Regarding the Fairbanks district, many people have gathered an erroneous idea that the various placer creeks have been thoroughly mined and all gold taken out. As a matter of fact, probably less than one-fourth has been taken out, but the high cost of placer mining in this district, together with the former excessive fuel prices, has eliminated the mining of placer ground that would have been highly profitable in other sections of the country. It is almost inconceivable that prospectors were unable to mine gravel that ran a dollar and a half a yard, whereas one dollar a yard anywhere else in the country would have caused a stampede. This field will be developed with one of two methods: The low cost of coal going into Fairbanks district from the Healy Field when the Tanana bridge is constructed will open up many properties which have heretofore been idle. At the present time, however, a substantial corporation is prospecting the entire district at an expense of half a million dollars, with the idea of putting into operation more than fifty dredges if the district proves to contain as much gold as geologists have declared remains. Seventy million dollars' worth of metal has been mined. It is estimated by Dr. Brooks

and others that there are still remaining \$350,000,000 of placer gold in the old creek beds and benches. To win the precious metal in this district on the scale anticipated will necessitate a tremendous expense. A huge volume of water will have to be carried a distance formerly prohibitive. The people now prospecting this field declare that they will know by the fall of 1923 whether they will go ahead with the project. Most of the miners I talked with expressed a firm belief that the options will be taken up, and the greatest hydraulic and dredge development ever known vigorously prosecuted.

One of the experts in charge of the prospecting assured me that the work done up to this time was more than satisfactory. Fairbanks will become the most active city in Alaska if this great project is prosecuted. However, Fairbanks does not have to obtain this project to live. The "Queen City" of the interior supplies a tremendous territory, being a distributing center for the head waters of the Tanana, the Livengood, Chandlar, Eagle Creek, Circle, Fort Yukon, and many other placer districts, and lies in the heart of the famous Tanana Valley agricultural region. This section contains many highly developed farms and dairy ranches. Hay, wheat, berries, and vegetables of all kinds are not only successfully grown in this district, but quantity production is on a par with first-class farming sections of the United States. A fine flour mill is in operation, and an excellent quality of flour is manufactured.

There are several quartz properties within thirty-five miles of Fairbanks that are being developed. These properties are on the profit side of the ledger, and small but complete mills are in operation. Two large dredges are successfully operating on Fairbanks Creek. These dredges handle about six thousand yards of gravel every day. There are several hydraulic outfits in operation around Fairbanks that are paying handsome returns. Cheap coal will give a tremendous impetus to placer mining, and many properties are preparing to open up when the Tanana bridge is completed and coal brought in from the Healy Field.

I have described the various sections along the Government railway to give the public an idea of the possibilities of heavy tonnage for the Government project. The fact that the country has scarcely been scratched should prove to any unbiased mind that the Government road was not only feasible, but an absolute necessity. When good wagon roads have been constructed to the various mining districts along the route and pack trails into the hills, Congress need not worry about this project becoming, not only self-sustaining, but profitable.

Fairbanks, at the present time, has two outlets to the coast—the Government railway and the Richardson Trail. The latter, 427 miles in length, connects the interior with Valdez, on Prince William Sound, and also with a branch road connecting with Chitina, a station on the Copper River and Northwestern Railroad. Automobiles travel over this

road, making the trip in two days under forced driving, and three days for regular service. This is the longest road suitable for automobile travel in all Alaska. Fine accommodations are found for the night stops at comfortable road houses, where meals are served that the traveler will never forget.

For the distance, I think I am reasonably conservative in stating that this 427 miles of road outrivals any like distance in the world for scenery. Several Nationally known tourists have assured me of this fact, and I agree with them. I have lived in mountainous sections, around beautifully wooded lakes, and on rolling prairies practically all my life. This trail surpasses them all. A trip to Alaska is not complete without going over this road, and in a few years it will prove to be one of the greatest transportation assets of the Territory from the standpoint of tourist traffic.

A tremendous amount of work was necessary to bring the road to its present stage of development. A million dollars is required to bring the road up to the standard that it should be. Tourist travel alone will quickly reimburse this outlay.

Roads are every bit as necessary in the Prince William Sound district as in the interior. Roads will mean success to the many prospects and mines in this district. This section since 1919 has shipped 1,800,000 tons of copper ore. It has many promising properties that will be opened up when transportation facilities permit. It is the same old story—"We need roads."

CHRISTMAS AT HATTONCHÂTEL

A STORY OF VILLAGE RECONSTRUCTION IN FRANCE

BY BELLE SKINNER

IT was the Christmas of 1921, and Hattonchâtel is the dream town of the Meuse.

There have been other Christmas celebrations, many of them, in the little gray-walled village on the top of the hill. During the centuries of her history great people and famous have made memorable this Christian festival in the old fortress-château at the end of the street, and year after year the midnight mass has been chanted in the lovely Gothic church as it was in the Middle Ages and before. Even during the Great War, while the Germans were in possession of the village, there was at least one Christmas celebration, for when the French and American liberators entered Hattonchâtel they found the crypt of the ancient chapel still hung with the faded decorations of a German Christmas party.

But this celebration of Christmas, the first since the war, was a fête purely for the villagers, those peasants of France

who, undismayed by hardship and privation, are tirelessly working day after day and day after day, they and their children; toiling to restore their desolated homes and countryside. It was an effort to lighten their dull, weary hours of labor, and for a day at least the gigantic task of cleaning up gave way to the Christmas spirit of cheer and gaiety.

For a fête of any kind Hattonchâtel offers an incomparable setting. Hanging picturesquely on the highest hill of the range running from Toul to Verdun, this age-old village has for a thousand years kept watch over the lowlands, its enormously thick walls and network of subterranean passages making it all but impregnable.

The history of the village goes back to Charlemagne, one of whose towers still stands incorporated into the foundations of the more modern church, and from those early days down to the seventeenth century this proud little hamlet was a

stronghold of the princes of the blood and the prelates of the Church. Each age and each occupation left behind some mark of architectural loveliness. The underground Romanesque chapel, the arcades, the Gothic church and lace-like cloisters, the "Maison de la Voûte," all served their generations; but in the march of time the nobility withdrew from Hattonchâtel, the village lost its position of greatness and power, and its lovely buildings fell into decay.

Then the Great War swept over the hill, and all that remained of Hattonchâtel was jagged bits of its encircling walls.

It was on this height, then, amid humble ruins and ruins teeming with history and romance, that the Christmas party took place. We had hoped that the festivities might have somewhat the character of a surprise to the villagers and we thought our preparations for the day were wrapped in secrecy. But no—the postmaster at the foot of the hill had

laboriously translated into French telegrams purposely sent in English. He quite properly told the contents to his wife, who could not resist passing on the news to her neighbor, till little by little the tidings crept up the hill and the women of Hattonchâtel filling their pails at the village pump gossiped pleasantly of the fête-to-be. Even the Mayor and Town Council were caught in the wave of curiosity and excitement that swept the village, and discussed in solemn conclave the rumors running rife among the people. The curé alone assumed an air of indifference, but Monsieur le Curé, as often happens, had received direct information as to the plans, and, secure in the knowledge, could easily seem to ignore things so worldly.

Motoring through the valley of the Woëvre the evening before the holiday, we who had come from America to join in the merry-making found ourselves enveloped in a thick fog common to the Meuse at that season of the year and not unlike a London fog in denseness. It was hard to follow the road over which we were traveling, nor could the waiting villagers on their hilltop see afar off the lights of the automobile, as they had often done on clearer nights. Through the stillness, though, and the fog the regular beat of the motor engine drawing nearer and nearer told them of our approach, and quickly their eager hearts sent out the familiar greeting—the church bell ringing across the cold grayness to bid us welcome. It was like the communion of spirits—hearing what we could not see, feeling what neither they nor we were able to express in words, the triumph of faith over sight.

On we crept over the worn, rough road and up the steep hill, and the sound of the bell grew louder. At last faint lights began to glimmer here and there, more and more of them as we neared the top—the moving lights of torches carried by men of the village come out to meet us. We descended from the car. The scene was a bit of the Middle Ages—the village wrapped in thick fog, flaring torches dimly lighting the narrow street and only half revealing the weird gray figures moving in the dark shadows, the babel of voices, the sudden clatter of a horse's hoofs on the rough pavement, the *riras* of welcome—it might have been the ancestors of these peasants greeting an ancient Duc de Lorraine. We shivered in the penetrating cold. Familiar things seemed strange. It was as if the little street were peopled with the wraiths of long ago, and the illusion of their ghostly presence was not dispelled until we were indoors seated around a big log fire listening to the inevitable French speeches of welcome.

The next day dawned bright and clear. The mystery and creepiness of the night before had disappeared in a glorious winter sunshine, and as I looked out of a window in the early morning on the tiny country of Jeanne d'Arc, still

bleeding from the wounds of war, my heart beat fast and I knew why France has so many lovers. And when I stepped into the street and saw at the entrance to the village the garlands of mistletoe festooned in a welcoming arch of green, and all along the way the French and American flags crossed over the homely doorways, my pulse quickened again and I knew that France loves her lovers.

The peasants were already astir and hurried forward with morning greetings; women dressed in Sunday best and children in the holiday costume of Lorraine waiting for the coming of evening and the Christmas party, their shining eyes telling without the need of words the happiness in their hearts.

As the day wore on curiosity became acute, for in France New Year's Day eclipses Christmas as a popular holiday, and a community Christmas tree in that part of the country was a thing unknown. At noon the town crier announced very briefly the order of events; yet, in spite of this dissemination of knowledge, we were besieged with callers, from the oldest to the youngest in the village, some asking questions, some giving advice, some eager to open boxes, but all in a mood of Gallic gayety and good nature.

The fête opened in the early evening with the christening of a cinema apparatus in the new-old tavern. It was the first time that moving pictures had been shown in Hattonchâtel, and of course it was the inimitable Charlot who furnished the evening's entertainment. While the audience, forgetful alike of packages and promises, applauded his amusing antics, outside the darkness deepened, one by one the stars came out, and night enfolded the village. Then it was that we who had put the finishing touches to the tree and were waiting for the right moment to come turned on the lights.

Standing in the square in the sheltered angle of an old ruin, this real monarch of the forest towered above the red-tiled roofs of the near-by cottages. In its branches glittered gewgaws and baubles and scores of gayly colored electric birds, the brilliance culminating at the top in an amber star, big and bright and beautiful.

Tumbling out of the hall into the unlighted street, stumbling in the dark and fumbling for their lanterns, suddenly their quick eyes saw above the roofs the star of the Christmas tree, and as if in reverence those simple village folk stopped laughing, stopped talking, and quietly, wonderingly, came to where it beckoned them. They were all there—old men and old women, their backs bent with toil, *poilus* in horizon blue home on furlough, mothers with babies in arms, and lonely children whose mothers and fathers were lost in the horror of war, all were there gazing with hungry eyes at the fairy tree. At the first strains of familiar music, though (for we had brought a fiddler

from Nancy), their attitude changed; smiles broke over their bronzed faces and slowly they began to dance the almost forgotten peasant dances of the days before the war.

And the star of the Christmas tree shone bright above them.

The dancing ended, we went into one of the recently rebuilt houses, long, low, and rambling, as it was three hundred years ago, and there, amid much merriment, the distribution of gifts was made. No one of the rooms being large enough to hold the whole company, we were scattered through the house in a series of connecting rooms following the line of the ancient walls of the village, for it must be remembered that Hattonchâtel, shaped like an Indian arrow-head, is so narrow that all the houses near the point necessarily have for their foundations the undestroyed centuries-old ramparts. It was in the cellar of this very house, indeed, that Guillaume de Haraucourt was captured, that crafty Bishop of Verdun who, at the instigation of Louis XI, invented an iron cage for the torture of political prisoners, and by the irony of fate and the order of his Sovereign became himself for years an occupant of the hideous device. But he and those others whose bloody deeds made history in this old, old village on the high hill passed forgotten that night. Mirth ruled. Gifts were exhibited and exchanged, healths were proposed and drunk in the champagne of the country, a grab-bag with its sporting chances caused riotous amusement, and the children screamed with delight when the plum pudding, "on fire," as they said, was carried through the rooms on a silver salver quite in the English manner by two young men dressed as chefs.

The hours passed quickly. Too soon the hands of the clock pointed to quarter before twelve. It was Christmas Eve, and suddenly above the music and laughter the church bell rang out loud and clear, mingling, as always in France, its religious appeal with its note of joy. The moment to separate had come. Good-nights were said, good wishes were exchanged, the Christmas party of 1921 was over, but in the cold, still winter air the star of the tree shone steadily on, lighting the way to the church, and the bell, peal following peal, called us to the mass.

As we entered the church vague pictures floated before our minds of other Christmas masses said there in the days of long ago, when cardinals in red robes officiated and dukes and princes knelt in prayer and choirs of priests chanted the service. This night there was no such glory of greatness. There were only a few Lorraine peasants and two strangers worshiping together in the partially restored church of a half-forgotten village in the valley of the Woëvre. The altar with its simple bouquets of common flowers and the cheap portable organ about which was grouped the village choir bore no resemblance to the magnificence of the service in other days,

nor did the *Crèche*, poor and crude, recall the Nativity as it is represented in the churches of great cities on Christmas Eve. But the wonderful "Calvaire" by Ligier Richier was there, brought back from Metz, where the Germans had taken it, and once more in its place at the side, and the tablet to the Soldier Dead was there beneath the crossed flags of France and America, and when that group of humble peasants, their eyes uplifted, sang "Noël," a thrill went through one that comes not save when the soul is touched.

The hour passed, the service ended,

and as we went out again into the night I found myself near an old white-haired man, the *doyen* of the village, who offered to escort me to the house. The weather had changed; the sky was black and threatening, an icy wind from the north cut our faces, the lights of our lanterns flickered, and the darkness of the street seemed darker.

But the star of the Christmas tree shone on.

The old man noticed it and, turning towards me—tall, wrinkled, bronzed, looking more like an Indian chieftain than a French peasant—his ordinarily

immobile face took on an expression almost of affection as, pointing in the direction of the tree, he said, quietly, "*Cette étoile nous apporte un nouveau courage.*"

It was a pretty thought—the star of the Christmas tree at Hattonchâtel a star of hope and courage and faith. Shining brightly in the hilltop village, it shed its light on the little ruined hamlets in the wide valley below, confirming to that people whose name is courage the hope of France in America as it symbolized to us America's faith in France.

CHRISTMAS EVE ON THE PLANTATION

BY ARCHIBALD RUTLEDGE

IT is Christmas Eve, and I'm on my way home for the holidays. But I'm not on a sleeper with screaming wheels, nor on a vessel whose engines sob and pulse and heave, nor in a motor on a 25-miles-an-hour speed limit highway—skimming along blithely at forty-five. I'm driving that obsolescent creature known as a horse. We've already come forty miles; two more, and we shall be at home.

You might well suppose that my journey has been over a prairie; but it has been through wild-woods all the way. From Charleston, the road parallels the coast to Georgetown, sixty miles distant; and the only breaks in the flanking forests are certain starved clearings. It would be hazardous to say that this land is cultivated; for much of it is a mere agricultural shambles, wherein crab-grass and sheep-burs have fatally assaulted the legitimate crops of cotton,

peas, and corn. What a planter of the region once pathetically remarked to me is certainly true: "If we could only get people to eat crab-grass instead of corn, some of us here could make a living." True, one passes a few fine estates, such as the great Horlbeck pecan orchard, containing upward of a thousand acres. But most of the dwelling-houses along this road belong to poor Negroes. Of these cabins a word may be said.

They are in general of two types: either old and smoke-grimed and staggering in posture, or else painfully new, with the sap oozing out of their pine boards; often they may be so new as to be unfinished. I mean that a porch or a set of steps may be begun, but left for months and even for years in its state of hopeful beginning. I have known a family to put a roof on one side of a house, and to move in, and actually not to finish the other part of the roof

for a matter of two years. Some people laugh at this sort of thing, and they say that it is just like Negroes to plan and not to execute. My observation leads me to a different feeling and to a different conclusion: I grieve over these cabins; and I know that they are unfinished because their owners are shackled by a dull, uniform, absolute poverty, which is the mother of a fatal inertia. If, for example, a Negro knows a good trade, and can thereby make a little ready money, he will build himself a pretty home, and he will finish it inside and out. But when a man's earthly possessions consist in an acre of barren land, and when he has no market for whatever tiny yields he is able, by weary toll, to scratch out of it, then he exemplifies what Gray meant when he wrote of the power of chill penury to repress noble rage; and what our own Edwin Markham means when he shows us the

THE OLD PLANTATION HOME

Man with the Hoe—a figure destined, by the poet's genius, to pass forever, with terrible portent and implication, before the eyes and through the heart of mankind.

Of these Negro cabins that greet my eyes on my homeward journey, some are painted. Reds and blues prevail; and these are the more startling because of the loneliness of the landscape on which they flamboyantly kindle. Negroes, like all men, having in their souls the natural yearning after beauty or embellishment of some sort, essay to paint their cabins. But commonly their meager means will permit them to buy only a pint or so of paint. This, when judiciously thinned, will cover two doors and perhaps one window; hence one of the architectural oddities to startle the stranger traveling along this Southern road is the sight of a squatting dim cabin with an alarmingly red door, and two or three shutters "terrifically blue," as Florence Wilkinson says. For simple human reasons I have always been touched by these pathetic displays of a mortal longing, distinct and but faintly assuaged. Many careless observers suppose that the Negro simply quits work; but possibly this little story will show that, given a chance, he will take it about as well as the average man.

Prince had lost his house by fire, the cause of which had been a lath-and-mud chimney. One of the laths had caught fire and had set the house ablaze. In helping him plan a new house I was emphasizing the need for a good brick chimney. But he told me he had no bricks and couldn't buy them. I then bethought me of an old brick chimney, all that was left of a rice barn, standing solitary on a plantation some three miles away, and across a river, a swamp, and a creek. I told Prince that I would buy the chimney for him if he would move it. He accepted with alacrity; and for days, in his dugout-cypress canoe whose middle name was Tippy, he crossed the river and the creek. Across the swamp the bricks had to be rolled in a decrepit wheelbarrow. From the final landing they had to be hauled a half mile. Yet all the work—the tearing down of the old chimney, the transportation of the bricks, the building of the new chimney—was done with speed and gladness. They wrong the Negro who point to his poor house and say that it is a just representation of his inertia. Give him a chance, and he will show you what he can do.

And now I return to my woodland highway that runs on, straight and broad and lonely—a road across which wild turkeys are wont to step warily, marching furtively to their roost; and a road down which deer, when the twilight is come, will pace in mysterious silence, delicately roaming the dim country of the night. Though it is midwinter, there are dewy fragrances allurme from the wayside, and in the n bays smilax wreathes the tallest

trees and drops great cataracts of densest greenery almost to the forest floor. Soon the woods take on a changed aspect; I come to sparkleberry thickets, scrub-oak hills, giant live-oaks, great hollies that tower sixty feet. In one of these hollies a flock of robins is feasting; and with them are cedar-waxwings and a few silent wood-thrushes. Perhaps three hundred robins are in this one tree or else have immediate designs upon it, for the bare sweet-gums near by are thronged with them, and the holly is their objective. On the gums are massive bunches of mistletoe; and on these the birds feed also; but the pale, cold berries of this mystic parasite seem less attractive than the ruddy holly berries. The changing of the woods means that I am getting near the river; and it means that I'm getting home.

The sun, burning down into the pine crests, sends far through the happy woods shafts of mellow light which touch with tender radiance the peaceful pinelands. High overhead throng flocks of wild fowl, passing to their night feeding-grounds on the delta. On the borders of a bay branch a scattered covey of quail is calling together. Far off I hear Negroes whooping melodiously. And this country is home to me—this glamour-land; and, quoting Comus (not because I admire him), I can say:

I know each lane and every alley
green,
Dingle and bushy dell of this wild
wood,
And every bosky bourne from side to
side,
My daily walk and ancient neighbor-
hood.

Fragrant, hung with arras of tattered gold that appears marginal to gorgeous mystery—solitary, beauteous—the midwinter Southern countryside must be compared to the autumn of New England. Everywhere the evergreens prevail: in bush and tree and vine—in jasmine, in smilax, in pine, holly, cassia, oak, and laurel. Looking upon this wistful and somber aspect of eternal life, I think of Goethe's exquisite line—

*Die Myrthe still, und hoch der Lorbeer
steht.*

Of all trees at this season the water-oak is the most arresting in beauty. Although its foliage assumes the most riotous hues, this tree retains all its leaves throughout the winter. The most stately is the live-oak, with prodigious reach of limb, druid-like festooning of gray moss, endless colonies of ferns living along the far-stretched tolerant arms, and with a massive lustrous crown of glossy foliage that confers with skies and stars.

But these woods are not altogether lonely. I pass old friends. First there's a gay cavalcade of amiable deer hunters, happily trespassing on my land, who with high discreetness hail me affectionately by my first name and invite me to kill my own deer. Then there's an old

rice planter, the last of his ancient régime, slowly driving home to his far-off plantation down the river. I stop for some words with him, for he is an ancient friend of mine whom I regard with a feeling akin to reverence. This feeling is natural; for this man, now past eighty, but still actively engaged in planting, is the only one in our region who survives of all those who, like him, fought through the four years of the great Civil War. He alone in the plantation district can speak familiarly of Jackson, of Lee, of Thomas, of Custer, of Pickett. He was at Pickett's romantic wedding; he met Custer at Appomattox. Thrice he was wounded; and, though he has often told me of almost every phase of the war, I have yet to hear the first word of bitterness from him. Moreover, he is the one man to whom the Negroes can go for an understanding of matters of genealogy; he seems to know the history of every family of his region—knows it even far back into slavery times. After the planter, I meet many Negroes thronging home for the holidays. Every one has a touch of vivid color about him; it may be a necktie, or a pair of tan shoes, or a bright handkerchief, or a care-free smile. In the lone forest I hear singing and laughter and shouting, and now and then I catch the sound of a strummed guitar or banjo. Nor is there any incongruity in hearing the sounds of these instruments amid the hushed splendor of the pine-land cathedral or the dim and solemn live-oak groves; for most of the melodies are in the minor chord, as perhaps befitting the songs of those who retain in their natures something of the exile's immutable longing.

And now I'm very near home. A quarter of a mile from the house the avenue winds into a clearing. Across wide pasture lands, happy in the light of the setting sun, the white pillars gleam, the windows glimmer, the friendly great chimneys spouting smoke show that fresh fires have been kindled against the arrival of travelers. On a plantation as remote as this one every guest must needs be a traveler, as every traveler is a guest.

The old home welcomes me as I drive up the winding woody road; the old home seems like a human heart, generous, understanding, unchanged by the years, wistful, thoughtful. Not being a believer in public embraces, I forbear to describe the scene that follows. I've always had a suspicion that these effusive ones who display their affections in crowds are likely the last ones to display them at home.

It is twilight now. Suffusing the pinelands with all kinds of garlands and roses, the sun has set. Plantation sounds fill the air. High over the dreamy oaks the thin, sweet music of wild ducks' wings can be heard. From their night haunts in the shrubberies behind the house the migrated white-throats are calling. I can see tiny

warblers going to roost in the swaying gray banners of moss. From the stockade where the deerhounds are kept I hear a joyous clamor. They know very well that a hunt is afoot for to-morrow. From the stable yard come the voices of the Negroes, singing, shouting, and breaking into peals of infectious laughter. On the broad steps of home, in the dusk, I talk with many Negroes who have come to see me. Their types are interesting.

Gabriel, the hunter, wants to know how soon I can join him in the pursuit of a buck that he has been "saving" for me all year; and from under his coat he produces a marvelous otter hide as a Christmas present. This wily creature he has trapped with a skill that few even among the ranks of expert woodsmen possess. His knowledge of woodland affairs is in singular contrast to the ignorance of wild life of that great army of people, otherwise intelligent, who really wouldn't know the difference between a drumming grouse and a flying buttress.

Martha, one of the members of an elder race, and for half a century the very soul of fidelity to my family, comes to tell me how Germantown, the name of the village where she lives (it is on the borders of the plantation) has guarded its fair civic name during my absence. A strange Negro, it seems, had come to Germantown, a settlement of Negroes of the very best type. This newcomer had behaved in a very shifty manner; and, as a result, he had been strictly ostracized. Martha put the matter to me most graphically when she said: "He has no principles; so we 'hibit [prohibit] him, and we 'hibit his hog." It would not do merely to punish the man by a show of outraged decency, but he must be given to understand that, since he would not behave himself, his stock should not enjoy free range. Possibly there are several other communities in our country which would be uplifted morally if the attitude of the better people toward any brazen sinner was to "hibit him and 'hibit his hog." Martha's earnestness gave me a very lively sense of the real depth of her morality.

Prince, the wood ranger and plantation watchman, tells me in his quiet fashion how he has been trying to look out for the place, and how he has had several encounters with poachers and plunderers. He has but one remark to make about all these rapparees and land pirates. "I make them ca' sail." Possibly no expression that the Negroes use is more vivid. The trespassers were made to "crowd their canvas," as Tenyson says. Prince also tells me of the misfortune of old Cudjo, a plantation charge, whose mule had died from the effects of a slip-knot's having been tied about its neck; and Prince has the humor to suggest that creatures more intelligent than mules get into difficulties with slip-knots.

Round the corner of the house there

A NEIGHBORLY GIFT FOR CHRISTMAS

comes now a messenger on horseback. It is a Negro from a neighboring plantation, and he has brought a message from a boyhood chum, who wants to know if I cannot join him on a Christmas deer hunt, and then dine at his place. Appreciating the frailty of human nature, the messenger adds that the mint bed down at his master's place hasn't been frozen.

Suddenly our attention is attracted to the approach of a most massive figure toiling slowly down the avenue. It is a huge Negro.

"Here comes the crowd," mutters Prince, with an infectious chuckle.

Seven miles has he walked, seven sandy ones. It is Hacklus Manigo, a Negro of very singular and admirable type. Like most stout people, he has a keen mind, and he is well read. Until he became so heavy he used to be an engineer on a river steamer; and he belonged to a religious sect known as "the Sanctified Ones." Now, some people will smile at that; but, knowing Hacklus, I have never taken his religion mirthfully. By the light of a dingy lantern, in the oily and grimed cabin of a Santee River steamer, "in the dead vast and middle of the night," I have had him expound to me, with the sad penetration of naïve intelligence, the Gospel of St. John. His tiny Bible was thumbled and stained with oil. Hacklus always carried it with him; and he carried its contents in his heart. And because of that the owner of the steamer has told me that Hacklus was the best engineer on the coast; that, amid a thousand temptations to drink, he was ever sober; that, while the other boat-hands

would wander off when the steamer touched at a town, this man was ever at his post. Kipling has hymned his McAndrews; in incomparably minor tones, but with not a whit less admiration, I can hymn this thoughtful black engineer. And now he's come to talk with me a while—not of hunts and of woodcraft, not of the affairs of the day and of the hour, but of the things of the spirit. "It's all in these two things," I hear him say, toward the end of our talk: "'To do justly, to love mercy, and to walk humbly with God;' and, 'I am the resurrection and the life.'" I never hear those tremendous words without thinking of Hacklus Manigo; for his life has helped to teach me what they really mean.

On the plantation dinner is usually served at night; and as I go into the dining-room I can see that every one is waiting for me to hear a story. It happens to be so human and so typical that it will bear telling. Its gentle satire is as harmless as it is delicious.

"Oh, do you know," my raconteur says, launching forth eagerly, "that the old Holbrook Randolph place has been sold? But it has been bought by *such* people! They've made money in fertilizer; they came originally from Oil City. Such hideous materialism! Well, of course they had to alter everything about the fine old place. And even the approach has been changed. The avenue now winds to the *back* door, which has been remodeled and made the entrance! Of course," comes the salient comment, "people of that kind never could get used to going into the Randolphs' *front* door!"

Festive is a plantation dinner table, with a huge haunch of venison, a wild turkey, snowy pyramids of steaming rice, crisp brown corn breads, and Bahama sweet potatoes, the sugar oozing out of their loose jackets. And there's the fellowship. And there are the plans for the morrow. Merrily the firelight plays on the frieze of stags' horns circling the room; it gleams on the faded paintings; warmly it enters and is lost among the lavish festoons of holly, myrtle, cassina, mistletoe, and smilax that deck the room.

When once more I go out on the broad porch, the moon has risen, striking silver lances through the misty river fens. Far off I can hear the Negroes singing their Christmas spirituals. They rise, those humble hymns, to the Creator in his mighty fane. The night has magic about it; I think of Whitman's superb phrase, "the huge and thoughtful night." Over the earth there is the sense of some serene arrival. The stars seem aware; the world is about to commemorate the coming of Love. And here, on this lonely plantation, even the humblest heart can feel that this is God's Holy Night; even the weariest heart can feel that all shall be well for them who love the Christ, and who, like Hacklus Manigo, try to walk humbly with their God.

FUEL FOR STEAMBOATS AND HUMANS

BY FULLERTON WALDO

ONE of the few long-distance wood-fuel river trips remaining in the Western Hemisphere is the journey from Fort McMurray, Alberta, to the delta of the Mackenzie River. The distance to and fro is three thousand miles. The steamers, loaded, draw three feet or less; in the shallow places that abound in the Athabasca River and the lake, soundings must be taken by two men stationed in the prow, and serpentine progress is slow. The paddle-wheels are nineteen and sixteen feet in diameter. The sixteen-foot paddle-wheel, which is that of the steamer that does four-fifths of the journey, below the rapids, at which the larger steamer transfers its freight, makes six revolutions per minute at two miles an hour, twenty-two revolutions at nine miles an hour, twenty-seven revolutions at its extreme speed of fourteen miles an hour. As the current of the river varies from two to six miles an hour, the pace is considerably accelerated or retarded as one goes downstream or up-stream. At nine miles an hour the fires eat three-quarters of a ton of four-foot spruce logs; at fourteen miles an hour the fuel consumption is about a cord.

Men spend the winter in the forest on the edge of the great stream to cut this wood and pile it on the bank. The serviceable timber is spruce. The black poplar (also called balm of Gilead and cottonwood) is plentiful, and it bulks as large, but it lacks the pith and stamina to make good fires. The little dry logs burn fast; logs cut with the sap in them and exuding the stickiest of gum last longer. There is as great a variation in the wood and in the way it is piled as in the men who cut it and leave it for the steamboat to find. One man who works alone, with a sled which he hauls himself instead of using dogs, has reared many a perishable monument to himself at a cost of \$4 a cord to the company employing him. He saws at right angles; he piles at right angles; he builds a square bastion at each end of the pile. His work is the admiration of the rivermen. The wood-pile built by the Indian is likely to be of little old logs, too thin and too long dried, which look at the ends as if they had been chewed off by dogs or whittled the way some women sharpen a pencil.

One man last December, working alone, froze his foot. Then he amputated the toes with his jack-knife. Blood poisoning set in, and he lay helpless till he was rescued in April. Indians sent to search out his solitary hut returned to Norman and reported that there was no one in his cabin. A constable of the Mounted Police then went, found poor McCreery, with a small bag of flour beside him, scraping the snow from between the logs of his miserable shack. A doctor at Fort Norman

treated the foot, and is said to have charged \$600. Our boat two months later burned the wood McCreery had cut and piled, and found it good.

If the axman piles the logs on the verge of the river, where it is most convenient for the boats, he may lose in a moment the fruit of his long toil. When the ice goes out of the rivers in June, it has no mercy on the banks. All along the stream the turf overhangs the rich black loam, which may be frozen to within a foot and a half of the surface. There is a continuous plashing of mud lumps into the water, as if fish were leaping. Stalwart and flourishing trees still stand at the very edge, but the dead gray trunks that have fallen into the stream, that perhaps will drift to the Arctic Ocean by and by, forecast the fate of the trees that still defy the undermining of the water and the frost.

Hence the wood-pile usually stands a hundred feet or so back from the ragged rim of the waterway. Thence it must be "toted" in the arms or on the shoulders of the crew, or of restive passengers desirous of exercise. Some are two-log and some are four-log, or even five-log men. The logs are thrown one by one into a narrow chute that reaches to the deck, and if the boat cannot tie up directly under the bank it may be necessary to use the wide, long gang-plank as well as the chute. If the slant of the chute is steep, the logs come cascading down speedily and violently; if the slope is gradual, it is necessary to direct a stream of water constantly upon it to keep it slippery.

The process of getting the wood aboard is more complex and cumbersome than the description intimates. In the way of an onslaught on the wood-pile there may be *chevaux-de-frise* of logs living, dying, and dead. It takes the eye of faith sometimes to discern timbers freshly cut and piled among those that are as nature or the wrack and ruin of the mighty wind and the battering of the ice left them. If the pilot lets the boat overshoot the almost indistinguishable mark in the hundreds of miles of

serrated spruce fringe, the boat is as helpless without fuel as a man is without food.

Your steamship fueled with coal or oil may seem animate, and not an impersonal machine, but one of these wood-burning river boats is much closer to a breathing, vital, human organism. It coughs red sparks upon the river as if these were the drops of its own blood; and it is indeed a dangerous contagion that is shed abroad therewith. For its length—but one hundred and forty-five feet—this boat is a rapacious creature. It must have meals several times an hour; and no half-portions, but an Eskimo feast, to the inelastic capacity of the ribs of the fire-box. One is inclined to believe that Shadrach, Meshach, and Abednego would have declined to serve in the fire-pit of a Mackenzie steamer. Yet an Alberta lumberjack at \$45 a month, spectacted against the hot white glare, takes a log as the wood-passer hands it to him from every nook and cranny the freight leaves free. He yanks open the alarming jaw of Fafner with as little ceremony as if he were a traveling dentist and the furnace were the mouth of a baggy Indian squaw. As the bottom of the fire-pit is six feet below the deck, he must receive the big log at the level of his head as it is slid over the brink, and while flame breathes at him from the firing-front he may be getting a shower of dust and minute pieces of bark as he turns to take the log in his gloved hands.

He must follow the log all the way in—and the gloves are not asbestos. It often seems as if the hands were bathed in flame; even so Latimer and Ridley and the rest of the glorious book of martyrs must have approached the stake. Frequently after the monstrous morsel is lodged in the capacious maw it takes the wrong turning, and must be straightened. If it is too solidly lodged for a swift turn of the wrist to set it right, then—and only then—the fireman deigns to use an eight-foot poker of iron pipe. As he turns his sooty face up to you and smiles, he does not think he has done anything; but it is like the smile of Christian after he had discomfited the fiend Apollyon, who straddled over the whole breadth of the way and said, "Here will I spill thy soul." As the man on high in the pilot-house must, like Palinurus, keep his rudder true, even so the sweating gnome below, with oil on his burns, must keep the needle of the steam-gauge pointing to 175 pounds, or the engineer comes bustling from his piston-rods and link-heads to know why. Behind the whole rocking lumber shanty is the wheel—the great wheel throwing out small rapids that ripple clear across the river, frightening the young wild ducks that cannot fly and fairly leap out of the way and toes.

Other articles by
Mr. Waldo on the
Mackenzie River
country will be published in later issues

ing the fox-tail grasses that stand for reeds along shore. The forest turns to fire; the water is transmuted into steam to move that wheel by which men are moved—that wheel on which lives of men are broken.

Thus seen and felt, the boat is epic of the toil and passion of existence. It is ours to seek out, along the River of Life, the fuel of body, mind, and soul. What

worthless sticks we often choose! "The trees of the Lord are full of sap." We give the precious engine, not the best, but, many times, the very worst of all there is. The fuel we might take to be the spirit's nourishment is proffered from the whole rich and various demesne of science, art, and letters. The world is all before us where to choose, as it was before our parents leaving

Eden. "Man," saith the philosopher, "is an animal of noble preferences." How often, of our own motion, do we believe that utterance! "Give us this day our daily bread," our souls are crying; and instead we give them stones.

He "maketh his angels spirits, and his ministers a flame of fire." That fire must be fed with the right fuel or it dies.

THE ENJOYMENT OF MUSIC

WHAT IS GOOD PIANO PLAYING?

BY W. J. HENDERSON

WHEN you go to hear a pianist, what do you expect? If you expect what you should not and the pianist does what he should, you will be disappointed. If you expect what you should and the pianist cannot fulfill his obligations to his art, you will be disappointed; but this time with unassailable reason. Too many persons regard music and its performance as some sort of mystery, comprehensible only to those possessed of special training, whereas to a certain extent any one who has a good ear and will apply common sense to his consideration of music can determine whether he ought to enjoy it or not.

If music is an art at all, it is the art of beauty in sound. We need not tor-

ment ourselves by trying to arrive at a definition of beauty. Let us confess at once that beauty has never been successfully defined, and that it is entirely a matter of opinion. But the fact remains that among the cultivated peoples of the world there is a pretty general consensus of opinion. In regard to music the general view is that its fundamental beauty is the beauty of tone. If the sounds produced by instruments or voices are harsh, rough, impure, or, in a word, noises rather than musical tones, beauty cannot exist. For that reason we may without hesitation assert that the chief object of all musical technic is the production of euphonious tone. Probably that is what Liszt had in mind when he declared that three things were

needed to make a pianist: "First, technic; second, technic; third, technic." What he undoubtedly meant was that a perfect and inexhaustible technic is essential to good piano playing, for the reason that without it nothing can be made to sound beautiful.

Therefore let us begin with some reflections on the art of playing the piano. Nothing is more generally misunderstood than what constitutes good piano performance except what is good singing, and this is reserved for future discussion. The million amateur pianists find that their greatest difficulty is to strike the notes written in all the "hard pieces" which the masters have given us. It does not seem to occur to these amateurs that about the mechanical difficulty of fingering all those notes the composers never thought at all. They took that part of the execution for granted. So should we. A professional pianist ought to be able to strike the notes in any of the standard piano compositions, to strike them while proceeding at the correct *tempo*, and to accent them correctly. False notes are simply forbidden.

But while playing the right notes the pianist ought also to be able to make them sound beautiful. No matter how intricate the passage, how rapid the succession of thirds or octaves or other combinations, no matter how complicated the polyphony, the tone drawn from the piano must be beautiful or the performance falls of its ultimate purpose—namely, to restore to living, breathing eloquence the instrumental song which sleeps in silence on the printed page till the clinging kiss of the interpreter breaks the spell.

The piano is undeniably an instrument of percussion. Its tones are produced by the blows of hammers on metal strings. And the purposes of interpretation are often best accomplished by emphasizing the percussive nature of the piano. But the hammer of Thor or the ax of Sergei Prokofiev is not the hourly companion of the great artist of the keyboard. His chief aim is to disguise the percussive character of his instrument and to make it seem to sing. This semblance of singing is the greatest desider-

JOSEF HOFMANN

"The master of phrase and accent"

Bain

HAROLD BAUER

"The exquisite cantilena of a Bauer. . . . This is the acme of legato, as it is called, and a pure, smooth, sustained legato is the foundation of musical performance"

Bain

GUIOMAR NOVAES

"All pianists and students of piano have made an idol of Godowsky because of his extraordinary technic. But many of us would rather listen to an erratic but imaginative child like Gulomar Novaes"

atum of all musical performance. What musicians mean by a singing tone is one that has a smooth and steady flow. In a series of singing tones united in a musical phrase the vocal quality is imparted by so performing them that they seem to be organically united. One note passes into the next without a noticeable break in the continuity of sound, yet the articulation between the two tones is not blurred, as in the exquisite cantilena of a Bauer or a Gabrilowitch. This is the acme of legato, as it is called, and a pure, smooth, sustained legato is the foundation of musical performance whether vocal or instrumental. It is the first and indispensable requisite of musical beauty.

The piano of to-day is capable of a far finer legato than the early ones. We have better strings, better sounding-boards, better key actions, and better pedals. We possess sound-sustaining devices unknown to the makers of Mozart's and Beethoven's pianos. Yet the illusion of song has always been sought by pianists. Johann Sebastian Bach's son Emmanuel wrote:

Methinks music ought principally to move the heart, and in this no performer will succeed by merely thumping and drumming and by continual arpeggio playing. During the last few years my chief endeavor has been to play the pianoforte, in spite of its deficiency in sustaining sound, as much as possible in a singing manner, and to compose for it accordingly.

Mozart cherished similar ideals. He demanded of the pianist a smooth, gliding movement of the hands, so that the passages should flow like wine and oil. In order that the vocal character of piano music might be preserved, Mozart wrote continually in the cantabile style (*cantare*—to sing) and developed many of his melodic thoughts from simple successions of notes of the scale. One wonders often whether Elly Ney ever heard of the wise sayings of Emmanuel Bach and Mozart.

But, while the singing melody is the basis of piano music, as it is of all other music, it is not the whole of it. Upon this foundation is reared an artistic structure in which variety in unity shows forth in all its engaging qualities. No one would wish to forego the pleasure experienced in hearing a pianist perform rapid passages with perfect smoothness and equality, with sonorous force and sunny clarity. While the pure cantabile melody may be the trunk of a composition, the florid passages are the natural and beautiful exfoliation, and we would regard some naked trunks as comparatively wintry objects.

In the performance of brilliant passages, and also in certain types of melody, the staccato, or short, sharp touch is required. The listener is justified in demanding that when a pianist has a staccato to play he shall play it musically. Singers use the staccato, and the instrumental performer therefore can form a vocal ideal of this type of utter-

ance. What, then, is to be said about rapid passages in simultaneously sounding tones, thirds, sixths, and octaves, as the musicians would put it? Always the same: the tone must be musical. But here enters another addition. The balance must not be destroyed. The accord must consist of two or more tones, one of which usually belongs to the melody. The listener must require the player to make the melody clear at all times and to give to the accordant or discordant notes precisely the amount of force needed to make them furnish the harmonic character to the performance.

This is one of the most exacting requirements of artistic performance, for the pianist who expects to preserve the outline of his melody and the balance of his subsidiary voice parts (as they are called) at all times must possess fingers and wrists trained to the utmost pliancy and independence, and he must have them under such command that they execute his wishes automatically. The pianist cannot be thinking all the time just how hard he is to strike this or that note. His mind is rather intent on the larger matters of phrasing and the adaptation of his *tempi* and his broader dynamics to the interpretation of the composition.

We now come to the subject of rhythm. With all due regard for the brilliant liberation of their spirits by the much-liberated Cyril Scott, the untrammelled Ornstein, and other colorists of the impressionistic school, the music lover will

without doubt continue to insist on a clearly defined outline. Now in music the clarity of the outline of a composition depends not only upon a neat enunciation of the separate tones, but upon a perfect relation of their relative lengths, their varying degrees of force, and their utterance in unmistakable groupings called phrases. The phrasing of an instrumental composition is founded upon the same artistic principle as the lines of a poem, and the preservation of the identity of the line can be accomplished only by a correct treatment of the meter.

Not all the angels;
In heaven nor;
The demons down;
Under the sea;
Can ever dis sever my soul;
From the soul of;
The beautiful Annabel Lee.

If you read it that way, the rhythm is spoiled, though it is impossible altogether to destroy it, while the phrasing—supposing it for the moment to be piano and not word music—is wholly ruined. But even when the lines are correctly phrased, the rhythm will still be imperfect if just the right emphasis is not laid on every syllable. In the larger forms of musical composition the melodic phrases are often very extended and the rhythms not simple, but compound. It is therefore the business of the pianist to convey to the hearer a clear and unmistakable outline, so that he may recognize the phrases of a melody and the melody as a whole. If you hear a blurred and uncertain melody, groping, as it were, its way toward you, be sure there is something wrong with the performance. The most uncouth or vague melody can be played in such a way that the responsibility for its defects will be shown to be the composer's, not the performer's. And when one thinks of perfection in rhythm one thinks of Josef Hofmann, the master of phrase and accent.

One of the commonest faults in piano playing is underestimating the relative sonorities of the upper and lower strings. The high treble notes are sounded by short strings with short vibrations; the bass strings are long and have more enduring vibrations. Pianists often forget this and make the bass of a passage resound so that the treble is obscured and the outline of the melody lost. Obviously a composer wishes that everything shall be heard, but in proper proportion. It must be plain to the reader that good phrasing is impossible when the bass overbalances the treble, except in cases where the melody is in the bass.

Perhaps enough has been said about the office of the hands. Now a word as to the feet. The possibilities of the pedals are very great. The amateur of music, unfortunately, has been taught to call them "loud" and "soft." But a pianist can play just as loudly without using a pedal as with one. He will, how-

Bain

OSSIP GABRILOWITCH

"One note passes into the next without a noticeable break in the continuity of sound, . . . as in the exquisite cantilena of . . . a Gabrilowitch"

ever, obtain a different kind of loudness. When a pianist strikes a key, he raises a damper, and as long as he holds the key down the strings of that note will vibrate freely till their vibrations die out. When on striking the key he also depresses the "loud" pedal, he raises all the dampers in the instrument and thus permits all sympathetic strings and their overtones to vibrate.

When he depresses the soft pedal, he shuts off one of the strings of a note (in a modern grand each note has three) and causes the instrument to give forth a more veiled tone. By various combinations of pedals and the union of such combinations with the several kinds of touch pianists produce those extraordinary illusions of changing qualities of sound which we call tone colors. It is not essential to an intelligent enjoyment of piano playing that one should know all about touch and pedals, for touch is so subtle that, in the last analysis, it becomes an individual gift. But even a tyro can understand that some difference must result when you strike the key with a stiff finger or a relaxed one, with the flat surface of the extremity or with its point.

Finally, as to interpretation. This brings us to indeterminate quantities, for, while it is easy enough to decide when the interpreter is entirely wrong, it is impossible to pronounce a conclusive verdict when several admittedly

great artists disagree. The true artist assimilates the composition. It becomes a part of his own artistic organization. When he gives it back to the public, he gives himself as nourished by Beethoven, Chopin, or Schumann. But at least the thoughtful listener can study the manifestations of the performer's temperament. Intellect and emotion must each play its proportionate part. As the author of this article has said elsewhere, "Music is a glorious ship on the ocean of art; emotion is the breeze that fills the sails; intellect is the skilled hand at the wheel."

The intellect is the designing power, and without design there is no art. Piano playing which is merely a bewildering exhibition of technical "virtuosity," as it is called, is worthy of admiration for just what it is, but it is far from being the supreme achievement of the pianist. This explains the attitude of critics who demand always that a pianist shall show ability to interpret some work of high intellectual design, such as a Beethoven sonata or the Schumann fantasia, before they will accord him a seat among the gods of his art. All pianists and students of piano have made an idol of Godowsky because of his extraordinary technic. But many of us would rather listen to an erratic but imaginative child like Guilmar Novaes or a solid master of form and style like William Bachaus.

Another article on "The Enjoyment of Music" will appear in an early issue. It is called "About Good Violin Playing"

IN THE FIELD OF THE SHEPHERDS: 1918

BY ALLAN A. HUNTER

A PALESTINE SHEPHERD AND HIS FLOCK

THE war was over. It was the morning of the first Christmas after the armistice, in Bethlehem. But the place where the Prince of Peace was born proved the scene of hatred and violence. Of course that hatred and violence were held in leash by the hand of the British administration. Two British Tommies were on guard beside the silver star which, according to tradition, marks the spot upon which the angels looked as they sang of good will among men. Those soldiers were on guard with bayonets fixed in their rifles and cartridges ready to see that the Greek priests did not start massacring the Armenian priests, or the Armenian priests the Roman Catholic, or the other way round.

A more ironical contradiction of the spirit of Christ would be hard to find. Here on Christmas morning, in the little cave-stable under the famous Church of the Nativity, there may have been two or three worshipping in spirit and in truth; but one noticed only the pomp, pride, and circumstance of those who had come either to show off or to see. Priests exhibited on their Orthodox bodies the crimson and purple of gold-laced robes. (These they had changed many times at a crowded ceremony the evening before.) As for the gaudy curtains and lamps, the ornate manger and the wax *dambino*, all that bric-à-brac made one think of a curio shop. What symbols there were represented, not the radiant Christ of the brotherly age that will come, but the musty past and its hopelessly stupid quarrels.

The silver star was a definite cause—

so they say—of the Crimean War. Some holy Orthodox fanatic stole it. An opposing sect called in the French to win it back. Clash! Another war! However that may be, many fights have taken place in this underground room and some have given their lives over such an issue of moment as this: Shall the Orthodox or the Armenians own such and such a nail on the wall, or shall the Catholics wash a certain window?

That crypt under the Church of the Nativity stands for the clenched fist and the incredibly grotesque. You can break your heart over it, or you can take it humorously, and rather sensibly, as did the British sergeant.

THE STAR IN THE GROTTO OF THE CHURCH OF THE NATIVITY

I met him in a room adjoining. He was off duty at the time; and he cherished no delusions about the holy places. To him the salient thing in this church was the wine cellar of one of the superintending priests.

"They're a rum lot, sir," he commented on the religionists. "But the wine's good, sir. Werry good, sir."

Tommy Atkins in Palestine was a wise and weathered man. He refused to worry himself sick about the graft and bigotry of the holy places. He was there for the sole purpose of guarding them, of doing his duty.

Nor his to reason why. As I left the church I asked a sentinel (with a wound stripe and many service stripes) where the field of the shepherds was.

"I don't know, sir."

"How long have you been stationed here?"

"Six weeks, sir."

Men might crawl out of bed before the dawn and walk the six muddy miles from Jerusalem to visit the field where the shepherds watched their flocks by night, but this field of the shepherds was nothing to him.

It was something to me, however. I hadn't fought four years in the war; on Gallipoli and then across the scorching sands of Sinai. (I had come up in comparative comfort six months before on the "Milk and Honey Express.") I hadn't marched with a ninety-pound pack all the way up the Philistine plain and then through the slush and storms of the Judean hills to David's home town. So the field beyond Bethlehem was worth some walking to see.

It was only half a mile from the church, over a hill and then down again. Walking up through the narrow, twisting streets, I passed a string of kneeling camels, an immense solemnity in their faces as they chewed their cud; and donkeys, the most lovable little fellows with fuzzy eyebrows and a patience in their eyes born of carrying innumerable burdens. Their backs would bend, but apparently without pain, as they twinkled down the street, half hidden under bulging sacks of grain and clover. One moment's hesitation, and "Thwack!" would come the driver's stick on the mouse-brown haunches, with the exhortation, "*Yu Hamar!*" (O donkey!) These drivers were robed in *jellabias* or glorified nightgowns, originally a brave Prussian blue, but now, thanks to many washings, the mild color of the sky. They were amiable barefoot Syrians who seemed genuinely to mean their deep-throated salutation of "*Salaam aleikum!*" (Peace be upon you!)

They are a strangely lovable people, the Syrian village folk, even if they do overload their animals. To be sure,

they have weaknesses. They do not seem to be interested in veracity; possibly they have no conception of what it is. They are not keen on what we Americans call co-operation; there is too much jealousy and distrust all round for that. They do not abound in initiative and the strenuous life. But they have a gift for quick sympathy and a dignity like the dignity of some children, that suggests the kingdom of God. Their lives are taken up pretty largely with finding sufficient grass for the family donkey and earning enough pancake-loaves of bread for the hungry mouths in the limestone box of a house where parents and little ones all literally go to bed with the chickens. Olives and occasional figs, or a special slice of impossible cheese, with grapes in summertime and a rare Jaffa orange, serve for dessert. Since this is Christmas time, they will indulge in three or four pieces of *deuclauwa*, or honeyed pastry, and the children will make piles of colored eggs on which have been etched, with a nail, the manger scene or the Wise Men. Nearly everybody will join in, for the little town of Bethlehem is mostly Christian, and the few Mohammedans are not unwilling to help the Christians keep their festival.

As I reached the top of the hill and looked back over the hollow where huddled the small white houses of the town, I saw that most of the windows were margined in spite of their lack of glass; margined with blue, in honor of the Mother of our Lord. Bethlehem from this distance was lovely to look upon, "all bright and glittering in the smokeless air."

What met me as I left the town behind and started eastward down the hill was even more enchanting. For there in truth was Palestine! Simplicity and peace! In front of me, across the field gleaming with barley stubble, was a yoke of slow-moving oxen, fresh brown in the sun, tugging away at a wooden plow, and followed by a peasant crooning an eery song. That plow could have been used by the servants of Boaz in this self-same field where Ruth gleaned among the harvesters. With that song Abraham may have heartened himself along the Bethlehem road as he set out with his camels for pastures new. And

A STREET IN BETHLEHEM

those watch-towers—tall cylinders of unhewn stone—that stood as sentinels among the terraced vineyards on the hillsides round about. Did not David survey this very valley from towers like these? Perhaps the fig and olive trees were thicker then, and the vines more generous; for half the trees of Palestine the Turks cut down, and blighted all her fairness.

The boy David must have loved these hills and *wadys*, that distant wall of blue whence the sun had risen, the mountains of Moab that forever haunt the Holy Land. Perhaps he led his flocks over this field to nibble grass or dewy moss among the crannies of stone walls.

Anyway, sheep were browsing on the edges of the field, and there were two or three shepherd boys; ragged young bare-

foot Arabs, as native as the oak or thorn. Possibly they had gathered here deliberately on Christmas morning in the field where the shepherds watching their sheep had heard good news from heaven.

I did not know. It was enough to admire the nine-year-old shepherdess, holding in her arms a kid with a shining jet nose, a picture of tranquillity.

After exchanging "peace" with these carers of the flocks, I climbed up the hill again toward the little town, and as I climbed I remembered:

They all were looking for a king
To slay their foes and lift them high.
Thou camest a little baby thing,
That made a woman cry.

Nearing the crest of the hill, I noticed, stark and white, clear cut against the blue—the Cross.

THE DIFFICULT ART OF BEING A JEW

BY ELIAS LIEBERMAN

This frank, thoughtful, and thoroughly American article discusses the problem of racial relationship without fear or favor. Mr. Lieberman believes that the American way of approaching a problem is to bring it out in the open for discussion. He makes manifest this belief by his forthcoming Outlook article

POEMS BY BERNICE LESBIA KENYON

TO ONE WHO WALKS THE HIGHROAD

I

THINK no thought of her
Whatsoever,
Foolish wanderer,
If you still have hope to find
Any peace within your mind.

II

She is vain and frail
(I know her!)—
She will fade and fail;
As a bloodroot blown apart
She will scatter from your heart.

III

Go—in glades of fern
Seek cover,
Lest the sun burn—
Lest the river drown you deep
In its shadows full of sleep.

IV

Where the leaves are cool,
Dew-crested,
Near a still pool,
With the moving, watching things
Listen to their whisperings;

V

But be silent. Stand
Deep rooted.
Clasp with either hand
Saplings, tall and thin of stem;
Lean upon the strength of them.

VI

Let them bear the weight
Of your longing.
They are tall and straight . . .
In their province, green and dim,
What is any woman's whim?

SMILING WOMAN

I

HER personable countenance
Incites the mind devoid of laughter;
She is a smooth and supple lance
That, bent, retained some bending after.

II

Always the sun will flash from it,
Tracing that length that never broke—
Her lovely grace—her singing wit—
That cuts a curved and cruel stroke.

POTENTIALITIES

AND if my hand should touch you, well, what then?
Could finger-tips disclose what thought has missed,
Or wake the sleeping sorceries that twist
Your mouth almost to smiling? In all men
I doubt not there is something kept apart,
Not meant to be disturbed. (As in my breast,
Darkly, I cherish the small seed of rest.)
What curious thing is hidden in your heart?

I will not ask. I shall not wonder much,
Save at the peace that broods upon your face,
As if you dwelt secure in a far land
Remote from thoughts of me and from my touch;
And this I know is your desired safe place,
And so I will not reach to you my hand.

IMPREGNABLE

AT times I grow distrustful of repose. . . .
Have you perhaps allowed yourself to die,
Shut in behind yourself, the walls too high,
The last gate shut, and never to uncloze?
And can you not be more than what you are:
Calm, and remote? My thoughts in clamorous storm
Surge like the rains of summer, black and warm,
And move you not, and spend themselves afar.

Always you wait; and I am wordless, held
Beyond the impassable barrier, apart;
Watching your mood, too long restrained and quelled,
Strong in the dark of doubt—as strong as stone—
Shaped by your will with its most desperate art,
To keep you safe, and deathless, and alone.

MARIA RAPALLO

BY ELSIE SINGMASTER

M^{R.} SPANGLER stood in the kitchen, pulling on a pair of heavy and oft-mended gloves. It was half-past three on the afternoon of the day before Christmas, and he was about to leave Plympton in his motor omnibus for Summit Hill, fifteen miles away. The kitchen, with pretty Mrs. Spangler sitting by the table, was pleasanter than the mist-enshrouded out-of-doors.

Mrs. Spangler held up her work for Spangler to see. It was a cat whose outline had been printed on muslin which she had stuffed into shape with rags. It made a safe and delightful toy for a little child.

"I've stuffed a cat and a dog and a doll to-day," she said, merrily. "And to-morrow I'll stuff a turkey."

Spangler laid his hand on the latch. Mrs. Spangler was the light of his eyes, and he never left her without a pang.

"What would you say if I didn't get back in time to help trim the tree?" he asked, ruefully.

Mrs. Spangler laid down her work.

"You won't have to make an extra trip to-night?"

"I'm afraid I will. Four college students are coming home by way of Fort Edward, and the boss told me to meet them."

"Oh, dear!" cried Mrs. Spangler.

"It means five dollars," said Spangler. "And you may have the five."

Outside, the mist created a premature twilight through which Spangler went briskly down the street. There were wreaths in the windows and festoons over the doors and Christmas trees by dozens for sale along the curb, and the Christmas spirit was in Spangler's heart. He wished that he could give some great, priceless gift to somebody, not his family—he was able to give them everything they wanted—but some forlorn person or some child.

In the garage he was hailed with shouts. He was probably the most popular person in the community, and there was no one who more deserved popularity. He climbed at once to the driver's seat of the unwieldy omnibus, in which two passengers, afraid of not getting seats at the starting-point in the Square, had already found places. One was Mrs. Hedge, tall, black-haired, and very cross-looking. The other was Mrs. Lischey, who was short and heavy and timid, with a broad, expressionless face. Mrs. Lischey had the comfortable seat beside Spangler, and Mrs. Hedge, behind her, glared at the back of her old-fashioned bonnet. The four seats of the omnibus rose like steps, and it was only beside the driver that one was not tossed violently from side to side, as well as tipped backward and forward as

the bus climbed or descended the steep hills.

A mischievous mechanic looked at the two ladies.

"Look out going round Dead Man's Curve," he warned. "It'll be slippery."

"Slippery nothing!" rejoined Spangler, with a reassuring glance at his passengers. He blew the horn and called, "Look out there!" and guided the lumbering vehicle into the street. The engine roared like that of a powerful locomotive.

At the Square twenty passengers waited, and his car was supposed to hold fourteen. Not only were there human beings, but there was one dog, and there were baskets and suit-cases beyond computation, and one trunk. There were also the early arrivals and himself. The sum to which the human beings added seemed to have a profoundly humorous significance to Spangler, and he said, in a loud tone, "Twenty-three!" It seemed to have a humorous significance for the crowd also, because they shouted with laughter.

"I've got to get home to milk the cows, Spangler," called some one.

"I engaged a place this morning, remember, Spangler. You know I did," said another.

"I don't take up much room," said a very fat man. He was a drummer who had traveled with Spangler for ten years, and he always cast tender and entirely ineffective glances at the ladies. He looked smilingly at Mrs. Hedge, and she repaid him with an indescribably fierce scowl, exhibiting for an instant the artificial substitute which had long since replaced her canine tooth.

Spangler began to give loud directions.

"All you grown people 'll have to hold children," he commanded. "Myron and Billy, you go only a short distance—you stand on the running-boards, one on each side. This ark 'll have to be balanced. All the bundles 'll have to go on the top. Now those that go farthest, in first. Mrs. Hedge, you kindly move front with Mrs. Lischey."

Mrs. Hedge was about to say, "I'll do nothing of the sort," but she changed her mind; not because public opinion was clearly against her, but because she would rather crowd Mrs. Lischey than be herself crowded by the fat man or hold a child on her lap.

Five passengers who came running up at the last minute Spangler could not take. He drove off amid a loud clamor, shouting at the top of his voice:

"I'll make another trip at 7:30. You'll have to wait. Have patience."

Every one on the street stopped to look at the omnibus, and almost all the men wasted their breath shouting at Spangler. The last generation created a

certain nameless and admired work of art by covering a jar or jug with putty and affixing thereon a variety of small articles—buttons, jackstones, buckles, tiny unclothed dolls, wishbones, and so forth, and completing the work by gilding. The bus was not gilded, but otherwise it resembled one of these objects. The trunk was strapped on the rear, baskets and bundles were placed in a rack on the top, a man stood on each side, human heads projected occasionally from between the curtains, and the dog whined piteously on the running-board. The front of the car was decked with greens and a Christmas tree was strapped to the rear. Through the windshield could be seen the face of Spangler, kindly, bright-eyed, smiling, and a little anxious. This was the heaviest load he had ever carried. Fortunately, his passengers would begin to leave at the end of the first mile, and few would be left to carry up the steep incline at the end of the journey.

At the edge of the town he turned on the lights. The mist had thickened and the sky had darkened, and the excrescences on the bus became invisible. The vehicle looked like some enormous elephant or hippopotamus with fiery eye hastening through the night. A mile out the young man addressed as Myron stepped down, and a little beyond the young man named Billy. Every one in the bus shouted "Merry Christmas!" and the young men shouted back and waved their hats.

Still a little farther on two persons got out. One was Mrs. Hedge, who said no good-by, but went directly into her great dim house. The other was a stout woman who, with Spangler's assistance, climbed into a buggy waiting for her at the entrance to what was known as the "back road," which climbed the mountain in a zigzag direction and joined the main road miles away near Summit Hill. The passengers pitied her because of the wretched road on which she must travel. Some one expressed anxiety also for Mrs. Hedge, who lived alone and had tempting possessions, but this sympathetic person was laughed at. No burglar would attack Mrs. Hedge; if he did, said some one, he would "get his."

On the first short incline Spangler waved his hand at a dim light. In a little house close to the road lived Mrs. Graybill, a gentle old lady of whom he and his wife were very fond. He smiled into his stubby mustache and his blue eyes brightened. To-morrow morning he would take Mrs. Graybill home with him to eat her Christmas dinner.

In the village of Worleysburg the bus was almost emptied. There was a long pause here, for all the bundles were re-

moved from the roof and handed to the departing passengers or put inside, and the trunk and the tree were unfastened. The monster had now only his own grayish hide.

Beyond Worleysburg began the steep ascent of the mountain, and there were few houses. Of the passengers who remained Spangler was well acquainted only with the fat drummer, who took the place by his side and began to discourse about the mistakes of the Government. From Summit Hill he would take the trolley to Fort Edward, and there catch an express train and reach home before morning.

The lights of the car, illuminating first a little space on this side of the road and then the other, showed no more fields, but rank upon rank of bare peach and apple trees. Presently, as Spangler changed gears, the landscape changed again. The grade was steeper, and on each side were thickets of rhododendrons and the lower boughs of pines and hemlocks, which vanished upward into blackness. Though Spangler had made the journey twice a day for more than ten years, he never failed to take a profound pleasure in the woodland, and he liked to have some one beside him with whom he could share his satisfaction. The drummer was not a congenial soul.

The woodland was not entirely unbroken. Set apparently in the midst of the forest was a little farm. Here lived two young people named Filson, who, like all the people on the road except perhaps Mrs. Hedge, were Spangler's friends. Several years ago they had lost their only child, and it had seemed at first as though Mrs. Filson would never recover her health or her cheerfulness. A few months ago, however, a great happiness had come to them. They had taken a child to raise, a stranger who had been found for them by the Children's Aid Society. She was a beautiful dark-eyed little girl, about ten years old, whom they called Esther. They longed to adopt her, but the Aid Society advised against any immediate approach to her father, who had treated her cruelly. Spangler stopped each morning and took her to school at Summit Hill, and brought her back in the evening. Now he blew his horn fiercely as he passed the little farm, and he saw the light darken as Mrs. Filson pressed her face against the pane to see him go by. When he came back, she and Filson would both be at the side of the road waiting.

A little farther on he blew his horn again. Here there was a dark aperture in the wall of foliage where the back road rejoined the pike. There was no danger of running into any one—the back road was hardly used once a month. Spangler thought of its few lonely inhabitants, then of Mrs. Spangler and the children, then of the five dollars he would earn; then, with a shake of the head, of Mrs. Hedge. The

wickedness and unhappiness of some members of the human family astonished him—it was so easy to be happy and good.

At Summit Hill there was an amusement park for the citizens of Fort Edward. It had been intended originally that the trolley should run down to Plympton, but funds had given out and it was doubtful whether it would ever be continued. There were a few houses, a little store, and a schoolhouse. It was with the storekeeper's children that Esther Filson stayed until Spangler came for her.

When Spangler drew up beside the platform at the trolley station, Esther came running to meet him and scolding prettily. Her black eyes shone out of a red hood, dimples came and went in her cheeks, and her tongue ran as though its mechanism were different from that of other people's tongues. Spangler was bewitched by her. He had begged Mrs. Filson to let him take her down to play with his children, and Mrs. Filson had said, with a little hesitation, "Some time." She seemed to be afraid to have the little thing out of her sight.

As the departing passengers climbed down Esther climbed in.

"I knew you'd be on time," she said, reproachfully. "I knew it."

"Ain't I always?" asked Spangler.

"Yes, but this evening you might have been late. We thought surely you'd be late with all your passengers. We were trimming a tree, and I could have stayed to supper."

"Is that what ails you?" said Spangler. "Well, I tell you. I'm going to make another trip, and I can take you down then."

Esther clapped her hands.

"But what will my mother say?"

"I'll fix it with her," said Spangler, easily. "I'll stop and tell her."

"Oh, goody!" cried Esther, and was gone, across a dark space into the broad streak of light from the store window. Spangler heard a cry of delight, then the door opened and closed.

It was not until the trolley had come in and the passengers had been transferred and Spangler was approaching the Filson house that he began to feel that he had made a mistake. Mrs. Filson might have other plans for Esther. It was now a little after six; he would reach Summit Hill again and pick Esther up at nine. After all, that was not late!

Mrs. Filson and her husband were both at the road. Mrs. Filson gave a little cry when Esther did not spring down, but her husband laughed at her uneasiness.

"It's all right. She'll have a good time, and you can finish your presents without sitting up all night. She'll be home now for a whole week." He waved Spangler on. "We'll be watching for you."

In Plympton Spangler found the five disappointed passengers also. The recol-

lection of Mrs. Filson's distress still worried him, and he put on all possible power for the return journey to Summit Hill. He saw again the dim bulk of Mrs. Hedge's house and the lamp of Mrs. Graybill. In Worleysburg he was left alone. He blew his horn loudly as he passed the Filsons' and again as he passed the dark opening of the back road.

At Summit Hill Esther ran forward out of the darkness and the storekeeper's wife stood in the doorway until Spangler shouted, "All right." Esther clambered up beside him, a basket in her hand.

"I have popcorn and candy and a present. I can't wait till I see my mother! Do you suppose Santa Claus will bring me anything?"

Spangler turned in his seat and looked down at the little figure. He had heaped up a pile of blankets to serve as a footstool, and he was determined to have no one else share his seat. He could hear the distant rumble of the trolley car over the rough roadbed.

"Doesn't he always come to your house?" he asked. "He always does to mine."

"I hadn't any house till this year," said Esther.

"Why, what did you live in?" asked Spangler, jocosely.

"Well, it was part of a house," explained Esther. "It was a cellar."

"A cellar!" repeated Spangler.

"Yes," said Esther. "I made flowers. My name wasn't Esther Filson; it was Maria Rapallo."

"Didn't you go to school?" asked Spangler, amazed. He was destined to be still further astonished.

"No, indeed! I worked," said Esther. "From morning till night. A man used to whip me. I have marks on me."

"Oh, I guess not!"

"But I have," insisted Esther. "But now he can't find me. He's in jail."

"I should hope so!" said Spangler. The color came back to his ruddy cheeks. The child was romancing, as children did. He looked down at her as the brilliant light of the trolley car, advancing round the bend, illuminated her face. Her impossible story made him uneasy—she had always seemed like a straightforward, honest little child. Now she looked strange, with her round eyes and her rich complexion and her swift-moving tongue.

His eyes were still fixed upon her when the trolley car stopped. He stepped down, prepared to show the passengers places in the omnibus. To his astonishment there were only two—one a woman with a basket who departed in the direction of the little settlement, the other a strange man whom the conductor was directing. The college boys, after the habit of their kind, had not kept their word. As he stepped out to guide this single passenger to a place, he glanced down at his companion. Her eyes were no longer soft, they were

bright and hard. Her mouth was fixed in an open grimace, like the mouths of tragic masks—a dreadful enough expression for an adult, but hideous on the face of this little girl. Following the direction of her gaze, he saw that it rested on this single passenger, a short, heavy man standing directly in the glare of the headlight. The motorman, pausing in the act of reversing the trolley, pointed him to the Plympton bus.

"I said he'd make an extra trip, and there he is. He can tell you everything about this neighborhood."

Spangler looked from Esther to the stranger and back to Esther.

"What's the matter?"

In answer Esther slid off the seat and down upon the pile of robes.

"Oh!" she cried. "Oh! oh! oh!"

Spangler leaned into the car and took her arm in a firm grasp.

"What's the matter?" he repeated, sharply. "Are you afraid of this man?"

"He will take me back," cried Esther.

"Oh, mother, mother, mother!"

"Lay still," he commanded, fiercely. "Whatever happens, lay still. Do you hear me?"

"Yes," said little Esther.

The stranger was already at the car.

"Well, sir," said Spangler. "Where are you bound for?" His tone was truculent and his thoughts terrified and confused. He was often called upon to meet small emergencies, both mechanical and human, but no situation had ever confronted him as serious as this.

The stranger answered in a voice which was hard and which had inflections strange to Spangler's ears.

"I'm bound for Plympton."

"To-night?" said Spangler.

"Yes, to-night."

"Then step up back there," directed Spangler. He motioned the stranger in and closed the curtains; then he mounted carefully to his own place, dreading to feel some part of a little body under his foot. He started the engine and turned the great machine toward Plympton.

"I want to talk to you," said the stranger. "They say you know everybody on this road. I'll come in front with you."

"No, you won't," objected Spangler, promptly. "The oil can spilled on this seat."

"Then I'll stay here," agreed the stranger, pleasantly enough. "Now I'll tell you my business. My name is Rapallo."

"A new name to me," said Spangler, quickly. Spangler was a good man, but he believed, without analyzing his convictions, that there was at times a higher duty than truth. "I never heard that name. It ain't common in this part of the country. We have Rapps, though, and Rapples."

"You never heard of Maria Rapallo?"

"Never," said Spangler, promptly. "I never heard of Mareea Anybody." He felt something creeping round his foot—

it was the hand of little Esther Filson. It reminded him that in ten minutes, if he kept up his present speed, he would arrive at the back road, in fifteen at the Filsons' gate, and there would be Mr. and Mrs. Filson with a lantern, waiting for Esther. He seemed to hear the stranger cry, "Aha!" He slowed down.

The stranger leaned forward, his folded arms on the back of Spangler's seat.

"She's here somewhere," he said, doggedly. "I've traced her this far. I'll find her if I have to stop at every house. To-morrow I'm going to get a car and go along the road. She's my child, and she was stolen away from me. She'll never get away again!"

The back road yawned to the left. Another moment and the Filsons' lantern could be seen at the bottom of a long grade. Spangler turned into the back road, the omnibus objecting as though it had been directed into a plowed field. He did not know what he would do eventually, but this seemed to be the thing to do now. It was an enchanting road in springtime. Columbine grew thickly in all the sunny openings and crow's-foot violets lifted their violet petals, and there were great masses of dogwood and Judas-tree and wild crab-apple. Occasionally one caught a glimpse of the lowlands far away. But now all was shrouded in impenetrable darkness.

Spangler reached down and patted the little hand, which gave him an icy response. It was maddening to have to think of Esther and the Filsons and Rapallo and the abominable road all at once.

"What makes you think she's here?" he asked.

"I heard it in a roundabout way," answered Rapallo. He began to pound on the back of Spangler's seat. "I'll find her! I'll find her!"

Again the little hand grasped Spangler's ankle. Its touch seemed to set in motion the machinery of his partly paralyzed brain. He must not only keep this villain away from the Filsons; he must get rid of him altogether. He shuddered at the thought of what would have happened if Rapallo had seen Esther or had questioned some one who was smart enough to put two and two together, but not smart enough to conceal the result.

"I tell you what you do," he said. "There ain't many houses on this road. You give me a quarter extra and you can stop to-night."

"Have you got children?" asked Rapallo.

"Yes," said Spangler. "Three."

"And they're yours, I'll bet, body and soul!" said Rapallo, fiercely. He began to pour into Spangler's ears a stream of oaths, interrupted in a moment by a jerk of the car. "Why, this is an awful road!"

"It's not very good," agreed Spangler.

The stranger bent his head to look out

through the wind-shield. His elevated position prevented him from having a good view.

"We're in the midst of trees and rocks!" he cried, astonished.

"Yes," said Spangler. "We're on a mountain."

Rapallo looked out again.

"Are there any wild animals?"

A faint twinkle came into Spangler's distressed eyes.

"Not as many as there was once," he answered. "There's about a thousand hunters in these woods every fall, and they get a good many." Spangler was at this moment not offending against truth, astonishing as his statement was. The forest was part of a State game reservation on which there were many deer.

"Did any wild animals ever attack you?" asked Rapallo, hoarsely.

"Oh, they wouldn't attack a moving car!" said Spangler. He spoke jerkily. Between his thoughts of the frightened Filsons waiting for the bus, which in a dozen years had never failed to appear, and his effort to avoid the hollows and hillocks, it was all he could do to keep the car in the road.

"This is awful!" said Rapallo, clinging with both hands to the back of the seat.

Spangler did not seem to hear. Suddenly he stopped his car. There were three houses in all the extent of the back road—he was now at the first.

"Here's a house," he said. "You can get out and ask."

"You know them—you ask," said Rapallo, panting a little.

"No, indeed," said Spangler. "This is your business. I wouldn't know what to tell 'em."

Rapallo clambered down and went toward the dim front of a small house. It was a long time before any one answered his loud rapping. Spangler bent low.

"Make yourself comfortable," he whispered. "Stretch out across the car."

The little hand felt for his.

"Oh, hide me! Hide me!"

"I will," he promised. "Only lay still. Mum's the word. No matter what happens, mum's the word."

At last an upper window opened and a man put his head out, cursing. Spangler knew him; he was one who kept, as the county said, one step ahead of the law.

"Is Maria Rapallo here?" asked the stranger.

There issued a still more dreadful stream of cursing and vile insinuations, and the window was slammed down.

"They wouldn't take a child to raise," said Spangler. "Only kind people would do that."

"Well, take me to kind people then."

Spangler started his engine. He heard a little pop, the unmistakable rejoicing of a cork at its release. He frowned—it would be well to have the business over before the stranger got drunk. The car racked along, the stranger

tuated his remarks on Spangler's back, little Esther clutched an ankle. Two miles farther on, he bade the stranger get down once more. Here his pounding and calling were not answered.

"Perhaps they have moved away," suggested Spangler.

Climbing back, the stranger began to complain.

"She earned five dollars a week for me. I'll bet she's earning more now."

Spangler had decided that the less one said the better, but this he could not let pass.

"You had her working for you?" he asked in an even tone.

"Of course. What else does one bring them into the world for? Don't yours work?"

"They're a little young yet."

"Start 'em young," advised Rapallo.

Spangler gave all his thoughts to managing the car on the steep descent and to considering what his move should be when he reached the plain. The loneliness and darkness depressed Rapallo still more and the motion of the car made him uncomfortable. He took out his bottle and tipped it high.

"Where are you takin' me?" he asked with a snarl.

"Down to Plympton," answered Spangler, coolly. "But I can tell you, you'll waste your time there. I live there, and there ain't such a thing as an adopted child in town. Now here's a house, but there's no use stopping. Only an old woman and her grandson live there. I brought her out from town this afternoon. You'll waste your time."

Again the stranger drank from his bottle. The car was now running on the level, and in a moment they came upon the main road in front of Mrs. Hedge's house. Spangler was now at his wits' end. If he carried his passenger to Plympton, he would certainly learn that he had been tricked.

"Here's a place," he said, in desperation. "Ask here." He did not believe that Mrs. Hedge would answer, and he was certain that she would not be alarmed.

Rapallo staggered in the dim walk and thumped on Mrs. Hedge's door. He shouted, "Is Maria Rapallo here?" over and over and thumped again. When no one answered, he began to kick the door. Hysterical with amusement and distress, Spangler was about to call him off when the door opened and Mrs. Hedge appeared. She stood plainly outlined against a bright interior, her great height and breadth exaggerated. In her hand was a firearm. Spangler knew it for an ancient and innocuous pistol, but Rapallo did not. He backed off the porch. Falling, he picked himself up and fell again.

"Away with you!" shouted Mrs. Hedge, pursuing him. "Out of this! Begone!" She came almost to the gate, still calling. "Clear out! Begone!" She stood still, peering into the darkness, but apparently not recognizing the ancient

Rapallo leaped, missed the step, and climbed in on his hands and knees. Spangler turned and faced him.

"Now what do you want to do?"

"I'm going back to Fort Edward and then New York," Rapallo panted. It was rather a rash declaration on the Summit Hill road at 10:30 at night.

"All right," said Spangler, cheerfully. "I'll take you to Fort Edward." His offer was even more wild than Rapallo's determination. The trolley had made its last trip, and Fort Edward was ten miles beyond Summit Hill. Moreover, he would not dare to take the main road, but would have to climb the steep, rough ascent down which he had crept. But he turned and reached down and touched the little hand. A fresher air blew suddenly between the curtains, and he knew that a west wind had risen and it would be clear before morning. He thought again of Christmas trees and the children's happiness.

"Could you defend us if wild beasts did attack us?" asked Rapallo.

"Oh, they won't attack us," answered Spangler. He pitied the man, desperately wicked as he held him to be.

"I'm coming in front with you," said Rapallo. "I don't care for oil or grease."

"No, you're not," said Spangler. He could feel little Esther shake from head to foot with long tremors. "You're going to stay right where you are. No climbing about on this road."

Rapallo began to talk incoherently about his child and his foolishness. They had tricked him in sending him out here to the wilderness. Never again would he venture into the mountains. He talked of bears and tigers and even elephants. He seemed to fancy that he had been pursued by a tiger, and he muttered of teeth and claws. Presently he laid his head on Spangler's back and wept.

It was long after midnight when Summit Hill was passed, and two o'clock when the lumbering bus drew up at Fort Edward station. To Spangler's great joy the station was illuminated—that meant that the New York train was expected soon. He got out with Rapallo and, waiting, saw him on it, lingering till the steps were drawn up and the door closed. Even then he could not go, but watched the red light out of sight beyond the curve. Then he ran back to the omnibus. Little Esther was asleep; he stepped over her carefully. He spoke to her, but she answered only with a little moan. He put on all the speed he could, waking town and country as he flew.

At half-past two he passed Summit Hill. Usually he saw it twice a day—this day he had seen it five times. He coasted down the hill. When he had passed the entrance to the back road, he began to blow his horn furiously. It was not a very loud horn, but he could produce on it a peculiar, shrill squeak. He could see long before they reached the Filsons' that the house was lighted and that some one moved about the yard

with a lantern. The lantern became suddenly motionless, then moved swiftly toward the road, and the house door opened and remained open. He believed that he heard some one crying.

But when he stepped stiffly down there was at first no sound. The young people stood close together, Filson's arm round his wife. Spangler meant to say, facetiously, "Well, did you think I'd kidnapped her?" but he could only reach into the car and lift Esther out.

"What has happened to her?" asked Mrs. Filson. She did not come forward; she spoke as though she were smitten to the heart.

Spangler found Esther heavy, and he sat down on the running-board.

"Wake up, here," he said. "Wake up! You're home, Esther. Here's your mother and your father!"

Filson lifted the lantern and let the bright rays fall on Esther's face. Her eyes opened, but she did not seem to see. She put her arms round Spangler's neck and clung to him.

"He's gone," said Spangler. "Listen, Esther, he's gone."

"Who is gone?" said Mrs. Filson.

"She had a scare," explained Spangler. "A man named Rapallo came hunting her. She's been hidden in the car while we fooled him. He's gone."

Esther opened her eyes and looked about, and Spangler lifted her into Filson's arms.

"Oh, mother!" she called. "Mother! Mother!"

Spangler put one foot on the running-board and pushed back the curtain.

"I'll tell you about it to-morrow," he promised. "I'll tell you everything. Now, good-night."

"Oh, are you sure he's gone?" cried Mrs. Filson.

"Sure," said Spangler. "Positively certain. Now good-night—why, it's Merry Christmas!"

"Yes," said Mrs. Filson, crying. "It will be a merry Christmas."

Spangler coasted on down the hill. Sometimes he sang. At Mrs. Hedge's house he blew his horn furiously and said, "God bless you, old lady, for the good you done!" On the last hill he stopped the car and put his round head out between the curtains. The sky was wholly clear. The moon in its last quarter rode high in the south. Beside it and near by were three great planets which seemed to glow more brightly than the moon. The color of the sky, he noted, was a dark velvet green. He was a pious soul, and he wished suddenly that he could have been one of the shepherds and heard the angels sing. Then his mind came back to the present, to Mrs. Spangler trying not to be anxious, to the sleeping children, and to his own weary frame. He sighed in pleasant anticipation of rest. Then he remembered his wish, and he nodded his head with satisfaction.

"I did give a pretty big present, after all," he said, as he roared and rumbled and rocked toward Plympton.

THE BOOK TABLE

TWO GENERATIONS OF AMERICAN AUTHORS¹

BY BRANDER MATTHEWS

WHETHER shall hereafter undertake the "History of Publishing in the United States" will find abundant material garnered for his use. The house of Harper and the sons of Putnam have celebrated themselves; and there are biographies of half a dozen or half a score of other publishers. For one publishing house, and not least eminent, the records are almost superabundant. This is the firm which was once Ticknor, Reed & Fields—although I think that this was not the style of the original firm. It became successively Ticknor & Fields; Fields, Osgood & Co.; James R. Osgood & Co.; and Houghton, Osgood & Co.; changing its name to Houghton, Mifflin & Co. when Osgood withdrew to set up for himself once more as James R. Osgood & Co. And when Osgood gave up to join the Harpers he was succeeded by Ticknor & Co., a new firm started by his former partner, Benjamin H. Ticknor, son of the senior member of Ticknor & Fields.

James T. Fields wrote "Yesterdays with Authors," and his widow wrote "Authors and Friends," besides a memorial of her husband. And now Mr. Howe has extracted from Mrs. Fields's journal the matter for the first of the two volumes I am to review. Miss Caroline Ticknor, daughter of the senior partner of Ticknor & Co. and granddaughter of the senior partner of Ticknor & Fields, after writing "Hawthorne and His Publisher," has now given us "Glimpses of Authors." What we are still waiting for is the publication of the reminiscences of James R. Osgood. They exist, or at least they did exist; and they were in the possession of the widow of Anthony, the engraver. Are they still extant? Where are they? And why are they not in print? If ever they are published, I think that they will be what Horace Greeley called "mighty interesting reading." If Osgood wrote as freely as he talked, there will be a portrait of Charles Dickens not so flattering as those which have been painted by Mrs. Fields and by Miss Ticknor.

The sister volumes of these two ladies take us once again into the society of Emerson and Thoreau, Hawthorne and Longfellow, Lowell and Holmes and Whittier; and they give us glimpses of the immediately succeeding generation, which has in its turn passed out of sight—Mark Twain and Bret Harte, Howells and Henry James, Aldrich and Stedman, Eugene Field and Joel Chandler Harris. Of at least half of the fifteen whose names I have set down on these two lists

Courtesy Atlantic Monthly Press
MRS. JAMES T. FIELDS

the popularity has waned and the reputation has shrunk. Of only three or four can it be said that their fame is unfaded because it is unfading. Of three or four others the eclipse which we may not deny is pretty certain to be as brief as eclipses usually are.

The members of the older and greater group were more friendly with one another than those of the younger and less notable group; and in these two volumes we can again observe the amenities of authors and we can see why it was that envious New Yorkers called the men of Boston and Cambridge and Concord a "Mutual Admiration Society." But why should not Thoreau and Lowell admire Emerson? Why should not Hawthorne admire his classmate Longfellow and Longfellow admire his classmate Hawthorne? Why should not Holmes and Lowell, even though they did interrupt one another at the Saturday Club, have a high regard the one for the other? Their very intimacy made this inevitable; and it supplied their appreciation with solid foundations.

But, mutual admiration society as it might be, there was almost as little log-rolling as there was backbiting, and, so far as we can judge, there was no backbiting at all, no envy, no hatred, and no malice. They dwelt together in unity and in amity, with only now and again a casual fling at one or another of the outsiders—a fling cursory but not damnable. It was a pleasant circle, and they were fortunate who were admitted within its magic ring. There is now no such group anywhere in these States. Boston is no longer the literary center that once it was; and New York is in

no better case. It must be all of thirty years since Tom Aldrich remarked that whenever a Boston author died New York immediately became a literary center. To-day that arrow would have no barb. If he were alive to-day, he might modify his epigram and say that whenever an author died either in Boston or New York Indianapolis immediately became a literary center.

Mr. Howe demands hearty commendation for his discretion, his taste, and his tact. He has selected judiciously; and with delicate self-effacement he has permitted Mrs. Fields to speak for herself; and hers is a low and gentle voice, as is becoming in a gentlewoman. She records her adventures in friendship and her admirations. She paints portraits with a caressingly feminine touch, but with no sentimentality. She looks on the bright side, and perhaps she saw no other—perhaps there was no other, for it was a blameless society in which she lived and hers was an age of innocence. So it is that her friends—our friends also, and the friends of all who love American literature and who cherish the inheritance of the forefathers—are set before us as they were in her eyes, doing their work honestly, enjoying life, enjoying their own fame, telling stories, cracking jokes, and having a good time generally. It is a cheerful book that Mr. Howe has given us; it is what Thackeray—it was Thackeray, wasn't it?—called a bedside book, as welcome in convalescence as in health.

In two preliminary chapters Mr. Howe tells us (who did not have the pleasant privilege of knowing her) about Mrs. Fields herself, about the houses in which she lived with their many literary and artistic treasures and mementoes, and about her gracious hospitality. For years Mrs. Fields was a near neighbor of Dr. Holmes; and to him the third chapter is devoted, with abundant quotations from the pages of the journal in which his sayings and his doings were recorded. Although I cannot say that I knew Dr. Holmes personally, I saw him twice—once when he came to New York to read his paper on Emerson before the Nineteenth Century Club and once again in London, during his "Hundred Days in Europe," when he was the guest of honor at a dinner of the short-lived Rabelais Club, founded by Charles Godfrey Leland and Walter Besant. And the chapter which Mr. Howe devotes to him confirms the fading image that lingers in my memory.

The fourth chapter deals with "Concord and Cambridge Visitors," and the fifth with Charles Dickens, who appears in these pages a far pleasanter personality than in the authorized biography by John Forster, that "arbitrary cove." Through Dickens the Fields came to know Charles Fechter; and the sixth chapter introduces us to "Stage Folk and Others," a chapter in which Fechter ap-

¹Members of a Hostess: A Chronicle of Eminent Friendships. Drawn Chiefly from the files of Mrs. James T. Fields. By M. A. Wolfe Howe. The Atlantic Monthly Press, Boston. \$4.
Glimpses of Authors. By Caroline Ticknor. Houghton, Mifflin Company, Boston. \$3.50.

years to better advantage than he did to me when I came to know him (slightly) in his declining and dissipated years. In this chapter we meet also that fine old Boston gentleman William Warren, with his cousin Joseph Jefferson and with Edwin Booth. There were giants in those days; and Mrs. Fields has limned them in their habits as they lived. The final chapter of the book is given up to Sarah Orne Jewett, whose firm yet delicate etchings of New England character deserve to be better known than they are to-day. Rip Van Winkle might well ask, "Are we, then, so soon forgot?"

As I read Mr. Howe's volume I marked passage after passage for quotation—the account of Mark Twain in his own home at Hartford and his statement about the haphazard autobiography he was intending to write, that about Henry James in his own home at Rye, and a dozen more, all crying aloud for transcription in this review, if only space permitted. But I must find room for a word of praise for the illustrations, half a hundred of them—portraits, caricatures, views, and facsimiles of autograph letters, these last including part of Holmes's hitherto unprinted "Letter from the last man left by the Deluge of the year 1964 to the last woman left by the same."

Miss Ticknor's volume is also characteristically illustrated with portraits of the authoress herself and of the authors she celebrates and with facsimiles of autographs. And she also sings the praise of Dickens and of Dickens's family, whom she visited after his death. Her personal memories do not go as far back as do those of Mrs. Fields; and so it is that after chapters on Hawthorne and Longfellow and Whittier we are brought down to the more recent Mark Twain and "Uncle Remus," Howells and Henry James, Lafcadio Hearn and Eugene Field, E. C. Stedman and the Stoddards. She quotes freely from the correspondence of these authors with her father, who was their publisher, either as an associate of Osgood or as the head of Ticknor & Co.

Her quotations—especially that from a letter of Henry James about his ill-fated novel, "The Bostonians"—are welcome; and it is to be hoped that the most important of the letters in her possession will some day be printed in full; they will be invaluable for the future biographers of this interesting and important group of American men of letters. The relation of the author with his publisher is always intimate and often cordial. Very rarely, indeed, has any American writer lost self-control and boiled over into abuse as "Gail Hamilton" did when she brought out a book to berate Osgood. Even more infrequent is it that an author writes a letter as cutting as that Robert Louis Stevenson sent to a New York house which had issued certain of his writings without his authority—a missive so incisive that it has never appeared in print.

Miss Ticknor does not limit herself to

MISS CAROLINE TICKNOR

the great lights of our literature; she has interesting facts to communicate about some whose torches burned brightly for a little space and are now

quenched—to Edward Bellamy, for one, author of the once famous and now forgotten "Looking Backward." I was glad to see that she gave half a score of pages to a rushlight long since blown out—to Edgar Fawcett, an ambitious bard of forty years ago, who had more aspiration than inspiration and who was the most sadly sensitive and suspicious creature I have ever met. He wrote poems and plays and novels—and where are the snows of yesteryear? He had ability of a kind, and perseverance, and a certain felicity of phrase; and yet all these qualities and his ambition availed him nothing.

In Miss Ticknor's volume, as in Mr. Howe's, I had marked many a passage for quotation. And one of them I must tack in here at the end. Miss Ticknor records her visit to Thackeray's daughter, and she tells us that Lady Ritchie had a high admiration for Howells and deplored his antagonism to her father's writings. "I should sometime like to say to him," she remarked, "Dear Mr. Howells, I feel sure that when you get to heaven you will change your views about him." Surely that was a pious wish; and we can only wonder whether it has now been fulfilled.

THE NEW BOOKS

POETRY

OLD ENGLISH POETRY. By J. Duncan Spaeth. The Princeton University Press, Princeton, N. J. \$2.

That body of autochthonous verse which existed in England between the periods of the Anglo-Saxon invasion and the Norman conquest is a closed book to many lovers of verse because of the language and spelling. The difficulties of archaic English, surmounted rather easily in the reading of Chaucer, are so great in Beowulf, Caedmon, Cynewulf, and such contemporary composition as to require the services of a specialist as interpreter. Professor Spaeth is both specialist and interpreter. He divides "Old English Poetry" into four sections, viz.: (1) epic poetry; (2) lyric poetry; (3) charms, riddles, and gnomic poetry; and (4) historic war poetry. While the field that he covers is extensive, he manages by judicious selection to give a fairly adequate idea of the charm and volume of the old alliterative verse. His translations, though scholarly, do not lift the old poetry to the authentic height where Tennyson placed "The Battle of Brunanburg," for instance; but his venture, such as it is, deserves commendation.

GARDEN OF THE WEST (THE). By Louise Driscoll. The Macmillan Company, New York. \$1.25.

The faint flavor of a personality more animated by an urge to poetry than by the mastery of its expression is to be discovered in Louise Driscoll's "The Garden of the West." It is not to be inferred from this statement that she cannot turn a stanza well nor handle the proper number of feet in a line. These

things are well enough; she is always facile and often graceful. The trouble appears to be in rising properly to the occasion. There are moments when she almost reaches an authentic utterance, as in the poems called "October," "Harbury," and "Nausicaa." The last, rather neatly turned, is herewith quoted:

You will never be old!

The days and the years go by,
And centuries have rolled
Over the Phæacian sky.

But you are a girl and run,
Fresh bathed and warm and sweet,
After the flying ball
On little sandaled feet.

And with the Wanderer
We stand for audience,
Pleased with your gayety,
Charmed by your innocence.

The women we forget
Age and die quietly,
But you are a maiden yet,
Playing beside the sea.

POEMS OF HEROISM IN AMERICAN LIFE. By J. R. Howard (editor). The Thomas Y. Crowell Company, New York. \$1.75.

Mr. Howard's anthology is an extremely comprehensive collection of patriotic verse ranging all the way from poems on Columbus to poems incident to the Great War. They have been compiled in such a fashion as to afford the reader a chronological history of the United States, and one can but admire the industry and intelligence of selection that the compiler obviously brought to his task. While it was to be expected that a certain amount of stereotyped material would be included, it is pleasurable to observe that a variety and

Courtesy of Charles Scribner's Sons

"THE CITY [SEGOVIA, SPAIN] PILES UP GRANDLY FROM THIS SIDE, TOO"

(A sketch by Ernest Peixotto, reproduced from "Through Spain and Portugal")

distinction has been attained by the inclusion of such surprises as Herman Melville's "The Surrender at Appomattox," Edwin Arlington Robinson's "Demons," and Alice Meynell's sonnet "In Honor of America." The anthology as a whole is one that may be dipped into with pleasure constantly, for it includes quite as many unexpected patriotic pieces of sound poetic value as it does old and time-honored poems.

TRAVEL AND DESCRIPTION

ROADS OF ADVENTURE. By Ralph D. Paine. Illustrated. Houghton Mifflin Company, Boston. \$5.

Accustomed as Mr. Paine is to writing newspaper "stories," his biography reads like a novel. But his instinct for fact keeps him from fictionizing even his greatest adventure—the presentation of a jeweled sword from an American admirer to General Gomez during the Cuban insurrection. The book will appeal to readers who like lively, conversational accounts of stirring adventures.

THROUGH SPAIN AND PORTUGAL. By Ernest Peixotto. Charles Scribner's Sons, New York. \$3.50.

A rare combination of skill with both pen and pencil enables Mr. Peixotto to

present in this volume an unusually interesting account of his travels. He tells in an easy, flowing narrative about his experiences in the two countries named in the title, and succeeds in putting into the story the atmosphere of Old World seclusion and far-away self-absorption that characterizes many of the scenes he depicts, while he does not neglect the themes that tie the past glories of the Peninsula to the more commercial aspects of the present day. The book is of the kind that stirs the reader to say, "Can't we manage a trip abroad next year?"

TRAMPING WITH A POET IN THE ROCKIES. By Stephen Graham. D. Appleton & Co., New York. \$2.

Stephen Graham is much better in describing himself and his reactions to other people than he is in describing another person and that person's reactions to life. "Tramping with a Poet in the Rockies" falls down, not so much for what is or isn't in it, but because of the way in which the material is handled. Mr. Graham apparently wrote in a deuce of a hurry; he did not stop to smooth out his style, but rushed the matter on to a daily newspaper in the form of let-

ters. The result is a book which, although it moves along in chronological order, does not hang together, is often imperfectly conceived and executed, and is frequently dull and inconsequential. This is regrettable, because it would be rather difficult to imagine a more admirable companion for a tramping trip through the Rockies to Canada than Vachel Lindsay. The affair should have culminated in an extraordinarily fascinating study of personality set against primitive life. But the Lindsay of Mr. Graham's book does not stand out, and this, it must be suspected, is the fault of the writer and not the companion.

It would be too much to say that the volume is entirely devoid of interest, for nothing in which Lindsay figures could be quite that. There are moments in the long trip that rise to a certain height of interest. Some of the anecdotes are amusing and some of the remarks of Lindsay, faithfully set down, suggest the flavor of that poet's work. But, after all, one can but wistfully surmise what would have been the result if Vachel Lindsay had written this book himself. At least we would have known Stephen Graham better.

CONTRIBUTORS' GALLERY

W J. HENDERSON, formerly on the staffs of the "Times" and "Sun," is now associated as musical critic with the New York "Herald." Besides his important and authoritative books on music Mr. Henderson has also written a volume of poems and some books for boys.

BRANDER MATTHEWS, lawyer, author, and bibliophile, was born in New Orleans in 1852. He was admitted to the bar in 1873, but soon turned to literature. Since 1892 he has been at Columbia University as Professor of Literature. He is one of the founders of the Authors and Players Clubs, a member of the French Legion of Honor, Chancellor of the American Academy of Arts and Letters, and former President of the Modern Language Association of America. He is the author of numerous plays, essays, stories, and text-books.

THE page of poems comes from Bernice Lesbia Kenyon, who is assistant to the editor of "Scribner's" and a graduate of Wellesley College. A volume of Miss Kenyon's verse is to be published this spring by Charles Scribner's Sons, under the title "Songs of Unrest."

RICHARD BARRY, whose character sketch of Senator La Follette was published a week or so ago, now gives us another of his penetrating studies—an account of an interview with Senator Couzens which was made especially for The Outlook. Mr. Barry is at present on the staff of the New York "Times" Sunday Magazine.

ONE of our most faithful of contributors is Archibald Rutledge, a native of South Carolina, but now a resident of Mercersburg, Pennsylvania. Mr. Rutledge has often contributed articles to The Outlook on his experiences and observations as a hunter and lover of nature.

ELSIE SINGMASTER (Mrs. Harold Lewars) lives in Gettysburg, Pennsylvania. She is a graduate of Radcliffe College and the author of three novels. She has contributed fiction not only to The Outlook, but also to the "Century," the "Atlantic Monthly," "Pictorial Review," and "Saturday Evening Post."

IMPORTANT TO SUBSCRIBERS

When you notify The Outlook of a change in your address, both the old and the new address should be given. Kindly write, if possible, two weeks before the change is to take effect.

Men's Teeth

Should also glisten.

Shall women take all the care?

A large percentage of the women you meet have white teeth nowadays. Men like the charm. They like the smiles that pretty teeth engender.

But don't you know that women also like such evidence of care?

Careful people the world over use a new teeth-cleaning method. It means whiter, safer, cleaner teeth. You owe yourself a test.

Film is the cause

The cause of dingy teeth is film—that viscous film you feel. It clings to teeth, enters crevices and stays.

Food, tobacco, etc., discolor film. Then it forms cloudy coats. Tartar is based on film. Teeth which people don't like to show are made unsightly by that film.

Troubles follow

Film also causes most tooth troubles. It holds food substance which ferments and forms acids. It holds the acids in contact with the teeth to cause decay.

Germs breed by millions in it. And they cause many serious troubles, local and internal.

Now we combat it

Now people who are well-advised constantly combat that film. Dental science has found two ways. One acts to curdle film, one to remove it.

Able authorities proved those methods

effective. Then dentists everywhere began to urge their use.

A new-type tooth paste was created, based on modern research. The name is Pepsodent. Those two great film combatants were embodied in it. Now it has come into world-wide use, largely by dental advice.

Fights acids, too

Dental research found two other things essential. And they were both embodied in this new day dentifrice.

Pepsodent multiplies the alkalinity of the saliva. That is there to neutralize mouth acids, the cause of tooth decay.

It multiplies the starch digestant in the saliva. That is there to digest starch deposits on teeth which may otherwise ferment and form acids.

Thus Pepsodent, with every use, gives to Nature's tooth-protecting agents manifold effect. And these results are bringing to millions a new dental era.

It's easy to know

You can easily prove that these effects do come and know what they mean to you.

Send the coupon for a 10-Day Tube. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how teeth whiten as the film-coats disappear.

What you see and feel will very soon convince you. Make this test in justice to yourself. Cut out the coupon now.

AN ASSOCIATE'S REMINISCENCES OF LYMAN ABBOTT

AN incident which illustrates both Dr. Abbott's sympathy as a man and his alertness as an editor takes us back to the time when Dr. Abbott first became Editor-in-Chief of The Outlook, then the "Christian Union." It was the day of small things for editors. No palatial buildings, no sanctums with oil paintings and Oriental rugs. The publishing offices of the "Christian Union" were then at 27 Park Place, under the management of J. B. Ford & Co. The paper was put in type on the top floor of the building in a roomy loft. This composing-room was partitioned off at one end as a storeroom. There was plenty of space in it, and a desk was placed by a window and Dr. Abbott was installed here in this *sanctum sanctorum*. I was then working in the composing-room as a two-third, and to my boyish vision Dr. Abbott was an extremely interesting figure. He was a spare, wiry man, wearing a black beard and full of nervous energy. One afternoon a queer-looking mendicant, of the kind that pesters you with pencils and other things you do not want to buy, found his way up the four pairs of stairs (this was before the day of elevators) to the composing-room. He circulated around among the compositors, making his appeal in a queer, broken voice, for he seemed to have a cleft palate in addition to his other disabilities. He got small pickings from the printers, for those were the days of '76—1876—and times were hard. The compositors indeed, when they were "braced" for a dime on the street, were wont to retort, "Say, cully, I'm workin' this side of the street myself." The foreman, a stern, hard man, a veteran of the then recent Civil War, happened to be out at the moment, and the cripple opened the door into the sanctum and found Dr. Abbott there. I listened attentively, expecting the man to get as short shrift from the busy editor as he would have had from the hard-fisted foreman. Instead of this, he apparently had a pleasant reception, for I heard the queer voice going along at intervals for over half an hour. The man then came out smiling and apparently happy, and made his painful way down the long stairs. Later in the afternoon I got a "take" of copy from Dr. Abbott, which was the first sheet of a splendid editorial on Christian cheerfulness and resignation under the most grievous troubles. Dr. Abbott had listened attentively to the man's story, had found that he was in a way a hero who was supporting himself and an invalid sister in the only way that was open to him, had discerned the man's real sincerity and worth in a way that we printers could not fathom, and had got a grand lesson from the man's life to be published in the columns of the paper, for the edification and encouragement of a host of readers.

I said that I had taken from the book a "take" of Dr. Abbott's manuscript. This was long before the days of type-

Nassau (Bahamas)

SEASON OPENS JANUARY 1st

No spot offers more inducements for your winter vacation than Nassau. In this charming British colony tennis, golf, fishing and sailing are now at their best—a wonderful bathing beach, splendid duck and pigeon shooting. Less than three days from New York through the placid waters of the Gulf Stream. No passports required.

Splendid hotel and other fine accommodations will be supplemented February 5th by New Colonial Hotel, absolutely fireproof—information and room reservations through J. W. Greene, Manager, 243 Fifth Avenue, New York City.

writers, and everything was written out in longhand. Now, Dr. Abbott's handwriting somehow looked like copperplate, but read—like Horace Greeley. It was a peculiar, fine hand, but to most of the printers was indecipherable. I early caught on to the peculiarities of his handwriting, and the other composers, men much older than myself, got in the way of coming around to my frame and asking me to decipher words that stumped them. A man would say, "Moore, what are these words?" I might say, after glancing at the manuscript, "Why, that is 'the doctrine of Puritanism.'" The man would look relieved, and say, "Well, I was going to set it up the decline of Presbyterianism." So, not many years later, when there was need in the office of a proof-reader who could decipher Dr. Abbott's handwriting and that of the other editors, Mr. Lawson Valentine, the then publisher—a man of genius also, though of a different kind from that of Dr. Abbott—and the Editor-in-Chief picked me out as a likely candidate for the job. In installing me in my new position, Dr. Abbott gave me a little dissertation as to his ideas about my new work. "I don't care so much," he said, "for absolute typographical correctness. You will get most of those mistakes. But I do care," he said, "for absolute clearness of expression in our paper. So, when you come across any sentence in my writing or in that of any of the other editors or contributors which you do not understand, or which seems grammatically incorrect, please put a query against it. For everything that goes into this paper should be expressed with absolute clearness and smoothness, so that there may be no misunderstanding of it." Later, when I came to write myself for the paper, I found this interview an inspiration.

Bearing it in mind, I faithfully put in the queries wherever there was need for them. The result was that Dr. Abbott, whenever he came into the composing-room with a distinguished visitor, to show him the plant, usually stopped at my den and said to his guest, "Mr. So-and-So, if you ever read our paper, and find that it runs along pretty smoothly and clearly, you may thank our proof-readers, for they catch a lot of mistakes that we editors make." This was perhaps over-generous in its acknowledgment of favors done, but it was characteristic of Dr. Abbott in his attitude toward his subordinates to be over-generous. In this respect, and in every respect, he was a perfect gentleman of the old school.

Whenever I think of Dr. Abbott, my chief during these many long years, I associate him with three men, also products of the religious life of America—Ralph Waldo Emerson, the seer; Richard S. Storrs, a typical example of a scholarly, dignified minister; Henry Ward Beecher, the fervent pulpit orator. Dr. Abbott shared in the great qualities of these men, but in some respects he was a man of broader views, of wider vision, of sounder judgment, than any of the men I have named.

THE TEMPLE TOURS

65 A Franklin Street, Boston, Mass.

"See America First"

written by O. O. Heistand in collaboration with Charles J. Herr, published through Regan Printing House, Chicago, is a story of the growth of America. The author took a motor trip through the eastern part of the United States—Niagara, the Hudson, Boston, New York, and the Berkshires. He set down his impressions for others in such a fashion that it would be very easy for some one else to travel the same path. There are numerous pictures and valuable itinerary. Price \$2. Orders should be sent to CHARLES J. HERR, Westcott Hotel, Richmond, Ind.

Lady, experienced in foreign travel recently returned from a year's visit in Europe, wishes to escort one or two ladies on similar trip, spring and summer. \$389, Outlook.

Real Estate

HUDSON RIVER ESTATE

Fine location for a sanitarium, school or colony. To any one wanting a most desirable property this estate offers a unique opportunity, being located on the east bank of the Hudson River, one mile river frontage, the locality being picturesque. Near the Artist Church estate, the excellent quality of the soil being all arable, its acquisition should prove a highly lucrative investment. 287 acres, two large modern residences, four cottages, store and post office on estate, large modern poultry plant, capacity 4,000, large barns, cold storage plant for the fruit, about 6,000 bearing fruit trees. This place must be seen to be appreciated. Death of husband demands sacrifice.

Health Resorts

"INTERPINES"

Beautiful, quiet, restful and homelike. Over 25 years of successful work. Thoroughly reliable, dependable and ethical. Every comfort and convenience. Accommodations of superior quality. Disorder of the nervous system a specialty. Fred. W. Seward, Jr., M.D., Goshen, N. Y.

Are You Paying the Price of Health ~and not Getting it?

Robust, vigorous health can be purchased.

Thousands of energetic, revitalized persons residents of Tucson, Arizona, testify to it.

The price of exuberant health for many hundreds has been a few months in the Sunshine Climate.

Perhaps you, like thousands who will read this message, are struggling along, tired out, run down, with "nerves," pulmonary trouble, etc., daily finding yourself outdistanced by stronger men and women.

If you are paying the price of health and not getting it, read every word of this invitation. It is a simple, straightforward word from those who have conquered ill health.

What Tucson Offers

Half-mile high Tucson, from October to May, is a city of sunshine, flowers, bright, warm days and dry, invigorating air. No snow. Little rain. No fogs, dust or wind. Winter mean monthly temperature never exceeds 72° or falls below 49°. Outdoor life is comfortable, delightful, stimulating.

Each year hundreds find in Tucson physical refreshment and robust health. Golf every day, hunting, motoring, hiking, horseback riding, trips to Old Mexico, hundreds of new experiences await you.

Reduced Fares Effective

Reduced fares via Rock Island, Southern Pacific and connecting lines are now effective. Tucson is only 53 hours from Chicago, 73 from New York.

Read this Booklet

"Man-Building in the Sunshine Climate" tells of the glowing, tingling health that many have won and of the fascinating life where winter is springtime. Just mail the coupon.

BY THE WAY

CHARLIE CHAPLIN (he signs himself "Charles" in an article in "Collier's") says that one reason for his more recent popular success as a comedian was his decision to stop throwing custard pies. This statement, he adds, is not to be taken too literally. But, he concludes, "If I can sometimes stir the inaudible laughter of the mind and incite an audience to a whimsical contemplation of life itself—to a spirit of mockery in which there is no sting, since it is aimed at every one and everything. I would rather have it a thousand times than the guffaws which follow the usual funny gags which any one can do."

Under the title "Humor with a Gender," a writer in the "Atlantic Monthly" prints these anecdotes, which might have been sub-titled "The Old Ones Are the Best."

"The English comedian, Foote, asked a man why he was always humming a certain tune. Being told, 'Because it haunts me,' Foote remarked, 'No wonder, when you're always murdering it.' One does not readily imagine a woman saying this," the writer observes, "or even making the milder though kindred response of Douglas Jerrold, when a friend announced that 'A certain air always carries me away.' 'Can no one whistle it?' asked Jerrold innocently."

At the twenty-fifth anniversary of the Merchants Association of New York on November 17 special invitations were

sent to businesses that had been in uninterrupted activity in the city for one hundred years or more. Twenty-five firms were found in that category—the largest number being banking houses; there were two grocers, a fur house, two newspapers, one bank note company, and one publishing house.

"In this week's issue (p. 535) you spoke of Dr. Farrington's poem 'Who Won the War?' as not being 'poetry,'" a New York City public school teacher writes. "Dr. Farrington did not intend it to be 'poetry,' but a cartoon of the war. I had my pupils learn this poem and they were very enthusiastic about it." From another section of the "Armistice Day Program" we give our readers a more serious effort of Dr. Farrington's muse:

1921, ENVOYS

'Cross chanting seas, the East and West's,
Come brilliant minds, their countries' hearts,
On shining ships, a nation's guests,
In rôle of men, and comrades' parts.
Calm statesmen, sage, with logic, fact,
Have hope and aim in only this:
A God-sworn bond of human pact—
The rust of arms in armistice.

Under the heading "A Coconut Columbus" a book called "The Adventures of a Grain of Dust" tells of South Sea island crabs that climb coconut trees to get the nuts. "And who has a better right?" says one of the crabs. "This tree," he might continue, "is the

Let us help 12

BY THE WAY—(Continued)

descendant of a nut that some of my ancestors sailed upon to this island; for a cocoanut, dropping into the water from a tree near some far shore, often carries on it the crab that had started to eat it. Then a current of the sea carries the nut and its passenger to some other island."

"Up to the eighth stein I am a republican," the Junker says, as reported by the Munich "Simplicissimus," "but after that I can't keep from saying what I think."

One day a big man watched an angler casting in a stream for some time, the London "Morning Post" says, and eventually inquired: "Had any luck?" "Yes," replied the fisher. "I took thirty-one trout out of here yesterday." "That's interesting," said the inquirer. "By the way, do you know who I am? I am the senior magistrate in this district, and this stream happens to be on my estate." "Ah! Do you know who I am?" responded the angler. "I am the champion liar in the district." This joke is just as good as when it was first told of an American game warden.

"Remember," said the serious friend, as reported by the Washington "Star," "your country is calling you." "I know that," replied Senator Sorghum; "but different parts of the country are calling me different things."

The following "infallible recipe to preserve children" is from the "Michigan Health Bulletin":

"Take one large, grassy field, one-half dozen children, two or three small dogs, a pinch of brook and some pebbles. Mix the children and dogs well together and put them in the field, stirring constantly. Pour the brook over the pebbles. Sprinkle the field with flowers. Spread over all a deep, blue sky, and bake in the hot sun. When brown, remove and set away to cool in a bath-tub."

A son of William Dean Howells, John Mead Howells, recently won a \$50,000 prize in the Chicago "Tribune's" competition for plans for its new building to be erected at a cost of \$7,000,000. A native of Finland, Eliel Saarinen, won the second prize of \$20,000. The building will be of a tower-like character.

Physical Standards for Boys and Girls

By Chas. K. Taylor, M.A.

By this system children are judged according to their own type of build and not by some impossible average. It makes it possible to distinguish improvement from mere growth. It points out each child's individual needs and creates an effective interest in physical training. Adapted for small schools as well as for public school systems. Lately adopted by the public schools of Kansas City, Mo. \$2 postpaid.

THE MAIL BAG

THE ST. LAWRENCE ROUTE

MR. GILBERT's article appearing in a recent number of *The Outlook* on the St. Lawrence canalization project is most interesting, discussing, as it does, a matter of National importance, and one that is misunderstood by the people at large, who are not familiar with the practical side of the question, viz., to open up the Middle West to direct Atlantic commerce.

Mr. Gilbert well sets forth the proposition, but naturally does it as an engineer, and not from the standpoint of the ship-owner or transportation operator. He evinces an idealistic longing, and not a proposition that would appeal to capital. The Middle West has long since dreamed of a deep-sea outlet, failing to realize the difficulties in the way—that she is two thousand miles inland and that for five months of the year all navigation is closed. No seaport so far removed from the Atlantic Ocean can compete with one on the seaboard. Vessels seek the nearest harbor where there is a market and where rail facilities are to be found and where a return cargo may be expected. For such advantages a ship will pay greater port charges and the consumer or manufacturer a greater freight rate. It is not reasonably possible to conceive a lake city successfully contending with one on the Atlantic seaboard. The St. Lawrence River canalization project, stripped of the fog surrounding it, reveals a hydroelectric water-power proposition, a thing greatly to be desired, but to be obtained under conditions very dissimilar to the method proposed. Why saddle a reasonable project with the overweight of an uneconomic shipping project? Hydroelectric water power to an extent of 1,000,000 horse power can be had in the State of New York, and even now plans looking to such requirement are being developed by the State authorities. By the terms of the proposal this country is asked to enter into a joint partnership with Canada on a "fifty-fifty" basis to build and operate the canalized river and lakes. This in itself is a dangerous proposal, involving many points of discord. The Federal Government should use its resources to build up and develop territory within its own boundaries and not enter into "entangling alliances." The writer of the article fails to take into sufficient consideration the fact that there now exists an outlet from the lakes to the Atlantic Ocean by way of the enlarged Barge Canal from Lake Erie to the Hudson River. One-fifth of the capabilities of this great waterway, which has cost the State of New York \$170,000,000, have not been utilized.

In reality, the thing that the lake cities long for is on the point of realization. By 1923 the Barge Canal will offer

facilities to that five per cent of export trade which originates in the fifteen States tributary to the Great Lakes. The canal has been deepened for the passage of 2,000-ton self-propelled vessels, numerous corporations have been organized to construct and operate modern steel barges which can take on cargo at Duluth, Minnesota, and then under their own power proceed and without break of bulk land their burden alongside the wharf in New York Harbor or on the deck of the vessel outward bound, and all at a rate that is reasonable and economic. As already stated, the St. Lawrence River route is ice-bound for five months of every year. This in itself is prohibitory in competition with well-equipped ports where vessels arrive and leave throughout the year. It is said that a vessel passes through the Narrows in New York Harbor every twenty minutes of daylight. Our American railways, in order to accommodate the ever-growing business of the Western States, must be kept at peak, and to attain this economically must obtain a twelve months' business. Are we to antagonize and limit the means by which this country was developed? Are we to expend an enormous sum (not yet stated, as no estimates have been made of the cost of dredging and enlarging lake city harbors) to divert from our trunk line railways the freight rightfully belonging to them and enter into a plan to send the ocean-bound commodity through a canal two thousand miles long, physically bordering more on the Canadian shore than on that of this country, and to do this by spending a fabulous sum of the taxpayers' money, enter into a moneyed partnership with a foreign Government, divert just Government appropriations from our old Atlantic seaboard harbors, ignore the adequate facilities already at hand, and antagonize transportation interests wherein American capital is represented by billions of invested funds? Certainly not. It is unreasonable to conclude or contemplate this either from a commercial or a financial standpoint.

I have referred to the needs of our Atlantic seaboard. Let me cite one enterprise that is now being considered. For several years the project of enlarging the inland waterways along the Atlantic coast has been discussed with an ever-increasing interest. Step by step openings have been made from one waterway (river, sound, or bay) until now it is possible to navigate light-draught vessels from Portland, Maine, to Jacksonville, Florida, inside the coast line and away from the ocean's perils and the danger of an enemy fleet. One link in the chain is imperfect—the short stretch of forty miles across the State of New Jersey from Morgan, on Raritan Bay, to Bordentown, on the Delaware River, just below Trenton. At

about the point of entrance on the Delaware, "the busiest river in the United States," are situated Philadelphia, Camden, and Chester. By such a route a distance of 180 miles is saved from Philadelphia to New York, and that largely outside navigation. Consider what this would mean to the iron and coal interests and to the manufactures of New England. How much more reasonable to ask the Federal Government for the necessary appropriation for this work (about \$40,000,000) than to enlist in an effort to enter into the Canadian partnership, involving perhaps \$1,000,000,000. As to the St. Lawrence River project, I am not objecting to it as a dream, but combat it as an uneconomic business proposition involving great expenditure of capital at a time when the world is knocking at our doors asking for aid, a serious entrance into financial partnership with a state not under our jurisdiction, as diverting strength from our seaboard cities, as injuring vast railway interests, and all in the end to meet with failure by not accomplishing the results aimed at.

HERMANN DE SELDING.

New York City.

OUT OF OUR DEPTH

THERE is an odd mistake in your article headed "Clark of the Oregon" in the issue of October 11. Jupiter Inlet, on the coast of Florida, is a practicable harbor for small boats only, having at times not over three feet of water on the bar, and probably never more than five or six feet. Captain Clark may have sighted Jupiter Light at that date, but he certainly did not steam into Jupiter Inlet.

SENATOR SMOOT AND THE MORMON SUCCESSION

Church of Jesus Christ of Latter-day Saints
The Council of The Twelve
Salt Lake City
47 E. So. Temple St., Dec. 9, 1922.

THE following is a quotation from an article entitled: "A Radical in Power," published in *The Outlook* of November 29, 1922:

This is not his gravest problem. Smoot is next in line for the Presidency of the Mormon Church, an office which any good Mormon considers the most exalted on earth. The President, Heber Grant, is very old, and likely to die at any moment. If Smoot were ready to take the Mormon Presidency, Grant would probably resign immediately.

As a matter of fact, Senator Smoot is not next in line for the Presidency of the Mormon Church. There is another member of the Church who is ahead of him.

It may also be said that President Heber J. Grant is by no means "a very

man," he having attained the age of sixty-six in November, 1922, and is therefore not likely to die at "any moment." He is in good health.

And, furthermore, President Grant could not, under any circumstances, resign, no matter who might be regarded ready to take the Mormon Presidency. The office of President of the Mormon Church is a life appointment, and is not transferred so long as the incumbent is in good standing and fellowship in the church.

I am calling attention to this matter because the writer of the article, Mr. Richard Barry, seems to think that this is the gravest problem Senator Smoot has to face, and yet it is *no problem at all*.

In conclusion, let me say that in dealing with the "Mormons" or the "Mormon" question writers generally come as near to the truth as did Mr. Barry.

RUDGER CLAWSON,

member of the Quorum of the Twelve to which Senator Smoot belongs.

HERE'S HOPPING

CONTRIBUTIONS drift in from all over the world. We print here an offer of stories which we regretfully were forced to decline. Who knows, we may have nipped some budding genius. Who knows, ten years from now—or two perhaps, considering the age of some popular writers—we may be held up to scorn as the journal which rejected the first short stories of our nameless friend.

I have been reading the stories in the Outlook of the outdoor life. I am a Boy Scout and would like to write stories for the Outlook of my life of the mountains. What would do if you were out in the mountains all by your self at night. When the roar of the pine trees made you homesick and you could hear the mountain lion and he sounded like he was about to eat you up for his midnight supper. If you will let me write the story for your paper and of course I can write dozens more. hopping to hear from you.

YOUR FRIEND.

ELLIS ISLAND CONDITIONS

WE lately published a letter narrating the experiences on Ellis Island of a cultivated woman, technically an alien, who was returning to her home from a visit in Europe; her son-in-law is an American officer. Here is another letter narrating the experiences of a graduate of the American University at Beirut, Syria, who came to this country to study in the Massachusetts Institute of Technology. He was well provided with credentials showing that he had a right to enter this country. He says:

Coming in I was taken by a mistake to Ellis Island, and, as it was a Saturday afternoon, I had to wait till Monday to be able to come out. The place is terribly filthy and dirty, and, worse than this, there are people who remain there for months, and they do

not give them a chance to get to their baggage to get clean clothes. I met a student from Palestine there who had been confined for twenty-three days in that terrible place without ever going out in the fresh air. Avedis Donabedian had been there for fifteen days when I was there, and I left him there because he could not prove to them that he was a student. Luckily for me, Tech had sent me a paper stating that I was going to study, and so I had no trouble getting out except waiting through Sunday.

PENALTIES OF PERFECTION

I AM sorry to say that I will have to discontinue my subscription to The Outlook. It is too good a magazine. I have not time enough to read it properly.

M. H. W.

Cambridge, Massachusetts.

ON BEHALF OF THE LEGION

ONE should always lodge a complaint by first offering a compliment, thereby gaining a hearing where the bald complaint might take the shortest route to the waste-basket. Accordingly, I bring my compliment, which is wholly sincere.

I enjoy reading The Outlook for a number of reasons, one of which is that it expresses an opinion freely and courageously. I enjoy the editorials, not because they agree with what I think, for often they do not, but because they seem so fair, so free from prejudice, and usually show that they are the result of deliberation upon established facts. But—now for the complaint—I feel that you have been guilty of an expression, not of opinion, but of prejudice, a prejudice not justified by the facts.

In The Outlook for November 15 there was an excellent article on "Fascisti Triumphant." It was an informing editorial setting forth the facts in the case with a splendid analogy. But it included one gratuitous qualifying remark that added nothing to the clarity of the exposition, that seemed, indeed, to be inspired by an unfounded if not malicious prejudice.

I refer to the statement that ran as follows: "And then suppose that these veterans, organized as the American Legion is organized, *but devoted, not to their own advancement, not for any bonus for themselves, not for the glorification of their own past deeds, but for the salvation of the country from disaster*" (the italics are mine).

As a loyal member of the American Legion, I am forced to call your attention to this glaring misstatement of fact. You know well enough the expressed purpose of the organization of the American Legion. You know as well as I do that portion of the preamble to the Legion Constitution which states that

"For God and Country" the Legion was organized. You know that patriotism, Americanism, good citizenship, clean politics, and high National and civic ideals are the real purpose of the American Legion.

When, with the heat of the conflict just behind, the American Legion came into being, it was not with any thought of self-glorification. It was not with any idea of personal advancement. It is true that the organization may have lost sight, for a time, of its high purpose. But you know and I know that the American Legion is sound at heart and that it cannot, in fairness, be accused of having the motives you ascribed to it, by inference at least, in the words I quoted.

As for the bonus, I believe that most of the Legionnaires who are working for adjusted compensation are working to secure it, not for themselves, but for their comrades who need it. And you ought to know, if you do not, that the Legion is not responsible for the great bonus outcry. Its records show that the Legion stepped into the fight only when scheming office-seekers were trying to capitalize their stand on the question, and that it has since been fighting for a measure that would meet the need for compensation without wrecking the treasury or pauperizing the recipients.

If you are in close touch with what the Legion is doing—and you should not have said what you did unless you knew whereof you spoke—you know that there are Legion posts that stand sponsor for the Boy Scout movement in their cities. There are posts that are carrying on extensive Americanization work among the alien population. There are posts that have their speakers visit the public schools, not to tell of the Marne and the Argonne, but to teach the way of devoted and intelligent citizenship. These are only a few of the things that the Legion is doing quietly but well.

It is so easy with a swift, subtle inferential phrase to create an impression far from correct. I am sure that you will be willing to grant most of the arguments I have advanced. I only hope that you, in all fairness, will see how false an impression you will have created, and that the prejudicial statement had much better have been left out of the otherwise valuable editorial.

San Francisco, California.

STILL THE OLD OUTLOOK

WHEN I read your recent editorials upon the Buckner Case and the Bible in schools of California, I said to myself that here are the conscience, the convictions, the courage and Christianity of Lyman Abbott. He is not dead nor "sleepeth." Surely his mantle has fallen upon some one. It is still the real "Outlook," book reviews and everything.

HARRY WEBB FARRINGTON.

New York City.

Magic?—No, Intelligence holds Beauty's Secret

FOR the next while, we are going to tell you some simple but arresting truths about how cleanliness and beauty are related.

Let us start with the face.

A really healthy skin is always a *clean* skin and usually a beautiful skin.

Physicians who have studied the care of the skin say that simple cleanliness is the one most important aid to the health and beauty of your complexion.

And they dwell upon the importance of using pure, gentle soap, which is nothing *but* soap—that is, without extraneous or mysterious additions.

A word of caution, therefore:—if you buy a soap with the hope that it has magic beauty powers, you court disappointment. For promoting beauty, soap can do only one thing—clean safely.

One would say that was simple enough—to *clean safely.*

Yet before Ivory Soap, only a few people could enjoy the luxury of pure, mild, safe-cleaning soap. Now, of course, *everyone* can have it.

Safe-cleansing is the duty, the privilege and the destiny of Ivory Soap. In forty-four years no other claim has been made for it.

Ivory is always the same—always that white, mild, gentle soap which has protected hands and faces and refreshed bodies for nearly two generations. It contains no "mysteries," it offers no "magic."

When you buy Ivory, you are asked to buy only *pure soap*. Ivory helps to beautify, because it *cleans safely.*

PROCTER & GAMBLE

IVORY SOAP

99 4/100% PURE IT FLOATS

And here, dear reader, is Dr. Verity, whose motto is: "*Keeping well is better than getting well.*" A most lovable old gentleman, indeed, but very severe and frowny when dealing with persons like Mrs. Folderol, to whose home he is now hurrying.

"My dear Alicia," says Mr. Jollyco in a very gentlemanly dudgeon, "why has this comic opera soap replaced the Ivory in my bathroom?" (We always know Mr. Jollyco is angry when he says "my bathroom" and is so frighteningly polite.)

"I think, Henry," replies his wife without a flinch, "that that soap belongs to your daughter Sally, who has lately gone in for colored 'beauty soap.' The Ivory is just behind you."

Some day Mr. Jollyco is going to speak sternly to Sally about dyes in colored soap. But today he will feel so good after his latherly Ivory bath that he will forget it.

Here we see Mrs. Folderol—at home. What! The Mrs. Folderol, of Vanity Square? The very same! With her poor little rich baby that cries so much. Why does he cry? Listen as Mrs. F. talks with Mrs. Jollyco.

"Why, I can't see how the soap could hurt him—it's so expensive and pretty and smells heavenly!"

"But, my dear, his skin *shows* it. He's *chafed*? Haven't you any Ivory? No, Mrs. F. has no Ivory, but she will have after Dr. Verity arrives.

The Outlook

DECEMBER 27, 1922

SHOULD CHILDREN BE COURT-MARTIALED?

AS a result of hazing at Annapolis the President has ordered the dismissal of two first-class midshipmen and the reduction to a lower class of three more. Other cases are awaiting executive action.

The President is emphatically right in expelling and reducing midshipmen guilty of hazing at the Naval Academy. We trust that Congressmen will have learned by this time to keep their hands off cases of discipline at the Naval Academy and that there will be no interference, successful or otherwise, with the sentences which the President has confirmed.

The persistence of the hazing tradition at Annapolis is rather incomprehensible to the country at large. College traditions can, if handled wisely, be created or abolished in a comparatively short space of time. Hazing even in its mild form has died out or is dying out of every civil institution in the country of any standing. The Annapolis students, by supporting and sanctioning the hazing of underclass men, manifest nothing except their own childishness.

It sometimes seems that, instead of treating them like men who can be held accountable for their acts, they ought to be given caps and bells and stood in corners with their faces to the wall. Such punishment, however, is impossible, for though the mentality of a hazer may be infantile, the offense he commits against decency and discipline is very serious.

IN KANSAS CITY THEY MOVE QUICKLY

MR. C. K. TAYLOR's contention that children should be first given a thorough medical examination and then, if found healthy, developed physically in accordance with their natural and normal type of build has attracted nationwide interest. And now the great "under-weight delusion," which, as readers of The Outlook know, troubled Mr. Taylor exceedingly, has been given a body blow by Kansas City, Missouri.

As a result of his Outlook articles Mr. Taylor was invited by the Rotary Club of Kansas City to present his views in person before the parents, physicians, and educational leaders of that wide-awake and progressive city. Some of our Eastern *intelligentsia*, if they should happen to read The Outlook, might learn from this statement that Rotary Clubs

have other and more vital functions than merely that of boosting their home towns. They build as well as boost.

Kansas City kept Mr. Taylor extremely busy. He gave demonstrations of his method of measuring healthy children before the Rotary Club, the Jackson County Medical Association, the Parents-Teachers Association, the Boy Scouts, and most of the educational authorities of the city. In the course of the week Mr. Taylor gave twenty-one lectures, most of them with demonstrations.

Of the results of this week's campaign Mr. Taylor writes:

On Saturday was a meeting of the physical training heads of the various schools. Every one had seen the workings of the plan in his or her own school. A brief résumé of the plan was again outlined to them, and then Dr. Cammack, the progressive superintendent, said, simply, "Shall we take up this new system?"

"Yes," they unanimously replied.

"All right," said he; "we'll get the material right away."

And that was all there was to it. How directly these Middle Westerners go to a point! If a matter is practical and useful, it is promptly taken over. And I thought of an aggressive but sadly experienced head of the physical training department of one of our Eastern public school systems, who, while deciding to introduce the height-weight plan, showed that it would take a year or two to do so openly! For there would be prejudices against anything new that had to be overcome. There would have to be much newspaper publicity and education through the press. There would have to be much diplomacy, for groups of aliens that comprise so large a proportion of the population of our Eastern cities would make an awful fuss if a boy took his shirt off so that his chest could be examined! What a contrast to Kansas City, with the scores of schoolboys measured during that week, sturdy sons of pioneering Americans, like their fathers keen for physical fitness, who not only were measured from head to foot without a stitch on their backs, but who went home and bragged about their scores to their admiring and approving parents!

The physical standards developed by Mr. Taylor have been accepted by nine public school systems, six private schools, two foreign mission schools, several Boy Scout troops, one Girl Scout troop, one life insurance company, and a State School for the Deaf in Michigan. All this has occurred during the past year. An article by Mr. Taylor on the introduction of his system in public schools is published in this issue.

CARTS BEFORE HORSES

As school and college students know, it has been the custom of the august authorities to examine their vic-tims on the progress they are making in the utilization and acquisition of facts. Harvard seems to have adopted what may be considered by some a Chinese version of the accepted practice. In one instance it gave an examination in the beginning instead of the end of a course. Appropriately enough, this test was given in the basic college course in Government, known to all Harvard men as Gov. 1, a course which Dr. Lowell himself conducted for several years before he was made President of Harvard University.

This examination was designed to test the student's power to use terms accurately, his background of elementary information of public affairs, his general knowledge of the sequence of events of American history, and his reaction to simple questions of public policy. There were forty-five questions in the test as a whole, and the time allowed for the examination was twenty minutes. It included such questions as the following:

Where the two words mean the same thing, or nearly the same thing, mark Yes; where they mean quite different things, mark No.

Abbreviate—Curtail; Prolix—Verbose; Centripetal—Disintegrating; Plenary—Restricted; Iconoclastic—Idolizing.

By striking out words make the following sentences accurate:

It was Lee Washington Pershing Stark who said "Put none but Americans on guard to-night."

Daniel Webster was a native of New Hampshire a graduate of Dartmouth College the editor of a famous dictionary and a Senator from Massachusetts.

Where the statement is accurate, mark Yes; where it is inaccurate, mark No.

The decisions of a grand jury must be unanimous.

An American citizen who accepts an office in any foreign government loses his American citizenship.

The Constitution provides that the President and the Vice-President must not be residents of the same State.

Where the events are placed in their proper chronological order mark Yes; where they are not so placed, mark No.

Jay's Treaty, Jackson's war on the Bank, Fourteenth Amendment, Greenback Controversy.

Framing of the Constitution, Mexi-

can War, Missouri Compromise, Promulgation of the Monroe Doctrine.

Complete each of the sentences by marking a cross (X) after the clause which helps to make the most sensible statement.

Congress is made up of two Houses to represent all parts of the country because there were two Houses during the Revolution to prevent hasty and unwise legislation

The secret ballot is used because it protects the voter against intimidation prevents men from voting twice makes votes easier to count

One freshman confronted with this test scored 100 per cent, and other members of the course made only a few mistakes. It would seem from this result that the growth in the study of civics and government in our primary and secondary schools has not been without definite results. Either that or the present-day college student takes a wider interest in public affairs than he is credited with by those who lament the shortcomings of the rising generation.

GOVERNOR ALLEN ON THE KU KLUX KLAN

KANSAS is engaged in trying out the Ku Klux Klan through an action brought in the State Supreme Court to restrain its secret activities. Naturally, Governor Henry J. Allen is much interested in the question. In an interview in New York recently Governor Allen gave such a vivid description of the Klan as he sees it that we quote at some length from it in the New York "Herald:"

In my State the thing has gone beyond a laughing matter. Every day my mail is choked with letters from people who have received threats—pitiful letters from poor people so frightened they know not what to do. Every one who has a private grudge is using the Klan to scare his enemy. Bigotry and religious intolerance are rife. Pulpits where once was preached the brotherhood of man now thunder denunciations against each other, and neighbors who in years gone by lived in peace and harmony now hate each other with a hatred which passes understanding. And they say that all this is the aftermath of a feeling engendered by the war. There is no doubt that many excellent men have joined the Klan from misdirected zeal. In New Orleans its activity is directed against the Jewish element. In other parts of the South the object is the Negro. In Kansas it is the Catholic. I myself have been branded by the Klan as a Catholic and all of my family, Catholic. They must have been somewhat surprised when they discovered that I am a Methodist, a thirty-second degree Mason, and a lot of other things which a Catholic cannot be.

What is proposed in Kansas is to have Supreme Court uphold the State

Charter Board in denying the Klan a charter, and thereby make it illegal for the Klan to carry on its organization work. Other States take notice!

AVIATION WITHOUT LAW

BOOTLEGGING by airplane between the United States and Canada continues to thrive; Lieutenant Maynard, the "Flying Parson," is killed; President Harding and thousands of spectators at the dedication of the Lincoln Memorial are placed in jeopardy by an irresponsible low-flying aviator; and the lives of countless thousands of innocent spectators at the Yale Bowl and other stadiums are risked unnecessarily because the House of Representatives has so far failed to provide, as forty other nations have provided, for Governmental regulation of civil aviation. And this in spite of the fact that the entire aeronautical industry has asked for that Governmental "interference" to which many American industries have objected.

Before you went hunting cottontail or deer this winter you had to have a hunting license; before you sat down behind the wheel of the new car you likewise had to have an automobile license. But if you have the price of an airplane and a few gallons of gas there is nothing in the world—or, rather, in the United States—to hinder your going and coming as you please, without let, hindrance, or license. If you are an irresponsible "stunt" pilot with an obsolete "war" machine, or an unattached or "gypsy" flier with a rickety contraption hitched to a sputtering motor, no one can prevent you from taking passengers for "joy" rides at so much per head.

THE LAW PROPOSED

ONE of the most important pieces of legislation now before the House is the Wadsworth Bill providing for Federal control of civil aviation, which the Senate passed months ago. If the Wadsworth Bill is enacted into law, there will be established in the Department of Commerce a Bureau of Civil Aeronautics, which will regulate and encourage flying. This Bureau will co-operate with the Forest Service or any other Government bureau which seeks aerial co-operation. The fitness of an applicant for a license to operate an airplane will be passed upon by experts. The machine itself will be inspected and tested, and if found airworthy a license will be issued. Pilots who engage in performances which imperil the lives of others will lose their "papers," and all kinds of "stunt" flying and swooping low over outdoor assemblages will be prohibited. As things stand, there is no provision for any of these things. In other words, if the Wadsworth Bill is enacted into law,

flying will be made safer, and rickety airplanes and reckless pilots will be for the most part eliminated. The benefit, therefore, will be shared by those who make airplanes, those who pilot them, those who ride in them as passengers, and those who watch them fly.

Opposition to the passage of the House bill is practically nil. On the other hand, the Department of Commerce, the Army Air Service, the Navy Bureau of Aeronautics, the National Aeronautic Association, the Aeronautical Chamber of Commerce, and other civilian and Governmental agencies are for it.

AIR CONTROL AND AIR CAUTION NEEDED

THAT some sort of control over aviation is needed, however, is not merely the opinion of aeronautical authorities or the long-suffering public, for a committee of the American Bar Association recently began a campaign for uniform aviation laws in all the States. The need for such laws or for Federal control of aviation was strikingly illustrated when that irresponsible pilot flew low over the Lincoln Memorial assemblage. That this solemn ceremony was not turned into a disaster was a matter of mere luck. Maynard, the "Flying Parson," made a splendid record as a pilot in our Army Air Service during the war, and was the victor in America's first transcontinental flight. The blame for his untimely end is placed by aeronautical authorities on the obsolete and patched-up machine with which he did "stunts" at the Vermont fair.

That airplanes are not necessarily deadly means of transportation is shown by the fact that our transcontinental mail pilots recently completed a year of flying without a single fatality, although they flew back and forth over the Rocky Mountains and other dangerous territory in all sorts of weather and at all hours of the day and night. This shows what can be accomplished through caution used in selecting pilots and a rigid inspection of machines. A few airplanes have fallen, just as a few steamships have foundered and a few railway trains have been wrecked. But the vast majority, when caution has been used in selecting the pilot and inspecting the machine, have flown without accident.

There are statistics showing that in a single year more than 250,000 persons have been carried something like 6,000,000 miles in American airplanes without a single fatality from straight flying. At the same time hundreds of machines in the Army and the Navy Air Services also functioned without accident. No one doubts that commercial aviation is here to stay, just as the automobile and railway train are here to stay. Every-

thing possible should be done by Government regulation and otherwise to promote its safety. Above all, there should be Federal restrictions against airplanes being flown over cities and outdoor assemblages except at a considerable height. For even the best pilot may make an error in judgment; even the best of machines may experience some mechanical trouble which may necessitate a quick descent.

AN ADVENTUROUS HONEYMOON

INTO the port of New York came a motor yacht just under one hundred feet in length with a beam of seventeen feet and a draught of six. Vessels of this type and size as a rule do not excite much interest in the waters along the Atlantic coast. This particular vessel, however, had dropped in from a trip around the world—the first voyage to be made by a craft of this kind.

Spee-Jacks sailed a year ago last August from Miami, carrying Mr. and Mrs. Gowen, of Cleveland, on a honeymoon voyage. She passed through the Panama Canal, and thence westward, through the Pacific and the Indian Oceans, the Mediterranean Sea, and the Atlantic, back to the starting-place. The voyage was a perilous one, for Spee-Jacks was almost entirely dependent upon her engine power and her gasoline supply. From the photograph it would appear that the only sails which she carried were one square sail and a jib. The signal mast upon which these are set does not look heavy enough to carry sail in much of a blow.

We should say that the feat of the Spee-Jacks is one not likely to be repeated. A power yacht is certainly not the most comfortable type of ocean craft that can be built. A Gloucester schooner with auxiliary power could make the voyage in comparative comfort and at greatly reduced expense. Why burn gasoline where the trade winds blow?

STOP, LOOK—AND LISTEN

WHY shouldn't a Museum of Art include music? Isn't music one of the greatest and finest of the arts?

Four years ago a remarkable series of concerts, free to any one who might care to come, was the contribution of the Metropolitan Museum of Art, New York City, to the concert season. These first concerts were very quietly ushered in, for with the exception of brief announcements in the daily papers and the placards placed in the doors of the Museum they were unheralded. On the first Saturday night in January, fifty-four symphony orchestra players took their places in the north end of the huge gallery above the great Fifth Avenue Hall of the Museum and under the leadership of David Mannes gave as delightful a concert as might be heard in New York. The hundreds who came to the first concert felt the pride of those who officiate at some event which proves later to have been one of much importance as they mingled with the thousands who came thereafter.

Following the example of New York, London's museum also has added music to the arts which it offers the public, and has had presented a series of chamber music concerts.

It has been the custom for many years to have a symphony orchestra, led by Mr. Mannes, play in the Metropolitan Museum of Art on reception days. The possibilities for concerts of good music as an additional part of the work of the Museum interested Director Edward Robinson, the trustees, and Conductor Mannes; and such a series was planned. John D. Rockefeller, Jr., has made generous donations to make these evenings possible, as have Robert W. de Forest, Edward S. Harkness, Henry Walters, Arthur Curtiss James, and Michael Friedsam.

Mr. Mannes's programmes have been arranged with the utmost care and have

delighted alike the trained musician and the average music lover. The philosopher-composer Brahms has been heard many times at the Museum concerts, both in his symphonies and the more widely known Hungarian Dances. Beethoven, Mozart, Haydn, Dvořák, Schumann symphonies have been played, as have overtures, symphonic poems, suites, and shorter selections by the most representative composers. Contemporary musicians have not been neglected. For this season's concerts, four on Saturday nights in January and four in March, Mr. Mannes will present programmes which prove that the Museum concerts have attained the full dignity of symphony concerts. A partial list of the works to be played is as follows: Beethoven's Fifth Symphony, the Fourth of Tchaikowsky, Schubert's "Unfinished," Brahms's Variations on a Theme by Haydn, the first movement from César Franck's D Minor Symphony, Theme and Variations by Beethoven, one of the Liszt "Hungarian Rhapsodies," "The Fountains of Rome" by the Italian modernist Respighi, two movements from a suite for strings and solo flute by Bach, the "Festival Overture" of Brahms, minuets by Mozart and Schubert, Volkmann's suite for strings with cello obbligato, Weber's overture to "Oberon," Berlioz's "March to the Gallows," Wagner's "Forest Sounds" from "Siegfried," overture to Tannhäuser, Tchaikowsky's "Nutcracker" Suite and "Marche Slav."

The director of the Museum, Edward Robinson, has arranged that this year, as in the preceding ones, the Museum will be open for a short time after the concerts so that those who so desire may visit the galleries and collections before going home. As usual, lectures illustrative of the music to be played will be given in the Lecture Hall of the Museum on the afternoons of the concert days.

SHALL WE TURN THEM BACK TO THEIR PERSECUTORS?

AMONG those fleeing from the Turk are Greeks and Armenians who have relatives in America.

Naturally these refugees think of their relatives here as natural and competent protectors. Some of them have tried to join them in this free country. Those among them who have made their journey as far as the Port of New York have found for the most part an impassable door between them and their kin.

Nothing could illustrate more effectively the stupidity and heartlessness of a law that attempts to deal with a human problem on the basis of arithmetic. The so-called quota law determines the fate of an immigrant, not by the qualities he possesses, but by the percentage already admitted from the country from which

he halls. It happens that the Turkish quota of 2,388 is exhausted for the year. It matters not that there are Americans of Greek and Armenian origin prosperous enough, as well as willing, to support these relatives, mainly women and children, who are coming to them for succor. They have to see these people who are no menace to the labor market, who are otherwise admissible, and who are eager for education, turned back.

To pass a law which would admit all otherwise admissible refugees would open the gate to a flood of immigrants from many parts of the world; for there is scarcely any part of Europe or Asia from which people are not ready to flee. But there is no reason why these particular refugees should not be admitted. The number is limited. The emergency is quite extraordinary. And the alternative of turning them back is exceptionally inhumane.

Congress should lift the Turkish quota sufficiently to enable the otherwise admissible refugees from Anatolia and Thrace to join relatives here who are ready and able to take care of them.

CANADA AND THE UNITED STATES IN POST OFFICE RECIPROCITY

A VERY interesting and significant conference was recently held at Ottawa when Canadian and United States officials met for the first time in joint conference to discuss measures for the more effective handling of mails passing between the two countries.

This meeting was attended by the Postmasters-General of both countries

Courtesy Near East Relief

AN ARMENIAN CHRISTIAN GIRL WHO ESCAPED FROM A TURKISH HAREM AND IS NOW AN AMERICAN WARD

and by a number of their department heads; a great variety of subjects were discussed and many important decisions arrived at.

Some of the many matters dealt with were the adjustment of weight limits for merchandise parcels and the rates of postage and insurance thereon; arrangements for the transit of the mails of one country through the territory of the other; the equalization of special delivery rates; direct correspondence between postmasters in this country and Canada and *vice versa*; the distribution of postcards mailed in Canada for United States

points prepaid in United States postage stamps; the extension of United States railway mail clerks' runs to points in Canada; and a great many other subjects not always of interest to the general public but of great importance to the smooth and efficient handling of the mails and the elimination of red tape.

This conference is the culmination of a long series of events appertaining to postal matters affecting this country and the Dominion which began in the year 1763, when Benjamin Franklin opened post offices at Quebec, Three Rivers, and Montreal and established the first postal service between Montreal and New York, via Lake Champlain and Lake George. Since then from time to time various postal conventions have been entered into by this country with Canada, but the recent conference is the first occasion upon which officials actually responsible for the conduct of postal affairs in both countries have met in joint session, have discussed common problems, made mutual concessions, and arrived at solutions mutually satisfactory. Negotiations in the past have been conducted on the basis of diplomatic interchanges.

A real spirit of reciprocity marked the proceedings. "We ask no concessions," declared the Hon. Hubert Work, Postmaster-General of the United States, "except those that are going to be of mutual advantage. We are willing to concede anything conceived in that spirit. We ask for no privileges and no advantages, but only the opportunity to co-operate." While in his address of welcome the Hon. Charles Murphy, Postmaster-General of Canada, assured the visitors that, "although in their journey from Washington to Ottawa they crossed

the international boundary-line, they did not then enter a country of strangers. Quite the reverse. They are, in fact, among friends and brothers, who are desirous of expressing neighborly feeling and international good will in deeds rather than in words."

POLAND'S FIRST ASSASSINATION

Two days after he entered upon his duties as President of the Republic of Poland and only a week after his election to that office Gabriel Narutowicz was assassinated just as he had finished an address at an art exhibition.

At first the assassination was ascribed to political motives, on the supposition, apparently, that the turbulent and exciting political conditions in Poland had something to do with the matter. The victim's political opponents had attacked him as a radical and asserted that he favored non-Poles (meaning chiefly Polish Jews) and foreign-born races. He was himself a Swiss citizen until recently, although he was born in Warsaw. It soon appeared, however, that the assassin, Niewadomski, was certainly a person of unbalanced mind and probably was positively demented. This has led to a very general comparison of the crime with the assassination of President Garfield by Guiteau. In both cases probably the effect of sensational and irresponsible political attacks on the victim had some effect on the minds of the assassins.

One Polish newspaper expressed the belief that the crime has a serious aspect because of the present political complications; another spoke more positively, but perhaps without full information, as to political motives for the crime itself; there is a general and evidently sincere expression in Poland of horror and condemnation. Following the assassination there have been many arrests of persons suspected of connection with political plots and disorder. It is stated that Niewadomski's wildness and irresponsibility had led to his expulsion from two separate political parties.

General Haller, some of whose followers were accused, probably recklessly, of being implicated in the crime, has a notably fine record of war service and is known to Americans because he commanded in France the American, British, and Polish volunteers.

Marshal Pilsudski, the successor of Mr. Paderewski as Premier of Poland, is now at the head of the Polish army, replacing General Sikorski, who has become Premier at the head of a newly organized Cabinet.

Despite all that has been said about the tendency of the Poles' fierceness in

political life and about their warlike propensities, it is pointed out by Mr. Paderewski in his comments deploring the recent crime that this is the first time in the history of Poland that a ruler has been assassinated.

AT LAUSANNE

Two somewhat incongruous subjects are occupying the attention of the Lausanne Conference at this writing—the Turkish proposal to banish the Patriarch of the Greek Church, and the control of Mosul, which means oil, although that word is carefully avoided in all the discussions. Turkey's willingness to join the League of Nations if she can have her way as to Mosul has an almost humorous aspect.

Meanwhile conditions as to the use of the Dardanelles Straits and the waters to the east, including the Black Sea, are still under debate. The plan now most favored seems to be to allow each nation to have in those waters at one time only three warships, which should be of not over ten thousand tons. This is not acceptable to Russia, but seems to be fairly satisfactory to the other nations. It does not exactly accord with the American view, but we shall probably be satisfied with permission to send small war-vessels on peaceful errands to Black Sea ports, which is really what our delegates most insist upon.

The proposal to banish the Greek Patriarch has naturally excited opposition and hostility throughout the Christian peoples of the East. Greece especially resents this action. A vigorous protest has been received by the Conference from religious organizations in England and America in nowise affiliated with the Greek Church.

In every matter that comes up for discussion at Lausanne the Conference runs against the continued assertion of Turkey that it must and will have absolute national independence and integrity. Ismet Pasha declares that his Government will not accept any sacrifice of principle involving Turkish independence, but that it is ready to make reasonable treaties which shall conform with international law and reciprocity and that the Nationalist Government recognizes the power of its people as fully as does any other governing body.

This sounds logical, but, as we have said before, the Powers have in the history of the past good reasons to make them demand assurances as to the treatment of their own peoples in Turkey and for the recognition of the rights of minorities in Turkey as against religious or racial persecution.

REPARATION NOT REPRISAL

IF a Rip Van Winkle had waked just in time to read American newspapers about the middle of this month he might have easily concluded that Germany had been invaded by her neighbors, had been subjected to devastation, had lost her factories and her railways, and in general had been deprived by her enemies of the common means of livelihood.

It is not by chance that the picture of a prostrate and suffering Germany has appeared again at this time. France has suggested the possibility of seizing certain German property in the Ruhr unless satisfactory payments on account of reparations are made by January 15. A similar picture of German poverty has been presented every time a day of reckoning has approached. And the picture has called forth a generous response from the sympathies of the world.

GUARANTIES FOR EVERYBODY BUT FRANCE

The people of America and England in particular have become very sorry for Germany. They do not like to think of her university professors living on the edge of starvation. They do not like to hear about German children being short of food and clothing. So sympathetic with Germany have people become that a resolution has been introduced into Congress providing for an appropriation of \$70,000,000 to feed the starving Germans and Austrians.

The farmers of the Western States have, moreover, seen the opportunity of providing the starving Germans with millions of bushels of wheat if there is only some way by which they can get payment for it. Bankers have been talking about providing a loan for Germany on condition that they can get a perfectly trustworthy guaranty for the ultimate payment of the loan. English politicians and business people are moved with a desire to see Germany placed back upon her feet, since a prosperous Germany will provide a market for British exports—that is, will be able to pay for them. So sympathy has formed a partnership with business instincts.

Of course English merchants and American farmers and American bankers want guaranties.

But everybody seems to be denouncing France for wanting a guaranty too.

NOT REVENGE, BUT A MORTGAGE

Why is it righteous for American farmers and American bankers to require a guaranty, and wicked for Frenchmen to do so? A search into history reveals the fact that it was not

Germany that was invaded, after all, but France. It was French factories which were destroyed. It was French land that was devastated. It was French mines that were deliberately and maliciously flooded.

It has already been decided that France is not morally required to pay for what Germany did to her. It has been decided that Germany owes all that she can pay to undo the damage she did. For the payment of this debt France received the offer of a guaranty, by a treaty of alliance with Great Britain and America, but never received the guaranty itself. She expected some kind of guaranty from the League of Nations, but has been disappointed there. The only guaranty that is left to her is to take a mortgage on some of the German real estate—for example, in the industrial region of the Ruhr. But Great Britain and America are very sure that such a mortgage would not be for their interests. There is nothing punitive or vengeful about bankers wanting a guaranty for a loan; there is nothing punitive or vengeful about American farmers wanting payment for wheat even from hungry people in Germany; but somehow the impression has got abroad that in desiring a guaranty for the payment that is justly due her France is proving herself to be in a vengeful and punitive mood.

Bonar Law, the British Prime Minister, has not been in sympathy with the French desire to take possession of the industrial resources of the Ruhr; but he has seemed to understand the French point of view better than his predecessor. He has stated it to Parliament as follows:

I think it is right that we should try to look at these questions from the point of view of France. What is their view? Germany undertook to pay a very large amount. Almost nothing has been paid.

Since then we have had conference after conference, and what has been the result? The result has been in every case, in one form or another, that at the end of the period of moratorium we have found ourselves in a worse position for getting money out of Germany than we were before the discussions.

That is the view of France. She may also very fairly say that this result is largely due to the deliberate action of Germany.

Now, what was that action? There is not the smallest doubt that the German Government did allow this tremendous depreciation to take place, and it is a fact that this depreciation does make it impossible for Germany to meet these reparations payments.

The French go further—they say it has been deliberately done by Germany. Well, honestly, I cannot myself take that view. I cannot do it, for this reason: by the method of passive resistance they could forever avoid paying the indemnity.

But there is this to be said for the French view—the inflation has enabled the great industrial groups who exercise great power in Germany to make enormous fortunes, although it was part of the arrangement with the German Government that this should not take place and that the money should be made available for reparations.

There is no doubt whatever that, if there had been a strong enough Government in Germany to face the real position, it was their clear duty, and not only in their own interest, that they should try to put their finances on a sound basis. They have never tried. Maybe this was not their policy, maybe they had not the power, but that is the result.

AMERICA NOT A NEUTRAL

Though the American Government has not at this writing made any official announcement, it is clear that the Administration is considering the possibility of some action to aid in rescuing Europe from economic chaos. Ambassador Harvey has been summoned from England. Unofficial statements have appeared in the press indicating very clearly that the President has a plan or plans under consideration.

Among the rumors regarded as important enough to be cabled as news abroad was the suggestion of a loan of \$1,500,000,000 to Germany. There is no intimation that this would be a Government loan; but it is strongly intimated that American bankers would not be willing to float such a loan unless it was backed by the guaranty of the American Government.

Objections from both Britain and France have at once been raised to such a loan as this. The objection that is at once obvious is that such a loan, if practicable at all, would take precedence over Germany's debts to other countries. Another objection is that no bonds of such a loan could be sold unless France undertook not to get any guaranty herself by seizing German property. Still further objection is that such a loan would be utterly inadequate to stabilize the mark, and even if it were used for that purpose would, according to certain economists, bring about an utter collapse of German industry.

In this situation the "Journal of Commerce," which has a very practical knowledge of finance, sees "hopeful symptoms." It is significant that it bases its opinion as to the chance of improvement, not upon any specific financial programme, but upon the sign that Germany is more willing to do her part than she has seemed to be heretofore, that France is showing a better spirit, that Great Britain under Bonar Law is substituting common sense for selfish policies, and that the "entente between Great Britain, France, and Italy

is on a firmer ground than at any time since the war."

It is certain that the chief question is not one of pounds or francs or marks; it is a question of mind and heart and will. There is little chance that America can do much merely with her dollars. There is chance that America can contribute to a clearer understanding, a better disposition, and a firmer purpose in all the nations involved.

We hope, however, that, whatever America does, she will not assume the rôle of arbitrator. The fact is we are not in the position of an arbitrator. We are not and cannot be, in either justice to other nations or justice to ourselves, a neutral. We cannot assume a lofty attitude, as if we had never taken part in the conflict. We did take part on the side of justice and liberty. Upon us as well as upon other nations rests the duty of seeing that those who were aggressors in that conflict shall not shift their burdens to their victims.

JOHN WANAMAKER, MERCHANT

IT takes more than success to make a career memorable and significant.

A. T. Stewart made a great commercial success because he was the first to put into effect certain sound business ideas, such as one fixed price, and because he was shrewd in buying and an indefatigable worker. But his success did not have deep roots; after his death the business fell off deplorably. Then came John Wanamaker, with the background of the Philadelphia enterprise that he built up year by year after a modest start with a few thousand dollars, until it came to have a turn-over of \$25,000,000 a year. He took over the Stewart stores in New York. For a time success and failure seemed to hang even in the balance.

What won was John Wanamaker's personality; he put himself into the organization; he made each department a store in itself, each buyer for a department a minor merchant. People went to his stores, not so much in search of bargains (for there were cheaper department stores), but because merchandising was there carried on with skill and knowledge and by the gathering of goods from world-wide commerce, and because taste and variety were aimed at constantly. The customers liked also the art and musical treats furnished them without charge, a distinctive feature of Mr. Wanamaker's invention.

In all ways the great merchant thought of the human and æsthetic elements as well as those of cost, price, and profit. He regarded the business of

great store as having professional and idealistic sides, and he sought for the good will and kindly feeling of those who worked for him as well as of those who bought from him.

As in his business, so in his relations to his fellow-citizens, Mr. Wanamaker was easily and naturally friendly. He was a philanthropist, not from pressure or to be praised, but because he truly cared for others. He started a profit system in the Philadelphia store many years ago; he founded libraries, pension and benefit clubs for employees, and a cadet corps for the boys; he became a large factor in the National building up of the Young Men's Christian Association; he was a noted figure in Sunday-school work, and said that it was his best way of resting; as Postmaster-General under President Harrison he used his business astuteness for the general good.

Always, as a friend writes of him, John Wanamaker ennobled service; he dignified labor; he made business a profession equal to any other. He wrote his own epitaph when he said: "Thinking, trying, toiling, and trusting in God is all of my biography."

TINKERING

AMENDING the Constitution promises to become an annual pastime. Like football, for example.

Even President Harding has joined in the sport, and has advocated not one, but two Constitutional amendments.

The latest attempt at amendment is one made by the Senate Committee on Agriculture and Forestry, and is for the purpose of changing the terms of the President, Vice-President, Senators, and Representatives and the machinery of the Presidential election.

What agriculture or forestry has to do with the subject of the proposed amendment passes the mind of any one but a Senator to understand. The explanation—it cannot be called a reason—for this strange procedure is Senator Caraway's desire to have a resolution of his, for which this proposed amendment was substituted, scrutinized by the friendly eyes of the committee of which Senator Norris is chairman.

The purpose of the amendment is good. The intentions of those who favor it are of the best. The effect of the amendment, if put into operation, would be partly harmful, but mainly beneficial. We doubt very much, however, whether all the good that it is proposed to do by this amendment could not be equally as well done by law.

The chief object which this amend-

International

JOHN WANAMAKER

ment would accomplish is a prompter response to the people's will as shown by their votes. At present the people in November of one year vote for a Congress which normally does not meet until the December of the following year. At present the people elect a President in November, and yet the President who is supplanted remains in office until the following March. This delay between the command of the people and its execution was well enough, and indeed quite necessary, in the day of the post-chaise in a sparsely settled land of pioneers. It is altogether unnecessary and unjustified in the days of the railway and the telegraph in a land of a people long trained in self-government. The amendment now proposed would summon Congress into session on the first Monday of the January following the November election, and two weeks after the assembling of Congress would place in office the newly elected President.

For this desirable change it seems to us somewhat doubtful whether an amendment to the Constitution is necessary.

There is nothing in the Constitution which prevents Congress from providing by law that the Representatives elected in November shall take office on the first of January following. Since that is so, the new Congress can assemble on the first of January without a Constitutional amendment. It is true that according to the Constitution Senators are elected for six years, and if that be construed as preventing Senators from having their terms shortened by two months by law, nothing prevents the old Senate meeting with the new House. As the Senate is

a slowly changing body, anyway, this is not serious.

As for the changing of the inauguration of the President from the Fourth of March to the third Monday in January—a very desirable change—there is nothing in the Constitution itself preventing it except the provision that the President shall be elected for four years. The first President of the United States, however, was elected for four years, and yet his first term was only from April 30, 1789, to the Fourth of March of the fourth year later—that is, nearly two months short of four years. Since the Constitution provides that the Congress shall "assemble at least once in every year, and such meeting shall be on the first Monday in December unless they shall by law appoint a different day;" and since the shortening of Washington's first term is a good precedent; we see no reason why Congress (perhaps leaving the newly elected Senators to take their seats later) should not by law summon the newly elected Congress into assembly on the first Monday, and place in office the newly elected President on the third Monday, in the January following their election.

If a Constitutional amendment be necessary for this purpose, it need be only a very simple one.

Mr. Norris's amendment, on the other hand, is cumbersome, clumsy in phraseology, and in a great part unnecessary. Not only would it change the date of the inauguration, but it would also abolish the Electoral College without changing in any appreciable degree the very sound principle of voting by States. If Mr. Norris's amendment were to make the election of the President a matter of mere majority vote of the total of all the voters in any Presidential election, the abolition of the Electoral College would be significant, though at the same time it would be contrary to the best interests of the country. Mr. Norris's amendment, however, simply substitutes the impersonal votes of the respective States for the votes cast by persons called electors.

It is claimed that this change, if made, will make possible the election of a candidate for President from one party and a candidate for Vice-President from another. This would be not progress, but reaction. It would be reversion to the original provision of the Constitution, which was a blemish that was removed from it only seventeen years and eight days after its adoption.

It is claimed that this change, if made, will make it possible to elect to the Presidency a candidate who has no regular party support. Is this desirable? We do not think so. At least the burden of proof rests upon those who advocate this means of destroying—or making

it possible to destroy—party responsibility in a National Administration.

If the Judiciary Committee, which has under consideration an amendment on the same subject, decides to report it favorably, we hope that it will discard all provisions for changing the method of electing the President and confine the amendment to changing the dates of the meeting of Congress and the inauguration of the President from March to January.

Perhaps we are yet in an era of Constitutional change like that which immediately followed the adoption of the Constitution. Then there were twelve amendments made in almost exactly seventeen years. After the Civil War there were three more amendments made in less than four and a half years. Then, after a lapse of forty-three years, began another period of amendments beginning in 1913—four amendments in less than eight years, with apparently

more to come. President Harding delights to speak of the Founding Fathers. Perhaps this generation will be known as the Amending Sons.

And Daughters.

If we are to continue to amend the Constitution, let us do it as good craftsmen.

When an important change is to be made in the architecture of the Constitution it ought not to be done by tinkering.

TWO VIEWS OF CLEMENCEAU'S VISIT

Upon the departure of Georges Clemenceau from the United States, the New York "World" published an editorial from which we quote the part referring directly to the visit of the great Frenchman. This "World" editorial gives one view of the effect of the visit of the French ex-Premier to

America. In contrast to the opinion of the "World," a competent observer in Chicago has sent us a letter giving the impression which M. Clemenceau made in that city. The writer has long been interested in French culture and life.—THE EDITORS.

I—THE VIEW OF THE NEW YORK WORLD

THE success of M. Clemenceau's tour is greater than he had reason to expect. It has been greater than much in his speeches and articles justified.

It is a success that would have been more immediately apparent if instead of talking with his eye so constantly on the Paris newspapers he had spoken his real mind everywhere as he did in yesterday's interview in *The World*. Obviously the response to him would have been much more sensational had the American people been allowed to see him as an old French radical who was going home to attack militarist and clerical reaction in his own country, instead of a somewhat tame Tiger talking the official chauvinism.

But M. Clemenceau was not here to create sensations. And so until the day he sailed he refused to say anything which would drag domestic French politics into the discussion. His tour was less interesting for that reason than if he had drawn the issue at the start between himself and French reaction. But this witty and dauntless old French man could risk seeming to be dull for three weeks if in that time he could advertise the simple truth that America must work with Europe.

So he put aside a good deal of easy popularity that would have come to him by revealing his present position in French politics. He concentrated on one thing, and even threw some red meat to the wolves at home so that they would not molest the Tiger in America.

To a certain extent M. Clemenceau played in luck. He came after a harvest which had left deep discontent throughout the West. He came after an election which had emphatically repudiated the results, if not the policy, of isolation. He came at a time when people throughout the land were realizing, as they had not realized it for three years, that our

industrial system is out of joint because agriculture is depressed and that agriculture is depressed because the world market is disorderly.

He pointed the moral when the lesson had already been taught. He has started a current of discussion which will gradually but inevitably bring American policy in line with American needs and interests, instead of with the partisan prejudices and thoughtless campaign speeches of 1920.

M. Clemenceau has achieved a success

because at exactly the right moment he arrested attention and uttered an unanswerable truth which is supported by the irresistible logic of fact.

II—CLEMENCEAU IN CHICAGO

YOU asked me to send you a letter about Clemenceau's effect upon Chicago opinion.

His audience in the Auditorium in-

International

CLEMENCEAU AT THE LIBERTY BELL IN INDEPENDENCE HALL IN PHILADELPHIA

cluded the makers of opinion from fashionables to labor union chiefs, so that the Tiger's personality, as well as his words, had a chance to reach all classes.

Personally, he has made upon the public a distinctly favorable impression. His onion soup, his pawky humor, his quaint gestures, his eyebrows, his night-cap, and his willfulness appeal to us and create a "character" with appropriate stage properties. Closer up, one sees a cynical attitude towards poor old mankind which makes one feel naked and curious to know what is going on in his head. The one passion, among the many which he interprets, which strikes one as genuine is love of his France. He is so French that it is a handicap to his comprehension of Western American psychology. In some passages of his speech he has evidently tried to correct this defect with the peculiar brand of clumsiness for which Woodrow Wilson and Colonel House were once famous. While protesting that he and France asked nothing, he made it plain that he wanted America to replace England in

a partnership wherein England was not sufficiently anti-German, and then he proved up to the hilt that it would be a bad bargain for us and a good one for France. His pictures of French sufferings, losses, crushing taxation, Asiatic entanglements, and impending bankruptcy, of French suspicion and fear of Germany—even his devotion and patriotism frightened us as we thought what even a *beau geste* might let us in for. The sentimental appeal, which might have taken the mind off the consequences of an approach to France, and the demonstration of identity of aims and interests were entirely wanting.

The introduction by General Dawes was most effective. For half an hour the audience listened breathlessly to Clemenceau, but his clipped English and his obstinate avoidance of the amplifier, without which only a few could hear him at all, soon began to count against him. He would sidle off to the right wing, and attempts by Colonel Bonsal, General Dawes, and the audience, to persuade him to stand where he could be heard were first refused and then ac-

ceded to with bad grace. In a few moments he was off again to the extreme right, to be recalled by the audience. The device had been explained to him, but he insisted that his voice could carry without mechanical aid.

To summarize the views of those with whom I have spoken: Chicago gave Clemenceau the great reception to which his place in history entitles him; his personality made a distinct impression; his speech might have done much to create a sympathy and sentiment for France full of possibilities; but Clemenceau failed to seize his opportunity; he frightened his hearers, displayed a touch of French selfishness and French hatred of Germany and a list of French liabilities enough to scare off any thought or suggestion of partnership. We may be fond of the picturesque Tiger, sorry for the sufferings of France, but we are not going to ruin ourselves by touching the European mess until it is demonstrated that we have got to in the interests of America. The touch or two of Wilsonian idealism interjected in the great Frenchman's speech clinched opposition.

THE SINGULAR CASE OF SPAULDING VS. THE A. B. S.

BY ROLLIN LYNDE HARTT

SOLDIER, sailor, explorer, scribbler, and romantic ne'er-do-well, my friend Spaulding chanced one day to find himself as hard up for thrills as for cash, so decided, "A colporteur I'll be, and roam the earth, at other people's expense, handing out Bibles."

However, the American Bible Society thought differently, though there have been worse triflers than Spaulding—for example, the young novelist who heard of free rooms, free tuition, aid money, and abundant leisure for writing at the General Theological Seminary, and forthwith demanded admission. Said the dean, "Are you an Episcopalian?" Said the applicant, "No, I'm an atheist." To which the dean replied, "I don't see that that need stand in the way; this institution will soon cure you."

True it is that the young novelist was not admitted to the Seminary; true, also, that his subsequent frivolities have amply justified the rejection. But Spaulding—behold him to-day! He has "ranged himself," as the French say. Father of a family, pillar in the church, author of at least a dozen admirable books, and General Secretary of a great National organization every whit as disinterested, in its way, as the American Bible Society, he feels that vindication is his—and laughs. Whereas the Society, after all these years and the changes they have brought, still glories in having scorned him. Indeed, it appears to feel that he was guilty, at the time, of something remarkably like impudence.

But is not impudence—or, at all

events, the consecrated impudence of the devout humorist—a prime requisite for colporteur? Accidentally walking into a camp of five hundred Tibetan brigands, the delightful Huston Edgar was a bit "nonplused and uneasy," he admits, though his cheek never deserted him. To the outlaws' bewilderment, he not only sold them Bibles, hand over fist, but "insisted on getting the money." In Siam a colporteur coolly "visited fifty-six temples;" only one refused Bibles. In Mexico, during Holy Week, a colporteur came to a lonely ranch where the peons were assembled for mass. No priest had arrived. With a fine sense of impropriety, the Protestant read aloud from the "Protestant" Bible and "sold several books."

A solemn-looking affair is the old-fogy red-brick Bible House on New York's lower East Side, yet sometimes I suspect it of suppressing a grin. Out from that building go New Testaments in Yiddish, to say nothing of Bibles in Russian for Soviet Russia itself. Leon Brauenstein, the Russian Jew known as Trotsky, used often to stroll past the Bible House—with a sneer. To-day it outwits him. It has outwitted others many a time. Mr. A. B. Howell writes as follows:

"My father, a merchant and receiving agent, had removed to Port Isabel, on the Gulf of Mexico. One day, as a ship was unloading a cargo from New York the captain said: 'I have a box on board consigned to nobody, and I was told that wherever I unloaded I was to put it ashore. The freight is all paid, and there are no charges connected with it.'

"The box was brought into my father's store, and I remember, then a lad of ten or twelve, how curiously I desired to see what it contained. When the lid was pried open, we found it full of Bibles and Testaments in Spanish.

"His commercial instinct told my father that he ought not to waste this material, so we put the books on the counter, took the covers off, and used the paper for wrapping up cigars, matches, spools of thread, etc., little realizing that by that very act we became distributing agents of the Bible Society and put pages of Scripture in every home. It was not strange that in after years, when I went back to Port Isabel, I found a Protestant congregation there."

Then, too, recall how Goble first printed the Scripture in Japan fifty years ago, when the thing was dangerous. Says he: "I tried in Yokohama to get the blocks cut for printing, but all seemed afraid to undertake it. I was only able to get it done in Tokyo—by a man who did not know the nature of the book on which he was working!"

In the light of all this, does it not seem a little strange that a Society gifted with such a charming sense of humor should have frowned so inhospitably upon young Spaulding? If he lacked a certain deference toward his elders and betters, he lacked also a deference toward peril. He has been three times shipwrecked. The sensation, he declares, is always the same—a sensation, namely, "of disgust." What a

colporteur he would have made—in so far as intrepidity counts!

By all I hear, it is indispensable. Not long ago a colporteur in Mexico fell among bandits, who stole his mule, kicked away his Bibles, tumbled him down a cliff, and left him for dead. The first colporteurs in the Philippines were poisoned. In Bulgaria a colporteur was arrested so often that it became almost a habit. In China, just before the Boxer Rising, three colporteurs were hung up by their thumbs and bastinadoed. During the Rising eighteen went into the disturbed district. Four returned.

Are we to conclude, then, that the Bible Society's attitude toward Spaulding indicates a degree of—what shall I say?—Narrowness? It is a contention difficult to sustain. Narrowness, if it existed, would betray itself in sectarianism. Whereas, you will find that all the Protestant denominations are represented together in the Society's management, and that all the Protestant denominations unite to support it, and that it ranks as the first—and the one magnificently enduring—interchurch world movement of North America. Since the beginning, in 1816, it has distributed the Bible "without note or comment" or any sectarian coloration whatever.

But there is another type of narrowness—the academic—and the Bible Society stands dangerously high among learned societies, having mastered nearly eight hundred languages and dialects. Do you happen to read Benga? Or Bulu? Or Mortlock? Or Luragoli? Or Chamorro? Or Dikele? If not, then doff your hat to the Bible Society. Time and again it has had to begin by "picking out the words from between the teeth of the heathen." Just now it is preparing a Bible for the Quecha Indians, and other Bibles in Moro, Moro Lanas, and Samarens, and a Bible for China in Chu Yen Tzu Mu, the new phonetic system, in which a Mandarin version of Mark has already been completed.

A great advance this new phonetic system represents. In the old Chinese system a single character may consist of as many as sixty-two strokes, and translation involved heroic patience. Bishop Schereschewsky, a converted Jew, spent forty years in turning the Bible into Chinese. As both hands were partly paralyzed, he wrote the entire text of his Wenli Bible with the middle finger of each hand.

And there are languages within languages. Japan requires four different Bibles—one to suit classical scholars enamored of the Chinese style, another for less cultured Japanese, still another to attract lovers of plain Japanese writing, and finally a version for Japanese newly learning to read.

Very curious technical niceties now and then attend such labors as these. When translating Chinese, where it is a puzzle to find a word for *God*, you must choose between "Shen" and "Shangti!"

P. & A. Photos

A COLPORTEUR OF THE NEW YORK BIBLE SOCIETY DISTRIBUTING POCKET TESTAMENTS TO SEAFARING MEN IN NEW YORK HARBOR

and meet difficulties either way. After two generations the question remains unsettled. In Arabic-speaking countries, meanwhile, the paramount problem is typographical, as everything depends on the curves and slopes of letters, and books in Arabic printed from type made in Europe disgust the Orient.

What wonder, then, that a Society engaged in these more than schoolmasterly pursuits should run some risk of acquiring the academic temper and losing its grip on broadly human considerations? But, the more you look at it, the more clearly you will perceive that underneath the Society's amazing scholarliness throbs a warm and very tender humanitarianism.

Note its work for the blind. Eighty years now it has been supplying them with Braille Bibles—a seven-foot bookshelf, nineteen volumes to each Bible—at less than cost. Of late nothing has interested the Society more than Helen Keller's reply to Mr. W. L. Stidger's question, "What is your favorite book?" "Zee Bi-bule," she said. Nothing, that is, unless perhaps it was hearing from Kenneth Bullard, who is blind and crippled and whose fingers have lost the sense of touch, yet who reads the Bible with his upper lip.

Or note the work among lepers, among prisoners, among seamen, among circus people, among Indians, among the Southern mountaineers, and among Negroes. During the first year after the War of Secession 500,000 Negroes learned to read. Then began a campaign that has progressed steadily ever since. And again, note how the Society treats the immigrant. Seeing aliens arriving in unheard-of numbers, the vast majority of them untrained to read the Scriptures, it tempted them with diglot

Bibles—that is to say, Bibles in each of which the English text appears side by side with the text in some foreign language. Aliens anxious to "learn American" found here the most convenient of short cuts. There are now thirty-three different diglots circulated by the Society. Perhaps no other single influence has been of greater service in popularizing our common tongue—and our common ideals' also.

Does this seem to bespeak the academic temper—the sort of thing that narrows men, instead of broadening them, and tends to dry men up? If that notion—or the faintest ghost of it—lurks in your mind, consider these fellows' attitude toward their triumphs. They have issued nearly a hundred and fifty million volumes. Far from glorying in that unparalleled achievement, they observe with sorrow that the need greatly exceeds the supply, not only abroad, but in this so-called Christian land! Colporteurs hear over and over again such stories as, "We lent our Bible, and it never came back," "We had one once, but there was a fire," and, "We lost ours when we moved." A colporteur in the West writes of "counties as large as some of the smaller Eastern States without a store where Bibles are carried in stock." He reports "towns of 40,000 with only a single drug-store handling Bibles, and the cheapest one \$7.50." Another writes from Utah, "I have called on many Mormons who do not seem to know what a New Testament is." Still another complains, "Of the 400,000 people in New Orleans, eighty-five per cent are without Bibles."

At the Bible House this cuts. And another thing cuts—namely, the increased cost of manufacturing Bibles. For it will soon abandon their manufacture.

though not their publication and circulation. But the cost of circulating them has increased. The Society needs funds. Hampered financially, it feels as any group of warm-hearted philanthropists would feel—acutely miserable.

So this is the surprisingly broad-minded and the generously human organization that weighed my friend Spaulding in the balance and found him wanting. It freely recognized his courage, his ability, and his rare personal charm. I even imagine that it thought him capable of recounting his experiences, had he been permitted to have them, in a book as entertaining as "The Bible in Spain," which, by the way, Theodore Roosevelt took with him to Africa. Indeed, I dare say the Society saw in Spaulding the germs of an executive ability which, properly developed, might have fitted him for a place among its administrators. But—too obviously altogether—he lacked a certain quality without which no colporteur can succeed. Talking with Mr. Frank H. Mann, General Secretary, the other day, I mentioned the Spaulding case. He laughed.

For the fact is—and Spaulding himself would recognize it after reading a few thousand letters from the "field"—that colporteurs are not "roaming the earth at other people's expense," for fun, or for a livelihood, or for want of some more attractive thing to do. They are white-hot, flaming zealots, with the mentality, say, of Salvationists or of tent evangelists, regarding the Bible as indubitably "God's Word," the "silent missionary," a "divine Book," which points, now and always, "the only way out of

the dark," so that every man of them cries, "Woe is me if I sell not this Bible!" That impulse, and that alone, is what makes the patient, self-sacrificing, courageous, devout "supersalesman" we term a colporteur.

However, the American Bible Society appears to have thriven mightily without Spaulding. It issues the world's perennial "best-seller." In China the circulation of Bibles is limited only by the supply. In Japan "knowledge of the Bible has so permeated the nation that the words of the prophets, the Apostles, and many sayings of Jesus are quoted in the daily papers." In Cairo "a Mohammedan barber bought a Bible for his customers to read while waiting their turn." Here at home the book becomes not less popular, but more so. An organization of commercial travelers has put 400,000 Bibles in hotels. In New Orleans dealers now keep Bibles in the front of their shops. At least a beginning has been made toward bringing back the Bible into the class-room; not long ago the Louisville, Kentucky, Board of Education bought Bibles out of its own funds for the Louisville schools.

Naturally, the Great War, along with smaller ones that accompanied or followed it, profoundly affected the traffic in Bibles. Thousands on thousands of Bibles were given to soldiers, whose favorite passages, it seems, were the Thirty-seventh and Ninety-third Psalms. On the other hand, whole regions were devastated and whole populations deported, losing their Bibles, so that one principal effort of the Society is to supply the lack. Moreover, an intense an-

tipathy toward everything Christian has developed throughout the Moslem world since the armistice.

Nevertheless the net result is gain. Japanese control in Siberia has facilitated the smuggling of Bibles into Russia. In the South Sea Islands, where German missionaries were ousted from Ponape and Truk, Japanese Christians have replaced them. If China is in ferment, the Christian General Feng Yuxiang buys New Testaments for his troops. Thanks to Venizelos, the Bible in modern Greek now circulates in Greece. With the collapse of Austria Hungary 850,000 people have joined the Czechoslovak Church; for the first time in a thousand years it is possible to circulate a Slovak Bible, and the American Bible Society has ordered one made.

Because of chaos in Mexico Mexicans have swarmed across the border, where the Society has supplied them with Bibles. Returning home, they take the books with them. And if this, as well as various other indications the world over, seems to show that the Society often elects to work among the humble, pray note that in Porto Rico the colporteurs are taking pains to visit town authorities, literary men, journalists, and merchants. Effort has never been confined to the lower classes anywhere, nor has effect. In Peking several years ago a Chinese official brought to the Society's book-store a slip of paper naively inscribed, "One Old Testament, one New Testament." His curiosity aroused by the uncommon look of the writing, Dr. Gatrell asked who had written it, and was told, "The Emperor."

THE STATUS OF THE STRAITS

A HISTORICAL SKETCH

BY COLONEL A. M. NIKOLAIEFF

FORMER RUSSIAN MILITARY ATTACHÉ TO THE UNITED STATES

THE question of the Straits—the Dardanelles and the Bosphorus—discussed at the Lausanne Conference, has a long history.

At the beginning it was a question concerning only two countries—Turkey, the owner of the Straits, and Russia, the country for which the Straits are the door leading to the Mediterranean Sea.

In Russian history the question came up in the end of the seventeenth century, although as far back as the tenth century the Russian rulers at Kiev had engaged in campaigns against Czargrad (Constantinople).

In 1699 Peter the Great, having conquered Azov (a fortress near the mouth of the Don at the Sea of Azov), raised the problem of free navigation for the Russians on the Black Sea and in the Straits. To this the Sultan replied that navigation on the Black Sea is Turkey's

"inviolable sacred right," or, putting it in modern terms, Turkey's monopoly.

The great naval Powers of that time did not pay any attention to that controversy. The struggle of England against Holland and France for the supremacy on the seas was at full swing and kept the Powers busy with their own affairs.

In 1739 Russia was obliged, as the result of her and Austria's war against Turkey, to give her consent to the exclusive right of Turkish ships to trade on the Black Sea. But thirty-five years later (1774) Catherine II conquered the Crimea, and Russia acquired the right of free navigation for her merchant ships, not only on the Black Sea, but also in the Straits (the Kutchuk-Kainardji Treaty). Later, during Bonaparte's expedition to Egypt, access to the Mediterranean was given by Turkey to

Russian warships. England did not interfere, because Russia was against France.

The subsequent *rapprochement* between Alexander I and Napoleon alarmed England; she started negotiations and concluded a treaty with Turkey, the object of which was to deprive Russia of her exceptional right. On her side, England bound herself to consider the Straits closed also to her warships.

Thus, despite the fact that England at that time, after the Trafalgar victory, was at the very top of her naval might, she sacrificed the possibility for her fleet to appear in the Black Sea, provided the Russian fleet was not allowed to pass through the Straits and appear in the Mediterranean.

When, a quarter of a century later, Nicholas I, having given the Sultan military help against Egypt, obtained again

for the Russian warships the right of passing through the Straits, England, in the person of Palmerston, raised a protest, and was backed in her protest by France. Russia had to yield. Since that time the question of the Straits, which heretofore had been a Russian-Turkish question, became an international one.

At the London Conference of 1840 and 1841 the decision was taken to keep the Straits closed for the warships of all nations. However, this international decision was not carried out. In the Crimean War against Russia (1855-6) the British and French fleet sailed into the Black Sea. The Peace Treaty of Paris, having ended the Crimean War, "neutralized" the Black Sea. By this "neutralization" Russia was deprived of the right to have and build ships on the Black Sea; her fleet, arsenals, and docks were destroyed.

In 1870 Prince Gortchakoff, taking advantage of the situation (war between France and Germany), addressed a note to the Powers, announcing that Russia abrogated the treaty of Paris. Thereupon England threatened Russia with war. The United States promised Russia to take her side. Finally the conflict was settled at the London Conference; the neutralization of the Black Sea and the prohibition for Russia to build warships on the Black Sea coast were canceled. Again the principle of keeping the Straits closed for all warships was proclaimed.

A few years later the Russian-Turkish War broke out, after which the San Stefano Treaty was signed (1878). Certain privileges were gained by Russia in that treaty, enabling her to approach the Straits from the land. England became alarmed, and again her warships appeared in the Dardanelles. Subsequently the question of the Straits was submitted to the Berlin Congress, and the principle of keeping the Straits open for commercial navigation only was confirmed at the Congress once more.

In the nineties of the last century the policy of England toward Russia took a turn which came as the result of the growing rivalry of Germany (Germany penetrating into the Near East and constructing the Bagdad Railway), and the English-Russian antagonism changed into English-German antagonism. In the World War England, fighting against Turkey, Germany's ally, was willing to let Russia have Constantinople, and even promised it to the Czar's Government.

From all the historical facts mentioned above it is clear that the free passage of warships was of paramount interest in the whole question of the Straits. It was so, because on the freedom of the Straits for naval operations depended the economic interests of the Powers.

For Russia it was of vital importance to protect her principal artery of trade by keeping the warships of the dominant naval Power outside of the Straits and the Black Sea.

For England, anxious for the safety of her naval communications with India, it was of great importance to keep the Russian warships out of the Mediterranean by bottling them up in the Black sea.

After the World War the Treaty of Sèvres changed the status of the Straits very materially. It was decided that the question of navigation in the Dardanelles, the Marmora Sea, and the Bosphorus should be placed under the control of a special "Commission of the Straits," made up of representatives of England, France, Italy, the United States, Russia, Greece, Rumania, Turkey, and Bulgaria, the first five countries to have two representatives each, and the latter four one representative each. However, the United States, having not signed the European treaties of peace, did not send her representatives, whereas Russia, Bulgaria, and Turkey were not, for political reasons, admitted to it. The Treaty of Sèvres established also a "Zone of the Straits," formed by the European and Asiatic shores of the Dardanelles, Marmora Sea, and the Bosphorus, including Constantinople. The "Zone," which was to serve as a guaranty that the Treaty of Sèvres will be carried out by the Turks, was placed under military and naval control of England, France, and Italy.

Thus Turkey was deprived of her sovereignty over the Straits and Russia was put aside from taking part in the new arrangement. Such a situation led to the signing of the Russian-Turkish treaty of 1921, in which with regard to the Straits it was agreed between the two parties that their status should be drafted by a conference of delegates of the riverain states only—that is, states bordering on the Black Sea—"with a view to guaranteeing the freedom of the Straits and their free passage for commercial purposes to all countries."

FORTHCOMING OUTLOOK ARTICLES

Canada's bold experiment in Government ownership of railways is described in special correspondence from D. M. Le Bounlais.

Mrs. Schuyler Van Rensselaer gives us a delightful essay on Bohemia. It is called "A Lost Land."

Lewis Edwin Theiss asks, "Why Not Clean up the Milk in the Country?" His article will appeal both to producers and consumers.

Captain L. M. Overstreet, now on the Naval Mission to Brazil, left with us just before his departure a clear and readable discussion of "Naval Strategy as Affected by Aircraft and Battleships." His article will be profusely illustrated.

A new change in the political situation was brought by the Turkish victory over the Greeks. As the result of that victory the whole of Anatolia and Eastern Thrace, which after the World War had been turned over to Greece, got under Turkish control. However, the Zone of Allied occupation remained, although it was somewhat altered by the Mudania armistice. At present it consists of parts of the Constantinople, Ismid, and Gallipoli peninsulas and Chanak and is held only by British troops, France and Italy having withdrawn their troops from Asia Minor before the Turkish victory. In such a way the territory of the Straits and the navigation in the Dardanelles and the Bosphorus are under the *de facto* control of England.

That such was the position at the time when the Lausanne Conference was called is a fact which should not be disregarded by the future historian.

At the present time it is of interest to note that two points of view have come into conflict at the Conference, both relating to the freedom of the Straits, but having different definitions of freedom. One view is English, the other is Russian.

The English want the Straits controlled by an international body with full liberty of merchant ships and warships for all nations. It is the first time in the history of the Straits that England has adopted such a position, her aim always having been to keep the Black Sea as a *mare clausum* (Palmerston's protest in 1833, the Crimean War, Disraeli interference in 1878) and never make it an international highway. Seeing England's policy now completely reversed, one cannot help thinking that the change may be due to the fact that at present there are no Russian warships in the Black Sea which could use the Straits and appear in the Mediterranean.

The Russians, representing the Soviet Government, wish the status of the Straits to be the same as before the World War—that is, Straits free for commercial navigation and forbidden to warships of all nations at all times, with Turkish fortifications to enforce that ruling.

This view, only as far as the barring of warships of the outside Powers from the Black Sea and the Straits is concerned, is also the view expressed by the Russian Nationalists. The latter's argument is that, so long as the Black Sea is open to warships, it will be necessary for Russia to have naval forces on that sea and build fortifications on its coast. Such a situation would not contribute to the limitation of armaments, and consequently to the political, economic, and financial restoration of Russia and Europe. The Nationalists are, furthermore, of the opinion that no decision of a permanent nature should be taken with regard to the status of the Straits so long as Russia is under the control of a Government not recognized by the Powers.

THREE PAINTINGS BY RUSSELL CHENEY

A COMBINATION of strength, sanity, and the modern approach are sufficiently rare in painting nowadays to make the lover of art who has been bewildered by futurism and its successors hail any instance of it with delight. The work of Russell Cheney, which has recently been exhibited at the Babcock Galleries in New York and in the Athenæum in Hartford, is as modern as radio, but it is firmly based on tradition. It is unsensational and comprehensible; it has nothing in common with the unreconstructed jigsaw puzzles of the so-called modernists; it presents scenes and people who correspond to nature and man as the average layman knows them; and it is as relaxing to the nerves and as stimulating to the mind and spirit as only that art can be which is an authentic expression of immediate experience.

Mr. Cheney's subjects are taken in the main from the hill country of Connecticut and of California, though there are numerous still-lives which in their delicate and felicitous harmonizing of rich colors have unusual vitality. The range of subject and treatment is extraordinary, from simple depiction of cedars on snowy slopes to stern (and somewhat

startling) reactions to tropic gardens and overwhelming summits under a California sun.

"You note in the living luminosity of midsummer bloom and blossom," says Mr. Christian Brinton in a preface to the catalogue of the exhibition, "in the spare appeal of New England farm land, or the soaring crest of coastal mountain range, a vivid sense of the actual. Something of the painter's own habitual freshness of view and buoyancy of mood are found in each decoratively composed still-life, each landscape expression. Sheer joy of eye can indeed scarcely go further."

There is beauty in every canvas, charm in many, and power in more than a few. The artist is progressing, and, though here and there he is obviously experimenting, there is no suggestion of uncertainty behind the skillful hand. His pictures give the impression of a man who, whatever his mood or his method may happen in any particular case to be, knows what he is trying to do and how and why he is trying to do it. There is nothing accidental or improvised about his work. One is aware, on the contrary, of an exultation in the achievement of a proudly conscious artistry. And yet the art remains sub-

servient to the subject. What Mr. Cheney sets out to reveal to us are bits of American landscape seen through the eyes of one who loves them for what they are and knows that they need no editing or prettifying. Now and then he becomes abstract and seems to paint, not the mountain he appears to be regarding, but a blue symbol of a massive idea; but as a rule he is a quiet, clear-eyed, and sure-footed realist, whose realism, however, is a revelation, not of harsh facts, but of hidden, implied beauties. "Haling's" is not a pretty farm and life there is obviously not a thing of beauty nor of joy; but partially because the picture is true, distorted neither by artistic nor sociological sentimentalism, and partly because Mr. Cheney has seen in the bleak corner of Connecticut he is depicting colors and relations of colors missed by the less penetrating eye, he has achieved a beautiful and significant expression of contemporary American life.

It is worth noting that one of Mr. Cheney's largest canvases, entitled "Skunkimaug—Morning," has been purchased for the permanent exhibition of the Morgan Memorial Museum in Hartford.

THE SUPPER CLUB

BY EDWIN M. BROOKS

OF all the pinnacles in the world, that which least pricks and imperils is the presidency of a community club whose only aim is social pleasure. It is the Mount Everest of sinecures. A *sine qua non* of such a club is a good supper. Without that sure anchorage, success and edification are an empty dream. If the organization has a constitution and by-laws, no one must be permitted to take them seriously. They must be simply a playhouse in which to work off the surplus energies of that small fraction of every organization which wishes periodically to amend the constitution, to indulge the instinct to tinker, to take apart and put together again. It must be understood that in such a club all the respectable element of the community meet on the common ground of liking to be well provisioned and immediately thereafter to be pleasantly entertained. In the average community most of us cannot afford to court the graces of elegant living. We cannot give or participate in a state dinner at the White House and then adjourn to the Blue Room to be enraptured by grand opera song-birds or fiddlers of note. But the neighborhood club idea solves the problem. There is force in numbers. And, even if such a club does not possess an imperial treasury, it musters a mass of enthusiasm, appreciation, and desire that is likely successfully to board and capture all the argosies of genius and talent that lie hove to in the offing.

It has been the lot of Dulcinea and me to find mooring in a suburban village whose inhabitants are moderately prosperous, very intelligent and discriminating, superlative in the quality of good neighborliness and in the capacity and desire for good entertainment. We have had for some years a community club. While its members are not so exclusively hedonists that they scorn philanthropy and abjure altruism, they hold this club sacred to the lighter propensities and pursuits. No serious propaganda is permitted on its platform. No speaker with a lugubrious message is encouraged to hope for a return engagement. We do not seek to reform the world. While we are not Epicureans in philosophy or practice, we are willing on one evening in the month to indulge an Epicurean mood of the better sort, and pursue happiness frankly and exclusively.

While not fanatically extolling the pleasures of the table, we believe that the corner-stone of our successful history is the bountiful table with which we have comforted the inner man. We believe that good rationing is a necessary preliminary to good entertainment, at the most gifted speaker will have

hard shift with his audience if it is in a rebellious ferment of discontent and criticism by reason of a mean feast. We believe in practical psychology. We know that an audience which assembles merely for a lecture or a musical entertainment, without the ingratiating prelude of a good supper, will be made up too largely of those heroic souls for whom life is a somber, doleful, dutiful thing, devoid of the spirit of fun and frolic. The men or women who will leave comfortable homes at eight o'clock in the evening and go forth to a lecture or entertainment are not good material for the lecturer or artist—they are too select, "too bright and good," too far from representing the good, wholesome, mildly pugnacious, wanting-to-be-amused average rank and file. We believe that if you wish to assemble an audience that will come to friendly grips with a speaker or heartily enjoy the marvels of musical genius and cheer it on to still nobler performance, your club must provide suppers, and must have an established reputation of providing good suppers.

This policy will provide you with just the sort of audiences that you will wish to be a part of—representative, alert, responsive, red-blooded, beaming with prosperity and ambition, gifted with a hearty relish for the good things of the table and an equal eagerness for the good things of the mind. A dining-room with a multitude of inhabitants and in active operation is one of the most edifying spectacles which civilization offers. Especially is this true on your club evening, when you meet with two hundred of your contemporaries—elderly ladies of gentle history and conversation, slyly garbed in dark dresses, with fichus of Mechlin or Alençon lace; robust wives of your local Cœsuses, with proper self-confidence and with just a hint of costliness of attire; maidens of fresh countenance and eager spirit; bachelor women of spirited conversation and piquant wit; a few of the clergy; a banker or two; shrewd executives, faithful accountants, and the many who, in interesting variety of occupation and taste, make up the rank and file who give your village its reputation for sobriety and thrift. What a grand scene of elegance and animation when the members of the club surrender themselves to the mollifying pleasure of eating together, with bright lights, acres of snowy linen, the willing and swift service of volunteer waiters—radiant and vivacious maidens bringing you the salad, rubicund males bearing aloft steaming pitchers of coffee!

The morale resulting from such a supper is invaluable and irresistible. The atmosphere is surcharged with in-

terest, geniality, and kindness. All things become possible. The musician excels all her past performance. The orator reaches new levels of eloquence and friendly understanding with his audience. If he utters a sentiment that is lofty and brilliant, the instant appreciation of the audience magnifies its effect a hundredfold and stimulates him to further scintillation and increased felicity, electrifies his reserves of vanity, and incites him to flashes of wit and a continuity of humorous observation which would be utterly impossible to him in cold blood. So contagious and potent is the good feeling generated by such a gathering, so flattering to one's *amour propre*, that, in the fifteen minutes of open discussion which we always have after the address, even the impromptu speakers borrow the gift of tongues, the pedant becomes a wit, the lawyer is sensible and brief, the doctor forgets to talk in terms of health and abandons his Latin derivatives, the business man becomes fluent and elegant and ceases to be a prosing materialist.

Because the temper of the assembly is determined by the supper, and an unfed or ill-fed company will manifest a chill that few speakers can wholly dissipate, the personnel of the Supper Committee is of major consequence. Let them be persons of great dependableness, energy, resourcefulness, constructive imagination. Let them be in general thrifty, not extravagant. Let them realize that a commonplace supper, if good and wholesome, can be made memorable by a single exceptionally satisfying course. I recall with pleasure a buffet luncheon served at a certain anniversary gathering in June, in the course of which each guest was blessed to behold and partake of an iced half-cantaloup in which nestled a sphere of café mousse. Such a triumph of chef invention, such a pleonasm (as Coleridge would say) of palatal temptation and incitement, crowns the feast and perpetuates the gathering in blissful memory.

To tarry a moment longer with the mundane, one of our supper committees found that it could insure itself a plethora of compliments by the simple device of including in an otherwise good menu fruit fritters immersed in a liberal sauce of delicate, translucent hue. A little worldly-mindedness will suggest that the first gathering of the club year should be a harvest supper, honestly good and abundant—an augury of a liberal policy for the season; and that the last course of the final supper should outrival everything in the memory of living epicures—so that the administration may go out in a blaze of glory and hand over to its successor a glorious tradition and a satisfied constitu-

ency. Also, whatever item of any menu may be the *pièce de résistance*, let there be no shortage in it, no narrowness of calculation. There let the waiters serve with generous hand, without visible stint, let the club's hospitality be expansive, baronial, without let or limit, as though some Mæcenæ were "paying the freight."

But though the supper is the indispensable foundation of the club's success, it is only the beginning. It must be for the most part a subordinate, not too insistently noticed, element in the club's inventory of achievement. As befits a club in a community priding itself on its intellectual standards and attainments, the club must be conspicuous for the quality of the artistic and literary diversions which it offers, the truly æsthetic and cultural emotions which it excites. The entertainments given by the club—musical and dramatic recitals, addresses, travelogues, authors' readings—must be of an order to give high satisfaction and stimulus to the membership and distinction and luster to the life and tradition of the village. But how can this be accomplished without a war chest by a club whose membership dues are barely sufficient to buy the supplies for provisioning its tables? But that, as Kipling says, is another story.

THE presidents of the club—our prime ministers of pleasure—have, with one exception, been men of fortunate endowment. They have included college professors, bankers, a clergyman, a man who graduated from a New Hampshire farm and a New Hampshire college, and a man of many-faceted genius who combines in one personality a play-actor, a preacher, a humorist, and a past-master of the art of salesmanship. Under their leadership, although we have never paid any coin of the realm to our lecturers or our musical or dramatic entertainers, many delightful evenings have been brought to pass. Our by-laws provide that no person can be president for more than one year. Perhaps this is on the theory that any man of good attainment is likely to have enough relatives and acquaintances who have gained distinction in fields of useful and interesting endeavor to occupy the five or six winter evenings that make up a cycle of our club life, but that one man's resources of this kind are likely to be exhausted at the end of one year, so that another should take his place. Our town has répute and glory from the presence of a college for young ladies. Members of its faculty occasionally appear on our platform. We have also been indebted to our college neighbors for many pleasant musical programmes. Thus we have heard violinists, pianists, a harpist, readers, and singers to whom youth has given freshness of voice and animation of style as well as comeliness of person. Perhaps we have taken advantage of youth and innocence in asking these budding artists to appear before our assembly without other compensation

than a supper, a virtuous consciousness, and liberal applause, before they have yet commercialized their art; but they have obviously found pleasure in the experience and enjoyed the plaudits of the multitude. It was my fortune to be chosen president of the club for one year. I esteem an election to that position to be the highest of honors. To be chosen by one's contemporaries master of their pleasures is a superlative compliment. Some one has said, "Tell me how you spend your leisure hours and I will tell you what you are." Dr. Johnson expressed it, "No man is a hypocrite in his pleasures." So to be elected to preside over such a club's adventures in pleasure is to receive a real meed of praise. He who has not been president of such a club has a serious vacancy in his experience; there is in his mental acres an area of potential appreciation the cultivation of which would have yielded him and his admiring household much pleasure at the time and much agreeable reminiscence.

The first anxious duty of the chief executive is to secure a speaker for the next meeting. I am sincerely and heartily opposed to fishing for sport, but I take leaves from the book of the fisherman. In general experience, I have the fisherman's love of testing strange and mysterious pools, visiting unfrequented spots, varying the bait, finding cloudy days good, trusting a bit to luck. This spirit has guided me in my search for speakers, and now that my fishing season is over, my rod and net packed away, and the catch measured, weighed, and recorded, I shall not offend modesty more than does your genuine slouch-hat fisherman in telling "what luck" I have had. I shall speak in the first person, like any fisherman, for you never heard a fisherman's tale told otherwise. The *quorum pars magna fui* element is specially emphasized in stories of conquest of speckled beauties, finny monsters.

Some principles apply equally to catching and landing trout and catching and landing speakers. I venture this claim, however: that the art of hooking and netting a speaker is more complex than the art of the real, unfigurative fisherman. Patience is essential to both arts—not to abandon the sport on initial discouragement. Don't let your shadow be thrown across the pool. Don't let your speaker to be forewarned and have time to think of reasons why he cannot accept. Fish up the stream. Don't let your intended catch suspect the number of fine fat fish that have already declined your bait. Have your hook well concealed by worm or moth. Appeal to your speaker's vanity. Play upon his clan sense. If he is a Brahmin, remind him that his audience will include a few of his own intellectual kin. Intimate, not too clumsily, that this is an opportunity for a man of eminence to do a real, though not specially conspicuous, public service. Do your own fishing; don't send the hired man. Don't trust

the securing of a coveted speaker to messenger or deputy. Play him yourself. As you will be the one to guide him through the preliminaries of the club meeting and set his stage and give him and his audience their respective cues in your introductory remarks, deal with him yourself *in limine*. Let him feel the warmth of your palm, let him learn from you at first hand that the prosperity and happiness of this club are your meat and drink, your first and only concern in life. Let him feel that everything possible will be done for his comfort, that the details of programme will be accommodated to his slightest desire. Create in him the belief that he is approaching a resplendent event, of which he will be the central figure.

I once without introduction visited, with the predatory purpose of such a fisherman, the mansion of a man of eminence in his metropolis. The door was opened by a Scotswoman of strong character and the defensive attribute of a liege. She did not fan my hope of an audience with her master. "He doesn't usually see any one unless by appointment." I opined that he would be willing to chat with me for a few minutes. "Won't you tell him that the President of the Supper Club of Briardale would like to see him briefly?" The official designation impressed her, and proved adequate to entice the great man from his desk. He at once descended to his reception-room and greeted me as politely and pleasantly as he would a captain of industry. Circumstances beyond his control stifled his amiable impulse to address the Supper Club, but my cast over his pool was rewarded with ten minutes of very agreeable conversation with one of the great and fascinating characters of the city. He gave me a bit of worldly wisdom from the lecture world—said if I wished to interest a certain lecturer in my request it would be well to offer him something, the amount was not important, perhaps ten dollars. The principle, if not the quantum, of compensation was important. So in fly-casting, if the color be rightly chosen, great size of the simulacrum is not essential.

At another time, still acting on Disraeli's principle of "*L'audace, toujours l'audace*," I bearded another Douglas, inspired not so much by faith or hope as by courage, accompanied with a somewhat adventurous desire to meet this man of far-flung fame under honorable auspices. An inexperienced fisherman sometimes, by hook or crook, makes a fine catch. So, without any introduction to this scholarly and distinguished gentleman, with no claim upon him either in person or by proxy, my simplicity (my success proves it was not audacity) was rewarded by his prompt assent to my request. Not choosing to make a parade of candor, I concealed my surprise and elation, giving full expression to them later, however, in my punctilious solicitude to make his appearance before the club and the travel inciden-

tal thereto most comfortable and agreeable to him. Our executive committee commandeered the most elegantly cushioned limousine owned by any member of the club and our most notoriously slow and careful driver to transport our distinguished guest. The responsibility of safely conveying our guest—whose continued well-being was of considerable importance to society—weighed upon us, and, while we did not take out accident insurance for the benefit of society, we felt relieved of a real responsibility when we had safely returned him to his home. I suspect that what drew him to instant acceptance of our invitation was the rich connotation in the name Briardale. He was himself a man of university associations, and the name and repute of Briardale, its institution of learning, its highly respectable inhabitants, moved him to think that a Supper Club in such a place must be a sort of French Academy, an assembly where prosperity, chivalry, elegance, and learn-

ing were in fortunate partnership. I hope that his first impression remains unchanged. The gathering received his wise and humorous address with an enthusiasm and a gratitude which still persist, and I hope that he pleasantly remembers the club and entertains for it a reciprocal friendliness.

The president of such a club knows no more ecstatic hour than that during which the speaker whom he has persuaded to address the club and who is now addressing it for the first time inspires it with entire complacency and admiration. In such a case there is the preliminary period when speaker and audience are taking each other's measure—the speaker deliberate, seemingly cold, passive, the audience respectful, interested, expectant, but non-committal. Then the speaker gives the audience a few sly digs in the ribs to test its mettle, ventures a mild pleasantry to test its responsiveness. Some of the audience begin to suspect that this man is

going to be a merry entertainer if he finds his audience is of the right sort, and then, as they detect a gleam of wit, there is an experimental ripple of hesitant amusement. This breaks the ice of suspended judgment. The speaker sees that he is in the presence of kindred spirits, eager and sympathetic. Soon he and his audience are in the fullness of mutual understanding, launched on a career of enjoyment of each other and of the subject-matter of the address—the gifted speaker knowing that his audience are hanging on his words and losing nothing of what he says or of the way he says it; the audience knowing they are listening to a man worth going miles to hear, a man of red blood, sane faculties, and a prodigious capacity for finding zestful interest and delight in human beings and the human drama, and for sharing that interest and delight with his hearers, speaker and audience now being sworn friends and allies, for the hour—and long afterwards.

More of the experiences of this prime minister of pleasure will be recounted in a later issue

PHYSICAL DEVELOPMENT OF PUBLIC SCHOOL CHILDREN

BY CHARLES K. TAYLOR

AFTER a description of the "height-weight" method of physical standardization was published in the March 15 issue of *The Outlook* there came a deluge of nearly seven hundred letters. Most of these were from superintendents of schools, medical inspectors, physical directors, and school nurses, many of whom wanted to know how such a system could be applied in any general way in public schools. It seems that there are two problems to be solved. One concerns the large numbers involved, and the other the prejudice of many parents, especially in cities of large foreign populations, against any kind of physical examination.

This fall the writer has had the pleasure of demonstrating the practical side of the method for the heads of a number of public school systems, their medical inspectors and physical directors. And along with a very frank approval there arose these same two questions: How can we manage with such numbers, and what can be done with the many who have prejudice against physical examinations and measurements?

Fortunately, these are problems that the private academies and privately managed gymnasia do not have to bother about. So it is that the height-weight system is spreading in the private schools and in Y. M. C. A.'s like the Central Y. M. C. A. of Philadelphia.

At first glance, however, it does seem as though the public schools have actually those two problems to solve if they are really going to do anything effective by way of physical training.

A THIRTEEN-YEAR-OLD WINNER OF AN INTER-GRAMMAR SCHOOL BEST PHYSIQUE COMPETITION

This was taken several years ago. The lad became a famous intercollegiate swimmer, and was so perfect physically that he was used as a model by Dr. R. Tait McKenzie for his statue of the discus-thrower, which won such favorable comment last year in an exhibition in London.

And, in fact, a great number of medical inspectors and physical directors have come to feel that there should be much more emphasis on health and on physical development, two important factors that have been almost obliterated by a great excess of attention to mere weight. After all, no mere weight comparison can possibly provide a safe judgment as to the condition of a child's health. Too many of us are normally, healthily, and hereditarily slender to make mere slenderness a reason for saying a child is "under-weight" and most likely, therefore, has malnutrition! A child actually is under-weight when that child's weight is below what it should be for that particular child—a matter to be found by medical examination only, and never by mere weighing.

Let us examine these two serious problems in detail, and see if there may not be some simple solution. The first concerns the large number of children involved, and the great burden that would be thrown on the medical inspectors and physical directors if every child were to be given even a brief examination and a brief measurement. Several heads of departments of medical inspection claim that their staffs are so undermanned that even a brief examination of each individual would be almost impossible—especially when some physical measurements are also desired. And all this is true. Many such departments are sadly undermanned. But, on the other hand, some cities and towns are equipped with thoroughly efficient and complete staffs, which, if so desired,

could in a reasonable amount of time examine and measure every child in their schools. And when staffs are undermanned it is not difficult to bring popular support to a reasonable demand for an increase. The values of medical inspection can be given such effective publicity that it would be a short-sighted community indeed that would refuse to make provision so that each child can come, even for a brief period, before a competent medical inspector.

After all, signs of ill health, malnutrition, and so on are usually quite obvious to trained observers, and even a brief observation is a far safer foundation for a judgment than can be merely the taking of a child's weight. Frankly, this is one vital matter for which we are fighting—a medical examination for every school child, and proper steps to correct improper conditions.

So this problem, after all, is not so difficult to solve. Many cities and towns already have staffs large enough to do such a work, and if some are so provided there is no real reason why such provision cannot be gained elsewhere—with the aid of a little intelligent campaigning and publicity. And that brings us to the really hard problem.

When children are healthy, we should see to it that they are given a proper amount of muscular development. In the March 15 issue I described a simple method for obtaining a fair judgment of a boy's or a girl's development compared with an attainable and satisfactory standard for *the same type of build*, and for distinguishing actual improvement from mere growth gains. All this implies taking physical measurements—a performance that is a part of the regular routine of most private academies and colleges.

Taking measurements of public school children, however, is not so simple a matter as one would think. First of all, to many it is a new idea, and therefore to be received with suspicion; and with the more suspicion because it concerns a physical examination—something to which all parents are not educated. Now it is true that in all public schools there is a large proportion of intelligent patronage that would fully approve such measures, or any other measures that would make for the physical benefit of their children. In some localities this would include an overwhelming proportion of the parents involved. The opposition would come largely from the foreign quarters of large cities or from sections where parents are not acquainted with the possibilities or methods of physical training. And yet this objection, and even violent prejudice, can be done away with and effective support gained if one or two simple expedients are used. There is nothing mysterious about them. They are merely *privilege* and *competition*.

The first step is to interest the boys in physical measurements. This is only too easy. Boys are primitive creatures much interested in their muscles. It

SCORING THE BOY EMPLOYEES IN A LARGE DEPARTMENT STORE BY THE "HEIGHT-WEIGHT" SYSTEM

has been well said that if you measure a boy's biceps he is your friend for life! But how are you to open the subject so that you will not only make an enthusiast of the boy but send him home with an enthusiasm fit to combat parental opposition and prejudice? Well, the interest is aroused easily by showing a class of boys a well-developed boy of the same age, and taking his measurements on the spot. If this cannot be done, large photographs of obviously well developed boys arouse a very certain interest. Then announce two competitions, for suitably attractive awards—one for the boy improving the most (and this gives the best chance to the poor developments) and one for the boy attaining the highest score (which gives the strong boys a chance). The mere fact that there is to be a competition in a matter of natural interest to boys achieves a large part of the victory at once. The boys will be keen to be measured. They will swing many parents too—with the aid of that prospective prize; but you can get still more boys and parents if it is put on a basis of "privilege." That is, it might be announced that boys will not be admitted to the competition just because they want to, and that only those boys will be measured whose parents request it. By making entrance a little difficult, a little "exclusive," boys and parents, being human beings, will be apt to put in requests with great promptness, and this they will do more readily when they are given a mimeographed request blank to be signed.

Now suppose some do not sign—and some will not, though the writer's experience is that this group will not be large. Very well, leave them out. Plan not on getting such a system going in one school term. Be glad if you can accomplish it in a year.

The measuring can now begin. When you have the boys' scores, they can be posted on some conspicuous bulletin-board, the high scores being given special prominence, and with the low ones notes as to which underdeveloped muscles brought the score down.

Two things will happen. Those who were not measured will wish the more strongly that they were. And those with poor scores, with great indignation, will demand exercises to aid in bringing their scores up. And if a boy exercises faithfully on an assigned exercise—say for breathing, for arms, for shoulders, or the like—he may be measured again in five or six weeks, and if he has gained the correction can be noted on the bulletin. And all this is very worth while, even if at first the boys will no more than strip to the waist. It is a start, and even the backward and dubious ones will be demanding head-to-foot measurements before many months have gone by.

And then the final spike is driven at the end of the school year, when the prizes are awarded for the highest scores and for the greatest percentage of improvement. You have no idea of the tremendous excitement and interest boys will take in such matters—and very properly, too. For it is an important matter, after all, whether one is well developed or not. And the interest in all these things is redoubled when you institute competitions between schools. The writer remembers a wildly enthusiastic one of this character between four grammar schools, the best five from each school being selected, and all twenty appearing before the judge in a Y. M. C. A. gymnasium. The judge, an expert of international reputation, first picked the best boy of each school, explaining why when each boy was turned aside, until he had four boys before him, each the best of his school—four fine specimens too. And out of this fine four he picked the best. In this judging, the physical score—the relation of the boy's measurements to satisfactory ones for his height and weight—counted two-thirds, and the remaining one-third was divided between symmetry and freedom from defect. The thirteen-year-old who won was as perfect as a young Greek god, and a first-class all-around boy, too.

This competition brought the interest in such proceedings in the four schools to such a pitch that the following year every boy was measured, and again came

a similar competition, won by a beautifully developed boy of fourteen. After that there was no question of objection or prejudice. They all demanded measurements. And it might be said that the newspaper publicity given these proceedings, with the published photograph of the winner, did not do any harm at all.

It is not difficult to see how such a procedure would create an effective interest as far as boys are concerned. In

fact, the results of such work have been proved most effective, not only for physical betterment, but in character development and in the class-room work itself.

"But how about the girls?" you may well ask. Well, does one really have to answer? What will a school full of modern girls do if they find the boys having some tremendous interest out of which they have been distinctly left? The first thing you know they will demand simi-

lar competitions, and, though the performance will be of slower spread, it will spread nevertheless, and be as effective with girls, almost, as with boys.

After all, you see it isn't so hard a problem, and surely if we are going to have medical inspections at all and physical training that really is physical training, it may just as well be so arranged that every individual child receives the full benefit.

LADY BATHURST, THE WORLD'S GREATEST WOMAN NEWSPAPER OWNER

BY HELEN HOFFMAN

THE late Lord Northcliffe in his book on "English Newspapers and their Millionaire Owners," which he published shortly before his death, referred to Lady Bathurst, director of the "Morning Post," of London, as "the most powerful woman in England, without exception other than royalty."

This high tribute to the fearless owner of the "Morning Post" is shared by a big newspaper-reading public of England. I have often heard English people commenting on this conservative member of the English press. "I would rather go without my breakfast than be deprived of the 'Morning Post.'"

Every one admires courage, and this quality, so pronounced in the brilliant director of the "Morning Post," has made her a dominant figure, not only in journalistic circles, but in the political life of England as well.

The "Morning Post" has often taken issue with Lloyd George and other political leaders of the country, and when any Parliamentary action has been taken which it believed was not for the best interests of the country it has editorially said so in no soft terms.

This titled and brilliant newspaper owner, like Lady Rhondda, represents in her success undoubted proof of the ability of daughters of genius to safeguard and direct the great interests handed down to them by illustrious parents.

Lady Rhondda, the world's greatest business woman, a director in more than thirty corporations and companies, inherited these vast interests from her father, the late D. A. Thomas, the Welsh coal operator.

Lady Bathurst took over the control of the "Morning Post" at the death of her father, the late Lord Glenesk.

Lord Northcliffe, in further commenting upon her genius, said: "You may not always agree with her methods and policy, you may not always agree with the enormous headlines, but you will admit that, right or wrong, the 'Morning Post' is bright, consistent, and always English." "Knowing," he said, "the internal organization of the 'Morning Post'—for every newspaper knows the

COUNTESS BATHURST

internal organization of every other newspaper, just as every army knows the organization of every other army—I know that this paper is produced by the genius of a woman, assisted by just two really capable men. If she were living in America, her name would ring from one end of the Continent to another, and be hurled at Great Britain as a sign of American national superiority."

Always having admired Lord Northcliffe for the honesty of his convictions and the almost superhuman courage

with which he backed them, I felt a great desire to meet this titled and brilliant owner of the "Morning Post."

I wrote to Lady Bathurst, conveying my desire and outlining the questions I was tempted to ask her regarding her ideas of what a great daily newspaper should represent.

A few days later I received her reply by letter, as she had been called away from London at the time.

In brief, she wrote: "My ideas about journalism are so simple and crude that they would be of no interest in this complicated world. They are merely to stand by the right and expose what is wrong. I think papers have much power, but there is much I should like to see corrected. I should like all sensational divorce and other criminal cases cut out and the mere facts that so and so are divorced printed, and the result mentioned as a matter for regret and shame by the guilty party, and no unwholesome details." (A committee of distinguished men are now conferring together in London for the purpose of obtaining this end—that sensational divorce cases shall not be exploited in the newspapers.)

"I should like," Lady Bathurst further wrote, "to see more literature, more wit, more information of a really interesting character, such as scientific matters, garden, farm, painting, music, etc.—less sensationalism. In fact, the ideal would be that a paper should contribute to people's happiness and sanity and not to excite all their worst feelings.

"As for politics, the paper must of necessity reflect the bias of its owner's and editor's minds, but if it is perfectly truthful and sincere it matters not whether it is Conservative, Liberal, or Labor, Republican or Democrat. We all like an opponent we can respect.

"It is the man or the paper that suppresses the truth to serve his own ends and who lies glibly that we cannot tolerate. These are my simple views, and, simple as they are, I believe in them; and, what is more, I know that if you go straight ahead and fear not, on what you believe to be the straight road, it's wonderful what you can achieve."

THE ENJOYMENT OF MUSIC

ABOUT GOOD VIOLIN PLAYING¹

BY W. J. HENDERSON

A WELL-PREPARED imagination is one of the true luxuries of the music lover's existence. The preparation consists largely in the easy adoption of certain indeterminate formulae, phrased in the lubricated language of the unscientific observer. "The piano is incapable of such expression as the violin attains. The violin is the most expressive of all instruments." Now to one seeking to enjoy violin playing for its own sake it is of no importance to know whether it is more expressive than some other instrument to which one does not happen to be listening at that moment. And long observation of concert-goers has convinced me that a large proportion of them discover the most soul-melting expression in the melancholy wailing caused by the use of the sliding finger on the left hand, a method of heart-breaking singularly neglected by Kreisler and Heifetz.

The sliding of the fingers in passing from one note to another produces a mournful sound much like the crying of a baby, but it destroys the outline of a melody and usually leads to playing out of tune. Therefore let us begin at the beginning. A violin, as almost every one knows, has four strings, tuned to G, D, A, and E, the first tone being below the treble clef and the last in the uppermost space of it. Those four tones are the only ones which can be produced from a violin by simply drawing the bow across the strings. When a player desires to call forth some other note, he must press down some one of those strings with a finger of his left hand, thereby shortening the vibrating part of the string, causing the number of vibrations per second to increase, and thus raising the pitch.

When a violinist holds the instrument with his left hand near the head (the outer extremity where the nuts for tuning are located) and presses down the first finger of the left hand on the E string, he gets an F. The second finger gives G, and the third A, and the fourth B. This group of notes belongs to the "first position," as it is called. If he wishes to go higher than the B, he must shift the first finger to the place previously occupied by the second. The first finger now gives G, the second A, the third B, and the fourth C. This fingering is called the second position.

There are other higher positions on each of the four strings. The violin and other bowed instruments such as the violoncello, therefore, differ radically from the piano in that the justness of the intonation of a melody is dependent

Bain

LEOPOLD AUER

"Teacher of Heifetz, Elman, Zimbalist, and other eminent players"

on the accuracy of the player's application of the left-hand fingers to the strings. One cannot play out of tune on a piano if he strikes the right keys, unless the instrument is out of tune; but on the bowed-string instruments it is possible to play out of tune with almost infinite variety.

The first requirement of good violin

(O) Bain

FRITZ KREISLER

"Long observation of concert-goers has convinced me that a large proportion of them discover the most soul-melting expression in the melancholy wailing caused by the use of the sliding finger on the left hand, a method of heart-breaking singularly neglected by Kreisler"

or cello playing is that the instrument shall be in tune. This includes two elements. First, as the violin is usually accompanied by a piano or orchestra, it should play at precisely the same pitch as the accompaniment. Secondly, it should be in tune with itself, which is to say that, even if it were unaccompanied, as in the case of certain works of Bach every interval must be exact. Playing in a pitch foreign to the piano or orchestra is infrequent. When it occurs, it is probably because the violin itself has not had its four strings properly tuned before the playing began. But playing inaccurate, and therefore discordant, intervals is very common and leads to that kind of sound which caused the famous Mr. Weber (of Weber and Fields) to demand, "Who sang that sour note?"

Unfortunately, bad intonation, as it is called, seems to escape the ear of the general public. Violinists and cellists play out of tune, singers sing out of tune, and whole orchestras are out of tune in their different choirs without disturbing the pleasure of audiences. I have heard celebrated opera artists sing a whole act without more than two or three times being on the same pitch as the orchestra and yet receive as much applause as if they had delivered their music without a flaw. Almost every human being brought up in the conditions surrounding Western life¹ is fond of music, but not one in a thousand has a musical ear. So perhaps, after all, it signifies nothing that a few who hear accurately are annoyed by what the majority of mankind does not hear. Erika Morini's occasional false intonation and Mischa Elman's tendency to lachrymose utterance are rewarded with abundant applause.

Since this is a statement of what constitutes good stringed instrument playing, it was the duty of the writer to declare that playing in tune was its fundamental requirement. We may now pass to more subtle matters. The expressive power of the violin and its kind rests in the management of the bow. The use of the bow corresponds to the touch of the pianist. There is telegraphic directness in the communications of the musician's brain to the strings of his instrument. A pianist has to overcome the mechanical intervention of the hammer action, but every shade of the violinist's pressure on the bow is reproduced immediately by the strings. If he stroked them with a gloved hand, he could not be in more direct command of their sensitiveness.

Because of this subtle transference of

¹ An article in this series appeared in last week's Outlook. Other articles in the same series will be printed in later issues.—The Editors.

¹ Long experience with sensitive readers leads us to explain that Mr. Henderson is referring not to the Western States of the Union but to the whole western world, the Occident, including Europe, Boston, and upper Fifth Avenue.—The Editors.

ERIKA MORINI

ERNA RUBINSTEIN

"A large tone is advantageous in playing with an orchestra, but it is not essential to beautiful performance. Erika Morini has a big tone, but Erna Rubinstein's is more admired, for it is essential that the tone be pure, mellow, and sonorous"

the violinist's thought to the strings every player's tone has its own character. This tone is a reflection of the personality of the player. It is quite true that instruments have their own tones. But a good performer can extract from an inferior violin the best tone of which it is capable, while an incompetent one will draw from a Stradivarius only an indifferent quality. Heifetz owes much of his success to the ravishing beauty of his tone. Would you know something of the secret of the infinite variety of shades at the command of the violinist? Watch the wrist of the bow arm. To be sure the entire arm should be absolutely without constriction. It should not be what the athletes call muscle-bound. But the soul of the bowing is in the perfectly flexible wrist. Even the manner of holding the bow with the fingers of the right hand possesses comparative insignificance, since different master performers have different ways.

Tone may be large or small. A large tone is advantageous in playing with an orchestra, but it is not essential to beautiful performance. Erika Morini has a big tone, but Erna Rubinstein's is more admired, for it is essential that the tone be pure, mellow, and sonorous. Purity means freedom from scratchiness or twanging, from audible scraping of the hairs of the bow on the strings. It should flow apparently spontaneously, like clear water from a spring. It should always be mellow, which means that it should not be squeaky, or dull and opaque, or hard, as if the strings were of metal. Steel strings are sometimes used, but they should not sound steel-like. The term "sonority" does not mean loudness, but resonant vibration. There is a peculiarly bell-like quality in

a sonorous violin tone, and one should expect it from every good performer.

A beautiful tone, perfect intonation, and free elastic bowing are the prime requisites of good violin playing. Two or three special effects will doubtless attract the attention of what is called "the average" hearer, and he may wish to know something about them. Harmonics are those high, flutelike tones which seem to lie beyond the natural range of the instrument. It was long ago found that by lightly, instead of firmly, touching a string with a finger of the left hand a performer could cause an overtone to be heard while the fundamental tone was silent. Every musical sound consists of a fundamental and several overtones. The untrained listener can hear some of these overtones when a big bell rings. The harmonics of the violin and other bowed instruments are overtones, and they can be produced from all four of the strings, each giving a different quality and thus adding to the number of tonal tints at the command of a composer.

Reverting to the bow, the listener may acquire some idea of the elasticity and freedom of the bow arm from noting how the violinist plays staccati—those short detached notes which seem so astonishing when they are sung. A clear, light, firm staccato can be obtained only by good bowing. The position of the bow on the strings affects the tone. Playing close to the bridge gives a thin, nasal tone, often used in orchestral pieces for special effects. Playing a little further away increases the power. But as the bow approaches the finger-board the tone decreases in strength and increases in mellowness. Playing right over the finger-board causes the tone to become veiled and very soft. A different variety

of soft veiled tone is secured by the use of the mute, a little wooden contrivance in appearance like a small comb, pushed down over the strings at the bridge.

All concert-goers who are observant must have seen violin and cello players causing the fingers of the left hand to quiver when pressed on the strings. This produces what is called the vibrato, a swift trembling of the tone, which is believed to be expressive of feeling. It might be so were it not that most performers use it all the time, so that it becomes a mere mannerism. Leopold Auer, teacher of Heifetz, Elman, Zimballist, and other eminent players, is very severe in his censure of this continual employment of what ought to be introduced occasionally and for a manifest purpose. "The vibrato," he says, "is an effect, an embellishment; it can lend a touch of divine pathos to the climax of a phrase or the course of a passage, but only if the player has cultivated a delicate sense of proportion in the use of it."

Excellence in violin or cello playing, like that in all other musical performance, is dependent upon something beyond technic. There must be purity of taste and propriety of style; but such matters do not readily lend themselves to definition. However, the most inexperienced music lover will have no difficulty in perceiving that shallow and showy compositions, such as the concertos of Paganini or Ernst, admit of more *ad captandum* playing than the dignified and deeply felt creations of Bach or the elegant and finished writings of the Italian classicists. At the bottom of all truly great musical performance there is a certain indescribable, but none the less evident, nobility which always succeeds in making itself

(C) Mishkin

MISCHA ELMAN

"Excitement is what the unthinking concert-goer desires. . . . Many music lovers prefer Elman to Heifetz because, as they put it, he is 'more emotional.' Well, you have to make your choice. The finest violin playing is certainly emotional, but never sentimental, lachrymose, rude, or unfinished"

(C) Mishkin

JASCHA HEIFETZ

known to those who do not wish to find sensationalism in solo art. For those who do it is safe to say that the best violin playing is always unbearably dull.

Excitement is what the unthinking concert-goer desires. He would rather observe the stormy flights of rash Toscha Seidel up and down the finger-board or the bold attacks of Boris Hambourg on his cello than to be wafted into a celestial dream by the seraphic chanting of some new Sarasate or the organ tones of a Casals. Technically, almost all violin playing is now good. It is in the departments of taste and style that we have to seek for supremacy. Many music lovers prefer Elman to Heifetz because, as they put it, he is "more emotional." Well, you have to make your choice. The finest violin playing is certainly emotional, but never sentimental, lachrymose, rude, or unfinished.

While we are considering the playing of bowed instruments, we may give our thought for a moment to the performance of the best of their combinations, the string quartette. All that has been said about tone and intonation applies with equal force to quartette performance. In the department of intonation the requirements are very exacting, for an absolute agreement among four stringed instruments is rare, and yet it is essential to true beauty in quartette achievements. Finish of style in the performance of such an organization is another necessity. To attain it the four performers must play together without the slightest inexactitude of attack or movement, and every phrase must be delivered with flawless smoothness, purity of tone, and justness of accent.

The subject of interpretation cannot be discussed. All that can be made obedient to clearly definable law is the technic of performance. The rules which apply to it are general; those which might be laid down in regard to interpretation would surely have to be equally general, but much fewer. It is difficult to go further in determining the requirements of interpretation than to say that the style should be appropriate. Now style is itself a dubious term, for it is open to more than one construction. We are quite ready to assert that the style appropriate to the performance of one of Bach's unaccompanied violin sonatas is not that which should be applied to the Mendelssohn Concerto and that a chamber music organization could hardly be expected to treat a Beethoven quartette as it would that by Debussy.

But these are obvious generalities. An actor does not read the lines of Augustus Thomas as he would those of Shakespeare. But when we have accepted this rather hazy conception of style, we are still confronted with the fact that every composition worthy of study has its own individuality, and that this individuality demands of the interpreter a special style. Beethoven's "Emperor" piano concerto cannot be played in the same style as his G major concerto. The true artist will of course endeavor to assimilate the art work and reproduce it as nearly as he can in its own spirit. But he can never be any one except himself. When he tries to be, he smothers himself in the wet blankets of tradition. In regard to violin playing there are some very uncomfortable traditions which cramp and fetter the genius of young artists. These are the traditions about

the true school of Tartini, the true school of Bach, and other true schools, of which we know very little and in some cases nothing at all. Here, again, it is a pleasure to quote the great teacher Leopold Auer:

Tradition in reality weighs down the living spirit of the present with the dead formalism of the past. For all these hard and fast ideas regarding the interpretation of the older classic works, their tempi, their nuances, their expression, have become formalisms, because the men whose individuality gave them a living meaning have disappeared. The violinists of to-day are rightly just as individual, each in his own way, as were those of the past. Let them play honestly as they feel they must; let them give us beauty as they—and we—understand it. Let them express themselves, and not fetter their playing with rules that have lost their meaning. Let them not hamper that most precious quality the artist has—his style—with the dusty precepts handed down from times gone by. How is a violinist to conceive the meaning of an older work which he may be studying if his own musical instinct, his freedom of conception, are obfuscated by the dictum, "This must be played in such and such a manner because So-and-So played it that way two hundred years ago"?

Therefore in the end we are forced in matters of style to rely largely on innate and sedulously cultivated good taste. The finer the fiber of the artist, the finer will be his style. And for every composition he must have a certain special manner, which the good taste of the hearer will promptly accept as the right one.

In this series by Mr. Henderson two articles to be published later are "Tests of Orchestral Playing" and "What Is Good Singing?"—The Editors.

THE CURSE OF A "BUMPER" CROP

BY WILBUR O. HEDRICK

"God has blessed us with bountiful crops."—(Extract from any President's Annual Thanksgiving Proclamation.)

THE history-minded reader will easily recall that it was exactly this event of bounteous crops which gave birth to our festal time known as Thanksgiving Day. The proclamation of Governor Carver to our Plymouth colony forefathers had all the fitness of an emergency occasion to call it forth too, since a repetition of the sparse yields of the year before would have marked the end of another "forlorn hope." The Governor's proclamation was, in fact, made to a body of householders supported by a style of farming in which each one gleaned from the soil at first hand the means by which he lived. As technically phrased in the words of modern economics, it was a proclamation to participants in a self-subsisting style of farming, which then prevailed the world over. This was before the great change had taken place which put agriculture upon a commercial basis.

The time-worn words quoted above provoke feelings quite other than those of gratitude, however, to no small part of our National family when made use of in this first quarter of the twentieth century. It is, indeed, to the modern farmer an exact case of using old skins for new wine. By him farming is no longer looked to as a direct source of living to his household, but is regarded as the means of making money profits the same as is the case with any other industrial pursuit. Farming is now to only a slight extent a self-subsisting industry. It purveys to the market for its rewards and is affected by all the hazards of an ill-mated demand and supply of products.

The main crops of this year—as were those of last year, and the year before—promise to be of the bumper sort. The official crop report from the Department of Agriculture shows for this year maximum yields for corn, cotton, hay, and oats. Wheat is higher in yield than the average for five-year crop periods, as are also the potato, the apple, and the tobacco crops. From this teeming embarrassment of riches there is but singularly little of joy among farmers. A Congressional commission of inquiry into the causes of agricultural depression has just issued a report of seven volumes upon the subject. An emergency conference upon the farmer's needs was called by President Harding at the beginning of the present year, and Secretary Wallace declares that the present state of farming in this country is the worst in all history.

The farmers' disgust with bumper crops comes from the fact that they over-supply the demand; therefore they always sell for less money than do normal crops or, even at times, scant ones. A random selection of the big crops of staple sorts during the past decade shows this plainly—the sixteen-million-bale cotton crop in 1914 sold for \$56,000,000; and the three billion-bushel corn crop in 1920, for \$2,208,000,000. On the other hand, the average returns per annum for the preceding five years for each of these crops equaled, for cotton, \$79,200,000; and for corn, \$3,150,000,000, respectively. In his annual report for 1921 Secretary Wallace confirms the truthfulness of this outcome by the statement, "A large crop brings the farmer fewer total dollars than a small one."

The human demand for the products of our farms is fairly fixed and inelastic. Dr. Pearl, the statistician of the Hoover Food Control, in a recent book entitled "The Nation's Food" shows that during a seven-year period (1911-18) this demand amounted annually to 129,931,314 millions of calories. No other nation in the world consumes so much. There is little room, therefore, for expansion in the American appetite. Indeed, subtle food distributors or middlemen have devised many other uses for food than that of mere nourishment. It is widely used, for example, as a method of hospitality; it gives social distinction, and it has curative qualities. Pushing middlemen have made food more attractive for all these purposes by processing the raw material into novelties of all sorts, by packaging it, and by the almost unlimited use of advertising. Schools of domestic science everywhere have also done their best in making food more attractive to the consumer, and therefore creating a bigger outlet for the farmer's crops than he had previously enjoyed.

Farm fecundity, however, under favorable conditions, can easily overflow all these channels of outgo and resolve itself into a simple case of an over-supply of food. Dr. Pearl shows that during the years shown above the yield of these farms was per annum in excess of 144,636,152 million calories, a clear surplus of more than 4 per cent beyond the amount demanded. The money effects of this fatal variance between demand and supply may be seen from the claim made by our Secretary of Agriculture that the crop of 1921, though huge, returned to the farmers \$7,000,000,000 less than during the previous year, and for 1922 \$4,000,000,000 less than for the preceding year. It may be said further that the crop of this year promises no variation from this rule.

It is plainly to be seen from the fore-

going that city people and farmers do not see the matter of crops and food as eye to eye. To the farmer the bumper crops which have been so much the theme of joyous newspaper headlines and editorials during the present autumn bring little else than grief. A new agitation for crop restriction, or for farmers' strikes, of which we heard so much two years ago, will probably be the reaction. Indeed, the displacement of the old self-subsistence style of farming by the commercial type has been so recently and so swiftly done that phrases and ideas upon the subject have not changed with equal speed. The rapid shift of the bulk of our people, too, from the country to the city which has taken place has also obscured clear thinking upon the relations between town and country. Some popular slogans, for instance, with regard to this greatest of pursuits are clearly city-made and are coming to have more and more an exclusive city acceptance.

One of these deifies the merits of "bumper crops." A second choruses the worth of a "back to the country" movement. Here, indeed, is a fine panacea for demobilizing the city. People will remove to the country, so the theory runs, and thenceforth feed themselves, and thus leave a larger food supply for those who remain in the city. The intelligent farmer's reaction to this proposal is the same, however, as is that of the steamship company when it hears that its rival is to put a new fleet of ships on the route. Why should the farmer always be the victim of back to the country movements, colonizing of soldiers schemes, and new homestead legislation on our dry or swamp lands? The flour-mill industry has never been debilitated by gifts of free mills from the Government, as the farming pursuit was by the gifts of free homesteads a few decades ago.

The stressing of intensive farming, which seems to be the press fashion of the day in treating of farming, has little of support among farmers. The thesis here, in brief, is that the intensive is the better style of farming, because it gives bigger yields per acre than are now the rule among us. Our farming, in fact, is so notorious for the low yields per acre which are got from the fields, as compared with those of other countries, that it has been called a system of "soil skimming" or "soil butchering." Our farmer is dull to these criticisms, however, since he knows that large yields per acre are costly in labor and fertilizer expense. Land, on the other hand, is abundant with us, so he prefers to get his crops from the use of much land rather than from the costly

labor. This is extensive farming, and it gives a lowering of the farmer's costs the same as the manufacturer gets a lowering of costs through the use of machinery, wherever possible, instead of men.

The evil of bumper crops must at bottom, however, be laid in large measure to the farmer himself. The farming pursuit must be described as one which is in a highly unstable state, or, as sometimes more strongly put, in a state of genuine anarchy so far as production is concerned. The six million farmers of our Nation, loosely grouped into some dozen or more classes, according to their chief product, have only a faint sense of class unity. The independence, or, more properly speaking, isolation of farmers one from the other, has been a main element of pride to members of this pursuit from remote times. The control of the industry has been left to the bare operation of the laws of economics. In this subject it has been taught that an excess of output in one branch of agriculture will cause farmers to give up this branch and raise something else, or, in case of general over-production, turn to some new trade. The functional effects of price, as these sorts of results are called in economics, find their best examples in farming.

But there are many farmers who desire to continue as farmers for a lifetime and do not want to pursue any other calling. So, too, the shift from one farm enterprise to another is no longer easy, since each crop requires its own outfit of machinery and of training, and these are no longer of slight expense. The case, indeed, is on all fours in farming with the case of the soft-coal industry. Here we have been taught during the past summer that the cause of our present bad state is the fact of too many competing coal mines. Anarchy in production is the rule in both industries. This leads to rivalries and mistakes in production, with the resulting attempts to charge high prices as a means of writing off the losses which come from wasteful production.

Doubtless, too, it may be said that the marketing or distribution of the farmer's products to the consumer leaves much to be desired. The ideal set by the California Citrus Fruit Exchange for many years, of "one orange to each member of every family in the land each day," is far from being an attained goal in the case of other farm products. The middlemen distributors are to blame for this, and their failure adds greatly to the naturally weighty evils of the bumper crop. The food middleman system, like its parent, commercialized agriculture, are both of recent origin, and the former has had in late years a degree of harsh criticism from the public which exceeds that vented on all the other trades put together. The food middleman, as his name suggests, piles between the farmer and the city consumer and, without doubt, performs a

real service, but in a back-handed way. He of course handles nothing for which he is not paid, and this shows at once the vital distinction that there is between food need on the part of consumers and food demand—demand always implying ability to pay.

On the other hand, he takes from the farmer only what he can sell at a profit, and this leaves much of a bumper crop as waste in its producer's hands. The paradox is therefore often seen of many people without sufficient food while much of this same food is wasting in farmers' fields not far away.

The middleman system, in short, has no programme by which its services are directed. Haphazard efforts are the rule, even in this vital task of feeding a nation, and as a result great wastes abound. The directness of interest and clearness of ends, on the other hand, with which mail is picked up at the farmers' doors and carried to its destination are widely different from the devious and halting practices which govern the distribution of food. During the war the middleman system of this country broke down and was unable to perform its functions. The Hoover system, though hastily got together and ill equipped, did much to show what could be done by a more deliberate and planned effort to take food from where it is grown to where it is to be consumed.

The remedy for the particular evil in farming which results in bumper crops takes on many forms. President Harding would have better means of spreading market and trade news to farmers so that they may know beforehand what the prospects are for a good demand. His own words upon the matter are as follows:

One of the most serious obstacles to the balancing of agricultural production lies in the lack of essential information. With instrumentalities for the collection and dissemination of useful information, a group of co-operative marketing associations would be able to advise their members as to the probable demand for staples, and to propose measures for proper limitations of acreage in particular crops.

A second remedy urges the increase of the exports of farm products to foreign countries. This policy was the key to the outcry among farmers two years ago for the revival of the War Finance Board. There was clamor even for direct loans from our Government to foreign countries so that they might make purchases of foodstuffs from our producers. The speedy upbuilding of the buying power of these countries shows little of promise, however, while, on the other hand, farming is in the most advanced state of any European pursuit. Farming, through the ease with which it may be restored, is said, widely, to have come back to an almost complete degree among our late foreign friends and foes.

With nations able to feed themselves in this way and with little means to buy, no trade may be hopefully set up, therefore, which will take off our farm surplus.

Farmers themselves have tried to remedy the situation by various sorts of forcible means. There have been dairy-men's strikes and threats of cutting down crop areas. The Night Riders were successful to some extent in keeping down the tobacco acreage in Kentucky a few years ago, and the burning of a bale of cotton scheme in the South in 1914-15 lowered the supply of this commodity. The failure of these efforts has pointed out the remedy which is probably most practical for farmers in seeking to control "bumper crops," namely, organization.

Farmers have been, indeed, organized for marketing purposes into co-operative associations for some time past, and these business concerns have been very successful. As is well known, these farmers' associations, whether of the grain elevator, live stock, produce shipping, or creamery types, are merely joint efforts on the part of farmers for the purpose of giving a common business service to each of their members. The last Census shows that ten per cent of our farmers are members of these bodies and that the gross amount of sales made through these agencies was in the year 1919 in excess of \$700,000,000. Co-operation in these groups is usually made upon a commodity basis, and not rarely the local units are federated into State organizations, of which the California Citrus Fruit Exchange is the best-known type. Whether large or small, however, these agencies content themselves with taking the place of the local middleman. They take over the services of the David Harums among our middlemen class, but otherwise they make use of the marketing machinery of the land exactly as did their forebears.

Another type of farm organization, and one which has held the very center of the stage for the past few years, is the Farm Bureau. This grew out of the agricultural extension movement put on by the Federal Government nearly a decade ago. It was plain that the county farm agent, provided by this plan, would not be able to carry his message to each separate farm family within his charge and that organization of some sort must be set up. The Farm Bureau was the result, and possibly there is no better description of its nature than to say that it answers the purpose for each rural county that the well-known Chamber of Commerce does for the town and city. Although these too have been federated into State and even National societies and number their members by hundreds of thousands, the edge of the movement has been dulled somewhat by the extreme multiplicity of reforms which were undertaken.

The type of organization which goes much further than either of these is the

type, however, which has most of promise for the prevention of bumper crops. This is the type to which dairymen have committed themselves in the milk areas of most of our large cities. It is the type with which the raisin growers of California, the Burley tobacco growers of Kentucky, and the prune and apricot growers of California have identified themselves. It is the type made fully legal by the Capper-Volstead Act of the present Congress, subject only to such oversight as the Secretary of Agriculture may give. Farmers' organizations of this type go much further than the mere marketing of their products or the setting up of a bureau for promoting purposes; they undertake the control of production itself.

Perhaps the now legal-proof dairymen's leagues illustrate the aims and methods of this new type as fully as can be done by single concrete examples. Dairy milk has become in recent years a necessity to cities to a scarcely less degree than a water supply. It is a commodity which does not stand long shipment, and hence must be produced in the vicinity of the place of use. This, together with the restraints of the sani-

tary tests laid down by the city, makes the matter of monopolizing a supply of milk fairly easy for the interested dairymen. Competition as a regulator of the dairymen pursuit breaks down, as it always does where co-operation is possible. The chaos and anarchy of the milk trade about our large cities which have filled much newspaper space during the past few years are surely a reproach upon competitive control. The leaguing of the dairymen into joint effort has been the remedy by which a stabilized milk trade has been brought about in recent years. Dairymen near our large cities, numbering in each case many thousands, sell their product as a single man as the result of this organization. They insist upon "the closed shop" plan so far as the city distributor's right to buy of non-league dairymen is concerned. Their league pledges give the control of the size of herds which each may own to the organization, so that the danger of an over-supply of milk is cut out. By a closely bound union of this sort the dairying industry has become stabilized and made to yield a profit. Further, when proper public supervision is given, the consumer is not overcharged for his

milk, while always having the assurance of a full supply of this needed food.

The farmers of to-day, in some branches of their pursuit, are in the throes of the economic changes which overtook the laboring classes and the more capitalized industries three or four decades ago. They have felt the joys of product "pooling," of "collective bargaining," and of intensive co-operation, which these interests were denied by the anti-pooling, anti-agreement, and anti-trust laws of this period. During the war some potent object-lessons were given by the Government as to the gains which are possible through production according to a programme. The joint system of railways, the single food and coal control, and the unified labor and factory power of this time spoke loudly for the efficiency which comes from using the "get-together" plan in industry. A production programme, in short, more than anything else, is the need of our farmers at the present time. They would be stupid indeed, with the facilities given by our modern means of transport and communication, not to take advantage of organization in order to cope with the evils of bumper crops.

DEATH AND THE FLYING MAN

BY MARION COUTHOUY SMITH

A FLYING MAN went trailing Death;
But his intrepid soul,
When at last they met and clinched,
Was left both gay and whole.

"There are other wings," said Death:
"Spread them in the light;
Drop the wood and drop the flesh;
Try a longer flight!"

"Good!" said the flying man,
"I'll go on with you."
But the shreds he left behind
Were all men had to view.

Something they laid in hollow earth,
With a box and shroud;
They could not hear the laugh that dropped
From a high, bright cloud.

THE MEANING OF PASTEUR

BY WILLIS FLETCHER JOHNSON

THERE were brave men before Agamemnon; but they did nothing that secured lasting record. There were voyagers who visited America before Columbus; but they did not open the continent to general and permanent settlement. There were steamboat makers before Fulton, and telegraph inventors before Morse; but they did not bring those devices into practical use.

There were in like manner bacteriologists before Pasteur; but none of them achieved results of epochal importance, or even realized the significance of what they did accomplish. We must honor them, of course, for what they did. Leeuwenhoek as early as 1673, using only a single lens, discovered micro-organisms—a veritable landmark of science. Inspired by this, Plenciz, a cen-

tury later, conceived the theory that diseases were caused by such organisms, or at least were associated with them, and that there was a separate and specific bacterium for each disease. He was thus very close to a great truth, but he was unable to demonstrate his theory or to act upon it. The development of the compound microscope, scarcely a hundred years ago, greatly promoted bacterial research. Bassi in 1832 discovered that a disease of silkworms was accompanied by what he regarded as a minute vegetable growth; but he was unable to determine whether that growth was the cause or a result of the disease. A few years later Ehrenberg enumerated no fewer than sixteen different kinds of micro-organisms; Schoenlein found a minute parasite in the skin

disease known as favus, and Malmsten found a similar growth in barber's itch. Cohn, whose researches extended through many years (from 1853 to 1875), divided bacteria into two classes: the spherical cocci and the rod-shaped bacilli. All of these and others preceded Pasteur. Most of them were botanists, who regarded the micro-organisms as mere vegetation. Not one of them had any vision of the relation of their discoveries to human life and health, or of the development of a great system of therapeutics and prophylaxis. That was reserved for Louis Pasteur.

He began work chiefly as a chemist and as a student and practitioner of what we may call the mechanics of chemistry. His first important researches and discoveries were in crystallography and po-

larization; apparently as far as possible from biology. Yet from observing the effect of polarized light upon crystals of tartaric acid his transcendent vision swept through the whole gamut of science and beheld as its goal the elimination of all communicable diseases from the world!

His study of tartaric-acid crystals—in processes of wine manufacture—led him directly to the study of fermentation, which at that time was one of the most obscure of processes, understood by nobody. Perhaps the theory nearest to the truth was that of Cagnaird-Latour, who held that beer yeast was a vegetable product. In this he was supported by Schwann and Kuetzing. But Berzelius contradicted him, insisting that fermentation was due to what he described as catalytic force; and Liebig also condemned his notions, insisting that the process in question was purely mechanical and had nothing to do with life, either animal or vegetable. In such division of what was then the foremost scientific opinion of the world, it was not to be wondered at that Claude Bernard in despair dismissed the whole subject as hopelessly obscure.

Pasteur, however, regarded obscurity as something to be enlightened and an obstacle as something to be overcome. His rule of action was to "prove all things" by practical and precise experiment. So he presently was able to demonstrate that fermentation in all its forms was not a mechanical but a biological process, and was a phenomenon not of vegetable but of animal life. This led straight to a battle royal over abiogenesis. Long before Harvey had pronounced the great truth, *Omne vivum ex ovo*—or *ex vivo*; or, All life comes from living germs. But he never proved it. He could not prove it. And for all the years after him until Pasteur's time belief in spontaneous generation widely prevailed. Dead matter through processes of fermentation or putrefaction or otherwise was supposed to be transformed into living matter. Obviously, there was—there could be—no more important problem than this in the whole domain of biological science; indeed, in cosmogony itself. Many great scientists devoted themselves to it: Spallanzani, Schulze, Schwann, Schroeder, Dusch, and others. But Pasteur and Pouchet were the supreme protagonists, the one on the one side, the other on the other, in the greatest duel in the history of science. The result was the complete demonstration and confirmation of Harvey's law of the origin of life—that, and the conception of Pasteur's transcendent vision of the elimination from the world of all zymotic plagues.

I shall not undertake to review even in brief synopsis his gigantic work on the etiology of communicable diseases, of the prevention of infection, and on prevention or cure by means of inoculation. To the first and third of these achievements he devoted himself, leaving the second to his illustrious con-

temporary and part disciple, Lister, whom he had inspired and taught by his researches into fermentation. Had it not been for Pasteur, there would have been none of the achievements of Lister. In like manner, from Pasteur's researches and demonstrations proceeded, not only his own achievements against pebrine, anthrax, rabies, and what not; but also those of Neisser, Hansen, Koch, Roux, Yersin, Metchnikoff, Behring, Kitasato, Haffkine, Finlay, Ross, Wright, Semple, and their compeers in combating glanders, tetanus, diphtheria, typhoid, cholera, yellow fever, malaria, bubonic plague, leprosy, pneumonia, and other ills that flesh is heir to. There was an old-time epigram—

*St Lyra non lyrasset,
Lutherus non saltasset.*

There may be some question as to the influence which Nicholas de Lyra exercised upon the Reformation. There can be none as to that which Louis Pasteur exerted upon the whole vast and still expanding science of bacteriopathology and bacteriotherapy.

That was and is the meaning, the significance, of Pasteur to the world, in terms of material science and of human health and life. Yet as the centenary of his birth (December 27, 1822) approaches there comes to mind a still loftier significance, further reaching and more enduring, since it has to do, not alone with the material, but also with the intellectual and the spiritual domain of man. And that higher significance is threefold.

First, vision. Conspicuously and supremely above his forerunners and his contemporaries, Pasteur was a man of vision. One of the eminent scholars of our own day has said that if a man has not vision he can never be a great scientist. Assuredly, he can never be supremely great. Thousands of persons before Galileo saw the lamp swinging in the church at Pisa, but only he had the vision to perceive in it an ocular demonstration of a great natural law. Thousands before Newton had seen apples fall from trees to the ground, but it was reserved for his transcendent vision to see in that familiar phenomenon the principle which controlled the innumerable spheres of the immeasurable universe. So, while many others perceived the phenomena of fermentation and putrefaction and the myriad teeming micro-organisms therein, it required the vision of Pasteur to see in them the factors at once of disease and of health, of death and of life, and the assured highroad to conquest over the deadliest of pestilences.

Second, unity. I have recalled the fact that he began work as a chemist, as far removed as possible from biology. Indeed, he was for that reason at first reluctant to undertake the bacterial commission which Dumas urged upon him. But from the chemistry of crystals and of light he made his consistent way through organic chemistry and so into biology, demonstrating the essential con-

nection between the two and disclosing the reciprocal influences of chemistry upon biology and of biology upon chemistry. No man ever contributed more to recognition of the coherent unity of science. Or perhaps it would be better to say the harmony of science; for mechanical, chemical, and biological processes are not identical, though they are all directly interrelated.

Third, faith. There never was a more timely or more suggestive coincidence in human history than that of Pasteur's contemporaneity with Darwin and Huxley and Haeckel and their colleagues in the purely materialistic exploitation of the philosophy of evolution. Darwin himself probably never relinquished spiritual faith; but a host of others, strong in the strength of his great name, went to extremes that he never would have sanctioned in proclaiming an irremediable antagonism between science and religious faith—extremes culminating in the monstrous proposition that, even though there was no possibility of proving that spontaneous generation ever had occurred or could occur, yet "it must be so, for otherwise we should be compelled to believe in God"! Amid such counsels and such propaganda it was indescribably impressive that Pasteur, the peer of the foremost scientists of his age, and the superior of all others in that department of scientific research and demonstration which was most pertinent and essential to the determination of the controversy between science and faith, stood resolutely and inflexibly on the side of spiritual and Christian faith. Perhaps I should say that he stood for faith, but not against science. For here again his marvelous vision was triumphant. He saw that between true faith and true science there was not, there could not be, conflict or controversy. For here again his principle of unity, or of harmony, prevailed. Just as all departments of science—mechanical, chemical, biological—so far as they were true must be in perfect accord, so science, so far as it was true, and faith, so far as it was true, must also be in exact harmony. Others before him had believed this. Guyot as a geologist and Gray as a botanist had declared it. But it was reserved for Pasteur as a biologist, and therefore concerned with the very highest phases of science, not only to believe it and to declare it, but, so far as was humanly possible, to demonstrate it; at any rate, to demonstrate it to a degree quite irrefutable by his opponents.

Such was the threefold significance of the immortal sage who was born into the world a century ago—the harmony of science in all its parts, the harmony between material science and spiritual faith, and the application of the profoundest principles of science to the healing of the nations, so that men might have life and have it more abundantly. That is what Louis Pasteur meant and means and will ever mean to the world.

GETTING A BONUS FROM THE LAND

THE STORY OF DISABLED VETERANS WHO ARE REHABILITATING THEMSELVES

BY EARL CHRISTMAS

THE FODDER IS IN THE SHOCK AT VETERANSVILLE, AND IT GREW ON LAND CLEARED THIS LAST YEAR. HOW'S THAT FOR QUICK RESULTS?

WHERE do we go from here?" The familiar question of war time popped up in a discussion among some disabled soldiers at the Minnesota School of Agriculture last winter. They were being trained in agricultural pursuits there at the expense of the Government, just as thousands of other young men throughout the country who were disabled in the war are being prepared for new places of usefulness in society.

But one day, not far away, they would finish their allotted period of training and be graduated. What could they do then? That was the burning question.

True, they would have had three years of training in a good agricultural school, but these former doughboys wanted

some more practical results. Unless they got something else, they reasoned, they would be only educated farm-hands when their training was over. Now the prospect of being farm-hands, even educated farm-hands, did not appeal to these former soldiers.

Then some one sprang the big idea. They would become landowners and take the rest of their training farming their own land. It sounded fine. Most of the men in the group had come from the farms at the call of war, and the suggestion that each go back to the land as the owner of a farm of his own had a genuine appeal.

Buy a farm, yes; but how? Purchasing farms in these days of \$200 and \$300 an acre land requires money, and dis-

abled soldiers certainly are not capitalists.

But there were pioneering spirits in that little group. One of them thought of the cut-over lands.

In northern Minnesota, as in northern Wisconsin and Michigan, there are millions of acres of these lands. Once they were covered by great forests, but the ax of the lumberman and the red tongue of fire have exacted a heavy toll. Amid the stumps and wasted timber new trees are growing up in many places. Often there is a tangled mass of brush, old timber, and new vegetation.

In other sections no young trees have come up, as if to leave the cemetery of the forest inviolate. Here one finds acres and acres of stumps or great charred wastes with the blackened trunks of trees still standing like shadowy ghosts of the forest that was.

To the settler the cut-over country offers a fight. In it one finds perhaps the last frontier. Far up in these cut-over lands men are struggling against great odds to clear farms in the wilderness, just as men of another generation wrested from the forest now prosperous farming communities farther south. But men have a way of persevering, and the brush line is constantly being pushed farther north.

The disabled soldiers at the Minnesota school decided to make the fight. They would settle on adjoining tracts of land. That would prevent the isolation which too often is the lot of the settler in the north country, and they could help each other in the land clearing. Soon a committee was on the hunt for a location.

After many disappointments, a suitable tract was found near McGrath, Minnesota. Representatives of the Veterans' Bureau and the College of Agriculture looked it over, and the purchases followed. Some thirty veterans bought farms in the community, ranging in size from forty to eighty acres. Most of them had little or no money except their monthly checks from the Government, running from \$80 to \$150 a month, but easy payments were arranged with the owner of the land. In some cases the initial payment was only \$1. Earnestness of purpose was a greater consideration. The monthly payments ranged from \$20 to \$50 a month. The cost of the land varied from \$20 to \$25 an acre.

Thus Veteransville, Minnesota, came into being. The former soldiers gave that name to the little settlement about which they are developing their farms. Formerly it bore the name of White Pine, but a petition has been forwarded

VETERANSVILLE TOLERATES NOTHING STRONGER THAN SODA POP, AS ONE MAN FOUND OUT TO HIS SORROW

to the Post Office Department asking that the name be changed.

Veteransville is a town of veterans. All the men who live in and around it were wounded, gassed, or otherwise incapacitated in service.

On April 7, just five years after the beginning of the war, the former doughboys arrived at Veteransville, and, armed with the grubbing hoe and the ax, began a new and perhaps greater fight in their careers. Soon warlike explosives designed for blowing up the strongholds of the Germans were set to work blowing up the deeply intrenched stumps.

Reveille would sound at 5:30 A.M., and soon after the veterans would be on the firing line. All summer they kept it up. No retreats, no replacements, no rest camp. At times it looked discouraging, but nobody quit voluntarily.

When fall came, each man had five acres of his farm cleared and ready for the plow. Old settlers in the community were amazed. Many of them had spent five years in the cut-over country without getting as much done.

Moreover, most of the veterans had raised all the potatoes, vegetables, and garden stuff they needed. Knute Loth-

berg had a good crop of corn, part of it planted on land cleared this year. Incidentally, that is getting results pretty fast. No wonder old settlers in the community were amazed at the way those soldiers did things!

When I visited it this fall, Veteransville was a humming center of industry. The clearing work was going on full blast. Log houses were being erected in little clearings in the woods.

A former soldier led the way down a narrow path. He said it would be a walk of a mile or two. We walked on along the winding footpath, and at

THE MEN WORK TOGETHER IN BUILDING, AND HOMES GO UP IN SHORT ORDER

THIS MAN IS BUILDING A HOME FROM MATERIAL CUT FROM HIS OWN FARM. NEXT YEAR HE WILL BUILD A BIGGER HOME AND USE THIS BUILDING FOR A HEN-HOUSE

length came to a brand-new log house in a clearing. Inside a young woman was preparing the evening meal.

"That is one of the soldiers' homes," said my companion. "Kinda homelike, don't you think?"

He led the way on down the path. You see, these pioneers at Veteransville have gone even beyond the roads. But the roads will follow in short order. The township had an election not long ago to vote bonds for the building of roads. Some of the old settlers opposed the procedure, but the soldiers carried the election.

Presently we came to another clearing, where a log house was in the process of construction.

"This man will live in this log house this winter," said my companion. "Next year he will build a bigger and better house, and use this building for a hen-house. The plan is for every man to start out as simply as possible, and never go in debt."

On our walk we passed many clearings. Altogether, thirty-six veterans have bought land in the community. This particular walk happened to be on a Sunday, and no work was being done. Yet at nearly every place we found men looking over their farms.

"I like to just sit here and dream it all out," one big fellow explained. "I am going to have my house there on that hill. It is going to be a log house, with a fireplace. Yes, and shelves around the fireplace for books."

At length we came back to the barracks where the unmarried men at Veteransville have their living quarters. About one-third of the men are married and have their own houses. The others live in a barracks not so much different from those of war time.

In the barracks a lively discussion was on. It concerned plans for the coming school, which, I learned, was to be held at Veteransville. Instead of leaving their farms and going back to St.

Paul to complete their training in the School of Agriculture there, they would take the rest of their training on their own farms. The school would come out to them—dairy experts, poultry experts, and all.

The men themselves asked for this kind of training, and the Veterans' Bureau set about to arrange for it. None of the expensive living, none of the distractions of the city! Most of the men at Veteransville took their first year of training at the School of Agriculture in St. Paul. Few were able to save any money out of the funds provided by the Government for their maintenance during the training period.

Now these same men not only are making regular payments on their lands, but are laying away money to buy live stock and equipment. Some were in debt when they came to Veteransville,

but since have got out of debt and started saving. In three years most of them will have their land and buildings paid for and some live stock. The Government payments just about enabled the men to support themselves in the cities, as intended, but with the lower living costs at Veteransville they find it possible to meet the payments on their farms and equip them.

Then there's the matter of health. A man at McGrath who has followed the progress of the venture said:

"When they came up here, many were pale and thin. After they had been working outdoors a while, away from the smoke and dirt of the city, they became healthy and robust. One fellow when he came up here two months ago couldn't walk two blocks without playing out. Now he is just as husky as any of them."

Indeed, one would have to go far to find a harder group of settlers. Some of the men came to Veteransville as tuberculosis cases. Two were machinists who had to give up this work for an outdoor occupation because of tuberculosis. Certainly, none of them look like it now.

Disabled? Yes, they were disabled. There's Joe Sandkamp. Joe had part of his spine shot away and wears a brace, but he wields an ax with the best of them at Veteransville. Otto Ellig got a shrapnel wound in the thigh, and limps a bit, but he certainly is an active casualty. A German bullet went through T. A. Olson's lung. Many of the boys were gassed. All the fighting divisions are represented among those thirty-six men—but war stories are taboo at Veteransville. Casualties once, perhaps, but you'd never know it now from watching the way these men are making the stumps fly.

The men work in squads while doing their clearing. Perhaps the army got them in the habit. The squad works a

LOG HOUSES LIKE THIS ARE GOING UP IN LITTLE CLEARINGS IN THE WOODS AROUND VETERANSVILLE TO FURNISH HOMES FOR FORMER SOLDIERS WHO ARE GOING BACK TO THE LAND

while on one man's farm, and then goes to another, and so on around.

Some of the veterans are going into dairying. Others are going to specialize in poultry and bees. Moreover, they are going to standardize their products. All will have the same breed of cows and the same kind of chickens. Eggs sent to market will bear the Veteransville stamp and the number of the farmer shipping them. So will the butter and honey be marked. Products of the Veteransville farms in time will command premiums in the cities.

The men will sell their products together. Purchases also are pooled. On a car-load of picnic acid the former soldiers pooled their orders and saved \$2,000. Ownership as well as operation of a man's farm is an individual matter.

But all is not work at Veteransville. A baseball team offers outlet for athletic energies. Every two weeks a dance is held, and the settlers come from miles around. An old barn was converted into a fine dance-hall.

Once an outsider brought in some moonshine expecting generous profits at the veterans' dance. Instead, he got thrown out rather roughly. The soldiers had one of their number appointed a deputy sheriff, and no vender of liquor has had the temerity to come near Veteransville since.

The former soldiers held a Memorial Day celebration, the first ever seen in that section of the country. Settlers came from fifteen and twenty miles to attend the services. A hundred automobiles were counted at Veteransville that day. More and more Veteransville is becoming the center of activities for a wide territory.

Questions affecting the settlement as a whole are handled through the Veteransville Association.

The soldiers first took up quarters in an old logging camp. White Pine was the headquarters for James E. McGrath, who year after year floated down the Snake River millions of feet of timber which he cut along its upper reaches.

But the last logs have gone down the Snake River. Small sawmills now are grinding up the final bits of timber into lath. Soon this will be done.

Hardly does the lumberman finish his work when a new pioneer comes in, the disabled soldier seeking to rehabilitate himself. The veterans even took over some of the buildings of the old logging camp. An old barn was cleaned up, floored, and whitewashed to make a barracks for the single men.

Several log buildings in the camp house the families of the married men while their homes are building. Veteransville also has a store, a post office, and several other buildings. It has a schoolhouse, where the children are taught by the wife of one of the former soldiers. In time it will have a creamery, a blacksmith shop, a community center, and all the adjuncts of a first-class town. At least such is the vision of its founders, who expect it to become the nucleus of a large community of former soldiers.

BOLSHEVISM, THE CHURCH, AND THE HOME

AN AMERICAN RELIEF OFFICIAL DESCRIBES CONDITIONS AS HE FOUND THEM IN RUSSIA

The following statement has been obtained from a former American Relief official who lately returned from Russia, and who is entirely reliable. His name is withheld because to reveal it would lead to the discovery by the Soviet Gov-

ernment of the people with whom he has been in contact, and that Government would certainly take summary vengeance on them for making him acquainted with the true facts.—THE EDITORS.

DURING the war Tchicherin is said to have remarked, in the course of conversation, "There are two great obstacles to the spread of the Social Revolution—the church and the home—and both must be swept aside."

There is sound psychology in this so far as the home is concerned. The Soviet Government is purely Communist. The greatest incentive with most men to the acquisition of property is the desire to provide for those whom they love. If the home, which fosters family affection, can be broken up, this incentive will disappear, and the strongest objection to Communism, which seems now to be ingrained in most people, will disappear with it.

But the statement has especial importance because it affords the true explanation of certain facts which have recently been brought to the attention of the public through the newspapers. Despatches have told of the arrest of Russian bishops and their condemnation to death. Tihon, Patriarch of Moscow and head of the Russian Church, is said to be in prison, and the Church as a whole has been charged with failing in its duty to the Russian people during the famine. What has really happened is this.

The fight against the Church began in 1917, as soon as the Bolsheviks came

into power. The Reds took possession of church property wherever possible—monasteries, convents, schools, the houses of priests and bishops. The Soviet abolished the theological seminaries, so that the supply of priests might be cut off, it closed the parish schools and passed a law forbidding any religious instruction to be given outside of the home to youth under eighteen years of age. Priests were arrested and shot for teaching their young people the basic elements of their religion. According to figures given by the Reds and recently published in the Soviet newspapers, twenty-eight bishops and over twelve hundred priests have been executed by them since 1917.

But the most insidious attack has been made within the last year, since the great famine came. This was the charge that the Church had refused to help the starving millions of Russia, and that their deaths have been due to its neglect. Of course the object of this was to discredit the Church with the people and to prepare the way for the spoliation which was purposed. The Soviet took care to make out an apparent case against the ecclesiastical authorities, though in doing so it has deliberately suppressed the truth, a course which prominent Bolsheviks have boasted that they never hesitated to pur-

sue. At Genoa one of them gloried publicly in the fact that they never kept their word about anything when it suited them to break it.

In truth, the Church had been anxious to help its people from the outset. The first account which gave an adequate idea of the extent of the famine was contained in a despatch from the Patriarch to the Archbishop of Canterbury, asking for help. This despatch was not permitted to be delivered to the Archbishop, but found its way into the press, both on the Continent and in England. In addition to this, the Patriarch requested to be permitted to take a full share in the relief work of the Gorki Committee in 1921, with the understanding, however, that the representatives of the Church should know how the money which they raised was spent. He thought, not unreasonably, that he ought to be in a position to assure people who responded to his appeals that their money had gone where it was meant to go. This request was absolutely refused. Public notices with the Patriarch's name on them were not allowed to be published, and no document was permitted to appear under his authority or the authority of the Church.

Next, the Patriarch offered to collect food in kind, and have it distributed among the people in the famine districts

by the parishes, and this also was refused.

In March of the present year the Soviet Government ordered the Patriarch to issue an ecclesiastical decree directing the bishops and clergy to surrender the Church's treasures throughout the country, because, as they said, of the famine, but with no assurance or guaranty that the proceeds from the sale or other disposal of these treasures would be applied to the feeding of the starving people. The Patriarch made the grave answer that he and his colleagues were forbidden by their oaths and the canons of the Church to dispose of the property of the Church, which was, and had been from time immemorial, devoted to sacred purposes. He did not say that it could not be disposed of by any means, but that it could not be disposed of in a reckless manner, or without the Church's knowing what was done with it; that the danger of sacrilege would certainly arise, and that he was not, therefore, in a position to do what was directed without violating his oath.

But he went on to say: "We are prepared on behalf of the Church to undertake to raise the very money you think you will get by the sale of these treasures and to be responsible for seeing that the money goes to the famine areas, if you will leave the treasures where they are and allow us to deal with them as seems to us to be consistent with the oaths we have taken and the promises we have made."

The answer came at once: "We refuse to allow any such arrangement to be made," and the commissars were ordered to go into the churches, to tear down the ornaments, some of them of extraordinary interest, antiquity, and beauty—ikons, vessels, books, hangings, etc.—to take them in defiance of their custodians (the priests of the Church), and to allow no interference at all.

Now the Russian people have always been devoted to their Church, and since the Bolshevik troubles have come they have resorted to the churches more than ever, for, since man seemed to have deserted them, they had no place to turn but to God. In fact, there has been a great religious revival throughout the whole country, which has been commented on by all observers. Naturally, when the commissars began their work of spoliation disturbances arose. Thereupon the Soviet arrested a number of priests and bishops, charged them with inciting the people to riot, tried, and sentenced them to death. Moreover, it was their opportunity to deal with Tihon. Here in New York, where he lived for some years as Archbishop, he was greatly respected; in Russia he was profoundly revered. Sir Paul Dukes, in his enlightening book on Russia, "The Red Dusk and To-morrow," quotes a workman as saying: "There is only one man in the whole of Russia whom the Bolsheviks fear from the bottom of their hearts, and that is Tihon, Patriarch of the Russian Church."

Tihon was arrested and thrown into prison. This was denied by the Soviet, who asserted that "he was living in a monastery." So he was—in the Donsky Monastery at Moscow, which is used as a prison for ecclesiastics. It was reported some time ago that he had been taken to Petrograd for trial, and if he is tried there is no slightest doubt that he will be convicted on some trumped-up charge and sentenced to death. Whether the Patriarch and the other bishops and priests who are under sentence of death will be executed will depend on whether the Soviet Government thinks it to its advantage in its dealings with the outside world, in the matter of loans, etc., to appear to be becoming more moderate in its policy. That it has changed its heart is unthinkable, for the same set of men are still in control who have deluged Russia with blood.

There is one other insidious method by which the Bolsheviks are attacking the Church, and that is by encouraging other sects to come into the country and do propaganda at the expense of the national Church. This would account, for instance, for its extremely friendly attitude towards the Roman Church, of which we have read lately in the newspapers. Certain American sects are engaged in this work, and it ought to be impressed upon them that by what they are doing, which weakens the national Church, they are only playing the Bolsheviks' game and working to their own ultimate disadvantage. If the Russian Church were destroyed, these newcomers would be easy victims. There ought to be churchmanship in America wise and resourceful enough to serve Russia spiritually without making common cause with the Communists, which is what some sects are doing now.

In fact, the Soviet was rightly alive to its danger from the Church. Not long ago a distinguished Russian remarked that his country had passed through several such crises as the present, and when he was asked how it had come out of them he replied, unhesitatingly, "Through religion and the Church." The Bolsheviks never forget that history may repeat itself.

In dealing with the home the Soviet's methods were a little less direct than in dealing with the Church. They began by taking away the home-maker, the mother, as much as possible. Everybody in Russia is more or less dependent on rations for food, and the Government rationed men who were employed, but not their wives, unless they too had jobs. This took the mother away from the home a great part of the day, necessarily. Then the Soviet established institutions where fathers and mothers, while not actually compelled to do so, were encouraged to send their children to be brought up. This served a double purpose—to break up family life and to give the Bolsheviks a chance to bring up the children as good Communists. Fortunately, it has not succeeded. The

institutions have generally proved disastrous failures, often with shocking conditions, and recently in many cases parents have been directed to send and take their children back: "We are closing the house; come and take them away." No better sign of the failure of Communism in Russia could be given than this.

The misery of the starving people in the famine areas, naturally and properly, is what has been brought most to the attention of the American people, yet there are other forms of suffering which are hardly less poignant. One of these is the great blight which has fallen on the *intelligentsia*, the educated classes. The American Relief by its food parcel system has done a work for them which has been not the least of the benefits which it has brought to Russia. The condition of these people, especially those engaged in teaching, is indescribably pitiable, not only because of the under-feeding, not to call it slow starvation, which they are obliged to face, but because of their intellectual hunger.

As for the physical hunger, the ration for a professor in one university, not in the famine region, is eighteen pounds of food a month. The average American eats approximately four pounds of food a day. No wonder that a petition from this institution gave the names of six professors who had recently died, nor that the remaining two hundred appealed to "the Civilized Scientific and Humane Societies of the United States to extend help, without which the university within the ensuing year had only to finish its existence."

An appeal for relief early in 1922 by the music teachers of one of the principal cities was addressed "To the citizens of our friendly country in the hope of a favorable answer to this entreaty of our starving artists. . . . We receive too little food and money. On the market everything is too dear, and our essential nourishment consists of cabbage, frozen potatoes, and scanty portions of bad rye bread. Our Association counts no less than 2,000 members, and among them not less than 500 are in bitter want of food." And almost more numerous than the appeals for food from the highly educated classes have been the requests that scientific material be obtained for them, since they have been cut off from it since the beginning of the war. Electricians, physiologists, and other specialists declare that they have heard nothing new in their spheres since 1914.

Something of the general frame of mind of these poor people may be gathered from the case of one woman, gently nurtured and highly cultivated, who came to see one of our Relief officers. When he had received her, the American stepped out into the hall, called a servant, and told her to bring a couple of cups of tea and some cakes. When they came, the young woman burst into tears. "What's the matter?" "Oh, I did not know that there was a man in Russia with so much courtesy left!"

THE BOOK TABLE

MR. LOCKE'S AWFUL BELIEF IN HUMANITY

BY JAMES WEDGWOOD DRAWBELL

IN William J. Locke's latest book, "The Tale of Triona," Alexis Triona wins fame through the publication of a volume which is, in fundamentals, a plagiarism. The lie is discovered by his adoring wife, Olivia; Triona, in shame, hides himself away for a year, is finally reconciled to his wife, and comes back to society with a confession of the part he played in the creation of the book.

Writing to the "Times," he tells how, finding the notes on the dead body of an espionage agent in Russia, he came to take the story as his own and wrote it as such, adopting the romantic name of Alexis Triona in place of the somewhat prosaic one of John Briggs.

Despite the fact that his own brilliance made the book, Briggs's part has of course been an ignominious one; but he is prepared, backed up by his wife, to make matters clear to the public and stand free of his guilt for all time. He expects all sorts of uproars from the publication of his letter of confession.

Mr. Locke is wonderfully kind! This is what he says:

But as they had planned so did it not turn out. Rowington gave news that Onslow and Wedderburn had dropped the question. Why revive dead controversy? But Triona and Olivia insisted. The letter on the origin of "Through Blood and Snow," signed "John Briggs," appeared in the "Times." A few references to it appeared in the next weekly "Press." But that was all. No one was interested. "Through Blood and Snow" was forgotten. The events of 1917 in Russia were ancient history. . . . What did the reading world care what Alexis Triona's real name was or how he obtained the material for his brilliant book?

I repeat, Mr. Locke is wonderfully kind. Would that many more people were built the same way. Just what would have happened under the circumstances in real life is something like the following.

Scene: The news-room of half the newspapers in the city.

Time: Morning.

A lynx-eyed city editor sits in his chair reading. Suddenly he starts, pounces forward. There is quick play of right hand and a pair of scissors, and the sheet lies mutilated before him.

"Scott! Whalen!" he barks, and from nowhere appear two keen-faced young men, who stand attentively before the Great One.

"Seen Alexis Triona's letter in the 'Times' smorning?" he asks, looking piercingly at them.

"No," they both answer.

"No, you wouldn't! What d'you do on

the way to the office? Sleep? Well, anyway, you know the chap I mean?"

"Sure," from both.

"Right; get onto this. Read that letter."

They read it together, while the other returns to his paper.

"Gee! This is good!" bursts from both young men.

"Glad you realize it," the C. E. says, without looking up. "Now get right on it. Find out what's back of it. You, Scott, get at Triona himself and his wife. Funny business this about being away for a whole year. See what it means. There's a story somewhere." He glances up. "Might be another woman in it, you know. See. Get at the servants. Whalen, you get after this publisher fellow, Rowington. How much did he know when he published the book? Has he been keeping it dark? Is it a conspiracy between the two, and is this 'Times' dope just a free ad? You know what I want. Right, first edition, mind. Shoot!"

Scott and Whalen rush out of the room.

The city editor picks up the telephone.

"Harry? Say, Harry, we're running a page feature on this Alexis Triona stunt. . . . See his letter in the 'Times'? You did, eh? Thought you would. . . . Well, Harry, I want you to fix me up with two or three pictures. You know the stuff. Triona and his wife. . . . Have they got any kids? H'm! Pity! Tell you what, rake up some of these Russian starvation pictures, will you? All right; let me know. 'By'!"

The city editor of half the papers in the city then jumps to his feet and barges through the door of the Sunday Magazine Section, disturbing the peace and quiet that reign therein.

"Say, Jim," he cracks out, and the spiders up in the corners look down in amazement at the disturbance. "What did we say about Triona's book 'Through Blood and Snow' when it was published last year? Hunt it up, will you? And get me a copy of the book as well. I want some quotations from it."

Five minutes later he is glancing over the review.

"H'm," he mutters disconsolately, "this won't do! 'Wonderful . . . thrilling . . . the mark of truth is stamped on every page. It is only too clear that the author has lived through the agonizing experiences he so vividly describes. . . . Something more than a book. . . .' Jim, what d'you mean by it? Spoiling the story like this! I wanted to say that at the time of publication the 'Daily Squeal' had been the only newspaper in the country to point out that the story should be taken with a pinch of salt. We can't do that now."

He thinks for a moment.

"Tell you what! Find out what the sales of the book have been, will you? And (if you can) just what Triona has brought in from his little deception."

The man of books is moved to protest.

"But, I say, old chap," he ventures, "don't you see this fellow Triona is doing a pretty big thing with this confession? Why treat the story this way?"

"Which way is that?"

"Well, it seems pretty obvious, doesn't it?"

"That's my affair. Don't the people want the news?"

"Well, God in heaven," cries the other, "hasn't the fellow given it them in his letter?"

The city editor (of half the newspapers in the city) becomes immersed in documents.

Scene: The office of the manager of half the photographic agencies and film news bureaus in the city.

Time: Morning.

The manager sits in his chair reading the morning paper. Suddenly he starts, pounces forward, and peers into the news sheet as if in recognition of a long-lost friend. Throwing down the paper, he raises grateful eyes to heaven, and as his hand reaches for the telephone he murmurs, wonderingly, "For the love of Pete!"

"Say, Eddy," he bawls down the tube, "have you seen the letter in the 'Times' smorning from that guy Alexis Triona? You have, eh? Some story, boy! How many men have we got out on it? Eh? Good for you! Let's see the results when you get 'em."

The manager then puts down the telephone reverently, leans back in his chair and twiddles his thumbs. Closing his eyes, he whistles softly to himself the "Song of Love."

Scene: The office of the manager of half the film-producing companies in the city.

Time: Forenoon.

The manager sits in his comfortable chair reading. From his table a bevy of beautiful women smile dazzlingly towards him, but he ignores the photographs, his attention having been drawn to something of more than ordinary interest in the news. Leaning forward, he pushes one of the row of white buttons in his table.

A minute later the door is opened noiselessly and a tall, well-groomed man enters the room.

"Ah, Ward," booms the man at the table, "I suppose you have done something in the matter of this Triona confession?"

"We have," answers the newcomer. "We are negotiating now for the film rights of the book 'Through Blood and Snow.' As you know, we have tried in vain to get in touch with Triona during

the past year. But now I have Smith out on the job, and have already prepared the ground by a series of wires and phone calls. It appears, however, that Triona is besieged this morning."

"Naturally, naturally," comes testily from the Mighty One, "but it was up to you to get in first. Let me know what progress you make."

Ward silently withdraws, and the manager, frowning, leans back in his chair and mutters: "Too bad, too bad! These fellows of mine want waking up badly."

Many scenes of a similar nature are being enacted all over the city, but we spare you them, and leap ahead.

The scene is the interior of all the elevated trains, surface cars, and subway carriages of the city. The time is early evening on the same day.

Packed masses of humanity are swaying and rolling with the lurch of motion. With eagerness they con the flaring headlines of the newspapers which, in some mysterious way, they have contrived to bring safely and untorn through the crowds.

Snatches of conversation can be heard above the roar and rattle of steel. Even the heavy breathing does not entirely drown the voices.

"... Some guy, eh? ..."

"... That's society for you! ..."

"... Funny thing how it wasn't found out before ... seems to me. ..."

"... And his wife, too! ..."

"... It says here that he's been living away from her for a year. ..."

"... Yeah! ... That's good gum. ..."

"... Says in my paper that he was secretly married to a girl in. ..."

"... A Russian princess, they say. ... Gee! That's the life for me. ..."

"... He get's away with it, too. ... Knows how to put it over. ..."

"... And his name! Some name, boy! ... Say, did you see that bit? ..."

"... She's not much to look at, is she? ..."

"... You could tell by his picture he wasn't an author. ..."

"... It's my opinion. ..."

"... I haven't read the book, but I think it's a downright. ..."

"... They're getting divorced. He was found at the. ..."

"... It was an awful book, anyway. ... I never read it, but my sissy says she couldn't understand a word. ..."

"... He's not a Russian at all. ..."

"... What are the police doing, anyhow? ..."

"... Wonder what his game is now? ..."

"... Good thing the newspapers found him out. ..."

"... Oh, look! It's to be on the pictures. ..."

"... Shouldn't be surprised if he commits suicide. ..."

"... Her, you mean! ..."

The last scene of all, perhaps, should be a little picture of Triona and Olivia

FROM A WATER COLOR BY ARTHUR RACKHAM

sitting together the same evening, a look of terrible bewilderment in their eyes—wondering whether, after all, it had not been the better part to go on acting the lie.

Trifling little scenes, these. But they

will be understood by the unfortunate people who have gone through this mill. In their sad eyes I might be able to raise a gleam of understanding and pity.

But would the pity be for Triona and his wife?

THE NEW BOOKS

PAINTING

ARTHUR RACKHAM: A LIST OF BOOKS ILLUSTRATED BY HIM. Compiled by Frederick Coykendall. With an Introductory Note by Martin Birnbaum. Privately printed, 1922.

Collectors and bibliophiles as well as illustrators will be interested in this beautifully printed little brochure, the product of the printing house of W. E. Rudge, of Mount Vernon, New York, and designed, we understand, by Mr. Bruce Rogers. Mr. Birnbaum's introduction presents an enthusiastic yet discriminating appreciation of Mr. Rackham's work, which, as every one knows, has made many good books better during a score of years or more. Perhaps Rackham's children are his most characteristic as well as his most popular creations; though Milton's "Comus" has very recently been illustrated by him, while in an earlier period he was attracted by Washington Irving's books. A recent exhibition of Rackham's work at the Scott

and Fowles galleries in New York City has presented his original drawings for the first time to the public, and makes the issuing of this appreciation especially appropriate. We reproduce above one of the characteristic drawings from "Mother Goose" as shown in this exhibition.

JULIAN ALDEN WEIR. By Duncan Phillips and Others. Illustrated. E. P. Dutton & Co., New York. \$15.

This handsome book contains thirty-odd full-page plates showing in monotone the best of Weir's work. With the appreciations by Duncan Phillips, Royal Cortissoz, Childe Hassam, J. B. Millet, and others, it constitutes a worthy memorial of one of the most distinguished of American painters.

EDUCATION

PHYSICAL STANDARDS FOR BOYS AND GIRLS. By Charles K. Taylor. The Academy Press, Orange, New Jersey. \$2.

Mr. C. K. Taylor's Cutlery articles on

physical standards for boys and girls evoked a wider response than perhaps any other articles which appeared last year in this journal. A statement of the principles behind his standards and the method of their application, together with complete tables for the measurement of boys and girls, is now available in book form. This compact and authoritative volume should be in the hands of every one interested in the physical welfare and development of children.

POETRY

ENCHANTED YEARS (THE). Edited by Professors John C. Metcalf and James S. Wilson. Harcourt, Brace & Co., New York. \$1.50.

Although a few of the poems contributed to "The Enchanted Years" have already appeared in periodicals and volumes, the majority of them are printed here for the first time. When it is pointed out that among the contributors to this volume are Lord Dunsany, D. H. Lawrence, H. D., Vachel Lindsay, Edwin Arlington Robinson, John Drinkwater, Ralph Hodgson, Thomas Hardy, Arthur Symonds, and Walter de la Mare, to enumerate a few of the eighty poets present, it may readily be seen that the anthology is not without importance as an addition to the season's poetry. The writers whose work appears in this book contributed their efforts as a centennial offering to the University of Virginia,

and because this is so a number of the poems are concerned with the University itself, with Virginia, and with Edgar Allan Poe. However, most of the poems are on general subjects, and the reader may discover such delightful efforts as "Egypt," by H. D.; "I Know All This When Gypsy Fiddles Cry," by Vachel Lindsay; "Saul," by George Sterling; and "Afterthoughts," by Edwin Arlington Robinson.

SELECTED POEMS. By Laurence Binyon. The Macmillan Company, New York. \$2.

Mr. Laurence Binyon is an admirable example of what assiduous application in almost any art by an intelligent and sensitive man will do. When he first started writing verse, he wrote probably the worst poetry that any man of his prominence had ever perpetrated in England. But time went on and Mr. Binyon's work grew better, until it reached that authentic plane which placed him among the lesser contemporary figures in English poetry. He has now reached that proud eminence which entitles him to a volume of "Selected Poems." Some of the work included is mediocre, much of it is charming though not especially important, and a few pieces possess that distinguished ring of finality which proclaims the achieved poem. He is essentially a conservative in verse, employing time-honored meters, writing about Tristram and Iseult, Sir Mione, and "The Death of Adam." His phrasing is clear and vibrant, albeit it

is but seldom that the truly distinguished phrase flashes before the reader. He is frequently delicate in his apprehensions of beauty. Here is an example of his lyric note at its best:

MORN LIKE A THOUSAND SHINING SPEARS
Morn like a thousand shining spears
Terrible in the East appears.
O hide me, leaves of lovely gloom,
Where the young Dreams like lilies
bloom!

What is this music that I lose
Now, in a world of fading clues?
What wonders from beyond the seas
And wild Arabian fragrances?

In vain I turn me back to where
Stars made a palace of the air.
In vain I hide my face away
From the too bright invading Day.

That which is come requires of me
My utter truth and mystery.
Return, you dreams, return to Night:
My lover is the armed Light.

TRAVEL AND DESCRIPTION
WHITE HEART OF MOJAVE (THE). By Edna Braash Perkins. Illustrated. Boni & Liveright, New York. \$3.

Two women who loved adventure and beauty and the wild outdoors went to Death Valley, and one of them has made a good book about the trip to and in that desolate region, full of the atmosphere of the real desert. The account of the difficulties that beset the travelers in reaching their goal is entertaining and at times humorous, and the descriptions of desert scenery are unusually good.

RUNNING WATER

BY FULLERTON WALDO

GREAT rivers like the Yukon and the Mackenzie, moving forever toward a distant goal, enthral the imagination with a sense of irresistible power and perpetual motion that never comes to him who travels on still water. Old-timers who ran the Athabasca or the Slave River rapids in their canoes deplore the passing of the ancient order; for, if the change reduced the personal risk, it also did away with the tingle and the thrill of battle amid the rocks in the foaming torrent to bring the scow or the York boat through. That bristling adventure counted for more than a man's pay. If there was peril, there was also the true romance, with "the bright eyes of danger." The passenger learned to place his trust in Providence, his own paddle, and his tight-lipped pilot and not to rock the boat. The miracle was that so many frail cockle-shells came through unscathed. The wary river pioneers did not despise the dangers; familiarity never bred contempt. But they read the river as a scholar reads a book. They interpreted by a flash of intuition the meaning of every white ripple, every darkling patch or shifting color or revolving eddy. They seemed to possess an uncanny faculty for the divination of that which lay beneath the surfaces. They had cool judgment and unshaken nerve.

"There was I lying in the bottom of the boat," said a canoe passenger of the Athabasca Rapids, "and Colonel Cornwall sat there in the stern steering with his paddle, never once showing the faintest trace of concern. I saw the blue sky and the clouds shooting by like steam blowing off. There was a roaring in my ears—we struck a rock, and caromed off again; we scudded out of a twisting, boiling chute into a placid reach, and I thanked my stars we had come to the end of the passage. And then I learned that it was only the beginning, and the merest ripple to what was to come. From a whirlpool where we spun like a helpless insect we were thrown against two rocks, the water rushing under the boat as we hung there. We had to get out and unload the canoe, then hoist it round the obstacle and let it down into a foaming pool. Colonel Cornwall grinned and said it was fun. I was gladder than Pollyanna when it was over."

The reckoning comes when the men who passed down the swift-flowing stream so lightly must ascend it. Great Bear River has a course of ninety miles between Great Bear Lake and the Mackenzie at Norman. The distance is descended by canoe in a day. When Inspector La Nauze, of the Mounted Police, went up in quest of Eskimo murderers in 1915, he needed thirteen days. He had to take with him a scow laden

with provisions. This means the wearisome process known as "tracking," by which the river-men must haul the vessel along the bank with tow ropes. All the old-timers can tell a generation fond of desk work and afraid of blistering its hands the wide difference between gliding down-stream and "bucking the current." It is still a formidable feat to descend in a canoe the river Mackenzie, explored in 1789. To-day the canoeist, returning, can put his boat aboard a steamer; but Mackenzie, uncomplaining, worked his passage with his spruce paddle all the way back to Chipewyan, on Lake Athabasca. To paddle your own canoe had meaning then.

Within fifty miles of Hay River, a hamlet at the southwest corner of Great Slave Lake, are the Alexandra Falls, on the stream that bears the same name as the settlement. The upper falls are eighty-five feet high, and a mile down the river are the lower falls, fifty-five feet high, a total drop of one hundred and forty feet. Twelve miles from the lake are rapids. Yet before it enters the lake the stream is moving so slowly that it seems stagnant. It is as brown as coffee, and an iridescent scum with a displeasing aroma forms upon it. On either hand the banks exhibit vegetation of an almost tropic luxuriance. The traveler might imagine himself on a waterway of Amazonia, amid this lush growth of long grasses, willows, alders,

¹ Other sketches of the Mackenzie River country by Mr. Waldo will appear in subsequent issues.

and spruces, so abundant and thickset that in their rank, green opulence they seem nearer the hothouse tropics than the Arctic Circle. The air teems with insect life, and one half expects to find the corrugated snouts of alligators breaking the oily surface like water-logged driftwood here and there. Only the lily-pads are lacking to complete the picture of a sluggish stream of the Temperate or even the Torrid Zone. The people of the settlement forbear to drink the rusty water. They repair instead to the lake into which it so deliberately empties. The lake is green and clean, with a tang of the saline and the marine, and emerging from the river to its sailless broad expanse is like going from a moldy cellar to the windy freedom of a housetop. But the strange thing is that the very water which has so recently been furiously raging like the heathen of the psalm is now so placid. The falls, fairly comparable in form and beauty with Niagara, and the boisterous rapids below them have created a vehement turbulence of which nothing appears a short distance farther on. The fury was spent in sound and commotion, like the white heat of anger of a "husky" dog. The water of life has become the water of death—a Lethe or a Styx.

No wonder the mortal term of man is compared with the course of a river. The parallel is obvious. Mere force and violence at the beginning may offer an imposing spectacle, but when the driving energy gives out and the seething current of abounding vitality conforms to the channel of routine and acquiesces in low levels, forgetful of high origins, man's life is no more a quickening force, a motive power, a servant of God like sunlight or fire, wind or frost. Salvation, for man or river, is in maintenance of motion. For a man the motion may be that of intellectual processes as well as physical. He need not brandish his arms to appear to be doing something. But his mind, at least, must work. This is what Thoreau means, when he says, "A man sits as many risks as he runs." The danger to a solitary dweller in the North is that, with so much time on his hands and boundless space about him, he will not save his mind by means of the strenuous exertion it requires. He need not fear so much for the upkeep of his body. It has much to do to assure its warmth and nourishment. He will have the physical exercise of cutting wood, or minding trap lines, or fishing through the ice. The danger is that the soul may "dwindle, peak, and pine" for sustenance in the barren snowbound lands; that it will hibernate and sit in darkness the long night through; that the sun of summer will not dissipate the chill and rouse the soul from its enduring torpor.

The mind and the river cannot afford to stand still. The mind must go on from strength to strength till finite life is merged with infinite love, even as the river, unhasting and unresting, cleaving a mountain, traversing a plain, finding a way and brooking no denial, goes on and on until it meets the sea.

Expansion

A million new subscribers were linked to the Bell System during the past two years—putting into operation a million new routes of talk, and a corresponding increase in all intervening facilities such as switchboards, cable and long distance lines.

No other country is so well equipped as the United States for telephone communication. Yet, because of this—because the telephone is so useful—the demand for service keeps growing greater.

The growth of telephone

demand in the United States is greater than the growth of population. It is an intensive growth. An increasing percentage of the population is seeking telephone service.

The Bell System is providing for more investment, further technical achievement, more wires, switchboards and stations—and more subscribers. The American people require the best service. The best service means the most comprehensive service, not only for the necessities of to-day, but for the necessities of the future.

FINANCIAL DEPARTMENT

The Financial Department is prepared to furnish information regarding standard investment securities, but cannot undertake to *advise* the purchase of any specific security. It will give to inquirers facts of record or information resulting from expert investigation, and a nominal charge of one dollar per inquiry will be made for this special service. All letters of inquiry should be addressed to THE OUTLOOK FINANCIAL DEPARTMENT, 381 Fourth Avenue, New York.

STOCK DIVIDENDS

THE United States Supreme Court has ruled that stock dividends are not taxable as income. A tax is payable on this form of income only in case the stock received is converted into cash; dividends of course may subject the owner of the shares to a surtax.

The declaration of a stock dividend means that a corporation's surplus is being capitalized. There seems to be some apprehension on the part of corporations that an accumulated surplus, if it is a substantial one, may be subjected to a tax on the

ground that it is larger than the legitimate requirements of the business demand. It has been suggested, therefore, that many of the corporations which have piled up big surplus accounts have adopted the stock-dividend method of cutting them down in order to escape the possibility of having them taxed. It is of course impossible to say whether this is or is not the case. The fact remains, however, that stock dividends have been of frequent occurrence this past autumn, and more are rumored. Many stocks have advanced in price on the strength of such

41 Years Without Loss to Any Investor

ANOTHER year has been added to the record of S. W. Straus & Co.—a record of prompt payment of both principal and interest in cash for 41 years without the loss of a dollar to any bondholder.

This record has been a guide to safety and satisfaction for tens of thousands of Straus investors, in every state in the Union and many foreign lands.

In considering the investment of your January funds, this record is a basis for your confidence. We are now offering a well diversified list of sound first mortgage 6% serial bonds, in \$1,000, \$500 and \$100 denominations, secured by the highest type of properties in the larger cities of the country. We suggest that you write for our January investment suggestions, and specify

rumors; many stocks have advanced in price merely because the issuing corporations have large surpluses and speculators have professed to see good possibilities of a stock dividend.

The close observer will have noticed, however, that, while many stocks show immediate advances in price on stock dividend rumors, most of them do little advancing after the dividend is definitely announced, and in numerous instances actually register declines. What is the value of a stock dividend to a stockholder, anyway?

Suppose a corporation has ten thousand shares of stock outstanding and is paying annual dividends of \$9 a share. Its dividend requirements are \$90,000 a

year. Suppose this corporation decides to pay a stock dividend of fifty per cent. This means that the number of shares will be increased to fifteen thousand, and that each stockholder will now have three shares of stock where previously he had two. On the face of it he is fifty per cent better off than he was before. In order to maintain annual dividends of 9 per cent, however, it will now require \$135,000, in place of \$90,000, an increase of \$45,000 a year, the same proportionate increase here as in the case of the outstanding shares. Suppose, however, that earnings are no larger than they were before, and that \$90,000 is still all that the corporation can afford to pay out in dividends. What happens?

Well, the dividend rate is reduced from \$9 to \$6, and the total amount disbursed remains exactly the same. And the man who owned two shares and received \$18 a year on them in dividends now possesses three shares and still receives \$18 a year. Is he any better off than he was before? Not so far as his income is concerned. He is better off if the three shares he now owns will bring more on the market than the two shares he had previously, but the market price of stock is largely determined by earnings and dividends, so that the chances are that he is in just about the same position financially as before.

The companies comprising the Standard Oil group of corporations have

Big Business and Complete Banking Service

ONE of the largest corporations in its line in the United States began its relations with us by placing certain securities which it owned in the safekeeping and care of our Trust Department. Now, the corporation is a customer of several main departments.

The corporation's general banking and loans are handled through our Banking Department.

Through our Foreign Department the corporation has at its command the facilities of our branches

abroad and complete foreign banking service.

In connection with a readjustment and increase of capitalization, we acted as depositary and agent, and through our Transfer Department we act as transfer agent for the stock.

This corporation, like many others, has found it advantageous to have as a banking connection an institution equipped to render promptly and efficiently any financial or trust service.

We shall be pleased to discuss in detail with you the exceptionally broad facilities which an account with us places at your command

many years made a practice of distributing stock dividends. The business and earnings of these corporations have shown a tremendous increase during the past twenty years, and in most instances this new stock has become exceedingly valuable. People who purchase the so-called Standard Oil group of stocks and who consider only the straight cash yield do not, as a general rule, obtain a very high yield. Atlantic Refining Company stock, for instance, selling at \$1,300 a share and paying dividends of \$20 a share a year, yielded only slightly more than one and one-half per cent. The explanation of the high price has been of course the large undivided surplus and the prospect of a big stock dividend. Announcement has just recently been made that the Atlantic Refining Company has declared a 900 per cent stock dividend. Fifty thousand shares of stock have been authorized and but 5,000 issued; it is proposed to distribute the 45,000 shares so far unissued among the stockholders. Further, the report states that the directors hope to pay \$1 a share quarterly on the new stock. Every man who owned one share of stock will now have ten shares, and, instead of \$20 a share a year, he will now receive \$4. But he will have ten shares instead of one and his income will be doubled. If expectations are realized, therefore, this particular stock dividend is exceedingly valuable. They do not always have such beneficial results.

There is one result of stock dividends, however, which is always good, and that is the benefits accruing to preferred stockholders from such distributions. The declaration of a common-stock dividend means, as we have seen, that a corporation's surplus is being capitalized. It is probable that the largest part of this surplus consists of real estate, plants, equipment, and the property of subsidiary companies. When these assets are once capitalized, they cannot be dissipated, and common stock issued against a surplus of this kind means that it is to be kept as an asset. It cannot be disposed of, and the position of the preferred stock will be strengthened accordingly, for preferred stocks have a right prior to the common to all fixed assets. If, therefore, the fixed assets are increased, the result is additional security for the preferred stock.

The point for a common-stock holder to decide is whether it is more profitable for him to keep the shares received as a stock dividend, trusting that his income will be at least as much as formerly and that possibly the value of his holdings will increase, or to sell the new stock and take the cash. If he sells, he has to pay an income tax; if he holds on, he doesn't. But a bird in the hand is worth two in the bush, and oftentimes a dollar in cash proves more valuable than two dollars in prospect.

Stock dividends on the face of things are of no particular benefit, and increasing the number of shares and reducing

their par value is scarcely more than a gesture. Increasing the number of outstanding shares does not increase earnings, and earnings are what make stocks valuable. Reducing the par value of a stock and splitting the original shares into smaller units does not increase earnings either; it is like giving a man two five-dollar bills for one ten. A successful sugar company a few years ago was paying \$40 a share a year in dividends on its stock of \$100 par. Presently par of the stock was reduced to \$20 a share and each stockholder given five new shares for each old one. Divi-

dends, however, were reduced to \$8 a share, so that so far as income was concerned there was no change whatsoever. The main advantage was that the selling price per share was reduced and, instead of having to pay \$2,000 for five shares, the investor could buy five shares for \$400. This business of reducing the cost per share is considered worth while in many instances, for it is a well-known fact that most people would rather buy ten shares than one, even if the ten are worth only as much as the one. It is for this psychological reason that the par value of so many new promotions is fixed at a low figure. People get lots of shares for little money, and seem to think that for this reason they have a bargain. It is well to remember, however, that it is more a question of what you get than how much. And this point applies to stock dividends, which on the face of things seem to be a great boon to stockholders, but which actually may leave them exactly where they were before.

QUESTIONS AND ANSWERS

Q. I notice that Pennsylvania Railroad stock, which pays 6 per cent dividends, I believe, is quoted at about \$46 a share. What is the reason for this, and why should a stock like Pennsylvania yield over 12 per cent? What is the catch?

A. There is no catch. The par value of Pennsylvania Railroad stock is \$50 a share and the dividend rate is \$3 a share a year, the equivalent of \$6 on a stock of \$100 par. The yield on Pennsylvania is only slightly more than 6 per cent, just about in line with other railway stocks of the same class.

Q. Please suggest some bonds for investment purposes which bear the highest rate of interest consistent with safety. What do you think of first-mortgage real estate bonds?

A. We think very well indeed of first-mortgage real estate bonds, and in all probability they would meet your requirements as well as anything you could find. The one thing to make sure of in buying this kind of investments is that the house with which you deal is sound, reliable, and conservative.

The Solution of Your Investment Problem

THE extent and reliability of information at hand influences the right solution of investment problems—as it does with other business matters.

Around the first of the year—

You may have interest money or principal from bonds maturing, available for reinvestment.

Examination of present investments may reveal opportunities for more effective employment of your funds.

If you want to increase your bond holdings during 1923 you can assure yourself of making the most steady progress by beginning a systematic investment program now.

Our current issue of "Safe Bonds for Investment" will help you, whatever your investment problems may be. Lists and descriptions of a wide range of Government, Municipal, Public Utility and Industrial Bonds are given—together with other information and suggestions of timely value.

GRADUATE nurse and physician will take into their home and care for small children. References exchanged. 3,111, Outlook.

LADY taking independent ten-week Mediterranean trip, sailing February, wishes companion. Small fee. References exchanged. 3,116, Outlook.

CONTRIBUTORS' GALLERY

WILLIS FLETCHER JOHNSON since 1880 has been on the staff of the New York "Tribune" as foreign editor, literary editor, and general editorial writer. He is also a contributing editor of the "North American Review," a staff lecturer of

the New York City Board of Education, and a member of the Council of New York University.

ANOTHER article by W. J. Henderson, musical critic for the New York "Herald," appears in this issue.

EDWIN M. BROOKS's New England reserve and modesty made him prefer to run the risk of a rejection rather than to supply us with biographical material.

WILBUR O. HEDRICK is a true and loyal Michiganite. He was born in South Bend, Indiana, but he has lived practically all his life in Michigan. He graduated from the Michigan Agricultural College

in 1891, and in 1903 returned as Professor of Economics, a position which he has held ever since. In 1909 he received a doctor's degree in philosophy from the University of Michigan. He is the author of "History of Railroad Taxation in Michigan" and "The Michigan Milk Commission."

JAMES WEDGWOOD DRAWBELL has played the newspaper game in the United States, Canada, Scotland, and England and has held every job from cub to that of editor. He has contributed to periodicals on both sides of the Atlantic, written short stories, and fought in France during the war with a Scotch regiment. And all this while still in his "twenties." At present Mr. Drawbell is free-lancing in New York.

EARL CHRISTMAS was born in Kansas, and grew up on an Oklahoma farm. He was graduated from the University of Oklahoma and later took a course in journalism at the University of Missouri. Following graduation he traveled over most of the Middle West and eventually settled in St. Paul, where he has been engaged in journalism ever since, with the exception of a year in the service.

Do You Use Tools?

Keep them bright and working right with 3-in-One Oil. Red rust and friction are the two great tool destroyers.

3-in-One prevents rust on all metals, plain, polished or nicked. Rub a little on all tools after using. It sinks into the pores, forming a protective coat that moisture can't penetrate.

3-in-One is the right lubricant for all automatic tools, scroll saws, light lathes. Penetrates to the most remote friction point; works out caked grease and dirt accumulations; stays in the bearings; lubricates perfectly. Fine for oil stones, too.

3-in-One

The High Quality Tool Oil

Carpenters, machinists, repair men—all tool users—consider 3-in-One as necessary as hammer or any other tool. Trades School teachers use and recommend it. You will be just as enthusiastic about 3-in-One. Try it.

3-in-One is sold at all good stores in 1-oz., 3-oz., and 8-oz. bottles and in 3-oz. Handy Oil Cans.

FREE—Generous sample and Dictionary of Uses. To save postage, request these on a postal.

BY THE WAY

"SKIM milk used to be considered as nearly worthless as anything might well be," a chemist says in "Collier's." "Now it turns up as hair combs, fountain pens, and paper sizing. I recall a manufacturer who was making a water paint out of glue and gypsum. He found a German product which was better than glue, but the Germans wanted 30 cents a pound for it—which was more than he could pay. The German product, on analysis, proved to be only a mixture of casein and lime. Casein is easily prepared from skim milk. We made some for him. The man's factory was in a dairy country. Since then he has accumulated a large fortune selling his improved paint. He might well quarter a cow on his coat of arms."

In a recent examination of students before a medical board in a Southern State, according to the "Journal" of the American Medical Association, one question asked was: "Give the quantitative analysis of uric acid." Following the examination there was much discussion among those examined as to the fairness of this question. Finally a colored applicant who had just graduated from a Northern institution said:

"Last night I was kinda expectin' a question on uric acid, so I got down my book and looked it up. The article was so long and such hard readin' that I decided no white gentleman down in Virginia would ever ask any such question so I stopped studyin'."

"A new book on George Borrow is very welcome," says the editor of the London "Sphere." The book's title is "George Borrow, Lord of the Open Road," and the author is R. Thurston Hopkins. "For more than twenty years after his death," the editor goes on, "Borrow's works were much neglected, and his life an enigma. Since then there have been many books. I myself have perpetrated one. Naturally I think my life of George Borrow one of the best biographies in the English language. The reviewers did not think so when it appeared, but then I have never pretended to attach much importance to the judgment of the critics."

Danny (as quoted by the New York "Evening Mail")—"Mamma, are you going to get that fur coat from papa for your birthday?" Mamma—"No, darling." Danny—"Have you tried throwing yourself on the floor and kicking with your feet like I do?"

The £90,000 which Lloyd George is to receive for his memoirs is in marked contrast with the £20 which Milton is sometimes said to have received for "Paradise Lost," remarks the New York "Evening Post." "It is said that Winston Churchill will receive nearly £50,000 for all rights to his memoirs. The Kaiser is a bad third with £40,000. When we pass from lump sums in advance to royalty checks, we of course enter quite another field. It is stated

that A. S. M. Hutchinson has already received the tidy sum of £70,000 for 'If Winter Comes,' and more is rolling in. What H. G. Wells got out of the 'Outline of History' seems not to be known, but it is known that Wells is a millionaire." Some of these profits represent chickens before they are hatched, for American papers have canceled contracts that would have brought £40,000 to Lloyd George.

"In regard to Texarkana," a correspondent says, "you did not go far enough with it. The name is taken from three States—Texas, Arkansas, and Louisiana. The main street of this city is actually divided between the States of Texas and Arkansas."

"He says that animals of the cat specie will never forget an injury," a special article in the New York "Herald" says. The writer who uses "specie" as the singular of species is matched by the man who speaks of "working in a quart mine."

A well-known efficiency engineer, according to the "Treasure Chest," took his children to see the great steamship, the Majestic. He wanted to impress on their minds the fact that the Majestic was the biggest steamship ever built, so he took them all over the boat and explained everything to them in detail. When they arrived home Dan, who was the spokesman for the crowd, began with the thing that had impressed him most: "Oh, mother, just think, they had two dining-rooms. After you had eaten all you wanted in one dining-room you could go into the other and eat some more and they wouldn't know anything about it."

"At the risk of seeming to indulge in national boastfulness," says the author of "Rome and the World To-Day," "I believe it can be said that there is a striking resemblance between the busts and statues of the leaders in Roman history and many of the public men of the United States a generation ago. I knew a former Federal Judge who could have sat for a bust of Julius Caesar. Justices Miller, Bradley, Strong, and Harlan, of the Supreme Court of the United States, each had the same type of countenance as Cicero. Is it to be taken as an indication that our National stock and character are changing, since such faces are not to-day found in our National Congress and in our courts?"

"One reason why the Leader is often a little bit late in coming out," says the editor of the Tarpon Springs (Florida) "Leader," "is that we frequently have a number of fair visitors who come in to leave a news item or an ad, or something of the kind, and at such times we always, like a true Southern gentleman, take our pipe out of our mouth and lay it down somewhere and after they are gone it always takes about fifteen minutes to find it again."

ONE LAW FOR ALL

A REVIEW OF THE ECONOMIC, POLITICAL, AND
SOCIAL RESULTS OF THE GREAT STRIKES

*Mr. Cobb is
one of the most
famous living
short-story
writers and
humorists*

WHY IRVIN S. COBB READS THE OUTLOOK

In politics, I think The Outlook sometimes is wrong. In Americanism, it always is right.

There always is need, in this country—and, for that matter, in every other country—of a magazine dedicated to the task of endeavoring fairly and truthfully to interpret the spirit of the nation and the thought of the people. Never was there a time when this country needed such a publication more than it needs it to-day. In my opinion, The Outlook amply satisfies this need.

Reading it regularly, I think I see in its columns an honest endeavor honestly to present the issues which arise in America and, most of all, I see a

strong and virile nationalism. There are times when I, as a citizen, may disagree with some of the conclusions its editors and its contributors have drawn; but there is never a time when I discern in it any note of insincerity, any suggestion of timidity, any taint of cowardice. I value it as part of the literary diet which helps to make me, I trust, a good American.

BY OSCAR S. STRAUS

PRICE: FIFTEEN CENTS A COPY.

FIVE DOLLARS A YEAR

381 FOURTH AVENUE, NEW YORK

*David Belasco
is one
of the foremost
leaders of
American drama*

WHY DAVID BELASCO READS THE OUTLOOK

THE value of The Outlook lies in its breadth of vision, normal view-point, and unswerving steadiness of purpose. The ideal precedes all things, and a magazine without an ideal is like a man without a country.

The view-point of The Outlook is much needed in these excitable times. Progress, development, and rational growth are attained only under normal conditions.

That we are reverting to a steadier mood, must be evident to all who think profoundly. Jazz in thought and writing is merely a phase, no deeper

than the music which suggests the name; it is rather like a gay circus in a side street that soon passes by. When the brief glamour has vanished, the boys and girls go back to their studies.

Those who write must bring new faith and courage to all who labor for the welfare of mankind. The world has good sound reason to look forward to great international achievements.

America is the most idealistic country, as its past proves. The wise journals of the present are those that inspire hope in its future.

*Mr. Bok is
one of America's
most noted journalists
and was for many years
editor of
The Ladies' Home Journal*

WHY EDWARD W. BOK READS THE OUTLOOK

I HAVE known The Outlook for thirty years, and have been a steady reader of it, and know of no periodical which has so consistently stood for the best of worth-while reading and been such a true reflection of American life. I have always found in it the note of that progressiveness which makes for sure progress. Very few readers realize the tremendous influence that a periodical coming out week by week may have on the minds of its readers, especially when, as in the case of The Outlook, it is a journal that is read when men's minds are at leisure and are receptive to influences. The editors of The Outlook have, to my mind, ever been conscious of this stewardship, and have never failed in their responsibilities.

THE GREEN GOLD OF THE TROPICS

BY NEWTON FUESSLE

The pattern
above is
No. 378

Here are the New Designs!

Gold-Seal Congoleum Art-Rugs have long been famous for the rare beauty of their designs. But the six new patterns shown at the left—creations of master rug-designers—are, we believe, the most beautiful Congoleum patterns that have yet appeared.

Unequalled beauty is but one of the many superiorities of Gold-Seal Congoleum Art-Rugs. They are wonderfully economical and durable. They lie flat without fastening. They are very easy to clean—a quick light mopping being all that is ever required. And they are unconditionally guaranteed.

Any Congoleum dealer in your town will gladly show you these six new designs, as well as many other attractive patterns suitable for every room in the house. Look for the Gold Seal guarantee which is pasted on the face of the goods.

Note the Very Low Prices

6 x 9 ft. \$ 8.10	The rugs illustrated are made only in the five large sizes.	1½x3 ft. \$.50
7½x 9 ft. 10.10	The smaller rugs are made in patterns to harmonize with them.	3 x3 ft. 1.00
9 x 9 ft. 12.15		3 x4½ ft. 1.50
9 x10½ ft. 14.15		3 x6 ft. 2.00
9 x12 ft. 16.20		

Owing to freight rates, prices in the South, west of the Mississippi and in Canada are higher than those quoted.

BY GILBERT H. GILBERT

WU PEI-FU, A CHINESE WITH ONE IDEA

BY UPTON CLOSE

*Theodore Roosevelt,
Assistant Secretary
of the Navy*

WHY THEODORE ROOSEVELT READS THE OUTLOOK

THE OUTLOOK is, to a certain extent, a cousin of the Roosevelt family. The Outlook is clean, progressive, and sane. It has the great asset of being unafraid to discuss any subject simply because it is new. This is an essential attribute in constructive thought ; for, though some good people refuse to admit it, even our religious beliefs on which we base our lives were at one time "new." The necessary corollary to this is possessed by The Outlook also. It does not embrace any doctrine simply because it is new. Many papers and people mistake a love for the sensational for liberalism. Last, and most important, The Outlook is unafraid and hews to the line !

Theodore Roosevelt

ROLLING DOWN TO RIO WITH HUGHES

*Mr. Morley is
one of the
most brilliant of
the younger poets
and essayists*

WHAT CHRISTOPHER MORLEY THINKS OF THE OUTLOOK

THE OUTLOOK was one of the first journals to make an impression on me as a boy. . . . It was the first American magazine that ever actually bought and paid for a poem of mine. . . . I fear that I do not read any magazine in the world regularly and persistently. And I do not expect to find, ever, in any one journal, all facets of truth and opinion. But when The Outlook comes my way, I admit that I find it congenial for its temperate, calm, and sensible scrutiny of our present discontents, its humor and wide-mindedness in consideration of literary matters, and a general feeling that I get to the effect that

the paper is solidly rooted in judgment but not in the least unready to welcome the *aliquid novi* that deserves hospitality. Let me put it this way : From time to time I have offered one-act plays to various magazine editors ; usually they are greatly shocked and reply that a one-act play is quite outside their province. I have a ridiculous feeling that The Outlook would publish even a one-act play if it thought it amusing or for any reason at all worth ink. Perhaps The Outlook is in essence more liberal than many a weekly that makes a much louder shout about being a friend of that mysterious thing called liberty.

Christopher Morley

*Francis H. Sisson,
Vice-President of the
Guaranty Trust Company
of New York*

FRANCIS H. SISSON, NEW YORK BANKER, TELLS WHY HE READS THE OUTLOOK

COMMENTING on The Outlook is for me a good deal like commenting on a member of one's own family ; it has for so long been a part of my life and thought that it is hard for me to regard it objectively. Long ago I came to rely upon it as a sound interpreter of current thought through whose eyes I could view the world of thought and action with a considerable degree of understanding and accurate judgment. Religious, social, economic, literary, and other prob-

lems have found fair statement within the pages of The Outlook through all these years, and for the broad spirit, the cultured mind, and the sympathetic heart which have been reflected in its pages I have long had a sincere affection and respect. I wish that its message of practical idealism, sound living and thinking might be carried far beyond the splendid selected audience which it has long reached so effectively. It is one which a disorderly world greatly needs to-day.

United States*

(C) International

WHY GENERAL PERSHING READS THE OUTLOOK

AMONG our excellent periodicals 'The Outlook has a very high place. Through its columns one may keep in touch with current events and with the many National problems that can be rightly solved only when public opinion is enlightened. Its views are always clearly

and frankly stated. 'The Outlook does not restrict itself to the more momentous questions, but contains weekly articles, written in entertaining style, on subjects of general interest to our citizens. The service rendered the public by The Outlook has commended it to me most highly.

THE FESTAL DAY—SO CALLED

BY ROLLIN LYNDE HARTT

LLOYD GEORGE AND BONAR LAW:
THE CONTRAST

SPECIAL CORRESPONDENCE FROM FRANK DILNOT

ANALYZING JOHNNY

BY CHARLES K. TAYLOR

DOES THE AUTHOR COUNT
WITH BOYS?

BY HUBERT V. CORYELL

How can YOU acquire the art of being interesting?

The coupon at the bottom of this page is the Key to a new world of fascinating enjoyment

YOU KNOW MEN and women in social and business life who, to all outward appearance, are alike. But what a difference when you are in their company for more than a few minutes at a time!

One is helpless in a conversation that goes beyond the narrow circle of his own daily existence. The other always holds your attention and interest, whatever the subject may be.

Around commonplace facts he weaves romance founded seemingly upon knowledge that spans centuries. Wherever he goes he seems to have known the spot when it was in the making. His conversation illumi-

nates the present with the vivid colors of the past.

How can you, whose time for libraries, museums and travel is limited, acquire the fascinating information that causes your company eagerly to be sought? How can you know the hidden story behind a prehistoric relic, or a mystifying freak of Nature?

There is no mystery to the art of being interesting. It is known to all who read an amazing story which the coupon below will bring to you for free examination.

Imagine a story that begins 10,000,000 or 100,000,000 years ago; imagine being carried through the ages from one dramatic scene to another—as if you sat in a motion-picture theatre and saw the whole drama of the human race displayed on the screen before you—imagine the thrill of such an experience and you have some conception of

So we decided to bring it out in a form that would be not only convenient and easy to handle but as handsome a set of books and as beautifully illustrated as any History ever made. That meant starting all over from the very beginning, setting everything anew in fresh, clear type; gathering from the four corners of the earth a hundred of the most famous historical paintings for illustrations.

Mr. Wells threw himself into this task with all his marvelous enthusiasm. For a long time he had felt that certain parts of the "Outline" needed elaborating, certain other parts revision. This was his chance. Starting at the very beginning, he made changes on every single page of the text, rewrote whole chapters, added page after page of material.

Here Is Our Offer:

And now, at last, we can offer you the new, revised, illustrated history, complete in four beautiful, hand-tooled volumes, in convenient library size at 25% less than the price of the original two volume set!

Think of it! Thoroughly revised, printed from brand-new, clear, readable plates, with a hundred famous historical pictures from the great art galleries of the world, and bound up into four hand-tooled, library size volumes—all for a fourth less than the ordinary two-volume set would cost you even now in any book-store!

And the Review of Reviews, Too!

Wells begins with the dawn of time. Before there were men. Before there were reptiles. In broad, magnificent strokes he paints the picture, bringing you straight down to today. He shows the thread of human purpose binding men together the world over from one age to another.

And where Wells stops, the Review of Reviews takes up the story. It ties together the events of today the world over, shows their relation one to another, gives you a background of facts for your daily news.

Only One Condition We Make—

There is but one condition—that you mail the attached coupon at once. Such an unusual offer as this cannot last long. You must act at once.

Send the coupon—without money. If for any reason you are dissatisfied with the History, if it doesn't seem to you the utmost of book value and satisfaction, send it back and cancel your order. There'll be no quibbling—no questions asked.

But mail the coupon now—today—before it is too late!

H. G. WELLS' Outline of History

In 4 Library Size Volumes

Profusely Illustrated

Although more than a million copies have been sold here and abroad, virtually the only complaint we have heard of Wells' "Outline of History" has been that it was too bulky to hold comfortably while reading.

The Outlook

An Illustrated Weekly Journal of Current Life

WEDNESDAY, NOVEMBER 22, 1922

"GLORY O' THE DAWN"
BY HAROLD T. PULSIFER

CRACKLING LOGS AND SNOWY NIGHTS

THERE are moods that nothing can satisfy but the printed page. Winter nights are reading nights, and The Outlook offers in coming issues a large variety of carefully selected articles of uncommon excellence.

ELSIE SINGMASTER contributes two remarkable short stories.

DOROTHY CANFIELD is represented by a short story entitled "The Ideas of M. Brodard."

THOMAS L. MASSON, the genial humorist, writes with his usual sparkle concerning "Our Feeble-Minded Intellectuals," "An Interview with Vanity," "The Great American Weakness," and other equally unhackneyed subjects.

ELIAS LIEBERMAN contributes an arresting article on "The Difficult Art of Being a Jew."

ROLLIN LYNDE HARTT describes how he felt the night he broadcast by radio his interview with Augustus Thomas.

ARCHIBALD RUTLEDGE contributes "Christmas Eve on the Plantation."

ROBERT HALE confesses how it feels to get back to Oxford after having been a Rhodes Scholar on the classic quadrangles.

"A FLAPPER'S APPEAL TO PARENTS" is by one of those modern young creatures who bobs her hair and keeps going from morning until late at night.

SHERMAN ROGERS in "Alaska the Misunderstood" clears up scores of misunderstandings regarding the so-called land of blizzards and dance-halls.

OSCAR S. STRAUS continues his engrossing memoirs, "Under Four Presidents."

*Mr. Barton ranks among
America's most
incisive publicists*

A TRIBUTE FROM BRUCE BARTON

A few months before his death Lyman Abbott sent me a copy of his "Silhouettes of My Contemporaries," on the fly-leaf of which he had written these lines from General S. C. Armstrong: "Those who are hopeless disarm themselves and may as well go to the rear; men and women of faith, optimists, to the front."

That quotation seems to me to symbolize both Lyman Abbott and The Outlook. He looked at

the world through unclouded eyes; the picture he painted was complete, even in the unpleasant or discouraging ideals. Yet he saw more than the things which are visible. He saw tendencies, promises, and the hope which is often more significant than the fact. It was this combination of the interpreter and the prophet which gave him so large a leadership; and his spirit goes marching on in the publication he loved.

Macmillan Christmas Books

A SHORT HISTORY OF THE WORLD

By H. G. Wells

The romance of world history is Mr. Wells' theme. Shorn of elaboration and complication, and illustrated with 200 photographs and drawings, this new book forms an interesting, informing and authoritative story of man through the ages. \$4.00

A brilliant new novel by Miss Sinclair

ANNE SEVERN AND THE FIELDINGS

By May Sinclair

A novel of love, honor, pity and remorse centered in the three principal characters and worked out to a supreme issue through the action of one of them. \$2.00

A novel of New England character

OLD CROW

By Alice Brown

Disillusioned by the war, John Raven returns to his New England home where, through his pity and care for two bewildered neighbors, he finds new interest in life. \$2.00

RIGHT ROYAL

By John Masefield

With three colored illustrations and many drawings in black and white by Cecil Aldin. "Right Royal" is more than a story of the running of a great race, more than the tale of a horse, more than a love story, it is a rich fabric interwoven from these threads."—*The Book Review*. \$2.50

THE CROCK OF GOLD

By James Stephens

The new edition of this masterpiece of literature illustrated with many drawings in color and in black and white by Wilfred Jones is a book to warm the cockles of your heart. \$2.50

RAINBOW GOLD

By Sara Teasdale

An anthology of about eighty of the very best poems for boys and girls whose love of poetry is just being formed. Beautifully illustrated by Dugald Walker. \$2.00

THE McKINLEY AND ROOSEVELT ADMINISTRATIONS

By James Ford Rhodes

Written by one of the foremost living historians about two epoch-making administrations, this volume ranks in historical importance with the famous *History of the United States* by the same author. \$4.00

An absorbing novel of America today

A MORE HONORABLE MAN

By Arthur Somers Roche

The never solved debate of idealism versus materialism. Jim Willoughby's success is contrasted with the spiritual growth of his friend Sam Foyle. A strong story of love, honor and truth—philosophy and science. \$2.00

Phillipotts' new novel of mystery

THE RED REDMAYNES

By Eden Phillipotts

A Dartmoor cliff riddled with caves and tunnels in which the murderer was supposed to lurk almost proved the desperation of Mrs. Pendean and the famous detective, Mark Brendon. *Probable price*, \$2.00

DRAMATIC LEGENDS AND OTHER POEMS

By Padraic Colum

In the dramatic legends the poet combines his lyric and dramatic powers. The other poems are lyrics which have a strange beauty of original rhythms. \$1.50

THE GOLDEN BOUGH

A Study in Magic and Religion

By Sir J. G. Frazer

Many whose interest has been greater than their purse will be glad to know that this great work on religious customs of primitive man has been abridged and brought forth in one volume. \$5.00

SHAKESPEARE AND THE HEART OF A CHILD

By Gertrude M. Slaughter

Adventures sufficient to lure the tomboy, travel for the eager fireside traveler, poetry and romance on every page. Illustrated by Eric Pape. \$2.00

CHILE: Today and Tomorrow

By L. B. Elliott

A colorful picture of Chile as well as interesting details about the characteristics, social life, history, education, and the economic standards of this unique country of physical extremes. *Illustrated*. \$5.00

THE TUDOR SHAKESPEARE

These volumes "generally edited by Professors Neilson and Thorndike show an imposing array of individual editors. . . . The editors can be as proud as the publishers, for these volumes are as excellent specimens of book-planning as book-making."—*New York Herald*.

Leather binding. 39 volumes. Set \$39, each \$1.00

Friend to Friend—

A Gift That Lives Over Again Each Month

IN the Christmas giving, books are the greatest treasures that can pass between friend and friend. And books that live—*magazines*—are ideal expressions of a friend's wishes that live not for the Yuletide alone but for each succeeding month.

"Scientific American" as a Christmas gift means 12 great monthly issues to keep the reader in intimate contact with progress-in-the-making; gliders, radio developments, discoveries, explorations, psychical manifestations, the industries, new inventions, etc.

This all-year gift of "Scientific American" will cost you but \$4 for one subscription; \$7 for subscriptions to two different addresses, additional ones proportionate.

* * * * *

A card similar to above will be mailed to the recipient of your gift, unless you care to mail it yourself. Use coupon below to insure mailing for Christmas.

The Outlook in Schools and Colleges

BOARD OF EDUCATION
THE CITY OF NEW YORK
THE BOARD OF SUPERINTENDENTS
Park Avenue and Fifty-Ninth Street

I congratulate you on the frequency with which I see *The Outlook* used as a text-book in the schools and on the interest and vivacity of the recitations in which it is used. I do not know of any single subject of more vital importance to the coming citizen than the study of actual National problems which will confront the voter when he reaches his majority. A clean, concise consideration of these questions such as is presented by *The Outlook* every week without "writing down" to the supposed lower intelligence of the school makes a highly desirable text.

WM. McANDREW,
Associate Superintendent, Public Schools,
New York City.

June 27, 1922.

"SUGGESTIONS FOR USING THE OUTLOOK IN THE TEACHING OF CURRENT HISTORY, CIVICS, ENGLISH AND RHETORIC

—is the title of a pamphlet giving a complete outline of suggestions for the use of *The Outlook* in class-room work which will be mailed free of charge to any instructor or teacher in the United States. The Outlook's special class-room rates are also enclosed and explained in this pamphlet. There is no charge and there is no obligation—simply drop a line of inquiry to

PUBLIC SCHOOL, WILDWOOD, N. J.

"In choosing a periodical for our school," writes a prominent educator, "the following points have determined the choice: (1) The use of precise and exact English; (2) clearness and definiteness of presentation; (3) unquestioned scholarship; (4) painstaking care in giving to its readers only trustworthy and authoritative information; (5) lack of partisanship; (6) an aggressive policy for public good; and (7) its power and purpose to arouse public conscience.

"In my opinion, The Outlook meets these seven requirements better than any other periodical that I know of."
